 NaCl phosphors, X-ray luminescence, depend. on radiation time 8=18612
 NaCl(Ag), colouration, impurity centres produced 8=1994

Luminescence—contd

solids, inorganic—contd

- NaCl:Ag, electrophotoluminescence 8=2486
 NaCl:Eu, and excit. spectrum, rel. to centres structure, obs. 8=9623
 NaCl:(Ni, Cu, In, Pb and Tl), roentgenoluminesc. and F-flash temp. depend. obs. 8=9626
 NaI capture centres, i. r. excit., heat treatment in O effects, obs. 8=23060
 NaI(Tl), activator distrib. rel. to Cl⁻ ion addition 8=14327
 NaI: Tl capture centres, i. r. excit., heat treatment in O effects, obs. 8=23060
 NaI(Tl), fluorescent response function to X and γ-rays 8=5665
 NaI-Tl, photoluminesc. spectra, effect of X-irrad. and O-containing impurities 8=5666
 NaI(Tl), recomb. luminesc. at low temp. 8=18611
 NaI-Tl, single cryst., with oxygen-containing impurities, response 8=18610
 NaI, X-ray luminesc., effect of Cu impurity 8=23062
 NaMg[Cr(C₂O₄)₃].9H₂O 8=14247
 NaMgF₂:Ni²⁺, i. r. emission 8=18626
 Nd³⁺ ions, influence of glass comp. and activator conc. on quantum yield and quenching time 8=18592
 Nd silicate glass laser, stimulated emission cross section 8=14292
 Nd³⁺ in disordered matrices, structure of non-uniformly broadened luminesc. bands 8=14329
 Nd:Cr:YAG, sidelight fluorescence changes, due to laser at 1.06 μ 8=6473
 PbBr₂:Mn excit., emission and absorpt. spectra 8=9622
 PbCl₂:Mn excit., emission and absorpt. spectra 8=9622
 RbI:Tl, and formation of excitons 8=5131
 Sb₂O₃:Mn, impurities rel. to spectral props., brightness and temp. stability, obs. 8=18613
 Si, non-equilib. carrier recombination at high photo-excitation levels 8=18616
 Si, p-n junctions, mesoplasma, visible and i. r. 8=2218
 SiC, B and N doped 8=18615
 SiC crystals spectrum, deduction of energy spectrum of acceptor states 8=5668
 SiO₂:Tb, Eu, fused, and H diffusion 8=17585
 Sm²⁺ in host lattices, temp. depend. 8=14332
 SrF₂, additively coloured, phonon-assisted colour centre fluorescence 8=14306
 SrF₂:Sm²⁺, temp. depend. 8=14332
 (Sr, Mg)₂(PO₄)₂:Eu²⁺, Mn²⁺ phosphors, obs. 8=9629
 (Sr_{0.88}Mg_{0.11})₂(PO₄)₂:Eu yellow luminesc. and mechanism 8=9629
 SrO, photoluminescence, photoelectric emission and enhanced thermionic emission 8=23063
 SrTiO₃:Eu²⁺, Tb³⁺, Pr³⁺, vibronic structure in spectra 8=14333
 SrY₂O₇:Ce 8=18600
 Tb chelate phosphors, radiative quantum efficiencies, enhancement 8=18617
 Tb salts, fluoresc. lifetimes and multi-phonon deactivation, 4.2°, 77° and 300°K 8=14315
 Tb³⁺, energy transfer in Na rare-earth tungstates 8=9610
 Tb³⁺, energy transfer with Nd³⁺ 8=9594
 Tb³⁺ in tungstates and molybdates, u. v. excitation of fluoresc. 8=2473
 TiBr₃:Mn excit., emission and absorpt. spectra 8=9622
 TiCl₃:Mn excit., emission and absorpt. spectra 8=9622
 Tm³⁺, energy transfer in Na rare-earth tungstates 8=9610
 Y phosphate, vanadates 8=14330
 Y vanadate phosphors, particle size rel. to preparation 8=13048
 YAl garnet, Er, Tm and Ho doped 8=5669
 YAl garnet:Nd³⁺, fluoresc., quantum efficiency 8=5667
 YAlG:Nd³⁺, laser transition cross-section and fluorescence branching ratio 8=20003
 Y₃Al₂O₇:Ce 8=18600
 YVO₄:Bi 8=2490
 YVO₄(Dy or Sm) activated, const. quantum yield 8=5670
 YVO₄:Eu, Bi 8=2490
 ZnF₂:Ni²⁺, i. r. emission 8=18626
 ZnO, prepared by annealing in O₂, mechanism 8=5672
 ZnO, radical-recombination spectra, new bands attributed to surface centers 8=5673
 ZnO radicaloluminesc. and excit. mechanism, obs. 8=9635
 ZnO:Ni²⁺, i. r. emission 8=18626
 ZnO:Zn, heavy ion irrad. damage deterioration obs. 8=18623
 ZnO:Zn rel. to H, He, N, Ar and Kr ions energy losses and deterioration depth, obs. 8=18624
 ZnS cathodoluminescence spectra and bands lifetimes obs. 8=9646
 ZnS crystals, rel. to phase transforms on crushing 8=17106
 ZnS crystals, two-photon excitation of u. v. emission 8=9632
 ZnS, electroluminescence, influence of illumination 8=9630
 ZnS films, cathodoluminescence energy losses, rel. to photoluminesc. yield 8=9645
 ZnS, Cudden-Pohl effect correl. with photoelectret state 8=5679
 ZnS luminors, effect of Te on emission 8=14336
 ZnS phosphors rel. to carrier redistrib. among traps under i. r. irrad., obs. 8=9135

luminescence—contd

solids, inorganic—contd

- ZnS phosphors, cryoluminescence 8=14347
 ZnS phosphors, glow curve anal. rel. to traps 8=5675
 ZnS phosphors, mech. excited, behaviour of light emissions 8=9633
 ZnS phosphors, spectra, time constants of build-up and decay 8=5677
 ZnS phosphors, stimulated with i.r. wavelengths 8=5671
 ZnS, radical-recombination spectra, new bands attributed to surface centers 8=5673
 ZnS, reabsorption rel. to equilb. emission kinetics 8=9641
 ZnS, u. v., cryst. prep. conditions for optimum obs. 8=18629
 ZnS, u. v., under electron excitation 8=18619
 ZnS:Ag, red fluorescence of rapidly quenched phosphor 8=9648
 ZnS:Ag, use of radiation deterioration for meas. ion energy losses 8=8758
 ZnS-Ag single crystal, influence of i.r. radiation following α excitation 8=5674
 Zn-CdS graded band-gap semiconductor, spectra electric-field dependence 8=9134
 ZnS:CdS luminors, nonmonotonic var. 8=14337
 ZnS:Cl rel. to green and blue centres excit. 8=9642
 ZnS:Cu electroluminescence brightness non-additivity obs. 8=9636
 ZnS:Cu²⁺, filled trap distrib. rel. to duration of u. v. irradiation 8=18628
 ZnS:Cu photo- and electroluminescs., effects of grinding, obs. 8=9647
 ZnS(Cu), photoluminescent emissions, exptl. determ. of surface temps. 8=13082
 ZnS:Cu rel. to green and blue centres excit. 8=9642
 ZnS:Ho³⁺, and blue centres rel. to lattice-activator energy transfer, obs. 8=9643
 ZnS:Mn²⁺, decay time for tetrahedrally coordinated ions 8=14326
 ZnS:Ni²⁺, i. r. emission 8=18626
 ZnS, S³⁵ radioactive, photoluminescence spectrum, dark conductivity 8=5000
 Zn(S,Se)-Ag luminors, interaction of heated centres 8=14338
 ZnS:Sm³⁺, and blue centres rel. to lattice-activator energy transfer, obs. 8=9643
 ZnS:Tm, Tm luminesc. centres form rel. to Zn vacancies obs. 8=8434
 ZnSe crystals, hexagonal 8=9631
 ZnSe crystals, recombination centre parameters 8=18627
 ZnSe:Ni²⁺, i. r. emission 8=18626
 ZnTe, melt-grown, edge emission, annealing effects 8=5681
 ZnTe, photoluminescence spectra with anomalous temp. dependence 8=2492
 ZnTiO₄, emission spectra, temp. var. 8=2488
- solids, organic**
 acetophenone, lowest π, π^* triplet state 8=12892
 3-aminophthalimide solution in frozen dioxane, fluorescence 8=5682
 anthracene, delayed fluoresc. rel. to triplet-triplet interaction and triplet exciton diffusion, obs. 8=23066
 anthracene delayed fluoresc. decay time, 2-300 °K 8=23065
 anthracene excimers in rigid matrices at low temp. 8=14339
 anthracene, fluoresc. decay curve 8=18633
 anthracene, fluorescence intensity depend. after two-photon photocarrier generation 8=13918
 anthracene frozen in n-paraffin forms, fluorescence 8=23067
 anthracene, light output under influence of α -particles 8=2495
 anthracene and plastic scintillator, radiation damage by 4→10 keV electrons 8=23029
 anthracene, polarization of triplet factor group states 8=2494
 anthracene, quenching by mag. field, distinction of excitons 8=18632
 anthracene, u. v. irradiated, fluorescence and photo-conductivity rel. to carrier generation 8=2266
 aromatic amino-acids, frozen solns., delayed luminesc. 8=9650
 aromatic hydrocarbons, zero-field splitting of triplet states 8=4181
 benzaldehyde at 77°K, influence of solvent on time resolved phosphorescence 8=18635
 benzene, in cryst. matrices, and state of dispersion 8=9651
 benzene, phosphoresc. cryst., e. p. r. 8=14095
 benzyl, single crystals, and solid solns. in polystyrene 8=18634
 biphenyl in methylcyclohexane glass, gamma-irradiated, radiophotoluminescence 8=9652
 3-bromopyrene in ethanol, fluoresc. decay 8=21128
 charge-transfer complexes, triplet states 8=2493
 1-chloronaphthalene in ethanol, fluoresc. decay 8=21153
 chrysene-d₁₂ in plastics, γ -ray scintillation 8=9656
 coronene in CCl₄, phosphoresc. rel. to mol. deform. by lattice interactions, 77°K 8=1577

Luminescence—contd

solids, organic—contd

- coronene-d₁₂ in plastics, γ -ray scintillation 8=9656
 delayed, decay time study 8=9579
 durene, doped monocrys., mechanism 8=18637
 4-dimethylamino-4'-nitrodiphenyl in decalin, frozen solution 8=5684
 9,10-diphenylanthracene, intersystem crossing obs. 8=4207
 4,4'-diphenylstilbene in polymethyl methacrylate, solid soln., temp. effect on anisotropy 8=9654
 durene, single cryst., progressive fluoresc. and delayed induced luminesc. 8=18636
 energy transfer in irrad. crystals 8=23038
 halogenated benzenes, excimer phosphoresc. in organic glasses 8=9653
 halonaphthalenes in host crystals, three-dimens. polarization anal. 8=5683
 1-methylnaphthalene excimers in rigid matrices at low temp. 8=14339
 naphthacene in aggregates of anthracene in n-heptane, fluorescence 8=23067
 naphthalene derivatives as donors in reson. energy transfer 8=18639
 naphthalene in ethanol, fluoresc. decay 8=21153
 naphthalene solns. phosphoresc. and delayed fluoresc. rel. to triplet state obs. 8=23068
 naphthalene-d₈, triplet reabsorpt. and e. s. r. 8=9655
 naphthalene, phosphoresc., effect of impurity molecules 8=23069
 naphthalene in PMMA, triplet-triplet annihilation 8=2114
 naphthalene, polarization of triplet factor group states 8=2494
 2-(1-naphthyl)-5-phenyloxazol in polymethyl methacrylate, solid soln., temp. effect on anisotropy 8=9654
 nucleic acid components, frozen solns., delayed luminesc. 8=9650
 nucleotides 8=16334
 oxalyl chloride 8=2468
 perylene excimers in rigid matrices at low temp. 8=14339
 phenoxide ion in rigid-glass, polarization 8=14340
 phenanthrene-d₁₀, in solidified solvents, thermoluminesc. and delayed fluoresc., mech. 8=23070
 phenanthrene-d₁₀, triplet reabsorpt. and e. s. r. 8=9655
 phenazine, polarization of triplet factor group states 8=2494
 phthalimiden compounds, quantum yield in anti-Stokes region 8=18640
 plastic scintillator, light output under influence of α -particles 8=2495
 plastic scintillators for β -ray detect., complications rel. to absorpt. of contaminants 8=20386
 plastic scintillators, excited by Co⁶⁰ γ -rays 8=9656
 polarization of triplet factor group states 8=2494
 poly-2,2-propyl-bis-4-phenylcarbonate, chemiluminesc. obs. 8=23072
 polycyclic monoazines, solvent effect 8=8095
 polymers, polarized-fluorescence experiment, preferred orientation mathematics 8=1721
 polymethylmethacrylate, phosphoresc. of solute mols., quenching rel. to O₂ diffusion 8=8687
 polyphenyl benzenes, triplet states, zero-field splitting 8=12288
 polyphenyls in n-butanol glass, triplet lifetimes and T-T extinction coeff., obs. 8=23071
 polystyrene:anthracene:chloranil fluoresc. obs. 8=9261
 polystyrene, organic cpd. activated, chemiluminesc. obs. 8=23072
 polyvinylthalamide rel. to triplet-triplet energy transfer, 15000-40000 cm⁻¹ 8=12389
 pyrazine, in frozen aq. solvents 8=14342
 pyrazine, Zeeman splitting at 4.2°K 8=14341
 pyrene excimers in rigid matrices at low temp. 8=14339
 pyronine B, by excitation of S → T band 8=5686
 quinoxaline, optical detect. of e. s. r. transitions 8=14343
 rhodamine B, by excitation of S → T band 8=5686
 rigid solns., p-type delayed fluoresc. 8=14291
 scintillating plastic fibres, light-conduction characts. 8=9586
 stilbene crystals with anthracene impurities, quantum output as function of impurities 8=5687
 stilbene, light output under influence of α -particles 8=2495
 styrene scintillators radioluminesc. yield rel. to polymerization, obs. 8=14346
 p-terphenyl in plastics, γ -ray scintillation 8=9656
 tetramethylpyrazine rel. to triplet state struct., 4.2°K 8=22907
 1,1,4,4-tetraphenylbutadiene in polymethyl methacrylate, solid soln., temp. effect on anisotropy 8=9654
 4,4,4-trifluoro-3-hydroxy-3-trifluoromethylbutyrophenone 8=18638
 triphenylene in CCl₄, phosphoresc. rel. to mol. deform. by lattice interactions, 77°K 8=1577
 triphenylene-d₁₂, energy transfer with rhodamine B in rigid soln. 8=9584
 triphenylene, triplet reabsorpt. and e. s. r. 8=9655
 tryptaflavin in lucite, α -phosphoresc. and fluoresc. spectra shift rel. to O and pigment conc. 8=2496

Luminescence chambers

image intensifier application 8=608

Luminescent devices

See also Counters/scintillation.

cathodoluminescent detector for an electron microprobe 8=5689

cathodoluminescent, for distinguishing phase assemblages in reaction system MgO-MgSiO_3 8=18641

electron sensitive resist. 8=14345

fluorescence emission detector with 100 psec time resolution 8=5690

n, fast thermoluminescent 8=20564

n image intensifier tube 8=6954

phosphor screens, replaceable 8=5688

proton scintillator, energy dependence obs. 8=20536

scintillation transmitter resolution meas. by amp.

pulse analyzer, statistical error 8=3460

semiconductor, potential use, capabilities 8=9589

$\text{CaSO}_4(\text{Mn})$ thin film phosphors as thermoluminesc. dosimeters 8=11800

CdS acoustoelec. light scanner 8=5309

GaAs, electroluminescent diode, temp. depend. of recombination lifetimes 8=2222

GaAs spherical recomb. drodes, use as optical

pumping elements 8=23074

GaP:Ge p-n junctions, electroluminescence 8=23073

ZnS electrolumiphors, radiation-controlled enhancement 8=14344

ZnS:Cu phosphor condenser, characts. depend. on props. of crystal barrier layer 8=9657

Lumino(ph)ors. See Luminescence/solids, inorganic;

Luminescence/solids, organic; Luminescent devices.

Lutetium

X-ray L emission spectrum 8=9549

$\text{Lu}^{172} + \text{Hf}^{172}$, positrons, number, in decay 8=11824

Lu^{175} , nuclear dipole moment from hyperfine structure in III spectrum 8=4083

Lutetium compounds

Lu phosphate-vanadates, struct. and luminesc. 8=14330

LuTiBO_6 (B=Nb, Ta, Sb), crystal structure and fluorescence 8=4879

Luxemburg effect. See Electromagnetic wave propagation/ionosphere.

M-centres. See Colour centres.

M-regions. See Sun.

Mach number. See Aerodynamics; Shock waves; Supersonic flow.

Mach's principle. See Relativity.

Macromolecules. See also Molecules/configuration and dimensions, macromolecules; Polymers; Proteins.

antiferromagnetic spin structure in mols. with conjugate bonds 8=21208

aqueous solns, freezing 7=21761

biological, diffusion consts. from scatt. spectra 8=12381

biological one-electron or radical group transfer, e.s.r. study 8=12341

DNA with complexed carcinogen, elec. and optical props. 8=18093

DNA in soln., birefringence relax. 8=16849

DNA, intermolec. interaction energies, MO calc. 8=1318-19

DNA, triplet state 8=4263

macroions of rigid-sphere potentials, potential of average force 8=21203

n-alkane chains, polarizability anisotropy 8=16385

networks, viscoelasticity theory 8=21209

nongaussian chains, light scatt. 8=16386

polynucleotide helices, stability against torsional deform. 8=4268

polynucleotides, singlet energy transfer 8=16334

polynucleotides, synthetic, helix-coil transition 8=16387

ribonucleic acid derivatives, Raman spectra and molec. structure 8=7598

solutions, props. determ. by distillation 8=8018

in soln., X-ray scatt. 8=21205-6

volume effects by Monte-Carlo method 8=4261

Madelung constant. See Solids/structure.

Maggi-Righi-Leduc effect. See Magnetothermal effects.

Magnesium

in alloys, electrographic determ. 8=18762

atom, wavefunctions and oscillator strengths, semi-empirical calc. 8=20959

compression, plane-strain, anisotropy 8=17814

cold-worked, particle size and strain determ. by variance method 8=1761

crystal, electronic structure from optical

properties 8=14239

crystal interband absorpt., 82° and 295°K 8=18545

determination in picomole range by emission photometry 8=9757

Fermi surface from de Haas-van Alphen studies 8=2102-3

fused electrolyte, NaCl, KCl, CaCl_2 additives, elec. cond. and density obs. 8=23143

isoelectronic sequence, spectra, transition probabilities 8=7411

liquid, effective ion-ion potential 8=8237

liquid, wavenumber-dependence of elastic moduli 8=1499

Magnesium—contd

mass ejection by laser pulse 8=8759

muonic K series X-rays 8=1209

oxidation and diffusion removal in Al and Al-Mg alloys 8=18670

quark-atom lines in solar spectrum 8=6718

Rydberg states obs. from electron collision 8=20941

silico-thermal prod., isotopic studies 8=23776

solid solns. in Cu, precipitation of Cu_2Mg 8=4705

stacking fault energy calcs. using pseudopotentials 8=17673

Sun, Mg II resonance line, emission peaks 8=23744

twins, second-order (1011)-(1012) irrational habits 8=4784

vapour discharge, colour change 8=12393

in β -AgMg, stoichiometric, diffusion of Mg 8=17562

Er doped, e.s.r. 8=5531

Mg⁺ e affinity calc. by superposition of configurations 8=21281

Mg I, theoretical multiplet strengths 8=7410

Mg II, H and K lines in solar spectrum, rel. to chromosphere model 8=23707

Mg II reson. lines rel. to photosphere-chromosphere transition zone temp. distrib. 8=19319

Mg II solar line in lower chromosphere 8=2859

Mg⁺, ²F and ²G levels, polarization by outer electron 8=7411

Mg⁺, pseudopotentials 8=7409

Mg III and Mg IV, vacuum ultraviolet spectroscopy 8=1169

Mg²⁺, dipole polarizability from spectra 8=7414

in Ni, evaporation rel. to CO evolution 8=16745

Magnesium compounds

alloy, deform. by hydro-explosive loads 8=17815

alloy, magnetic properties 8=22755

alloys, Mg content, electrographic determ. 8=18762

aluminate spinels, defect structure and mech.

props. 8=22187

binary alloy, isothermal growth of Mn precipitates

in 8=4688

chrysotile asbestos, microfibrils and lattice parameters

from electron microscopy 8=1796

ferrites, Mössbauer power spectra in external mag. field 8=18342

ferrous ferrites, magnetically-induced ordering 8=22857

magnesia, hot-pressed, preferred orientation 8=8375

Magnox ZR-55, heat treated, creep behaviour in

350-450°C range 8=5078

photoelectrons created by soft X-rays, energy

spectra 8=18274

phthalocyanine, luminesc. singlet-singlet transitions 8=18591

vanadate, neutron diffr. determ. of O_2 parameters and degree of conversion 8=8534

Mg-9 wt. % Al alloy, age hardening mechanism and precip. process 8=13683

Mg-Al spinel, plastically deformed, slip parallel to {111} plane 8=17664

MgAl_2O_4 , crystal field theory rel. to optical transition variation with temp. 8=23000

MgAl_2O_4 fibres and platelets, growth and crystal chemistry 8=21956

MgAl_2O_4 , hot-pressed, microstructure and mech. props., quadratic multivariable analysis 8=21991

Mg-Ag, dilute alloy, temp. depend. of impurity resistance 8=5182

$\text{Mg}[\text{B}_3\text{O}_6(\text{OH})_6]_6\text{H}_2\text{O}$, crystal structure 8=13270

Mg-Cd alloys, Cd-rich, diamag. from mag.

susceptibility 8=5431

MgCd , order-disorder transformations obs. by electrical resistance and thermal investigation 8=8271

Mg_3Cd , antiphase boundaries, size, shape and orientation 8=17679

Mg_3Cd , critical resolved shear stress for slip, degree of order dependence 8=5079

Mg_3Cd , order-disorder transformations obs. by electrical resistance and thermal investigation 8=8271

MgCl_2 :Ag, γ -irradiated, e.p.r. and optical spectra 8=9419

MgCl_2 -KCl molten mixtures, absorpt. spectra of Ni centres 8=8086

Mg-Cr-Cu ferrites, mag. permeability tensor, influence of porosity 8=22852

$\text{MgCr}_{2-x}\text{Mn}_x\text{O}_4$, tetragonal distortion of Jahn-Teller type, study by X-ray and neutron diffr. 8=13269

MgCu_2 , Laves structures 8=13071

MgF_2 , F-treated, photocathodes, spectral characts. 8=18281

MgF_2 films, thin, charging with electrons of average energy 8=22505

MgF_2 films, thin, Molter electron emission 8=22732

MgF_2 , lattice dynamics and phonon dispersion relns. 8=13335

MgF_2 and Na_3AlF_6 and CaF_2 , i. r. antireflectant suitability 8=2435

MgF_2 , phonon-terminated stimulated emission and i. r. fluorescence 8=2489

MgF_2 , sintered, effect of additives on density and grain size 8=17026

Mg-Fe ferrites, magnetic diffusion after-effect 8=5491

Mg-Fe mixed hydroxides, and dehydration prods., microstruct. and pore struct., obs. 8=17023

(Mg, Fe)O, (magnesiowustite), oxidation depend. on temp., oxygen press., and crystal composition 8=23108

Magnesium compounds—contd

- MgFe₂O₄, thermal conductivity dependence on anion vacancies (produced by chem. reduction) 8=17543
 MgFe₂O₄, thermal conductivity rel. to non-stoichiometric vacancies 8=8660
 MgFe₂O₄:Sn, Mössbauer effect 8=16980
 MgGa₂, Mn activated, aluminium-substituted, luminescence 8=14325
 MgGa_{2-x}Mn_xO₄, tetragonal distortion of Jahn-Teller type, study by X-ray and neutron diffr. 8=13269
 Mg₂Ge, and selection rules for transitions and intervalley scattering 8=22437
 MgH, (A²Π-X²Σ⁺), oscill. strengths meas. 8=7530
 MgH, solar lines, centre-limb anal. in five photospheric models 8=23697
 Mg-In, energy of order-disorder transformation 8=13072
 Mg-Li, compression, plane-strain, anisotropy 8=17814
 Mg-Mn ferrite composition microinhomogeneities 8=21990
 Mg-Mn ferrites, magnetostriction and mag. anisotropy consts. 8=5492
 Mg-Mn ferrites, Mössbauer spectra in external mag. field 8=18342
 Mg_{0.4}Mn_{0.7}Fe_{1.9}O₄ mag. resonance spectra rel. to sintering temp. effects 8=2342
 Mg_{0.293}Mn_{0.636}Fe_{1.77}O₄:Sn, symmetry round Sn⁴⁺ from Mössbauer effect 8=16980
 MgMn₂O₄, cation migration at high temps 8=4955
 MgNi₂, Laves structures 8=13071
 Mg₂Ni, soft X-ray emission spectra 8=5624
 MgO, absolute structure factor meas. 8=17392
 MgO, addition up to 2% in BeO, rel. to rupture and grain growth props. 8=22315
 MgO, adsorpt. of nitro-cpds. rel. to electron donor props. on surface 8=8343
 MgO aggregates, hot-pressing 8=17816
 MgO, (B¹Σ⁺-X¹Σ⁺), oscill. strengths meas. 8=7530
 MgO bicrystals, transgranular cleavage fracture studies 8=8854
 MgO colour centre production, effect of atomic displacements 8=2011
 MgO containing Ni²⁺, e. s. r. line investigation from spin-phonon interactions 8=5532
 MgO crystallites, from thermal decomposition of Mg cpds., X-ray strain analysis 8=22379
 MgO crystals, Compton scatt. power 8=23012
 MgO, diffusion of Ba rel. to dislocation densities 8=4954
 MgO, doped, thermal conductivity, mag. field depend. 8=13395
 MgO, ductile whiskers, growth 8=13586
 MgO, electrical cond. at low temps. 8=22506
 MgO, grain shape change during creep 8=13584
 MgO, impurity distribution 8=13450
 MgO, Kikuchi band, line in middle, many-beam dynamical theory 8=13272
 MgO, Kikuchi patterns rel. to anomalous absorpt. 8=17362
 MgO, lattice expansion and density decrease rel. to n irr. 8=13249
 MgO, lattice vibration, surface modes 8=17482
 MgO matrix composites, Young's and shear moduli 8=13585
 MgO, mechanical props., high-press. data 8=19342
 MgO, "mirror" absorption, fluorescence 8=9620
 MgO, neutron or γ irradiated, O₂ chemisorption rel. to surface states 8=5724
 MgO, optical props. 8=9550
 MgO, powdered, mag. quenching, "anomalous", of three photon annihilations of positrons 8=17908
 MgO, primary step growth obs. by direct transmission microscopy 8=4789
 MgO, retention of OH 8=1703
 MgO, sintered, fast n-irr., effects on lattice, thermal cond., microstruct., density etc. 8=22245
 MgO, solubility in Al₂O₃ in H₂ atmos., temp. dependence 8=21818
 MgO, specific heat from 1.2 to 36°K and Debye θ 8=22116
 MgO-stabilized ZrO₂, stress relief mechanism 8=17839
 MgO substrate chemical interaction with Nb condensate 8=8326
 MgO surfaces, gas emission 8=2272
 MgO, whisker growth by vapour-liquid-solid mechanism 8=13144
 in MgO-Al₂O₃ system, phases in splat-quenched mets. 8=1677
 MgO-Al₂O₃-Cr₂O₃ system, coherent precip. 8=21848
 3MgO.B₂O₃:Ge:Mn cryst. growth and luminesc. mechanism 8=9621
 MgO:Co²⁺, anisotropy of spin-lattice relax. for Kramers doublets 8=9414
 MgO:Co²⁺, near i.r. fluoresc. and absorpt. 8=23050
 MgO:Cr, hypersound generation using ruby laser 8=10727
 MgO:Cu²⁺, paramagnetic reson. in ²E state, effect of linear Jahn-Teller coupling 8=18402
 MgO:Fe solid solutions, superparamagnetic magnesioferrite precipitate 8=1675
 MgO:Fe²⁺, microwave phonon-impurity ion interactions 8=9450
 MgO:Fe²⁺, Mössbauer effect, low temp. quadrupole splitting 8=13019
 MgO:Fe²⁺, spin lattice relaxation 8=9452

Magnesium compounds—contd

- MgO:Fe²⁺, u. p. r. temp. depend. 8=2367
 MgO-MgSiO₃ system, cathodoluminesc. study of reaction product distrib. 8=18641
 MgO:Mn²⁺, angular depend. of intensities of "forbidden" transitions 8=18430
 MgO:Mn²⁺ paramag. resonance transition probability temp. dependence 8=14113
 MgO:Mn²⁺, stress induced nuclear quadrupole splitting 8=22928
 MgO:Ni²⁺ absorption spectra line shift rel. to temp. 8=2442
 MgO:Ni²⁺, microwave phonon-impurity ion interactions 8=9450
 MgO:Ni²⁺, near i.r. fluoresc. and absorpt. 8=23050
 MgO:V²⁺, Ni²⁺, superexchange interaction between V²⁺ and Ni²⁺ 8=9355
 Mg(OH)₂, reactive hot-pressing 8=5077
 α-Mg₂P₂O₇, crystal structure 8=17367
 Mg-Pb, dilute alloy, temp. depend. of impurity resistance 8=5182
 MgSO₄ aqueous solution sound absorption and velocity, improved method 8=12858
 MgSO₄.7H₂O, epsomite, left form predominance during crystal growth 8=17241
 Mg₂Si, Renninger effect rel. to X-ray reflections 8=13271
 Mg₂Si, and selection rules for transitions and intervalley scattering 8=22437
 in MgSiO₃-CaSiO₃-Al₂O₃, garnet-pyroxene equilib. press. depend. obs. 8=1676
 Mg₂SiO₄ in earth's mantle, temp. and press. for reactions calc. 8=2556
 Mg₂SiO₄, forsterite, growth by flame fusion method 8=17242
 n-Mg₂Sn, piezoresistance at 80-300°K rel. to valence-band structure 8=2204
 Mg₂Sn, and selection rules for transitions and intervalley scattering 8=22437
 Mg-Th, compression, plane-strain, anisotropy 8=17814
 Mg-Th alloy, elastic constants 8=5080
 MgTiO₃, solubility in Al₂O₃ in H₂ atmos., temp. dependence 8=21818
 Mg(UO₂AsO₄).nH₂O, novacekite, e-diffr. meas. 8=17360
 Mg-Zn alloy, dendrite arm spacing and grain size, influence of coarsening 8=4849
 MgZn₂, plastic deformation, dynamic and creep tests 8=5081
 MgZn₂, Laves structures 8=13071
Magnetic amplifiers. See Amplifiers; Magnetic devices.
Magnetic anisotropy. See Magnetic properties of substances; Magnetization state.
Magnetic bays. See Earth/magnetic field, variations; Magnetic storms.
Magnetic bottles. See Magnetic fields; Plasma/confinement.
Magnetic cooling
 cryostat, demagnetization, for Mössbauer effect expts. 8=1642
Magnetic devices
 amplifier, appl. in millivoltage to current converter 8=10831
 amplifier, single-core, output-circuit transmittance 8=6282
 balanced mag. circuit, as memory element, anal. using theory of ratchet writing 8=19753
 character recognizer, sequential, using domain wall motion in Permalloy wire 8=10876
 coincident current store with ferrite core 8=14043
 combining Hall effect and magnetoresistance, design and charact. 8=13839
 Curie converter, thermomechanical 8=3167
 ferrite dev., superhigh freq. for operation in band 8.1-12.4 Gc 8=10939
 ferrite magnetostatic degenerated-type amplifier with resonator coupling 8=358
 ferrite magnetostatic degenerated-type amplifier with waveguide coupling 8=359
 ferromagnetic junction, magnetoresistance 8=18343
 field detector 8=6280
 film memories, multilayer processing techs. 8=19752
 film memory accessed by combined photon and electron beams, proposal 8=19754
 film memory and logic devices, appl. of domain tip propag. 8=13992
 film memory, written by focused light, thermal cycle-time and read bandwidth 8=10874
 gas analyser, magneto-mechanical 8=5758
 generator, without ferromagnetic core for MHD investigations 8=15356
 Hall-effect gyrators, geometrical design considerations rel. to use of only neg. resistance element 8=19751
 Kerr effect app. with polarization azimuth vibrator, for dynamic analog readout 8=19750
 liquid level sensor, magnetostrictive 8=10872
 magnetostrictive vibrators, limit of available mechanical output power 8=18322
 massive circuits, transient behaviour 8=10867
 metal tapes, moving, resulting mag. field distrib. and eddy-current energy losses 8=13957
 mirror, rel. to stochastic acceleration of charged particle 8=15271

Magnetic devices—contd

- parallel-to-serial converter, using domain wall motion in Permalloy films 8=10875
- permalloy films, memory performance and hysteresis in inhomogeneous magnetic field 8=2319
- Permalloy-SiO-Permalloy multilayer films, memory appls. 8=14035
- Permalloy wire dev., domain wall propag. and digital appls. 8=14034
- quadrupole magnetic lens using ceramic magnets 8=3226
- recording head, mag. field meas. using tapes of various coating thickness 8=19746
- recordings detection, magneto-optic, high-density 8=14185
- resonators, ferrite electro-mech. coupling coeff., mech. reson. freq., meas. accuracy 8=9368
- sensor, noise cancelling, for proton magnetometer meas. geomag. field near a.c. lines 8=302
- square cross-section coils, for prod. of uniform mag. fields 8=3162
- superconducting magnets, low-temp. technique, review 8=6225
- tapes of various coating thickness, for meas. of field geometry and strength of recording head 8=19746
- transducers, magnetostrictive, design 8=10873
- transducers, magnetostrictive, electro-mech. coupling coeff., mech. reson. freq., meas. accuracy 8=9368
- variometer, 3-component portable with resolution better than 1% 8=6278
- vibrating coil magnetometer for use below 0.3°K 8=15264
- wideband magneto-optic readout from rotating disc thin film 8=10871
- GdFe garnet wafer, magneto-optic memory element 8=19755

Magnetic domains. See Magnetization state/domains.

Magnetic field measurement

- alternating direction implicit method for grid of long lens spectrometer 8=6337
- betatron, transient, field distrib. 8=16563
- calibration, absolute, generated by small coil 8=10863
- current magnetometer with closed superconductor circuitry 8=15253
- direct plotting method 8=311
- earth's field, meas. from rockets, use of Rb and p magnetometers 8=14720
- electron guns for mapping and tuning 8=15289
- five-wire superconducting probe 8=22574
- fluxgate magnetometer probe, analytic model 8=10861
- Hall effect magnetometer, for small mag. fields 8=3162
- high field, by periodic size effect in Ga 8=3161
- Lorentz microscopy, wave-optical aspects 8=6279
- magnetograph for meas. of Zeeman effect in sun spectrum 8=14865
- magnetometer, fast response, using ferromag. resonance in thin films 8=19744
- magnetometer, transistorized with 10⁻⁴ accuracy 8=19914
- magnetometer, vibrating head, for meas. of transitions in high coercive force films 8=19745
- magnetometer, v.l.f. integrating vibrating sample 8=19743
- magnetometer, wide range, utilizing intensity modulation of transmitted light, optical pumping 8=12085
- meter for remanent rock magnetism 8=10058
- n.m.r., accuracy with strong field modulation 8=3282
- n.m.r. field discriminator 8=15433
- probe, gives audible signal for lab. demonstration 8=10822
- quartz variometer experience 8=23443
- recording head, using tapes of various coating thicknesses 8=19746
- sensitive variation indicator, based on Barkhausen effect 8=15257
- sensor, noise-cancelling, for proton magnetometer geomag. meas. near a.c. lines 8=302
- solar and stellar, review of methods 8=5963
- spinner magnetometer using mag. for shielding to reduce ambient mag. noise 8=14702
- of sweep for field of solenoidal supercond. magnet 8=10869
- torque magnetometer, for use to 4.2°K, design of cryostat 8=15140
- variometer, portable, 3-component with resolution better than 1% 8=6278
- weak field detector 8=6280
- weak fields, possibilities of meas. by optical orientation of atoms 8=20934
- Rb magnetometer using small vapour cells 8=19739

Magnetic fields

- See also Earth/magnetic field; Electromagnetic fields; Interplanetary magnetic fields; Sun/magnetism.
- accelerators, electron loading in tubes, suppression 8=15653
- amplitude modulation of e.m. waves 8=15391
- anomalies arising from horiz. cylinder type bodies, e.m. analog computation 8=18807
- anomalous, rock magnetization vector direction from statistical parameters 8=23449
- bottle for e spin-exchange collisions with H atoms 8=15304
- conducting sphere in alternating field, boundary values, transition from theory to actual values 8=19742
- confinement by ion-beam, geomag. appl. 8=1417
- cylindrical bar magnets, axial field at distance closer than magnet length, calc. 8=19749

Magnetic fields—contd

- cylindrically symmetric, in presence of freely moving particles 8=14966
- deflection, one-dimensional, production and analysis 8=1978
- dipolar, motion of mag. monopole 8=19031
- distributions in running metal tape, and eddy-current energy losses 8=13957
- entry into open shielding cylinders 8=10866
- ferromagnet, and elastic field around dislocation 8=18316
- finite parallel conductors, complex calc. 8=15256
- fluctuation stabilization, study by integration system using temp. variation 8=19740
- flux linkage of mag. thin film with rectangular coupling loop 8=22782
- force-free, relevant to dynamics of stellar shells 8=23509
- Galaxy, meas. method 8=14798
- high, effect on recombination through centres 8=22223
- high, production, field limitations in cylindrical flux compression experiments 8=10862
- high, prod. methods, review 8=306
- homogeneous, detection of conductor movement possibility 8=10344
- interaction with steady-state plasma 8=21286
- leakage, on ferromag. cryst., effect of mag. film 8=2313
- Lorentz microscopy, wave-optical aspects 8=6279
- magnetohydrostatic, application of variation principle 8=305
- magnetosphere and near space, IMP-2 results 8=2832
- modulated, stability of charged particle 8=3178
- multipole, spherical for use in plasma confinement 8=4393
- orbital accelerators, distortion by parasitic currents 8=635
- periodic, focusing and stability of intense electron beams 8=10895
- production, small uniform 8=3165
- pulsed, magnetoelastic waves 8=156
- pulsed, prod. by Si-controlled rectifier switching circuit 8=3164
- pulsed, prod. from electromagnets with variable-spaced helical windings 8=15260
- shaping, use of supercond. shields 8=13769
- slit for momentum definition and beam separation 8=6700
- solar prominences, quiescent, intensity obs. 8=10423
- solenoids, axially symmetrical and rectangular cross sectional, calc. 8=10865
- space anisotropy, soln. by linear sources 8=14936
- strong, of large volume, prod. 8=15255
- structure, analysis rel. to plasma confinement 8=19741
- sunspots field structure 8=2851
- superconducting films, surface parallel critical field, calc. 8=13727
- superconducting strips, flux motion 8=2152
- superconductors, type II, flux motion prod. voltages obs. 8=2149
- susceptibility meas, influence of field profile 8=15252
- synchrotron modifications, guide-field arrangements 8=636
- toroidal, drift of plasma ring 8=21367
- toroidal in stellar radiative zones, stability 8=23507
- transverse homogeneous, heat exchange in turbulent motion 8=12742
- uniform, prod. by system of four square coils 8=3162
- Venus, and Ashen light 8=5958
- waves at plasma-mag. field interface 8=21384
- weak, effect on electron spin echo 8=15429
- Al superconducting cylinders, periodicity in flux quantization expts., temp. depend. 8=22539
- Bi, high, magnetoresistance 8=5172
- Fe₃O₄, hyperfine, rel. to sublattice magnetizations 8=21809
- in Pb superconducting shell, attainment of zero field 8=17990
- Pt-Fe alloys, internal magnetic fields at Pt nuclei 8=2334

effects

- acoustoelectric gain in semiconductors 8=13345
- anthracene, photoconductivity, theory 8=22691
- antiferromagnetism, mol. field treatment 8=14062
- atoms, resonant freq. shifts rel. to electrostatic potentials 8=314
- axial torque on heated cylinder in rarefied gas 8=1320
- p-oxoanisole, nematic, X-ray structure investigations 8=4532
- on boundary layer in m.h.d. flow 8=10922
- crystal lattice, symmetry groups representation 8=5111
- deflection of electron beams, aberration 8=10897
- diffusion after-effects in high-amplitude fields 8=9322
- discrete charges in crossed elec. and mag. fields, rotating ring stability 8=6291
- domain wall velocity, numerical study 8=9321
- elastic wave propag. in conducting plate 8=10708
- electroconducting fluid flow between rough plates 8=8110
- electron beam compression 8=326
- electron beam deflection and spot distortion on target 8=6306
- electron scattering 8=3201
- electron transmission through aperture and R.P.D. technique 8=6312
- electronic conductors, electrons and lattice distribution functions 8=13635

Magnetic fields--contd
effects--contd

electrons, induced emission, moving in const., homogeneous field, exposed to e.m. waves 8=6805
 ferromagnetic single domains, isolated spherical, rotation under varying field and strain 8=13993
 fringing field, focus of spectrograph 8=10920
 gas flow, subsonic with crossed elect. field 8=16659
 gas, partially ionized, e vel. distrib. function 8=12423
 gases, polyatomic, viscosity at 290°K 8=1484
 graphite, linear magnetoresistance in the quantum limit 8=13711
 heat transfer from flat plate 8=19630
 on input transformers of measuring devices 8=10864
 ion beam focusing, theory 8=10919
 interactions in rotating molecule 8=12124
 jet, viscous, infinite σ perturbation effect 8=1518
 on Landau damping in Maxwellian plasma 8=7826
 laminar boundary flow, over dielec. disc 8=4507
 laminas in microtron, vertical focusing props. 8=3495
 light amplification, variable refractive index medium 8=400
 masers, gaseous optical, props. in weak axial fields 8=6410
 metal drop falling in viscous dielectric medium 8=7994
 metals, electron-nuclear relax. at low temps. 8=9449
 m.h.d. flow in expanding pipe 8=6354
 Mössbauer spectra in fluctuating environment 8=13017
 motion of low energy charged particles, perturbing forces effects 8=19052
 nuclear polarization determination by appl. to recoil nucleus stopped by foil 8=3955
 particle accelerator, 4 MV, reduction of e loading and X-ray intensity 8=15650
 Permalloy films, alternating mag. reversal 8=5474
 plasma compression 8=12535
 plasma, containment by closed configurations (toroidal) 8=1411
 plasma, cyclotron-resonance attenuation 8=7744
 plasma, high frequency, instability 8=12564
 plasma, potential surface wave propagation 8=7811
 plasma rarified, shock wave 8=12491
 quantizing, free electron absorpt. of ultrasonics 8=6165
 semiconductor diodes, minority carrier lifetime 8=13853
 semiconductor surface wave propag. and amplification in strong fields, theory 8=9090
 semiconductors, thermomagnetic coeffs. in strong fields, quantum oscs. 8=5426
 semiconductors, tunneling in crossed and parallel elec. and mag. fields 8=5227
 sols, birefringence 8=12878
 on spin density wave, one-band model 8=13980
 steel, quenching, review 8=22343
 stellarator mag. surface destruction by irregularities 8=16562
 superconducting foil, type I, in transverse mag. field, evidence for mixed state 8=17962
 on superconducting quantum interference device 8=17991
 superconductivity by proximity effect, breakdown field dependence 8=13733
 superconductor, type I, rel. to heat transport 8=22544
 superconductors, Ginzburg-Landau eqns. for arbitrary tangential fields, solution 8=9027
 superconductors, h.f. surface resistance, field dependence 8=9035
 superconductors, thin-film, rel. to far-infrared absorpt. 8=22938
 superconductors, type II, vortex structure motion in high field 8=9033
 thermocouples, theory 8=284
 viscosity of dilute diamag. gas 8=12703
 viscous flow under transverse magnetic field 8=6353
 Au₂Mn, magnetization in fields up to 50 kOe at 4.2°K and up to 70 kOe at 80°K 8=9281
 Bi, galvanomagnetic effects 8=8994
 Bi, quantum variation of Fermi level 8=17882
 Bi_{1-x}Cu_xMnO₂ solid solns., mag. props. in pulsed mag. field of 160kOe 8=18330
 CH₄ thermal cond., 290°K 8=4469
 CO thermal cond., 290°K 8=4469
 Ce ethylsulphate, thermal conductivity 8=13393
 Co films, rotating, galvanomagnetic effect 8=17931
 Cr-Ni steel, γ - α transform., pulsed field 8=17063
 EuS, magnetically ordered, rel. to internal field emission, obs. and model 8=5428
 EuSe, magnetically ordered, rel. to internal field emission, obs. and model 8=5428
 Fe, purified, induced oscillations rel. to amplitude-dependent internal friction and modulus defect 8=13557
 Fe-C-Ni-Mn alloys, martensitic transformation 8=17079
 Fe(NH₄)₂(SO₄)₂·6H₂O, isothermal dissoln. and growth 8=8411
 α -Fe₂O₃, magnetization in fields up to 80 kOe from 4.2-290°K 8=9281
 Fe₃S₈, magnetization in fields up to 90 kOe at 1.2°K, 201°K and room temperature 8=9281
 GaAs, absorption edge shift 8=9531
 n-GaAs, circularly polarized waves, doping rel. to optical absorpt. 8=22981

Magnetic fields--contd
effects--contd

Ge p-n junction at 77°K 8=18112
 n-Ge, on I-V characts. 8=13808
 Ge, photon-assisted magnetotunneling in parallel and crossed, elec. and mag. fields 8=5260
 He³ liquid, zero sound propagation 8=3120
 on He-Ne laser output 8=15468
 He-Ne laser, power output 8=3320
 He-Ne laser, resonance dips in output 8=11065
 In films, longitudinal magnetomorphic effects 8=5430
 InSb acoustic amplifiers, d.c. power dissipation reduction at max. gain 8=13355
 InSb laser, mode spectrum 8=11105
 InSb, n-type, microwave detection props. 8=2224
 InSb, polaron induced anomalies in interband magneto-absorpt., Coulomb effect 8=22818
 InSb, rel. to shallow donor levels 8=22462
 KAl(SO₄)₂·12H₂O, isothermal dissoln. and growth 8=8411
 KBr, electron transport props. in high fields at low temps. 8=2264
 KCl and KF, dichroism circular, of R₂ band 8=14235
 Mg ferrites, on Mössbauer spectra 8=18342
 Mg-Mn ferrites, on Mössbauer spectra 8=18342
 Mg-Mn ferrites, strong, impulse mag. reversal 8=9380
 MgO, doped, thermal conductivity, depend. 8=13395
 MgO, powdered, quenching, "anomalous", of three photon annihilations of positrons 8=17908
 Mn ferrites, on Mössbauer spectra 8=18342
 Mn_{2-x}Cr_xSb(x > 0.035), antiferromagnetic-ferromagnetic transition 8=9282
 MnHg magnetization in fields up to 100 kOe at dry ice temperature, room temperature and liquid air temperature 8=9281
 N₂ thermal cond., 290°K 8=4469
 NO thermal cond., 290°K 8=4469
 Nb, superconducting, u.s. attenuation depend. 8=17503
 Nb-25%Zr supercond. wires carrying a.c. 8=5208
 Ni, dynamic ΔE effect frequency dependence in weak mag. field 8=2065
 Ni(NiO) films, anisotropy in electrical resistance 8=5166
 Ni-Co alloys, uniaxial anisotropy by electron irradiation 8=5479
 O₂ thermal cond., 290°K 8=4469
 Pb, superconducting, depairing effect, microwave absorpt. in surface-sheath regime 8=13760
 Sm¹⁵⁰ in ferromagnetic lattices 8=2335
 Sn, superconducting films, thermal conductivity 8=22137

Magnetic films
 ageing problem, analytic solution 8=22784
 anisotropy field, low-freq. meas., appl. to automation 8=18325
 diagonalization procedure for Hamiltonian 8=5459
 domain structure in uniaxial thin films 8=14002
 double layer of different chem. comp., props. 8=9332
 double layer, separated by a dielectric, magnetic reversal quasi-statistical analysis 8=5458
 effect on leakage mag. field, on ferromag. cryst. 8=2313
 ferromagnetic, complex susceptibility 8=22786
 ferromagnetic, effect of superconducting screen on relative stability of Bloch and Neel walls 8=18327
 ferromagnetic, electrolytically deposited, growth rates and structure characts. 8=13999
 ferromagnetic, electron diffraction images from single and periodic domain structs. 8=22772
 ferromagnetic, ferromag. resonance, theory rel. to boundary conditions 8=18394
 ferromagnetic, inhomogeneity of magnetization calc. 8=2311
 ferromagnetic, magnetization inversion by Barkhausen-Cisman-Brion method, e.m. aspect 8=22781
 ferro, magnetization ripple theory 8=22785
 ferromagnetic, model including interactions between regions 8=14003
 ferromagnetic, resonance, due to hypersound in substrate 8=1841
 ferromag. resonance, use in fast response magnetometer 8=19744
 ferromagnetic, sputtered, controlled crystalline orientation rel. to coercive force 8=9333
 ferromagnetic, with surface anisotropy, spin-wave theory 8=5456
 ferromagnetic, susceptibility tensor under spin-wave resonance excitation 8=9330
 flux linkage of thin film with rectangular coupling loop 8=22782
 of high coercive force, meas. of mag. transitions with vib. head magnetometer 8=19745
 Lorentz microscopy, wave-optical aspects 8=6279
 magnetic structure and ferromagnetic resonance 8=22787
 magnetite on Fe, tensile fracture 8=21875
 magneto-optical transmission convertivity optimization 8=518
 memory accessed by combined photon and electron beams, proposal 8=19754
 memory devices, multilayer processing techs. 8=19752
 memory systems, written by focused light, thermal cycle-time and read bandwidth 8=10874
 multi-domain, demagnetising field rel. to ferromag. reson. condns. 8=22783

Magnetic films—contd

- with non-planar surfaces, determ. of magnetization and field distrib. 8=14000
- Permalloy, anisotropy, effect of defects caused by plastic deform. 8=14031
- permally, deposited on silicon grease over glass substrate, props. 8=2331
- permally deposition with varying degrees of anisotropy 8=21885
- permally, domain wall obs. by pulse technique 8=9364
- Permalloy, evaporated, influence of residual gases and metal bases on props. 8=5476
- Permalloy films hysteresis, effect of deposition conditions 8=14032
- permally, "flash-evaporated", standing spin-wave resonance 8=14083
- Permalloy, hysteresis, effect of deposition conditions 8=14032
- Permalloy, large-angle flux reversal meas., eddy-current-free 8=14030
- Permalloy, mag. reversal in alternating mag. field 8=5474
- permally, memory performance and hysteresis in inhomogeneous magnetic field 8=2319
- permally, r.f. reflecto-polarimetry 8=9409
- Permalloy, rotational hysteresis, temp. depend. 8=22823
- Permalloy-SiO-Permalloy multilayers, memory device appls. 8=14035
- Permalloy, worm motion of domain walls 8=14028
- polycrystalline, magnetization ripple wavelength 8=18326
- properties and applications 8=22780
- on silicon grease over glass substrate, hysteresis 8=2331
- spatial distribution of spontaneous magnetization, contribution 8=22779
- spin-wave resonance, nonuniform magnetization models in theory 8=14080
- stripe domains, electron mirror microscopy study 8=22778

 liquid metals, spin-orbit coupling 8=13969
 methane, susceptibility and proton shielding 8=7584
 platinum metals (i.e. Ru, Rh, Pd, Pt, Ir, Os), specific mag. susceptibility 8=5439
 rare-earth garnets, susceptibilities meas. 0.6-4.2°K 8=9298
 rare-earth hexaborides 8=5438
 rare-earth-zinc intermetallic compounds, susceptibilities 8=2298
 spin diffusion in paramag. temp. range 8=9318
 taurine, susceptibility, e.p.r. 8=5540
 Würster's blue perchlorate, susceptibility and transition heat rel. to triplet excitons 8=22763
 Ag-Au alloys, Pauli spin susceptibility, electron states variation, electronic sp. ht. 8=13970
 Ce ethyl sulphate, Schottky anomaly and spin-phonon coupling 8=8636
 Ce ethyl sulphate, spin-phonon scatt. in mag. field rel. to thermal cond. 8=13393
 CeCl₃, susceptibility meas. 1.07-4.2°K 8=14097
 Co in Pd and Pt, giant moments, theory 8=9302
 Cr halides (CrBr₃ and CrF₃), exchange integrals by neutron scattering 8=13971
 Cr-Mn alloys susceptibility rel. to band struct., obs. 8=22759

Magnetic properties of substances—contd paramagnetic—contd

- Cr-Os alloys susceptibility rel. to band struct., obs. 8=22759
Cr-Ru alloys susceptibility rel. to band struct., obs. 8=22759
Cr_{1-x}Te_{1+x} alloys, Hall effects and susceptibilities 8=9300
Cr₂O₃-Al₂O₃ solid solns., susceptibility 8=13972
Cu solid solns., with Ti, V, Cr and Mn, localized moments 8=22760
Cu-Au alloys, α -phase, Pauli spin susceptibility, electron states variation, electronic sp. ht. 8=13970
Cu-Zn alloys with (Cr, Mn, Fe, Co) impurities 8=9339
Dy-Al-garnet, hyperfine splitting of lowest 2' state of Dy 8=9301
ErCl₃·6H₂O, hyperfine splitting of lowest 2' state of Er 8=9301
Eu chelates 8=9306
Fe in Pd and Pt, giant moments, theory 8=9302
Fe-Mn alloys, susceptibility of martensitic phases 8=9304
FeNH₄(SO₄)₂·12 H₂O, sp. ht. and susceptibility calcs. at very low temps. 8=13370
Fe₂O₃-Al₂O₃ solid solns., susceptibility 8=13972
 α -FeOOH antiferro-paramag. transition temp., e. s. r. obs. 8=22879
Ga-Fe system, moments, above room temp. 8=22817
K₃Fe(CN)₆, hyperfine structure of Mössbauer spectra 8=16986
K₂MoCl₃ magnetization rel. to mag. structure, 1-300°K 8=2297
La-Ce alloys, impurity effect on superconducting transition temp. 8=9303
La-Gd alloys, impurity effect on superconducting transition temp. 8=9303
La₂Mg₃(NO₃)₁₂·24H₂O impurities, effect on proton dynamic polarization 8=14147
MTiO₃, (M=Mn, Fe, Co and Ni), susceptibility and resonance meas. 8=9398
MTiO₃, (M=Mn, Fe, Co and Ni), theoretical interpretation 8=9399
Mn steel, susceptibility of martensitic phases 8=9304
Mn-Ni system, crystal and mag. structures rel. to phase transformation 8=17088
MnYb₂S₄, a spinel, and structural study 8=5436
Mo-Fe solid soln., below 300°C 8=22749
MoO₃ in TiO₂, solid solutions, susceptibility 8=13963
Mo-Re alloys susceptibility rel. to band struct., obs. 8=22759
NaBrO₃, γ -irrad., form. of paramag. centres 8=2372
Na₂Mn₂Si₂O₇, susceptibility and validity of Curie-Weiss law from 100-300°K 8=9292
Nb-Re alloys susceptibility rel. to band struct., obs. 8=22759
Nb₃Sn, normal-state, susceptibility temp. depend. rel. to Fermi level motion 8=5118
Nd ethyl sulphate, Faraday effect, mag. resonance saturation 8=14278
NH₄(Fe, Al)(SO₄)₂·12H₂O, Mossbauer-effect study of electronic relax. 8=21812
Ni, density of states from soft-X-ray analysis 8=8940
Ni₄/3Fe₂/3 coprecipitate, and structure 8=23078
Pd, magnetic moment data, limits of exchange enhancements, 4.2°K 8=13973
Pd-Ni alloys, s-electron-paramagnon scattering 8=9015
Pd-Ni alloys, specific heat, paramagnon mass enhancement theory 8=17524
Pd-Ni alloys, susceptibility enhancement and sp. ht. obs. 8=18300
PdNi alloys, thermoelectric power anomalies 8=13904
PrH₂ 8=22761
RbCoF₃, spin-density oscillation in space at T > 96°K, by n.m.r. meas. 8=18472
SeO₄(NH₄)₂, γ -irrad., form. of paramag. centres 8=9305
Si powders, paramagnetic centres 8=22762
Tb ferromag. to paramag. phase transition 8=18352
TiO₂·V⁴⁺, multiple electron-spin echoes by interaction with dielectric modes 8=22657
UP₂, P³¹ Knight shift meas. 8=5564
UP₂, P³¹ Knight shift temp. dependence 8=5563
U₃P₄, P³¹ Knight shift meas. 8=5564
USe₂, $\Theta_c < 0$, susceptibility 8=5440
U₃S₅, $\Theta_c < 0$, susceptibility 8=5440
USn₃, susceptibility and Sn¹¹⁹ n.m.r. rel. to interband mixing effects 8=18474
V₃Ga, normal-state, susceptibility temp. depend. rel. to Fermi level motion 8=5118
V₃Si, normal-state, susceptibility temp. depend. rel. to Fermi level motion 8=5118
Y crystals, susceptibility temp. dependence, 80-300°K 8=18303
Y-Tb alloys, susceptibility meas. and Curie constant analysis 8=2299
YbCl₃·6H₂O, hyperfine splitting of lowest 2' state of Yb 8=9301

transitions

- austenite in Fe-Ni alloys, effect of C on Curie pt. 8=18336
in ferromagnets, effect of non-mag. impurities 8=5444

Magnetic properties of substances—contd transitions—contd

- ilmenites, Curie point from thermomag. plot 8=18324
metallic surface, oscillations of impedance, quantum spectroscopy 8=2094
Ca₂Fe₂O₃, Néel temp. 8=5499
CoCl₂·6H₂O, antiferro-paramag. at low temps. 8=9392
CoCl₂·6H₂O, antiferro-paramag. transition rel. to Fisher's relation 8=9393
Cr Néel temp. press. depend. and itinerant antiferromagnetism, obs. 8=5500
Cu(HCOO)₂·4H₂O crystal, antiferromagnetic at 60°K, possibility 8=5501
DyFeO₃, antiferromag. ordering, at liq. He temps. 8=9375
EuPd₂, Curie temp. determ. and hyperfine field studies by Mossbauer e.p.r. and n.m.r. 8=18334
EuPt₂, Curie temp. determ. and hyperfine field studies by Mossbauer e.p.r. and n.m.r. 8=18334
EuZn₂, Néel temp. determ. and hyperfine field studies by Mossbauer e.p.r. and n.m.r. 8=18334
Fe-Mn-As system, first order ferrimag. to antiferromag., temp. dependence 8=9376
Fe-Ni(35 wt. %)-Cr(0-20 wt. %) alloys (in cold worked state) Curie temperature 8=9006
Fe-Rh alloys, antiferro-ferromagnetic, rel. lattice parameter changes 8=9395
 α -Fe₂O₃, antiferromagnetic-ferromagnetic with magnetic field and Morin point entropy change 8=9281
 α -Fe₂O₃, antiferro. to weakly mag., obs. by magnetization in pulsed fields 8=5503
FeCl₂, metamag., at 4.2°K and hysteresis 8=9396
Fe(Pd_{1-x})₃ alloys, antiferro-ferro, neutron-diffraction study 8=5465
Ga, near 1.7°K, absence, from sp. heat meas. 8=1871
M Mn₂N, (perovskite, M=metal), first order, and mag. struct. 8=22742
MnBr₂·4H₂O, antiferro-paramag. at low temps. 8=9392
Mn-Ni system, para-antiferromag., rel. to phase structure transforms. 8=17088
Mn-Pd alloys, structural and mag. props. rel. to compos. 8=4714
Mn_{2-x}Cr_xSb₂ (x > 0.035), antiferromagnetic-ferrimagnetic with magnetic field 8=9281
Mn₂GaC_{1-x}, antiferro-ferro, transition at 150°K, rel. to non-stoichiometry 8=22819
Mn₃Pt, first-order mag. transformation, X-ray and susceptibility study 8=18382
Ni ferro-paramag., photostimulated exoelectron emission obs. 8=2273
NiO antiferro-paramag., photostimulated exoelectron emission obs. 8=2273
NiO, Co⁵⁷-doped, in ultrafine particles rel. to Mössbauer spectra 8=4680
NiS, pressure dependence from elec. resistivity meas. 8=22885
Pd-Mn alloys, structural and mag. props. rel. to compos. 8=4714
RbCoF₃, T_N \approx 96°K from n.m.r. meas. 8=18472
RbNiF₃ structure crystals, ordering 8=5482
Tb, ferromag. to paramag., neutron diffraction study 8=18352
TbCu_{1-x}Zn_x alloys, antiferro-ferromag., on increasing Zn conc. 8=14073
TbFeO₃, antiferromag. ordering, at liq. He temps. 8=9375
US, ferromag. transition 8=22848
YFe₂Al₆O₃ crystal, antiferro-ferromag. over 602-600°K 8=14074
YFe garnet, Ga substituted, in spheres and powders, determ. of Curie points 8=18367
YFe garnet, in spheres and powders, determ. of Curie points 8=18367
Y-Tb alloys, Néel point deviations 8=2299
ZnWO₄·Mn, to antiferromag., e.p.r. obs., 4.2-77°K 8=5535

- Au₂Mn, up to 50 kOe at 4.2°K and up to 70 kOe at 80°K 8=9281
- Co film on Cu, magnetization under circular alternating and longitudinal static fields 8=9335
- Cr/Co layered films, high coercive force, for storage medium in digital recording 8=14009
- CuFe alloy, magnetic field and temp. depend. 8=5178
- CuMn alloy, magnetic field and temp. depend. 8=5178
- Fe powder dispersed in perspex, anhysteretic curves 8=5470
- Fe-whiskers, nucleation mag. field strength investigations 8=5467
- FeCl₂·2H₂O, antiferromag., from exchange interaction study 8=2349
- α-Fe₂O₃, in pulsed fields to 140 kOe, rel. to antiferro. to weakly mag. transition 8=5503
- Fe₂S₈, up to 90 kOe at 1.2°K, 201°K and room temperature 8=9281
- Fe₂Se₃, rel. to magnetocryst. anisotropy const. 8=2321
- In in porous glass, superconductor, flux jumping 8=2163
- Li_{0.5}Cr_{1.25}Fe_{0.25}O₄, spontaneous, rel. to compensation temp. 8=14049
- Mg-Mn ferrites, impulse reversal in strong fields 8=9380
- MnHg, up to 100 kOe at dry ice temperature, room temperature and liquid air temperature 8=9281
- Mn(NH₄)₂(SO₄)₂·6H₂O, 1°-4°K 8=17520
- Mo-Fe solid soln., susceptibility 8=22749
- Nb, mag. flux lines—dislocations interaction, 4.2°K 8=22210
- Nb, superconducting, flux penetration and a. c. losses 8=5210
- Nb, superconducting, rel. to n-irradiation 8=2169
- Ni, dynamic ΔE effect frequency dependence in weak mag. field 8=2065
- Ni, reversible and irreversible temp. dependence 8=14025
- Ni saturation magnetization, temp. depend., applic. of demagnetizing field technique 8=22834
- Ni-Fe films, dynamic energy losses during magnetization reversal 8=14029
- NiFe₂O₄ ferrite obs. in 14-600°C 8=5494
- NiSiF₆·6H₂O, isothermal work, 0.05°-4.2°K 8=8641
- R_xM_{1-x}Al₂(R=Gd, Tb, Er and M=Y, La, Th) cubic Laves phases, and Curie temps. 8=14039
- Si-Fe, freq. depend. of mag. reversal mechanism 8=5484
- TmFeO₃, hysteresis loop study of temp. induced spin flop 8=14048
- YFe garnet, Al and Ga substituted, heat treatment effects 8=14055
- (Zr_{0.6}Nb_{0.4})Fe₂, Laves struct., anomalous behaviour 8=2295
- ZrZn₂, itinerant electron model of ferro-magnetism 8=2336

Magnetization state

- AlNi Al, magnetization coercive field strength, time- and temp.-depend. 8=5460
- Brillouin function and spontaneous magnetization table for J=1/2 to 7/2 and J=∞ 8=9328
- electron gas, polarized free, spin density oscillations 8=22482
- elementary, excitations in mag. crystal with strong crystalline field 8=22770
- ferrites, dilute solid solns., saturation, and Néel temp. 8=9369
- ferromagnetic materials subject to magnetostriction, calc. 8=13998
- ferromagnetic metal, particle contrib. and assoc. differential suscept. 8=22764
- film, anisotropy field, low-freq. meas., appl. to automation 8=18325
- films, ferromagnetic with surface anisotropy spin-wave theory 8=5456
- films, thin ferromagnetic, inhomogeneity calc. 8=2311

Magnetization state—contd

- films, thin, rel. to spatial distrib. of spontaneous mag. 8=22779
 - helicoidal structures, coupled e.m., plasma, and spin waves 8=18307
 - Ising ferromagnets, high-temp. absence of spontaneous magnetization 8=18304
 - localized mag. impurities, spin polarization 8=18317
 - Lorentz microscopy, wave-optical aspects rel. to domain and ripple problems 8=6279
 - magnetic films with non-planar surfaces, equilib. state 8=14000
 - magnetic tapes, storage capacity improvement through anisotropic props. 8=5457
 - microwave-induced change, approximations 8=13955
 - non-linear, susceptibility 8=2287
 - periodic magnetic structures and phase transitions 8=1399
 - polycrystalline films, ripple wavelength 8=18326
 - pressurized materials, meas. 8=13952
 - rare earth Fe garnets, intrinsic coercive force near compensation temp. (>77°K) 8=14005
 - rocks, igneous, remanent at low temp. 8=2755
 - Shubnikov groups, three dimensional periodic mag. structure 8=8367
 - spinel ferrites, orientation superstructures and their effects 8=14046
 - structure analysis, space group representation 8=13951
 - sublattices, mol. field soln. uniqueness 8=14042
 - superstructures in reciprocal space by n-diff. method 8=18293
 - 3-dimensional structures described by Shubnikov groups 8=13956
 - trivalent heavy rare-earth ions, anisotropy in high mag. fields 8=2293
 - BaFe₁₂O₁₉, complex permeability and mag. loss in cm. and mm.-wave range 8=5489
 - Co, transmission of polarized n 8=2031
 - Cu-Fe alloy, rel. to existence of antiferromag. coupled bound state 8=22519
 - Fe, resistivity, and rel. to temp. 8=13716
 - Fe-rich alloys, with various transition elements 8=22811
 - Fe-whiskers, nucleation mag. field strength investigations 8=5467
 - Fe, (Al, Ga, Si, Ge, Sn, Sb) impurities, magnetization distribution 8=9349
 - Fe-Ni-Cr alloys, ang. depend. of phenomena in interacting particle chains 8=5429
 - β- and δ-FeOOH, and mag. susceptibility 8=22747
 - Fe₂O₃ (hematite), rel. to temp. 8=5469
 - Fe₃O₄, hyperfine mag. fields rel. to sublattice magnetizations 8=21809
 - Gd-Y alloys, temp. depend., and props. 8=5472
 - I. Pb type II superconductor, and magnetostriction 8=22548
 - Li_{0.5}Fe_{2-x}Al_{0.5}O₄ (0<x<1), mag. moments and mol. field coeffs. 8=9378
 - Ni, transmission of polarized n 8=2031
 - Ni-Co alloys, uniaxial anisotropy 8=5479
 - NiMn₂O₄ single crystals. 8=21959
 - Ni₂Mn, intermed. ordered, mag. field induced anisotropy 8=2327
 - PrC₂, antiferromag. structure 8=18386
 - TbC₂, antiferromag. structure 8=18386
 - TmFeO₃, antiferromag. ordering, variation with temp., 1.6°K-94°K 8=22859
 - ZrZn₂, particle contrib. and assoc. differential suscept. 8=22764
- domains**
- antiferromagnets, canted, orthorhombic, domain-wall motion anal. 8=14059
 - Bloch-type, periodic structures 8=2310
 - Bloch walls in ferromag. b.c.c. crystals, variational calc. 8=2308
 - Bloch walls in ferromag. f.c.c. crystals, variational calc. 8=2309
 - Bloch walls, properties, application of statistical interpretation 8=13989
 - boundary energy, rel. to angle between magnetizations 8=22776
 - channeled tip propag., threshold, rel. to memory and logic devices 8=13992
 - electron diffraction images from single walls and periodic structs. 8=22772
 - ferrites, boundary shift resonance 8=5512
 - ferrites, magnetic walls, nucleation 8=2339
 - ferromagnetic film, effect of superconducting screen on relative stability of Bloch and Neel walls 8=18327
 - ferromagnetic particle with high uniaxial anisotropy 8=22773
 - ferromagnetic, single isolated spherical, rotation under varying mag. field and strain 8=13993
 - ferromagnetics and superconductors, structure, theory 8=13742
 - in films, demagnetizing field rel. to ferromag. reson. condns. 8=22783
 - films, double layer of different chem. comp., mag. props. 8=9332
 - films, thin uniaxial 8=14002
 - fixed and mobile in crystal with induced anisotropy, origin and consequences 8=5449

Magnetization state—contd

domains—contd

- iron losses, low freq., rel. to coercive force, wall eqn. 8=22777
- Kerr technique improved for domain obs. 8=9323
- observation, direct, by scanning e microscopy 8=18315
- 180°-wall energy due to magnetic-diffusion after-effects, calc. 8=9322
- particle, single, temp. depend. of props. 8=22775
- Permalloy, electron diffraction obs. 8=22824
- Permalloy films, mag. reversal in alternating mag. field 8=5474
- permalloy films, obs. by pulse technique 8=9364
- Permalloy films, worm motion of domain walls 8=14028
- Permalloy wire devices, domain wall propag. and digital appls. 8=14034
- review 8=18313
- semiconductors, negative differential cond., slowly propagating high-field 8=13777
- single-, elongated, particles, reversal mechanisms 8=5453
- stripe, electron mirror microscopy study 8=22778
- structure and mag. field obs. with scanning electron microscope 8=13991
- transition temp. of magnetization rel. to domain structure 8=9324
- walls, bulges and curvature under influence of applied easy axis field 8=18314
- wall velocity in applied magnetic field, numerical study 8=9321
- Weiss, mean susceptibility matrix calc. 8=13995
- Co foils, ferromagnetic domain width depend. on thickness 8=22791
- Fe particles, for magnetostatic accretion 8=23632
- Fe powder dispersed in perspex 8=5470
- Fe-50%Ni mag. props., metallic impurities effects rel. to wall trapping, obs. 8=22825
- Fe-3%Si, grain-oriented, hysteresis and eddy current losses rel. to wall motion, obs. 8=22842
- Fe-Si, grain-oriented, wall mobilities rel. to alternating field freq., obs. 8=22841
- Fe-Si sheet, rel. to mag. freq., and initial permeab. depend. 8=5464
- Fe-3wt.%Si single crystals, rel. to X-ray interference fringes 8=22021
- $\alpha\text{Fe}_2\text{O}_3$ crystals, n. m. r. obs. 8=5557
- Fe_3O_4 , fine grained, coercivity rel. to edge dislocations 8=9343
- Gd, internal friction, obs., torsional damping effect 8=14020
- HgCr_2S_4 , and metamagnetism 8=18340
- MnO, axially cooled or stressed, anisotropy from torque meas. 8=14072
- Ni, Bloch-wall-friction model, rel. to Rayleigh-region 8=5481
- Ni cylindrical crystals, (100) axis, ferromag. basic structure, investigations 8=14038
- Ni cylindrical crystals, (110) axis, closure-domain structure, investigations 8=14037
- Ni-Fe double films, domain wall motion 8=2329
- Ni-Fe films, wall pinning effects on bias susceptibility meas. 8=14026
- Ni-Fe, magnetic thin films, thickness dependence of wall energy 8=18346
- 77Ni-14Fe-5Cu-4Mo wt. %, wall surface energy rel. to mag. props. sheet thickness depend. 8=22827
- NiO, axially cooled or stressed, anisotropy from torque meas. 8=14072
- NiO, rhombohedral distortion, antiferromagnetic ordering 8=5507
- Si-steel, sample prep. for domain struct. meas. 8=22840
- Si-Fe, freq. depend. of mag. reversal mechanism 8=5484
- YFe garnet, configs. and cryst. defects effects, obs. 8=22863
- YIG crystal, ferrimag. reson., influence of structure 8=5513
- YFe interaction of microwave phonons with domain walls 8=22087
- Magnetoacoustic effects**
- ferroacoustic resonance, theory 8=4918
- ferro- and antiferromagnetics, nuclear magneto-acoustic resonance 8=22916
- ferromagnet, u.s. attenuation near transition temp., phonon interact. with spin system 8=18323
- Landau quantization near singular or saddle point 8=22439
- magnetic materials, excitation of rf resons. and echoes 8=17493
- magnetophonon resonance, influence of optical phonon heating 8=8622
- plasma excitation, non-linear by magnetoacoustic resonance 8=21333
- plasma oscills., ion heating 8=7824
- plasma waves, instability 8=21390
- resonance, double electron-nuclear, at local electron centres 8=8623
- resonance effects in metals in inclined mag. fields 8=1844
- sound attenuation near critical points 8=13344
- Al alloy, frequency and damping change, structural and impurity dependent 8=8624
- Al, u.s. shearwave attenuation and rot. in mag. field 8=17497

Magnetoacoustic effects—contd

- Bi, microwave phase velocity obs. 8=22097
- Bi, u.s. attenuation, amplitude of giant quantum oscs. 8=1848
- Bi and Bi alloys, magnetoacoustic attenuation, $\text{Fe}^{1,2-4,2}\text{K}$ 8=13659
- $\text{Fe}^{1,2-4,2}\text{K}$ in MgO , u. p. r. temp. depend. 8=2367
- Ga, Fermi surface study, by u.s. geometric reson. 8=8935
- InSb, rel. to acoustoelec. domain form. and amplifiers d.c. loss mag. fields effect 8=13355
- K, shear wave 8=22105
- Li donors in Si, acoustic paramagnetic resonance 8=9443
- $\alpha\text{-Mn}$, ultrasonic attenuation in vicinity of Néel point 8=17501
- NaCl , plastically deformed, acoustic n. m. r. 8=5561
- Ni-Co-Mn ferrites, shifting of u.s. vel. minima due to mag. polarization changes 8=8632
- YFe garnet single crystal, resonance obs. 8=22891
- Magnetocaloric effects.** See Magnetoenthal effects.
- Magnetocrystalline anisotropy.** See Magnetic properties of substances; Magnetization state.
- Magnetoelastic effects.** See Magnetomechanical effects.
- Magnetoelectric effects**
- See also Hall effect; Magnetoresistance.

- direct convertor, molten metal mixing, thermodynamics of cycles 8=294

Magnetohydrodynamics—contd

discontinuities in the presence of electric fields 8=15360
 drag in conducting fluid with aligned field, obs. 8=6349
 dragging motion of a liquid by plane walls 8=10926
 dynamos, nearly symm., Braginskii result true to second approx. 8=10097
 earth's core, surface fluid motion rel. to secular mag. field changes 8=2724
 earth's core, surface fluid velocity rel. to mag. field 8=5813
 earths mag. field, dynamo model 8=23427
 electric and m. h. d. currents in pipes 8=6347
 electroconducting fluid flow between rough plates 8=8110
 electrohydrodynamic waves in super-permeable media 8=10925
 electrolytic turbulent flow, temp. fluctuation meas. 8=356
 engines, rel. to electrical conductivity of ionized gases 8=4487
 engine with liquid Na 8=289
 equations, class of exact solns. 8=19808
 eqns., invariant soln. 8=6344
 ferromagnetic colloidal suspension, mag. field prod. rotation 8=16622
 field diffusion into moving conductor 8=3237
 flat channel flow, current and pot. distrib. 8=15366
 flow in cylindrical pipes with non-uniform mag. field 8=19810
 flow, discontinuous one dimensional non-dissipative 8=15375
 flow distortion by strong Hall effect and effect on power generation 8=15381
 flow in expanding pipe, magnetic field effect 8=6354
 flow, one dimensional, and Monge-Ampère eqn. 8=19812
 flow through a pipe, coefficients of resistance 8=16753
 flow in quasi-aligned fields 8=10924
 flow, quasi-unidimensional, stability of transverse oscillations 8=349
 flow, solution for small magnetic interaction 8=3236
 flow stabilization, heat exchange, in plane channel 8=3240
 flow, subsonic in crossed elect. and mag. fields 8=16659
 fluctuating boundary layer near magnetized plate 8=10922
 fluid, elec. cond., Hall effect for variable mag. field and high Reynolds numbers 8=16614
 fluid with finite conductivity, flow 8=10921
 fluid flow electrically conducting, incompressible near accelerated plate under transverse magnetic field 8=3241
 fluids, incompressible, exact solns. valid for all conductivities and viscosities 8=10928
 galactic proton plasma, anisotropic relativistic, transverse e. m. wave effect 8=5850
 gas conductor in aligned magnetic field with normal magnetogasdynamic shock 8=15375
 gas flows, temp. dependence of elect. conductivity 8=16491
 gas, longitudinal flow stability in crossed E and H fields 8=10923
 gas, partly ionized in mag. field, transport properties 8=10927
 gas, vorticity and current density behind shock wave in unsteady flows 8=6358
 generation, closed cycle, prospects for 8=292
 generation of elect. power, status report 8=15201
 generator boundary flow calc. 8=19725
 generators, combustion fired 8=291
 generators, critical survey 8=290
 generator, effects of electrode ends on flow 8=3155
 generator, elec. conductivity of high-void-fraction two-phase flow, expt. 8=15202-3
 generator, extreme value of voltage 8=6269
 generator, homopolar without ferromagnetic core 8=15356
 generator, induction type, fundamentals 8=6268
 generator, liquid metal, computer efficiency calc. 8=3156
 generators, liquid vein 8=6262
 generator, liquid vein, sliding field 8=6264
 generator, non-equilib. flow of conducting fluid in channel on sudden short-circuiting 8=6267
 generator, power, Li-Cs cycles, 1366°K 8=10837
 generator, pulse, explosively driven lumped-parameter (slug) model 8=10838
 generator, rectangular channel, 2-dimensional flow analysis 8=15209
 generators, review 8=19724
 generator, segmented-electrode, effective cond. 8=15200
 generators from superconducting magnets 8=3166
 generator with water-cooled electrodes, temp. distrib. in channel wall 8=19726
 generator, LaB₆ powder suspension in N₂ as working fluid 8=15199
 half-jet, compressible, inviscid stability 8=354
 heat transfer of flow at flat duct entrance 8=19809
 hydromagnetic energy conversion, thermodynamics of 8=345
 hydromagnetic oscillations of conducting incompressible fluid cylinder 8=19817
 hydrostatic thrust bearing, MHD lubricated, effects of inertia 8=8809
 incompressible flow, group props. of eqns. 8=15357
 induction generator, flat channel, linear, comparison of three analyses 8=15204
 induction machine, general equations of sliding magnetic field 8=15383

Magnetohydrodynamics—contd

interface of ferromag. with non-magnetizable fluid, instability 8=6355
 of interstellar gas-dust medium 8=23579
 ionosphere, hydromagnetic gradient waves 8=14674
 rel. to ionosphere, turbulence at low mag. Reynolds number 8=19813
 jet, flat, stability of 8=15367
 jet, stationary 8=6359
 jet, turbulent, incompressible 8=15377
 jet, 2D, annihilation by transverse mag. field 8=352
 laminar flow thro' conducting parallel porous walls 8=347
 laminar flow, heat exchange, effect of fields 8=348
 liquid, conducting and in turbulent flow, effect of mag. field on heat transfer 8=10930
 liquid, conducting, surrounded by compressible gas, surface waves 8=3243
 liquid conductor in magnetic field aligned with flow with magnetohydraulic jump 8=15375
 liquid phase, alkali metal appl. 8=15384
 liquid, stagnant conducting, flows induced by nonuniform m. h. d. pinch 8=10932
 liquid vein m. h. d. generators 8=15207
 liquid, viscous, flow in porous channel with transverse mag. field 8=15363
 liquid wave, gravity-capillary, in film, effect of transverse mag. field 8=7987
 mag. dipole, nonlinear inflation by plasma 8=10028
 mag. field deformation by conducting-fluid motion 8=6346
 magnetic field enhancement by conducting fluid 8=15380
 magnetogasdynamic accelerator and generator local characts., graphical display 8=15382
 magnetogasdynamic flow round nose of blunt body, influence of Hall effect 8=15378
 magnetohydrodynamic electrical power generation, conference, Salzburg, Austria (1966) 8=15355
 MHD generators, stability of plasma, voltage oscils. 8=15208
 MHD machines, liquid metal, efficiency 8=19727
 mercury in tube in longitudinal mag. field, turbulent flow 8=10933
 metal rotating in magnetic field, heat transfer 8=8054
 nonequilibrium, wave propag. three-dimens. 8=344
 nozzles with end effects 8=6348
 oblique shock waves, stability 8=16456
 pipes, hydraulic resistance 8=15385
 pipe, rough, rectangular, flow 8=15368
 piston, conducting, motion in mag. field 8=15361
 piston, expansion into compressible conducting fluid in mag. field 8=353
 plane jet propagation and damping 8=19807
 plasma column diffusion across uniform mag. field, kinetic theory 8=4341
 plasma model, physical interpretation 8=6342
 plasma stability, influence of initial density and temperature gradients 8=7844
 power generator with peg walls, effect of internal short-circuiting 8=3157
 power plant 8=19728
 proton motion in Alfvén wave field 8=9958
 pumps and flowmeters applications 8=6266
 rarefaction, reflection waves 8=15358
 relativistic, energy-momentum tensor evaluation 8=1536
 relativistic, props. of rays 8=6341
 remote measurement of speed, hydraulic circuit application 8=3235
 resonances, highly asymmetric, guided poloidal mode 8=3
 Reynolds number determ., magnetic 8=6352
 shock and current layer structure in mag. driven tubes 8=6140
 shocks in fluids, transition soln. 8=19805
 shock waves, low intensity, theory 8=6345
 sliding-field liquid-vein generator 8=15205
 in solar wind flowing round comets 8=19262
 spiral flow, over dielec. disc, laminar boundary layer 8=4507
 stars, ionized, thermomagnetic instability and thermodynamic waves 8=10109
 stations, large scale, open cycle, economics and thermal efficiency of 8=293
 steady rotating motions of cond. fluids over rotating disc, influence of general e. m. forces 8=19806
 steady-two-dimensional flow 8=3234
 stellar corona model 8=23506
 stellar mag. field with differential rotations in spherical fluid shell of infinite elect. conduct. 8=23508
 Stokes flow past a circular cylinder 8=15372
 supersonic flow, for blunt bodies 8=355
 T-layer formation processes 8=3244
 thermionic conversion transport processes, effect of mag. field 8=15246
 thin body in perpendicular fields 8=15373
 thin plate, lifting force 8=15365
 thrust bearing, step-type, lubrication flow induced by rot. upper plate 8=351
 turbulence, conservation theorem 8=15379
 turbulence decay, with small mag. Reynolds no. 8=3245
 turbulent flow friction coeff. in ducts 8=6356

Magnetohydrodynamics—contd

- turbulent structure hydromagnetic homogeneous, large scale 8=10929
- turbulence suppression by uniform magnetic field 8=10931
- tuyere, extremity effect of extending magnetic field 8=19816
- two-dimensional motion, finite Reynolds numbers 8=3238
- 2-phase liquid metal devices 8=19729
- unsteady channel flows, osc. characts. under Heaviside-type applied mag. fields 8=19814
- variational principle for hydromagnetic flows 8=15374

Magnetoresistance—contd

- metals, low temp., general theory 8=13644
 n-type semiconductors as function of impurity 8=5226
 narrow layer of open trajectories, rel. to mag. field and temp. depend. 8=5157
 Nernst-Ettingshausen effect relationship 8=9082
 oscillatory, and mag. breakdown by Kubo formula 8=13954
 Permalloy, and effect of 3d orbital degeneracies 8=13724
 semiconductors with edge dislocation, effect of non-uniformity of density 8=13780
 semiconductor films, longit. oscs. rel. to thickness and field strength 8=9074
 semiconductors, high-ohmic, meas. by capacitive method 8=5234
 semiconductors with non-uniform charged ion conc., theory 8=22421
 semiconductors, voltage ratio meas. appl. 8=10821
 Shubnikov-de Haas effect, additional oscillation due to $4\pi M = B - H_0$ 8=22446
 Shubnikov oscillations, resistance jumps, galvanomagnetic charact. 8=22445
 submetallic films, longit. oscs. rel. to thickness and field strength 8=9074
 transverse negative, in low-temp. inelastic scattering by optical phonons 8=8892
 Ag, longitudinal from 4.2 to 35°K, electron scattering effects 8=22511
 Ag single crystals, at 4.2°K 8=8997
 Al, mag. resist. var., 2.5° to 300°K 8=5170
 Al, plastically deformed 99.999% pure, and strain effects, 4.2°K and ≤ 175 kOe 8=17926
 Bi, effect of pressure 8=5173
 Bi, in high mag. field 8=5172
 Bi and Bi alloys, Shubnikov-de Haas effect, 1.2-4.2°K 8=13659
 Bi-Sb alloy, Shubnikov-de Haas effect vanishing under pressure 8=22514
 Bi-Sb, transformation of semiconductor into metal, obs. 8=22581
 Bi_{1-x}Sb_x, (0 < x < 0.15), coeff. meas. at 77°K rel. to band structure 8=22518
 C resistance thermometer, negative magneto-resistance 8=19666
 C resistors at low temp. 8=17929
 n-CdSe, and Hall effect meas. and anal. 8=13796
 CdSnAs₂, n-type, 77° and 300°K obs. 8=5241
 n-CdSnAs₂, in pulsed magnetic field, influence of spin 8=2290
 Co single crystals, up to 1000 Oe 8=8999
 Cu, and transverse effect, rel. to Fermi surface 8=13713
 Cu, longitudinal from 4.2 to 35°K, electron scattering effects 8=22511
 Cu single crystals, at 4.2°K 8=8997
 Cu-Cr alloys, obs. on quasibound state 8=17933
 Cu-Fe alloy, rel. to existence of antiferromag. coupled bound state 8=22519
 CuFe alloy, magnetic field and temp. depend. 8=5178
 CuMn alloy, magnetic field and temp. depend. 8=5178
 p-GaSb, at 4.2°K, valence band studies, and by Hall effect meas. 8=13803
 n-Ge, and hot electron Hall mobility for elec. field along <100> direction 8=18052
 n-Ge, piezomagnetoresistance for mixed scattering mechanism 8=18047
 n-Ge, Shubnikov-de Haas oscillations, 20-80°K 8=18044
 n-HgSe, magnetothermo-e. m. f. magnetoresistance and photomag. effects, meas. 8=5261
 HgSe, oscillatory, beat freq. rel. to inversion asymmetry 8=2100
 HgTe, and Hall coeff. at 4.2 and 77°K rel. to carrier model 8=2200
 In films, longitudinal magnetomorphic effects 8=5430
 InAs, transverse, quantum oscs. 8=13818
 InSb, Corbino, admixture and layer distrib. effects 8=5266
 InSb, n-type, and electrical resistivity, from 4.2°K to 0.1°K 8=5265
 InSb, transverse, quantum oscs. 8=13818
 Ni, low-temp. resistivity 8=17937
 Ni-Cu(0-30.42%) alloys, longitudinal in single crystals up to 1100 Oe at 0°K 8=9013
 Ni-Fe-Cr-Si alloy, 200-300 Å films, obs. 8=5478
 NiFe-SiO-Co multilayer, hysteresis loops rel. to stray-field coupling effects 8=14027
 Pu, α and β , transverse magnetoresistivity 8=2350
 Se, magnetoconductivity rel. to mobility mechanisms 8=18065
 Tl, field dependence up to 150 kG at low temps. 8=5433
 TlCl, transient, of holes 8=9020
- Magnetosphere.** See Atmosphere/upper; Earth/magnetic field.
- Magnetostriction**
 constants for ferrites from ferromagnetic resonance 8=14045
 ferrites, electro-mech. coupling coeff., mech. reson. freq., meas. accuracy 8=9368
 liq. level sensing, appln. 8=10872
 magnetite, anisotropy depend. on hydrostatic press 8=19065
 magnetite, reversible, at high temp. 8=23448

Magnetostriction—contd

- magnetoelastic interactions for infinitely long prism, transform of linear eqns. 8=13997
 meas. method in ferromagnetic materials 8=13998
 metals destruction in magnetostriction oscillator by cavitation and droplet impact 8=22306
 polar crystals, theory 8=22741
 prismatic bar, magnetoelasticity 8=10552
 rare earth Fe garnets, consts. λ_{111} and λ_{100} 8=2322
 transducers, magnetostrictive, design 8=10873
 vibrators, limit of available mechanical output power 8=18322
 Au₂Mn, up to 90 kOe at 0°K and 20°K 8=9281
 CdCr₂Se₄, by ferromag. resonance technique 8=2316
 Ce in YFe garnet 8=2344
 Fe-Ni(35 wt. %)-Cr(0-20 wt. %) alloys (in as-cold worked state), parallel and perpendicular to rolling direction 8=9006
 Fe-Si, grain-oriented transformer sheet 8=22839
 Fe-Si(3%) sheet, oriented, dynamic, under longit. and transverse stresses 8=22812
 InPb type II superconductor, and magnetization 8=22548
 Li ferrite, effect of ion ordering, constants at -170 and +340°K 8=9379
 Mg-Mn ferrites, and mag. anisotropy consts. 8=5492
 MnAu₂ antiferromagnet, spontaneous appearance 8=9400
 Ni films, meas. and obs. 8=18347
 NiFe₂O₄ ferrite obs. in 14-600°K 8=5494
 PbTe, p-type, oscillatory magnetostriction 8=13964
 Si-steel, silicate glass coated, film removal effects rel. to corrosion, obs. 8=22843
 Sm₂V₃-Fe₂O₁₂, anomalies, 4.2-100°K and ≤ 25 kOe 8=18364
 Tm₃Fe₂O₁₂, anomalies, 4.2-100°K and ≤ 25 kOe 8=18364
 Yb in YFe garnet 8=2344
- Magnetothermal effects**
 crystal, Ettingshausen and Nernst coeffs. depend. on magnetic field 8=13635
 ferrites, magnetic anisotropy constants, mag. saturation intensity dependence, temp. effects 8=2338
 ferrites, magnetic anneal relaxation, correlation with ferromagnetic relaxation 8=9407
 ferromagnetic metals, spontaneous Hall and Nernst-Ettingshausen effect 8=9329
 hot-electron gas, galvanomagnetic and thermomagnetic size effects 8=19466
 phonon drag effect contribution 8=5103
 semiconductors, coeffs., quantum oscs. in strong mag. field 8=5426
 semiconductors, phonon-drag Seebeck effect, quantum theory 8=9236
 in superconductors 8=9040
 thermocouple in mag. field 8=284
 thermoelectric semiconducting materials, measuring method 8=9288
 thermogalvanomagnetic phenomena, quantum theory 8=18208
 Bi, magneto-Seebeck effect 80°K, effect of surface recombination 8=18211
 Bi, Nernst effect, increase due to phonon dragging 8=22435
 Cd₂As₂, Righi-Leduc effect meas. 8=9289
 Co, and sp. ht. near Curie temp. 8=9337
 Co during the $e^- \gamma$ phase transition 8=13961
 Cu_{1-x}Mg_xFe₂O₄, on quenching in high oxygen pressure furnace 8=2516
 n-HgSe, magnetothermo-e. m. f., magnetoresistance and photomag. effects, meas. 8=5261
 In films, superconducting, Nernst effect 8=2174
 Mn(NH₄)₂(SO₄)₂·6H₂O, ht. capacity 1°-4°K in mag. fields 8=17520
 Nb, galvanomagnetic props. 8=22682
 Nb, superconducting, explanation 8=2167
 Nb, superconducting, thermal conductivity rel. to mag. hysteresis 8=2166
 n-Si, Nernst-Ettingshausen effects, longit. and transverse, 100-400°K 8=18075
 Sn films, superconducting, Nernst effect 8=2174
- Magnetrons.** See Electron tubes.
- Magnets**
 alnico-type for use > 550°K 8=22806
 bar, five pairs for compensating magnetic field gradients 8=3165
 cylindrical bar, empirical expression for axial field, at range closer than magnet length 8=19749
 electromagnet, double mushroom, design 8=10868
 electromagnets, high-field liq. Ne-cooled 8=15261
 electromagnets for particle accelerators 8=643
 electromagnets, pulsed field prod., helical windings with variable spacing 8=15260
 electromagnet for variable-delay vacuum valve 8=7955
 ferrites, design and performance in loud-speaker circuits 8=15258
 magnetics 8=301
 periodic permanent for electron beam focusing in mm. wave tubes 8=6308
 permanent, application in motors, separators and switching tubes 8=3154
 permanent, columnar, high-temp. stability 8=19748

- MnCu, Mn²⁺ anomalous low-temp. susceptibility 8=13962
- MnF₂, antiferromagnetic, radiationless processed and afterglow kinetics 8=23058
- MnF₂, Co doped, magnon sidebands and local order 8=23001
- MnF₂, i.r. spectra due to lattice vibrations 8=14241
- MnF₂, phonon processes, selection rules 8=13318
- MnF₂, stressed magnon sidebands in absorpt. spectra 8=14240
- MnF₂, tetragonal antiferromagnet, scattering of light by one- and two-magnon excitations 8=18546
- MnF₂:Co²⁺, antiferromagnetic, radiationless processes and afterglow kinetics 8=23058
- MnF₂:Eu²⁺, antiferromagnetic, radiationless processes and afterglow kinetics 8=23058
- MnFe₂O₄:Sn, Mössbauer effect 8=16980
- Mn-Fe spinels, Mn-rich, Mn²⁺ clustering effect on ferromag. resonance linewidth 8=18396
- Mn₂Fe(CO)₁₄, crystal structure 8=8533
- MnFe₂O₄, cation distrib. in sample from aq. soln., by n-diffr. 8=13274
- Mn₂Fe₃O₄, dielec. loss peaks rel. to check of electron diffusion 8=14050
- Mn₃GaC_{1-x}, mag. props. and transitions rel. to non-stoichiometry 8=22819
- Mn(HCOO)₂·2H₂O, heat capacity between 1.4 and 20°K 8=13375
- MnHg, magnetic susceptibility, variation with temperature 8=9281
- (Mn, Me)(S, Se)-type synthetic cpds. and selenide-sulphide inclusions 8=4692
- MnMg-ferrite, square-loop, coercive force temp. depend. 8=14051
- Mn(Mg)SO₄·4H₂O:Mn²⁺, e.p.r. temp. dependence and spin-lattice relax. 8=9432
- MnMoO₄, crystal structure preliminary data 8=17395
- Mn(NH₄)₂(SO₄)₂·6H₂O, heat capacity, near critical point 8=13376
- Mn(NH₄)₂(SO₄)₂·6H₂O, ht. capacity 1°-4°K in mag. fields 8=17520
- Mn-Ni alloys, mag. structures and phase transformations 8=18381
- Mn-Ni system, phase transformations rel. to crystal and mag. structures 8=17088
- MnO, antiferromagnetic, u.s. attenuation 8=22106
- MnO, axially cooled or stressed, mag. anisotropy from torque meas. 8=14072

Manganese compounds—contd

- Mn-O, high-temp. phase diagram 8=16954
 Mn₂O₄ crystals, growth by arc-transfer 8=4806
 MnO₂, electrolytic, pore struct. and surface area, sorption obs. 8=21904
 MnO₂ films, prep. and props. 8=4750
 MnO₂, radiochem. separation by adsorpt. 8=9763
 MnO₄⁻, MO calc. of u.v. spectrum 8=12207
 MnO₄⁻, vibr. spectrum 8=21085
 MnO₂-Zn alkaline cell discharge curves and reactions, obs. 8=18717
 MnP, Curie point and anisotropy energy decrease under hydrostatic pressure 8=2328
 Mn₂P, magnetic structure 8=22736
 Mn-Pd alloys, mag. structures and phase transformations 8=18381
 Mn-Pd alloys, structural and mag. props. 8=4714
 Mn-Pt alloys, mag. structures and phase transformations 8=18381
 Mn-Pt, magn. structures and interactions 8=22883
 Mn₂Pt, first-order mag. transformation, X-ray and susceptibility study 8=18382
 α-MnS, conductivity rel. to optical reflectance and absorption props. 8=18057
 MnS, phosphoresc. 8=2484
 MnSb, existence region and mag. and elec. props. 8=22820
 Mn₂Sb₂O₆, prep., thermal stability, X-ray diffr. and reflection meas. 8=14363
 MnSe, K absorption spectra rel. to chemical bonding 8=14242
 MnSe-MnS system, phase relations 8=17014
 Mn₃Si₂C₂, mag. props. and transitions rel. to non-stoichiometry 8=22819
 MnSO₄ in water-glycol, elec. cond. 8=12921
 MnSO₄·4H₂O e. p. r., thermal detect. obs. 8=14100
 MnSO₄·(NH₄)₂SO₄·6H₂O, n. m. r. obs. 8=2385
 MnS/ZnS mixed crystals, phosphoresc. 8=2484
 MnT'O₃, (T' = Ho, Er, Tm, Yb, Lu), hexagonal, transform. to perovskite form under high press. 8=17089
 MnTe, antiferromag. semiconductor, optical meas. 80-375°K 8=5622
 MnTiO₃, mag. props., theoretical interpretation 8=9399
 MnTiO₃, mag. resonance and susceptibility 8=9398
 MnUO₄, antiferromag. structure 8=18384
 MnYb₂S₄, a spinel, mag. and structural study 8=5436
 Mn-Zn eutectics, shock-decanted, interface examination 8=8170
 MnZn ferrite, mag. props. rel. to final firing cycle cooling conditions and atm. equilib. maintenance, obs. 8=22855
 MnZn ferrite, monodisperse fractions, prepn. 8=9384
 Mn-Zn ferrite, oxidation rate and phase 8=9691
 MnZn ferrites, comp. rel. to stability and losses and prep. 8=22854
 Mn-Zn ferrites, dielectric props., influence of ultrasound 8=9370
 Mn-Zn ferrites, intermed. phases in formation 8=17087
 Mn-Zn high permeability ferrites, dynamical magnetization curve 8=18361

Manometers

- See also Vacuum gauges.
 glass bellows, for ultrahigh vacuum devices, 1-760 torr 8=7964
 manometric liquids, outgassing 8=4503
 mercury, avoiding parallax error when reading 8=10489
 micro-, 15 μ in. methylated spirits. limit 8=7891
 thermal conductivity, error in radiation limitation formula 8=21544

Many-particle systems. See Quantum theory/many-particle systems.**Markov processes.** See Statistical analysis.**Mars.** See Planets.**Masers**

- amplifiers, low-noise, basic characteristic meas. methods 8=396
 amplifying medium, polarization, and of cosmic OH radiation 8=19916
 atoms with angular momenta interaction with photons 8=19921
 cyclotron, resonator excitation near electron cyclotron freq. 8=395
 four-level system, susceptibility at saturation 8=393
 gaseous, optical, props. in weak axial mag. fields 8=6410
 in heterodyne radiation detector 8=6201
 i. r. freqs., generated by isotopic substitution 8=10993
 interstellar hydrogen, maser effect 8=5924
 materials, spin-lattice relaxation meas. 8=10994
 multi-cavity, theoretical transfer characts. 8=15440
 noise and operation quantum theory 8=19438
 optical, quantum theory of 8=15441
 pumping power minimization 8=19918
 push-pull, pumping power and Qm(l, max) 8=392
 reflex multi-cavity solid-state, bandwidth 8=19922
 ruby, C-band, with quarter-wave coupled transmission cavities 8=392
 ruby: Cr³⁺, L-band performance 8=15439
 ruby, laser pumping at 77°K 8=19920
 ruby, operating in 8 mm range 8=6411
 ruby, three-cavity, 21 cm. 8=19923
 solid state, amplifier, phase characteristics, saturation effects 8=394

Masers—contd

- two-resonator molecular generator with opposite beams, operation regimes study 8=19917
 X-ray scatt. expts. shortened by exposure 8=15408
 X-ray scatt. expts, shortening time of exposure 8=15409
 H, appl. of theory of relax. of F = 1 level of ground state 8=12049
 H, dynamic behaviour near equilib. osc., level 8=19919
 H, meas. of spin-exchange cross-section from oscill. characteristics 8=21008
 NH₃, amplifier, characteristics: theory, exp. 8=397
 NH₃ beam oscillator, modulation effects 8=10995
 OH mols. in interstellar space, masering action 8=5927
 optical. See Lasers; Optical pumping.

Mass spectra

- See also Chemical analysis/by mass spectrometry.
 acetaldehyde reaction with atomic H 8=18668
 aliphatic ketons, metastable ions 8=12238
 alkynes, field-ion, of eleven compounds 8=1372
 advances in atomic and molecular physics, book I and II 8=16171-2
 barbitol 8=20912
 barbitol, fragmentation patterns 8=12031
 benzene, by electron impact 8=16452
 benzoates 8=20912
 benzoic acids 8=20912
 1, 3-butadiene, photodissoc., primary processes 8=23155
 n-butane, photoionization 8=4319
 cycloparaffins, chem. ionization 8=1374
 digital recording method, and automatic reduction of data 8=1137
 ethane, photoionization 8=4319
 ethylamine and its deuterated analogs, dissociative mechanism 8=16326
 hydroxybenzoates 8=20912
 ions in flow discharges 8=16429
 ketones, aromatic, ion decomp. rel. to charge and radical sites 8=4308
 metastable ions, abundances variation 8=12237
 nonexistent molec. ions, detect. 8=16440
 organic mass spectrometry, lecture 8=12030
 phenylferrocenes, carbonyl-subst., ortho-effects in decomposition 8=4183
 proaporphine-type alkaloids and derivatives 8=12032
 propane, photoionization 8=4319
 pteridines 8=20912
 pulse shape calc. for quadrupole spectrometer 8=7362
 purines 8=20912
 pyrimidines 8=20912
 pyrones, metastable ions 8=12239
 γ-pyrones, monocyclic, fragmentation obs. 8=21023
 silazanes, expulsion of stable mols, etc. 8=1275
 salicylic acids 8=20912
 tetraethyl compounds, group IV elements 8=18766
 tetramethyl compounds, group IV elements 8=18766
 4-vinylcyclohexene, preferential ass. of pos. charge with butadiene fragment 8=4320
 Al alloys, investigation of secondary ion emission 8=1828
 AlF₃ 8=12997
 Al₂O₃ systems, photochemical effects 8=14441
 Ar, autoionization 8=12430
 Ar binary mixture glow discharge, fast channel ions 8=7665
 Ar clusters in nozzle beams, dimer concs. 8=12379
 Ar, mass 80 peak, identification in spectrum obtained with static operation 8=12056
 B isotope ratios prod. by p-O⁺ reactions 8=20792
 Be isotope ratios prod. by p-O⁺ reactions 8=20792
 Bi₂ and Bi₄ 8=4239
 C₂H₂ isomers, chem. ionization 8=9745
 (CH₃)₂N radical, ionization pot. and heat of form. obs. 8=4245
 CH₂OH radical, ionization pot. and heat of form. obs. 8=4245
 CN halides, photoionization 8=12433
 C₂N₂, photoionization 8=12433
 CO₂, ions and fragments, sequential mass spectrometry 8=21270
 CS₂, ions and fragments, sequential mass spectrometry 8=21270
 Cs⁺, abundance sensitivity improvement on low mass side 8=12029
 Fe alloys, investigation of secondary ion emission 8=1828
 Li isotope ratios prod. by p-O⁺ reactions 8=20792
 N₂, positive column of glow discharge 8=1341
 NH₄ClO₄, thermal decomp. 8=9693
 NO dimers 8=7637
 NaF + AlF₃ in saturated vapour mixture 8=9692
 Pt oxides 8=5716
 Re, isotopic anal. from thermal ionization source 8=7479
 ScF and ScF₂, high temp. 8=7617
 Si₂Te₃ 8=9662
 TiF₃, high-temp. sublimation 8=1623
 YF and YF₃, high temp. 8=7617

Mass spectrometers

- See also Ion optics.
 double-focusing, new version using plane condenser as energy analyser 8=7350
 double, with non-uniform magnetic field 8=7354

Mass spectrometers—contd

- dynamic quadrupole, pulse shape calc. 8=7362
- electrical r. f. field replaces mag. field 8=4042
- fast-response, temp. effects on ion source 8=16177
- fast scanning, ion detector 8=1141
- glass, miniature, charact. spectra 8=16176
- high-resolutions, ions 0.5-3 keV, angle and energy 8=1139
- high resolution, real-time data acquisition and processing 8=20916
- ion-detecting plates for mass spectrograph 8=16179
- ion microprobe mass analyzer development 8=6340
- ion optics 8=20915
- ion-sensitive plates, thin-film, construction 8=16178
- ion storage in 3D rot. symm. quadrupole field 8=19799
- ions trapped in 3D rot. symm. quadrupole field, current integration 8=19800
- LKB 9000 with gas chromatograph, testing and application results 8=7363
- loss of atomic O in relative concentration meas. at 120 km altitude 8=18920
- magnetic deflection type for atmosphere composition above 100 km obs. 8=9901
- magnetic, photorecording for 400 MeV/c spectra 8=11292
- magnetic prism, optical axis and correcting profile determ. 8=12114
- Mattauch-Herzog type with connected β -dependent image defects for able masses 8=4041
- 90°-sector type for gas analysis 8=12033
- 180°, fast scanning, small, description 8=7353
- polyphenols 8=1204
- quadrupole mass filter, rod mounting, amplified 8=7357
- quadrupole and omegatron, main parameters 8=7361
- r. f., 8, 16 and 24 stage instruments 8=7352
- refractive electron systems 8=16175
- semi-automated, rel. to ion identification, and metastable transition meas. 8=1138
- sensitivity improvement design using image converter 8=7356
- tandem double-focusing for n cross-sections 8=7355
- time-of-flight, blanking circuit for mag. electron multiplier 8=20913

accessories

- See also Ion sources.
- inlet leak 8=7358
- ion-sensitive emulsions, characts. 8=1140
- magnetic analysers, spherical aberration calculation 8=10898
- magnetron cold cathode ion source for ultrahigh vacuum residual gas analysis 8=4039
- omegatron efficiency, comparison of oil-free and oil diffusion pumps 8=21538
- photographic plates for ion detection, AgBr grain distrib. 8=7360
- retardation lens to improve abundance sensitivity 8=4040
- semiautomatic admission system of C-free stainless steel 8=7351
- synchronous operation by solid state circuit 8=20914
- tandem, retardation lens for improved abundance sensitivity 8=12029

applications

- See also Chemical analysis/by mass spectrometry.
- adsorption and cryst. nucleation 8=17155
- anomalous glow discharge, positive ions 8=7658
- beam-modulation, ionization fragmentation patterns 8=16439
- butane, ionization probability meas. RPD method 8=21283
- colour picture c. r. t., residual gas analysis 8=15324
- Dempster, collision-induced phenomena 8=4309-10
- electron tube manufacture, gas flow analysis 8=18770
- gas chromatography, interface separators 8=14506
- ion-current apportionment 8=4239
- ion-molecule reactions, pulsed-source meas. 8=10918
- isotope ratio meas. by peak matching 8=4112
- photocathode deposition, vapour detect. 8=21532
- photoionization, microwave plasma light source 8=3355
- silicone resins investigation 8=16740
- time-of-flight, meas. of translational energy of ions 8=7703
- time-of-flight, metastable transitions 8=16438
- weak intermolec. potentials, well-depth determ. 8=7636
- Ba, on W surface, ionization coeff. meas. 1800-2600 K 8=18288
- Cs ions from thermionic converter, analysis 8=15211
- He, leak detector 8=7359
- O^{16} and O^{18} relative abundances in minerals 8=12112
- UO_2 burnup determ. 8=7344

 - steel, nodular graphite, effect of heat treatment 8=8843
 - steel, notch-brittle fracture, torsional prestraining, influence on 8=13563
 - steel plates, proof stress props. 8=17802
 - steel sheet, effect of rapid heat treating 8=22364
 - theoretical and applied mechanics, conference, Haifa Israel (1967) 8=16750
 - thin gauge specimens, tensile testing, environmental chamber for 8=8792
 - thin walled shells, supported, pressurized, anal. of short endurance fatigue 8=17716
 - torsional vibrations of non-homogeneous spherical and cylindrical shells 8=19513
 - Udimet-500, -520 and -700, heat treatment and composition rel. to stress-rupture and structural stability 8=13599
 - "whisker" straining devices, two, for low temp. 8=22258
 - Zircalloy-2, cold rolled, age hardening and recovery, obs. 8=8872
 - AgCl, high-press. data 8=19342
 - αAgZn , relax. due to changes in short-range order produced by stress 8=5009
 - Al alloy, dynamic indentation, conical projectile, up to 550°C 8=17780
 - Al alloys, high strength with good weldability for cryogenic service 8=17762
 - Al alloy at short time elevated temp. 8=5048
 - Al alloy, short-transverse, effect of ingot quality 8=13531
 - Al rods, polycrystalline, texture changes rel. to mech. forming processes 8=22308
 - Al, rolled, texture representation by biaxial pole figures 8=17778
 - Al-5% Mg with small Ag additions, X-ray investigation of ageing 8=13528
 - Al-Si alloy, interaction between dislocations and precipitates 8=13431
 - Al-Zn-Mg, lattice defects and aging phenomena 8=13536
 - Bi, deformation and simultaneous elec. resistance meas. 8=5052
 - CoAl-Co eutectic 8=17770
 - Co alloys, low-temp. compilation from literature 8=17779
 - Cu, and crystallization, rel. to plastic deform. at low temps. 8=8403
 - Cu, dislocation structure effect 8=13550
 - Cu, dynamic indentation, conical projectile, up to 600°C 8=17780
 - Cu, low-temp. compilation from literature 8=17779
 - Cu rolled, texture representation by biaxial pole figures 8=17778
 - Cu, rolling texture development at room temp. and -196°C 8=22328
 - Cu, texture development deformation dependence, pole figure 8=17777
 - Cu_2O , plane stress effect on 4 exciton line series 8=22973
 - Fe alloys, containing Al_2O_3 , MgO and SiO_2 , dispersion strengthened and hot extruded 8=8842
 - $\alpha\text{-Fe}$, change due to tension, compression and rolling 8=5067
 - $\alpha\text{-Fe}$, solid solutions 8=22350
 - Fe-Cr(0-53%) alloys, aged at 475°C 8=8841
 - Fe-Ni alloys, anisotropy, by C diffusion 8=22814
 - Fe-Ni-Al-Ti alloy, after thermomech. treatment 8=21987
 - Fe-Ni-C alloy, effect of rapid re-austenitizing 8=17807
 - LiNO_3 , shear-wave attenuation 8=2059
 - Mg aluminate spinels, and defect structure 8=22187
 - MgAl_2O_4 , hot-pressed, rel. to microstructure, quadratic multivariable analysis 8=21991

Mechanical properties of substances—contd

- Mg-Mn-Zn ferrite, ageing mechanism 8=9381
- MgO, high-press. data 8=19342
- Mo, rel. to 8×10^{20} n/cm² dose 8=8856
- Mo, structure and low-temp. ductility, deform.-induced changes 8=13589
- NaCl, high-press. data 8=19342
- Nb-Mo steel, heat-treated, high strength, combined effect of Nb and Mo 8=22385
- Ni-base alloy 718, correl. with comp., microstruct. and heat treatment 8=21827
- Ni, electroformed, tensile strength and weldability at room and cryo-temps. 8=17823
- Ni-Co-Mo steels, precipitate reversion 8=17096
- Nb alloys for nuclear reactors 8=5082
- YH₃, stability of pressed pellets, expansion obs. 8=8871
- W, effect of fast n irradi. rel. to microstruct. changes 8=21998
- W-Re alloys, rel. to phases and struct. from H reduction of ReF₆ and WF₆ 8=17100
- Zr, cold rolled, age hardening and recovery, obs. 8=8872
- Zr-2.5wt.%Nb cold rolled, age hardening and recovery rel. to stress relax., obs. 8=8872

Mechanical strength

- See also Elasticity; Hardness.
- alloys, time and temp. depend., non-equilib. state 8=8811
- anisotropic cohesive medium, slope stability under instantaneous failure conditions 8=22284
- bending and buckling of frame system under its own weight 8=6042
- ceramics, meas. 8=22321
- composite high strength material design 8=5025
- composite mats., effects of fibres and particles 8=5023
- composites with buckled microfibrils 8=22289
- cylinders, orthotropically stiffened, elastic instability under torsion loading 8=19393
- dry modulus of rupture and drying shrinkage, response surface anal. 8=17737
- glass-ceramics, strengthening by application of compressive glazes 8=22322
- ice, accreted, effect of impurities 8=17739
- insulators, high-tension, ultrasonic pulse method for non-destructive testing 8=22286
- in long rods, effects in deceleration theory after impact 8=19378
- metals, time and temp. depend., non-equilib. state 8=8811
- polycrystalline metal whiskers rel. to high strength materials 8=21971
- polymer melts 8=16748-9
- rectangular beams, stress anal. of cracks and longit. shear and torsion and flexure 8=22297
- reinforcement of mag. transparent vacuum chamber by glass fibre laminate 8=16722
- rocks under confining press., rupture and elastic wave propag. and absorpt. 8=13515
- rod, inhomogeneous, internal stresses and loading capacity 8=10553
- sapphire, single crysts., alloyed with Ti, increased fracture strength 8=17767
- shallow shell equations; displacement, stress function and mixed solutions 8=48
- sheet, plate and multilayered adhesive-bonded panels, fracture toughness 8=17734
- steels, ausforming effect 8=13561
- steel, austenitic type 304, creep-rupture props, influence of N and other elements 8=17754
- steel, Cd plated, fatigue strength and delayed brittle failure 8=22361
- steels, CrMoV cast, load-time curves in breaking-strength meas. rel. to carbide precip. 8=17804
- steel, correlation of fatigue limit with stress-strain behaviour 8=17783
- steel, effect of lower bainite after tempering 8=17805
- steel, rel. to grain size and precip., hot working effects 8=22356
- steels, rel. to solid soln., precip. and work hardening and grain refining 8=22344
- steels, time-to-rupture tests, theory of occurring notch-brittleness 8=17753
- whitewaves, quartz-free, flexural strength rel. to elasticity mod. 8=17733
- Al alloys, natural ageing effect prior to artificial ageing 8=17764
- Al, strengthening rate in slow loading process 8=22311
- Al, stressed, thermally cycled, temp. after-effect 8=13534
- Al-Mg alloys, effect of various ageing conditions and recovery 8=17765
- Al₂O₃ grain, effect of environments on fracture strength 8=13526
- BeO, rupture props. rel. to SiC and MgO additions 8=22315
- Cd-Zn solder alloys, high-strength, props. 8=5056
- Cu-Fe mixed whiskers, high strength and hardening rate, and growth mechanism 8=17249
- Fe-base alloys, solid-soln. strengthening 8=22341
- Fe-Ni alloy, phase-hardened, condition for thermal stability 8=17066
- Fe-Ni alloy, rapid heating effect during reverse martensitic transform. on high temp. stability 8=17065

Mechanical strength—contd

- Fe-Ni-Ti, rel. to aging during transformation 8=17070
- MgAl₂O₄, hot-pressed, rel. to microstructure, quadratic multivariable analysis 8=21991
- Mn steel, effect of multiple $\gamma = (\epsilon, \epsilon')$ transformations 8=17785
- NaCl crystals under tension along body and face diagonals 8=13590
- Nb-Mo steel, heat treated, combined effect of Nb and Mo 8=22385
- Nb-Mo steel, strengthening effect of precipitates 8=22386
- Nb-W alloys, influence of carbide and boride additions 8=22384
- Nb-W-Ta alloys, influence of carbide and boride additions 8=22384
- Ti, textural, biaxial strengthening 8=5086
- U containing small alloying additions, creep strength 8=8868
- W, low temp. yield strength, effect of non-metallic trace additions 8=17835
- W single crystals, from elec. field required to break whiskers 8=2069
- WC cemented pistons, crushing 8=8870
- compressive**
- apparatus to meas. compression loads in controlled atmos. 8=5019
- crush strength apparatus with photocell detection 8=5022
- cylindrical shells, axisymmetric collapse under pressure 8=10554
- graphite, nuclear grade A, anomalous strength and deform. props. 20-2200°C 8=8829
- plastic, glass-reinforced, at cryotemps. 8=17840
- Portland cement, development, obs. 8=14362
- Ni:Al₂O₃, sintered, dependence on grain size 8=2048
- shear**
- dynamic and constant rate, comparison 8=22287
- graphite, pyrolytic hot-worked, compliance 8=5054
- plastic, glass-reinforced, at cryotemps. 8=17840
- steels, stainless, irradiated, at cryotemps. 8=17763
- Al alloys, irradiated, at cryotemps. 8=17763
- Al-Zn eutectoid alloy, superplasticity rel. to grain boundary shear 8=17766
- Ag, grossly deformed, at high pressures and temps. 8=8833
- Au, grossly deformed, at high pressures and temps. 8=8833
- CCl₄ solid, 187° to 247°K 8=22401
- Cu, grossly deformed, at high pressures and temps. 8=8833
- Fe-Ni base alloy: 9 at %Cu, changes on aging 8=1759
- Ni-Al₂O₃ alloys, rel. to creep 8=22388
- Ni alloy, irradiated, at cryotemps. 8=17763
- Ti alloy, irradiated, at cryotemps. 8=17763
- UO₂, calc. of temp. depend. modulus 8=13610
- tensile**
- alloys, structural, from strain hardening formula 8=22282
- glass fibres 8=5073
- glass fibres, rel. to length 8=1666
- glass, porous, effect of micromechanical stress concentrations 8=13577
- granular materials, effect of moisture 8=8804
- granular materials, equation 8=22288
- granular materials, rel. to moisture 8=22285
- HK-40 alloy, short-time props. to 2000°F 8=17755
- hastelloy X-280, thermomechanical effects 8=17288
- instability mechanism, effect of variation of Poisson's ratio 8=8799
- low C steel, to failure, effect of large torsional prestrains 8=22367
- lucite, and struct. disintegration, obs. 8=17843
- plastic, glass-reinforced, at cryotemps. 8=17840
- polycarbonate films, rel. to chem. struct. 8=22403
- stainless steel, type 310, short-time props. to 2000°F 8=17755
- steel, EI702, dispersional, hardening, investigation 8=8845
- steel, nodular graphite, heat treatment effect, 800-850°C 8=8843
- steel, stainless with high N content, at cryotemps. 8=17784
- steels, stainless, irradiated, at cryotemps. 8=17763
- steel, structural, fracture toughness, temp. and strain rate effects 8=5070
- styrene-polypropylene graft-copolymers, obs. 8=23139
- Teflon, and struct. disintegration, obs. 8=17843
- vinyl plastic, and struct. disintegration, obs. 8=17843
- Ag, effect of purity 8=8722
- Ag-Mg solid soln., Ag-rich, short-range order dependence 8=21819
- Ag-Mg solid solns., Ag-rich, long-range order dependence 8=21820
- Al alloys, irradiated, at cryotemps. 8=17763
- Al alloy, short-transverse, effect of ingot quality 8=13531
- Al alloys, wrought-, and ductility rel. to ingot structure 8=5046
- Al rods, polycrystalline, rel. to texture changes on different mech. forming 8=22308
- Al-Ag alloys, rel. to GP zones and stacking faults 8=8821
- α -Al₂O₃ crystal whiskers, testing 8=17248
- Al₂O₃ whiskers, rel. to surface area 8=5050
- B, "amorphous", contradiction of Weibull relationship 8=2050

Mechanical strength—contd**tensile—contd**

- CuZn(β -brass), hydrostatic extrusion effects obs. 8=5059
 Fe, crystalline, increase by step-wise low temp. creep 8=2054
 Fe-C alloys, effect of noble metal additions on toughness 8=17795-6
 Ni alloy, irradiated, at cryotemps. 8=17763
 Ni base alloy with improved oxidation resistance to 2200°F 8=22387
 Ni, crystalline, increase by step-wise low temp. creep 8=2054
 Ni, electroformed, at room and cryo-temps. 8=17823
 Pu/1 wt.% Ga alloy, rel. to plastic flow props. from -60 to 77°C 8=13604
 Ti alloy, irradiated, at cryotemps. 8=17763
 TiNi, hydrostatic extrusion effects obs. 8=5059

Mercury

- adsorbed layer nucleation onto W field emitter tips 8=1702

Mercury—contd

adsorption at Hg/methanol interphase 8=18721
 afterglow of vapour pulsed discharge 8=21238
 anisotropy of relaxation in 6^3P_2 level 8=7609
 atoms, electron scatt. angular distribution and spin polarization, influence of plural scatt. 8=16225
 atom, 6^3P_1 state depopulation, effect of N₂ and CO 8=7405
 atoms, $6s6d$ levels, collision cross-sections with inert gases 8=1201
 atom, $6s6d$ levels, lifetime, magnetic meas. 8=4095
 atoms, 7^3S_1 - 6^3P_1 - 6^3S_0 cascade correlation, and 6^3P_1 coherence time 8=4078
 atom, Stark effect obs. 8=20966
 atoms, temperature dependence of 1849 Å absorption in saturated vapour 8=1166
 atomic vapour, optical pumping, polarization effect 8=4088
 discharge, ion-acoustic waves, propagation and damping 8=4313
 freezing, invariance of photocurrent and work function 8=13939
 induction pump, vel. distrib. 8=16727
 isotopes, Holtsmark collisions 8=7468
 jet, turbulent, velocity profile in axial mag. field, obs. 8=7991
 liquid, cavitation damage data for venturi and vibratory systems 8=16767
 liquid, eqn. of state and elec. resistivity, rel. to temp. and press. 8=12900
 liquid, large amp. sound propag. 8=12859
 liquid, optical const. and dielec. const. $\epsilon_1 + i\epsilon_2$ 8=12877
 liquid, optical props. and Drude theory 8=12881
 liquid, press. depend. of resistivity, thermopower and phonon dispersion 8=16879
 molecular 4850 Å and 3350 Å bands, role of Hg 6^3P_0 atoms 8=21033
 optical const. of clean surface as function of temp. 8=4582
 plasma, ion acoustic waves phase vel. and ambipolar diffusion coeff. 10^{-3} torr 8=21377
 plasma, longit. waves second harmonic generation, 10^{-3} torr 8=21389
 solid, elec. resistance, low temperature variation meas. 8=5181
 superconducting, surface nucleation and bulk superheating fields, $1.2^\circ\text{K}-\text{T}_c$ 8=17968
 resonance line, pressure broadening by He 8=7403
 turbulent flow in square duct, temp. distribution in wall, obs. 8=1545
 turbulent flow in tube in longitudinal mag. field 8=10933
 vapour positive column zeroth order distrib. changes 8=7667
 3P_1 state, lifetime meas. by Hanle effect 8=1181
 $^3\text{P}_2$ metastable state, intensity heats in absorpt. due to coherent e excitation 8=4094
 6^3P_0 state rel. to molecular 4850 Å and 3350 Å band 8=21033
 6^3P_2 level, destruction of alignment 8=7469
 C_6H_4 impurity, absorption spectrum of Hg λ 2537 Å line 8=16287
 Hg⁺ cathode lasers, hollow cathode, wide bore, fabrication 8=3294
 Hg₂ excimers, kinetics of band emissions 8=12203
 Hg₂, trapped in inert gas matrices, spectra 8=8227
 Hg¹⁹⁸, 2537 Å line, H₂ and D₂ effects compared 8=7470
 Hg¹⁹⁸ 4356 Å line shape, intensity correl. obs. 8=20075
 Hg¹⁹⁸ double reson., Zeeman sublevel transitions shifts, obs. 8=21001
 Hg¹⁹⁹ and Hg²⁰¹, comparison of nuclear magnetic relaxation 8=7450
 Hg¹⁹⁹ and Hg²⁰¹, 6^1P_1 level hyperfine structures 8=7404
 Hg¹⁹⁹, hyperfine structure of the 2967 Å (6^3P_0 - 6^3D_1) and of 6^3D_1 level 8=16205
 Hg²⁰¹, hyperfine levels, population transfers 8=7467
 Hg($^3\text{P}_1$) atom reaction with gaseous paraffins 8=9688
 Hg*($^3\text{P}_1$) atoms, quenching by H₂, phase-space theory 8=14436
 Hg-In fluoresc. spectrum, In line intensities 8=4080

Mercury compounds
 EDTA chelates of Hg²⁺, comp. study by ultrasonic vel. meas. 8=23170
 Hg alloys, liq. with In, Tl and Na, abs. thermoelec. power 8=12913
 Hg-halogen-chalcogenides, single cryst. growth, by modified vapour phase method 8=21955
 Hg-Bi alloy, Knight shift 8=14142
 HgBr₂, spectrum in vacuum u.v. 8=12204
 Hg(CN)₂, 0.80 tetrahydrofuran, morphology and atomic structure 8=1794
 Hg-Cd alloy, Knight shift 8=14142
 Hg_{1-x}Cd_xTe, i.r. laser and fast detector 8=11103
 HgCr₂S₄, mag. structure and metamagnetism 8=18340
 HgI₂ crystal, polarisation vs field strength under light excitation 8=5373
 HgI₂, Raman spectra in molten state 8=21691
 HgI₂, trap levels rel. to photoelectret state 8=5372
 HgIBr, Raman spectra in molten state 8=21691
 HgICl, Raman spectra in molten state 8=21691
 Hg-In alloy, Knight shift 8=14142

Mercury compounds—contd

Hg-In alloys, liq., atomic distrib. and electronic transport 8=12799
 Hg-In alloys, liq., optical const. rel. to free-electron theory 8=16846
 Hg-In, interf. functions, pair distrib. electron transport 8=8005
 Hg-In liq. alloy system, mag. susceptibility up to 60% In conc. 8=12925
 Hg-Mo system, desorption, mobility, work function 8=21903
 Hg(OH)F, crystal structure 8=17376
 Hg-Pb alloy, Knight shift 8=14142
 HgS, linear electrooptic effect at 0.63 and 3.39 microns 8=14225
 α -HgS, second harmonic generation of laser radiation 8=5606
 HgS single crysts., growth by vapour phase method 8=21955
 HgS-HgSe solid solns., optical props. 8=5607
 Hg₃S₂Cl₂ single crysts., growth, by vapour phase method 8=21955
 Hg₃S₂Cl₂, structure confirmation and refinement 8=13264
 HgSO₄·1H₂O, proton magnetic resonance 8=9457
 HgSe, oscillatory magnetoresistance, inversion asymmetry splitting 8=2100
 n-HgSe, quantum oscills. of transport coeffs. 8=5261
 Hg-Sn system, superconducting transition temp. comp. dependence 8=17960
 HgTe, Hall coeff. and magnetoresistance at 4.2 and 77°K rel. to carrier model 8=2200
 HgTe, metal vacancies formation energies rel. to Te-Te covalent bonding 8=17608
 (HgTe)₃-In₂Te₃ alloys, single-crystals, optical energy gap 8=5608
 HgTe-ZnTe, Hall coefficient and conductivity at low temp. 8=13816
 Hg-Tl alloys, liq., atomic distrib. and electronic transport 8=12799
 Hg-W system, desorption, mobility, work function 8=21903
 HgX₂-TiX (X = I, Br, Cl) systems, cpds. formed 8=17085

 bound state, relativistic, symmetries of Bethe-Salpeter eqn. 8=3608
 charge-current commutators between states and vacuum 8=599
 data on properties, updating 8=15671
 decay mode, B + pseudoscalar meson, classification of particles 8=6766
 electric and mag. polarizabilities, in quark model 8=6823
 e^+ search for in $\pi^+ + d \rightarrow p_{sp} + p + \text{neutrals}$, 2.7 GeV/c 8=11488
 η -N coupling constant in $\pi^- + p \rightarrow n + \eta$, $\gamma + p \rightarrow p + \eta$ 8=20490
 hadron dynamics, self-interacting charged meson model 8=20398
 K in p-p and π -p high energy collisions, charge ratios 8=11524
 K₁ phenomenological summary 8=11545
 K-B coupling constants from K-N scatt. sum rules 8=20483
 \bar{K} , $\Delta\pi$ and $N\bar{K}$ composite model of Σ 8=11633
 K-N coupling constants from 2 sum rules for meson-N scatt. 8=20469
 $\bar{K} \Omega$ as bound state of ΞK 8=6978
 K_{π^4} vector form factor calc. 8=6906
 $K_S^0 \rightarrow \pi^+ \pi^-$ decay, CP violation 8=777
 K_S^0 , C, CP, CPT theory consequences 8=777
 low-energy theorems not involving Schwinger terms from divergence of vector currents 8=20495
 model, Singer's vector-dominance for η decay 8=20488
 meson-meson coupling in Fubini sum rule from K^+ decay 8=20474
 meson-N coupling constant calc. in non-linear spin theory 8=20288
 MMM rel. to BBM coupling constant from πN scatt. superconvergence relations 8=3640
 ninth pseudoscalar in broken SU_c(6) symmetry 8=15756
 nonets, mass-splitting calc. via quark-antiquark scatt. 8=677
 π^- beam, 370 MeV, in thin absorbers, energy loss distrib. 8=13471
 photon-meson coupling in Fubini sum rule from K^+ decay 8=20474
 polarization, η in $\pi^- + p \rightarrow \eta + n$, Regge-pole model 8=11519
 pseudoscalar, bootstraplike conditions from superconvergence 8=11497
 pseudoscalar, strong decay of $\frac{3}{2}^-$ baryon resonances 8=11635
 pseudoscalar in $Y_0^* \text{ BP}$ coupling from $K + N \rightarrow \Sigma + \pi$ 8=20580
 quantum theory scalar field with nonstatic source 8=11362
 quark-antiquark model, soln. of Bethe-Salpeter eqn. 8=15687

Mesons—contd

σ model for PCAC, improved 8=11489
strangeness zero, prod. in K⁺p final state at
6 GeV/c 8=3661
sources, strong coupling group model 8=20492
symmetries based on nonchiral SU(3) \otimes SU(3) 8=3609
vector interacting with spin- $\frac{1}{2}$ fermion field, derivation of
Regge trajectory 8=6770

absorption

π by nuclei, radiative, rel. to μ capture 8=20775

capture

π^- in O and light nuclei 8=7221

decay

$A_1 \rightarrow \rho\pi$, current algebra and dispersion relation
analysis 8=811

$A_1 \rightarrow \rho + \pi$, current algebra calc. 8=11565

$A_1 \rightarrow \rho\pi$, decay constant anomaly, d-wave coupling
constant 8=6907

$A_1 \rightarrow \rho\pi$ S/D wave ratio determ. 8=11566

$A_2 \rightarrow KK$ obs. 8=6860

e^+, ω and ϕ lepton-pair decay rates relations 8=11562

$\eta \rightarrow \pi^0 e^+ e^-, \pi^0 \mu^+ \mu^-$ branching ratio calc. rel. to
C-conservation 8=20487

η rel. to form factor calc. for K_{rad} decay 8=3657

$\eta \rightarrow \gamma\gamma$, for η -pole contrib. to $K^+ \rightarrow \pi^+ \gamma\gamma$ 8=791

$\eta \rightarrow$ neutrals, $\pi^+ \pi^- \pi^0$ branching ratio, rel. to
 $K^+ p \rightarrow \Lambda \eta$ 8=6888

$\eta \rightarrow \pi^0 \gamma\gamma$ search in reaction $\pi^+ p \rightarrow \pi^+ p + 4\gamma$ 8=3670

$\eta \rightarrow e^+ + e^- + \gamma$, Dalitz agreement 8=3672

$\eta \rightarrow e^+ + e^- + \pi^0$, branching ratio 8=3672

$\eta \rightarrow \pi^0 e^+ e^-,$ C-conservation, vector-meson model, decay
width calc. 8=3674

$\eta^0 \rightarrow \pi^0 e^+ e^-$, unsuccessful search 8=804

$\eta \rightarrow 3\pi$, current algebra approach review 8=15808

$\eta_{3\pi}$, dynamical model, suppression of $3\pi^0$ mode 8=3673

$\eta \rightarrow 3\pi, \pi$ spectra 8=6885

$\Gamma(\eta \rightarrow 3\pi^0)/\Gamma(\eta \rightarrow 2\gamma)$ using 4π spark chamber obs. 8=11552

$\eta \rightarrow \pi^0 \pi^0 \pi^0, \pi^+ \pi^- \pi^0$, ratio obs., $T = 1$ sufficient 8=20485

$\eta \rightarrow \pi^+ \pi^- \pi^0 \gamma$ and $\eta \rightarrow \pi^0 \gamma\gamma$ branching ratio calc. 8=11551

$\eta \rightarrow \pi^+ \pi^- \pi^0 \gamma$ in terms of $\eta \rightarrow \pi^0 \gamma\gamma$ using CA and
PCAC 8=20488

$\eta \rightarrow \pi^+ + \pi^- + \pi^0 + \gamma$, search, rel. to $\eta \rightarrow \pi^+ + \pi^- + \pi^0$
mode 8=805

f^0 in $\pi p \rightarrow \pi^+ \pi^- n$ 8=6851

f^0 , in $\pi p \rightarrow \rho N^*$, ang. decay correl. with
 $\pi p \rightarrow f^0 N^*$ 8=11636

f^* , modes and spin and parity 8=809

405 multiplets, SU(6)_v invariant amplitudes 8=807

K, rel. to axial vector current consisting of pseudo-
scalar octet. 8=6743

K, and CP violation and $\Delta S = \Delta Q$ 8=11546

K_{e^+} and K_{e^-} rates 8=6881

K_{e^+} rate in calc. $\pi^+ \pi^-$ S-wave scatt. length 8=20466

K_{e^+} rate, form factor determination and η decay 8=3657

K_{e^+} vector form factor calc. by current algebra 8=6906

K, leptonic 8=797

K_{l3} , form factors, $f_+(t)$ "leakage" matrix element
contribution 8=15796

K_{l3} form factors q^2 var. 8=788

K_{l3} , form factors 8=6878

K_{l3} , $f_+(q^2)$ momentum dependence 8=15795

$K \rightarrow \mu + \nu, \pi \rightarrow \mu + \nu$, evaluation of a_K/a_π using SU(3)
algebra and PCAC 8=15798

$K \rightarrow \mu\nu$, superconductivity model with SU(3) \times SU(3)
symm. 8=11501

K, model of T violation, non-leptonic 8=6820

K, nonleptonic 8=15799

K, nonleptonic, $\Delta T = \frac{1}{2}$ amplitudes correlation 8=15800

$K \rightarrow 2\pi$, CP violation in current-current models 8=20467

$K \rightarrow \pi\pi$, phenomenological analysis in terms of isospin
amplitudes, CP violation 8=3652

$K \rightarrow 2\pi$ and $K \rightarrow \pi^+ \pi^0$, related probabilities 8=784

$K \rightarrow 2\pi\gamma$, matrix elements from radiative $\pi\pi$ scatt. using
unitarity 8=15793

$K \rightarrow \pi\pi e\nu$ 8=20422

$K \rightarrow 2\pi, 3\pi$ relation between modes 8=15752

$K_{\pi3}$, CP noninvariance and $|\Delta T| = \frac{1}{2}, \frac{3}{2}$ amplitudes
limits 8=6886

$K \rightarrow 3\pi$ rel. to $\eta \rightarrow 3\pi$ 8=15808

$K \rightarrow 3\pi, \pi$ spectra 8=6885

$K \rightarrow 3\pi$, with TCP or time reversal, $\Delta I = \frac{1}{2}$
rule 8=20471

$K \rightarrow 3\pi$, p-wave interaction calc. using Fadeev
formalism 8=11547

$K_A \rightarrow K^* \pi, F_K/F_\pi$ calc. using Weinberg sumrule 8=11568

$K_A \rightarrow K^* \pi, 95$ MeV, resonance width calc. from spectral
function sum rule 8=20261

$K_A \rightarrow \rho K, 97$ MeV, resonance width calc. from spectral
function sum rule 8=20261

$K \rightarrow K^* + \pi$ in $K^+ + p \rightarrow N + \pi + K^*$, diffraction
dissociation 8=15815

K^0 , CP-invariance breaking 8=11541

K^0 , CP violation and $\pi^+ \pi^-$ interference 8=778

K^0 , vector form factor, energy depend. 8=787

$K^0 \rightarrow \gamma + \gamma$, CP violation, interference effect theorem 8=3653

K^0 , total reflection TCP, or time reflection T 8=790

K^0 , leptonic, test of validity of $\Delta S = \Delta Q$ rule 8=792

$K_{\mu3}^0$ T-odd correl. and π e.m. form factor 8=6883

Mesons—contd

decay—contd

K^0 , nonorthogonality of states and CP nonconservation 8=783

$K^0, \bar{K}^0 \rightarrow \pi^+ \pi^-$ pair decay into neutral particles and CPT 8=15814

$K^0 \rightarrow \pi^+ + \pi^- + \gamma$ CP violation, interference effect
theorem 8=3653

$K^0 \rightarrow \pi^+ \pi^-$, long-lived decays, status of CP
invariance 8=779

$K^0 \rightarrow 2\pi$, determ. of $\text{Re}(A_2/A_0)$ 8=11544

$K^0 \rightarrow 2\pi$, TCP-invariance test 8=15792

K^0 , CP-violation and interference phenom. 8=6880

$K_L^0 \rightarrow \pi^0 e^+ e^-$ and CP nonconservation 8=20475

$K_L^0 \rightarrow \pi^+ + \mu^+ + \bar{\nu}(\nu), \Delta S = -\Delta Q$ amplitude determ. 8=11543

$K_L^0 \rightarrow \pi^+ + e^+ + \bar{\nu}(\nu), \Delta S = -\Delta Q$ amplitude determ. 8=11543

$K_L^0 \rightarrow \pi^+ + e^+ + \nu$, charge asymmetry 8=782

$K_L^0 \rightarrow \pi^+ \pi^-$, CP violation 8=777

$K_L \rightarrow 2\pi$, isotopic spin selection rules and CP
violation 8=780

$K_L \rightarrow 2\pi^+ + \gamma$, CP conservation effects 8=20472

$K^0 \rightarrow \pi^+ \pi^- \pi^0$, charge asymmetry 8=6884

K_S^0 , CP-violation and interference phenom. 8=6880

$K_S^0 \rightarrow \pi + \pi$, e.m. correction to meas. $\text{Re}(A_2/A_0)$ 8=785

$K_S \rightarrow 2\pi$ mode, as test of octet dominance in weak, e.m.
and strong interactions 8=3516

$K^0 \rightarrow 2\pi, SU_3$ -breaking effect and hyperon decay 8=3729

$K_L^0 \rightarrow \pi^+ \pi^- \pi^0$, CP conserving, Hamiltonian, estimate of
 $K_L^0 \rightarrow 3\pi/K_S^0 \rightarrow 3\pi$ 8=20470

K^0 CP noninvariance rel. to non-classical theory of mag.
monopoles 8=781

$K_2 \rightarrow 2\gamma, \pi^+ + \pi^- + \gamma$, branching ratio 8=3659

$K^0 \rightarrow \pi^+ + \mu^+ + \bar{\nu}, \mu^+ + e^+$, branching ratio 8=11569

$K_2^0 \rightarrow \pi^+ + l^+ + \nu$ and CP violation 8=15791

$K_2 \rightarrow \pi^+ \pi^-$, CP violation, energy depend. on branching
ratio 8=11569

$K_2 \rightarrow 3\pi$, CP conserving, Hamiltonian, estimate of
 $K_L^0 \rightarrow 3\pi/K_S^0 \rightarrow 3\pi$ 8=20470

$K^0 \rightarrow \pi^+ + \pi^- + \gamma$, rate calc. 8=3659

K_{e^+} decay rates and ratios obs. 8=20473

K_{e^+} , e⁺ momentum spectrum, branching ratio
obs. 8=20477

$K^+ \rightarrow e^+ + \pi + \nu$, pure vector coupling and form factor
structure 8=11542

$K^+ \rightarrow l^+ + \nu + \gamma, \pi^+ + l^+ + \nu + \gamma$, Fubini sum rule between
form factors, meson-meson couplings and photon-meson
couplings 8=20474

$K^+ \rightarrow \mu^+ \nu_e e^+$ as hadron weak decay time-reversal
invariance test 8=789

$K^+ \rightarrow \mu^+ + \nu + e^+ + e^-$, test for T invariance in μ
polarization meas. 8=20476

$K^+ \rightarrow \mu^+ \nu + e^+ + e^-$ as a test of time-reversal
invariance 8=20476

$K^+ \rightarrow \pi^+ \gamma\gamma$, use of η -pole approx. 8=791

$K^+ \rightarrow \pi^+ l^+$ obs., $K_{\text{e}^+}/K^+, K_{\mu3}/K^+$ ratios 8=20473

$K^+ \rightarrow \pi^+ \pi^0$, rel. to e.m. π^0 mixing 8=791

$K^+ \rightarrow \pi^+ \pi^0 \gamma, (\pi^+, \gamma)$ ang. distrib. obs. 8=3655

$K^{*0} \rightarrow \pi^+ \phi 1^-$, using weak Hamiltonian 8=20470

$K_{\text{e}^+}^+$, Dalitz plot, radiative corrections 8=3656

$K^*(1420)$, agreement with 2^+ , SU(3) nonet 8=813

K^* , radiative, e.m. structure 8=6911

$K^* \rightarrow K\pi, F_K/F_\pi$ calc. using Weinberg sum rule 8=11568

leptonic, SU(3) theory yielding unobserved modes 8=11490

μ on mass values maximization of ratio Γ/Q 8=3601

$\omega \rightarrow$ baryons, coupling constants calc. 8=3677

$\omega \rightarrow e^+ e^-$, following $\pi^+ + p \rightarrow \omega + n$ 8=808

ω_0 , leptonic, vector boson model 8=20497

Ω , lifetime estimation, from production by K^-
mesons 8=20498

189 multiplets, SU(6)_v, invariant amplitudes 8=807

in 189-plet of SU(6), mixing coeffs. of unitary
multiplets 8=20411

phenomenological analyses, lectures 8=20413

PCAC hypothesis, pole dominance version 8=3696

$\phi \rightarrow e^+ e^-$, following $\pi^+ + p \rightarrow \phi + n$ 8=808

$\phi \rightarrow KK$, calc. using asymptotic symmetry 8=3677

$\phi \rightarrow KK$ obs. 8=6860

pseudoscalar, SU(3) theory of 3-body leptonic mode 8=3610

radiative decay widths, calc. in static quark model 8=736

rates, calc. via relativistic quark model 8=735

rates in O(4, 2) and introduction of SU(3) 8=20414

$\rho, \rho N^*$, distrib. using statistical tensors 8=20505

$\rho \rightarrow e^+ e^-$, following $\pi^+ + p \rightarrow \rho^+ + n$ 8=808

$\rho \rightarrow \pi + \pi$ current algebra calc. 8=11565

$\rho \rightarrow 2\pi$, calc. of rate via relativistic quark model 8=735

$\rho \rightarrow 2\pi$, current algebra and dispersion relation
analysis 8=811

$\rho \rightarrow 4\pi$ rel. to equality of ρ complete and perturbative
propagators 8=15811

ρ_0 , leptonic, vector boson model 8=20497

ρ^0 in reaction $\pi p \rightarrow \pi^+ \pi^- p$ at 2.77 GeV/c 8=20503

$\rho^0 \rightarrow e^+ e^-$ and $\pi^+ \pi^-$, branching ratio, 600-900 MeV/c² 8=6908

ρ^0 in $\pi^+ + p \rightarrow \pi^+ + \pi^+ + n, 1.38-3.00$ GeV/c compared to
OPE model 8=3685

ρ^0 in $\pi p \rightarrow \pi^+ \pi^- n$ 8=6851

tensor and axial vector, using quark model 8=11557

$35\pi^{*1}$ in three octets 8=733

vector, electromagnetic, calc. using asymptotic
symmetry 8=3677

vector meson, orthodox quark model 8=6822

vector, radiative relations 8=6901

meson-baryon interactions in quark model, prod. cross-sections 8=20405
meson-baryon systems, systematics of forces 8=6918
ω + π → π + π amplitude and Regge trajectory bootstrap 8=11563
ω in φ-ω mixing and equality of Schwinger terms 8=11561
φ-ω mixing and equality of Schwinger terms 8=11561
p exchange in meson-B scatt. 8=740
p + K → p + K*, Mandelstam branch cuts rel. to scatt. and prod. amplitudes 8=11594
p + π → p + A₂, Mandelstam branch cuts rel. to scatt. and prod. amplitudes 8=11594
PN → P'N, VN Regge pole model 8=20318
pseudoscalar-baryon coupling from current divergences 8=6983
pseudoscalar, vector prod., Regge-pole model, parity effects 8=6902
pseudoscalar-vector, superconvergence relations, symms., mass spectra 8=11493
pseudoscalons, pair, quark model, spin-2 meson coupling 8=3612
ρ exchange in π-N scatt. 8=3637
ρ photoprod. cross-section calc. 8=20508
SU(2) × SU(2), chiral, method of phenomenological Lagrangians 8=6744
vector exchange as origin of nuclear repulsive core 8=20642
vector meson sum rules from current commutators 8=3525
vector-vector, superconvergence relations, symms., mass spectra 8=11493
magnetic moment
K* calc. from radiative decay 8=6911
mass
equal spacing rule from meson symmetries based on SU(3) ⊗ SU(3) 8=3609
field theory, vector, interacting with massless fermions 8=3678
field theoretical model prediction 8=3421
K_S⁰ obs. in CP violating decay 8=11569
K₁K₂⁰ mass spectrum, phenomenological interpretation 8=6913
K₁⁰-K₂⁰ difference 8=15801
K₁⁰-K₂⁰ mass difference from asymptotic chiral symmetry and superconvergence sum rules 8=795
K⁺-K⁰, e.m. mass difference 8=15802
K⁺-K⁰ difference, field theoretic model 8=20415
K⁺-K⁰ mass difference, wrong sign from Weinberg sum rules 8=3660
m₁²-m₂², divergences in gauge-field algebra 8=737
K*, from Reggeized bootstrap 8=6910
mass splitting in bootstrap model for even-parity resonances 8=20491
massless in asymptotic symm. approach to derivation of Weinberg sum rules 8=20260
meson-baryon scatt., response of decuplet to octet perturbations 8=3691
nonets, J^P = 1⁻ and 2⁺ from eigenvalue problem solved with SU₃ harmonics 8=11555
in non-linear spin theory 8=20288
Ω, estimation, from production by K⁻ mesons 8=20498
pseudoscalar mass difference, vector meson exchange model 8=20415
pseudoscalar octet, splitting and coupling constants 8=3565
pseudoscalar-vector meson interactions, spectra 8=11493
π and η, agreement value of κI 8=20416
quark model rel. to qq scatt. 8=11478
R agreement with quark model 8=3676
resonance, strangeness-carrying, from SU(3) × SU(3) spectral function sum rules 8=20493
ρ, e. m. effects 8=20251
ρ, in low-energy πN scatt. channels 8=765
ρ⁺, from reaction π⁰p → π⁰π⁰p at 2.77 GeV/c 8=20503
ρ⁺-ρ⁰ mass difference, e. m., superconvergence dispersion relation approach 8=11485
s wave bound states in quark model for Bethe-Salpeter eqn. 8=11476
scatt. crossing-symm. model, equality assumption of resonances 8=3613
σ, in low-energy πN scatt. channels 8=765
SU(2) × SU(2), chiral, method of phenomenological Lagrangians 8=6744
2-body bound problem of Dirac particles 8=11491
unified formula in quark model 8=738
U(3) invariant 4-fermion interaction 8=657
Weinberg's relation m₁ = √2 m_ρ derived in the framework of current algebra 8=20506
production
A₁ production in πp scatt., 2π exchange model 8=3650

Mesons—contd

production—contd

- A_1° in Kp, at 4.6 and 5.0 BeV/c 8=11567
 A_2 in $p + \pi \rightarrow p + A_2$, Mandelstam branch cuts rel. to amplitudes 8=11594
 A_2 in $\pi^- p \rightarrow \pi^- \pi^+ \pi^- p$, 8 GeV/c 8=20447
 A_2 production in πp scatt., 2 π exchange model 8=3650
 cosmic rays as high-energy source 8=7004
 $\Delta^-(1238)$ in $\pi^- p$, 5.5 GeV/c, multiple π prod. 8=3633
 $\Delta^+(1238)$ in $\pi^- p$, 5.5 GeV/c, multiple π prod. 8=3633
 e^+e^- collision, spin current 8=739
 electromagnetic processes and collisions 8=727
 η , ang. distrib. in $\pi^- + p \rightarrow \eta + n$, $T_s = 593$ -704 MeV 8=6853
 η in $\gamma + p \rightarrow p + \eta$, N pole and vector meson resonance below c.m. energy 1700 MeV 8=20490
 η in K $^-p \rightarrow \Lambda \eta$, 1.2-1.7 BeV/c 8=6888
 η in N* decay modes from $\pi^- + p \rightarrow \eta + N$ 8=11637
 η in $\pi^- + p \rightarrow \eta + n$, 561-1300 MeV, resonances and branching ratios 8=11520
 η , in $\pi^- + p \rightarrow n$, 670-805 MeV/c obs. 8=20489
 η in $\pi^- + p \rightarrow n + \eta$, N pole and resonances below c.m. energy 1700 MeV 8=20490
 η in $\pi^- p \rightarrow \eta n$, partial wave analysis in terms of Lorentz group 8=6856
 η in $\pi^- + p \rightarrow n + \eta$, phenomenological model 8=15758
 η in $\pi^- p \rightarrow \eta^0 n \rightarrow \pi^+ \pi^- \pi^0$ 8=15772
 η in $\pi^- p \rightarrow \pi^+ \pi^- \eta$, 3.2, 4.2 GeV/c obs. 8=20448
 η in $\pi^- + p \rightarrow \eta + \Delta^+(1238)$, cross-section and Δ^+ spin density 8=6855
 η^0 from $\gamma + p$, recoil p polarization 8=838
 η^0 in $\pi^- p \rightarrow \eta^0 n$, and ρ' Regge trajectory 8=3665
 f^0 in $\pi^- p \rightarrow \pi^+ \pi^- n$, 8 GeV/c 8=6851
 f^* in K ^-p interactions at 5.5 GeV/c 8=810
 g^0 in $\pi^- p \rightarrow \pi^+ \pi^- n$, 8 GeV/c 8=6851
 η photoproduction on p, 553-850 MeV analysis in second reson. region 8=6843
 $\gamma + p \rightarrow \eta + p$ amplitude, unitarity and S-matrix analysis 8=3569
 $\gamma p \rightarrow \Lambda^+ K^+$, Regge-pole calc. of cross-sections 8=3621
 $\gamma p \rightarrow \Sigma^+ K^+$, Regge-pole calc. of cross-sections 8=3621
 $\gamma p \rightarrow \rho p$, 2 π exchange model 8=3650
 K, photoform. on nucleons, and quark model 8=6842
 K in $\gamma + N \rightarrow \Sigma + K$, consistency conditions for non-Born amplitudes 8=20344
 K in $\pi^- p \rightarrow K^+ K^- n$, cross-section calc. 8=20442
 K factories, linear accelerators 8=15661
 K from π^- , 1.5-4.2 BeV/c 8=6861
 K in pp collisions, high energy π, k, p prod. cross-section depend on longitudinal and transverse momentum components 8=20478
 K in pp \rightarrow YKN, OBE model with approx. 8=20522
 K in $p + p \rightarrow$ hyperon + K + N, 6 BeV/c obs., N $^+$ prod. and decay to hyperon + K 8=20480
 KK in pp \rightarrow KK π , K $^*(891)$ prod., KK $J^P = 2^+$ resonance at 1280 MeV 8=6940
 K $\pi\pi$ mass enhancement between 1.1 to 1.4 BeV 8=815
 K $^-$ in $\pi^- p \rightarrow \Sigma^- K^+$, 1170 MeV/c, cross-section obs., C independence confirmed 8=20449
 K 0 in K $^+ + p \rightarrow K^0 + \Delta^+(1238)$ 8=3662
 K 0 in $\pi^- + p \rightarrow \Lambda + K^0$, $\Sigma^0 + K^0$, phenomenological model 8=15758
 K 0 K 0 , pp, 2.7 GeV/c, 2 meson final states 8=843
 K $^0\Lambda$ backward peak in associated prod. at 5, 7 and 12 GeV/c 8=6973
 ΛK^+ enhancement at 1.7 GeV, $\pi^- p \rightarrow \Lambda K^+ \pi^-$ at 6 GeV/c 8=3630
 K $^+$ photoprod., 3.4 and 5.0 GeV 8=6887
 K $^+$ photoprod. rel. to Y * , 4.0-6.1 BeV 8=15859
 K $^+$ in p-p collisions 2.5-3.0 GeV 8=20479
 K $^+$ in $\pi^- p \rightarrow K^+ \Sigma^+$, 3.23 GeV/c, ang. dist., Σ polarization 8=6852
 K $^+$ in $\pi^+ + p \rightarrow \Sigma^+ + K^+$, $\pi^- + p \rightarrow \Sigma^- + K^+$, phenomenological model 8=15758
 K $^+$ in $\pi^+ + p \rightarrow \Sigma^+ + K^+$, quark model for backward process 8=11480
 K $^+ K^-$, pp, 2.7 GeV/c, 2 meson final states 8=843
 K $^+ \Sigma^-$ in $\pi^- p$ reaction, Regge cut 8=3631
 K b in $\pi^+ p \rightarrow K^b \Sigma^b (\Lambda^b)$, Regge-pole model based on K * , K ** exchange 8=15777
 K $^+$, η , π^+ in cosmic ray collisions 8=20617
 K $^+$ photonuclear reactions, 16-18 GeV e acceleration, with metal targets 8=20768
 K * (890), (1500) prod. in Kp, 4.1, 5.5 GeV/c 8=20509
 K * in pseudoscalar-pseudoscalar scatt. 8=11559
 K * in KN \rightarrow K $^*(890)$ N, 3 GeV/c, absorpt. model, π and vector meson exchange 8=6889
 K * in $p + K \rightarrow p + K^*$, Mandelstam branch cuts rel. to amplitudes 8=11594
 K $^*(1250)$, in K $^+$ p interactions at 9 BeV/c 8=814
 Λ/Σ^0 photoproduction cross sections, ratio 8=15859
 NN \rightarrow KK, predictions 8=825
 NN \rightarrow MM, rel. to baryon exchange model of MN scatt. 8=825
 ω in $\pi^- p \rightarrow \omega n$, ϕn , 2.1 BeV/c, cross-section calc. 8=20442
 ω in $\pi N \rightarrow \omega \Delta$, Reggeization procedure 8=11412
 ω in $\pi^- p$, 5.5 GeV/c, multiple π prod. 8=3633
 ω in $\pi^- p \rightarrow \pi^+ \pi^- \pi^- \pi^0$, 3 GeV/c 8=20446
 ω^0 photoprod., OPE, diffraction contrib., polarization prediction 8=20502

Mesons—contd

production—contd

- Ω , by 6 GeV/c K $^-$ mesons 8=20498
 ϕ , high-energy diffraction photoproduction, expt. limit 8=20500
 $\phi \rightarrow$ KK obs. in πp interactions 1.5-4.2 BeV/c 8=6860
 ϕ in $\pi^- p \rightarrow \omega n$, ϕn , 2.1 BeV/c, cross-section calc. 8=20442
 ϕ in pseudoscalar-pseudoscalar scatt. 8=11559
 photo-, diffractionlike mechanism 8=20507
 photoproduction on nuclei, threshold 8=1034
 photoproduction, Regge-pole hypothesis 8=3611
 $\pi^+ p \rightarrow K^+ \Sigma^+$, mass difference effect in Wali-Warnock model, violation of SU(3) 8=3692
 from \bar{p} annihilation on N \rightarrow two mesons and higher symmetries 8=15839
 p-p collisions, synchrotron-radiation model 8=11492
 p-p interaction, 20 GeV, nuclear emulsion 8=831
 resonance in He $^4(\pi, M)$ He 4 , magnitude and phase of meson scatt. amp. 8=890
 resonances photoproduction on nuclei with zero spin and isospin 8=11558
 ρ in $A_1 \rightarrow \rho \pi$, decay constant anomaly, d-wave coupling constant 8=6907
 ρ in $A_1 \rightarrow \rho \pi$ S/D wave ratio determ. 8=11566
 ρ in e^+e^- colliding beams 8=812
 ρ in $\gamma \pi \rightarrow \rho \pi$, sum rules rel. to e.m. widths of ω , A_1 , A_2 8=11566
 ρ in NN \rightarrow NN ρ absorptive peripheral model 8=6920
 ρ , parametrization for resonant scatt. applic. to NN, $\pi\omega$ 8=3683
 ρ in πN collisions and rel. to conserved current 8=15813
 ρ in $\pi N \rightarrow \rho \pi N$, mass distrib. from Regge-pole exchange model 8=20440
 ρ in π -N scatt., semiclassical theory 8=20452
 ρ , in $\pi p \rightarrow \rho N^*$, ang. decay correl. with $\pi p \rightarrow \rho^0 N^*$ 8=11636
 ρ in pseudoscalar-pseudoscalar scatt. 8=11559
 ρ^- , in reaction $\pi^- p \rightarrow \pi^+ \pi^- p$ at 2.77 GeV/c 8=20503
 ρ^0 in $\gamma + p \rightarrow p + \rho^0$, 3.2-4.9 GeV 8=16057
 ρ^0 photoprod. on N, cross-section calc. 8=20508
 ρ^0 photoproduction in nuclei, cross-section 8=20767
 ρ^0 in $\gamma + A \rightarrow \pi^+ + \pi^-$ on $9 \leq A \leq 207$ nuclei, 4.35 and 6.02 GeV 8=7164
 ρ^0 in Al(γ, ρ^0)Al, 3.2-4.9 GeV 8=16057
 ρ^0 in C(γ, ρ^0)C, 3.2-4.9 GeV 8=16057
 ρ^0 , OPE calc., normalization for S-wave $\pi^+ \pi^-$ S-wave scatt. cross section 8=20439
 ρ^0 in $\pi^- p \rightarrow \pi^+ \pi^- \rho^0$, 3.2, 4.2 GeV/c obs. 8=20448
 ρ^0 prod. in $\pi^- p \rightarrow \pi^+ \pi^- \pi^+ p$, 8 GeV/c 8=20447
 ρ^0 in $\pi^+ p \rightarrow \rho^0 N^{*+} \rightarrow \pi^+ \pi^+ p$, peripheral models 8=11515
 vector, conspiracies and forward prod. 8=6898
 vector, double-Regge-pole model, appl. of SU(6) $_v$ symm. 8=3680
 vector in $\pi B \rightarrow V \Delta$, Regge-pole couplings 8=6903
 vector in pseudoscalar interactions, Regge pole model, parity effects 8=6902
 vector, Regge pole residues, kinematical singularities 8=11415
 vector and tensor by π exchange Reggeization 8=11499
 X 0 from π p cross sections obs. 8=20501

 ρ in N-N scatt., Mandelstam representation 8=824
 ρ prod. in $NN \rightarrow NN\rho$ absorptive peripheral model 8=6920
 ρN^* decay distrib. using statistical tensors 8=20505
 $\rho NN, \rho NN^*, \rho NN_{3/2}^*$ coupling from current algebra 8=11564
 ρ in OPE model for $\pi-\pi$ scatt. 8=15789
 ρ parameters in bootstrap $\pi-\pi$ scatt. 8=11536
 ρ , parametrization for resonant scatt. applic. to NN , $\pi\omega$ 8=3683
 ρ phenomenological Regge trajectory, 8=20504
 ρ photoprod. in $\gamma + A \rightarrow A + \pi^+ + \pi^-$ on $9 \leq A \leq 207$ nuclei, 4.35 and 6.02 GeV 8=7164
 ρ , prod. in πN collisions and rel. to conserved current 8=15813
 ρ -P vacuum trajectory branch cuts conspiracy in NN and NN charge exchange scatt. 8=11584
 ρ , in π prod. 8=20438
 ρ in πN high energy interactions, N/D effective-range theory 8=3554
 ρ in $\pi N \rightarrow \rho p N$, mass distrib. from Regge-pole exchange model 8=20440
 ρ , πN scatt. exchange contrib. 8=761
 ρ , in $\pi p \rightarrow \rho N^*$, ang. decay correl. with $\pi p \rightarrow f^0 N^*$ 8=11636
 ρ in $\pi-\pi$ scatt. as sum rule, as input 8=3646
 ρ in $\pi^-\pi^0$ scatt., Chew-Low method 8=768
 $\rho \rightarrow \pi + \pi$ current algebra calc. 8=11565
 $\rho \rightarrow 2\pi$, current algebra and dispersion relation analysis 8=811
 ρ prod. in pseudoscalar pseudoscalar scatt., bootstrap calc. with Schrodinger eqn. 8=11559
 ρ propagator, complete equal to perturbative since $\rho \rightarrow 4\pi$ is absent 8=15811
 ρ Regge trajectory, derivation and solution of integral eqn. 8=20412
 ρ^- in $\pi^+p \rightarrow \pi^-\pi^+p$ 8=11522
 ρ^- , production and decay, from reaction $\pi^+p \rightarrow \pi^-\pi^+p$ at 2.77 GeV/c 8=20503
 ρ^- in $C(\gamma, \rho^-)C$, 3.2-4.9 GeV 8=16057
 ρ^- in $Al(\gamma, \rho^-)Al$, 3.2-4.9 GeV 8=16057
 $\rho^- \rightarrow e^-e^+$ and $\pi^+\pi^-$, branching ratio, 600-900 MeV/c² 8=6908
 ρ^- in $\gamma + p \rightarrow p + \rho^-$, 3.2-4.9 GeV 8=16057
 ρ_0 , leptonic decay, vector boson model 8=20497
 ρ_0^+ , ω , and ϕ , photon coupling form factor 8=6905
 ρ^+ in photoprod. on N, cross-section calc. 8=20508
 ρ^+ photoproduction in nuclei, cross-section 8=20767
 ρ^+ , OPE calc., normalization for S-wave $\pi^+\pi^-$ S-wave scatt. cross-section 8=20439
 ρ^+ in $\pi^+ + p \rightarrow \pi^+ + \pi^+ + n$, 1.38-3.00 GeV/c compared to OPE model 8=3685
 ρ^+ prod. in $\pi^+p \rightarrow \pi^+\pi^+n$, 8 GeV/c 8=6851
 ρ^+ in $\pi^+p \rightarrow \pi^+\pi^+n$ 8=11522
 ρ^+ in $\pi^+p \rightarrow \pi^+\pi^+\pi^-$, 3 GeV/c 8=20446
 ρ^+ prod. in $\pi^+p \rightarrow \pi^+\pi^+\pi^+p$, 3 GeV/c 8=20447
 ρ^+ in $\pi^+p \rightarrow \rho^+N^{*++} \rightarrow \pi^+\pi^+\pi^+p$, peripheral models 8=11515
 ρ^+ trajectory in π - p charge-exchange scatt., Regge parameters 8=11538
 $\rho\Delta$ from πN interaction, π conspiracy consequences 8=6867
 $\rho\pi$, in $\pi^+\pi^-\pi^0$ system 8=15812
 σ , coupling constant to nucleons 8=11554
 σ , 700 MeV for π prod. 8=20438
 σ in Y-N scatt. 8=20573
sources, strong coupling group model 8=20492
 SU_3 harmonics as basis states 8=11555
tensor and axial vector, quark couplings and strong decays 8=11557
 $35^{1/2}$ in three octets, decay 8=733
 2^+ , partial conservation 8=11570
vector-baryon couplings from superconvergence relations 8=6900
vector, conspiracies and forward prod. 8=6898
vector-current spectral functions sum rules rel. to vector-meson dominance 8=3679
vector, radiative decay relations 8=6901

Mesons—contd

resonances—contd

- vector exchange as origin of nuclear repulsive core 8=20642
- vector gauge, as chiral partners in Yang-Mills theory 8=15809
- vector prod. in $\pi B \rightarrow V \Delta$, Regge-pole couplings 8=6903
- vector in $\gamma + p \rightarrow p + \eta$ 8=20490
- vector, and photoprod. 8=15669
- vector and tensor prod. by π exchange Reggeization 8=11499
- vector, interaction with massless spinors in 2 dimensions 8=15617
- V scatt. in $PV \rightarrow VV$, superconvergent sum rules 8=15759
- vector-meson field theory, coupling parameters, current algebra determ. 8=6899
- X^0 prod. from $X^0 \pi^+ p \rightarrow X^0 n$, cross sections obs. 8=20501
- $X^0 \rightarrow 2\gamma$, width rel. to mixing in η , X^0 8=20499
- z decaying to $\pi^+ \pi^-$, search in $\pi^+ + p \rightarrow \pi^+ + \pi^0 + p$ 8=11553
- Z_1 (1910), spin and parity from backward K^-p elastic scattering 8=6892

scattering

- A_2 - π superconvergence sum rules 8=20421
- on baryons, cross-sections, in $SU(3)$, asymptotic limits 8=742
- BM, MM, couplings in quark model, soln. to superconvergence relations 8=20404
- $He^4(\pi, M)He^4$, magnitude and phase of meson scatt. amp. 8=890
- K^+ , 240-300 MeV in emulsion, optical-model anal. 8=20482
- K - α , differential cross section, low-energy elastic 8=11549
- K - K , extension of domain of validity of dispersion relations 8=6895
- KK , extension of domain of validity of dispersion relations 8=6895
- K^+n , sum rule analysis 8=6896
- $K(\bar{K})$ - N , elastic, dispersion calc. compared with expt. 8=15830
- KN dispersion relations and coupling constants determ. 8=11550
- KN forward dispersion relation for $\Delta \bar{K}N$ coupling constant calc. 8=802
- K - N , phenomenological model of diffraction 8=6894
- KN , Regge secondary poles, cuts and conspiracies rel. to crossover and polarization 8=11529
- KN superconvergence sum rules and Regge pole parameters 8=3666
- KN superconvergence sum rules and vector meson Regge poles 8=3661
- K - N , s-wave absent with t-channel singularities, K - B coupling constants 8=20483
- K^+N , dispersion relations, $SU(3)$ invariance violation 8=6891
- $K\pi$ extension of domain of validity of dispersion relations 8=6895
- $K^{*-}\pi$, superconvergence sum rules 8=20421
- Kp , sum rule analysis 8=6896
- Kp superconvergent sum rule and Regge parameters 8=3667
- $K^- + p \rightarrow K^0 + n, \rho + R$ Regge-pole model determ. of parameters 8=6893
- $K^-p, \sim 1$ GeV/c, phenomenological model of diffraction 8=6894
- $K^-p \rightarrow K^+n, K^-p$, resonant partial wave amplitudes 8=6897
- K^-p elastic, s-wave interaction, 0 - 250 MeV/c 8=20481
- K^-p total and elastic cross sections at 2.66 GeV/c 8=801
- K^+p , backward elastic, as evidence for baryon exchange 8=803
- K^+p , backward elastic at 1-3.5 GeV/c 8=6892
- K^+p phase-shift analysis below 1500 MeV/c 8=20484
- K^+p , mass difference effect in Wali-Warnock model, violation of $SU(3)$ 8=3692
- $K^+p, l=1$ P-wave phase shifts from $N^*(1238)$ prod. 8=15805
- K^+p , test of PDDAC for A_1^{++} 8=3668
- K^+p , and parity of Δ and Σ 8=3730
- M - N factor from $\pi + d \rightarrow M + d$ 8=3736
- MN baryon exchange model rel. to $NN \rightarrow MM$ 8=825
- meson-B scatt. p-wave, low energy sum rules 8=6833
- meson-baryon, quark model 8=20418
- meson-baryon with Regge poles and $SU(3)$ symmetry 8=740
- meson-baryon, response of masses to perturbations in N/D model 8=3691
- meson-baryon, saturation of superconvergence relations 8=15818
- meson-baryon, $SU(n)$ crossing matrices 8=741
- meson-baryon s-wave scatt. length calc., pseudo-scalar 8=20420
- meson-baryon, test of a superconvergent relation 8=11494
- meson-N, amplitude determ., neutral scalar meson models 8=11496
- meson-N, amplitude expansion using Lorentz group representation 8=15696
- meson-N amplitude at high energy, Regge asymptotic behaviour 8=11495
- meson-N, quark model for mesons, Glauber formalism, correction to Johnson-Trieman relation 8=20419

Mesons—contd

scattering—contd

- meson-N, 2 sum rules and meson-N coupling constants 8=20469
- η - n as Regge pole in $\pi^- + p \rightarrow \eta + n$, phase shift calc. 8=20433
- ω - N , superconvergent sum rules 8=3553
- $\pi\omega, \rho$ parametrization 8=3683
- pseudoscalar meson-spin 2^+ meson, superconvergence sum rules 8=20421
- $PV \rightarrow VV$, superconvergent sum rules 8=15759
- pseudoscalar-pseudoscalar, to derive internal symmetries 8=3613
- pseudoscalar-pseudoscalar, with vector resonances, bootstrap calc. with Schrodinger eqn. 8=11559
- ρB rel. to baryon magnetic moment relations 8=6900
- ρ - π , sum rule rel. to e.m. widths of ω, A_1, A_2 8=11566
- ρ, π Regge-pole theory, constraint eqns. 8=20321
- $\rho\rho$ Regge-pole theory, constraint eqns. 8=20321
- $SU(6)_w$ symm. satisfied rel. to bootstrap model for meson resonances 8=20491
- vector meson-B scatt. lengths, symm. breaking and Ademollo-Gatto theorem 8=6916

spin and parity

- A_2 , from analysis of $\bar{p}p \rightarrow \pi\pi\pi\pi$ 8=15810
- A_2 in $\pi\pi \rightarrow p\pi^+\pi^-\pi^-, 3$ GeV/c 8=20446
- A_2 in $\pi\pi \rightarrow \pi^-\pi^+\pi^+p, 8$ GeV/c 8=20447
- chiral symmetry breaking 8=15757
- e^+e^- collision, spin current 8=739
- f^* , assignment from decay modes 8=809
- $K\pi 3$ decays, CP noninvariance 8=6886
- R^+ agreement with quark model 8=3676
- resonances in bootstrap model 8=20491
- ρ^+ prod. in $\pi^+p \rightarrow \pi^+\pi^-\pi^+p, 8$ GeV/c 8=20447
- Z_1 (1910) from backward K^-p elastic scattering 8=6892

 liquid and solid, Knight shift data interpret. rel. to density of states 8=12928
 liquid, sound velocity temp. coefficient var. with disorder processes 8=12857
 liquid, temp. depend. of self-diffusion 8=12831
 liquid, 2-phase m. h. d. applications 8=19729
 liquid, Ziman pseudo-atom phase shifts calc. for monovalent ions 8=16882
 liquids, MHD generators, computer efficiency calc. 8=3156
 localized impurity states 8=17921
 M-O-M sandwich, electroluminescence rel. to electron emission 8=9277
 magnetic, electrons 8=22739
 magnetic impurity in metal, ground state 8=8909
 magnetoresistivity, low temp. general theory 8=13644
 in magnetostriiction oscillator, destruction by cavitation and droplet impact 8=22306
 mass ejection by laser pulse 8=8759
 mechanical properties, stacking faults, effects 8=22305
 metal-dielectric-supercond. structure, electron tunneling in sound field 8=5219
 metal oxide, hypostoichiometric, partially ordered defects, statistical model 8=17600
 metal-SiO_x-CdSe (metal) contacts, photocurrent studies 8=2281
 metallic Mn perovskites, first order mag. transitions 8=22742
 metallides, isomorphous substitution of atoms in crystals 8=17195
 microplasticity, study by strain effects on the a.c. resistance 8=5036
 molten, double structure of spherical close packing and layer lattice 8=12786
 molten, vacuum induction furnace 8=16744
 with monomolecular semiconductor or dielectric layers, work function 8=9091
 nearly ferromag., band struct. and interatomic exchange effects on spin fluctuations 8=2092
 noble, effect on Fe-C alloys toughness 8=17795-6
 noble metals, dispersion energies and surface tensions 8=21791

Metals—contd

- with nonmagnetic impurities, freq. depend. of elect. cond. 8=17920
 nucleation on solidification, low freq. vibration effect 8=4796
 occluded gases, determ. by laser spectral method 8=9747
 optical second harmonic generation, nonlinear polarization vector calc. 8=18483
 oxidation, high temp., scales form. mechanism 8=5711
 oxidation mechanism, isotopic study 8=23092
 oxides, dehydration processes investigated by emanation methods 8=14369
 oxide film growth kinetics, model based on thermionic emission and ionic diffusion 8=5710
 oxides, i.r. absorpt. freq. and charact. Debye temp. 8=14190
 photoconductivity from Kubo-Greenwood formulae 8=5393
 photoconductivity rel. to self-consistent theory of optical transitions 8=5394
 photoelectric effect, vacuum u.v. 8=13934
 polycrystals, ionic corrosion, angle of incidence 8=13522
 positron mean lives, temp. depend. 8=2127
 positron momentum distrib. relax. 8=8973
 pure, liq., elec. cond. and other transport props. 8=12911
 quasi-particle excitation attenuation, ferrite temp. theory 8=2120
 rare, electronic furnace for electron beam smelting 8=10457
 repeated discontinuous yielding, mechanics 8=22274
 rod-drawing anals, use of work hardening and redundant work 8=22300
 semimetals and semiconductor insulating (excitonic) phase, anisotropy effect 8=9192
 in sheet form, anal. of bore-expanding test by incremental theory of plasticity 8=22272
 simple, relns. between lattice dynamics and liq. state props. 8=16789
 sputtering, comparison of laser beam and pulsed discharge effects 8=17698
 solid and liquid, angular correlation of positron annihilation 8=8974
 solid and liquid, positron annihilation 8=12896
 specific heat at high temp. diathermic calorimeter temp. depend. meas. 8=1864
 spin polarization of single mag. impurity, in ext. mag. field 8=2132
 strain fields under omnidirectional uniform compression 8=17756
 strength, time and temp. depend., non-equilib. state 8=8811
 stress-strain curves in work-hardening range, linearization 8=17722
 submetallic films, oscs. of conductivity, and mag. resistance 8=9074
 sulphides, chlorination in ore roasting 8=5712
 superconducting non-transition, band structure 8=17868
 surface exam. by u.v. emission on K⁺ bombardment analysed by spectral microscopy 8=14299
 surface films, influence on optical meas. 8=11168
 surface impedance changes on acoustic wave generation by r.f.e.m. radiation 8=180
 surface photoeffect, external 8=22720
 surface thermal resistance at low temps. 8=22130
 target, electron emission by Auger de-excitation of atoms by sputtering 8=5422
 tempered initial cooling in non-vaporizable liquid 8=8044
 texture study by magnetores. and Hall effect 8=8454
 thermal expansion: thermodynamic approach to anharmonicity of lattice vibrs. 8=17529
 thermodynamic props. and heat processes meas. in twin calorimeter 8=250
 thermoelectric power, high approximations 8=13901
 thermogalvanomagnetic phenomena, quantum theory 8=18208
 thin-film cathode drop meas. on vacuum arcs 8=7686
 trace characterization rel. to physical props. of materials 8=18755
 trivalent, molybdates and tungstates, structural type 8=8526
 ultrasonic shear waves in 8=17488
 ultrasonic wave generation 8=4920
 vapour absorpt. spectra, using modified King furnace 8=7393
 vapour phase deposition, applics. in electronics 8=13840
 wire, Snoek spectra at low freq., recording app. 8=8786
 work function anisotropy as meas. by field emission and thermionic techs. 8=18244
 work function, "volume" concept, discussion 8=18242
 Ag-M(M=Cd, Mg, In) alloys, one-phase, inhomogeneous concs., from Zener relax. 8=8239
 GaAs-metal ohmic contacts, thin multilayer 8=9145
 Si-metal contact characts. 8=18082
 Te, interband hole transitions 8=9018

theory

- See also Crystals; Electron gas; Plasma.
 alkali ions, pseudo-atom phase shifts 8=8910
 atoms, magnetic, in non-mag. host, ground state spin 8=16991
 cohesive and volume props., quantum-statistical ab initio calc. 8=4665

Metals—contd**theory—contd**

- conductivity, electrical 8=22508
 conductivity rel. to electron fluctuation pairing 8=17919
 containing impurities, energy spectrum 8=2077
 coupled cyclotron and spin waves 8=13682
 d-transition, formulae of Slater-Koster interpolation procedure 8=8885
 dielectric constant, exchange term 8=2137
 electrical conductivity due to isotopic disorder 8=13630
 electromag. surface waves on semiinfinite metals 8=14164
 electron giant oscillations, electron scatt. effect 8=5136
 electron plasma, sound-like waves, in quantized mag. field 8=17895
 electronic band structure, approx. calculation 8=13650
 electrostatic energy calc. by plane wave summation 8=8201
 evaporation, by powerful heat flux, pulse effect 8=8187
 films, thin, optical absorb. and photoelectric emission, vectorial selective surface effects 8=22950
 interband transitions due to Bragg reflection and pseudo-potentials 8=22442
 intermetallic cpds., bond length dependence on hybrid character of bond orbitals 8=13004
 localized spin and singlet bound state 8=8884
 magnetic moments nonlinear quantum pseudo-resonance 8=1631
 magnetoacoustic resonance effects in inclined mag. fields 8=1844
 metallic lattice, coefficients of accommodation and capture 8=8334
 Mössbauer effect, shift and intensity calc. 8=1643
 Nernst-Ettingshausen effect rel. to magnetoresistance 8=9082
 noble ions, pseudo-atom phase shifts 8=8910
 oscillatory size effects with arbitrary quasiparticle dispersion law 8=22441
 passivity, oxide-film form. and breakdown 8=9702
 phase diagrams and atomic interactions 8=13003
 plasmon satellite in soft X-ray spectra, theoretical interpretation 8=13680
 semimetals, m.h.d. waves, plasma-phonon 8=5135
 shock wave excitation by e. m. irrad. 8=6143
 simple, exchange and correlation mag. instabilities 8=22788
 sound absorpt., transport eqns. 8=17492
 spin susceptibility, dynamic, Fermi liquid theory 8=22447
 spin-wave dispersion in strong mag. field 8=9308
 superconducting characteristics, topological singularities of electron spectrum 8=22524
 transition to insulators 8=22451
 u.s. absorpt. in quantizing mag. field by free electrons, calc. 8=22093
 Ga₂-Fe₂O₃ and related cpds., Mössbauer investigations 8=13028
 Mg, electronic structure from optical properties 8=14239
 Pt/rare-earth alloys, conduction electron polarization 8=17857

Metamagnetism. See Antiferromagnetism; Ferromagnetism.**Meteorites**

- See also Meteors.
 Abee, enstatite chondrite, origin of 'excess' Ar³⁹ 8=19277
 Canyon Diablo, hexagonal diamond discovery and implication 8=10369
 chondrites, carbonaceous and disequib., isotopic composition of trapped Kr and Xe 8=19275
 chondrites, ordinary, total C content of 86 specimens 8=19272
 3 chondrites, carbonaceous, Xe and Kr isotopic composition 8=19276
 conference, U. K. research, Leicester, (1966) 8=19274
 cosmic ray radioactive particles distrib. in meteorites calc. 8=10367
 cosmic-ray tracks, very heavy, identification 8=20596
 fireball, 9 Dec. 1965, trajectory and orbit 8=19280
 fireball, 25 April 1966, Canadian obs. 8=19281
 fireball of 14 June 1967, trajectory 8=19282
 Goalpara, hexagonal diamond discovery and implication 8=10369
 Goose Lake, structure of typical fragments 8=10368
 Gosses Bluff astrobleme, shatter cone orientation 8=23680
 iron, Os in three specimens 8=14857
 lunar craters, meteoroidal impact hypothesis 8=14824
 Misteca and Carbo, inert gas compositions 8=10366
 Norton County achondrite, Rb⁸⁷-Sr⁸⁷ isochron and K⁴⁰-Ar⁴⁰ ages 8=19278
 orgueil carbonaceous, electron microscopy of biological structures 8=2830
 Orgueil, round-body structures, origin 8=23683
 parent bodies, origin of chondrules 8=14856
 radioactive nuclides in Peace River and Harleton chondrites, cosmic ray history deductions 8=14858
 St. Severin, chem. comp. 8=19273
 stone, asteroids crossing earth's orbit as source 8=19249
 stony, stony-iron and iron, interplanetary field from thermoremanent magnetization obs. 8=19279
 stony, surface, optical characteristics 8=2816
 surface, optical characteristics 8=2816
 tritium loss from iron meteorites by solar wind hydrogen 8=10370

Meteorites—contd

- Br in stony, analysis by thermal neutron activation 8=19271
 Fe abundance 8=23682
 Fe, Australian, comp. differences obs. 8=23684
 Fe ion tracks in olivine 8=8768
 Pu²⁴⁴ and P²³⁹ early abundances, obs. in achondrites, rel. to early solar system abundances 8=23468
 Xe fission and spallation, isotope ratios 8=14859
Meteoroids. See Meteorites.
Meteorological instruments
 See also Anemometers; Hygrometers; Ionosphere measuring apparatus.
 balloon-borne diffusing system, for i. r. rad. from 1 to 5 μ 8=9840
 dew-point instrument, minimizing effect of contamination on mirror 8=14581
 humidity meas., atmospheric, ceramic sensing device 8=18855
 radiosonde, rotation of fan and ascent of balloon 8=14580
Meteorology
 aerosol concentration and size distribution 8=18870
 astronomical observatory, influence on choosing site 8=14579
 atmosphere general circulation, computer model for global study 8=9822
 atmospheric radio refractivity, world atlas 8=18905
 canonical correlation and relation to discriminant analysis and multiple regression 8=23254
 characteristics correl. with outgoing rad. of "earth-atmos." system 8=9861
 computerized weather forecasting 8=18849
 data for southern hemisphere stratospheric circulation 8=2574
 frontogenesis, narrow zone, from field having only large-scale var., numerical expt. 8=18860
 high altitude fronts, theory 8=9830
 satellite, meas. of conds. via vertical vel. and stream function 8=10027
 solar cycle rel. to circulation 8=23253
 synoptic, abd boundary layer over oceans 8=14582
 temperatures, potential, formulae for different types 8=9823
 tropospheric propagation, radio-meteorological correlations over Bass Strait 8=18899
 weather analysis and predictions 8=18848
 weather correl. with Rn decay product conc. variation 8=5794
 O₃, oscillation, quasi-biennial, from monthly O₃ data 8=2581

Meteors

- See also Meteorites.
 activity, correlation with sporadic-E 8=10362
 in asteroid belt, collision probability, calcn. 8=2818
 asteroids, crossing earth's orbit as stone meteorite source 8=19249
 in atmosphere, fragmentation, deform. and ablation and luminous intensity 8=10364
 Canadian national report 8=14639
 comets rel. to shavers origin, Canada and N. Zealand radar obs. comparison 8=19265
 dust, effect on v.l.f. propag. 8=18992
 dust, upper atmosphere, detection from sounding rocket 8=18918
 Earth's orbit vicinity, part, distrib. rel. to extraterrest. telescope lifetime and radar echo obs. 8=10363
 rel. to formation of sporadic-E 8=2707
 Geminids, mag. effect due to passage through interplanetary space 8=2733
 geomagnetic micropulsations, possible cause, math. model 8=2734
 ionosphere, influx from sporadic E blanketing freqs. obs. 8=2705
 kinetic energy distrib. and rel. to radar obs. 8=10361
 luminous efficiency, laboratory measurement 8=14855
 lunar crater erosion 8=23643
 meteoroid environments in solar system, correl. rel. to mass conc. and 'perforation capability' 8=19269
 micro-, flux at 60 to 145 km, rocket obs. 8=2829
 radar echo duration as function of meteoroid mass 8=5960
 size, calc. from cosmic-ray-induced nuclear reactions 8=19266
 spectral lines identification by lab. dispersion standards 8=19270
 trail echoes during v. h. f. forward scattering, diurnal and seasonal vars. 8=19267
 trails luminous flux and ionisation powder 8=10365
 trails luminosity rel. to recomb. radiation 8=19263
 trails, molecular dissociation 8=19268
 Tunguska, energy density of explosion 8=23681
 visual observations recorder 8=19264
 visual over Waltair, November to January inclusive from 1961 to 1964 8=23679

Metrology. See Measurement; Mechanical measurement.**Mica**

- biotite, adsorpt. isotherms of alkyl ammonium ions in aqueous solns. 8=13106
 crystal as retardance meter 8=6510

Mica—contd

- electric dipoles on cleaved surfaces, LEED obs. 8=22650
- foil, e^+ annihilation fraction 8=13693
- polytype, Li fluorophlogopite 8=8531
- single crystals, D^+ transmission 8=22242
- superimposed layers subject to alternating field, elec. stress distrib. 8=9235
- tracks caused by electron showers 8=22246
- triclinic polytypes giving monoclinic diffraction patterns, symmetry enhancement phenomena 8=13290
- Ag film evaporation, W substrate nucleation 8=13087
- As ions registration in cryst. 8=11325
- Ions registration in cryst. 8=11325

Micelle systems. See Colloids.

Microanalysis. See Chemical analysis.

Microhardness. See Hardness.

Micrometeorites. See Meteorites.

Micrometry

- See also Interferometry; Strain gauges; Thickness measurement.
- photoelectric for meridian passage times 8=10104

Microphones

- See also Acoustic transducers.
- hearing aids, ear level, shadow and baffle effects of head 8=10733
- second-order gradient, random efficiency 8=183
- C contacts, resistance increase due to surface deterioration 8=19558

Microphotometers. See Densitometry.

Microprobe analysis. See Chemical analysis/X-ray.

Micropulsations. See Earth/magnetic field, variations; Magnetic storms.

Microscopes

- See also Electron microscopes; Ion microscopes.
- development during last 50 years, review 8=15516
- electron bombardment luminescence obs. 8=14296
- interference, dry-mass determ. of biological substs., ext. of Pehland-Hager theory to optically anisotropic systems 8=20098
- interference, two-beam Linnik, surface studies 8=13078
- laser, appl. to biology 8=6503
- objectives aperture meas., precision apertometer 8=6507
- X-ray projection, resolution and exposure time improvement 8=17263
- X-ray, soft, image intensifier 8=17261

Microscopy

- See also Electron microscopy.
- bright field image with partially coherent illumination, nonlinear transfer 8=15513
- bubble chamber exposures, electronic co-ordinate measurements 8=482
- dislocation loops from contrast in field-ion micrographs 8=17633
- extinction and area meas., integration method 8=20058
- field-ion images of hexagonal structures and superlattices, computer simulation 8=8494
- field ion images, interpretation 8=8493
- field-ion micrograph interpretation of contrast from dislocation loops 8=17633
- high-speed cinephotomicrography 8=11220
- holography, pulsed, appls. 8=20107
- holomicrography, image transformation during reconstruction 8=525
- microkymography, new method and apparatus 8=15566
- part. size distribn., photograph-projection comparator, nonautomatic, descr. 8=5
- phase contrast, direct obs. of conc. fluctuations in critical mixture 8=21616
- phase-contrast, partial coherence effects 8=15515
- silicon iron, notched, fracture topology from optical microscope obs. 8=17793
- steels, notched, fracture topology from optical microscope obs. 8=17793
- superresolution, and the Abbe resolution limit 8=6505
- trace analysis by electron and optical microscopy 8=17269
- tubes, thin-walled, non-absorbing, in living cells, conditions for visibility 8=6501
- ultrathin sections, Pb contrasting 8=19336
- X-ray hologram microscopy, high resolution attainment 8=15592
- X-ray image intensifier for soft X-rays 8=17261

Microstructure of crystals. See Crystal structure/microstructure; X-ray examination of materials/microstructure.

Microtomes. See Biological technique and instruments;

Laboratory apparatus and technique; Microscopy.

Microtrons. See Particle accelerators/orbital.

Microwave spectra. See Spectra.

Microwave spectrometers. See Spectrometers, radiofrequency.

Mie theory. See Scattering.

Milky Way. See Galaxies/the Galaxy.

Mineralogy. See Minerals.

Minerals

- See also Mica; Quartz; Ruby.
- asbestos, adsorpt. of gases 8=21898
- albite crystals in K^+ solns., hydrothermal Na-K "exchange" process 8=18648
- albite, elec. cond. at high press. and temp. 8=8978
- aluminous pyroxene peridotite and garnet peridotite, stability fields in upper mantle 8=9789

Minerals—contd

- Antarctic rocks, mag. props. rel. to mineralogy, methodology 8=10062
- apatite crystallites, carbonate effects on morphology during growth 8=1720
- apatites, luminesc. and stoichiometry 8=2477
- arsenolite epitaxial growth on fluorine rel. to temp. of As_2O_3 vapour and CaF_2 8=17252
- basalt, elec. cond. at high press. and temp. 8=8978
- basalts from Pacific, K-Ar ages and mag. props 8=19062
- basalts, submarine, self-reversal of remanent magnetism 8=19058
- beryl and beryl melts, thermal decomposition at high temps., press. depend. 8=18645
- beryl, i.r. spectra of foreign mols. 8=2400
- biotite, adsorpt. isotherms of alkyl ammonium ions in aqueous solns. 8=13106
- biotites, phengites and chlorites in schists, obs. on Al content 8=13055
- Brazilian glauconites, K-Ar age meas. 8=18830
- calcite, elastic compliances temp. dependence 273-90°K 8=5055
- calcite, motional effects in e. s. r. of CO_2 8=22899
- chalcophyrite, Mössbauer effect 8=16982
- chlorapatite, crystal structure 8=17352
- chlorospondiosite, e. s. r. and optical spectra of CrO_4^{2-} 8=14099
- cryolite melts, solubility of Al, comp. and temp. dependence 8=21618
- diamond hexagonal polymorph, "lonsdaleite", natural occurrence and crystal analysis 8=13121
- diopside in upper mantle, plastic deform. 8=14557
- diopside, radiative thermal cond. calc., rel. to planetary interiors 8=23654
- dolomite earthenware, cracking of applied glaze 8=2044
- epsonite, $MgSO_4 \cdot 7H_2O$, left form predominance during crystal growth 8=17241
- erionite and offretite, differentiation 8=13153
- ettringite, $3CaO \cdot Al_2O_3 \cdot 3CaSO_4 \cdot 32H_2O$, crystal structure and chemistry 8=13253
- eustatite in upper mantle, plastic deform. 8=14557
- feldspar, plagioclase, etching and replicating technique studied by electron microscopy 8=21930
- ferrian ilmenites in basalts, electron probe paleomag. analysis 8=14703
- fluorapatite, crystal structure 8=17352
- formacite, $Pb_2CuCrO_4(As, P)O_4OH$, crystal structure 8=13284
- fresnoite, $Ba_2TiSi_2O_{10}$, i.r. absorpt. spectra and X-ray powder data 8=18506
- galena, PbS, X-ray microanalysis, atomic no. effect corrections 8=14479
- galena, pitchblende and pyrite deposits, induced polarization field expts. 8=2561
- gibbsite in bauxites of Mas Rouge region, e-microscope exam. 8=17275
- gillespite, Fe^{2+} Mössbauer spectrum 8=13026
- goethites, structure determ. by Mössbauer spectroscopy 8=17370
- granite compression, microfracture events spatially located by S waves 8=23215
- granite and judeite, Hugoniot eqns. of state from shock wave and geophys. data 8=14558
- granodiorite shocked mechanically and by nuclear explosion, triaxial compression obs. 8=23212
- graphite, noble gas anomalies, origin 8=9793
- haradaite, $SrVS_4O_{10}$, crystal structure $SrVS_4O_{10}$, and Si-O bond lengths 8=17416
- hayne, polysynthetic structure 8=17348
- hydrothermal synthesis, apparatus 8=23782
- hydroxyapatite, crystal structure 8=17352
- ilmenites, Curie point from thermomag. plot 8=18324
- ilmenites, mag. props., theoretical interpretation 8=9399
- ilmenite particles, beach sand, mag. props. 8=23454
- ilmenite powders, mag. resonance and susceptibility 8=9398
- labradorite, supersatellite X-ray reflections 8=13255
- lamprophyllite, $(Ba, Sr, K)Na(Ti, Fe)TiSi_2(O, OH, F)_3$, structure determ. 8=17344
- lanthanide conc. ratios between pyroxene and garnet 8=5780
- lepidocrocite, structure determ. by Mössbauer spectroscopy 8=17370
- leucophanite, crystal structure 8=13252
- lonsdaleite, diamond hexagonal polymorph natural occurrence and crystal analysis 8=13121
- magnetite, Fe_3O_4 , weak reflections obs. in X-ray diffraction pattern 8=22020
- magnetite, magnetostriction and magnetocryst. anisotropy, depend. on hydrostatic press 8=19065
- magnetite, reversible magnetostriction 8=10063
- magnetite, reversible magnetostriction at high temp. 8=23448
- meliphanite, crystal structure 8=17351
- montmorillonite, Na and Li, adsorpt. of trimethylcarbonil, by i.r. spectra 8=1705
- murmanite-lomonosovite group, crystal chemistry 8=17198
- muscovite, superstructure when heated in vacuum 8=17285
- natrolite, $(Na_2(Al, Fe)_2Si_3O_{10} \cdot 2H_2O)$, e.p.r. of Fe^{2+} , at 4.2 and 293°K 8=18432

Minerals—contd

- neptunite, oxidation state of Fe, by Mössbauer effect 8=8369
- nordstrandite, $\text{Al}(\text{OH})_3$, structure determ. by X-ray powder analysis 8=17339
- obsidian, elastic props. by u.s. interferometry 8=17713
- oil, adhesion of glass spheres 8=8150
- oligoclase, radiative thermal cond. calc., rel. to planetary interiors 8=23654
- olivine, elec. cond. rel. to mantle cond. distrib. 8=23223
- olivine-spinel equilibria in Mg_2SiO_4 - Fe_2SiO_4 system, 43 to 96 kb at 800, 1000 and 1200°C 8=23218
- olurne in upper mantle, plastic deform. and glide 8=14557
- ores, variable density, selective γ -ray logging 8=18819
- pascoite, $\text{Ca}_3\text{V}_{10}\text{O}_{28} \cdot 17\text{H}_2\text{O}$, crystal structure 8=17350
- periclase, jadeite and spinel, thermal diffusivity from 300° to 1100°K at 1 atm 8=22131
- peridot, radiative thermal cond. calc., rel. to planetary interiors 8=23654
- phlogopite, stability at high press., possible presence in Earth's upper mantle 8=23221
- pigeonite, volcanic, Fe cation distrib. 8=9790
- pitchblende, purite and galena deposits, induced polarization field expts. 8=2561
- plagioclase feldspars, birefringence variation, rel. to age 8=14182
- potash feldspar, Al-Si order and Rb impurity effect 8=17618
- pyridine complexes formed with metallic halogenes, i. r. spectra 8=16860
- pyrites, FeS_2 , X-ray microanalysis, atomic no. effect corrections 8=14479
- pyrosmalite, crystal structure 8=17393
- pyrrhotite, $\text{Fe}_{0.88}\text{S}$, mag. structure from Fe^{57} resonance 8=16985
- quartz, high-low phase inversion, press. 6 to 35 kb, obs. 8=1681
- radioactive, aerial directional detectors 8=18829
- rinkite, features of crystal structure, rel. to analogous silicates 8=8543
- rock, moisture, effect on γ -field, in near-surface atm. 8=9795
- rock, moist, meas. dielect. constant and conductivity in lab. 8=13899
- rocks, creep, temp. and stress effects, rel. to isostasy and tide damping 8=14559
- rocks, phase transitions, under shock compression 8=9800
- rocks, rupture, and elastic wave propag. and absorpt. 8=13515
- rocks, thermal conductivity, rapid determ. by ring heat source probe 8=8654
- rutile, microwave acoustic beam, cross section imaging by Bragg laser diffraction 8=6175
- sandstones, fracture strength and mechanism 8=13517
- schists, Al content in biotites, phengites, chlorites 8=13055
- silica, quartz and olivine, thermal diffusivity from 300° to 1100°K at 1 atm 8=22131
- silicates, microprobe analysis standards prep. from gels 8=14496
- silicate powders, spectral reflectance classification into glasses, cryst.-acidic and basic-ultrabasic 8=14264
- sodalites, photochromic, e.s.r. 8=14120
- soil elect. cond. maps, U.S.S.R., allowance for stratification 8=23229
- spectrographic analysis, i. r. 8=9760
- sphalerite, ZnS, X-ray microanalysis, atomic no. effect corrections 8=14479
- spinel, prep. with ordered vacancies by exchange reactions 8=23082
- standard silicate rocks, chem. anal. techniques 8=9802
- sternbergite, Mössbauer spectra and mag. props. 8=14066
- stishovite, lattice parameters, effect of press. 8=22039
- syngenite, $\text{K}_2\text{Ca}(\text{SO}_4)_2 \cdot \text{H}_2\text{O}$, crystal structure 8=13268
- telluriumbismuthite, Xe extraction, Te^{130} decay rate 8=1017
- thortveitite, e. s. r. 8=9447
- titanomagnetites in basalts, electron probe 8=14703
- troilite, FeS, mag. structure from Fe^{57} resonance 8=16985
- ultrabasic rocks and nodules, anal. rel. to upper mantle comp. 8=5778
- umangite, Cu_2Se_3 , crystal structure 8=17366
- vivianite, $\text{Fe}_3(\text{PO}_4)_2 \cdot 8\text{H}_2\text{O}$, mag. symmetry 8=5502
- Wairakite, conversion of stilbite and Heulandite under very low water s.v.p. 8=2563
- wolframite, Fe, MnWO_4 , X-ray microanalysis, atomic no. effect corrections 8=14479
- wustite reduction in CO, promoters 8=5702
- xanthoconite, Ag_3AsS_3 , crystal structure 8=13248
- X-ray microanalysis errors 8=14485
- X-ray microanalysis, standards and correction methods 8=14480
- zeolites containing H_2O , ethane diffusion 8=8685
- zeolite, surface, energy states and dynamics of Sn atoms 8=16912
- zeolites, synthetic, Sr ion-exchange selectivity 8=23081
- zeolites, use for evacuation of containers in liq. He 8=4502
- zeolites, use in meas. of thermal cond. at liq. He temp. 8=3106

Minerals—contd

- Al-serpentine, hexagonal, crystal structure 8=17336
- $\text{Al}_2\text{Be}_2\text{Si}_4\text{O}_{18}$, crystochemical analysis and structure refinement 8=17338
- $\text{BaCa}_2\text{Al}_3(\text{Si}, \text{Al})_{12}\text{O}_{30} \cdot 2\text{H}_2\text{O}$, crystochemical analysis and structure refinement 8=17338
- Cr^{3+} diopside, absorpt. 10 000–20 000 cm^{-1} , 1.7–290°K 8=18520
- $\alpha\text{Fe}_2\text{O}_3$ crystals, domain walls, n. m. r. obs. 8=5557
- Fe_2SiO_4 , hydrothermally synthesized, melting curve at press. up to 40 kb 8=1615
- Hf, ore deposits in Republic of South Africa 8=9792
- KAlSi_3O_8 , polymorphic transform. at 120 kbar and 900°C 8=8268
- $\text{KC}_2(\text{Be}, \text{Al})_2\text{Si}_2\text{O}_{30} \cdot 0.8\text{H}_2\text{O}$, crystochemical analysis and structure refinement 8=17338
- Li fluorophlogopite, complex mica polytype 8=8531
- Mg_2SiO_4 reactions in mantle, required temp. and press. from thermal and compressibility data 8=2556
- Mn nodules from dredged W. Pacific basalts, mag. props. 8=10055
- $\text{NaAlSi}_3\text{O}_8$, isomorph of high pressure NaAlGeO_4 , rel. to formation in earth's mantle 8=1678
- O^{16} and O^{18} liberation for mass spectrometry 8=12112
- Zr and ore deposits in Republic of South Africa 8=9792
- Minor planets.** See Planets.
- Mirages.** See Atmospheric optics.
- Mirrors**
- See also Telescopes/astronomical.
- concave spherical, image form. for arb. angles of incidence and wide rays 8=469
- dew-point instrument, minimizing effect of contamination 8=14581
- electrostatic analysers, comparison with spherical deflectors 8=15309
- gimballed systems, matrix anal. 8=3348
- interferogram testing 8=20043
- laser resonator, diffraction losses 8=15447
- laser transmissivity optimization in high power cavities 8=6420
- for light pulse separation, spatial and temporal division 8=20021
- Mangin system, elimination of coma 8=20041
- point holograms as mirrors 8=6568
- reflectometer, single and normal incidence 8=6504
- spherical, apparatus involving repeated reflectors for air light absorption meas. 8=7935
- telescope in satellite, thermal deformations in mirror 8=480
- multilayer dielec., high reflectance 8=2461
- Mixing.** See Heat of solution; Solubility; Solutions.
- Moderation.** See Neutrons and antineutrons/moderation.
- Moderators.** See Nuclear reactors, fission/materials.
- Modulation of light.** See Light; Optical properties of substances; Optics.
- Moiré fringes.** See Interference/light.
- Moisture**
- See also Atmosphere/humidity; Humidity; Permeability, mechanical.
- atmospheric, condensation from tropical maritime air masses as freshwater source 8=18854
- colloids, absorpt., chemical potential 8=21730
- detection, beta-ray measurements efficiency 8=9842
- dew-point instrument, minimizing effect of contamination on mirror 8=14581
- fabrics in vapour, equilibrium content 8=21765
- granular materials, rel. to tensile strength 8=22285
- powder, adhesion to solid in temp. field 8=22303
- rock and soil, effect on γ -field, in near-surface atm. 8=9795
- steel effect on crack growth 8=5071
- wood, effect on ignition by radiation 8=15110
- Molar volume.** See Density.
- Molecular beams**
- See also Particle velocity, analysis.
- benzene, scatt. of K, Rb and Cs, compared with cyclohexane 8=1205
- for coherent light prod. of stable freq., theory 8=6438
- cyclohexane, scatt. of K, Rb and Cs, compared with benzene 8=1205
- differential cross-sections at thermal energies, trans-formations and averaging 8=21199
- focusing properties, rabi-type-state selector 8=1322
- force measurement microbalance 8=16380
- generator with opposite beams, optimal variant 8=7642
- ion gauge as species-discriminating detector 8=12380
- line quality, meas. 8=7485
- metastable and repulsive electronic states, time-of-flight determ. 8=4133
- modulated, scatt. from solid surfaces, anal. of 'lock-in' detection 8=1323
- 1 eV energies and above 8=7641
- refractory metal dioxides, geometries determ. 8=7550
- scattering of solid surfaces, quantum mech. calcs. 8=16378
- shock-tube produced, for O atoms at 3 eV 8=7640
- slotted disk velocity selector, construction by electric discharge machining 8=10453
- source, high intensity nozzle for total cross section obs. 8=7639

Molecular beams—contd

- time-of-flight velocity analysis 8=16379
 triple resonance h.f.s. spectroscopy 8=16279
 Ar clusters in nozzle beams, dimer concs. 8=12379
 Ar, at high intensity, condensation forming single crystals 8=16383
 Ar, reflection at Al surface, energy meas. from 100-7500 eV 8=16382
 Ar on W surface, translation accommodation coeff. 8=17113
 Au, vapour press. from Knudsen effusion 8=12999
 Br₂, reaction with K, Rb and Cs atoms, cross-sections 8=1202
 CO₂, at high intensity, condensation forming single crystals 8=16383
 Cs¹³³F¹⁹, h.f.s. meas. 8=16278-9
 He₂ in rarified flow, velocity distribution function Doppler obs. 8=16664
 I₂, laser-induced fluorescence 8=16288
 I₂, reaction with K and Cs atoms, cross-sections 8=1202
 K + HBr, DBr, crossed-beams, velocity and ang. distrib. of KBr 8=9689
 KBr, dipole moment meas. by elec. reson. 8=4154
 N₂ on W surface, translation accommodation coeff. 8=17113
 NH₃ gas, electron diffr., chem. bonding effect 8=6303
 NO, dimers obs. by mass spectra 8=7637
 O₂ on W surface, translation accommodation coeff. 8=17113
 Sb₂Se₃ film deposition, optical anisotropy 8=14259
 XeF₆, mag.-field deflection 8=16377

Molecular orbitals. See Molecules/electronic structure; Orbital calculation methods.

Molecular relaxation. See Molecules/relaxation.

Molecular spectra. See Spectra/inorganic molecules; Spectra/organic molecules and substances.

Molecular structure. See Molecules/configuration and dimensions.

Molecular weight

- cellulose acetates, from sedimentation in acetone, rel. to macromol. characts. 8=4262
 dioxolane polymer, rel. to conversion and temp. 8=18709
 DNA, from birefringence relax. 8=16849
 p-methacrybenzoic acid, polymerized in liq. cryst. state 8=18710
 polycapraamide, oriented, rel. to elastic modulus 8=22405
 polydimethylsiloxane elastomers, MWD changes rel. to octamethylcyclotetrasiloxane polymerization 8=14409
 polyethylene, effect on melting temp. 8=12971
 polyethylene, and ethylene polymerization chain transfer kinetics 8=23129
 polyethylene, vibro-mech. treatment effects, obs. 8=18253
 polymers, and non-Newtonian flow 8=16759
 polymethylmethacrylate, vibro-mech. treatment effects, obs. 8=18253
 polystyrene, rel. to dielec. props. 8=5360
 polystyrene, vibro-mech. treatment effects, obs. 8=18253
 polystyrene, and viscoelastic props. of solns. 8=8030
 polytrioxane rel. to preirrad. dose and temp., obs. 8=21210
 polyvinylacetate, rel. to dielec. props. 8=5360
 polyvinyl alcohol, vibro-mech. treatment effects, obs. 8=18253
 trioxane in soln, at polymerization, effect. of temp. and catalyst conc. 8=18708
 Se vapour 8=4659

Molecular weight determination

- by i.r. spectroscopy 8=9755
 proteins, by u.v. spectrophotometry of sample on sephadex column 8=18642
 thermoelectric method, by meas. of heat of condensation of solvent vapour into polymer solns. 8=18643

Molecules

See also Kinetic theory; Spectra.

- advances in atomic and molecular physics, book I and II 8=16171-2
 dipole, scatt. of e.m. waves, classical and quantum theory 8=7486
 homonuclear diatomic, electron scatt., theory 8=12371
 ionospheric ion-molecule reaction rates 8=18973
 Jahn-Teller coupling, linear, effect on paramag. resonance in ²E state 8=18402
 Jahn-Teller effect at lattice sites of D_{3d} symmetry 8=17308
 Jahn-Teller inclusion in linear Stark effect of R-centre 8=1992
 molecular spectroscopy, conference, Copenhagen Denmark (1965) 8=16239
 molecular structure and spectroscopy, conference Ohio USA (1966) 8=16238
 myoglobin in soln., X-ray scatt. 8=21206
 neutral, high energy, production by laser-surface interaction 8=18273
 neutron high energy scattering 8=1234
 orientation of fibres by polarized internal reflexion spectroscopy 8=16394
 polar, cross-sections for low-energy electron scatt. 8=1233
 in polybromoprene, motion, dielec. polarization obs. 8=22660
 in polychloroprene, motion, dielec. polarization obs. 8=22660

Molecules—contd

- positron, slow, scattering 8=12168
 propionate groups, retarded motion and phase transitions 8=8229
 PR separations prod. by prolate and oblate top mols. 8=12120
 rigid-body motion in mol. crystals 8=17311
 second harmonic generation in homogeneous mag. field 8=12123
 slow electrons, critical scattering 8=7638
 spectra exhibiting accidental resonances, numerical analysis 8=12116
 spectra, optical, Canadian N.R.C. apparatus and meas., review 8=7484
 spectral band, assuming gaussian line profile, calc. 8=7488
 stellar hot, spectroscopy trapped at 4°K 8=4116
 triplet, oriented in rigid-glass matrix, e.s.r. 8=9448
 He, scatt. of changed particles, total cross-section, Bethe cross-section sum rule 8=12107
- configuration and dimensions**
 See also Chemical structure; Crystal structure, atomic, complexes, crystal, analysis using N.Q.R. 8=22927
 Cartesian coords. calc. from internal molec. coords. 8=7500
 diatomic gas, by e interference examination 8=4115
 electron-diffr. determ. from high temp. vapour, rel. to excited vibrational populations 8=16245
 electron-mol. collisions, polarization meas. 8=1232
 gas diffraction data, least squares analysis 8=12165
 negative ions, config. rel. to neutral, obs. effects 8=4140
 macroscopic distrib. of binuclear distance, diatomic 8=7499
 modification by radioactive decay of constituent atom 8=12167
 nonbonded interaction influence on geometry and energy 8=12166
 from optical rotatory dispersion of transient species excited by flash photolysis 8=12258
 terminal atom position determ. by X-rays, rel. to charge distribution effect 8=1261
- configuration and dimensions, inorganic**
 boron oxide, "washing out" effect on mol. electron-diffr. pattern 8=16266
 intermetallic cpds., bond length dependence on hybrid character of bond orbitals 8=13004
 norbornene-2, 3-dicarboxylic acid mono-potassium salt dihydrate, and crystal structure 8=22052
 oxygen fluorides 8=4231
 refractory metal dioxides 8=7550
 silazanes, structure from mass spectra 8=1275
 Ag(I) complex, monothiosemicarbazidesilver(I)chloride crystal structure 8=22013
 AlCl₃, monomeric, by gas e-diffr. 8=16264
 As(SiH₃)₃, i.r. and Raman spectra obs. 8=4144
 BH₂, lowest bent state, effects of quasi-linearity 8=1243
 B₂O₃ planar cpds., B-O bond lengths, mol.-orbital treatment 8=16268
 CeO₂, molec. beam meas. 8=7550
 Co complex, trans-dichloro(1, 4, 8, 11-tetraazaundecane) cobalt (III) ion isomerism 8=7512
 Co(CN)₃³⁻ 8=4147
 Cu complex, N-salicylidene-glycinatoaquocopper(II) hemihydrate 8=8518
 CuF₆⁴⁻, absorpt. spectrum and struct. 8=16280
 CuI, internuclear distances, determ. from rot. consts. 8=1240
 DOCl, from i.r. spectra of ν, bands 8=21083
 F₂CN₂ 8=12816
 FeCl₃, monomeric, by gas e-diffr. 8=16264
 GaO, by gas e-diffr. analysis 8=16290
 GeH₃ radical 8=12346
 GeH₃NCO, from i.r. spectra 8=21074
 H₂⁺ 8=12194
 HBF₂ 8=21063
 H₂B₂O₃, cyclic. 8=12170
 H₂F₃⁺ 8=2425
 H₂O, lowest bent state, effects of quasi-linearity 8=1243
 HOCl, from i.r. spectra of ν, bands 8=21083
 H₂S₂ gaseous, electron diffr. study 8=21103
 HSiCl₃ 8=4169
 IF₇ 8=21107
 InO, by gas e-diffr. analysis 8=16290
 KrF₂, electron diffr. obs. 8=17383
 Li metaborate, "washing out" effect in mol. electron-diffr. pattern 8=16266
 M(CO)₆, (M=W, Mo), by gas electron-diffr. expts 8=12236
 MF₆, (M=U, W, Te, Mo), by gas electron-diffr. expts. 8=12236
 Mn complex, μ-hydrido-μ-diphenylphosphido-bis(tetracarbonyl-manganese) 8=1799
 MoCl₄-graphite, and crystal structure by single-crystal electron and X-ray diffr. 8=1797
 trans N₂F₂, geometry rel. to vib.-rot. bands 8=12218
 NH₂, lowest bent state, effects of quasi-linearity 8=1243
 N₂¹⁸O⁸, internuclear distances 8=21086

Molecules—contd

configuration and dimensions, inorganic—contd

- N_2O_3 8=7538
 NSCl, i.r. spectrum obs. 8=4161
 NSF, centrifugal distortion consts. 8=12219
 Ni complex, tetraethylammonium tetrachloronickelate, and crystal structure 8=8547
 OSO_4 , by gas electron-diffr. expts. 8=12236
 Pd complex, trans-dichlorobis(dimethyl sulphoxide)Pd(II), and crystal structure 8=1804
 Pt complex, cis- and trans-bis(dialkyl sulphide) dichloroplatinum (II) complexes, struct. and inversion mech. n.m.r. obs. 8=16355
 Pt complex, cis-bis(dibenzyl sulphide) dichloroplatinum(II), n.m.r. obs. 8=16356
 OH_3^+ , one-centre expansion SCF calc. 8=4202
 $Sb(SiH_3)_3$, i.r. and Raman spectra obs. 8=4144
 $SiDBr_3$ struct. from microwave spectrum 8=21105
 SiF_4 8=16301
 $SiHBr_3$ struct. from microwaves spectrum 8=21105
 SiO_2 , molec. beam meas. 8=7550
 SO_2 , gaseous, struct. by electron diffr. 8=21104
 SOF_4 , revision of struct. 8=21101
 Ti complex, diethoxytitanium dichloride, and crystal structure 8=17421
 TaO_2 , molec. beam meas. 8=7550
 ThO_2 , molec. beam meas. 8=7550
 TiO_2 , molec. beam meas. 8=7550
 UO_2 , molec. beam meas. 8=7550
 Va(III) complexes tris(salicylaldehydes) and tris(salicylaldimines) 8=16343
 VBr_4 , by gas-phase electron diffr. 8=16303
 VCl_4 , by gas-phase electron diffr. 8=16303
 XeF_6 8=21107
 $Zn[Co(CO)_4]_2$ 8=17431
 ZrO_2 , molec. beam meas. 8=7550
- configuration and dimensions, organic**
 acetoinenediol cyclophosphate 8=17438
 acetylene-diphenyl Ge addition cpd, and crystal structure 8=22046
 acetylene- GeI_4 addition cpd, and crystal structure 8=22046
 alkylbenzenes rel. to cryst. absorpt. spectra 8=5645
 p-aminobenzamide, and crystal structure 8=22075
 anthraquinone, 1,5-dihalo derivs. and crystal structure 8=22048
 aromatic, overcrowded, conformational analysis 8=21115
 L-ascorbic acid, and crystal structure 8=13303
 azidopurine from 6-hydrazinopurine + HNO_3 , and crystal structure 8=21117
 benzene rel. to cryst. absorpt. spectrum 8=5645
 benzoin in soln., optical rotatory dispersion of transient species 8=12258
 5,5'-biisoxazole, and crystal structure 8=22067
 biphenyl, phosphoresc. state 8=12288
 N-(p-bromophenyl) benzene sulphonamide, and intramolecular van der Waals interactions 8=1278
 2-bromo-1,1-diphenyl-prop-1-ene, crystal 8=4187
 p-bromobenzoyldimethylamine, X-ray obs. 8=21129
 p-bromobenzoylenimine rel. to ethyleneamide group struct., obs. 8=21129
 bromomalonaldehyde 8=21144
 bromomalonaldehyde anion 8=21144
 bromomexicanin E, and crystal structure 8=21151
 (3:1) bullvalene- $AgBF_4$ complex 8=4890
 ϵ -caprolactones, conformation 8=12879
 Δ^3 -cavene and oxide, from gas-electron-diff. meas. 8=21161
 chlorins, optically active 8=16317
 chloroform molec. complex with benzene 8=2464
 cyclic, asymmetry parameters from anal. of i.r. type A bands 8=1277
 cycloalkanes and alkylcycloalkanes semidiones, struct. and conformation, e.s.r. obs. 8=22898
 cyclobutadiene, πO calc. of stability and geometry 8=21131
 in crystals, rel. to π electron systems 8=13031
 determination of dimensions by effect of vapour mols. on viscosity of H and He 8=1485
 dialkoxytetrahydropyran isomers, spin-spin coupling models 8=12292
 diaminodiphenylsulphone and crystal structure 8=22075
 4,4'-dibromo-dibenzoyl peroxide, and crystal structure 8=17442
 4,4'-dichloro-dibenzoyl peroxide, and crystal structure 8=17442
 2,4-dichlorophenoxyacetic acid, steric distortions 8=2390
 difluorobenzenes 8=1285
 diketene, config. and ring deform. vibr. 8=4200
 2,6-dimethyl benzoic acid, and crystal structure 8=22049
 2,5-dimethyl-p-benzoquinone, and electron density 8=8573
 meso- α, α' -dimethylglutaric acid and crystal structure refinement 8=1819
 2,3-dimethylnaphthalene, and cryst. structure from i.r. spectra and diamag. anisotropy 8=18574
 2,2-dimethyl propane, C-C distance and covalent rad. of C atom 8=7586
 α, α' -dimethylsuccinic acids 8=22000
 ethylene, nonplanarity of first Rydberg state 8=21134
 formate ion, rel. to isoelectronic AB_2 mols. 8=1269

Molecules—contd

- 1,3-butadiene, photodissoc., primary processes 8=23155
 decay, quantum theory, WKB-method 8=12147
 diatomic gas, by e interference examination 8=4115
 diatomic, by inert Hurd bodies and recomb., stochastic theory 8=1308
 diatomic mols., kinetics 8=7615
 diatomic, thermal transfer of energy, shock wave appl. 8=6144
 diatomic, vibr. and rot. relax. effect 8=4123
 discharge-flow system, free radicals and atoms reactions in fast flow 8=9700
 equilibrium constant calc. as meas. of determining sums over states at high temps. 8=10634
 fragmentation pathways from metastable transition meas. by semi-automated mass spectrometer 8=1138
 hemoglobin, stat. mech. anal. rel. to association with O_2 8=1311
 meteor trails 8=19268
 methane, dissoc. attachment of electrons, isotope effects 8=16454
 paraffins by e irrad., probability for specific bond, calc. 8=4206
 pre dissociation, transition probability 8=6597
 rates and incubation times calc. 8=4238
 reversible termolec. reactions in multilevel system 8=9679
 3α in He, He-Ar, He-Ne gases bombard. by α rel. to scintillation mechanism 8=12202
 Br_2 , photodissoc., orientation of transition moment, photolysis mapping 8=1307
 CD, $C^2\Sigma^+$ decay rates and predissociation probability 8=21185
 CH, $C^2\Sigma^+$ decay rates and predissociation probability 8=21185
 CH_3OH and $(CH_3)_2N$ radicals, ionization pots. and heats of form. obs. 8=4245
 CO, incubation time 8=21184
 CO in solar photosphere-chromosphere transition zone 8=12337
 CO_2 , by electron impact, metastable CO prod. 8=4133
 CO_2^- ions, electron absorpt. spectra 8=12793
 CS_2^+ ions, electron absorpt. spectra 8=12793
 CSe_2^+ ions, electron absorpt. spectra 8=12793
 F_2O dissociation react. with Ar 8=12335
 H_2 , attachment of e rel. to H-H interaction pot. 8=21075
 H_2 by p, Balmer emission 8=12190
 H_2 , dissociative attachment of e, vibrational resonances obs. 8=21182
 H_2 e impact, as sum of first and second triplet cross-sections 8=1241
 H_2 , in h.f. discharge of polarized atom source 8=21018
 H_2 predissoc., absorption spectral evidence 8=12189
 H_2 , survival probability of e attachment 8=1310
 H_2^+ , cross-sections for photo-dissociation 8=21188
 H_2^+ , by electron collisions, proton production cross section meas. 8=7519
 H_2^+ by e and p impact, effect of vibrational excitation 8=21076
 H_2^+ , photo-, to determ. h. f. s. spectrum in 20 cm region 8=12195
 H_2^+ , H_3^+ in collisions with H , He, Ar, Ne N. 8=21191
 HO_2^+ , lifetime 8=5743
 I_2 , photodissoc., orientation of transition moment, photolysis mapping 8=1307

Molecules—contd

dissociation—contd

- N_2 , recomb. rates 8=1313
 N_2^+ , by e impact, 10-500 eV reaction energy, cross-section determ. 8=1312
 NH_3 , photodissoc. in vac. u. v. 8=16365
 NH_4Cl 8=12217
 N_2O , by electron impact, metastable N_2 prod. 8=4133
 $N_2O_4 \rightleftharpoons 2NO_2$, thermal conductivity and relaxation effects 8=7929
 NaI, atomic fluoresc. in photodissoc. 8=12069
 O_2 , continua from photoionization meas. 8=12453
 O_2^+ , by e impact, 10-500 eV reaction energy, cross-section determ. 8=1312

dissociation energies

 diatomic hydrides, charge distrib. and binding 8=7496
 halogens, dipole strenths as function of internuclear distance 8=21084
 nitrates, metallic, rel. to explosive props. 8=1259
 one- and two-electron-pair systems, spherical Gaussian orbital model calc. 8=12154
 perchlorates, metallic, rel. to explosive props. 8=1259
 transition metal complexes, by isotopic exchange 8=23087
 transition metal complexes, ligand exchange and e.s.r. linewidths 8=4616
 transition metal complexes, ligand substitution 8=14387
 transition-metal fluorides, MO calc. of 10 Dq 8=4667
 AlO, absorption spectrum, dissociation energy 8=12169
 Ar₂, ground state, single config. wavefunctions 8=7526
 AsH and AsD 8=21062
 AsO, potential curves of electronic states 8=1236
 B-N chains and rings, MO calc. 8=1237
 BD₄-like, electric field gradient calc. using one-centre expansion wave function 8=7513
 BF, diamag. susceptibilities LCAO-MO-SCF calc. 8=12176
 Be₂, potential curves, MO calc. 8=16267
 BeF, $^2\Sigma^+$ state and $^3\Pi$ levels, calcs. from Hartree-Fock equations 8=7503
 BeH₂, configuration-interaction calc. 8=16252
 BeH₂, Hartree-Fock limit 8=1238
 Br₂, $^3\Pi_{g,u}$ state, complete pot. energy curve 8=7511
 CH₄, correlation energy, from Gaussian basis SCF calcs. 8=1263
 CN group, effects of σ and π bonding on coordination 8=12181
 CO, diamag. susceptibilities LCAO-MO-SCF calc. 8=12176
 CS₂, laser action, P-branch vibrational transition 8=3310
 Cl₂, $^3\Pi_{g,u}$ state, complete pot. energy curve 8=7511
 ClH, ground-state props. calc. 8=7514
 Co(CN)₅³⁻ 8=4147
 CrO₃²⁻ in chlorospodiosite (Ca₂PO₄Cl) 8=14099
 Cs¹³³F¹⁹, h.f. s., molec. beam meas. 8=16278-9
 FH, ground-state props. calc. 8=7514
 H₂, accurate perturbation-variation calc. 8=21079
 H₂, Born inelastic differential cross-sections 8=12191
 H₂, calc. of Rydberg states 8=1250
 H₂, dipole polarizability calc. using variational methods 8=7517
 H₂, excited states, Weinstein calcs. 8=16254
 H₂, H atom model, autoionization processes 8=21034
 H₂, improved Gaussian wavefunctions 8=21080
 H₂, low-energy elastic electron scatt. calc. 8=7516
 H₂, one-centre perturbation calc. 8=4138
 H₂-H₂ system, self-consistent group calc. 8=12372-3
 H₂ + HeH⁺, energy hypersurface, MO calc. 8=16285
 H₂⁺, accurate wavefunction, James function as approx. to Guillemin and Zener 8=1249
 H₂⁺, excited states, Weinstein calcs. 8=16254
 H₂⁺, ground state, variational function 8=7518
 H₂⁺, improved Gaussian wavefunctions 8=21080
 H₂⁺, 3d σ and 4f σ states, props. 8=1244
 H₂⁺ wave function and electronic terms for large H-H distances 8=1255
 H₃⁺, Hartree-Fock and correl. energies 8=12197
 H₃, calcs. on ground state and potential-energy surfaces 8=4130
 H₃, potential-energy surface 8=12193
 H₃ system, single-centre expansions 8=12192
 H₃⁺, calc. using 1s Gaussian basis functions 8=16282
 H_n⁺ 8=12194
 H₂C₂, excited states, virtual-orbital approx, and spectra 8=1213
 HCF, excited states, virtual-orbital approx, and spectra 8=1213
 HCN, rel. to CW submillimeter laser lines, absolute freq. meas. 8=422
 HCN, excited state, effects of quasi-linearity 8=1243
 H₂CO, excited states, virtual-orbital approx, and spectra 8=1213
 HF, ground state correlation energy 8=1252
 HF, single-centre LCAO SCF calc. 8=7524
 H₂O, Compton profile, unified atoms method 8=1256
 H₂O, correlation energy, from Gaussian basis SCF calcs. 8=1263
 H₂O, laser oscillating at 118.65 μ m transition 8=3311
 H₂O, one-electron props. 8=4148
 HNO, excited states, virtual-orbital approx, and spectra 8=1213
 He²⁺, calcs. on ground state and potential-energy surfaces 8=4130
 He₂, ground-state potential 8=12200
 He₂, ground state, single config. wavefunctions 8=7526
 He₂⁺, potential curves for X² Σ_u^+ and $^2\Sigma_u^+$ states 8=12201
 HeH⁺, approx. wave function of 3d σ state 8=1245
 HeH²⁺, one-centre perturbation calc. 8=4138
 I₂, crystalline, insulator-metal transition from diatomic bond destruction under high pressure 8=2084
 IrCl₆²⁻ in cryst. at 20°K 8=22992
 K+NaCl=KCl+Na, electronic pot. energy surfaces 8=23106
 LaF, rotational analyses of a number of bands 8=7549
 Li₂, ground state, simple alternant MO calc. 8=1257
 LiCl, MO calc. of molec. props. 8=12206
 LiF, diamago susceptibilities LCAO-MO-SCF calc 8=12176
 LiH, floating spherical Gaussian orbital model calc. 8=12153
 MnF₂:Co doped, magnon sidebands and local order 8=23001
 MnO₄⁻, MO calc. of u.v. spectrum 8=12207
 N₂⁻, struct. of 2 eV resonance 8=12214
 N₂, model dipole spectrum consistent with oscillator strength sum rule 8=7533
 N₂⁺, ground and excited states 8=4158
 NCO, matrix-isolated free radical 8=16369
 NH, fine structure of $^3\Sigma^-$ and $^3\Pi$ states 8=7541
 NH₃ + HCl \rightleftharpoons NH₄Cl, charge transfer 8=5714
 NH₃, Compton profile, unified atoms method 8=1256
 NH₃, correlation energy, from Gaussian basis SCF calcs. 8=1263
 NH₃, excited states, virtual-orbital approx, and spectra 8=1213
 NH₃, one-electron props. 8=4148
 NH₃ pressure broadening theory 8=16294
 NH₃-He collision-induced quadrupole-type transitions 8=12216
 NH₄Cl, inner and outer complex 8=12217
 NO, hybridization of O atom effect on terminal atom position determ. by X-rays 8=1261
 NO₂⁻, ground state, minimal-basis-set LCAO-SCF-MO calc. 8=21096
 NO₂, its ions and dimer 8=4159
 NO₂⁺, configuration-interaction calc. 8=16252
 NOF, ground state, minimal-basis-set LCAO-SCF-MO calc. 8=21096
 NSCl, polarizability, i.r. spectra obs. 8=4161
 NaCl, MO calc. and molec. props. 8=21092
 NaCs, $^1\Sigma^+$ and $^3\Sigma^+$ potentials from total cross-section meas. 8=21091
 NaMg[Cr(C₂O₄)₂].9H₂O, vibronic spectra 8=14247
 Ne₂, ground state, single config. wavefunctions 8=7526
 O₂ 8=16297
 O₂, configuration interaction calc. 8=12028
 O₂ single and double transitions 8=1262
 O₃, ground state, minimal-basis-set LCAO-SCF-MO calc. 8=21096
 OF₂, ground state, minimal-basis-set LCAO-SCF-MO calc. 8=21096
 OH⁻, correlation energy, from Gaussian basis SCF calcs. 8=1263
 OH⁻($^2\Sigma^+$), Hartree-Fock wavefunctions and molec. props. 8=4165
 OH⁺, fine structure of $^3\Sigma^-$ and $^3\Pi$ states 8=7541

 dioxazines, electronic spectra, MO calc. 8=4205
 9,10-diphenylanthracene, Pariser-Parr method calc. 8=4207
 dipole moments and charge distrib. calc. by self-consistent MO theory 8=1230
 dipyrrolyl mononegative ion and alkali metal ion biradical, e.s.r. and structure 8=4247
 DNA, intermolec. interaction energies, MO calc. 8=1318-19
 DNA, triplet state 8=4263
 ethylene, LCAO-SCF calc. 8=21139
 ethylene, nonplanarity of first Rydberg state 8=21134
 ethylene, proton spin-spin coupling calc. 8=21136
 excited states and ions, changes in atomic orbitals, study by C in valence states 8=4135
 ferrocene, MO calcs., charge self-consistent semiempirical 8=4197
 fluoroacetylene, ground state 8=12246
 fluorobenzenes, CNDO/2 MO calc. 8=12261
 fluoronitrobenzenes, CNDO/2 MO calc. 8=12261
 formaldehyde, oscillator strength of singlet-triplet transition 8=16322
 formaldehyde, π -structure, rel. to Ohno's formula and constraining Koopman's theorem 8=1286
 α -germyl ketones, MO calc. 8=21159
 glyoxal, π -electrons, MO calc. 8=16310
 haemoglobin, quadrupole splittings and isomer shifts 8=16344
 halomethyl diazirines, analogies with n-diazirine, spectra obs. 8=12268
 heterocyclic, 77°K, triplet-triplet absorpt. 8=7554
 heterocyclic cpds. 8=21142
 heterocyclics, five-membered with C, N and O, CNDO SCF calcs. 8=16331
 heterocyclics, triplet-triplet absorpt. at 77°K 8=7561
 hexane, C-C and C-H bond electrons momentum distrib. rel. to β^+ annihilation 8=16324
 hydrocarbons, CNDO calcs. 8=16325
 hydrocarbons, saturated, perturbed orbital energies in radiolysis 8=18742
 hydrocarbons, semiempirical SCF MO calc. 8=4199
 8-hydroxy-1-methyl quinolinium hydroxide 8=1566
 iodine and substituted pyridines charge transfer complexes, spectrophotometric obs. 8=4216
 methane, energy levels 8=1373
 methylacetylene, methyl-triple bond interact. MO calc. anal. 8=1291
 methylene, triplet from photodecomp. of ketene 8=23157
 naphthalene, double intersystem-crossing 8=21153
 naphthalene ENDOR study of metastable triplet state 8=21169
 naphthols, triplet states, rel. to optical and mag. props. 8=21152
 α - β -naphthylaldehyde in alcohol and hexane solutions, singlet-triplet conversion 8=21693
 nickelocene, MO calcs., charge self-consistent semiempirical 8=4197
 non-alternant hydrocarbons, spin densities, UHFAA calc. 8=12348
 by n.m.r., anisotropic effects of carbonyl group 8=4225
 nucleotides, excited states, energy transfer 8=16334
 oxalyl chloride, triplet-singlet transition 8=2468
 perylene, π transitions, free-electron and MOLCAO calcs. 8=4139
 phenantholine, π electron density and proton signals in n.m.r. spectra 8=4236
 p-phenetidine vapour, near u.v. obs. spectrum 8=21157
 phenoxide ion, symmetry of lowest triplet state 8=14340
 phenylacetylene, singlet and triplet states, formed from total π -electron system 8=4210
 phthalocyanine, π MO calc. 8=4214
 π electron systems and mol. packing in crystals 8=13031
 π -electron systems, semi-empirical calc. 8=7575
 2-picoline exchange with dichlorobis (2-picoline) Co(II), n.m.r. obs. of ligand exchange 8=2501
 polycyclic monoazines, vibronic spin-orbit interactions 8=8095
 polyene, polarizability due to π -electrons 8=16390
 polynucleotides, singlet-energy transfer 8=16334
 polyphenyl benzenes, triplet states, zero-field splitting 8=12288

Molecules—contd

electronic structure, organic—contd

- polyphenyls, spin-spin interactions 8=2374
 polystyrene 8=14290
 porphyrins, π -electron conjugation 8=4215
 proton chemical shifts rel. to phys.-chem. quantities 8=7498
 purine, Pariser-Parr-Pople calc. 8=7594
 pyrazine, triplet states 8=14342
 2-pyrazolines, trisubstituted, spectra and analogues 8=12293
 pyrene, π transitions, free-electron and MOLCAO calcs. 8=4139
 pyrene, vibr. effects in radiationless transitions 8=21114
 pyridazine, 3700 Å transition 8=12297
 pyridine positive ion, all-electron SCF wave-functions 8=12294
 pyrrole, SCF-CI calc. 8=16306
 quantum absorption, study 8=4128
 radicals, hyperconjugation and spin delocalization 8=4172
 σ -radicals, comparison of calc. electron densities and e.p.r. coupling consts. 8=12347
 1,2-rearrangements, MO description of non-classical ion 8=21057
 α -silyl ketones, MO calc. 8=21159
 stilbene, triplet-triplet energy transfer and "phantom triplet" 8=21160
 sulphur cpds., by ESCA (electron spectroscopy for chem. anal.) 8=21100
 three-membered rings 8=12322
 p-tolunitrile, emission bands 8=21163
 triacetin, liq., e distrib. from X-ray scatt. obs. 8=16794
 α, α, α -trichlorotoluene 8=4219
 triphenylene, mag. circular dichroism data 8=21123
 triphenylene triplet dianion, Jahn-Teller instability 8=21170
 triphenylphosphine, modified Mataga SCF calc. 8=4209
 u. v. spectra, orbital energy level diagrams, limitations on use 8=1268
 unsaturated, triplet-state energies and spin densities, VB calc. 8=12240
 CD, $C^2\Sigma^+$ decay rates and predissociation probability 8=21185
 CH, $C^2\Sigma^+$ decay rates and predissociation probability 8=21185
 CH radical, relative oscillator strengths 8=7618
 CH_3^+ , one-centre expansion SCF calc. 8=4202
 C_2H_2 , equiv. orbitals. 8=21110
 C_2H_4 , equiv. orbitals 8=21110
 C_2H_6 , equiv. orbitals 8=21110
 $\text{C}_6\text{H}_6\text{F}^+$, lowest states 8=12257
 $\text{C}_6\text{H}_6\text{F}^+$, lowest states 8=21120
 C_6H_6^+ , lowest states 8=21120
 C_6H_6 , lowest states 8=12257
 CF_2 , from absorpt. spectrum at 2500 Å 8=4188
 CF_2 , triplet-to-singlet conversion 8=1293
 CF_4 , single-centre LCAO SCF calc. 8=7524
 Mg-azatetrabenzoporphyrins, porphyrin ring struct, polarization and absorpt, spectra obs. 8=21116

excitation

- acetylene, by proton collisions 8=1288
 alkali-metal halides, inner-electron spectra 8=7529
 aminoferrocene, energy assignment 8=4197
 amplifying medium, polarization 8=19916
 anthracene excimer fluoresc. in rigid matrices 8=14339
 aromatic amino-acids 8=9650
 aromatic hydrocarbons, dipolar nature of complexes 8=7553
 aromatic solns., excimer formation 8=8094
 aromatic at 77°K, triplet-triplet absorpt. 8=7554
 aromatics, molten, lifetime of excited states prod. charge carriers 8=12904
 benzenes, alkyl substituted, excimer fluoresc. 8=21699
 benzoin, flash photolysis, and optical rotatory dispersion of transients 8=12258
 chloroferrocene, energy assignment 8=4197
 3-bromopyrene, double intersystem-crossing 8=21128
 1-chloronaphthalene, double intersystem-crossing 8=21153
 cosmic OH radiation, polarization 8=19916
 dimers and complexes, electronic excitation binding 8=12241
 Einstein coeffs. in condensed medium 8=12118
 by electron scattering 8=21061
 electronic, organic, degradation in chelate solns. 8=16333
 ethane, vibr. excited, kinetics 8=18675
 ethane, by proton collisions 8=1288
 ethylene, by proton collisions 8=1288
 excimers in organic liqs. excited by electrons 8=12893
 excited states, semi-empirical calc., comb. of closed and open shell SCF LCAO MO methods 8=4134
 ferrocene, energy assignment 8=4197
 by flash photolysis, and optical rotatory dispersion of transients 8=12258
 fragmentation pathways from metastable transition meas. by semi-automated mass spectrometer 8=1138
 furan, $\text{Hg}(\text{P}_1)$ photosensitized, struct. of excited states 8=14434
 halogenated benzenes, excimer phosphoresc. in organic glasses 8=9653

Molecules—contd

excitation—contd

- heterocyclic, at 77°K, triplet-triplet absorpt. 8=7554
 homonuclear diatomic, electron scatt., theory 8=12371
 methane, by proton collisions 8=1288
 methylene triplet, from photodecomp. of ketene 8=23157
 ($n\pi^*$) and ($\pi\pi^*$) states spin-orbit interaction 8=1226
 naphthalene- d_8 biphotonic $T \rightarrow T$ transitions in ethanol and methyl-pentane glasses, obs. 8=23161
 naphthalene, double intersystem-crossing 8=21153
 nickelocene, energy assignment 8=4197
 non-reactive collisions, internal excitation 8=21193
 nucleic acid components 8=9650
 paraffins by e irradi., energy transfer to vibr. degrees of freedom 8=4206
 perylene excimer fluoresc. in rigid matrices 8=14339
 phenanthroline, electron excitation spectra 8=4208
 $\pi\pi^*$ and $n\pi^*$ states, luminescence 8=12117
 polyatomic, secondary light emission rel. to e eqn. of motion 8=1212
 polyatomic by unimolecular collision, activation mechanism 8=4260
 polyvinylphthalimide with impurity acceptors, triplet excitons and triplet-triplet energy transfer, 15 000-40 000 cm^{-1} 8=12389
 quinolines, oscillator strengths 8=4590
 rare-earth ions, electronic energy transfer to H_2O vibrations 8=16870
 resonance dipole interaction between 2 identical nuclei 8=21032
 rotational, by inelastic scatt. of atoms, sudden approx. calc. 8=12367
 rotational levels in two-temp. plasma 8=12460
 $\sigma-\pi$ coupling, generalized time-dependent Hartree theory 8=12163
 stilbene, triplet-triplet energy transfer and "phantom triplet" 8=21160
 stimulated Raman scatt., mechanism 8=7487
 translational-vibr. energy transfer, steric factor 8=4250
 triplet Rydberg states, pseudo-pot. theory 8=22479
 triplet state, energy transfer in rigid soln. 8=9584
 xanthane $\pi\pi^*$ and $n\pi^*$ levels location rel. to e-donor substituent and solvent, obs. 8=1302
 C, chemi-excitation on gaseous oxidation 8=5699
 C^{1-}H n. m. r. coupling consts. 8=4229
 C_2 , in hydrocarbon flames 8=7509
 CH , in hydrocarbon flames 8=7509
 CH_4 , ion formation by collision, $8.10^{-5}-10^{-3}$ mm Hg 8=4258
 CN, electronically in active N_2 flames, vibr. population 8=12179
 CO_2 , by electron impact, absolute cross section 8=21268
 CO_2 , by N_2 , emission spectrum obs. 8=21068
 CO_2 , by transfer from heated N_2 , rel. to chem. laser action 8=16271
 H_2 $\text{B}^2\Sigma_u^+$ state, Rydberg-Klein-Rees curve 8=1227
 H_2 and D_2 $\text{c}^3\Pi_u$ states, by trapped-electron method 8=16281
 H_2 by e impact, ground to first and second states, O and OR approx. 8=1241
 H_2 , Lyman- α prod. by electron collisions 8=12050
 H_2 solid, ortho, near 0°K, Holstein-Primakoff theory 8=8233
 H_2^+ , collision-induced, angular dependence 8=1362
 H_2^+ , electron collisions, proton production cross section meas. 8=7519
 H_2^+ by e and p impact, vibration effect on dissociation 8=21076
 H_2^+ , 2p σ state, variational function 8=21078
 H_2^+ , highly excited, production by H_2^+ and H_3^+ passing through Ne, H_2 , Na and Mg 8=21082
 Hg_2 excimers, kinetics of band emissions 8=12203
 N_2 , struct. of 2 eV resonance 8=12214
 N_2 , by microwave discharge, vibrational deactivation 8=12211
 $\text{N}_2(\text{A}^3\Sigma_u^-)$, kinetics in active nitrogen 8=7534
 N_2 , $\text{B}^3\Pi$ state, time estimates at 8000-9000°K 8=4155
 N_2 , by fast protons and H atoms 8=7433
 N_2 , by fission fragments along entire track 8=7531
 NH, $^3\Pi$ state fine structure, and $^3\Sigma^-$ 8=7541
 NO, by fast protons and H atoms 8=7433
 O_2 , emission spectrum 8=1262
 $\text{O}_2(^1\Delta_g)$ collisional-radiative reaction 8=12220
 OH, chemiluminescence by flame photometry, predissociation 8=12223
 OH radical, 18-cm transitions 8=12351
 OH $^+$, $^3\Pi$ state fine structure, and $^3\Sigma^-$ 8=7541
 PbBr, emission spectrum 8=7546
 PH, $^3\Pi$ state fine structure, and $^3\Sigma^-$ 8=7541
 RhC, $\text{C}^2\Sigma-X^2\Sigma$ band, Franck-Condon factors and r centroids 8=7548
 SH, $^3\Pi$ state fine structure, and $^3\Sigma^-$ 8=7541

intermolecular mechanics

- See also Association; Collision processes; Kinetic theory/gases; Liquids/structure; Liquids/theory; Solids/theory.
 acetone, potentials from viscosity obs. 30-200 °C 8=21523
 alcohols, solid, intra-molecular motion of OH, n. m. r. study 8=16989

Molecules—contd**intermolecular mechanics—contd**

- amplitude-density-functions method for scattering 8=12358
 asymmetric, atom scatt., classical theory 8=12368
 atom-diatomic mol. collision, compound state resonances 8=4255
 attraction and repulsion, appl. to theory of liquids 8=16371
 barium-ferrite magnets as "self-crystallizing" models 8=16375
 bimolecular reactions, velocity spectra 8=7635
 binary mixtures, excess thermodynamic functions 8=4423
 bound double molecules formation rel. to intermolecular potential 8=12357
 charge transfer in biological systems 8=14895
 chloroform, potentials from viscosity obs. 30-200°C 8=21523
 classical gas model, kinetic equation for long-range attraction 8=7908
 collision broadening of rot. absorpt. lines 8=12121
 collision broadening of spectral lines 8=21197
 collisions with solid wall, energy exchange 8=16381
 complexes, formation rel. to London's dispersion forces 8=16249
 correlation functions, linear mols. 8=4252
 diatomic gas, accommodation coeffs. 8=7629
 diatomic, Rydberg-Klein-Rees pot. curves uniqueness 8=1227
 dihalogenomethanes in CCl₄, methylene group valence vibr. bands rel. to weak intermol. interaction 8=1292
 e.s.r. line shapes of systems undergoing intermolec. exchange 8=12302
 energy transfer in polar mols., probability 8=12363
 ethyl alcohol, potentials from viscosity obs. 30-200°C 8=21523
 exchange interactions in different perturbation formalisms 8=12361
 exchange interacts, Schrödinger perturb. formalism 8=4256
 fluids mixtures, semiempirical theory 8=1436
 fluid, radial distrib. and direct correl. functions, square-well model 8=16613
 force constants, determ. for spherically symmetric potential functions 8=12362
 force, long range due to ν pair exchange 8=20273
 formulas for vibr. and rot. eigenvalues in Lennard-Jones 12-6 potential 8=21201
 gases, dilute, nonadditive molec. interactions 8=4466
 gases at high temp., rotational collisions 8=4478
 gases, polar rotational relax. 8=7909
 gaseous, correlation functions by Bloom-Oppenheim theory 8=1461
 hydrocarbons, nonbonded potential parameters calc. from cryst. 8=13002
 hyperfine interacts between electrons and systems of several nuclei 8=4253
 inelastic scattering, semiclassical theory 8=12364
 interaction force constants sign determ. 8=12369
 liquid phenomena, theory 8=21601
 liquids, exciton theory 8=4586
 liquids, intermolecular potential 8=4524
 low-energy "orbiting" collisions, semiclassical phase shifts 8=12366
 in methane, gaseous, translational and rot. motions, study by slow n scatt. 8=16374
 methane-O₂ mixtures, vibr. energy transfer 8=21200
 methyl alcohol, potentials from viscosity obs. 30-200°C 8=21523
 mixed solns., electronic transitions 8=8010
 naphthols, solid, intra-molecular motion of OH, n.m.r. study 8=16989
 nonpolar gases, effect on Clausius-Mossotti function 8=12693

 dixanthogens, i.r. spectra, anomalous band splittings 8=21118
 electronic Raman effect and vibronic coupling 8=12129
 electron-vibrational transition probability 8=1216
 energy levels of one and two-dimens. anharmonic Morse oscillators 8=1217
 energy transfer in collisions between diatomic mols. 8=21190
 ethane, torsional vibrs, meas. of frequency 8=1284
 ethane, vibr. excited, kinetics 8=18675
 ethylenediamines 8=1283
 ethylgermane 8=1280
 ethylsilane 8=1280
 excited levels rel. to structure determ. by electron-diffr. in high temp. vapour 8=16245
 force constants, extremal props. 8=12143
 force consts. calc. by iterative procedure 8=21042
 formic acid, normal coordinate calc. 8=14279

Molecules—contd

vibration—contd
 p-fluoro-phenol, OH stretching band struct. 8=4211
 formaldehyde, vibrational-rotational interactions for force field determ. 8=4198
 frequencies, 54 molecules, data compilation 8=21036
 furan, u.s. relax. obs. 8=12687
 germanium fluoro- and hydroxyfluoro-compounds and thermal polymerization products, i.r. vibr. freq. of Ge-O-Ge bond 8=4170
 haloacetonitriles 8=16323
 halogenated ethanes 8=12269
 halogenides, mean-square oscillatory amplitudes, calc. 8=4124
 halogens cyanoacetylenes, force consts. 8=1270
 halogens, dipole strengths as function of internuclear distance 8=21084
 heteronuclear, diatomic, constants rel. to electronegativity and reduced mass 8=7492
 d¹ impurity systems, octahedrally coordinated, dynamic Jahn-Teller effect 8=16990
 interatomic distance of various mols., calc. 8=21046
 i.r. intensities, CNDO calc. 8=12148
 isothiocyanates, i.r. spectra, anomalous band splittings 8=21118
 isotropic spacial, autocorrelation functions 8=16242
 ketones, intermolecular forces 8=1287
 Lagrange eqns. with non-vanishing couplings appl. to dependent coords. 8=1219
 ligand-metal-halide complexes 8=1296
 liquid oscillation and spectrum near Rayleigh line 8=21678
 liquids, stimulated Raman scattering, and spontaneous emission, effects 8=4587
 malonaldehyde anion 8=21144
 mean-square oscillatory amplitudes, calc. 8=4124
 metal carbonyls 8=4189
 methane-O₂ mixtures, vibr. energy transfer 8=21200
 methyl bromide and methyl bromide-d₃ 8=12280
 methylgermane and deuterioisotopes, spectra calc. 8=21148
 methyl lithium monomer 8=12282
 methylphosphine, fundamentals and force consts. 8=1289
 methylsilane and deuterioisotopes, spectra calc. 8=21148
 methylsilyl dialkylamines 8=1300
 methylstannate and deuterioisotopes, spectra calc. 8=21148
 methyl vinyl sulphide 8=12283
 monohalogen diacetylenes 8=1270
 naphthalene at liquid He temp., i.r. spectrum, interpretation of fundamental vibrations 8=18577
 naphthols, vibronic transitions, dichroic spectra in PVA sheets obs. 8=14285
 n scatt., interaction effect 8=21060
 1,2,5-oxadiazole, complete assignment from i.r. and Raman spectra 8=16335
 1,3,4-oxadiazole 8=12285
 partition function of Morse vibrating-rotator model of diatomic mol. 8=16240
 pentachlorotoluene from crystals and solns. i.r. spectra obs. 8=9575
 pentadeuteropyridine, structure of vibration bands, i.r. spectra 8=7597
 pentaerythrite, mono, di and trihalogen derivatives, vibr. spectra 8=7576
 p-(perfluorovinyl)toluene copolymer with styrene, molec. motion 8=17191
 γ-picoline-halogen complexes, and comparison with pyridine analogues 8=7592
 phenol-d₃, complete assignment, and torsion 8=16336
 phenol, OH stretching band struct. 8=4211
 phenol vapour, extended assignments and band contour anal. 8=16337
 phosphoramidates and phosphoramidothioates, i.r. spectra obs. 8=7591
 polar diatomic mol. dissolved in nonpolar solvents, i.r. band shapes 8=12885
 polyatomic, anharmonic calc. 8=12133
 polyatomic, frequency calc. using perturbation method 8=4120
 polyatomic, r.m.s. displacement formulae 8=12134
 polyethylene chain, methylene wagging 8=4265
 polymer rod, effects in absorption spectrum 8=7645
 polymers and periodic molecules of finite length 8=21039
 pyrene, vibr. effects in radiationless transitions 8=21114
 pyridine, structure of vibration bands, i.r. spectra 8=7597
 pyridine, u.s. relaxation obs. 8=12687
 2-pyrrolidone, vibration spectra, 3500-250 cm⁻¹ 8=7595
 Raman, relaxation times 8=9485
 relaxation times, amplitude-freq. opticoacoustical meas. 8=7490
 resonances in axially symmetric mols., nomenclature 8=21045
 rigid-body motion rel. to triclinic coordinates 8=8231
 -rotation energy levels of a tetrahedral molecule 8=16243

Molecules—contd
vibration—contd

1,2,5-selenadiazole 8=16342
 spectra, by inelastic electron tunnelling 8=13633
 substituted and perturbed, frequencies and force constants, Green's function use 8=21041
 sum rule for frequencies 8=7489
 symmetric-top mols., vibr.-rot. interaction, theory 8=16241
 tetrachloro-p-xylene from crystals and solns. i.r. spectra obs. 8=9575
 2,3,5,6-tetrachlorotoluene from crystals and solns. i.r. spectra obs. 8=9575
 theobromine salts 8=12300
 thiazoles, monosubstituted, i.r. and Raman spectra obs. 8=4217
 triethylphosphine and related cpds. 8=21137
 thiophene, u.s. relaxation obs. 8=12687
 thiophosphoryl halides 8=16300
 thiophosphoryl halides, spectra 8=7547
 tin fluoro- and hydroxyfluoro-compounds and thermal polymerization products, i.r. vibr. freqs. of Sn-O-Sn bond 8=4170
 trigonal bipyramidal XY₅ molecular model, amplitudes 8=16298
 trimethylaluminium 8=16327
 trimethylene oxide, ring puckering 8=16304
 triphenylaluminium, rel. to i.r. spectrum 8=12287
 trans-uranyl ions, M-O bond force consts. in various media 8=21094
 uranyl salts, crystal spectra, D₂O isotopic shifts 8=5641
 vibrational-translational energy transfer, molec. orientation effect 8=7632
 vibrators and librators perturbed by collisions 8=100
 weakly distorted systems, inversion-vib. levels and splitting 8=4121
 X₂Y₆, bridged type, mean-square amplitude of vibration 8=4126
 XY₃ type mols. and ions, force consts. calc. 8=21047
 XY₂-type oxides, potential relations 8=21038
 XY₂-type with T_h symmetry, force consts. calc. 8=12145-6
 AgCl, optically pumped, level population 8=1235
 AlCl₃ ion, h.f. i.r. active l. vibr., correction 8=4142
 Al₂Cl₆, force field 8=4143
 Al₂Me₂Cl₂, force field 8=4143
 Al₂Me₃, force field 8=4143
 AmO₂⁺, M-O bond force consts. in various media 8=21094
 AsF₃, general force field 8=4157
 AsF₅, mean amplitudes 8=16298
 AsO, potential curves of electronic states 8=1236
 BF₃, force consts. calc. 8=21047
 Br₂(C₂H₅), improving consts. 8=21065
 BrHBr⁺ and BrDBr⁺ ions 8=12174
 CCl₄ transitions and gas and liquid spectra intensities rel. to intermol. interactions 8=16274
 CD₃CD₂Cl, torsional 8=4193
 CD₃, mono, di- and tri-substituted compounds, far i.r. torsional vibration spectra 8=4196
 CF₂ band system from absorpt. at 2500 Å 8=4188
 CF₃, mono, di- and tri-substituted compounds, far i.r. torsional vibration spectra 8=4196
 [(CF₃)₂CF]₂SF₂, i.r. spectra 8=16273
 CF₃SF₃, i.r. spectra 8=16273
 C-H bond strengths, student expt. 8=21109
 CH₃ radical, bending force consts. 8=7624
 CH₃, mono, di- and tri-substituted compounds, far i.r. torsional vibration spectra 8=4196
 CH₃Cl, Fermi and Coriolis resonances in the ν₄ band 8=16319
 (CH₃)₂POCl 8=12286
 (CH₃)₂PSBr 8=12286
 (CH₃)₂PSCl 8=12286
 [C₆H₅]₄As⁺[MoOBr₄]⁻, i.r. Mo-O stretching freq. 8=9552
 CN⁻ in alkali halides, environmental perturbation 8=2405
 CN, electronically excited in active N₂ flames, vibr. population 8=12179
 CO, vibr. relax. in shock-wave and nozzle expansion-flow 8=16270
 CO, vibration-rotation band centred at 6350 cm⁻¹ 8=7505
 CO₂, deactivation by collisions, in presence of Fermi resonance 8=1321
 CO₂ + N₂ mixture, relax. time meas. of ν₃ mode of CO₂ with spectrophone 8=7508
 CO₂, vibr. relax. times 8=4146
 CO₂⁺, ²Π_g → ²Π_g transition 8=16277
 CO₂⁺ ²Π_g → ²Π_g transition probabilities 8=21066
 CaDPO₄ and dihydrate, i.r. spectra obs. 8=5594
 CaHPO₄ and dihydrate, i.r. spectra obs. 8=5594
 ClO₄⁻ ions in alkali-halide lattices 8=22968-9-70
 ClO₄⁻ ions in alkali-halide lattices 8=22968-9-70
 Cu(II) formate in planar network struct. 8=2466
 D, solid, rel. to Raman spectra anomalies 8=9535
 D₂S, harmonic freqs., empirical estimation 8=21072
 D₂Se, harmonic freqs., empirical estimation 8=21072
 FCN, ν₁ and ν₂ vibration-rotation bands 8=12183
 FCN, microwave spectrum of excited states 8=12182
 GeD₃I 8=12187
 H-bond stretching freq., effect of bond strength 8=21141
 H, solid, rel. to Raman spectra anomalies 8=9535

Molecules—contd**vibration -contd**

- H vibr.-rotational spectrum for e ground state, VKB calc. 8=1246
H₂, coherently vibrating, static field effect 8=16283
H₂, dissociative attachment of e, vibrational resonances obs. 8=21182
H₂ e-impact ionization spectrum rel to vibrational thresholds. 8=21272
H₂⁺, effect on dissociation under e and p impact 8=21076
H₂, in electron collisions, rel. to proton production cross section 8=7519
H₂⁺, para, coupling coeffs. for states with v = 5 and v = 6 8=16284
HCN and DCN, l-type resonance doublets 8=7522
HCl dimers, H-bond stretching force const. 8=18532
HCl, in inert-gas matrix 8=9537
HCl, pressure effect 8=21077
HDO in H₂O 8=21690
H₂F₃⁻ 8=2425
(μHO), fundamental frequencies 8=21218
HOBr, force consts. 8=12175
HOCl, force consts. 8=12175
H₂O vapour, pulsed laser action due to vibration-rotation transitions 8=3312
H₂Se, harmonic freqs. and bending freq. 8=21702
H₂Se, sum rule analysis of interacting (2, 0, 0) and (1, 0, 1) states 8=12199
IF₅, assignment, from Raman spectra 8=1568
KCl:OH, i.r. absorpt. spectra rel. to temp. dependence of intensity of OH vibrations 8=18538
KrF₂, absence of Fermi reson. 8=7528
Li metaborate, "washing out" effect in mol. electron-diffr. pattern 8=16266
MnO₄⁻ 8=21085
MoS₄²⁻ 8=2438
N₂, excitation by microwave discharge, vibrational deactivation 8=12211
N₂, lifetime obs. using positive ion Van de Graaff accelerator 8=16183
N₂, mixed with CO₂ and N₂O, relax. 8=12210
N₂, model dipole spectrum consistent with oscillator strength sum rule 8=7533
N₂, vibr. relax. in shocked gas mixtures 8=21195
N₂, vibr. relax. in shock tube, vac. u. v. absorpt. obs. 8=7532
N₂⁺, band intensity distribution due to passage of H₂⁺ through N₂ + He mixture 8=4156
NCO, matrix-isolated free radical 8=16369
NF₃ 8=1260
NF₃, general force field 8=4157
NH₃, bending, solvent effect 8=21093
NO, integrated intensity of fundamental vib. band 8=7535
NO⁺ from N + O collisions, excitation 8=4111
N₂O 8=21088
N₂O, i.r. absorpt. bands rel. to isotopic mols. and crystal lattice vibrations 8=14251
N₂O + N₂ mixture, relax. time meas. of ν₃ mode of N₂O with spectrophone 8=7508
N₂O, relaxation times, spectrophone determ. 8=21090
N₂O, 00¹-10⁰ transition 8=7537
N₂O₃, force consts. 8=7538
NS, γ- and β-systems 8=16293
NSCl, force constants, i.r. spectrum obs. 8=4161
NaCl:OH, i.r. absorpt. spectra rel. to temp. dependence of intensity of OH vibrations 8=18538
NaMg[Cr(C₂O₄)₃].9H₂O, vibronic spectra 8=14247
NbCl₅ 8=14249
NpO₂²⁺, M-O bond force consts. in various media 8=21094
OCS, absorpt. spectrum analysis, 1350-1420 Å 8=16296
OH-stretching, in solid alcohols, bandwidth 8=8228
OH groups in phenol H complexes with benzene and ethers 8=4213
OH, oscillator strengths in 2Σ⁺-2Π band system 8=7544
OH, vib.-rot. interact. and the transition moment 8=7545
ONF, and N¹⁵ and O¹⁸ species, force consts. 8=7539
Os carbonyl halide cpds., solvent depend. stretching freqs. 8=16856
PCl₃, potential function 8=12226
PD⁺, emission bands 8=4167
PF₃, general force field 8=4157
PF₅, mean amplitudes 8=16298
PO₂, bending modes 8=21097
PuO₂²⁺, M-O bond force consts. in various media 8=21094
ReO₃Br, force consts. calc. 8=1265
ReO₃Cl, force consts. calc. 8=1265
ReO₃N²⁻, force consts. calc. 8=1265
S₈ 8=12227
S₈, mean square amplitudes 8=12228
S₂Cl₂, torsional 8=12231
SF₆Cl, mean amplitudes 8=12230
S-N cpds., bond stretching freqs. 8=1299
SO₂, force constants of S-O bond 8=21104
SO₂, liq. and solid, spectra 8=8088
SbCl₃, solid, from NQR temp. dependence studies, 20-150°K 8=22929
SiF₂, force consts. 8=16301
Sr₁₀(PO₄)₆(OH)₂, i.r. frequencies 8=12234
V:Fe⁵⁷:Mössbauer system, force-constant changes and localized modes 8=13338

Molecules—contd**vibration-contd**

- WS₄²⁻ 8=2438
XH₂ groups, sym. and antisym. frequencies, relationship between overtones 8=21040
X₃P. BH₃ type additive compounds, frequency and absorption of vibrations 8=16305
XeF₄, r.m.s. amplitudes calc. 8=21106
XeF₂, r.m.s. amplitudes calc. 8=21106
ZnCl, band head quantum formula 8=4171
- Molecules, mesic and muonic**
(μHO), possible formation and vibrational frequencies 8=21218
pμd wave function rel. to D(p, γ)He³ cross-section 8=11593
(p-μ-p) molecule ion, ground state 8=20657
S-states, bound, variational calc. 8=12392
- Mollier diagrams.** See Thermodynamic properties.
- Molybdenum**
attack by atomic O at high temp. 8=14370
Auger electron yield on Ar⁺ and He⁺ bombardment 8=9279
catalyst, N₂ isotope equilibration 8=18655
coating by plasma jet 8=19337
collector in thermionic converter with vapour deposited W emitter 8=15230
combined effect with Nb on mech. props. and hardness of Nb-Mo steel 8=22385
conductivity, thermal, meas. and analysis, 100-400°K 8=4943
containing Co, Kondo temp obs. 8=9009
creep, 950° to 1385°K, 3500 to 12 000 lb/in² stress 8=13588
crystal, approx. dispersion relations 8=17480
crystal surface structure exam. 8=21992
crystals with adsorbed O₂, surface exam. by LEED and work function studies 8=17165
crystals, deformation at slow rates of strain 8=13587
crystals, dislocation velocity-stress relations 8=17657
cyclotron resonance, corresponding effective masses 8=2126
diffusion in Al 8=1911
dislocations etch pitting single crystal 8=4978
dislocations mobility rel. to amplitude depend. of internal friction 8=22209
effect on Co-Al magnetic alloy 8=22792
electron field emission, anomalous total-energy distribution and electronic structure 8=5411
Fermi surface 8=17887
Fermi surface determ. r.f. size effect 8=22464
Fermi surface investigation by cyclotron resonance meas. at 1.6°K and 9.7 GHz 8=13664
film heteroepitaxial growth on insulating substances 8=17134
films, on W crystal, adsorption and electron emission 8=9269
fluorinated, adsorpt. of Cs, structure of adsorbed layer, and effect on thermionic conversion 8=17154
internal friction due to interstitial atoms 8=17817
laser induced emission of electrons, ions and X-rays 8=13947
lattice expansion, temp. dependence 28°-522°K 8=22125
Kα rad., prep. of Ross difference filters 8=2437
mechanical prop. rel. to 8 × 10²⁰ n/cm² dose 8=8856
micromosaic block size and misorientation in zone-melted crystals, impurity depend. 8=8470
neutron irradiated and annealed, vacancy and interstitial loop identification 8=17610
optical props., rel. to conduction band transitions 8=9553
polycrystalline, γ-irrad. and non-irrad. X-ray scattering 8=22253
polycrystalline target, sputtering coeff. rel. to incident angle of Ne, Ar and Kr ions 8=8766
recrystallized, impurity effects on strain hardening 8=22380
reluctance field dependence, 1.8-35°K rel. to Kübler law deviations 8=22750
secondary electron emission, H⁺ bombardment 8=5423
sorption of CO, physical and chemical processes from low energy electron interactions 8=18702
stress-rupture characteristics, high temp. 8=2061
structure and low-temp. ductility, deform.-induced changes 8=13589
superconducting, energy gap anisotropy, u.s. investigation 8=9048
superconducting single crystals with small residual resistance 2 × 10⁻⁴ Ω 8=5207
surface, accommodation coeffs. of inert gases 8=4734
surface ionization, positive and negative 8=13950
target for ion emission, bombard by Ar⁺ 8=6626
thermionic converter emitters, UO₂ filled, radiation tests 8=15241
thermionic emitters, UO₂-fueled, irrad. studies rel. to in-core converters 8=15226
tip, absorption of O₂, H₂ and N₂, field emission study 8=21905
tracer-diffusion studies 8=17575
low work function region in Cs and Cs-Ba vapours, rel. to pot. as collector in converters 8=15213
zone refined, removal of C and W rel. to residual resistivity 8=17935
C, solubility limit and diffusivity 8=17007

Molybdenum—contd

- Fe-Mo systems, α - γ equil. 8=4709
 MO(VI) extraction, with TBP, mechanism study
 by radioisotopes 8=23076
 Mo-alumina ceramic seals bonding mechanism,
 obs. 8=16743
 Mo-F-Cs system, electron-emission rel. to vapours
 present 8=18261
 with Sn, bonds in organo-Sn cpds., Mössbauer obs. 8=4668
 in UF_6 , determ. by atomic absorpt. spectroscopy 8=18776

Molybdenum compounds

- alloys, anti-oxidation metallurgy 8=23779
 alloys, stress-rupture characteristics, high temp. 8=2061
 cavitation damage resistance 8=5035
 tetrathiomolybdates, i.r. spectra 8=2438
 $[(C_2H_5)_4As][MoOBr_4]^-$, i.r. Mo-O stretching freq. 8=9552
 Ge + MoO_3 in powder form., reaction
 mechanism 8=14365
 Mo permalloy, coercive force, neutron bombardment
 effect 8=18344
 Mo-Al intermetallic resistor films, sheet resistivity and
 temp. coefficients of resistance 8=22520
 Mo_2B , superconductivity transition temp. and
 d-shell 8=2164
 Mo_2C , rhombic modifications and polymorphic
 transitions 8=8561
 $MoCl_5$ -graphite, structure, by single-crystal electron and
 X-ray diffr. 8=1797
 $[Mo(CNS)_6]^{3-}$, ^{14}CNS , isotopic exchange rel. to structure
 study 8=23087
 $Mo(CO)_6$, structure determ. by electron diffr. 8=12236
 MoF_6 , liq., molec. motion, F^{19} relax. 8=12930
 MoF_6 , spin-lattice relax. of F in intense r.f. field 8=14139
 MoF_6 , structure determ. by electron diffr. 8=12236
 Mo-Fe solid solns., mag. props. 8=22749
 Mo_2NiB_2 , crystal structure rel. to analogues 8=17396
 MoO_4^{2-} anion, pH depend. of adsorp. of Fe_2O_3 powder 8=8342
 Mo_2O_8 ion in a crystal of ammonium heptamolybdate
 tetrahydrate, structure 8=8234
 $MoO_3-P_2O_5-K_2O$ glass, X-ray diffr. study 8=8356
 $MoO_3-P_2O_5-Ag_2O$ glass, X-ray diffr. study 8=8356
 MoO_3 in TiO_2 , solid solutions, magnetic
 susceptibility 8=13963
 Mo-Re alloys paramag. susceptibility rel. to band
 struct., obs. 8=22759
 MoS_2 polytypes by e-diffr. 8=17397
 MoS_2 surfaces, detection of monatomic steps and
 vacancies 8=4730
 MoS_2 , thin anisotropic, crystals, delocalized excitons from
 magneto absorpt. study 8=13764
 MoS_2 , vacancy detect. by etch-decoration 8=4963
 Mo-Ti systems, b. c. c., binary interdiffusion 8=17577
 Mo(V) complexes, liquid solutions, Overhauser
 effect 8=21725
 $(Mo_xV_{1-x})_2O_5$, crystal structure 8=17425
 Mo-y at. % Co alloys, $y=1.65, 1.085, 0.535$, mag. props.,
 28-300°K 8=14007
 MoZr crystal surface texture exam. 8=21992

 and ground observatories 8=2811
 pulse-height analyzer for charged-particle spectro-
 scopy on lunar surface 8=20214
 radar cross section, time average 8=2810
 radio emission at 25.0 and 30.2 cm by the "artificial
 moon" method 8=10327
 rel. to surface struct., silicates and polyethylene fragment
 shapes in hypervel. impact, obs. 8=13609
 rotation params. meas. from interplanetary
 stations 8=10339
 rough surface scatt., quasi-specular and multiple
 scatt. 8=15412
 selenodesy, laser-radar, operational theory 8=2813
 self-radiation obs. 8=5949
 shock wave, trailing 8=10332
 solar wind flow, effect on, Explorer 35 obs. 8=14828
 spacecraft explorations, review 8=5953
 spectra, differential 8-13 μ , obs. method 8=14822
 surface chemical analysis using scatt.- α particles
 aboard Surveyor V 8=23463
 surface composition and particle size from laboratory and
 lunar reflectance spectra 8=14820
 surface, depolarization of backscattered e.m.
 waves 8=19237
 surface disturbance by footpads of Surveyor 1, inferences
 from photographs and laboratory obs. 8=14818
 surface, inhomogeneous, e. m. wave backscatt. 8=19238
 surface lineaments displayed on Lunar Orbiter
 pictures 8=14823
 surface materials stimulation 8=14826
 surface morphology of Mare Cognitum, Ranger VII
 obs. 8=10329
 surface, optical characteristics 8=2816
 surface, porosity-polarization relationship 8=23646
 surface roughness rel. to emissivity and radio-
 brightness 8=10334
 surface roughness, rel. to thermal emission and
 shadowing 8=2809
 surface, space weathering by exposure to solar
 wind 8=19246

Moon — contd

- surface strength estimate from Orbiter II photo-graph 8=5948
- surface structure, granular, indicated by geometry of impact craters 8=23637
- theory, literal developments on Computer 8=23648
- theory, main problem, literal solution 8=23649
- thermal convection in mantle? comparison with Earth 8=14519
- thermoluminescence, obs. and theory 8=23650
- tidal effect on earth's pole movements 8=9770
- tidal forces, and sun, long period vars. 8=19241
- tidal influence on electron density in ionosphere 8=2656
- twilight colour theory 8=23647
- Tycho i.r. images on dark moon 8=2812
- unipolar generator, due to solar wind 8=23642
- variations in auroral zone 8=10331
- water on surface, evidence 8=23634

Morse potential. See Kinetic theory; Molecules/intermolecular mechanics.

Mosaic structure. See Crystal structure/microstructure.

Mössbauer effect

- See also Gamma-rays/absorption; nuclear excitation.
- analyzer, multichannel with automatic folding through forward backward operation 8=3787
- apparatus, transducer velocity generator 8=20360
- bell, amplitude-time distribution of partial tones 8=19572
- bone crystal surfaces, appl. ion uptake mechanism study 8=14902
- chalcopyrite effect 8=16982
- in crystal structure determs. 8=17326
- crystals with vacancies in the case of alocal vibrations, intensity calc. 8=8209
- ferrocene, effect of press. on resonance 8=1652
- ferrous ions in ice 8=4675
- ferric oxyhydroxide, in structure determ. 8=17370
- field, magnetic hyperfine, sign determ. by Mössbauer-Faraday effect 8=13007
- films, freq. spectrum 8=13024
- films, thin, rel. to spatial distrib. of spontaneous magnetization 8=22779
- garnet-type cpds., of Sn^{119} , rel. to Sn^{4+} coordination 8=17415
- goethites, in structure determ. 8=17370
- haemoglobin fluoride, low temp. spectrum, neighbour nucleus effects 8=21810
- haemoglobin, quadrupole splittings and isomer shifts 8=16344
- ice doped with Mössbauer ions, phase transform. kinetics 8=13069
- intensity sums, formulae for single crystals and polycrystals 8=8211
- lattice distortion effect on Debye-Waller factor rel. to Mössbauer studies 8=1779
- lepidocrocite, in structure determ. 8=17370
- line narrowing, quantum-mechanical model 8=1830
- linewidth calc. for various absorption thicknesses 8=15952
- metals, shift and intensity calc. 8=1643
- multicomponent systems complex, thermal shift, and Debye-Waller factor 8=13023
- polymers, doublet spectra obs. of line asymmetries 8=13022
- powders of small particles, rel. to packing 8=21805
- pressure depend. energy shift, using Debye integral 8=1641
- resonance detectors using conversion electrons, efficiency etc. 8=20673
- solid solutions in the case of alocal vibrations, intensity calc. 8=8209
- spectra in fluctuating environment, mag. field variation 8=13017
- spectra in fluctuating environment, randomly varying electric field gradients 8=13018
- spectra in presence of electron spin relaxation 8=1644
- spectrometer 8=15722
- spectrometer, constant-accel. drive 8=20362
- spectrometer, constant velocity, automation technique 8=8210
- spectrometer, MS10 8=693
- spectrometer, time analyser for vel. precision meas. 8=20361
- spectrometer, variable-freq. u.s. 8=13021
- spectroscopy, use of NGR in chemistry and solid state 8=692
- spectroscopy selection of mounting materials 8=3579
- spectrum intensity, mag. ions exchange interaction dependence 8=8208
- spectrum shift depending on degree of spin-system ordering 8=22734
- steel, stainless, rel. to plastic deform. 8=8219
- sternbergite, rel. to mag. props. 8=14066
- thin films, calc. of Debye-Waller factors 8=8207
- X-rays following internal conversion, new experimental method 8=691
- AgCl single crystals, state of iron study 8=8215
- Au-Fe solid soln., magnetic ordering rel. to electric hyperfine interactions 8=2289
- Co_2 , Sn and Ni_2 , Sn, quadrupole splitting 8=1645
- Cs^{133} , determ. of magnetic moment of first excited state 8=15987

Mössbauer effect—contd

- Cs^{133} , isomer shift of 81.0 keV γ -transition obs. 8=11762
- CuFe_2O_4 , spin relax. obs. 8=21804
- Cu_2FeS_3 (cubanite), rel. to mag. props. 8=14066
- Dy-Al-garnet hyperfine splitting of lowest 2^+ state of Dy 8=9301
- Dy^{161} in Dy^{3+} salts, hyperfine structure at 4.2°K 8=1646
- $\text{Dy}^{161,162}$, 75 and 81 keV states, magnetic and quadrupole moments determ. 8=3829
- Er, magnetic structure study 8=2291
- $\text{ErCl}_3 \cdot 6\text{H}_2\text{O}$ hyperfine splitting of lowest 2^+ state of Er 8=9301
- Eu^{151} in Eu-Yb, conduction-electron contribution to hyperfine field in Eu 8=1633
- Eu metal, 16^+ K anomaly 8=8212
- EuM_2 , (M=Pt, Pd, Zn, Rh), by mag. hyperfine Mössbauer studies 8=18334
- EuPd_3 , mag. hyperfine Mössbauer e.p.r. and n.m.r. studies 8=18334
- Fe ionic cpds., pressure effect 8=4674
- Fe, metallic, C impurity effects 8=20704
- Fe in silicate, site populations in amplitude, quantitative estimates 8=8218
- Fe, thermal-shift and Debye-Waller-factor meas. 8=8214
- Fe^{57} in chalcopyrite (CuFeS_2), resonant configuration 8=1649
- Fe^{57} in ferrites with compensation point 8=1648
- Fe^{57} in FeCr_2S_4 , effective field parameters 8=1647
- Fe^{57} in FeIn_2S_4 , sulpho-spinel, spectra 8=8216
- Fe^{57} in $\text{Fe}(\text{OH})_2$, at 90 and 4.2°K 8=13027
- Fe^{57} in $\text{FeSiF}_6 \cdot 6\text{H}_2\text{O}$, hyperfine interactions 8=8220
- Fe^{57} , in Fe-Si near ϵ -phase 8=8242
- Fe^{57} , meas. method with scatt. geometry 8=1651
- Fe^{57} , Mössbauer energy shift, Gruneisen parameter var. 8=1641
- Fe^{57} Mössbauer spectra of iron(II)-bis(α -diimine) complexes 8=8200
- Fe^{57} , in neptunite, oxidation state 8=8369
- Fe^{57} in $\text{Na}_2[\text{Fe}(\text{II})(\text{CN})_6]\text{NO}$, $2\text{H}_2\text{O}$, hyperfine interacts. and splitting 8=1650
- Fe powder dispersed in perspex spectra 8=5470
- Fe^{57} at 1-0.08°K, rel. to Co nuclear polarization in Fe 8=4676
- Fe^{57} in RbFeF_3 , effective field parameters 8=1647
- Fe^{2+} in square-planar environment, $\text{BaFeSi}_4\text{O}_{10}$ 8=13026
- Fe^{2+} in FeCr_2S_4 , sulpho-spinel, spectra 8=8216
- Fe^{57} , variable-freq. u.s. spectrometer obs. 8=13021
- Fe^{57} , in $\text{Y}_3\text{-Ca}_2\text{Fe}_{12}\text{-Sn}_2\text{O}_{12}$, obs. 8=4677
- FeBr_2 , rel. to hyperfine structure at 78°K and 4°K 8=13025
- Fe-C austenite, quadrupole splitting disappearance at elevated temps. 8=21808
- FeCl_3 , rel. to hyperfine structure at 4°K 8=13025
- FeCl_2 , rel. to hyperfine structure at 78°K and 4°K 8=13025
- FeCO_3 , Fe^{57} asymmetry of quadrupole splitting components 8=21806
- FeCO_3 , quadrupole doublets, vibrational anisotropy 8=16983
- FeF_3 , antiferromagnetic, interpretation of broadened and shifted lines 8=21807
- FeI_2 , rel. to hyperfine structure at 78°K and 4°K 8=13025
- Fe-Mo alloys, Fe-rich, precip. reactions and solid solns. from Mössbauer spectra 8=4678
- $\text{Fe}(\text{NCS})_2 \cdot 4\text{Py}$, probabilities for modifications 8=8213
- $\text{Fe}(\text{NO}_3)_3 \cdot 9\text{H}_2\text{O}$ magnetic relaxation 8=2378
- Fe-12 at. % Ni alloy, finely dispersed system, rel. to phase compositions 8=17280
- Fe-12 at. % Ni alloy, finely dispersed system, rel. to particle size and oxidation 8=17280
- Fe-Ni invar. Fe^{57} spectrum, plastic deform. effect obs. 8=21811
- $\alpha\text{-Fe}_2\text{O}_3$, ferromag. ultrafine particles 8=2318
- Fe_3O_4 , hyperfine mag. fields rel. to sublattice magnetizations 8=21809
- Fe_2O_3 powders, rel. to packing 8=21805
- Fe_2O_3 , superpara-, ferro- and antiferromag., depend. of crystallite size 8=14016
- FePO_4 , calcinated, study of magnetic ordering 8=8217
- FeS_2 , effect of press. on resonance 8=1652
- $\text{Fe}_{0.88}\text{S}$, pyrrhotite, mag. structure from Fe^{57} resonance 8=16985
- FeS, troilite, mag. structure from Fe^{57} resonance 8=16985
- Fe_{1-x}Se with NiAs structure, rel. to atomic structure 8=16981
- FeSn, study of antiferromag. characts. 8=18339
- Fe_3Sn , study of ferromag. characts. 8=18339
- $\text{Ca}_2\text{-Fe}_2\text{O}_4$ and related cpds. 8=13028
- Gd^{158} , obs. rel. to 79.5 keV gamma rays 8=3786
- H_2SnO_3 conversion to SnO_2 , kinetics obs. 8=14386
- $\text{Ir}^{191,193}$, g factors, for first excited states 8=3836
- Ir^{193} in Ir cpds. and salts 8=4679
- Ir^{193} in Ir-rare-earth cpds. 8=1634
- $\text{K}_2\text{Fe}(\text{CN})_6$, paramagnetic hyperfine structure 8=16986
- $\text{K}_2\text{Fe}(\text{CN})_6$, pressure effect 8=4673
- $\text{K}_4\text{Fe}(\text{CN})_6$, pressure effect 8=4673
- $\text{K}_4[\text{Fe}(\text{CN})_6]$, pressure effect 8=4673
- $\text{K}_4\text{Fe}(\text{CN})_6 \cdot 3\text{H}_2\text{O}$, ferroelectric phase transitions, test for lattice-dynamical model 8=22667
- KFeF_3 : Fe^{57} , isomer shift, calibration 8=16988

Mössbauer effect—contd

- Kr⁸³ in Br⁻ and BrO₃⁻ crystals 8=8221
 Kr⁸³, investigation using Rb⁸³ obtained from Sr⁸⁸(p;2p,4n) at 660 MeV 8=3817
 Kr^{83m} prep. by n irradiation of Se⁸² 8=3872
 Mg_{0.293}Mn_{0.696}Fe_{1.77}O₄:Sn, symmetry round Sn⁴⁺ 8=16980
 Mg ferrites, spectra in external mag. fields 8=18342
 MgFe₂O₄:Sn, symmetry round Sn⁴⁺ 8=16980
 Mg-Mn ferrites, spectra in external mag. fields 8=18342
 MgO:Fe²⁺, comparison with spin-lattice relaxation 8=9452
 MgO:Fe²⁺, low temp. quadrupole splitting 8=13019
 Mn ferrites, spectra in external mag. fields 8=18342
 Mn⁵⁴ in MnCu, anomalous low-temp. susceptibility 8=13962
 MnFe₂O₄:Sn, symmetry round Sn⁴⁺ 8=16980
 NH₃ adsorption on Fe catalyst, spectra 8=13108
 NH₄(Fe,Al)(SO₄)₂·12H₂O, study of electronic relax. 8=21812
 NH₄Fe(SO₄)₂·12H₂O magnetic relaxation 8=2378
 NiO, antiferromag. ultrafine particles 8=2318
 NiO, Co⁵⁷-doped, Fe⁵⁷ spectrum rel. to bulk and ultrafine particles 8=4680
 NpAl₂:Np²³⁷ rel. to nuclear moment ratios of Np²³⁷ 8=11790
 NpCl₄:Np²³⁷ rel. to nuclear moment ratios of Np²³⁷ 8=11790
 Pb(NbFe)_{1/2}O₃, study using Fe⁵⁷ 8=16984
 Pd-Fe alloy containing H, hyperfine fields and isomer shifts temp. dependence 8=13020
 Pt-Fe alloys, transition in Pt¹⁹⁵ 8=2334
 Ru⁹⁹ M₁-E₂ transition, time-reversal invariance obs. 8=7091
 Sb¹²¹, in Sb isoelectronic cpds., isomer chem. shifts 8=16987
 Sn bonds with Co, Mn, Mo and Re in organo-Sn cpds., obs. 8=4668
 Sn(halide)₂, isomeric chemical shift 8=8222
 Sn, isomer shifts rel. to electron struct. in cpds 8=12233
 Sn nuclei in Mn ferrites, mag. fields at nuclei investigations 8=9382
 Sn¹¹⁹ nuclei, impurity in semiconducting cpds., isomeric shifts 8=9086
 SnO₂ in glycerine/castor oil, line widening, temp. and viscosity dependence 8=1603
 Sr(TaFe)_{1/2}O₃, study using Fe⁵⁷ 8=16984
 SrTiO₃-1.15 Sr(TaFe)_{1/2}O₃ solid soln., study using Fe⁵⁷ 8=16984
 Te(halide)₂, isomeric chemical shift 8=8222
 Te¹²⁵ in CuCr₂Te₄, ferromag. spinel, mag. hyperfine structure study 8=8223
 Te¹²⁵ in Te(NO₃)₄, atomic structure study 8=4887
 Te¹²⁵ in TeO₂, atomic structure study 8=4887
 Te¹²⁵ in Te, atomic structure study 8=4887
 Tm, determ. of crystalline elec. field determ. 8=8203
 TmT₂ (T = transition element), cryst. elec. field splittings 8=16979
 V:Fe⁵⁷, recoil-free fraction and second-order Doppler shift meas., localized modes 8=13338
 W¹⁸³, 46.5 keV level, and lifetime 8=15999
 Yb^{174,176}, g_N meas. for first excited states 8=3832
 YbCl₃·6H₂O hyperfine splitting of lowest 2¹ state of Yb 8=9301

Multiple stars. See Stars.**Muonium**

Neodymium

- glass laser, travelling-wave mode 8=20000
 glass:Nd laser, travelling-wave, features 8=3333
 isotopes, specific shift and deformation coefficient 8=21024
 laser, continuously tunable, applications 8=15485
 laser, giant pulse generation 8=6472
 laser, Q-switching by Pockels shutter 8=20001
 laser, radiation mixing with ruby 8=436
 laser, simultaneous pulsing 8=15477
 H_2 definition, spectral-isotopic method 8=9743
 Nb-Ta-W alloys, creep strength, effects of metallic carbides and borides 8=22384
 Nd:Cr:YAG, sidelight fluorescence changes, due to laser at 1.06 μ 8=6473
 Nd: glass laser amplifiers, gain saturation 8=447
 Nd:glass laser, picosecond substruct. of laser spikes 8=20002
 Nd¹⁴³, ¹⁴⁵, neutron capture, γ -ray spectra 8=16032
 Nd³⁺-containing phases, e.p.r. rel. to molecular and structural props. 8=9436
 Nd³⁺ in disordered matrices, non-uniformly broadened luminesc. bands 8=14329
 Nd³⁺, energy transfer with Yb³⁺ in LaF₃ 8=14328
 Nd³⁺ in glass, CaWO₄ and YAl garnet, quantum efficiency 8=5667
 Nd³⁺:glass laser, stimulated Raman emission in H_2 at 8.84 μ m 8=15484
 Nd³⁺ in glass, influence on Q-spoiled laser dynamics 8=11017
 Nd³⁺, high-repetition-rate Q-spoiled, in YAG, lasers, output characts. 8=15487
 Nd³⁺ in CaF₂ and LaF₃, stimulated emission, high-temp. effects 8=22960
 Nd³⁺ in CaF₂, magnetic rotatory power temp. var. 8=5576
 Nd³⁺, in CaF₂, new laser line oscillations from ions at noncubic sites 8=3335
 Nd³⁺ ions, luminesc. characts., influence of glass composition and activator conc. 8=18592
 Nd³⁺ ions in rare-earth trichlorides, new satellite structure 8=12070
 Nd³⁺ in LiNbO₃, e.p.r. 8=18428

Neodymium—contd

- Nd³⁺/SeOCl₂ liquid laser, preparation 8=20008
 Nd³⁺, in silicate glass, Faraday rotation, freq. depend. 8=18531
- Neodymium compounds**
 glass laser, picosecond pulses, spontaneous appearance 8=439
 telluride phases, crystal chemistry 8=17202
 Nd glass, measurement cross-section stimulated emission 8=449
 Nd-glass laser, rad. spectra, spatial inhomogeneity 8=450
 Nd silicate glass laser, stimulated emission cross section 8=14292
 NdAlO₃, crystal structure, X-ray diffr. 8=8544
 NdBr₃, paramag., Br⁷⁹,⁸¹ quadrupole spectra 7=9469
 Nd³⁺:CaF₂, cubic e.p.r. spectrum 8=5539
 NdGa garnet, antiferromag. ordering by n-diffr. at 0.31 K 8=22884
- Neon**
 adsorption on Molecular Sieves 5A, 10X, and 13X, at 77.3 K and press. range 10² to 10⁻⁶ torr, effect of preadsorbed H₂O 8=21897
 afterglow, msec microwave pulses nonlinear interactions 8=21340
 atom, collision broadening and shift of Kr spectrum 8=20956
 atoms, electron scatt., 40 keV 8=7447
 atom, e scatt., long-range interaction, nonadiabatic contrib. 8=12092
 atom, Ne-p e capture excitation of 3s, 4s states of H 8=7462
 atoms, 2p levels, average lifetime 8=20963
 atomic interaction potential calc. 8=7456
 breakdown, secondary ionization mechanisms, theory 8=16419
 bulk mod. and Debye temp. at T=0°K, anharmonic contribs. 8=13594
 collision cross sections, elastic differential, meas. 8=4108
 collision with H₂⁺, H₃⁺, prod. of H atom in 3s state 8=21191
 conductivity, thermal, line-source transient-heat-transfer technique 8=16701
 crystals, lattice constants, thermal expansion and isothermal compressibility 8=1803
 diffusion in glass melt 8=4554
 discharge, hot-cathode, electron energy distribution in moving striations 8=12404
 discharge tubes, radial distribution of parameters in subnormal region 8=7668
 double resonance laser spectroscopy of excited states 8=11066
 electric discharge positive column, electrons energy distrib. 8=7655
 energy levels, radiative lifetimes, population mechanism 8=1171
 excitation cross sections for some of the states of 2p⁴-3p configuration 8=20973
 free-carrier drift-velocity studied in liquid and solid state 8=8119
 gas, He-Ne mixture excited by α , scintillation mechanism 8=12202
 gas, spectral self-broadening and oscillator strengths 8=7416
 glow discharge, secondary electron energy distrib. 8=16409
 glow discharge in toroidal tube, expt. investigation 8=4286
 i.r. Zeeman-tuned laser, for fine-structure anal. of absorpt. spectra 8=11160
 ionization cross-section, electron impact 8=7700
 ionization cross-sections for 100-2000 eV electrons 8=12446
 ionization rate temp. dependence correction 8=12450
 ions, incident on polycrystalline targets rel. to sputtering coeff. 8=8766
 isotope mixtures, thermal diffusion props. 8=1492
 isotope separation, in Hg diffusion column 8=1208
 Landé factors, meas. by saturation from laser 8=1186
 laser, He-Ne mixture, pulse delay 8=3314
 laser pumped microwave emission in excited states 8=12071
 laser, Zeeman type, polarization in mag. field 8=11037
 liquid, cooling of high-field electromagnets 8=15261
 liquid, isothermal compressibility and density to press. of 1000 atmos. 8=21555
 metastable atoms in glow discharge, conc. at low temp. 8=1368
 mol., recombination, e-ion, e-temp. depend. 8=12451
 molecular flow through capillary, interaction with tube wall 8=7893
 population transfer and alignment by spontaneous emission 8=20985
 refractive index, real part, calc. from Kramers-Kronig dispersion relation 8=16707
 scattering ionization, short range forces 8=1364
 self-consistent phonon theory, phonon spectrum and bulk thermodynamic props. 8=13336
 633 n.m. spectral line emitted by He³-Ne²⁰ discharge, effect of press. and mixture on profile 8=16295
 solid, free carrier mobility 8=17863

Neon—contd

- solid at 0°K, parameters from interact. potential of gas 8=1468
 solid, zero-point energy, effect of long-range 3-body forces 8=22083
 solution and diffusion in tridymite and cristobalite 8=8247
 thermal conductivity, hot-wire cell meas., 30°–100°C, 120–150 torr 8=16700
 thermal conductivity meas. with hot-wire cell 8=6210
 third virial coeff., and for nonpolar mixtures 8=12677
 thermal plasma, continuous emission spectrum 8=16207
 transition rates at levels excited by electron collision 8=20947
 X-ray, $\kappa\alpha$ satellites (non-diag. lines) intensity 8=1170
 He–Ne discharge tube, dia. and pressure effects 8=7676
 in He–Ne laser, collision excitation 8=11061
 He–Ne laser, ears on line profile of decay transitions 8=3316
 He:Ne laser, intensity fluctuations, correlation meas. 8=3315
 He–Ne laser, stationary regime and oscilln. damping 8=15471
 Ne(IV and V), mean lines of some excited levels 8=4097
 Ne-like ions, phys. props rel. to electronic config. for excited states 8=1148
 Ne₂, ground state, wavefunctions and potential curves 8=7526
 Ne₂, press and temp. depend of recombination rate. 8=21282 A
 Ne–Ar, cataphoresis in d. c. discharges 8=1334
 Ne–Ar system, electron density in plasma prod. by fission fragments 8=15215
 Ne–H bubble chamber, cryogenic 8=20224
 Ne–H₂ liquid-vapour phase equilib., 26°–42.5°K, 10–25 atm. 8=16937
 Ne–He laser, self-oscillations, stability 8=19974
 Ne–He mixtures, integral Joule-Thomson effect 8=15139
 Ne–He plasma, cross section for second kind collisions, meas. 8=21016
 p + Ne → H(2p) + Ne*, cross-section 8=21009
 Ne–O₂ gas lasers, mechanism of laser action 8=11975
 TiO₂ surface discharge, channel development 8=1330
 Xe–Ne couples in binary mixture, translation spectra 8=7425

Neon compounds

No entries

Neptunium

- B + \bar{B} → μ + ν with π as Regge particle 8=11502
 CERN apparatus and expts. 8=15724
 CERN p synchrotron neutrino programme 8=3587
 conference, Varenna, Italy, June 1964 8=6747
 cosmic ray, μ production, 7500 m. w. e. 8=3590
 cosmic ray ν rate at 8800 m. w. e., meas. and obs. 8=3591
 energy losses due to neutrino processes in hot plasma 8=10137
 force, long range, between particles due to ν pair exchange 8=20273
 mass, finite and finite e. m. coupling with matter 8=14980
 μ capture reactions, Doppler effect rel. to γ - ν ang. correl. 8=16065
 $\mu^- + p \rightarrow n + \nu_\mu$, muon capture rate 8=721
 $n + \mu^- \rightarrow n + \nu_\mu$, prop. counter system for μ^- capture meas. 8=3457
 $n(p) \rightarrow p(n) + e^-(e^+) + \bar{\nu}(\nu)$, decay observations 8=6798
 ν_μ absorption by protons 8=20371
 ν_μ mass squared using range-energy relation in He bubble chamber obs. 8=862
 ν -N interaction, with formation of μ , spin depend. 8=20370
 $\bar{\nu}$, prompt, in n-induced fission of Pu^{239,241} 8=20851
 $\nu_1 + N \rightarrow N^* + l$, lepton polarization calc. 8=3585
 $\nu_1 + N \rightarrow N^* + l$, N* polarization 8=3586
 $\nu + n \rightarrow \mu^- + p$, ν elastic scatt. obs. 8=3589
 $\nu = \bar{\nu}$ expts, and lepton charge conservation 8=15725
 ν -p sum rule used to derive e-p scatt. inequality 8=6923
 orbital electron capture induced by $\bar{\nu}$ 8=1042
 pairs from hot stars 8=19130
 $\pi \rightarrow \mu + \nu$, mass limit 8=6839
 $\pi \rightarrow \mu + \nu$, with π as Regge particle 8=11502
 $\pi \rightarrow \mu \nu$ superconductivity model with SU(3) × SU(3) symm. 8=11501
 pulsed source reactivity meas. in reflected reactor 8=4009
 scattering by electron, cross-section 8=6799

Neutrinos and antineutrinos—contd

- scattering by nuclei, cross section rules from current commutation relations 8=16061
 solar, capture by Cl³⁷ atoms 8=23718
 solar flux, Brans-Dicke gravitation theory 8=14731
 solar ν , inverse β decay and elastic scatt. meas. 8=2848
 solar, use in search for $(\nu e)(\bar{\nu} e)$ scatt. 8=14871
 spectra, calc. of enhanced beam flux density produced by 70 GeV protons 8=20369
 in stars evolution, prod. in β processes rel. to matter density 8=10138
 superconductivity model with SU(3) × SU(3) symm. 8=11501
 transport operator in plane geometry 8=3993
 transport, relax. lengths props. in angle-space synthesis approx. 8=3716
 transport, solns. of Chandrasekhar eqns. 8=3011
 transport, thermalized populations kinetics in heterogeneous media 8=4000
 waves, source and use for graphite props. meas. 8=3719
 weak interactions theory testing by high energy ν interactions 8=3588
 white dwarfs, energy loss 8=10150
 B⁸ solar neutrino flux dependence on heavy element composition 8=5968
 B⁸ solar neutrino flux dependence on rate of the reaction He³(He³, 2p)He⁴ 8=5969

Neutron diffraction

guides, present state of development 8=15846

Neutron diffraction crystallography

See also Crystal structure, atomic.

- Bragg reflections used for monochromatization giving high resolution 8=13243
 computer-controlled single-crystal diffractometry, counting time optimization 8=13214
 error elimination from multiple reflection on four-circle diffractometer 8=17312
 indexing reflections on 3- or 4-circle diffractometers, graphical aid 8=17320
 at liquid N temp., use of Joule-Thomson refrigerator as cryostat 8=8501
 phase problem, soln. using anomalous scattering 8=13244
 specimen motion effects 8=21976
 systematic absences due to mag. scattering caused by symmetry elements 8=13242

Neutron diffraction examination of materials—contd

- alloys, liq. and amorphous, structure and correl. 8=12795
 β -brass, order-disorder transition 8=17051
 glycerol, molecular translational and rotational analysis 8=21609
 liquid metals, atomic motions compared with polycryst. solid 8=12796
 liquids at high pressures, container 8=8001
 liquids, molecular translational and rotational analysis 8=21609
 liquids, Van Hone distrib. function, new approx. 8=12797
 magnetic structure determ. by spin density Patterson function 8=22735
 magnetic superstructures in reciprocal space by n-diffr. method 8=18293
 metals, ferromag., inelastic scatt. from spin-waves, rel. to wave vector q 8=2315
 metals, liquid 8=8002
 metals, liq. scatt. data compared with X-ray scatts. 8=12794
 neutron radiography, divergent beam collimator 8=21975
 paramagnetic exchange broadening d scatt., temp. depend. 8=13968
 n-propanol, molecular translational and rotational analysis 8=21609
 Al in Cr solid solution, antiferromagnetism obs. 8=14063
 Ba_{2-x}Sr_xZn₂Fe₁₂O₂₂, quasi-spiral ordering, at 4, 2–400°K 8=9372
 Be, long-wavelength scatt. meas. of defect clusters induced by n-irrad. 8=22177
 CoCr₂O₄, spinel, mag. study 8=9374
 Cr, spin density wave studies under high pressure 8=22876
 Cu, recrystallization and cold-rolled textures 8=17278
 EuSe, magnetic structure 8=22803
 Fe, polarized n scatt., rel. to phonon motion of mag. atoms 8=14012
 FeSn, rel. to mag. structure 8=2320
 Gd, magnetic study 8=14021
 H solid, cross-section due to mol. libration waves 8=8267
 Ho, helical periodicity, under high pressure 8=14040
 KH₂PO₄, anomalous incoherent scattering of thermal neutrons in Laue-case 8=13267
 Ln₂O₂S₂ (Ln=rare-earth), crystalline structure 8=4883
 MgCr_{2-x}Mn_xO₄, tetragonal distortion of Jahn-Teller type 8=13269
 MgGa_{2-x}Mn_xO₄, tetragonal distortion of Jahn-Teller type 8=13269
 MnCr₂O₄, spinel, mag. study 8=9383
 Mn₂P, magnetic structure 8=22736
 O¹⁸, in enriched-¹⁸O₂ coherent scattering length 8=8553
 α -O₂, solid, structure obs. 8=4882
 SiO₂ vitreous, intensities calc. for random network model 8=8467

Neutron diffraction examination of materials—contd

- SnO₂, rel. to scattering amplitudes of seven Sn isotopes 8=1809
 (Sr, Ba), Zn₂Fe₁₂O₂₃ (Y) ferrite, spin ordering 8=22858
 Pd-Au-D system, α phase 8=17407
 Pd-Au-H system, α phase 8=17407
 Tb, ferromag. spin waves, dispersion reln. from n scatt. 8=18351
 Tb, helical periodicity, under high pressure 8=14040
 UC₂, 300-5°K, rel. to mag. props., phase change and cryst. struct. 8=1810
 UFeO₄, ferromagnetic, and magnetic measurements 8=18353
 UO₂, Debye-Waller factors, anharmonic temp. contribs. 8=13299
 VFe, atomic spin values by polarized n-diffr. 8=18354

Neutron sources. See Neutrons/production.

Neutron spectra

- from (α , n) reactions on medium and heavy nuclei 8=7232
 in crystalline moderators, flux values near discontinuities 8=7292
 epithermal, determ. by Cd difference method 8=20554
 fast-neutron, in Daphne reflector, experimental and calculated 8=12009
 flux energy depend., calc. from activation meas. 8=849
 in graphite, meas. near temp. discontinuity 8=12000
 in graphite, time-depend., rel. to comparison of different scatt. kernels 8=16147
 in moderator, heterogeneous theory of reflected lattices 8=4004
 n-d, deuteron breakup, 14.1 MeV 8=11643
 position depend. thermal spectra in U²³⁵ multiplying assembly 8=11999
 p reactions with nuclei 30-340 MeV, anomalies 8=1051
 reactor neutrons energy distrib., up to 20 MeV obs. 8=16146
 reactor, thermionic, flux density determ. 8=1116
 resolution corrections, by pulsed source time of flight technique 8=20566
 slow, determination from foil activations 8=846
 space dependent, in plain water-Fe-water shield layers, calc. 8=20879
 thermal energies from soln. of Corngold eqn. 8=3998
 thermal neutron leakage spectra investigation 8=11611
 thermalization, time dependent, Monte Carlo method 8=11981
 in VVR-S reactor, meas. by stationary and dynamic methods 8=7311
 in water, rel. to temp. and poison concentrates 8=7331
 in Be, thermalization analysis 8=7303
 from Be⁹(p, n)B⁹ reaction, high-resolution fast-n spectra 8=1056
 D(n, p)2n, at 14 MeV 8=3715
 in D₂O-moderated lattices, epithermal and thermal indices 8=20866
 in D₂O, time-depend. 8=6948
 U²³⁵ fission fragments 8=11967

Neutron spectrometers

- associated particle time-of-flight spectrometer, fast neutron scattering 8=11625
 cross-section and temp. meas. 8=7355
 defocusing, for MeV range 8=15856
 diffractometer, biaxial 8=20567
 emission, absorpt. and scatt. aspects 8=20565
 high resolution, for cold source of high flux reactor 8=6964
 n- γ discriminating detector 8=11627
 for nuclear level identification, from orb. momentum of incident n 8=7041
 1-15 MeV, measuring energy and direction 8=6969
 photomultiplier, satellite pulse effect 8=20569
 polarized chopper for producing bursts 8=20568
 p recoil scintillation, 10s of keV range 8=11628
 pulse height discriminator 8=3479
 resolution corrections, by pulsed source time of flight technique 8=20566
 resonance parameter determ., resolution 8=15840
 semiconductor, sandwich using Li⁶ and He³ reactions 8=6968
 single crystal, time-of-flight for use with reactor 8=3725
 supermonitor radio channel, dead time instability rel. accuracy 8=6955
 time-of-flight, computer analysis of resonances by S wave 8=856
 time-of-flight, correlation type, with magnetically pulsed polarized neutrons 8=11626
 He³ semiconductor sandwich, increased efficiency to 20 MeV 8=6967
 Li⁶, He³ types, for fast-neutron spectra in Daphne reflector 8=12009
 LiF monochromator, correction factors 8=3724

Neutrons and antineutrons

See also Cosmic rays/neutrons; Nucleons and antinucleons.

advances in nuclear science and technology, book III 8=17691

β -decay, quark shell model of baryons, finite mass correction 8=15819

beta decay, ratio C_A/C_V and time reversal invariance 8=845

Neutrons and antineutrons—contd

- in body bounded by vacuum, n-th order collision probabilities 8=7297
 Boltzmann eqn., time-depend., spectral props. in cylindrical geometry 8=20545
 branching processes in multiplying medium, statistical theory 8=1998
 coupling parameter, axial vector, p-n 8=20253
 decay of free n, ν correlation 8=3712
 decay of pulse in low temp. Be 8=20905
 delayed emission, quantitative analysis of fissile materials 8=12012
 density field in heterogeneous systems with pulsed source, meas. 8=20548
 elec. dipole moment calc. with new CP violation model 8=6828
 electric dipole moment, model 8=3713
 electric dipole moment rel. to CP violation 8=11607
 emission from lunar surface 8=19240
 fast-reactor cross sections, collapsing many-group to few-group 8=3997
 first-flight, in coupled reactor, effect on kinetic behaviour 8=16148
 flux density, cavity boundary conditions 8=11982
 half-life of free n, $T_{1/2} = 10.80 \pm 0.16$ min 8=6943
 leakage from 2-dimens. system, collision probability calc. 8=7296
 mass difference n-p, calc. 8=15825
 mass difference n-p, rainbow graph model calc. 8=11587
 mass difference p-n, field theoretic approach 8=11586
 mass difference p-n, in terms of p-e and n-e cross-sections 8=655
 mass difference p-n, rel. to bootstrap model of hadron dynamics 8=11486
 mass difference from p using Dashen-Frautschi method 8=20267
 mass from capture-gamma ray energy as student excise 8=6944
 Milne's problem for plane slab with constant source 8=3994
 multigroup transport eqns., convergence of source iteration tech. in soln. 8=11997
 multiplication in reactor, new concept for subcritical system with reflector 8=7275
 neutron gas in finite media, anal. of behaviour 8=7311
 n-wave propag. in moderating media, eigenfunction anal. 8=11986
 one-speed transport eqn., closure relns. for eigenfunctions 8=847
 prompt, in NORA reactor, decay const. meas. by interval distrib. tech. 8=4010
 prompt, in spherical-cavity reactor, time depend. kinetics of population 8=4003
 pulse decay in moderator, anal. 8=4007
 pulsed in slab geometry 8=20555
 pulsed n source, Cockcroft type, for thermal reactor phys. 8=7282
 radiation when moving in a magnetic field 8=6945
 reactor noise, threefold corrls. and third order moments 8=11984
 reactors, extrapolation distance, calc. 8=11979
 real and adjoint fluxes, bi-linear functionals, perturb. anal. 8=7294
 slowing down of rel. to humidity meas., high speed 8=9839
 source energy spectra and ang. distrib. by e bombard. of Pb, Bi, W and U 8=11867
 spatial distrib. in H₂O, from T(p, n)He³ source 8=11612
 star, and eqn. of state of nuclear matter 8=19166
 thermal-group constants in three-region lattices, calc. 8=11988
 thermal n flux distribution and flux trap effect in active core of UA-RR-1 reactor 8=20871
 transport, anisotropic scatt. representation in S_n codes 8=3999
 transport eqn. in 3-dimens., truncation of spherical harmonic expansion 8=11990
 transport, invariant imbedding theory 8=7307
 transport kernel, first-flight collision probab. calc. 8=20544
 transport, 1-dimens. critical slab problem with anisotropic scatt., soln. 8=20546
 transport operator in spherical assembly, fundamental mode 8=7302
 transport in plane geometry 8=20547
 transport theory, two-region problem 8=7305
 transport theory, two-region problem 8=7306
 transport, transforms. of variational problems 8=7308
 tunneling reactions 8=20765
 wave propag. in graphite, effects of Bragg cut-off 8=7285
 Cf²⁵² fission source, standard, construction and emission props. 8=6950
 H²(n, p), 14.1, 18, 21.5 MeV search for trineutron 8=11649
 Sb¹²⁴ delayed neutron precursor 8=3875

absorption

 - transport theory, an inverse problem and dynamic programming 8=11613
 - ultrasonic cavitation in water 8=3721
 - Au¹⁹⁷, differential flux density by resonance detectors 8=6957
 - B, method of B¹⁰ isotope determ. 8=14456
 - BF₃ counters, paraffin-moderators with counting nearly proportional to dose-rate 8=15854
 - He³ detector, high temp. 8=6959
 - La¹³⁹, differential flux density by resonance detectors 8=6957
 - Mn⁵⁵, differential flux density by resonance detectors 8=6957
 - Ra-Be (α , n) standard source, comparison of meas. 8=11618
 - Sm¹⁵², differential flux density by resonance detectors 8=6957
 - Sb-Be photoneutrons, energy estimate using meas. of γ -ray of Sb¹²⁴ 8=11622
 - W¹⁸⁶, differential flux density by resonance detectors 8=6957
- diffusion**
- across temperature discontinuity in cryst. moderators, graphite and Be 8=20872
 - in anisotropic media, measurement 8=11614
 - appl. to criticality in heterogeneous media 8=7272
 - in benzene, pulsed meas. at 20°C, transport mean free path 8=20549
 - Boltzmann equation, non-local, in absorbing disk geometry 8=6115
 - Corngold eqn. soln., and resulting thermal-n spectra 8=3998
 - density field in heterogeneous systems with pulsed source, meas. 8=20548
 - entropy prod. in non-absorbing moderator 8=15850
 - finite cylindrical medium, matrix factorization soln. 8=15024
 - graphite, decay of thermalized neutron fields 8=7288
 - in graphite, n-wave obs. 8=3719
 - Jacobi polynomial method for solving Boltzmann's transport eqn. 8=11983
 - in JEN-2 reactor, pulsed determ. of parameter $\alpha = \beta/1^*$ 8=20882
 - with modulated source, one dimensional system 8=11617
 - multigroup eqns., convergence of source iteration tech. in soln. 8=11997
 - multigroup theory, boundary perturbations 8=4001
 - operator-type perturbation method utilizing variational principles 8=11992
 - in plain water-iron-water shielding layers, multi-group calcs. 8=20878
 - in polyethylene, rectangular moderation assemblies 8=20550
 - in reactor core and reflector 8=11982
 - slab method, S_N calc. method 8=20874
 - space-time group diffusion eqns., soln. by time-discontinuous tech. 8=4002
 - temperature regular of samples 8=6218
 - transport eqn. for critical slab, perturbation theory 8=16143
 - transport equation soln., isotropic, for spherical-symmetric medium 8=16150
 - transport process, Boltzmann soln. by extrapolation 8=3003
 - transport theory, kinetics, mathematical foundations 8=15848
 - transport theory in one-dimensional geometries, integral 8=16151
 - two adjacent media, from point source 8=4005
 - two-group transport eqns. 8=11991
 - variational functionals for space-time neutronics 8=7287
 - in BeO assemblies of bucklings beyond (B²)*, crit. study of decay 8=16159
 - ZrH, parameters meas. 8=16161

effects

- See also Nuclear reactions due to/neutrons.
- activity of radioisotope in reactor, hybrid computer for calc. 8=4025
- austenitic steel, B distrib. from obs. of He gas bubbles 8=13040

Neutrons and antineutrons—contd**effects—contd**

delayed, effective fraction rel. to source strength in reactor 8=16145
 diamond, current glow processes, dosimetric capabilities 8=20205
 dosimetry, depend. on distance from neutron source 8=10444
 fast, irradiation of water, rel. to charged particle slowing down 8=644
 glass, optical, thermal, effects 8=8771
 graphite, dimens. changes rel. to bromination test 200°C 8=8764
 graphite, irradiated, optical absorpt. 8=14202
 graphite, quasi monocrystalline, thermal conductivity 8=13389
 graphite, thermoelectric and galvanomagnetic props. 8=5384
 metals, b.c.c., rel. to rate controlling mechanism of slip 8=4987
 pn-pn devices, narrow base, permanent damage 8=22642
 paraffin block (human body imitation) 8=615
 polymethylmethacrylate, effect on permittivity 8=18180
 pulsed neutron researches, multiplying and non-multiplying systems 8=12020
 silica glass, on dielec. loss at low temps. rel. to OH⁻ conc. 8=18172
 solid solutions, rel. to rate controlling mechanism of slip 8=4987
 steel, stainless, voids obs. 8=22251
 Al, damage and recovery rel. to defect doping effect 8=1953
 Al, low temp. irradi., electrical resistivity recovery 8=2134
 Al, stacking fault removal 8=17670
 Al-Li alloys, grain boundary migration and gas bubble growth 8=8456
 α -Al₂O₃, induced macroscopic growth along a and c axes 8=13132
 Al₂O₃, on lattice, density, length, energy, thermal cond. and microstruct. 8=22245
 Al₂O₃, lattice expansion and density decrease 8=13249
 Al₂O₃, 5×10^{21} fast neutrons cm⁻², damage 8=22244
 Al-Zn alloys, n-irradiation effect on Guinier-Preston zone formation 8=17274
 Al-10% Zn alloy, irradi., pre-precipitation rate at 78°K 8=21980
 Au foil, self shielding and self-absorption rel. to n flux meas. 8=11620
 Be, low temp., decay of neutron pulse 8=20905
 Be, low temp. irradi., electrical resistivity recovery 8=2134
 Be, n-irradiated, recovery meas. 27-77°K 8=22249
 BeO, decoration at high temps. of twin boundaries and dislocations 8=22199
 BeO irradi., determ. of Li⁶ conc. and diffusion 8=8672
 BeO, irradi. at high temp., dislocation loops 8=8761
 BeO, radiation damage, electron microscope investigation 8=22250
 16/13 CrNi steels, high-temp. embrittlement after irradi. 8=22362
 Cu crystal, slip band development 8=22212
 Cu, dislocation pinning 8=1974
 Cu, small dislocation loops, type 8=13437
 Cu₂O, absorpt. spectrum and photocond. 8=5597
 Cu₂O exciton absorpt. spectrum, obs. 8=9521
 α -Fe, rel. to C precipitation 8=17059
 Fe crystals with 8-20 p.p.m. C, n-irradiated, yield stress rel. to radiation hardening 8=17800
 Fe, plastic deformation, stress-strain curves 8=22348
 Fe, plastic deformation, work-hardening parameters 8=22349
 Fe-N supersaturated solutions, irradi. rel. to nitride precipitation 8=17060
 Fe-Ni alloy, on mag. props. 8=2326
 Ge diodes, irradiated, L-shaped current characteristics 8=22630
 n-Ge, Hall meas. during irradiation over 78-330°K 8=18042
 LiF crystals, radiation heating in reactor 8=13488
 LiF, rel. to F-centre exchange interactions from optical and e.p.r. spectra 8=17684
 LiF, formation of macrodefects and metallic Li colloids 8=12947
 LiF, n-irradiation, colloidal Li e. p. r. meas. rel. to colloid distrib. 8=9431
 LiF, paramag. centre due to atomic H² formation 8=18427
 MgO, on lattice, density, length, energy, thermal cond. and microstruct. 8=22245
 MgO, lattice expansion and density decrease 8=13249
 Mo, dose of 8×10^{20} neutrons/cm², mechanical properties 8=8856
 Mo, n-irradiated, vacancy and interstitial loop identification 8=17610
 Mo permalloy, coercive force, bombardment effect 8=18344
 Nb, superconducting, on magnetization behaviour and transition temp. 8=2169
 NiO effect on elect. props. 8=18058
 Pt, damage and recovery rel. to defect doping effect 8=1953
 Se, hexagonal, effect on conductance, rel. to temp. and rad. damage 8=18067

Neutrons and antineutrons—contd**effects—contd**

Si damage, as fast n counter 8=4030
 Si diodes, irradiated, L-shaped current characteristics 8=22630
 Si, irradiation damage, investigation by transmission electron microscopy 8=17707
 n-Si, elec. props. rel. to defect structure and annealing 8=5283
 Si, energy given to lattice by primary ions 8=2033
 n-Si, Hall meas. during irradiation over 78-330°K 8=18042
 Si, impurities testing by non destructive neutron activation method 8=18086
 Si, rel. to O₂ conc. effects 8=5279
 Si, containing O₂, thermal conductivity, irradi. effects at 80°K 8=8663
 Si, p-type, thermal neutron irradiation effects 8=18068
 W, elec. resist. and hardness 8=2141
 W, microstructure changes rel. to mech. props. 8=21998
 W, point defect damage, annealing phases and mechanism 8=17601
 ZrO₂, cubic, influence on ionic mobility 8=5152

interactions

D(n,p)2n, at 14 MeV, neutron spectra 8=3715
 K⁺ n 2.3 GeV/c change exchange and p⁺ Regge trajectory 8=3665
 Λ -neutron stimulation, hyperfragments A = 50, calc. 8=15861
 n + D \rightarrow p + 2n, counter telescope for energy and ang. distrib. 8=11646
 n-d, 14.1 MeV, coincidence meas. 8=11643
 n + He³ \rightarrow p + H² rel. to "elementary particle" model of nuclei 8=15873
 n-n low energy parameters in n-d scatt. 8=15841
 n-p capture theory 8=827
 n-p pairing interaction, charge-independent 8=3771
 np, 2-10 GeV, search for nucleon T = $\frac{1}{2}$ isobar 8=3699
 ν + n \rightarrow μ^- + p⁺, ν elastic scatt. obs. 8=3589
 π^+ n \rightarrow ω p, Regge-pole model with L-S coupling 8=20444
 π^+ + n \rightarrow $\Sigma\pi$ + K⁺, in polyethylene, 1 GeV/c, Σ polarization 8=864
 \bar{p} n \rightarrow \bar{N}^{*+} (1238)p, at 2.8 GeV/c, isobar and anti-isobar production 8=844
 \bar{p} + n \rightarrow 2 π^- + π^+ in D bubble chambers, (Γ^{π^0} =1-0)-3 pion state analysis 8=20436
 H³(n,d)2n, 15.1 MeV, n-n scatt. length deduced 8=20543
 Nd^{145,146}, capture, γ -ray spectra 8=16032
 U²³³ fragment energy by 430, 630 keV and 1.1 MeV neutrons 8=11974
 U²³⁵ fragment energy by 100, 260, 700 keV and 1.3 MeV neutrons 8=11974
 U²³⁵, spin depend. of n cross-section 8=20849

moderation

absorption resonance in aqueous MnSO₄ soln. calc. from slow down theory 8=7208
 cosmic ray monitors, lifetime within 8=15877
 in crystalline moderator, flux values near discontinuities 8=7292
 diphenyl decay const. pulse meas., time of flight effects 8=16149
 graphite, diffusion across temp. discontinuity 8=20872
 in graphite, slowing down time, influence of chem. binding effect 8=7330
 in graphite, spectra meas. near temp. discontinuity 8=12000
 graphite thermalization params., n-wave obs. 8=3719
 heating up in cryst. moderators of low-energy neutrons 8=7293
 in hydrogenous mixture, second spatial moment, effect of heavier nuclei 8=7312
 length, effect of empty channels 8=20894
 n-wave propag. in moderating media, eigenfunction anal. 8=11986
 in polyethylene rectangular assemblies 8=20550
 pulse decay, pseudoexponential 8=20553
 in RI heavy water reactor, study of cold moderator combs. 8=7315
 slowing down, multiple collision soln. 8=7304
 slowing down in nonmultiplying medium, approx. theory 8=3717
 slowing down theory in reactor, eigendistrib. for continuous energy variable 8=20876
 in solids, spectrum, series representation and temp. transforms. appls. 8=7310
 spatial dependence, in water 8=1129
 thermal, density fluctuations, application of slowing down kernels 8=16158
 thermalization initial value problem 8=11980
 thermalization, time dependent, Monte Carlo method 8=11981
 time decay constant in pulsed multiplying assemblies 8=1120
 time eigenvalues, secondary model 8=20552
 transport operator fundamental mode, manoenergetic pulse calc. 8=20877
 in Be assembly, decay of pulse, anal. via energy-depend. mean lifetimes 8=7332
 Be, diffusion across temp. discontinuity 8=20872
 D, age and fast effect 8=16160

Neutrons and antineutrons—contd**moderation—contd**

- D₂O, age and fast effect 8=16160
 D₂O lattices, RESCUE method for resonance escape probability calc. 8=20880
 in D₂-O moderated lattices, epithermal and thermal spectral indices 8=20866
 H₂O decay const. pulse meas., time of flight effects 8=16149
 PuBe source, scattering moderator effect 8=1121

polarization

- in ferromagnets 8=15843
 generator, formulae for T(d, n)He⁴, D(t, n)He⁴ 8=15844
 multiple scatt. and finite geometry effects 8=11610
 polarimeter, α -particle avalanche counter 8=6952
 spectrometer, spin-flip chopper 8=20568
 thermal beam refl. from magnetized mirrors 8=15842
 from B¹¹(p, n)C¹¹ reaction 8=7189
 C¹²(He³, n)O¹⁴, 2.24-3.70 MeV, DWBA analysis 8=3965
 C¹²(n, n)C¹² and C¹²(n, n')C¹², 15.85 MeV neutrons 8=7204
 Co, magnetized, transmission 8=2031
 Dy, dimensions of ferromag. correlation range by neutron depolarisation obs. 8=22797
 H²(d, n)H³, below 400 keV, polarization of n emission obs. 8=20582
 Ni, magnetized, transmission 8=2031
 N¹⁴(d, n)O¹⁵, 3.1-3.7 MeV, ang. momentum transfer 8=3956
 in N¹⁵(d, n₀)O¹⁶, ang. depend. of polarization and diff. cross section 8=7227
 U²³⁵, spin depend. of n cross-section 8=20849

production

- continuous—pumping D-T generator 8=11608
 delayed, in infinite slab, initial-value transport problem 8=20875
 deuteron bombardment of tritium targets 8=11290
 d-T reaction, yield from annihilation radiation 8=874
 DIDO source, intensity improvement by rethermalization 8=20556
 $\gamma p \rightarrow n\pi^+$, ang. depend. of cross-section 8=6841
 generator, acceleration tube, properties of 8=3714
 generator with high intensity of n flux 8=3718
 generator with short structure accelerating system 8=15851
 high flux densities in range 10¹⁶ cm⁻²s⁻¹, applications 8=11609
 $\mu^- + p \rightarrow n + \nu_\mu$, muon capture rate 8=721
 n⁰ from $\pi^- + C^{12}$, probability < 2.6 × 10⁻⁶ 8=11915
 photoproduction of antineutrons, photon energy 4.0 to 5.7 BeV 8=20570
 $\pi^- p \rightarrow \eta^0 n$ and charge exchange polarization 8=3665
 $\pi^- + p \rightarrow \pi^- + \pi^+ + n$, 1.38-3.00 GeV/c p⁰ formation and decay ang. dist. 8=3685
 $\pi^- p \rightarrow \pi^- \pi^+ n$, 8 GeV/c, 2421 events 8=6851
 $\pi^- p \rightarrow p\bar{p}n$, 8 GeV/c, obs. in bubble chamber 8=6857
 $p + \bar{p} \rightarrow n + \bar{n}$, charge-exchange, calc. using U(6, 6) and absorpt. model 8=829
 $p\bar{p} \rightarrow n\bar{n}$, Regge pole analysis, anomalies 8=6932
 proprietary accelerators 8=6689
 pulse neutron generator 8=12020
 reactor, energy distrib., up to 20 MeV obs. 8=16146
 $\Sigma^+ \rightarrow n + \pi^+$ S-wave theory using quark model of baryons 8=6975
 source calibration, radiation-fields similarity method 8=20538
 source to target geometry, computer soln. of activation eqn. 8=3854
 source using d-d reaction for cyclotron 8=6703
 source-width analysis in nuclear reactors 8=20873
 superbooster, physics 8=1118
 thermal, radiation meters calibration 8=853
 by thermonuclear reaction in 6-pinch plasma, laser scatt. obs. 8=1399
 by t+d with t in Zr or Ta, yield decrease diffusion mechanism theory 8=6921
 variational functionals for space-time neutronics 8=7287
 PuBe source, intensity, moderator effect 8=1121
 Pu²³⁸O₂, depleted in O¹⁸ for radiation minimization 8=10443
 T(p, n), He³, obs. 8=882
 U²³³ and U²³⁵ fission, relative yields, 0.08-1 MeV 8=7264
 U²³⁵, prompt n emission 8=20853

reflection

- Doppler-effect, by rotating crystal, condition for time focusing 8=15845
 Al crystal monochromator 8=854
 Cu crystal monochromator 8=854
 PbGe crystal monochromator 8=854

scattering

- anisotropic, in Boltzmann eqn. soln. 8=20541
 in antiferromagnets and fluctuations in strong magnetic field 8=5498
 charcoal, activated/adsorbed ethylene system, rel. to adsorbant mol. motions 8=21901
 continuum wave-functions, for determ. of spectroscopic factors, comment 8=15931
 cross-section meas. by bright line technique 8=7198
 crystal analysis, use of anomalous scattering 8=13244
 by defect in solids, mathematical formulation, long wavelength 8=22167
 defocusing spectrometer, for MeV range 8=15856

Neutrons and antineutrons—contd**scattering—contd**

- diffuse, time depend., and diffusion in crystalline solid solns. 8=8667
 double-differential slow-n data, corrections for multiple scatt. 8=11894
 elastic diffuse, from mixed mag. systems 8=22766
 elastic 14 MeV, analysis using Fraunhofer diffraction model 8=1071
 elastic, on nuclei of mean atomic weight 8=3932
 fast neutron, meas., particle spectrometer 8=11625
 ferromagnet, Heisenberg, with magnetic impurity, diffuse inelastic neutron cross section 8=9319
 flux, at plane black boundary, boundary condition 8=6947
 4 π technique for separating capture and fission effects 8=3723
 graphite, scattering law S(α , β), values at 1300°K and 1800°K 8=11898
 Hauser-Feshbach model in scatt. from V⁵¹, Mn⁵⁵, 1.0-3.1 MeV 8=15975
 heavy nuclei, imaginary part of optical pot. 8=7197
 Heisenberg system, paramagnetic 8=22758
 hydrogen in solid and liquid, estimation by samples by n thermalisation 8=23197
 Kⁿ, sum rule analysis 8=6896
 liquids, rel. to eigenfunctions for collective motion in simple classical fluids 8=21419
 liquids, form factor calc. in classical fluid 8=7851
 liquids at high pressures, container 8=8001
 liquid, simple, new approx. for Van Hove distrib. function 8=12797
 methane, liq, slow n scatt., allowing rot. relax. functions of order 3 and 4 8=12798
 methane, solid, rotational hindrance effect 8=13038
 methylbenzenes, hindered rot. determ. 8=17484
 Milne's problem for 2 adjacent spaces, solution 8=1119
 molecule, spherical-top, including rotation-vibration interaction 8=21060
 molecules, structure, at high energies 8=1234
 multiple and finite geometry effects in polarization expts. 8=11610
 multiple, calc. using combination of Monte Carlo and analytical methods 8=6946
 multiple, soln. to slowing down 8=7304
 multiple in target, theory including atomic recoil 8=20804
 n- α phase shifts, polarized, 25 and 28 MeV 8=6949
 n-d counter telescope for energy and ang. distrib. 8=11646
 n-d Fadeev eqns., sensitivity to n-n parameters 8=15841
 n-d, Hamada potential, variational calc. 8=885
 n-d, length calc. using N-N non-local separable pot. 8=11647
 n-d, length calc. using pair pot. 8=881
 n-d length, obs. anomaly rel. to 3N binding energy 8=11648
 n-n length from H³(n, d)2n, 15.1 MeV 8=20543
 nuclei, even-even, using square-well generalized optical model 8=16086
 nuclei, heavy, 6.24 MeV, optical model parameters obtained 8=16085
 nuclei, polarized, elastic cross sections at E = 4 MeV obs. 8=7203
 by a nucleus, time dependent wave packet behaviour 8=20803
 paramagnet, Ising 8=9297
 paramagnetism, theory 8=9296
 pentanol, quasi elastic 8=8000
 polarization parameter 300-700 MeV 8=6927
 in polyethylene, for Nelkin-kernel, cross-sections and thermal n spectra 8=20802
 by polymer solutions, elastic, effects of hydrodynamic interactions 8=4542
 quantum gas, slow neutrons 8=16685
 reactors, spectra, review 8=7269
 resonance parameter determ. 8=15840
 shadow bar to shield detector from source 8=7199
 slab method, S_n calc. method 8=20874
 spectrometers, scatt. aspects 8=20565
 in spherical geometry media, Boltzmann eqn. soln. 8=20542
 thermal anisotropic, Milne problem, variational approach 8=11994
 thermal cross sections, computer codes SCAT and SLAB 8=20540
 thiourea, l.f. modes determ. 8=13340
 rel. to transport calcs., anisotropy representation in S_n codes 8=3999
 transport eqn. in slab geometry 8=19478
 transport, 1-dimens. critical slab problem with anisotropic scatt., soln. 8=20546
 urea, l.f. modes determ. 8=13340
 Al, 1-4 MeV, optical model pot. 8=3935
 Ar, liquid cold-n scatt. at 94.4°K, analysis using computer molecular-dynamics expts. 8=21611
 Ar, liquid, evidence for collective motion 8=16793
 Ar, liquid, inelastic scattering of cold neutrons, at high temps. 8=16792
 Ar, liquid, quasielastic 8=1524
 Au¹⁹⁷, 0.13-1.5 MeV, levels assigned 8=11899
 Bi²⁰⁹ rel. to isospin dependence of optical pot. 8=7039

Neutrons and antineutrons—contd

scattering—contd

- C^{12} , ang. distrib. and differential cross sections, 14.1 MeV 8=7205
- $C^{12}(n,n)C^{12}$ and $C^{12}(n,n')C^{12}$, polarization of 15.85 MeV neutrons 8=7204
- $C^{12}(n,n',\gamma)C^{12}$, obs. and compared with DWBA 8=16088
- $C(n,n',\gamma)$ transport problem in graphite, Monte Carlo calc. of unscatt. γ -flux distrib. 8=7206
- C^{12} , 1-2 MeV, multiple scatt. and finite geometry effects 8=11610
- CH_4 , gaseous, inelastic scattering 8=12274
- Ca, 2-8 MeV cross-section component to optical model calc. 8=3933
- Co, critical magnetic 8=2317
- Co^{59} rel. to isospin dependence of optical pot. 8=7039
- Cr halides ($CrBr_3$ and CrF_3), paramag. phase, exchange integrals 8=13971
- Cr_2O_3 , acoustic spin waves, study 8=14065
- $Cu^{63,65}(n,n'\gamma)$, 0.7-1.4 MeV 8=7209
- Cu, polarization 8=7210
- D, inelastic, at 14 MeV, neutron spectra 8=3715
- Er isotopes, thermal and paramagnetic cross-sections 8=1073
- F^{19} , intermediate-structure resonances as particle-hole states 8=3931
- Fe, magnetic, spin correlation 8=2026
- Fe, 1-4 MeV, optical model pot. 8=3935
- Fe^{54} , 1.81-40 MeV, γ radiation ang. distrib. 8=3934
- Fe, rel. to spin correlation function 8=2325
- H_2O H bonds from thermodynamic functions, meas. 8=1525
- H_2O molecules, double differential cross section 8=20806
- He^4 , single crystals, phonon dispersion measurements 8=10815
- Ho^{165} , 35-750 eV, spin assignments of resonances 8=16101
- I^{127} , 60-900 keV spin assignments, discrepancy 8=7096
- K, 2-8 MeV cross-section component to optical model calc. 8=3933
- $K^{39,41}$, inelastic, levels and cross-sections obs. 8=20809
- KH_2PO_4 , anomalous incoherent, rel. to standing neutron wave production 8=13267
- $KMnF_3$, antiferromag.-scattering 8=22882
- Li^6 , 4.83, 5.74, 7.5 MeV, cross-section meas., 3-particle break-up obs. 8=11897
- Li^7 , 3.35, 4.83, 5.74, 7.5 MeV, cross-section meas., 3-particle break-up obs. 8=11897
- Mn^{55} , 1.0-3.1 MeV, levels, spin assignment 8=15975
- in $MnSO_4$ aqueous soln., resonance self-shielding correction, rel. to meas. of source strength 8=7208
- N optical potential, complex symmetry term 8=924
- NH_3 , gaseous, inelastic scattering 8=12274
- Ni, magnetic, spin correlation 8=2026
- O^{16} , structure of negative parity states 8=1069
- O^{16} , 2.2-4.2 MeV resonance-parameters obs. 8=1070
- O^{18} , in enriched- UO_2 coherent scatt. length 8=8553
- Pb, liquid, classical fluid calc. 8=7851
- Pb, polarization 8=7210
- $Pb^{208}(n,n)Pb^{208}$, fine structure 8=996
- PuBe source, intensity, moderator effect 8=1121
- Si, differential cross sections between 4 and 5.75 MeV 8=1072
- Sn, grey, phonon spectrum from inelastic scattering of cold neutrons 8=4905
- Ta, total cross-section by time-of-flight spectroscopy 8=7196
- Tb, antiferromag.-scattering near transition point 8=22882
- U^{238} , energy level obs. 8=16007
- U, polarization 8=7210
- V^{51} , 1.0-3.1 MeV, levels, spin assignment 8=15975
- $W^{182,184,186}$, states obs. 0.3-1.5 MeV 8=1074

scattering, proton-neutron

- n-n length from 14.1 MeV n-d interactions 8=11643
- np \rightarrow pn, one π exchange 8=6847
- np \rightarrow pn, pion-exchange, Regge-pole model 8=11516
- n-p, 3-10 GeV, cross-section obs. 8=20539
- pn \rightarrow np evidence for conspiracy of branch cuts in a.m. phone 8=11584
- pn \rightarrow np, Regge-pole analysis, anomalies 8=6932
- particle spectrometer efficiency, different neutron energies, meas. 8=11625
- polarization parameter 300-700 MeV 8=6927
- real part at 8 GeV, elastic 8=6929

Newtonian fluids. See Fluids.

Nickel

- adsorption of Ar, temp. dependence, 78-120°K 8=17168
- alloying with steel, effect on temper brittleness 8=17797
- anode desorption efficiency, photoelec. meas. 8=17167
- band structure and Fermi surface, study by de Haas-van Alphen effect 8=2106
- band theory and low energy electron diffraction 8=2105
- catalyst, effect of support in benzene hydrogenation to cyclohexane 8=9707
- catalytic effect on BaO cathode contamination by residual gases 8=18663
- centres in molten $LiCl-KCl$, absorpt. spectra 8=8087
- centres in molten $MgCl_2-KCl$, absorpt. spectra 8=8086
- chromatographic separation, complex formation and reflectance spectros. detect. 8=23176

Nickel—contd

- cold-worked, nucleation of recrystallization 8=8397
- collector in W-emitter thermionic converter, comparison with Nb 8=15228
- compressibility, 4.2-300°K 8=5061
- creep at 700°K rel. to deformation at 77 and 4.2°K 8=17824
- creep strength increase after thermo-mechanical treatment 8=13601
- critical magnetic scattering of neutrons, spin correlation 8=2026
- crystal, plastically deformed, ferromag. props. using micromag. phase theory 8=5452
- cylindrical crystals, (110) axis, closure-domain structure, investigations 8=14037
- cylindrical crystals, (100) axis, ferromag. basic structure, investigations 8=14038
- Debye temp., 0 to 300°K, sp. ht. anal. 8=13377
- deformation, intermittent, upper temp. limit and dislocation density 8=2064
- de Haas van Alphen effect and electronic band structure 8=9360
- density of states from soft-X-ray analysis 8=8940
- deposits, pseudomorphic, of Cr 8=21886
- diffusion in Fe, volume and grain-boundary 8=17571
- dislocations, effect on mag. susceptibility 8=22830
- dull electroplating salt, formulation 8=23152
- dynamic ΔE effect frequency dependence in weak mag. field 8=2065
- electrochemical behaviour in $In-H_2SO_4$, influence of alternating current 8=5739
- electrodeposition from $NiCl_2$ soln. by a. c., microstruct. obs. 8=22035
- electroformed, mech. props. at room and cryogenic props. 8=17823
- electronic sp. ht. calc. by band model 8=4932
- electrolytically deposited layers, lattice deformations and crystal orientation 8=1805
- energy loss of fission fragments, range-energy relation 8=2021
- equation of state near Curie temp., approx. 8=2330
- exoelectron emission, photostimulated, during ferromag. transition, obs. 8=2273
- f. c. c., critical values for Bloch wall types 8=9320
- ferromagnetic, hot-electron scattering and rigid-band model 8=13940
- ferromagnetic lattice, hyperfine magnetic field on Sm^{150} 8=2335
- ferromagnetic, maximum susceptibility 8=18338
- ferromagnetic powders, magnetic props., lattice parameters 8=14033
- ferromagnetic reson. linewidth anisotropy rel. to relax. process, 25.92 and 9.42 GHz 8=2355
- film, electrolessly deposited, e microscope study 8=17136
- film on silicon grease, magnetic props. 8=2331
- films, condensed polycrystalline, structure and substructure elements 8=17286
- films, electrodeposited, perp. anisotropy 8=14024
- films, electrolytically deposited, growth rate rel. to structure and ferromag. props. 8=13999
- films, magnetostriction, meas. and obs. 8=18347
- films, resistivity, after magnetically induced anisotropy 8=5166
- films, thin, ion bombardment rel. to induced mag. anisotropy 8=22829
- galvomag. effect obs. in thin film specimens 8=5475
- hemispherical reflectance, rel. to λ and surface roughness 8=2399
- hydrostatic tension on solidification 8=21758-9
- laser induced non-linear photoelectric effect in metals 8=22721
- low work function collector in thermionic converter, effect of W emitter evaporation on to surface 8=15245
- magnetic properties, Anderson-type localized moments, model 8=2314
- mag. props., plastic deformation effects 8=9363
- magnetic susceptibility spin-orbit coupling dependence 8=2332
- magnetized, polarized n transmission 8=2031
- magneto-optical props., u. v., visible and i. r. 8=18550
- {100}, clean, adsorption of CO 8=21906
- (110) surface, adsorpt. of CO 8=17169
- oxygen chemisorption and film growth 8=9703
- photoelectric effect, non-linear, laser induced 8=2258
- plastic stress relaxation rel. to stacking fault energy 8=13529
- polycrystalline, ferromag. resonance, variation between -100 and +400°C 8=5511
- polycrystalline, secondary electron emission, temp. depend, 100 to 600°C 8=13944
- polycrystalline, shock-hardening 8=13595
- polycrystalline target, sputtering coeff. rel. to incident angle of Ne, Ar and Kr ions 8=8766
- powder, heating during ferromag. resonance 8=14082
- Rayleigh-region, derivation based on Bloch-wall-friction model 8=5481
- reactions, diffusion-controlled, at cylindrical surfaces, kinetics 8=14372
- recrystallization during creep, models criticism 8=8857

Nickel—contd

- recrystallization nucleation of weakly deformed foils 8=8421
 recrystallization rel. to polygonization 8=4808
 resistivity, elec., low-temp. obs. 8=17937
 resistivity temp. coeff., divergence at Curie temp. 8=9012
 reversible and irreversible magnetization temp. dependence 8=14025
 ribbons exposed to water, low-energy electron bombardment 8=21907
 saturation magnetization, temp. depend., applic. of demagnetizing field technique 8=22834
 secondary electron emission, H⁺ bombardment 8=5423
 self-diffusion, Arrhenius plot analysis allowing for divacancies 8=8681
 single crystals, magnetic anisotropy 8=9362
 sintered, effective volume self-diffusion 8=1923
 sintered, mag. props. rel. to porosity, obs. 8=22808
 in S solns., NiS surface film growth kinetics and mechanisms, obs. 8=2525
 specific heat, anomalous, at low temps. 8=22118
 specific heat at high temp., meas. of temp. depend. 8=1864
 structural changes under supersonic air streams at 900°C 8=17290
 surface segregation of S, obs. by Auger electron emission 8=22730
 thermal diffusivity meas. 8=1898
 thermoelectric power, high press. effects 8=13902
 twin and grain boundaries free energy ratios, from e-micros. exam. 8=17287
 Au-Ni spinodal, re-calc. 8=13245
 CO evolution by vacuum heating 8=16745
 Cu-Ni diffusion pairs, pore migration during counter-current diffusion 8=17569
 Fe-Ni systems, α - γ equilib. 8=4709
 and GaAs surface barrier diodes, elec. props. 8=22629
 H₂ desorption from surface 8=17170
 H₂ permeation, kinetics 8=8682
 Ni(II), co-ord. equilibria in alkali borate glasses 8=21836
 Ni(II) ions, sublation studies, by radioactive tracers 8=23075
 Ni(III), oriented growth of Ni₃S₂, e-diff. study 8=17254
 Ni²⁺, near i.r. fluoresc. and absorpt. in MgO 8=23050
 Ni-bearing steels, structure of martensite during ageing 8=1762
 Ni-induced surface structure on Si(111), LEED 8=4732
 Ni:Al₂O₃, sintered, compressive strength grain size dependence 8=2048
 Ni-Fe magnetic film memory elements, dispersion of anisotropy 8=14052
 Ni_{1-x}Sn, Mössbauer effect 8=1645
 Ni²⁺ centres in solids, i. r. luminesc. emission 8=18626
 Ni²⁺ in CaF₂, e. p. r. spectrum 8=9437
 Ni²⁺ in MgO absorption spectra line shift rel. to temp. 8=2442
 Ni²⁺ in MgO, microwave phonon interaction 8=9450
 Ni²⁺ and V²⁺ superexchange interaction in MgO 8=9355
 Ni²⁺ in KMgF₃, acoustic p. r., propag. factor changes near reson. 8=22912
 Ni³⁺ in KTaO₃, e. p. r. 8=9425
 Ni⁶³, 2-21 MeV deuterons, recoil range 8=13489
 Sn^{113,123} diffusion mobility obs. 8=17579
 Sb impurity, internal nucl. mag. field 8=8198
 on SiO₂, chemisorpt. of HCN, C₂N₂ and BrCN 8=23127
 Td-nickel, twin and grain boundaries free energy ratios, from e-micros. exam. 8=17287

Nickel alloys

See also Nickel compounds.

- alloy 718, superalloy, metallurgy, correl. of mech. props. with comp., microstruct. and heat treatment 8=21827
 Alnico-alloy permanent magnets, Ti-containing, columnar crystallization investigations 8=8399
 Alnico alloys, interaction effects 8=14036
 Alnico 8, Mössbauer spectroscopy study of paramagnetic environment 8=5480
 Alnico magnets, heat treatment below 1000°C 8=9361
 creep, temp. cycling effects 8=2066
 fatigued at several temps., dislocation structure 8=4981
 γ' particles, growth, distrib. and shape 8=21993
 hastelloy X-280, microstructure and tensile props., thermomechanical effects 8=17288
 heat transfer and corrosion relations 8=15102
 high-strength, with improved oxidation resistance to 2200°F 8=22387
 Inconel, anode desorption efficiency, photoelec. meas. 8=17167
 Inconel, stress corrosion cracking 8=8844
 Inconel, twin and grain boundaries free energy ratios, from e-micros. exam. 8=17287
 irradiated, tensile and shear props. at cryotemps. 8=17763
 nichrome ribbon, convection rel. to heat flux 8=17548
 Nimonic 80A creep damage and recovery by annealing, 600-750°C 8=5083
 Permalloy, composite films, structure and magnetic props. 8=9357
 permalloy deposition with varying degrees of anisotropy 8=21885
 permalloy, domain wall obs. by pulse technique 8=9364
 Permalloy evaporated films, influence of residual gases and metal bases on props. 8=5476
 Permalloy, ferromagnetic, maximum susceptibility 8=18338
 permalloy films, "flash-evaporated", standing spin-wave resonance 8=14083
 Permalloy films hysteresis, effect of deposition conditions 8=14032
 Permalloy films, mag. anisotropy, effect of defects caused by plastic deform. 8=14031
 Permalloy films, mag. reversal in alternating mag. field 8=5474
 Permalloy films, meas. of large-angle flux reversal 8=14030
 permalloy films, memory performance and hysteresis in inhomogeneous magnetic field 8=2319
 permalloy film on silicon grease, magnetic props. 8=2331
 Permalloy films, worm motion of domain walls 8=14028
 permalloy layers on Cu, magnetization under circular alternating and longitudinal static fields 8=9335
 Permalloy, magnetic domains, electron diffraction obs. 8=22824
 Permalloy magnetic films, rotational hysteresis, temp. depend. 8=22823
 Permalloy, magnetoresistance and effect of 3d orbital degeneracies 8=13724
 Permalloy, possibility of electron-beam vaporization 8=8189
 permalloy, r. f. reflecto-polarimetry 8=9409
 Permalloy-SiO-Permalloy multilayers, memory device appls. 8=14035
 Permalloy wire devices, domain wall propag. and digital appls. 8=14034
 Permalloy wire, domain wall motion appl. in character recognizer 8=10876
 Permalloy wires, domain wall motion used in parallel-to-serial converter 8=10875
 Supermalloy, ferromag. resonance rel. to spin diffusion 8=9404
 superalloys, struct. and metallurgical props. 8=4850
 Udimet-500, -520 and -700, heat treatment and composition effect on stress-rupture props. and structural stability 8=13599
 Udimet 700, sigma phase 8=13158
 Cr, plastically deformed, resistance recovery 8=13722
 Cu, plastically deformed, resistance recovery 8=13722
 In-Sb-Ni, the quasibinary section InSb-NiSb in 8=4691
 K-effect 8=13723
 Ni-base, molten, reactivity in vacuum with refractories 8=9694
 Ni base superalloy, carbide phases, structure, composition 8=8246
 50 Ni Permalloy, isotropic and anisotropic, effect of Ge addition on mag. props. 8=22815
 Ni-Al, ferromagnetic, hot-electron scattering and rigid-band model 8=13940
 NiAl, ordered b. c. c., supersaturation of vacancies on quenching 8=17611
 Ni-Al₂O₃, dispersion-strengthened, annealing and creep 8=22388
 Ni-Be, ferromag. props. rel. to transfer of electron states 8=14018
 Ni-C, growth of spheroidal graphite crystals 8=13156
 Ni-Co alloys, orientation superstructures by electron irradiation in mag. field 8=5479
 Ni-Co binary solns., interdiffusion coeff. conc. dependence, by X-ray analysis 8=17570
 Ni-Co, deformed, positron annihilation 8=17909
 Ni-Co-Mn ferrites, shifting of u. s. vel. minima due to mag. polarization changes 8=8632
 Ni-Cr film sputtering, role of H₂ rel. to thickness control 8=8777
 Ni-Cr, creep-resistant, fracture behaviour 8=17803
 Ni₂Cr, short-range order parameters from n-diff. data 8=17291
 Ni-Cr solid solns., interdiffusion, conc. and temp. dependence 8=17578
 Ni-Cr, sputtering in Ar, comparison of film and target composition 8=22254
 Ni-Cu, effect of cathodic hydrogen loading on ferromag. resist. anomaly 8=14023
 Ni-20%Cu, electron penetration at moderate energies, meas. 8=17694
 Ni-Cu, Hall effect, rel. to electrical resistivities 8=9014
 Ni-Cu(0-30.42%), longitudinal magnetoresistance up to 1100 Oe at 0°C 8=9013
 Ni-Cu, Portevin-Le Chatelier effect, hydrogen level dependence 8=22331
 Ni-Cu, solid, H solubility 8=21826
 Ni-Cu solid solns., variation of thermoelectric power and resist. 8=5389
 Ni-Fe, compressibility from 4 to 50 kbar by impact tech. 8=11719
 Ni-Fe, deformed, positron annihilation 8=17909
 Ni-Fe double films, domain wall motion 8=2329
 Ni-Fe ferrite, crystal growth, using arc image furnace 8=8422
 Ni-Fe films, lattice contractions by electron diffraction 8=1806
 Ni-Fe films mag. props. rel. to vacuum deposition press., 10⁻⁶-10⁻⁹ torr. 8=22822

Nickel alloys—contd

- Ni-Fe, film thickness and composition determ. by X-ray fluorescence 8=9750
 Ni-Fe films, vacuum-deposited thickness meas. by elec. resistivity method 8=17135
 Ni-Fe films, wall pinning effects on bias susceptibility meas. 8=14026
 Ni-Fe, mag. thin films, thickness dependence of domain wall energy 8=18346
 Ni-Fe, permalloy, thin films, exchange anisotropy, 4.2°K 8=2333
 Ni₃Fe alloyed with Cr, Mo or W, solid solutions, effects of atomic ordering 8=4690
 Ni₃Fe, order-disorder transition, n-diff. exam. 8=17095
 Ni-Fe sintered relay core prod. 8=22808
 Ni-Fe thin films, dynamic energy losses during magnetization reversal 8=14029
 Ni-Fe thin films, ferromagnetic resonance linewidth, rel. to temp. 8=2356
 Ni-Fe-Co thin films, strain sensitivity rel. to Co content 8=18345
 Ni-Fe-Cr films mag. props. rel. to high speed computer storage use, obs. 8=22826
 Ni-Fe-Cr-Si, 200-300Å films, galvanomagnetic effect 8=5478
 Ni-Fe-Cr-Ti Bourdon tubes, vacuum versus air-melted, rel. to elastic and fatigue props. 8=17822
 Ni-Fe-Cu films mag. props. rel. to high speed computer storage use, obs. 8=22826
 Ni-Fe-Cu-Mo, effect anisotropy on magnetic props. 8=9365
 77 Ni-14 Fe-5 Cu-4 Mo wt. % mag. props., sheet thickness effects 8=22827
 Ni-Fe-Mn films mag. props. rel. to high speed computer storage use, obs. 8=22826
 Ni₃(Fe, Mn), Ni₃(Fe, Cr), Ni₃(Mn, Cr), (Ni, Co)₃Mn, (Ni, Co)₃Fe_{0.5}Mn_{0.5} n analysis of superstructure 8=1763
 Ni-Fe-Pd films mag. props. rel. to high speed computer storage use, obs. 8=22826
 NiFe-SiO-Co multilayer, magnetoresistance hysteresis rel. to stray field effects 8=14027
 Ni₂Ge alloy, susceptibility in range 0<T<1000° C 8=18299
 Ni₃Ge, resistivity and thermoelectric power in the range 77°K < T < 1300°K 8=18215
 Ni₃Mn alloy, magnetic field at Mn^{5s} 8=1635
 Ni₃Mn, mag. field induced anisotropy 8=2327
 Ni-Mn Nimalloy, effect of Fe addition 8=22832
 Ni-Mn Nimalloy, permeability obs. 8=22831
 Ni₃Mn ordered, dislocation structure and grain size effect on validity of Cottrell-Stokes law 8=8721
 Ni-Mn, n. m. r. meas. of Mn^{5s} atom 8=9465
 NiMn, tetragonal, order twins and antiphase boundaries 8=17289
 Ni-2.2 wt.%Be, ageing investigated by electron microscopy 8=17056
 Ni₃(MnCo) ordered dislocation structure and grain size effect on validity of Cottrell-Stokes law 8=8721
 Ni-Mn-Fe, atomic mag. moment, conc. depend. 8=9358
 Ni-Mn-Fe ordered, dislocation structure and grain size effect on validity of Cottrell-Stokes law 8=8721
 Ni-Mo, quenched, deformation effects on transformation during annealing 8=17094
 Ni-Mo-Fe core power line de-icing transformer core, obs. 8=22828
 NiPb formation by simultaneous evaporation of NiPb 821852
 Ni-Pd system, mag. coupling 8=22821
 Ni-Pt binary solns, interdiffusion coeff. conc. dependence, by X-ray analysis 8=17570
 Ni-Si, reflection coeff. and thermal e. m. f. 8=18551
 Ni₃Si with coherent, ordered, stressed precipitates, dislocation motion 8=1978
 Ni-ThO₂, dispersion hardening and damping capacity, 20-500°C 8=17821
 Ni-Ti martensite transformation, atomic structure changes 8=21851
 Ni-Ti, obs. on non-spherical distortions by diff. contrast 8=8688
 Ni-Zn alloys, soft X-ray emission spectra 8=5624
 Ni-ZnO-Fe₂O₃ ferro(ferri)mag. reson., heat prod. obs. 8=14100
 Ni-1%Cr, prestrain during creep 8=13600
 Ni-12.7 at.%Al, rolled, effect of coherent γ'(Ni₃Al) particles on annealing 8=13598
 Ni-60 at.%Co, deformed, thermal conductivity decrease rel. to dislocation density increase 8=8658
 Ni-20Cr-2ThO₂, creep and creep fracture 8=8858
 Rh alloys, ferro- and paramag. behaviour saturation and susceptibility meas. 8=5477
 V alloys ferro- and paramag. behaviour saturation and susceptibility meas. 8=5477

Nickel compounds

- See also Nickel alloys
 hydroxide electrochem. oxidation, γ NiOOH form., obs. 8=18716
 nickelous nitrate-water-magnesium oxide system, low-temp. cementation effects 8=14374
 (CH₃)₂N. NiCl₂, crystal structure 8=22076

Nickel compounds—contd

- Ni(II)bromides, absorption spectra at high temp. and pressure 8=1580
 Ni complex, bis(diethyldithiophosphato) nickel (II), structure 8=8548
 Ni(II) complex, bis-(N, N-di-n-propyldithiocarbamate), pseudo-homometric structure 8=22034
 Ni complex, bis-(N-isopropyl-3-ethylsallycaldiminato) nickel, structure 8=8551
 Ni complex, bis-(N-methylsallycaldiminato) nickel, orthorhombic form 8=8550
 Ni complex, bis-sallycaldoximato-nickel, bond lengths 8=8549
 Ni complex, bistrisphenylphosphine-ethylene nickel, crystal structure 8=13281
 Ni complex, tetraethylammonium tetrachloronickelate, crystal structure 8=8547
 Ni-ferrite-chromite, Mössbauer effect on Fe⁵⁷ 8=1649
 Ni ferrite, origin of $k\pi$ and mobile domain walls 8=5493
 Ni ferrous ferrites, magnetically-induced ordering 8=22857
 Ni hydride, reduction in electrical resistance during formation 8=5183
 Ni(II) perchlorates, water solns., u. s. velocity 8=12865
 NiAl, electrical resist., temp. and composition depend. 8=13721
 NiAl₂O₄, cations distrib. as function of equilibrium temp. 8=13282
 NiAl₂O₄, distribution of cations as function of equilibrium temp. 8=13282
 NiBr₂ crystals, surface-spikes, growth and impurities conc. 8=4807
 Ni(CO)₄, in CCl₄, CO stretching vibs. 8=1570
 Ni₄(CO)₆[P(C₂H₅CN)₃]₄, cryst. struct. with tetrahedral Ni cluster 8=8589
 Ni₃Co, micro-strain and hardness under deformation 8=13596
 Ni-Cr₂O₃ system, mag. props. and superparamagnetism of Ni particles 8=9366
 NiCr₂O₄, lattice vibration, effect of deformation 8=8614
 NiCr₃S₄, mag. structure, analogy with Cr₃S₄ 8=22833
 NiCr₂Se₄, structural, electrical and thermal parameters rel. to d-orbital interactions 8=5391
 Ni_{1/3}Fe_{2/3} coprecipitate, structure and mag. props. 8=23078
 Ni_{0.5}Fe_{0.5}O₄, crystalline anisotropy, effect of oxygen stoichiometry and annealing temp. 8=9385
 NiFe₂O₄, ferrite films, single cryst., prep. and props. 8=18362
 NiFe₂O₄, thin films, microstructure, ferrimagnetic props., electrical conductivity 8=2343
 NiGa, elec. resist., temp. and comp. depend. 8=13721
 Ni₂Ga, magnetic susceptibility, temp. dependence, density of states curve explanation 8=9359
 Ni₂GeO₄, cations distrib. as function of equilibrium temp. 8=13282
 Ni₂GeO₄, distribution of cations as function of equilibrium temp. 8=13282
 Ni-H system, lattice parameter H conc. dependence at -40° C 8=17404
 Ni₃Mn, micro-strain and hardness under deformation 8=13596
 NiMn₂O₄, single crystals, growth 8=21959
 Ni₄Mo ordered alloys, effect of symmetry on field ion images 8=4881
 Ni(NO₃)₂·4H₂O, crystal structure 8=17405
 NiO, absorpt. spectrum, fine structures 8=2441
 NiO, antiferromag. ultrafine particles, Mössbauer study of mag. props. 8=2318
 NiO, axially cooled or stressed, mag. anisotropy from torque meas. 8=14072
 NiO crystals, growth by arc-transfer 8=4806
 NiO crystals, structure study by LEED rel. to (100) face 8=8379
 NiO, dislocation etch pits, shape and size rel. to etching time 8=1977
 NiO electrodes hydration state and struct., obs. 8=23146
 NiO exoelectron emission, photostimulated, during antiferromag. transition, obs. 8=2273
 NiO ferrite, heating during ferromag. resonance 8=14082
 NiO, films, resistivity, after magnetically induced anisotropy 8=5166
 NiO, Hall effect at high temp. 8=8977
 NiO, neutron irradi. effect on elect. props. 8=18058
 NiO, paramagnetic, anomalous Hall effect 8=17914
 NiO, reduced, mag. behaviour 8=14071
 NiO, rhombohedral distortion, domain ordering 8=5507
 NiO, semiconducting, near and far i. r. absorpt. by small polarons 8=23008
 NiO, stoichiometry, thermodynamic and elec. props. 8=13826
 NiO, Co⁵⁷-doped, bulk and ultrafine particles, Mössbauer spectra 8=4680
 NiO/Ni-CO₂ system, isotopic exchange reaction between O¹⁶ and O¹⁸ 8=9663
 α-Ni₃P₂O₇, crystal structure 8=17367
 NiS film on Ni in S solns., growth kinetics and mechanisms, obs. 8=2525
 NiS, mag. and elec. transition pt. pressure dependence 8=22885
 Ni₃S₂, oriented growth on Ni(III), e-diff. study 8=17254

Nickel compounds—contd

- NiSiF₆·6H₂O, thermodynamic and mag. props., 0.35°-4.2°K 8=8641
 Ni₂SiO₄ (cubic nickel orthosilicate), synthesis from stoichiometric compound 8=21853
 Ni₃Sn, antiphase boundaries, size, shape and orientation 8=17679
 Ni₃TeO₈, crystal structure 8=4880
 NiTiO₃, mag. props., theoretical interpretation 8=9399
 NiTiO₃, mag. resonance and susceptibility 8=9398
 Ni-2ThO₂, dispersion-strengthened, fatigue behaviour on cycling 8=13597
 Ni₂Zn_{1-x} ferrites, doped with transition elements 8=22856

Night sky. See Airglow

Night glow. See Airglow.

Nilsson's model. See Nucleus/models.

Niobium

- additions to Ti alloys, superconducting props., phase transformations 8=22563
 anisotropic energy gap meas. by tunneling 8=17964
 collector in W-emitter thermionic converter, comparison with Ni 8=15228
 combined effect with Mo on mech. props. and hardness of Nb-Mo steel 8=22385
 crystals, dislocation structures, chemical and electro-etched, optical microscope obs. 8=22208
 deformed single crystals, mag. flux gradients, 4.2°K 8=22210
 diffusion studies 8=17575
 diffusion, summary of ORNL work 8=17593
 dislocations mobility rel. to amplitude depend. of internal friction 8=22209
 effect on grain coarsening temp. of austenite 8=8462
 electronic band struct. by modified OPW method 8=8939
 epitaxial film on MgO, rel. to substrate-condensate chemical interaction 8=8326
 films, for cryotron ground planes 8=2171
 foil, dislocation density and flow stress, effects of grain size 8=4980
 galvanomagnetic props. 8=22682
 hydride phase, solubility of H₂, isotherm 8=1924
 low work function region in Cs and Cs-Ba vapours 8=15213
 nitride precip., rel. to hardness and micro-structure 8=8274
 property changes by dissolved O₂-N₂ mixtures 8=9011
 in sormite type alloys, influence on hardness and structure 8=5066
 in stabilized stainless steels, spectrophotometric determ. 8=23179
 superconducting, anisotropic energy-gap meas. by tunnelling 8=22552
 superconducting, energy gap anisotropy by single crystal tunneling technique 7=5209
 superconducting, flux diffusion 8=9053
 superconducting, flux penetration and a.c. losses 8=5210
 superconducting, heat effects rel. to mag. processes 8=2167
 superconducting, helicon resonances near H₂ 8=9049
 superconductive, irreversible magnetisation obs. 8=2160
 superconducting, magnetocaloric effect, rel. to upper critical field 8=9052
 superconducting, mixed and normal states, internal friction and Young's modulus variation 8=2063
 superconducting mixed state, u.s. attenuation rel. to transverse mag. field 8=17502
 superconductor, nuclear relax. near upper crit. field 8=2170
 superconducting, resist. and Hall angle, theory and obs. 8=2162
 superconducting, thermal conductivity rel. to energy gap and mag. hysteresis 8=2166
 superconducting, u.s. attenuation 8=17503
 superconducting upper two critical fields ratio, temp. dependence 8=17963
 superconductivity under high pressure 8=9060
 surface exam. by field electron microscopy 8=13930
 surface superconductivity investigation 8=2157
 thermal conductivity, temp. dependence of temp. coefficient 8=13387
 Nb^{90m}, influence of chemical binding on half-life 8=16024
 O and C, effect on creep strength 8=13593
 O₂-Nb system at very low pressure, adsorption, absorption and degassing 8=4763

Niobium compounds

- alloys, anti-oxidation metallurgy 8=23779
 alloys, stability in nuclear reactors 8=5082
 cavitation damage resistance 8=5035
 niobates, single crystals, ferroelec., growth 8=21958
 stannide, superconducting coils with high Q's 8=17982
 CbBe₃, X-ray diffraction data 8=17426
 (C₂NH₅)[NbCl₄O], deviation from superposition structure 8=13279
 Nb₃(Al, Ge, Sn), solid solns., superconducting transition dependence on atomic ordering 8=17967
 NbB₂, specific heat 0.6-0.28°K 8=17522
 σ-2NbAl alloy, mech. props. rel. to atomic ordering and co-ordination 8=17030
 NbC precipitation, brittleness in steel 8=22358

Niobium compounds—contd

- NbC, solubility in 20%Cr-25%Ni stainless steel 8=4689
 NbC solubility in γ-Fe from C content analysis at temps. 950-1050°C 8=4535
 NbC, stoichiometric, enthalpy and specific heat in range 500 to 2400°K 8=13366
 NbCl₅, vibrational spectra 8=14249
 Nb-Cu composite, strong proximity effects: superconductivity 8=22553
 Nb-Fe alloys, structure 8=8272
 Nb-Hf, (-W), (-Mo) alloys, interstitial solid solubilities of O, N, C 8=17015
 Nb-Mo, alloys, Debye temp., Young's modulus, atomic bond strength 8=1626
 Nb-Mo alloy single crystals, plastic deformation, -196°C -250°C 8=17819
 Nb-Mo-C alloys, constitution 8=8275
 NbN, lattice dimensions, thermal and elect. cond., Hall coefficient, thermal e.m.f. and microhardness 8=13702
 NbN, prep. and superconductive props. 8=17966
 NbN, preparation and critical superconductive data 8=2165
 NbN, with Ti, preparation and superconductivity 8=2158
 NbN, with Zr, preparation and superconductivity 8=2158
 Nb-Ni-Al alloy, M phase structure determ. 8=17403
 NbO, precipitation from supersaturated solutions electron microscope examination 8=1679
 Nb-O solid solutions, CO equilibrium pressure 8=21825
 Nb₂O₅, high temp. and related phases exam. by e-microscopy and diffr. 8=22033
 α-Nb₂O₅, near-stoichiometric, diffusion of O₂ 8=1922
 Nb-Re alloys paramag. susceptibility rel. to band struct., obs. 8=22759
 NbS₂, specific heat 1.7-6.4°K 8=17522
 Nb₂S₃, crystal structure 8=22032
 Nb₃Sn, cubic → tetragonal martensitic transform., low temp. 8=8273
 Nb₃Sn Fermi level motion rel. to normal-state props. temp. depend. 8=5118
 Nb₃Sn, specific heat, temp. range 1-42°K in mag. fields up to 52.5 kG 8=17523
 Nb-Ta, alloys, Debye temp., Young's modulus, atomic bond strength 8=1626
 (Nb-Ta)N, prep. and superconductive props. 8=17966
 Nb-50 at. % Ta superconducting sheets, transport current distrib. obs. 8=9051
 Nb-Ti, alloys, Debye temp., Young's modulus, atomic bond strength 8=1626
 Nb-Ti alloy wires, superconducting, flux jumping 8=9050
 NbTi, superconducting large coils, performance 8=17994
 Nb-Ti systems, b.c.c., binary interdiffusion 8=17577
 (Nb-Ti)N, prep. and superconductive props. 8=17966
 Nb-Ti-Zr alloy, magnetic props. 8=13754
 Nb-Ti-Zr alloy solenoid at mag. field strength more than 75 kG 8=309
 Nb-Ti-Zr wire, transitions during destruction of superconductivity 8=22567
 Nb-V, alloys, Debye temp., Young's modulus, atomic bond strength 8=1626
 Nb-V systems, b.c.c., binary interdiffusion 8=17577
 Nb-W alloys, creep strength, effects of metallic carbides and borides 8=22384
 Nb-W, alloys, Debye temp., Young's modulus, atomic bond strength 8=1626
 Nb-Zr alloy, electron microscope investigation of structure 8=8245
 Nb-Zr alloy, nitride precip., rel. to hardness and microstructure 8=8274
 Nb-Zr alloy superconducting solenoid, flux jumping-patterns 8=2168
 (Nb-Zr)N, prep. and superconductive props. 8=17966
 Nb-Zr and Nb-Ti wire, in composite superconducting cable, critical current 8=13770
 Nb-25 at. % Zr, superconducting sheets, transport current distrib. obs. 8=9051
 Nb-25% Zr, superconducting large coils, performance 8=17994
 Nb-25% Zr supercond. wires carrying a.c. in mag. field 8=5208
 Nb 25% Zr wire, superconductivity, a.c. quenching 8=13755
 R₂O-M₂O₅ (R = rare earth, M = Nb, Ta or Pa), crystal structure 8=1802

Nitrogen

- accommodation coeff. in impact on Al, Ag, Au and Pt, 500-12000 eV 8=12685
 active, in flames, electronic excitation of CN 8=12179
 active kinetics of N₂(A³Σ_g⁺) 8=7534
 adhesion coefficients at 4.2° and 20°K 8=7954
 adsorption on Molecular Sieves 5A, 10X, and 13X, at 77.3°K and press. range 10² to 10⁻⁶ torr, effect of preadsorbed H₂O 8=21897
 adsorption on W films, sticking probability temp. dependence 8=14396
 adsorption on W, phase transforms caused by e-impact 8=21913
 adsorption on W, rel. to work function 8=1711
 afterglow, surface catalytic efficiency and decay of atomic N 8=21239

Nitrogen--contd

atmospheric, Raman scatt., N_2 u.v. laser obs. 8=23289
 atom, spectral absorption coeffs. compilation 8=12060
 atomic beam, photoionization 8=21022
 atoms, e loss in collisions with H^+ , He^+ 8=7461
 atoms, recomb. rates 8=1313
 atoms, spin-relax. effects in e.p.r. 8=12098
 aurora enhancement 8=9929
 aurora, second positive system, vibrational development 8=18944
 aurora, $\lambda 3914$ and $\lambda 4709$ N_2^+ , ratio of spectral intensity to $H\beta$ 8=23340
 beam-plasma systems, beam generated, interacting components 8=21289
 benzene luminesc. excit. in solid solns., obs. 8=13036
 bubbles in water, decay constants and pulsation frequencies determ. 8=21588
 cascade arcs, conductance decay after switch-off 8=7685
 collision cross sections from meas. on arc discharges 8=4294
 conductivity with LaB_6 powder suspension, m. h. d. generator working fluid 8=15199
 desorption kinetics, from Fe- N_2 solid solns. 8=1704
 diffusion of interdiffused O_2 and org. vapours 8=14452
 diffusion in liquid Fe-C alloys. at 1600°C 8=16815
 discharges, high-freq. unipolar, spectral diagnostics, 1 to 5 atm. press. 8=4290
 dissolved in Nb, with O_2 , effect on props. 8=9011
 effect of lifetime on CO_2 laser levels 8=420
 e-ion recombination, temp. depend. obs. 8=7719
 electric breakdown, wave shape effect 8=21246
 electron drift velocity obs. 8=12695
 electron microscope investigation of condensed N_2 8=8465
 enthalpy calc. from Redlich-Kwong eqn. 8=16689
 ethane mixture, Joule-Thomson coeff. prediction 8=12679
 excitation of CO_2 , emission spectrum 8=21068
 excitation by fission fragments along entire track 8=7531
 excited by microwave discharge, vibrational deactivation 8=12211
 gas, rotational relaxation, high temp. u. s. obs. 8=1251
 gas, thermomagnetic torque, temp. dependence 8=16712
 heated, excitation by transfer of CO_2 , rel. to chem. laser action 8=16271
 high-pressure boiling apparatus 8=16944
 ion, energy loss in passing through ZnS:Ag film 8=8758
 ionization cross-section, electron impact 8=7700
 ionization, electron and proton impact, classical model 8=12444
 ionization energy per ion pair formed by $H\beta$ particle 8=4315
 ionization, mechanical damage to BaO cathode 8=18663
 ionosphere, 100 to 280 km, distribution and lifetime of atoms 8=23308
 ions, molecular among neutral molecules, drift vels. and reactions 8=7718
 ions, II-V, lifetimes meas. by decay of optical radiation 8=7412
 in iron and steel, spectrophotometric determ. 8=23178
 isotope equilibration on Mo 8=18655
 isotope mixtures, thermal diffusion props. 8=1492
 laser action in electrical discharge containing N 8=12398
 laser-heated plasma radiation spectra 8=16200
 laser, u.v., Raman scatt. from atm. 8=23298
 laser, as u. v. source with repetitive subsec. kW pulses 8=20069
 liquid, equations of state 8=4543
 liquid, temporal stability of quiet metastable states 8=16788
 liquid, volume viscosity meas. via u. s. attenuation 8=1538
 melting curve to 30 kb, obs. 8=1610
 molecular, electron impact cross sections 8=1348
 molecular, ionization by e collisions 8=16448
 molecule, N_2 -p e capture excitation of 3s, 4s states of H 8=7462
 molecules excited by electron beam, rot. temp. obs. 8=16292
 molecules, ionization by scattering 8=1364
 in Na-K reactor coolants, effect on efficiency of coolant, corrosion activity and residual radioactivity 8=7328
 partial photoionization cross-sections, determ. by photoelectron spectra 8=1369
 phase change, dramatic demonstration 8=1607
 plasmas, electron velocity distrib., non-Maxwellian form. 8=16418
 plasma, excitation temps. from multiplet intensities 8=1376
 positron cross-section for rotational excitation 8=12168
 pressure over $UN_{2,1} + U_{1,1}$ system 8=18646
 pulsed molecular laser, theory 8=15472
 pumping speed-press. data, getter-ion pump 8=1495
 radiative transfer, for local thermodynamic equil. 8=7926
 relaxation behind shock waves, electronic excitation 8=21087
 residual, in colour picture c. r. t., mass spectrometry 8=15324
 residual, pressure obs. in picture c. r. t. 8=15325
 sorption isotherms on purified silica gel, rel. to modification of gel struct. 8=1663
 sorption in Ti films, sticking coeff. obs. 8=17175
 sound velocity 8=4484
 Stark effect on n.q.r. 8=7611

Nitrogen--contd

stars, Am, abundance 8=23514
 in steel, austenitic type 304, influence on creep-rupture props. 8=17754
 steel, mild, effect of content on dynamic strain-ageing 8=13554
 stream, laminar boundary with coolant mixture injected through porous surface 8=4459
 on Teflon 6, isotherms 8=13047
 translation accommodation coeff., on W surface 8=17113
 transport properties, single-component model 8=1438
 u. s. velocity and absorpt., 300°-1300°K 8=4478
 vibrational relax. in shock tube, vac. u. v. absorpt. obs. 8=7532
 vibrationally excited, relax. 8=12210
 viscosity, low-temp., high press. 8=4493
 X-ray microanalysis using network method analyser, obs. 8=14489
 in Cr alloys, determ. from nitride behaviour 8=9740
 D content, neutron spectrometry 8=9765
 H_2 - N_2 gas mixtures, thermal conductivity 8=4473
 in Li melt, supercooling due to N_2 crystallization 8=12814
 Mg-Fe mixed hydroxides adsorpt. and desorpt. rel. to pore struct., obs. 8=17023
 Mo tip, absorption, field emission study 8=21905
 N I and N II electrostatic interaction integrals using screened hydrogenic orbitals calc. 8=7394
 N II, Stark effect in multiplet lines 8=4084
 N + O \rightarrow NO $^+$ + e, ionization cross section calc. 8=4111
 N $^+$ reaction with O_2 in ionosphere, rate coeff. study 8=14666
 N_2^- , struct. of 2 eV resonance 8=12214
 N_2 , $B^3\Pi$ state, excitation time estimates at 8000°-9000°K 8=4155
 N_2 , collisions with p, H, optical emission rel. to Aurora 8=12212
 N_2 , collision with H_2^+ , H_3^+ , prod. of H atom in 3s state 8=21191
 N_2 discharge, prebreakdown Townsend discharge 8=7677
 N_2 discharge, release of secondary electrons by metastable N_2 and its quenching 8=7663
 N_2 , energy deposited in electron slowdown 8=2634
 N_2 gas, H^+ , H_2^+ , He^+ charge exchange, 40-1500 eV 8=21275
 N_2 ionization by Fe atoms, ionization ratio meas. 8=1359
 N_2 ions, appearance potential and kinetic energy 8=7721
 N_2 , large-angle electron-impact spectra 8=16224
 N_2 , laser oscillation characteristics on electronic transitions 8=11069
 N_2 , model dipole spectrum consistent with oscillator strength sum rule 8=7533
 N_2 , new Rydberg series 8=4160
 N_2 , positive column, mass spectrometric analysis 8=1341
 N_2 , pre-breakdown currents rel. to temp. at high pressure 8=16417
 N_2 , p 0.15-1.0 MeV collisions, ionization and excitation 8=12213
 N_2 pulsed laser, new lines 8=11070
 N_2 second positive system excited by impact with a metastable Ar atom 8=12209
 N_2 sorption and reaction with Bayard-Alpert gauge 8=16732
 N_2 , spectra on excitation by fast protons and H atoms 8=7433
 N_2 thermal cond., mag. field effects, 290°K 8=4469
 N_2 , thermal conductivity at 100-300°C, 1 atmosphere, obs. 8=4477
 N_2 , vibr. relax. in shocked gas mixtures 8=21195
 N_2 12.28 quadrupole transition, far u. v. absorpt. obs. 8=12208
 $N_2(A^3\Sigma_u^+)$, kinetics in active nitrogen 8=7534
 N_2 , vibrational levels, lifetime obs., using positive ion Van de Graaff accelerator 8=16183
 N_2 -Ar gas mixtures, thermal conductivity 8=4474
 N_2 -Ar mixtures, virial coeffs. from Burnett meas. 8=16691
 N_2 -CO $_2$ gas laser use of multipath cell 8=419
 N_2 + He mixture, passage of H_2^+ , N_2^+ rotation and vibration 8=4156
 $N_2^{14+14} + N_2^{15+15} \rightleftharpoons 2N_2^{14+15}$, in shock tube 8=5696
 N^{14} hyperfine splitting in e. s. r. of Cr(NH $_3$) $_6$ NO $^{2+}$ 8=1592
 N^{14} nuclei, n. q. r. study with modified Robinson spectrometer 8=3283
 N^{14} quadrupole coupling in CN free radical 8=1316
 N^{15} , enrichment by ion exchange electromigration method with superposition of a. c. on d. c. 8=12113
 N^{15} in solids, detect. by nuclear activation 8=14504
 N_2^+ , absolute electron impact excitation cross-section 8=7720
 N_2^+ , dissociation by e impact, 10-500 eV, cross-section 8=1312
 N_2^+ , ground and excited states 8=4158
 N_2^+ intensity distrib. among bands, obs. in atmosphere 8=18933
 N_2^+ , ionosphere, dissociative recombination rate 8=9961
 N_2^+ λ 3914 spectra, auroral luminosity spatial var. obs. 8=14649
 N_2^+ reaction with O_2 in ionosphere, rate coeff. study 8=14666
 N_2^+ , vibration and rotation, band intensity distribution 8=4156

Nitrogen—contd

- $N_2^+ + N_2$ reactions, is N_4 produced? 8=1366
 $N_2^+ + N_2$, reaction cross-sections 8=4310
 $N_2^+ + O_2 \rightarrow O_2^+ + N_2$, low-energy cross sections 8=16372
 N_2 -CO₂ 10.6 μ m laser, beam patterns 8=19973
 N_2 -He mixtures, diffusive separation obs. 8=19537
 NO, from W, desorption by electron impact 8=21912
 Ta + N_2 system, adsorpt.-absorpt. kinetics 8=18698
 W film, adsorption, sticking probabilities obs. 8=4761
 in ZnO:Zn, ions energy losses obs. 8=18624

Nitrogen compounds

- azides, explosive props. and electronic struct. 8=1259
 nitrates, explosive props. and electronic struct. 8=1259
 nitrides, extraction from Cr alloys 8=9740
 nitroso dimers, photodissociation on irradiation with u.v. light 8=9726
 trans N_2F_2 , vib.-rot. bands and molec. geometry 8=12218
 BrCN, chemisorpt. on Ni and Ir on SiO₂, i.r. spectroscopy 8=23127
 C_2N_2 , chemisorpt. on Ni and Ir on SiO₂, i.r. spectroscopy 8=23127
 Fe-Cr-N ternary system, microstructures and nitrides 8=4845
 HNO₃ aq. soln., phenomenological coeffs. for elect. cond. and diffusion 8=12924
 N oxides, reactivity with cellulose hydroxyl groups 8=5721
 HCN, chemisorpt. on Ni and Ir on SiO₂, i.r. spectroscopy 8=23127
 NCO, free radical, matrix-isolated spectra 8=16369
 NDF₂, centrifugal distortion constants 8=7542
 NF₃, centrifugal distortion consts, from mm wave spectrum 8=1258
 NF₃, general force field 8=4157
 NF₃, i.r. spectrum and molec. constants. 8=1260
 NF₃, new compound by fission-fragment radiolysis 8=9730
 NF₃, solution H in, spectral simultaneous transitions 8=21675
 NH, fine structure of $^3\Sigma^-$ and $^3\Pi$ states 8=7541
 NH⁺, emission band systems 8=16291
 NH₃, centrifugal distortion effects in spectra 8=21089
 NH₃, in lowest bent state, effects of quasi-linearity 8=1243
 N₂H₄, liq., significant struct. theory 8=4526
 N₂H₄, hydrazine, int. rot. barriers from LCAO-MO-SCF wave-functions 8=1247
 NHF₂, centrifugal distortion constants 8=7542
 NH₂OH, hydroxylamine, int. rot. barriers, from LCAO-MO-SCF wave-functions 8=1247
 NiO films, semicond. and insulating, prep. and thin-film triodes 8=22602
 NO, dimers obs. by mass spectra 8=7637
 NO, elec. field effect on n.m.r. 8=7612
 NO, far u.v. photolysis, N₂O yield 8=23159
 NO, fundamental vib. band, integrated intensity 8=7535
 NO, gas-phase electron reson., double quantum transitions 8=12308
 NO in solid Ne, Ar and Kr, absorpt. rel. to excited states, 2300-1100 Å 8=14243
 NO ions, appearance potential and kinetic energy 8=7721
 NO molecule, electric field effect on electron resonance, obs. of transitions 8=16349
 NO, reaction with perfluorodimethyl peroxide 8=14371
 NO, rotational lines at 150 GHz, a high-Q Fabry-Perot resonator 8=7536
 NO, solid, absorpt. rel. to mol. excited states, 2300-1100 Å 8=14243
 NO, spectra on excitation by fast protons and H atoms 8=7433
 NO thermal cond., mag. field effects, 290°K 8=4469
 NO, thermodynamic props., 200°-2000°K and at 1000 bar 8=7918
 NO at 100 to 280 km height, distribution and lifetime calc. 8=23308
 NO + Ar mixture, conversion of positronium atoms 8=7476
 NO⁺, ionosphere, dissociative recombination rate 8=9961
 NO⁺ from N + O collisions, ionization cross section calc. 8=4111
 NO₂⁻, ground state, minimal-basis-set LCAO-SCF-MO calc. 8=21096
 NO₂⁻, i.r. spectra in solid solns. 8=2439
 NO₂ ions in soln., shift of absorpt. bands 8=12890
 NO₂ production by electron transfer from O⁻, O₂⁻, O₃⁻ and OH⁻ 8=1367
 NO₂⁻, NO₃⁻ ions, injected in alkali halides, i.r. absorption 8=5583
 NO₂, attachment of gaseous electrons 8=12449
 NO₂, chemiluminescence, rad. from far wake of hypersonic spheres 8=21478
 NO₂, e.p.r. in irr. KNO₃ at 4°K 8=5537
 NO₂, its ions and dimer, electronic struct. 8=4159
 NO₂, photoionization 8=16449
 NO₂, thermal cond. 8=16699
 NO₂⁻, configuration-interaction calc. 8=16252
 NO₂ ions in soln., shift of absorpt. bands 8=12890
 NO₃, effect on transparency of Hf and Th oxide films 8=5605
 NO₃⁻ ions, role in thunderstorm electrification 8=23290
 N₂O-acetylene flame in emission anal. 8=18782

Nitrogen compounds—contd

- N₂O bubble in water, laminar flow obs. 8=21591
 N₂O, cryst. Raman spectra 8=9510
 N₂O, electron-impact dissoc. 8=4133
 N₂O, heat cond., extension of Saxena-Saksena-Gambhir theory 8=16702
 N₂O, ionization curves due to electron impact 8=12434
 N₂O, i.r. absorpt. bands rel. to isotopic mols. and crystal lattice vibrations 8=14251
 N₂O, near i.r. bands 8=21088
 N₂O, use in obtaining high stagnation-enthalpies in shock tunnels 8=16676
 N₂O, photochemistry, and vac. u.v. actinometry 8=14439
 N₂O, photoionization 8=16449
 N₂O, photoionization coeff., 600-1000 Å 8=16447
 N₂O, photolysis at 1470 Å 8=14438
 N₂O pure and in a matrix, absorption spectrum between 63 and 14°K 8=18552
 N₂O, vibrational state relaxation times, spectrophone determ. 8=21090
 N₂¹⁵O¹⁸, i.r. vibr. rot. bands 8=21086
 N₂O-CO mixture, study of overlapping absorpt. bands 8=7507
 N₂O-CO₂ mixtures, separation in thermal-diffusion column 8=7945
 N₂O + N₂ mixture, vib. relax. time of ν_3 mode of N₂O, meas. with spectrophone 8=7508
 N₂O⁺ + N₂O, reaction cross-sections 8=4310
 N₂O₃, i.r. spectra 8=7538
 N₂O₄ \rightleftharpoons 2N₂O₂, thermal conductivity and relaxation effects 8=7929
 2NOBr \rightleftharpoons 2NO + Br₂ system thermal conductivity in range 290-900°K 8=12684
 NOCl, photodissociative laser, chemical reversibility, solar excitation rates 8=3321
 NOF, ground state, minimal-basis-set LCAO-SCF-MO calc. 8=21096
 NOF, vibr. spectra and force consts. 8=7539
 γ NOOH electrochem. form. and props., obs. 8=18716
 NO(SO₃)₂⁻, aq. solution, dynamic proton polarization at 38 and 3400 gauss. obs. 8=1602
 NOSO₂Cl, crystal structure 8=3275
 NS, Frank-Condon factors for B² Π -X² Π transition 8=7540
 NS gaseous free radical, e.s.r. study 8=12340
 NS, spectra, γ - and β -systems 8=16293
 NSCl, i.r. spectrum and molecular props. 8=4161
 NSF, microwave spectrum and molec. consts. 8=12219
- ammonia**
 adsorption on Fe catalyst support, Mössbauer spectra 8=13108
 alkali metal-NH₃ solns., phase separation model 8=12808
 ammonia, refractive index, electric dipole rot. effect 8=4162
 beam maser oscillator, modulation effects 8=10995
 crystals, plastic deformation at liq. N₂ temps. 8=17820
 deuterium isotopic disproportionation equilibria 8=2505
 decomposition in glow discharge 8=18682
 electron diffr. by molecular beam 8=6303
 enthalpy calc. from Redlich-Kwong eqn. 8=16689
 gas, mol. refr. and Lorentz-Lorenz rel. 8=1477
 gas, radiolysis, effect of H and e scavengers 8=23162
 inelastic scattering of cold neutrons 8=12274
 ionization potentials 8=4314
 maser amplifier, characteristics 8=397
 melting curve to 30 kb, obs. 8=1610
 molecular pressure broadening theory 8=16294
 molecule, Compton profile, unified atoms method 8=1256
 molecule, one-electron props. 8=4148
 molecule, signs of nuclear spin-spin coupling consts. 8=12330
 photodissociation in vac. u.v. 8=16365
 radiolysis in gas-phase 8=18743-4
 solvent effect on bending vibr. 8=21093
 spectra, and virtual-orbital approx. to excited states 8=1213
 steel analysis, extraction-spectrophotometric determ. 8=2546
 supercritical, use for growing hexagonal Se crystals 8=8425
 SCF calcs, correlation energies and Hartree-Fock limits 8=1263
 K-NH₃ dilute soln., absence of vol. change on dilution at -34°K 8=1530
 Na-K-NH₃ solns., liq.-liq. phase separation 8=8014
 Na-NH₃ dilute soln., absence of vol. change on dilution at -45°K 8=1530
 Na-NH₃ solns., liq.-liq. phase separation 8=8013
 NH₃-methylamine gas mixtures, viscosity 8=4492
 NH₃-Ar, thermal cond., 39° to 199.6°K 8=4470
 N¹⁴H₃, resolution of central line, at J = 3, K = 3, $\Delta F = 0$ 8=4163
 NH₃-He collision-induced transitions between rot. levels 8=12216
 NH₃ + HCl \rightleftharpoons NH₄Cl charge transfer 8=5714
 NH₃-H₂O-N₂-H₂ system, vapour-liq. equil., fugacities and activation coeffs. 8=12977
 NH₃ and ND₃, dipole moment and polarizability differences 8=12215

Cl^{32} , energy of first analog states 8=16017

Co^{59} , inverse reaction cross-section effect 8=3900

Cr^{52} isobaric analogue state in Mn^{52} obs. in $Cr^{52}(He^3, p)Mn^{52}$, 12 MeV 8=20703

Dy^{161} , Coulomb excitation, gyromagnetic ratios from branching ratio 8=11772

F^{20} analogue states from $F^{19}(d, n) 2.980$ MeV 8=20688

Fe^{56} analogue ground state identified in $Fe^{54}(He^3, p)Co^{56}$, 12 MeV 8=20706

Fe^{56} , isobaric analog resonances obs. in $Mn^{55}(p, \gamma)Fe^{56}$, $Mn^{55}(p, n)Fe^{56}$ 1.3–1.85 MeV 8=15977

$In^{115}(n, n')In^{115m}$, spatial distrib. in water of In resonance and neutrons 8=11612

In^{115} , 600 and 830 keV photoexcitation 8=20714

Kr^{78} in $Br^{78}(p, n)Kr^{78}$, half-life and g-factor meas. 8=11752

Li^5 resonance obs. in p- α scatt. 22–25 MeV 8=20532

Li^8 , search for T = $\frac{1}{2}$ states 8=11659

$Mg^{24, 26}(\alpha, \gamma)Si^{28, 30}$, giant dipole resonance 8=11944

N^{15} , isobaric analog states of O^{16} 8=15956

Na^{24} analogue states from $Na^{23}(d, n) 2.98$ MeV 8=20688

O^{15} , excited states with isobaric analogs in N^{15} 8=15956

O^{16} , giant resonance, interference between bremsstrahlung and nuclear γ radiation 8=6796

O^{16} , 27.6 MeV state, from $J^{\pi} = 3^{-}$, T = O, resonance in $C^{13}(He^3, \alpha)C^{12}$ 8=3795

O^{17} , 2.2–4.2 MeV n scatt. 8=1070

Os^{189} , Coulomb, reduced transition probabilities 8=3835

P^{28} , energy of first analog states 8=16017

P^{29} , isospin-forbidden analogue resonances 8=20691

Pb^{208} , analog resonance parameters from p scatt. 8=11881

Pb^{208} , excitation obs. from e scatt., 28–73 MeV 8=11785

Sc^{40} , energy of first analog states 8=16017

Si^{27} , first and second excited states in $Si^{28}(He^3, \alpha)Si^{27}$ 8=7082

$Si^{28}(\alpha, \gamma)Si^{32}$, 7–12 MeV, giant dipole resonance 8=11944

Si^{30} , isobaric analog of Al^{29} 8=3959

$Ti^{47, 48, 49}$, by bremsstrahlung, photoproton yields 8=7168

$Ti^{48}(p, p'\gamma)$, 4–6 MeV, ang. correl. compared with compound nucleus and direct reaction theories 8=11879

V^{48} , transition to ground state analogue Ti^{48} in $Ti^{46}(He^3, p)V^{48}$ 8=20702

Y^{90} , isospin analogue resonance decay 8=11754

$Y^{90}(p, n)Zr^{90}$, 3.6–5.8 MeV, $2^{-}, 3^{-}$ analogue state resonances 8=11889

Zr^{90} in $Y^{90}(He^3, d)Zr^{90}$, T_C single-proton single-proton hole states 8=3818

Nuclear explosions. See Explosions/nuclear.

Nuclear field theory. See Field theory, quantum.

Nuclear fission

See also Explosions/nuclear; Nuclear reactors, fission.

α emission accompanying fission, probability 8=3977

angular anisotropy in neutron fission of nuclei, quasiclassical relation 8=7254

energy, and mass distrib. using double pulse ionization chamber obs. 8=1106

energy gap increase using assumption G \propto magnitude of nuclear surface 8=11956

Nuclear fission—contd

- fast-fission effect in lattices with cluster elements, anal. 8=11962
 fragment charge distrib. as function of kinetic energy 8=11966
 fragment det. with Si surface barrier detector 8=3465
 in heavy ion reactions 8=20842
 kinetic part of Hamiltonian computed as quadratic form of time derivatives of nuclear surface 8=7241
 (n, γ) prod. of isomers, statistical model 8=20847
 xny reactions, spin-dep. treatment 8=1108
 photofission, up to 1600 MeV 8=7169
 rate meas. use of "spinner" 8=20202
 ratio meas., γ counter correction 8=20358
 scintillation tank for meas. ratio of capture and fission events 8=11958
 ternary, emission of light charged particles at moment of fission 8=20850
 ternary, by heavy ions, mechanism 8=1110
 track densities of internal and ext. surfaces, etched, comparison after n irradi. 8=20852
 Am, spontaneously fissioning, prod. by p reactions with Am 8=20843
 Am^{240, 242}, spontaneous, spin determination 8=1108
 Am^{241, 242m}, n-induced cross-sections meas. 8=20846
 Am²⁴², prod. by (n, γ), most probable spin values 8=20847
 Am^{242m}, spontaneous, obs. agree with "shape isomerism" 8=1107
 Am^{242m}, 14 msec spontaneously fissioning, spin value 8=7243
 Bi²⁰⁹, by Ar⁴⁰ ions, excitation function 8=1110
 Cf²⁵², on-line studies of mass-separated products 8=20858
 Fm^{246, 248}, spontaneous half lives, new nuclides Fm^{244, 245} identified 8=7242
 Np²³⁷, α emission accompanying probability 8=3977
 Np²³⁷ n fission yields, $131 \leq A \leq 135$ 8=20856
 Np²³⁷ n fission yields $141 \leq A \leq 153$ 8=20857
 Np²³⁷ n fission yield of Zr^{95, 97}, Mo⁹⁹ 8=20855
 Pu²³⁸, n-induced, cross-section obs. at 1.0, 1.5, 3.0 and 14.9 MeV 8=1109
 Pu²³⁹(d, pf), fragment ang. distrib. anisotropy 8=3983
 Pu^{239, 240, 241}, cross-sections relative to U²³⁵ 8=7252
 Pu²³⁹, energy depend. of n cross-section in range 0, 7-4 MeV 8=7251
 Pu²³⁹, n energy 14-90 eV, multilevel analysis 8=11961
 Pu²³⁹ neutron induced, properties of resonance levels 8=7258
 Pu²³⁹, by neutrons 8=7245
 Pu²³⁹ scintillation tank for meas. ratio of capture and fission events 8=11958
 Pu²³⁹, shielding effect of U²³⁸ on epi-cadmium fission 8=7246
 Pu^{239, 240, 242} photofission fragments, ang. distrib., and conservation of K quantum no. 8=11964
 Pu²⁴⁰ spontaneous fission half-life 8=7244
 Pu²⁴¹, fission and absorption g-factors 8=7250
 Pu²⁴², spontaneous, mass yield of I, isotopes rel. to Pu²⁴⁴ in early solar system 8=3978
 Ta, p-induced, 156 MeV, probability, fragment energy spectra 8=11965
 Th, rel. to creep 8=8866
 Th, induced by 15 MeV neutrons 8=3979
 Th²³², α emission accompanying probability 8=3977
 Th²³², neutron induced, integral and differential cross-sections near threshold 8=7257
 Th²³² photofission fragments, ang. distrib., and conservation of K quantum no. 8=11964
 U carbide-heavy water subcritical system 8=11957
 U, p-induced, 156 MeV, probability, fragment energy spectra 8=11965
 U²³⁵, n induced and capture cross-section meas., resonance analysis 8=20844
 U^{235, 238}, by monoenergetic neutrons, kinetic energies and fragment yields 8=7260
 U^{235, 238}, α emission accompanying probability 8=3977
 U²³⁸ photofission fragments, ang. distrib., and conservation of K quantum no. 8=11964

products

- activation detectors for fusion-n spectra, development and excitation meas. 8=11970
 α -particle emission from U^{235, 236, 238} induced by 2.5 and 14 MeV neutrons 8=7256
 angular distrib. anisotropy less than unity depend. on target deformation and spin 8=3983
 atmospheric explosions, interhemispheric transfer 8=23297
 ceramics, conference Harwell 1965 8=16168
 diffusion of gaseous products in graphite 8=4950
 fission-gas, recoil release from UO₂ 8=7266
 fragment detection efficiency in presence of intense α -rad., of spark counter 8=16134
 fragments, excitation of N₂ gas along entire track 8=7531
 fragment K. E. 8=16133
 fragment K. E. rel. to excitation of fissioning nucleus 8=16132
 fragments, multiple and plural scatt. 8=11969
 γ -ray spectra of earth contamination, aircraft meas. 8=9895

Nuclear fission—contd**products—contd**

- gases from n-irrad. UO₂-graphite pellets, γ -ray spectra 8=4016
 gas release from UO₂, activation energies in defect-trap model 8=3980
 ion prod. rate, space-depend., by fragments escaping from fuel plate 8=11968
 in kerosene degraded by HNO₃, removal with K₂Cr₂O₇ and H₂SO₄ soln. 8=20854
 lanthanides, chromatography 8=9739
 mass asymm. and probability of simultaneous α emission 8=3977
 mass and energy distrib. using parallel foils 8=20860
 migration and concentration along fuel rods rel. to burning up 8=16164
 $\bar{\nu}$ prompt, in n-induced fission of Pu^{239, 241} 8=20851
 $141 \leq A \leq 153$, from Np²³⁷ n fission 8=20857
 p, t, α fractional yield, U²³⁵ fission by slow and 14 MeV n 8=7262
 removal from degraded solvent by mixed ion exchange resins 8=5694
 short lived, from n-irrad. enriched U, γ -ray spectra 8=7263
 simulation in fast critical set-ups 8=11971
 Am²⁴² prompt, spectrum, prod. by d bombard. of Pu²⁴⁰ 8=16131
 Am^{242m}, spontaneous, spectrum, prod. in Pu²⁴²(d, 2n) Am^{242m} 8=16131
 Br⁸⁷ decay in atmosphere 8=2611
 Cd¹¹⁵ yield in U²³⁸ photofission, 5.3-6.5 MeV bremsstrahlung 8=16135
 Cf²⁵² fragments, transient responded Si surface barrier detectors rel. to plasma formed 8=20199
 Cf²⁵² fragments, K X-ray emission obs. 8=20850
 Cf²⁵², K X-ray yield rel. to odd-even effect 8=1113
 Fm^{244, 245}, new nuclides from Fm^{246, 248} fission 8=7242
 I, diffusion in graphite 8=12015
 I isotopes from Pu²⁴² spontaneous fission, rel. to Pu²⁴⁴ in early solar system 8=3978
 I^{131, 133, 135} from Np²³⁷ neutron fission 8=20856
 Mo⁹⁹ from Np²³⁷ n fission 8=20855
 Pd atoms, highly ionized, electron binding energies 8=1112
 Sm atoms, highly ionized, electron binding energies 8=1112
 Sr atoms, highly ionized, electron binding energies 8=1112
 Te¹³² from Np²³⁷ neutron fission 8=20856
 U atom emission from fissioning surface 8=3985
 U from irradi. of UO₂ pellets 8=20859
 U, by medium-energy p, isobaric yield distrib. 8=1111
 U^{235, 236} mean n yield 8=7264
 U^{235, 236} neutron yields, conversion from relative to absolute 8=7265
 from U^{235, 238}, γ -ray spectra at selected times after fission 8=3984
 U^{235, 238}, by monoenergetic neutrons, kinetic energies and fragment yields 8=7260
 U²³⁸, 14 MeV neutron induced instantaneous fission 8=7259
 UO₂ fuel, gas pressure calc. 8=7267
 UO₂-graphite mixture, fission gas (Xe and Kr) release during irradi. 8=4022
 Xe atoms, highly ionized, electron binding energies 8=1112
 Xe, captured in graphite, isothermal annealing and escape behaviour 8=11975
 Xe, diffusion in graphite 8=12015
 Xe, prod. by in-pile melting of irradi. UO₂(NO₃)₆·6H₂O 8=3982
 Xe, recoil prod. of U, diffusion in Ag 8=3981
 Xe¹³⁷⁻⁴² from Cf²⁵², decay props. 8=20858
 Zr^{95, 97} from Np²³⁷ n fission 8=20855
 Zr⁹⁷ from n + U²³⁵ fission at 14 MeV, fine structure obs. 8=7261

uranium

- ⁶²⁸ natural U cluster D₂O lattices obs. 8=20845
 electron beams, 1.5 and 3.0 GeV, product mass yields 8=11972
 emission of U from irradi. UO₂ pellets, due to superficial fissions 8=20859
 fragment tracks in LiF, anisotropy of orientation 8=17706
 induced by 15 MeV neutrons 8=3979
 meas. of U atom emission from surface 8=3985
 by medium-energy p, isobaric yield distrib. 8=1111
 n activation cross-section rel. to F¹⁹, Na²³, Mn⁵⁵, In¹¹⁵, Ho¹⁶⁵, Al²⁷ 8=3937
 p-induced, 156 MeV, probability, fragment energy spectra 8=11965
 short lived prods., γ -ray spectra 8=7263
 U²³⁵, by α particles 8=7245
 U²³⁵ fragment energy by 430, 630 keV and 1.1 MeV neutrons 8=11974
 U²³⁵, resonance parameters 8=11959
 U^{235, 236, 238, 239}, cross-sections relative to U²³⁵ 8=7252
 U^{235, 236} fragment mean kinetic energy, by 1.5 MeV neutrons 8=11973
 U^{235, 236}, neutron-induced, relative neutron yields of isotopes, 0.08-1 MeV 8=7264
 U^{235, 236} neutron yields, conversion from relative to absolute 8=7265

Nuclear fission—contd**uranium—contd**

- U^{235,236} scintillation tank for meas. ratio of capture and fission events 8=11958
 U^{235,236,238} induced by 2.5 and 14 MeV neutrons 8=7256
 U²³⁵, cross-section, ratio with U²³⁸ capture cross-section 8=20848
 U²³⁵ (C¹², 5n) Cf²⁴² 8=11834
 U²³⁵, cross-section at 30 and 64 keV 8=7253
 U²³⁵ (d, pf), fragment ang. distrib. anisotropy 8=3983
 U²³⁵ fragment energy by 100, 260, 700 keV and 1.3 MeV neutrons 8=11974
 U²³⁵ fragments, n emission rel. to mass 8=11967
 U²³⁵, γ -ray spectra due to products at selected times after fission 8=3984
 U²³⁶, n and diffusion widths rel. to compound nucleus spin 8=7255
 U²³⁵ n capture cross-section rel. to Na²³, Mn⁵⁵, In¹¹⁵ and Ho¹⁶⁵ 8=3943
 U²³⁵ neutron induced, properties of resonance levels 8=7258
 U²³⁵, prompt n emission from fragments 8=20853
 U²³⁵, p, t, α fractional yield, by slow and 14 MeV n 8=7262
 U²³⁵ quaternary fission by thermal neutrons, obs. 8=11963
 U²³⁵, resonance self-shielding of U²³⁸ 8=7246
 U²³⁵, spin-depend. of n cross-section 8=20849
 U²³⁵ thermal fission spectrum 8=16129
 U²³⁵ thermal neutron fission fragments charge division 8=11960
 U²³⁵, thermal neutron, total gamma energy release 8=7247
 U²³⁵, Zr⁹⁷ yield fine structure, E_a = 14 MeV 8=7261
 U^{235,238} capture and fission, Doppler effect obs. 8=7248
 U²³⁶ quaternary fission, total kinetic energy release obs. 8=11963
 U²³⁶, ternary fission with emission of particle with Z > 2 8=7249
 U²³⁸, angular distribution, n-induced, using solid-state track detector 8=16130
 U²³⁵, γ -ray spectra due to products at selected times after fission 8=3984
 U²³⁸, by Ne²² and Ar⁴⁰ ions, excitation function 8=1110
 U²³⁸ (n, f), mass, energy obs., range straggling data 8=20860
 U²³⁸, 14 MeV neutron induced instantaneous fission 8=7259
 U²³⁸ photofission, Cd¹¹⁵ yield, 5.3-6.5 MeV bremsstrahlung 8=16135
 UC rods, fast fission ratios meas. 8=16170

Nuclear fission reactors. See Nuclear reactors, fission.

Nuclear forces

See also Field theory, quantum/meson field.

- binding energy calc. using BHF model 8=3762
 binding energy from HF calc. for doubly even nuclei in s-d shell 8=7033
 binding energy rel. to π -nuclear scatt. 8=3948
 book, unified theory of nuclear models and forces 8=3760
 boson-exchange theory and N-N potential form 8=15916
 Brueckner theory of N-N wave functions tested in π absorpt. and 2N emission 8=20654
 central interactions, Wigner-Eckart theorem applied to SU₃ matrix elements 8=7037
 complex optical potentials, derivation 8=7038
 energy surface, force constant and mass parameter related to intrinsic structure 8=11707
 Fermi system, retarded interactions in meson theory 8=11693
 ground state props. of nuclear matter, A₁₁ approx. 8=15926
 Λ binding energy calc. 8=15857
 Λ binding energy and ANN potential 8=3766
 Λ -N pot. in s-shell hypernuclei 8=16009
 Λ^0 , Σ -nucleus pots. from K⁻ + He⁴ \rightarrow Σ + nucleus + $\pi^- \rightarrow$ Λ^0 + p + d + π^- 8=20417
 matter binding energy using 4N interactions 8=11695
 meson, vector exchange as origin of repulsive core 8=20642
 Mittelstaedt's definition of rearrangement energy extended 8=923
 n and p shell average field, N > 126, Z > 82 8=7035
 N optical potential, complex symmetry term from n scatt. data 8=924
 N, valence, effective interaction 8=11683
 N-N "free" potential and mass, 3-body force 8=7032
 N-N interaction, boson approx. 8=15917
 N-N interaction rel. to spin-orbit splitting 8=15947
 N-N, kuo-Brown, analysis for symm. 8=3759
 N-N potential to fit N-N scatt. data 8=3758
 N-N pot, Morse and vel. depend. investigated 8=11684
 N-N potential for odd parity spin triplet states, 320 MeV 8=3777
 optical pot. rel. to Al²⁷(He³, α) Al²⁶ 8=11945
 optical potential, (d, p) reactions, polarization effect 8=1087
 optical potential, form of imaginary part 8=3757
 potential, optical, isospin dependence investigated 8=7039
 optical pot., isospin term, (p, n) reactions 94 MeV 8=16070
 potential optical, for p scatt. 8=3917
 optical pot. rel. to polarized p scatt., ang. asymm. 8=11880
 potential, rel. to polarized p scatt, optical model 8=16067
- Nuclear forces—contd**
 optical pot. and p scatt. off F¹⁰ 8=7182
 optical pot., spin orbit interaction interference in 2N transfer reactions 8=11877
 optical potential in Te- α scatt. 8=1098
 pairing approx. appl. to spherical nuclei, separation energy calc. 8=3768
 pairing problem linearized approx. leading to ground and O⁺ states 8=11704
 parity-violating 8=15915
 4-particle T-matrix eqns. interacting via 2-body forces, rel. to nuclear matter 8=11695
 phenomenological approach justification 8=15918
 (p- μ -p)⁺, binding energy 8=20657
 p-n correlation effect on (π^+ , π^0) scatt. 8=3950
 pot. complex, replacement of single-particle by hole state rel. to quasi-free scatt. 8=16052
 potential, equivalent local 8=7034
 potential models, OPE, OBE, dispersion-theoretic, phenomenological 8=15919
 pot., spin-independent, s-state reaction-matrix calc., improved 8=11696
 proton hole states of odd parity in 2s-1d shell nuclei 8=20650
 Q-Q, effective N interaction calc. disagreement 8=11683
 realistic, core polarisation and quasiparticle theories of even Sn isotopes 8=15985
 repulsive interaction in atomic nucleus, strength 8=20643
 review of present knowledge, and suggested solution of uncertainties 8=11682
 shell-model potentials for heavy nuclei and stability of superheavy nuclei 8=11786
 soft core pot. fit for N-N and shell model of Ti⁵⁰ 8=11748
 soft and hard core pots. compared when they reproduce 2N scatt. 8=11691
 spherical nuclei, pairing approx., appl. to A > 20 8=3769
 star, neutron, zero temp., high density, soft core 8=19166
 tensor forces in residual interaction between particles 8=919
 tensor, Kuo-Brown interaction used in calc. collective O vibrations in 8 nuclei 8=11706
 tensor in shell model G-matrix interaction 8=7048
 Woods-Saxon pot. in calc. of e scatt. off light nuclei 8=7173
 Yale 2N pot. used in HF calc. 8=7033
 Yukawa pot., Regge trajectories for Schrödinger eqn. 8=11421
 Be¹⁰, binding energy, differentiating between p and n in h.f. approach 8=20677
 C¹⁰, binding energy, differentiating between p and n in h.f. approach 8=20677
 Ca isotopes, 3-body, contribution to binding energies 8=15970
 Ca, potential for n scatt. 2-8 MeV 8=3933
 Ca⁴⁰ BHF calc. of binding and single particle separation energy 8=3762

 Nb^{90} isomer, multipolarity deduced as $\text{M}2$ 8=20711
 $\text{Nb}^{99, 100}$, disintegration periods and energies 8=7089
 Np^{240} decay to Pu^{240} 1.131 MeV state 8=11791
 Pb^{205} , Bi^{205} γ -transitions to $13/2^+$ isomeric level 8=997
 Pu^{240} , 1.31 MeV state 8=11791
 $\text{Pt}^{195\text{m}}$, γ transitions, level decay 8=3837
 $\text{Rh}^{106\text{e}}$, γ -decay, energy levels of Pd^{106} 8=979
 Sn^{115} , 619 keV level, half-life of $1/2^+$ state 8=7095
 Sn^{119} impurity nucleus in metal solid solutions, shifts of γ radiation 8=1653
 Sr , isomer ratios from $\text{Sr}^{88}(\text{p}, \text{p}n)$ 8=11888
 $\text{Sr}^{87\text{m}}$, enrichment by recoil effect of $(n, 2n)$ reaction 8=7214
 $\text{Tb}^{158} \rightarrow \text{Dy}^{158}$, possible isomer of Tb^{158} 8=20755
 $\text{Te}^{127\text{m}}$ decay in $\text{Te}^{127\text{m}}(\text{OH})_2$ crystals, chem. effects 8=18751
 Tm^{165} , γ -decay, $\text{E}1$ transition 8=3828
 Tm^{170} , 4.1 μs isomeric state, strongly retarded $\text{E}1$ transitions 8=990
 W^{180} , γ -decay, $\text{E}1$ transition 8=3828
 Y , isomer ratios from $\text{Sr}^{88}(\text{p}, \text{xn})$ 8=11888
 $\text{Zn}^{69\text{m}}$, k conversion coeff. of 0.436 MeV transition 8=974

acetone-chloroform system 8=2498
acetonitrile- d_3 , liq., anisotropic molec. rotation 8=8140
acetylene cpds., proton reson. spectra 8=21173
acoustic, ion crystal with trigonal symmetry 8=389
adsorbed mols. intermolecular relax. 8=8330
alcohols, solid, intra-molecular motion of OH group 8=16989
alkaline-earth fluorides, H -doped, polarization 8=8206
 n -alkyl fluorides 8=12315
alloys, spin echoes, Knight shift 8=2387
aminopyridines, chem. shift and π -electron distrib. 8=12296
aniline, in dilute soln. of CS_2 and CCl_4 , dependence on viscosity 8=126
autodyne, sensitivity regulation for linear response 8=3279
azines, additivity of p.m.r. solvent shifts 8=12931
1-aziridinepropionitrile, solvent and anisotropy effects 8=16895
azo-compounds decomp., tracing by n.m.r. spectroscopy 8=8127
benzenes, substituted, chem. shift of ring protons 8=12316
benzenes, unsymmetrical, ortho-disubstituted, shielding parameters 8=4625
 $\text{N-benzyl-N, 2, 4-6-tetramethylbenzamide}$, rate of internal rotation, equilibrium method calc. 8=12331
in binary liq. alloys of equi-valent metals, Knight shift charges rel. to comp. 8=12927
bromobenzene, molec. motion in liq. 8=8132
bromo-naphthalenes, chemical shifts meas. 8=7613
 β -bromopropionitrile, 2 rot. isomers, solvent depend. rel. to virial H-H couplings 8=21158
3-bromothiophene-2-aldehyde, double reson. 8=6408
1,3-butadienes, theory of π -electron coupling 8=7604
tri-tertiary butyl phenoxyl radical, double reson. 8=12312
butyl phthalate, spin-lattice relax. rel. to dielec. relax. and viscosity 8=9459
charcoal, surface heterogeneity meas. 8=8293
chemically induced dynamic nuclear polarization 8=7601
chemical reactions, n.m.r. spectra explanation 8=8128
chemical reactions, rapid, tracing by n.m.r. spectroscopy 8=8127
conduction band structure and electron effective mass from double resonance data 8=17874
copolyesters, degree of randomness by high resolution n.m.r. spectra 8=12387
crystals, single, holder for low temp. expt. 8=14130
crystals, single, rotating head apparatus 8=8361
- Nuclear magnetic resonance and relaxation—contd**
cyclopropane derivatives, C-C coupling 8=12320
cyclopropanes, substituted, C^{13} chem. shifts 8=1303
cis- and trans-bis(dialkyl sulphide) dichloroplatinum (II) complexes, struct. and inversion mech. 8=16355
diaziridin rings, methylene-group spectroscopy 8=12940
dibenzoylperoxide decomp., tracing by n.m.r. spectroscopy 8=8127
cis-bis(dibenzyl sulphide) dichloroplatinum(II), struct., inversion and AB chemical shifts obs. 8=16356
dibenzyl sulphoxide, comparison with cis-bis(dibenzyl sulphide) dichloroplatinum(II) 8=16356
di- p -chlorbenzoylperoxide decomp., tracing by n.m.r. spectroscopy 8=8127
2,4-dicyanopentanes 8=16884
dielectric solids, spin relax. and dynamic polarization rel. to electron spin-spin relax. 8=18443
1,1-difluoro-1,2-dibromodichloroethane, spin-echo 8=4622
1,3-difluoro-4,6-dimittrobenzene 8=21178
1,1-difluoroethylene in soln., nuclear spin relax. 8=16889
dihydroanthracenes and Li salts, rel. to structure of ion pairs 8=7559
dimethyl acetamide, solvent-solute interactions 8=12936
dimethyl amides 8=21150
 N,N -dimethylaniline and deuterated derivatives, p.m.r. 8=21179
dimethyl formamide, solvent-solute interactions 8=12936
dimethyl phthalates, in soln., high-resolution proton mag. res. 8=1601
dimethylsulfoxide, solid, methyl group movement 8=9466
dipolar broadening of fine-struct. lines 8=14131
dipole-dipole interact. of spin- $1/2$ nucleus with quadrupole-coupled nucleus 8=5559
double quantum transitions in systems with four protons 8=21172
double, using v . strong decoupling fields, AMX system 8=7603
energy level diagrams, alternative representation 8=19915
 Cu(II) in ethylenediamine-water solns. 8=4621
ethyleneimine, solvent and anisotropy effects 8=16895
ethyl iodide, in nematic phase 8=8135
ferrites of Cu , Mg , and Mn , of Fe 8=5554
of ferromagnetic alloys, automatic swept-freq. spin-echo spectrometer 8=9454
ferro- and antiferromagnetics, nuclear magneto-acoustic reson. 8=22916
ferromagnetics with low concs. of mag. nuclei, theory 8=9456
field discriminator 8=15433

fluorinated organotin cpds., n.m.r. spectra 8=12318
fluorobenzene 8=12326
fluorobenzene, H and F spectra 8=12325
fluorotetrachloroethane, liquid, internal rotation 8=8137
freon, of F , chemical shift press. depend. 8=12324
gases, spin-lattice relax. 8=21176
group IV hydrides, geminal coupling consts., from ENDOR meas. 8=21175
"growth effect" in n.m.r. for a weak directing field, theory 9=15432
 H -bonded complexes proton transfer meas. by F n.m.r. 8=12157
halogenophenanthrenes, spectra 8=9461
Heisenberg paramagnets, linewidths asymptotic behaviours near critical points 8=22757
hexafluorides of Mo , W and U , liquid, F^{19} relax. rel. to molec. motion 8=12930
hexafluoroethane, of F 8=8134
hexamethylbenzene, molec. motions 8=14143
high magnetic field meas. by periodic size effect in Ga 8=3161
high polymers, composition study 8=16886
in highly viscous liqs., theory 8=4619
hydrides of S , Se and Te , proton reson. gas and liq. phases 8=12327
hydrocarbons, saturated, theory of C^{13} chem. shifts 8=7606
indirect spin saturation 8=16350
intermodulation in spin systems obeying Bloch's equations 8=10992
isotropic chem. shifts, non-Curie behaviour 8=16351
Knight shift in tiny samples, electrostatic effect in superconductors 8=5194
ligand nuclei in distorted octahedral Co^{2+} systems, isotropic res. shifts 8=1597
line shapes and path averages 8=19910-11
liquid crystals, equivalence of nuclear spins 8=16892-3
liquid/liquid interfaces, molecular interactions and mobility 8=12778
liquids, spin-lattice relax. time 8=8131
magnetic insulators, spin-lattice relax. 8=18448
magnetic resonance and relaxation, conference 8=22889
magnetoacoustic, double electron-nuclear, at local electron centres 8=8623
magnetometer, transistorized with 10^{-4} accuracy 8=19914
malonic acids, intramolec. H-bonding 8=16894
many-photon transitions, ang. mom. det. 8=22904
metals, electron-nuclear relax. at low temps. in strong mag. fields 8=9449

Nuclear magnetic resonance and relaxation—contd

- metals, liq. and solid, interpret. of Knight shift data 8=12928
 methane, liquid, proton spin-lattice relaxation 8=4617
 methane, spin relaxation rel. to density and temp. 8=7938
 methanol, liq., effect of proton exchange on spin relax. 8=1596
 methyl 1-aziridinepropionate, solvent and anisotropy effects 8=16895
 N-methyl-N-benzylformamide, determ. of int. rot., compared with equilibration method 8=4623
 methylcyclohexanes, C¹³ chemical shifts 8=16359
 methylfluoresilanes, of F 8=7608
 methyl-1-indanones 8=12329
 methyl iodide, anisotropy of C chem. shift 8=4234
 methylsilane derivatives, p. m. r. 8=16360
 multiple-photon transition in low-field expt., with harmonic generation 8=10984
 naphthalene ENDOR study of metastable triplet state 8=21169
 naphthodioxane, low-temp. spectrum 8=12939
 naphthols, solid, intra-molecular motion of OH group 8=16989
 norbornene derivs, endo- and exo-, coupling consts. in n. m. r. spectra 8=1306
 nuclear signals in solids, pulse expts. 8=18447
 optically orientated spin system, magnetization equations 8=121
 organic mols., anisotropic effects of carbonyl group, rel. to struct. 8=4225
 oriented mols., chem. shift anisotropies 8=4624
 1, 3 oxathiolanes, 2-substituted, rel. to ring system and free energies 8=1595
 oxaziridin rings, methylene-group spectroscopy 8=12940
 oxygen fluorides, of F¹⁹ 8=4231
 oxygen, ⁸S° metastable state 8=1304
 paramagnetic impurities in viscous solns., dynamic polarization 8=8129
 paramagnetic ion nuclear relax. due to spin-phonon interaction 8=18450
 paramagnetic salts, obs. 8=2385
 phenantholiene, π electron density and proton signals in n. m. r. spectra 8=4236
 phenanthrene and alkyl derivatives, spectra 8=9460
 phenylalanine, rotamer study 8=12289
 2-picoline with dichlorobis (2-picoline) Co(II), study of ligand exchange 8=2501
 poly- γ -benzyl-L-glutamate, liquid crystal orientation in mag. fields 8=8006
 polybutadiene-active carbon black, -160° to 0°C, line shape 8=5550
 polybutadienes, stereoregular, -160° to 0°C, line shape 8=5550
 polyesters, unsaturated, hardened, determ. 8=5565
 polyethylene in soln. 8=16891
 polymers, high resolution 8=21216
 polymethine-merocyanine dyes spectra, solvent depend. and rot. inhibition 8=12929
 poly(methyl methacrylates) in soln. 8=16890
 polymethyl methacrylates, stereoregular, broad line obs. 8=18462
 polyoxymethylene system, in solid trioxane matrix, during polymerization 8=22921
 polystyrenes, of controlled molec. wt., as characterization 8=18473
 polyvinyl chloride linewidth dependence on correlation time distrib. 8=18471
 poly(vinyl formate), study of tacticity 8=16897
 poly-2-vinylpyridine 8=16391
 propionate groups, investigation of retarded motion and phase transitions 8=8229
 proteins, internal rot. and ang. correl. functions 8=16384
 proton bonded to quadrupolar nucleus, second moment 8=7602
 proton, double, spin-stabilized spectrometer 8=3281
 proton-electron double reson. in organic cpds. 8=12312
 pyridine in dilute soln. of CS₂ and CCl₄ dependence on viscosity 8=8126
 pyridines, solvent effects in p. m. r. 8=1600
 pyridines, substituent effects 8=12332
 pyrrole, N¹⁴ spin-lattice relax. 8=21180
 quinols, solid, intra-molecular motion of OH group 8=16989
 radical ions, in soln., hyperfine splitting constants 8=8136
 rare earth trifluorides, of F¹⁹ 8=5556
 r. f. hybrid tees 8=3280
 relaxation and correlation time, definition 8=18453
 review of applications 8=5545
 rotating single crystal, time-dependent Dyson expansion 8=14136
 rotational isomerism, limitations of method 8=4226
 salicylaldehyde soln., H bonding obs. 8=16883
 1, 2, 5-selenadiazole and its methyl derivative, p. m. r. 8=12333
 selenobenzanide, of N¹⁴, chemical shifts 8=7614
 semiconductors, organic, r. f. spectroscopy 8=14088
 solids, chemical shifts from n. m. r. resolution 8=4670
 solids, effect of elec.-field-gradient inhomogeneity on quadrupolar satellites 8=22917

Nuclear magnetic resonance and relaxation—contd

- solids, high-resolution resonance theory 8=18452
 solids, line shape with long spin-lattice relax. 8=14132
 solid, magnetically dilute, free-induction decay evaluation 8=14135
 solids, resolution of chemical shift, comments 8=18451
 solid, ultra-slow motion, relaxation study 8=5548
 solvent effects, molec. interactions theory 8=12935
 spin-coupling Hamiltonian, matrix elements calc. 8=19909
 spin-lattice and spin-spin in multi-level quadrupole systems 8=5547
 spin-lattice relax. in multilevel systems 8=12313
 spin-lattice relaxation via paramag. centres 8=18449
 spin relaxation theory, book 8=18446
 Stark effect, linear, rel. to effective field acting on electrons 8=14133
 succinimide-dimethyl sulphoxide, H-bonding 8=12334
 superconductors, particle-size effects, Knight shift 8=2351
 superconductors, type II, obs. and explanation 8=5196
 T₁ and T₂ measurement, spin echo attachment to single coil high-resolution n. m. r. spectrometer 8=10988
 TCNQ-complexes, semiconducting, Overhauser effect 8=5549
 temperature controller, -185 to +350°C 8=19907
 1, 1, 2, 2-tetrabromofluoroethane, medium effects 8=21181
 tetramethyldiphosphine, of C¹³, used in X spectra of X₂AA¹X¹ spin systems 8=4235
 thienylphenyl-ketones and -thioketones, spectra, steric effects obs. 8=4218
 thioamides, of N¹⁴, chemical shifts 8=7614
 three-membered rings, of F 8=12322
 transition impurities, non-magn. in Cu alloys, rel. to elec. field gradients 8=9458
 transition-metal monophosphides 8=22847
 trifluoroacetone, in proton donor solvents 8=16887
 trifluorocyclopropanes, chem. shifts and coupling consts. 8=12321
 2, 2, 2-trifluoroethanol as H bonding acid, freq. shifts rel. to bonds 8=16863
 1, 3, 5-trideuterobenzene, molec. motion in liq. 8=8132
 s-trioxane in nematic solvent 8=4618
 triptycene, effect of mag. anisotropy on proton shifts 8=1305
 vanadium (III) tris(salicylaldehydes) and tris(salicylaldehydes) complexes obs. 8=16343
 water of combination in solids 8=5546
 water, proton resonance appl. to rehydration monitoring 8=23770
 zeolites in liquid, proton relax. meas. 8=18454
 [Ag₂O₃]HF₂ clathrate, rel. to supercond. 8=17957
 Al, modulation and cross-relaxation effects on line shape 8=18455
 Al, pure, meas. of diffusion coefficient 8=4949
 AlCl₃, in aqueous binary solvent mixtures 8=8138
 AlCl₃, p. m. r. determ. of coord. no. in aq. mixtures 8=16888
 Al₂O₃·V³⁺, longit. relax. times by spin echo method 8=5541
 Au, Au¹⁹⁷ Knight shifts 8=2379
 Au-Ag alloy, Ag¹⁰⁹ Knight shifts 8=2379
 for B compounds, ferromagnetic, electronic configuration obs. 8=13658
 BaAl₂Si₂O₁₀·4H₂O, proton resonance and H atom position 8=18456
 C¹³ chem. shift, steric perturbation 8=7605
 C_xCS₂, Knight shift of C¹³³ rel. to comp. and temp. 8=2382
 CD₄, d. m. r. studies 8=18460
 CF₄ clathrate hydrates, of F¹⁹ 8=7607
 CF₄ gas, of F¹⁹ 8=21176
 CF₃P(O)F₂, F¹⁹ reson. 8=21177
 CHBr₂-CFBr₂, rotational isomers 8=4226
 (CH₂)₂O, linewidth as function of pressure 8=16354
 [(C₆H₅)₃PCH₃]₂ (TCNQ)₂, proton reson. 8=5551
 CaF₂, ENDOR study of F centre 8=9417
 CaF₂, of F²⁰, and β -radiation asymmetry 8=7128
 CaF₂, spin-lattice relax. via paramag. centres 8=18459
 CaF₂:Ce³⁺, Yb³⁺, doped at tetragonal sites, charge compensation 8=22918
 CaF₂:H, D, of F¹⁹, single crystal, nuclear polarization 8=1640
 Ca(NO₃)₂·4H₂O melts, p. m. r. 8=12938
 Cd, Knight shift anisotropy, reversal at low temps. 8=5552
 Cd¹⁰⁹ and Cd¹¹¹ frequency ratio between 8=16232
 Co⁶⁰, by resonant absorption destruction of nuclear orientation 8=18331
 Co²⁺ ion, hydration 8=12937
 Co(II) chelates in CDCl₃, isotropic res. shifts 8=1598
 Co(III) ethylenediamine complexes, p. m. r. 8=12319
 CoCl₂, in aqueous binary solvent mixtures 8=8138
 Co-Ni alloys, effective field at Co⁵⁹ using spin echo method 8=8195
 Co-Pd alloys, of Pd¹⁰⁵ and Co⁵⁹ 8=2381
 Cr(V) complexes, liquid solutions, Overhauser effect 8=21725
 Cr³⁺ trivalent ion hyperfine structure obs. 8=5553
 Cs¹³³ in metal, spin systems below 77°K 8=9463
 Cs silicate glass, ionic conduction 8=9197

Nuclear magnetic resonance and relaxation—contd

- Cu ferrite, of Cu 8=5554
 Cu-Mn alloys, of Cu⁶³, and spin-lattice relax. 8=9464
 Cu(NH₂)₄.SO₄.H₂O, proton n.m.r. at low temp. 8=2384
 Cu(NH₂)₄.SO₄.H₂O, proton resonance, 0.25-4.2°K 8=14138
 Cu-Pt alloy foils, quadrupole effects 8=2383
 CuSO₄.5D₂O, deuteron n.m.r. 8=18461
 Cu-Zr, supersaturated, decomposition study 8=8265
 D₂O ice, O¹⁷ n.m.r. 8=18470
 DyAl₃ 8=22920
 Er¹⁶⁰, ground-state spin using atomic beam magnetic resonance 8=11777
 α-ErAl₃ 8=22920
 EuM₂, (M=Pt, Pd, Zn, Rh), mag. props. by Mossbauer n.m.r. 8=18334
 EuPd₃, (M=Pt, Pd, Zn, Rh), mag. props. by Mossbauer n.m.r. 8=18334
 F, dynamic enhancement, effects of chem. environment 8=12323
 F, dynamic polarization in solns. of fluorocarbon free radicals 8=4627
 Fe dilute alloys, of Fe⁵⁷ 8=14140
 α-Fe₂O₃ crystals, domain walls 8=5557
 Ge⁷³, Larmor freq. rel. to H² and K⁴¹ 8=5558
 H², Larmor freq. rel. to Ge⁷³, and K⁴¹ 8=5558
 H₂, ortho, in solid para-H₂ crystal-field splitting 8=13010
 H₂, solid, 1.6-4.2°K, obs., shorter correlation time for mol. rot. 8=14141
 H₂, solid, statistical model 8=22923
 HBr, gaseous, spin-lattice relax. 8=12697
 HCl, gaseous, spin-lattice relax. 8=12697
 HD, liquid, proton transitions 8=8133
 HI, gaseous, spin-lattice relax. 8=12697
 H₂O, acidified, of O¹⁷, linewidth rel. to proton exchange 8=1599
 H₂O dynamics in Na₂S₂O₈.2D₂O, deuteron m. r. 8=8539
 H₂O dynamics in Na₂S₂O₈.2H₂O and Li₂S₂O₈.2H₂O crystals, H¹-n. m. r. spectra 8=8537
 H₂O¹⁷ liq. and vapour, O¹⁷ shifts 8=16896
 H₂O, proton-spin lattice relax. times, search for thermal anomalies 8=16885
 H₂O at silica gels, proton relax. 8=12932
 H₂O-D₂O mixtures, comp. determ. by F¹⁹ n.m.r. 8=14454
 He³ atoms, spin relax. suppression by surface interactions 8=1160
 He³, solid, meas. 0.3-0.04°K, attributed to single phonon process 8=3130
 He³-He⁴ solutions, thermodynamic properties at λ-transition, investigation 8=10794
 Hg, anisotropy of relaxation 8=7609
 Hg dimethyl, coupling constants 8=7610
 Hg¹⁹⁹ and Hg²⁰¹, comparison above 600°K 8=7450
 Hg-Bi alloy, Knight shift 8=14142
 Hg-Cd alloy, Knight shift 8=14142
 Hg-In alloy, Knight shift 8=14142
 Hg-Pb alloy, Knight shift 8=14142
 HgSO₄.1H₂O, proton magnetic resonance 8=9457
 HoAl₃ 8=22920
 I¹²⁷ in NaI, rel. to determ. of gradient elastic tensor 8=13014
 In, liq., spin lattice relax. time, and elec. field grad. 8=12933
 In, Knight shift, band structure and Fermi surface 8=22463
 In, superconducting, spin-lattice relax. 8=18464
 InAs, Knight shift calc. 8=18463
 In-Bi liq. alloys, of Bi²⁰⁹, influence of short range atomic order 8=12934
 In-Bi liq. alloys, of In¹¹⁵, influence of short range atomic order 8=12934
 InSb, Knight shift calc. 8=18463
 Ir, and dipole moments of ¹⁹¹Ir and ¹⁹³Ir 8=14144
 K⁴¹, Larmor freq. rel. to Ge⁷³, and H² 8=5558
 KBr single crystal, first-order quadrupole broadening 8=14146
 KCuF₄, of F¹⁹, shifts on a and c axes 8=5505
 K₂Fe(CN)₆.3H₂O, proton relax. 8=14145
 KH₂PO₄, of K³⁹, at 77°K (ferroelec. phase) 8=22924
 LaMg nitrate, Nd doped, proton spin-lattice relaxation 8=9462
 La₂Mg₃(NO₃)₁₂.24H₂O: Mn²⁺, ligand endor 8=22925
 La₂Mg₃(NO₃)₁₂.24H₂O, proton dynamic polarization, influence of paramag. impurities 8=14147
 Li⁷, in aqueous alkali halide solns., conc. depend. of spin-lattice relax. 8=1593
 LiBH₄ and LiBD₄ 8=18466
 Li⁶Cl and Li⁷Cl solns., proton relax. times 8=8139
 LiF, ENDOR study of V_K centre rel. to lattice distortion 8=2009
 LiF, F centres, ENDOR 8=18465
 LiF:Fe³⁺ system, crystal field distortions, study 8=13005
 Lu¹⁶⁹, ¹⁷⁰, ¹⁷¹, ground-state spin using atomic beam magnetic resonance 8=11777
 Mn⁵⁴ by resonant absorption destruction of nuclear orientation 8=18331
 Mn²⁺ solns., proton relax. and hyperfine coupling 8=8130
 α-Mn, quadrupole effects in spectrum 8=18467
 Mn ferrite, simultaneous parallel pumping of electron and nuclear spin waves 8=14107
 MnBr₂.4H₂O, antiferromagnetic, space groups 8=14148

Nuclear magnetic resonance and relaxation—contd

- MoF₆, of F, spin-lattice relax. in intense r.f. field 8=14139
 MoF₆, spin-lattice relax. of F in intense r.f. field 8=14139
 Mo(V) complexes, liquid solutions, Overhauser effect 8=21725
 ND₃, deuteron mag. reson., 100 to 403°K 8=14150
 ND₃NO₃, d.m.r. studies 8=18460
 (ND₃)₂SO₄, correl. with i. r. spectra 8=23005
 NH₄BF₄, BF₄⁻ and NH₄⁺ motions 8=5560
 NH₄Cl: Mn²⁺, spin-Hamiltonian parameters 8=5534
 NH₄I, spin-lattice relax. for protons and I nuclei 8=14151
 (NH₄)₂SO₄, ferroelec., deuteron spin-lattice relax. time 8=2386
 (NH₄)₂SiF₆, molec. motions 8=14154
 NO, effect of electric field 8=7612
 NO(SO₃)₂⁻, proton polarization in solution at 38 and 3400 gauss. obs. 8=1602
 Na²³, in aqueous alkali halide solns., conc. depend. of spin-lattice relax. 8=1593
 Na²³ in some ionic compounds, quadrupolar couplings 8=18469
 NaBD₄, d.m.r. studies 8=18460
 NaBr single crystal, first-order quadrupole broadening 8=14146
 NaBrO₃ cryst., anisotropic chem. shift of Br 8=18457
 NaCl, plastically deformed, acoustic n. m. r. 8=5561
 NaCl powders, of Na²³ 8=5562
 NaCl type crystals, endor of F-centres, in external electric fields 8=14137
 NaCl-type crystals, quadrupole splitting due to lattice distortion by impurities 8=9455
 NaCl:Ag⁺, double resonance investigation 8=18468
 NaClO₃, relax. of Na²³, thermally and acoustically induced transition probabilities 8=14152
 NaClO₄ aq. soln. with HCl, nucl. mag. relax. times 8=21726
 NaHCO₃, H and Na reson. 8=14153
 NaHg, Na₂Hg₂ and Na₂Hg₃, solid state Knight shift rel. to liquid state 8=22926
 NaHg, Na₂Hg₂ and Na₂Hg₃, Na²³ spectrum dependence on temp. and Hg content 8=22926
 Nb, supercond., relax. near H_c 8=2170
 Ni(II) chelates in COCl₂, isotropic res. shifts 8=1598
 Ni-Mn, of Mn⁵⁵, magnetic moment 8=9465
 P³¹ in soln. with radicals, Overhauser effect rel. to scalar interacts. 8=4626
 P₂F₄ 8=16361
 Pr₂(SO₄)₃.8H₂O, of Pr¹⁴¹, meas. 8=14155
 Pr¹³⁹ Knight shift, cond. electron polarization 8=17857
 Rb⁸⁷ in metal, spin systems below 77°K 8=9463
 RbCoF₃, rel. to spin density oscillation in space at T > 96°K 8=18472
 RbMnF₃, antiferromag., F¹⁹ acoustic reson. 8=22922
 RbMnF₃, simultaneous parallel pumping of electron and nuclear spin waves 8=14107
 SF₄ clathrate hydrates, of F¹⁹ 8=7607
 SiF₄ gas, of F¹⁹ 8=21176
 Si₃F₈, coupling consts. and chem. shifts of F¹⁹ and Si²⁹ rel. to SiF₄ 8=4237
 Sn, Knight shift oscillatory field dependence 8=5566
 TiCl₄, in aqueous binary solvent mixtures 8=8138
 TiFe_{1-x}Co_x alloys, ⁵⁹Co Knight shift and ⁵⁷Fe isomer shift 8=14156
 Tl, anisotropy 8=9467
 Tl silicate glass, ionic conduction 8=9197
 Tm¹⁶⁵, ground-state spin using atomic beam magnetic resonance 8=11777
 UP₂, of P³¹, in paramag. state, Knight shift temp. dependence 8=5563
 U₃P₄ and UP₂, of P³¹, in paramag. state, Knight shift meas. 8=5564
 USn₃, of Sn¹¹⁹ rel. to interband mixing effects 8=18474
 V, superconducting, local field mapping 8=2179
 V₃Au superconductor, atomic ordering 8=18475
 VO₂, of V⁵¹ rel. to crystalline field theory of V⁴⁺ ions in VO₂ 8=9411
 (Zn, Cu)K₂(SO₄)₂.6H₂O, dynamic polarization of protons, non-exponential behaviour 8=18476

measurement

- ABXY spectrum, methods of anal. 8=12314
 benzene, long transversal times, difficulty using spin-echo 8=2380
 cryostats, room temp. to 4.2°K 8=10793
 double, detect. of v. small spin coupling consts. 8=6408
 dynamic polarization, nuclei, exchange narrowing influence 8=22893
 field, accuracy with strong field modulation 8=3282
 heating system for spectrometer 8=19912
 high-resolution apparatus, performance tests 8=16352
 integrator, gated, solid state, for pulsed n.m.r. 8=14134
 liquid cryst. matrices for mols. 8=8008
 liquid, high-resolution apparatus, performance tests 8=16352
 molecules, high-resolution apparatus, performance tests 8=16352
 n. m. r. frequency sweep using voltage controlled oscillator 8=19908
 noisy signals, simple method for calibration 8=15434
 phase-lock circuit for 100 MHz spectrometer 8=15430

Nuclear magnetic resonance and relaxation—contd measurement—contd

- proton n.m.r. and free-electron cyclotron resonance freqs., ratio 8=10989
- spectrometers, advances in sensitivity and magnet technology 8=15431
- spectrometer, frequency swept, p stabilized 8=388
- spectrometer, variable freq. construction from commercial grid dip meter 8=10987
- spin coupling consts., v. small, detect. by resolution enhancement 8=10985
- spin-lattice relax., saturation-recovery method 8=12941
- theory 8=5546
- thermal-noise and voltage decrease across tuned circuit as n. m. r. meas. method 8=19906
- wide-band dispersion detector 8=15435

Nuclear matter. See Nucleus/theory; Quantum theory/many-particle systems.

Nuclear orientation

- β -ray asymm. meas. of stopped recoil nuclei 8=3955
- Coulomb excitation, reorientation effect 8=11841
- dynamic polarization, chem. induced 8=7601
- polarization effects in (d, p) stripping 8=1087
- polarization by interaction with e shells 8=944
- quadrupole interaction with axially symm. field as a method of determination 8=3775
- semiconductors, spin polarization by hot electron current 8=8204
- solids and liquids by optical pumping 8=13016
- 2^+ rot. state, reorientation effect in Coulomb excitation 8=15940
- Au nuclei on MoS_2 substrate, effect on elastic strain 8=8823
- Bi^{12} , recoil nucleus, meas. by magnetic field appl. to stopping plane 8=3955
- $\text{CaF}_2:\text{U}^{3+}$, F dynamic polarization of 45% 8=18458
- Co, in Fe from Fe^{57} Mössbauer expts. at 1-0.08°K 8=4676
- U^{156} , longitudinal polarization calc. from β spectrum shape factor 8=1019
- F^{19} , in CaF_2 single crystal, dynamical 8=1640
- F^{19} in H-doped alkaline-earth fluorides 8=8206
- HD solid with H_2 impurity, high proton spin polarization 8=1639
- He^3 in fund. state, for electronic orientation in excited states 8=16226
- He^3 , solid, spin ordering evidence 8=6237
- LaMg nitrate, Nd doped, dynamic polarisation 8=9462
- Mn^{54} in iron lattice, resonance absorption destruction for n.m.r. detection 8=18331
- MnCu , Mn^{54} anomalous low-temp. susceptibility 8=13962
- (Zn, Cu) $\text{K}_2(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$, dynamic polarization non-exponential behaviour 8=18476

Nuclear photoeffect. See Gamma-rays/effects; Nuclear reactions due to photons; Photons/interactions.

Nuclear physics

Nuclear polarization. See Nuclear orientation.

Nuclear power. See Nuclear reactors, fission.

Nuclear quadrupole resonance

- alkyl halides, effects of molec. motions 8=2388
- p-bromoacetanilide, of Br^{79} , temp. var. and Zeeman effect 8=4228

Nuclear quadrupole resonance—contd

- coaxial bridge with helical line sample holders as detector 8=10991
 - correlation eqns., machine count program 8=3284
 - crystal molecular complexes, structure analysis 8=22927
 - 2,4-dichlorophenoxyacetic acid, Zeeman meas. 8=2390
 - hexachlorocyclopentadiene, two solid phases, Cl^{35} n.g.r. 8=8289
 - nonconducting crystals, spin relax. anomalies of impurity nuclei 8=9468
 - semiconductors, organic, r.f. spectroscopy 8=14088
 - solids, sensitive detection of interactions 8=18478
 - spectra, time-averaged, baseline slope elimination 8=6409
 - spectrometers, appl. of f.e.t.'s 8=15436
 - spectrometer, improved super-regenerative 8=15437
 - spin-1 nucleus, non-vanishing electric-field gradient, locus of magnetization vector 8=7067
 - Stark effect, linear, rel. to effective field acting on electrons 8=14133
 - tetraiodothallates, of I 8=18477
 - tribromide ions in different crystals. 8=5567
 - trichloroborazole, of Cl^{35} 8=6409
 - vanadates, of V^{51} , Na^{23} , quadrupole coupling constants 8=9474
 - III-V cpds., antishielding effects 8=14157
 - As_2Se_3 , of As^{75} , rel. to crystal structure refinement 8=17340
 - $\text{CaF}_2:\text{Eu}^{2+}$, stress induced quad. splitting using ENDOR tech. 8=22928
 - Cl^{35} , from charge-transfer complexes 8=14158
 - CN free radical, N^{14} coupling const. in ground and excited states 8=1316
 - CsI, antishielding factors of Cs ions, acoustic 8=9470
 - HCl^- ion, symmetrical, of Cl 8=5568
 - InSb, nuclear spin-lattice relax. temp. dependence 8=9472
 - InSb of $\text{Sb}^{121,123}$, In^{115} , nuclear spin-lattice relax rates 8=9471
 - $\text{MgO}:\text{Mn}^{2+}$, stress induced quad. splitting using ENDOR tech. 8=22928
 - N^{14} nuclei, modified Robinson type spectrometer 8=3283
 - N^{14} , Stark effect meas. 8=7611
 - ND_4Br , deuteron coupling consts. 8=14159
 - ND_4Br , deuteron coupling consts., theoretical calc. 8=14160
 - ND_4Cl , deuteron coupling consts. 8=14159
 - ND_4Cl , deuteron coupling consts., theoretical calc. 8=14160
 - $(\text{NH}_4)_2[\text{InCl}_4\text{H}_2\text{O}]$, freqs. of Cl^{35} and In^{115} rel. to temp. 8=2389
 - NaBrO_3 , of Br^{81} , at 150 MHz 8=10991
 - NaClO_3 , relax. of Na^{23} , ang. depend. of transition probabilities 8=14161
 - NaNO_2 , of N^{14} , ferroelectric phase 8=9473
 - NdBr_3 , paramag., of $\text{Br}^{79,81}$ 8=9469
 - RbI, antishielding factors of Rb ions, acoustic 8=9470
 - Sb Menshutkin complexes, electric field gradient, asymmetry parameter temp. depend. 8=21802
 - SbCl_3 , of $\text{Sb}^{121,123}$ and Cl^{35} , temp. dependence, 20-150°K rel. to mol. motions and intermol. forces 8=22929
 - $\text{SbCl}_4\text{CH}_3\text{CN}$, $\text{SbCl}_4\text{POCl}_3$, and SbCl_5 , of Sb , Cl 8=2391
 - U_3 , of F^{17} , in paramag. and antiferromag. crystal 8=9469
- Nuclear reactions**

 - excitation meas., rapid scanning by target self-changing 8=3897
 - exciton model, Griffin, precompound particle decay 8=1608
 - Fermi gas model for nuclear reactions not confirmed by 10^3 BeV cosmic ray obs. 8=20777
 - form factor calc. in stripping and pick-up 8=3902
 - heavy ions, nucleon tunneling through pot. barrier, analog of Josephson effect 8=3892
 - heavy and medium, conference 8=20640

Nuclear reactions—contd

- high-energy, with complex nuclei, mechanism 8=1028
high-energy stars in nuclear emulsions, frequency distrib. of heavy prongs 8=7160
indep. particle model, N-body scatt. theory 8=11850
inelastic, $T \geq 1$ GeV, energy and angular distribution of secondary particles 8=3518
inverse reaction cross-section investigated by $\text{Ni}^{62}(\text{p}, \alpha)\text{Co}^{59}$ and $\text{Fe}^{56}(\alpha, \text{p})\text{Co}^{59}$ 8=3900
K matrix theories rel. to transition operator T 8=3901
kinematics, simplified calc. 8=20766
knockout, DWBA analysis of $\text{Al}^{27}(\alpha, \text{d}_{0,1})\text{Si}^{29}$ 8=20837
Lippmann-Schwinger potential scatt. equation derivation from Bloch scatt. theory 8=3894
matrix calc, improved 3-body cluster corrls. applied to nuclear matter 8=11696
N transfer, orbital rearrangement energy large and different in different orbitals 8=16054
nucleon, computer, Monte Carlo simulation of intranuclear cascade, 380 MeV 8=20776
nucleon, Fermi gas model not confirmed by 10^8 BeV obs. 8=20777
neutron superbooster 8=1118
neutron tunneling reactions 8=20765
noble gas targets, electromagnetically separated, props. 8=6625
nucleons, distrib. and fraction of primary energy transferred to photons 8=16103
due to nucleons, optical model 8=1049
nuclides far off the stability line, conference, Lysekil Sweden (1966) 8=15911
optical potentials, complex, derivation 8=7038
optical potential, form of imaginary part 8=3757
particle range meas. using Coulomb excitation 8=8756
photoemulsion nuclei H^3 and He^3 (K.E. ~ 2 GeV) emission fluctuation mechanism 8=7159
pole, Butler in (d, p) reactions to calc. reduced widths 8=20818
polarization of production for separating direct and compound nucleus effects 8=1029
projection operator approach applied to decay of unstable systems 8=11262
R-matrix evaluation using projection operator 8=20764
R matrix theory in d- α 42 MeV 8=15868
rearrangement collisions, modified distorted-wave Born series 8=11838
resonance, cluster representations 8=11849
resonance, sum rule 8=1031
scatt. amplitude and cross-section, statistical props. using collision matrix 8=11839
scattering chamber of sliding cylinder type for cross-sect. meas. 8=7157
scattering, eigenfunction expansions, use of resonant states 8=16051
scatt. matrix S decomposed into direct interaction and compound nucleus parts, calc. of DI part. 8=7153
scattering, quasi-free, replacement of single-particle by hole state in complex pot. 8=16052
second-quantization formalism, yielding integral eqns. for n-body amplitudes 8=11853
shell model matrix elements, state depend. 8=926
 Σ^- capture by emulsion nuclei, hyperfragment prod. 8=7218
statistical model in n reaction on $\text{In}^{113,115}$ 8=11909
statistical, spectra of emitted particles, approx. suggested 8=3890
statistical theory, Si^{29} intermediate, evaluation of D_0 8=3899
in stellar surface layers, rel. to abundance anomalies 8=5870
stripping, DWBA, analysis of $\text{Al}(\alpha, \text{d}_{0,1})\text{Si}^{29}$ 8=20837
stripping, modified distorted-wave Born series 8=11838
stripping, trapping-state model 8=11920
studies 8=16050
superheavy-ion, Coulomb distortion and nuclear stiffness 8=11688
T violation effect on reciprocity relation 8=11851
theory, unified, overlapping resonances calc. 8=3889
time-reversal and detailed balance using DWBA theory 8=11847
three-body problem of neutron, proton and heavy nucleus 8=3888
three-body producing, coincidence meas. 8=3903
three-particle direct reaction amplitudes, mechanism identification 8=7155
transfer during collisions with cut-off diffraction model 8=7158
transfer, Feynman diagram technique 8=11852
2N transfer (pick-up), N pair corrl. effect 8=16053
2N transfer in n particle 2 j-shell model 8=15923
2s-1d shell nuclei, reduced width of levels, calc. using projected HF wave functions 8=11802
vacuum chamber for investigations 8=11846
wave functions for mixed reactions and Raich algebra of $\text{SU}(14)$ 8=3779
(a, by) and (a, by- γ), total and differential cross-sections 8=7154
A(x, yz)B, residual nuclei spin obs., polarized target 8=3898

Nuclear reactions—contd

- Ca^{40} , spectroscopic factors for pickup reactions in shell model, anomalies 8=11854
 $\text{Be}^9(\text{He}^6, \alpha)\text{Be}^{11}$, cross section 8=3964
 $(\text{NH}_4)_2[\text{OsCl}_6]$, use in expts concerning nucleus 8=16044
Ni isotopes, 2N transfer reactions 8=3814
chemical effects
See also Chemical effects of radiations/ionizing radiations.
cosmochemistry 8=23472
 $\text{Br}^{81}(\text{n}, \gamma)\text{Br}^{82\text{m}}$ in liq. bromobenzene 8=18752
 $\text{Br}^{82\text{m}}(\text{I. T.})\text{Br}^{82}$ in liq. bromobenzene 8=18752
 $\text{Te}^{127\text{m}} \rightarrow \text{Te}^{127}$ in $\text{Te}^{127}(\text{OH})_6$ crvsts. 8=18751
Nuclear reactions due to alpha-rays
 α -d, 1 MeV and the 2.19 MeV level of Li^6 8=20675
($\alpha, 2\alpha$) and reactions at medium-energy and alpha-clustering correlations in light nuclei 8=1055
($\alpha, 2\alpha$), 25 MeV, α -cluster model 8=11942
(α, n) reactions on medium to heavy nuclei, energy distrib. of emitted n 8=7232
nuclei about A = 60, 24.7 MeV, cross section by transmission method 8=7237
in stellar surface layers, rel. to abundance anomalies in peculiar A stars 8=5871
 $\text{Al}^{27}(\alpha, \text{d}_{0,1})\text{Si}^{29}$, 18.7 MeV DWBA, knockout and stripping models 8=20837
 $\text{Ar}^{36,38}(\alpha, \gamma)\text{Ca}^{40,42}$, 3-6 MeV, resonances 8=3967
 $\text{B}^{10}(\alpha, \text{p}_0)\text{C}^{13}$, excitation functions and p ang. distrib. 8=7236
 $\text{B}^{10,11}(\alpha, \text{d})\text{C}^{12,13}$, at ~ 25 MeV, ang. distrib. 8=1100
 $\text{Be}^9(\alpha, 2\alpha)$, reaction model with α cluster in nucleus 8=11942
 $\text{Be}^9(\alpha, \text{B}^8)\text{HF}$, H $^+$ unbound to particle emission 8=11659
 $\text{Be}^9(\alpha, \text{n})\text{C}^{12}$, stellar rates of 8=19131
 $\text{C}^{12}(\alpha, \text{Be}^9)\text{Be}^8$, O^6 8 particle-8 hole rotational band 8=7075
 $\text{C}^{12}(\alpha, 2\alpha)$, reaction model with α cluster in nucleus 8=11942
 $\text{C}^{12}(\alpha, \text{n})\text{O}^{15}$, T = $\frac{3}{2}$ states of F^{17} , calibration point 8=3799
 $\text{C}^{12}(\alpha, \text{p}_0)\text{N}^{15}$, excitation functions and p ang. distrib. 8=7236
 $\text{C}^{13}(\alpha, \text{n})\text{O}^{16}$, stellar rates of 8=19131
 $\text{Ca}^{40}(\alpha, \text{d})\text{Sc}^{42}$, at 24.7 MeV, d spectra 8=3968
 $\text{Cl}^{35}(\alpha, \text{p}_1)\text{Ar}^{38}$, lifetimes of states of Ar^{38} 8=11738
 $\text{Cl}^{35}(\alpha, \text{p}_1)$, 10.6 MeV and levels of Ar^{38} 8=3804
 $\text{Cu}^{65}(\alpha, \text{n})\text{Ga}^{68}$, gamma ray ang. distrib. 8=11948
 $\text{F}^{19}(\alpha, \text{n})\text{Na}^{22}$, polarization of γ de-excitation rel. to nuclear structure of Na^{22} 8=15961
 $\text{F}^{19}(\alpha, \text{n})\text{Na}^{22}$, 3.5-5.5 MeV for meas. of level lifetimes 8=11729
 $\text{F}^{19}(\alpha, \text{n})\text{Na}^{22}$, 4-7 MeV, γ -ray transitions 8=3801
 $\text{F}^{19}(\alpha, \text{n})\text{Na}^{22}$, 5.1 MeV and states of Na^{22} 8=20690
 $\text{Fe}^{54}(\alpha, \text{p})\text{Co}^{57}$, 10.5, 11 MeV for levels of Co^{57} 8=15978
 $\text{Fe}^{56}(\alpha, \text{p})\text{Co}^{59}$, inverse reaction cross-section to $\text{Ni}^{62}(\text{p}, \alpha)\text{Co}^{59}$ 8=3900
 He^4 and Li^4 products, excited states 8=15953
 $\text{Li}^6, ^7(\alpha, 2\alpha)$, reaction model with α cluster in nucleus 8=11942
 $\text{Li}^7(\alpha, \gamma)\text{Be}^{11}$ excited states of Be^{11} 9.5-11 MeV obs. 8=11721
 $\text{Li}^7(\alpha, \text{n})\text{B}^{10}$ for cross-section meas. in $\text{B}^{10}(\text{n}, \alpha)\text{Li}^7$ 8=11900
 $\text{Mg}^{20}(\alpha, \gamma)\text{Mg}^{24}$, 3-6 MeV, levels deduced for Mg^{24} 8=16121
 $\text{Mg}^{24}(\alpha, \gamma)\text{Si}^{28}$, 5.3-14.5 MeV, electric dipole transition obs. 8=11944
 $\text{Mg}^{24}(\alpha, \gamma)\text{Si}^{28}$, T = $\frac{3}{2}$ states of F^{17} , calibration point 8=3799
 $\text{Mg}^{26}(\alpha, \gamma)\text{Si}^{30}$, 4.0-13.5 MeV, electric dipole transition obs. 8=11944
 $\text{Mg}^{26}(\alpha, \text{p})\text{Al}^{29}$ and levels of Al^{29} 8=20693
 $\text{Ne}^{22}(\text{He}^6, \alpha)$, Ne^{21} Nilsson model validity test, near 3 MeV 8=7077
 $\text{Ni}^{60}(\alpha, \text{n})\text{Zn}^{63}$, gamma ray ang. distrib. 8=11948
 O^{16} , reaction model with α cluster in nucleus 8=11942
 $\text{O}^{16}(\alpha, \text{d})\text{F}^{18}$, two-nucleon transfer reaction, finite size effect 8=3952
 $\text{Os}^{192}(\alpha, \text{p})\text{Ir}^{195}$, levels and decay scheme 8=11827
 $\text{Pb}^{208}(\alpha, \text{t})\text{Bi}^{209}$, Bi^{209} single-p states rel. to $82 < 2 < 126$ shell 8=998
 $\text{Pt}^{194}(\alpha, 3\text{n})\text{Hg}^{195} \rightarrow \text{Au}^{195}$, stacked foil meas. 8=1066
 $\text{Si}^{28}(\alpha, \gamma)\text{S}^{32}$ 3.7-4.3 MeV, levels of S^{32} 8=963
 $\text{Si}^{28}(\alpha, \gamma)\text{S}^{32}$, 7-12 MeV, giant dipole resonance inhibited 8=11944
 $\text{Si}^{30}(\alpha, \text{p})\text{P}^{33}$ and levels of P^{33} 8=20693
 $\text{Ta}^{181}(\text{He}^6, 2\text{n})\text{Re}^{183}$, 19.8 MeV, levels of Re^{183} obs. 8=20729
 $\text{Tl}^{203, 205}(\alpha, \text{t})\text{Pb}^{204, 206}$, $\text{Pb}^{204, 206}$ transitions to ground and 2 $^+$ states obs. 8=20838
 $\text{Y}^{89}(\alpha, 3\text{n})\text{Nb}^{90\text{e}}$, $^{90\text{m}}$, cross-sections and isomeric ratios 8=1101
cosmic rays
See also Cosmic rays/effects and interactions.
Fermi gas model not confirmed by 10^8 BeV obs. 8=20777
graphite, electron shower energy spectra 8=16059
nucleons distrib. and fraction of primary energy transferred to photons 8=16103
 π -nuclei, distrib. and fraction of primary energy transferred to photons 8=16103
 π^0 prod. obs., high energy 8=20618
pions and protons, 100 to 1000 BeV energy, installation for study 8=15881

Nuclear reactions due to—contd**cosmic rays—contd**

- primary protons, inelastic cross-section with air nuclei 8=16075
 shower electrons in Cu, Fe, Al and graphite, calc. of integral spectra 8=16059
 Al, electron shower energy spectra 8=16059
 Cu, electron shower energy spectra 8=16059
 Fe, electron shower energy spectra 8=16059
 Pb nuclei, first interact, fraction of primary energy transferred to π^0 mesons 8=20841

deuterons

- d + nucleus interaction theory 8=11919
 (d, α), odd-odd nuclei, J, π , and T of unknown levels 8=16109
 (d, n), two nucleon transfer reaction, finite size effect, 8=3952
 (d, 2n) reactions with A ~ 100, half-life of Mo⁹³ 8=1014
 (d, p), analysis 8=16108
 (d, p) anomalous stripping, polarization and angular correl. selection roles 8=20821
 (d, p), J dependence for l = 1 N transfer 8=11922
 (d, p), extrapolation to Butler pole to determ. reduced widths 8=20818
 (d, p) leading to bound states in 1p shell, ang. distrib., DWBA and shell-model calc. 8=11921
 (d, p) reactions, j-dependence for 2p neutron transfer 8=20819
 (d, p) reaction in 1p shell, DWBA and shell model analyses compared 8=11921
 (d, p), two-nucleon transfer reaction, finite size effect 8=3952
 even rare-earth nuclei, (d, p) excitation of γ vibrational states 8=3782
 isotopic invariance, violation 8=1088
 in living tissue, observed in emulsion 8=3891
 on nickel foil, study of Co^{58m} \rightarrow Co^{58g} gamma decay 8=1011
 polarization effects in (d, p) reactions 8=1087
 recoil-charged from 14.5 MeV n, average cross-section 8=16072
 stripping, analysis avoiding objections to DWBA 8=16106
 stripping reaction, analysis of outgoing proton polarization 8=16107
 stripping reactions on deformed nuclei 8=7224
 stripping with spin-orbital distortion, angular distrib., polarization effects meas. 8=20820
 trapping-state model for stripping 8=11920
 Ag¹⁰⁶(d, 2n)Cd¹⁰⁹, at 21 MeV, yield 8=1014
 Al²⁷(d, α)Mg²⁵, excitation cross section rel. to Mg²⁵ rotational partitions 8=20828
 Al²⁷(d, n)Si²⁸, isobaric analogue states 8=7080
 Ar^{90, 92, 94, 96}(d, He³)Y^{89, 91, 93, 95}, 34.4 MeV, residual $\frac{1}{2}^-$ ground state in Y and shell model 8=20830
 Au, d disintegration ang. distrib. of p, n, rel. to Coulomb and nuclear forces 8=11934
 B¹⁰(d, $\alpha\alpha$) α , 0.6, 0.9, 1.45, 1.9 MeV, sequential process obs. 8=11718
 B¹⁰(d, 2 α) α , sequential decay via C¹², Be⁸ 8=16111
 B¹⁰(d, 3 α), 270 keV 8=1090
 B¹⁰(d, d₁)Be⁸ 8=16112
 B¹¹(d, n)C¹², 6 MeV, levels of C¹² 8=7073
 B¹¹(d, p)B¹², 1.70, 3.13 MeV, spin assignments to levels of B¹² 8=20679
 B¹¹(d, p)B¹², polarization of B¹² meas. by β -decay in stopping foil 8=3955
 B¹¹(d, p₁)B¹² rel. to γ decay of excited states of B¹² 8=20678
 Ba¹³⁸(d, p), 12 MeV, optical model parameters 8=1096
 C, d disintegration ang. distrib. of p, n, rel. to Coulomb and nuclear forces 8=11934
 C¹²(d, He³)B¹¹, two-step mechanism, 28-50 MeV 8=20825
 C¹²(d, He³)B¹¹, 52 MeV, energy and ang. distrib. of He³ 8=7228
 C¹²(d, np)C¹², 5.4 and 6.0 MeV, n-p ang. and energy correl. 8=7225
 C¹²(d, p)C¹³, 2.8 MeV, trapping-state model 8=11920
 C¹²(d, p)C¹³, 3.09 MeV to test determ. of reduced widths from Butler pole 8=20818
 C¹³(d, p)C¹⁴, 4-6 MeV, obs., optical model and DWBA analysis 8=16113
 Ca⁴⁰(d, α)K³⁸, 9.2 MeV, ang. distrib. of α 8=7230
 Ca⁴⁰(d, n)Sc⁴¹, 5-6.5 MeV, using optical model parameters from d scatt. 8=16118
 Ca⁴⁰(d, p)Ca⁴¹, applic. of general (d, p) theory 8=16108
 Ca⁴⁰(d, p)Ca⁴¹, 5-6.5 MeV using optical model parameters from d scatt. 8=16118
 Cd¹¹⁴, (d, p), 12 MeV, high resolution studies 8=11933
 Ce¹⁴⁰, (d, p), 12 MeV, optical model parameters 8=1096
 Ce¹⁴⁰(d, p)Ce¹⁴¹ (g. s. f_{7/2}), anomaly rel. to charge exchange effects 8=11755
 Cl³⁵(d, 2 α)Si²⁹, 9-12 MeV, double evaporation 8=11927
 Cl³⁵(d, 2p)S³⁵, 14.5 MeV, single and double evaporation 8=11926
 Cl³⁷(d, He³)S³⁶, positive parity S³⁶ levels obs. 8=20696
 Cr⁵⁰(d, α)V⁴⁸, 7 MeV, level obs. on V⁴⁸, in terms of shell model 8=20702
 Cr⁵⁴(d, p)Cr⁵⁵ at 12 and 6.8 MeV 8=11928
 Cu, d disintegration ang. distrib. of p, n, rel. to Coulomb and nuclear forces 8=11934
 Cu⁶⁵(d, p)Cu⁶⁶, anomalous γ -rad. 8=3960
 F¹⁹(d, α)O¹⁷, 0.9-4.25 MeV, 2l = 1 rule obs. 8=16115

Nuclear reactions due to—contd**deuterons—contd**

- F¹⁹(d, α)O¹⁷, 20.9 MeV, obs., evidence for n-p pair pickup 8=20827
 F¹⁹(d, Li⁶(Be⁹))N¹³(C¹²), 7.5-13.0 MeV DWBA and α -particle pick-up fits 8=3957
 F¹⁹(d, n)Ne¹⁰, 2.98 MeV analog state of F²⁰ 8=20688
 F¹⁹(d, p₁)F²⁰, 1.6 MeV, γ -p ang. correl. rel. to interaction mechanism 8=16116
 Fe⁵⁴(d, α)Mn⁵², 7 MeV and the levels of Mn⁵² 8=20703
 Fe⁵⁶(d, p)Fe⁵⁷, Q-value evaluation of the atomic masses of Fe^{56, 57} 8=21017
 Gd^{70, 72}(d, p), Gd^{71, 73} levels obs. 8=7087
 Gd^{155, 157, 159} in (d, p) and (d, t) reactions, transitions between spherical and deformed potentials 8=11770
 Ge(d, α)Ga⁶⁸, \leq 14.1 MeV excitation function meas. and compared to Peaslee theory 8=11930
 Ge(d, 2n)As⁷⁰, \leq 14.1 MeV excitation function meas. and compared to Peaslee theory 8=11930
 Ge(d, n)As⁷¹, \leq 14.1 MeV excitation function meas. and compared to Peaslee theory 8=11930
 Ge⁷⁰(d, p)Ge⁷¹, \leq 14.1 MeV excitation function meas. and compared to Peaslee theory 8=11930
 Ge⁷⁰(d, p)Ge⁷¹, 7.5 MeV 8=11931
 (d, He³), low binding energy of p-shell protons calc. 8=10650
 In¹¹⁵, (d, p), 12 MeV, high resolution studies 8=11933
 K⁴¹(d, α)Ar³⁹, 7.5 MeV bombarding energy, Ar³⁹ energy levels 8=20699
 Li⁷(d, n) α , 180 keV, sequential decay model 8=7226
 Li⁷(d, n)2 α , 2 MeV, coincidence meas. 8=3903
 Li⁷(d, n)Be⁸, n detection with organic scintillators 8=6963
 Mg²⁴(d, n)Al²⁵, 1.38-2.8 MeV, n group analysis 8=11923
 Mg²⁴ + d \rightleftharpoons Mg²⁵ + p test of time-reversal invariance 8=11924
 Mo⁹²(d, np)Mo⁹², analog states of Mo⁹³ 8=1095
 Mo^{92, 94}(d, p)Mo^{93, 95} (g. s. d_{5/2}), anomaly rel. to charge exchange effects 8=11755
 Mo⁹⁷(d, p)Mo⁹⁸, 10-12 MeV rel. to states of Mo⁹⁸ 8=11756
 N¹⁴(d, α)C¹², 28.5 MeV meas. 8=3962
 N¹⁴(d, α)C¹², E_d = 2.3-5.8 MeV, angular distributions obs. 8=16114
 N¹⁴(d, α)C^{12*}, E_d = 2.3-5.8 MeV, angular distributions obs. 8=16114
 N¹⁴(d, He³)C¹³, 52 MeV, energy and ang. distrib. of He³ 8=7228
 N¹⁴(d, n)O¹⁵, 3.1-3.7 MeV, n polarization 8=3956
 N¹⁴(d, t)N¹³, 52 MeV, energy and ang. distrib. of tritons 8=7228
 N¹⁵(d, α)C¹³, 20.9 MeV obs. 8=20827
 N¹⁵(d, n)O¹⁶, 6 MeV, levels of O¹⁶ 8=7073
 N¹⁵(d, n₀)O¹⁶, rel. to ang. depend. of n polarization 8=7227
 Na²³(d, n)Mg²⁴, 2.98 MeV analog state of Na²⁴ 8=20688
 Nb⁹³(d, 2n)Mo⁹³, at 21 MeV, yield 8=1014
 Nd^{142, 144, 146}, (d, p), 12 MeV, optical model parameters 8=1096
 Nd¹⁵⁰(d, p)Nd¹⁵¹, levels of Nd¹⁵¹ 8=11767
 Ne²⁰(d, p)Ne²¹, high resolution detector 8=6663
 Ne²¹(d, α)F¹⁸, high resolution detector 8=6663
 Ne²²(d, t)Ne²¹(d, He³)F²¹, to determ. mass in T = $\frac{3}{2}$ state 8=20656
 Ni⁵⁸(d, α)Co⁵⁶, 7 MeV and level structure of Co⁵⁶ 8=20706
 Ni⁶⁰(d, p)Ni⁶¹, 197 levels below 7.051 MeV 8=3815
 Pb(d, p) isobaric spin forbidden effects 8=20800
 Pb²⁰⁶(d, p)Pb²⁰⁷, 3.62 and 4.29 MeV states particle configurations obs. 8=3840
 Pb²⁰⁷(d, p₀)Pb²⁰⁸ at 10 MeV, proton-gamma coincidences 8=11935
 Pb²⁰⁷(d, t)Pb²⁰⁶, 21.6 MeV, levels of Pb²⁰⁶ 8=20730
 Pb²⁰⁸(d, p₁), Pb²⁰⁹ particle-vibration coupling expt. evidence 8=3841
 Pd¹¹⁰(d, p)Pd¹¹¹ level obs. 8=7087
 Pt¹⁹⁵(d, 2n)Au¹⁹⁵, stacked foil meas. 8=1066
 Pu²⁴⁰(d, f), prompt fission spectrum of Am²⁴² 8=16131
 Pu²⁴²(d, 2n)Am^{242m}, fission spectrum 8=16131
 Rb⁸⁵(d, 2n)Sr⁸⁵, at 21 MeV, yield 8=1014
 Rh, d disintegration ang. distrib. of p, n, rel. to Coulomb and nuclear forces 8=11934
 S^{32, 34}(d, He³)P^{31, 33} and levels of P^{31, 33} 8=20693
 Si²⁸(d, α)Al²⁶, 6.98-11.06 MeV excitation functions for levels of Al²⁶, isospin selection rule 8=20829
 Si²⁸(d, He³)Al²⁷, 34.4 MeV and levels of Al²⁷ 8=20692
 Si²⁸(d, n)P²⁹, 3 MeV, n- γ ang. correls., states of P²⁹ 8=16117
 Si²⁸(d, p)Si²⁹, modified distorted-wave Born series 8=11838
 Si²⁸(d, p)Si²⁹, non commutative correction terms 8=1091
 Si²⁸(d, p)Si²⁹, orthogonality of initial and final wave functions 8=1092
 Si²⁸(d, p)Si²⁹ to test determ. of reduced widths from Butler pole 8=20818
 Si³⁰(d, He³)Al²⁹ and levels of Al²⁹ 8=20693
 Si³⁰(d, t)Si²⁹, n configuration of Si³⁰ 8=3959
 Si³⁰(d, p)Si³¹, 7.10 MeV, spectroscopic factors, DWBA calc. 8=11925
 Sm^{147, 149}, (d, t) and (d, p) reactions, 12 MeV 8=987
 Sr⁸⁸(d, p)Sr⁸⁹, 7.0 MeV, levels of Sr⁸⁹ 8=11932
 Tb¹⁵⁹(d, 2n)Dy¹⁵⁸, effective cross sections E_d = 6-26.9 MeV 8=16119
 Tb¹⁵⁹(d, 4n)Dy¹⁵⁷, effective cross sections E_d = 6-26.9 MeV 8=16119

Nuclear reactions due to—contd
Deuterons—contd

- Tb¹⁵⁹(d, p)Tb¹⁶⁰, effective cross sections
 $E_d = 6-26.9$ MeV 8=16119
 Te(d, n, 2n)Te^{131, 130}, ≤ 14.1 MeV excitation function meas. and compared to Peaslee theory 8=11930
 Te¹²⁸(d, p)Te¹²⁹, 7.5 MeV, 87 levels of Te¹²⁹ 8=3961
 Te¹³⁰(d, p)Te¹³¹, 7.5 MeV, Te¹³¹ energy levels 8=984
 Te¹³⁰(d, p)Te¹³¹, ≤ 14.1 MeV excitation function meas. and compared to Peaslee theory 8=11930
 Th¹⁰³(d, 2n)Pd¹⁰³, at 21 MeV, yield 8=1014
 Ti(d, p), improved agreement with new pot. 8=20823
 Zn^{64, 66, 68, 70}(d, p), 10 MeV, spectroscopic factors 8=11929
 Zr(d, 2n)Nb⁹⁸, ≤ 14.1 MeV excitation function meas. and compared to Peaslee theory 8=11930
 Zr(d, 3n)Nb⁹⁸, ≤ 14.1 MeV excitation function meas. and compared to Peaslee theory 8=11930
 Zr⁹⁰(d, 2n)Nb^{90m}, influence of chemical binding on half-life of Nb^{90m} 8=16024
 Zr^{92, 94}(d, p)Zr^{93, 95}(g.s. d_{5/2}), anomaly rel. to charge exchange effects 8=11755
 Zr⁹⁴(d, p)Zr⁹⁵(S_{1/2}), anomaly rel. to charge exchange effects 8=11755
 Zr⁹⁶(d, n)Nb⁹⁷, ≤ 14.1 MeV excitation function meas. and compared to Peaslee theory 8=11930
 Zr⁹⁶(d, p)Zr⁹⁷, ≤ 14.1 MeV excitation function meas. and compared to Peaslee theory 8=11930

electrons

- capture rel. to KX ray- γ direction correl. 8=20739
 (e, e'p), rel. to low-lying shells obs. 8=20659
 e⁻ + Be⁷ effect on solar ν flux 8=10405
 Bi(e, n), study of n energy spectra and ang. distrib. 8=11867
 C¹²(e, ep)B¹¹, Born approx. and DWIA calc. compared 8=7175
 Cu, positron spectrum obs., 31.5 MeV 8=20392
 K⁴⁰, K capture 8=7176
 Lu¹⁷⁴ isomers, electron capture disintegration energies 8=11776
 Ni⁵⁶ and Ni⁵⁷, electron capture ratio using dicylopentadienyl nickel 8=3914
 O¹⁶, O⁺ state monopole excitation at 6.056 MeV 8=3798
 Pb(e, n), study of n energy spectra and ang. distrib. 8=11867
 U(e, n), study of n energy spectra and ang. distrib. 8=11867
 U, natural, fission product yields using 1.5 and 3.0 GeV electrons 8=11972
 W(e, n), study of n energy spectra and ang. distrib. 8=11867

gamma-rays. See Nuclear reactions due to/photons.

heavy ions. See Nuclear reactions due to nuclei of Z > 2.

helium-3

- (He³, p γ) total and differential cross sections 8=7154
 (He³, d), modifications due to t, T interactions 8=11938
 (He³, n), study of level schemes of Si²⁸, S³⁰, A³⁴, and Ti⁴² 8=20694
 T = $\frac{3}{2}$, from F¹⁹(He³, n) obs. 8=20689
 Ag, 29 MeV, total cross section compared with optical and geom. models 8=11937
 Al, 29 MeV, total cross section compared with optical and geom. models 8=11937
 Al²⁷(He³, α)Al²⁸, 10 MeV, excited states of Al²⁶ 8=11945
 Al²⁷(He³, d)Si²⁸, 37.7 MeV rel. to level structure of Si²⁸ 8=15963
 B¹⁰(He³, p)C¹² (1⁺, 12.71 MeV) + p \rightarrow 3 α + p 8=1006
 Be⁹(He³, α)Be⁸ (16.92) \rightarrow α + α , ang. correl. obs., Be⁸ 16.82 assigned J π = O⁺ 8=20834
 Be⁹(He³, p γ)B¹¹, 3, 4 MeV and levels of B¹¹ 8=20681
 B¹⁰(He³, He³)B⁷, for study of B⁷ ground state 8=11720
 B¹⁰(He³, α , p α)B⁹, Be⁸ and levels of B⁹ rel. to mirror props. of Be⁹, B⁹ 8=20676
 B¹¹(He³, α)B¹⁰, 15, 16 MeV, states of B¹⁰ 8=951
 C¹²(He³, $\alpha\gamma$)C¹¹, $\alpha\gamma$ correls. C¹¹ energy levels 8=953
 C¹²(He³, $\alpha\gamma$)C¹¹, 4-12 MeV and levels of C¹¹ 8=20681
 C¹²(He³, p γ)N¹⁴, 8.92 MeV, levels of N¹⁴, p, γ -decay widths 8=11724
 C¹²(He³, p γ)N¹⁴, p γ correls., N¹⁴ energy levels 8=953
 C¹³(He³, α)C¹², differential cross section, resonance J π = 3⁻, T = O, corres. to 27.6 MeV state in O¹⁶ 8=3795
 C¹³(He³, n)O¹⁴, 2.24-3.70 MeV, polarization of n 8=3965
 C¹⁴(He³, p)N¹⁶, study of T = 2 states in N¹⁶ 8=20683
 Ca⁴²(He³, d)Sc⁴³, energy levels obs., 16.5 MeV 8=7084
 Co⁵⁹(He³, d)Ni⁶⁰, 37.7 MeV, optical pot. fit, level structure of Ni⁶⁰ 8=15981
 Co⁵⁹(He³, p)Ni⁶¹, 11.65 MeV, structure of Ni⁶¹ 8=15980
 Cr⁵⁰(He³, p)Mn⁵², 12 MeV and the levels of Mn⁵² 8=20703
 Cr⁵²(He³, d)Mn⁵³, 10, 11, 12 MeV and levels of Mn⁵³ 8=3808
 Cu, 29 MeV, total cross section compared with optical and geom. models 8=11937
 Cu^{63, 65}(He³, d)Zn^{64, 66}, 18 MeV, levels of Zn^{64, 66} 8=3970
 F¹⁹(He³, B¹⁰)C¹², 7.5-13.0 MeV DWBA and α -particle pick-up fits 8=3957
 F¹⁹(He³, n)Na²¹, T = $\frac{3}{2}$, Na²¹ levels obs. 8=20689
 Fe, 29 MeV, total cross section compared with optical and geom. models 8=11937
 Fe⁵⁴(He³, d)Co⁵⁵, 10, 11, 12 MeV and levels of Co⁵⁵ 8=3808
 Fe⁵⁴(He³, p)Co⁵⁶, 12 MeV and level structure of Co⁵⁶ 8=20706
 Ge, activation meas. of oxygen conc. 8=18083

Nuclear reactions due to—contd

helium-3—contd

- K³⁹(He³, d)Ca⁴⁰, 14 MeV, nuclear transitions Gillet-Sanderson predictions anomaly 8=15971
 K³⁹(He³, p)Ca⁴¹, 13 MeV, Ca⁴¹ even-parity states 8=966
 K⁴¹(He³, p)Ca⁴³ at 13.0 MeV, proton hole states in Ca⁴³ 8=11742
 Li⁶(He³, d, γ)Be⁷, 8, 10, 14, 18 MeV cross-sections meas. for ground and first excited states using optical parameters from Li⁶-He³, Li⁷-d scatt. 8=20833
 Li⁶(He³, n)B⁶, 4-5.7 MeV and cluster structures of Li⁶ and B⁶ 8=1099
 Li⁷(He³, γ)B¹⁰, 3-6 MeV, strong resonance obs. 8=11943
 Li⁷(He³, p)Be⁹, 1.25 MeV and levels of Be⁹ 8=20676
 Mg, 29 MeV, total cross section compared with optical and geom. models 8=11937
 Mg²¹(He³, He³) reaction to determ. mass in T = $\frac{3}{2}$ state 8=20656
 Mg²⁴(He³, $\alpha\gamma$)Mg²³, 9.00 MeV and levels of Mg²³ 8=11730
 Mg²⁵(He³, α)Mg²⁶, 4-6 MeV, excitation functions obs., statistical fluctuation analysis 8=20836
 Mg²⁵(He³, d)Al²⁶, 12 MeV states of Al²⁶ obs. 8=16122
 Mg²⁵(He³, d)Al²⁶, unified model 8=16122
 Mg²⁶(He³, α)Mg²⁵, statistical fluctuation analysis 8=20836
 Mg^{26, 26}(He³, α), 5.5 MeV, finite value of spin cut-off parameter 8=16123
 N¹⁴(He³, α)N¹³, 13.9 MeV, levels of N¹³ 8=20835
 N¹⁵(He³, n)F¹⁷, lowest T = $\frac{3}{2}$ states of F¹⁷ 8=3799
 Ne²⁰(He³, n)Mg²², e⁺ decay, branching 8=3866
 Ne²⁰(He³, p γ)Na²², 6.56 MeV, γ -ray branching 8=3801
 Ne²²(He³, d)Na²³, 10, 12 MeV, levels of Na²³ 8=3802
 Ni, 29 MeV, total cross section compared with optical and geom. models 8=11937
 Ni⁵⁸(He³, p)Cu⁶⁰, 13.0 MeV, Cu⁶⁰ level scheme 8=11946
 Ni⁶²(He³, d)Cu⁶³, 11.0 MeV, levels of Cu⁶³ 8=11947
 O¹⁶(He³, p γ)F¹⁸ for determination of spin of 1.131 MeV level of F¹⁸ 8=3800
 Pb²⁰⁸(He³, d)Bi²⁰⁹, Bi²⁰⁹ single proton strengths in multiplet at 2.6 MeV 8=11787
 S³²(He³, α)S³¹, 7.6 MeV, α -ray ang. distrib. meas. 8=3966
 Si, activation meas. of oxygen conc. 8=18083
 Si²⁸(He³, α)Si²⁷, first and second excited states of Si²⁷ 8=7082
 Si²⁸(He³, $\alpha\gamma$)Si²⁷ and energy levels of Si²⁷ 8=3803
 Si³⁰(He³, α)Si²⁹, n configuration of Si³⁰ 8=3959
 Sn^{116, 118, 120}(He³, d) 8=3971
 Ti^{46, 48, 50}(He³, d) at 10 MeV 8=969
 Ti⁴⁶(He³, p)V⁴⁸, 12 MeV, obs. of levels in V⁴⁸, angular momentum transfer in shell model calc. 8=20702
 Ti⁴⁸(He³, d)V⁴⁹, 17 MeV levels obs. up to 8.7 MeV 8=20701
 Ti⁴⁸(He³, d)V⁴⁹, 18 MeV, level structure of V⁴⁹ 8=11750
 Ti⁵⁰(He³, d)V⁵¹, 10, 11, 12 MeV and levels of V⁵¹ 8=3808
 Y⁸⁹(He³, d)Zr⁹⁰, T_c single-proton single-proton hole states in Zr⁹⁰ 8=3818

mesons

 (π^- , N) interacts., momentum spectra of secondary p and π 8=1085
 π^- absorpt. 2N emission obs. and compared to theory 8=11913
 π^- + polyethylene, π^+ prod. at 0°, 2-6 BeV/c 8=16104
 (π^+ , 2p), on freon nuclei, at 40-80 MeV 8=1028
 π^+ -nuclei in emulsion, double charge exchange total cross sections, 40-176 MeV 8=7216
 spallation hypernuclei, by 6 GeV/c K⁻ on heavy emulsion 8=3949
 Ar, K⁺, Λ^0 (Σ^0) prod. cross sections, 120 MeV 8=11917
 Be(π^-), π^+ prod. at 0°, 2-6 BeV/c 8=16104
 C¹², π probes of structure 8=7052
 C¹², π^- absorpt., calc. of W(pn \rightarrow nn)/W(pp \rightarrow pn), test of Brueckner theory 8=20654
 C(π^-), π^+ prod. at 0°, 2-6 BeV/c 8=16104
 C¹²(π^- , n⁴)B⁸ 8=11915
 C¹²(π^- , He³n)Li⁸ + n, reaction probability (2-10) $\times 10^{-4}$ 8=11916
 C¹²(π^- , π^-)C¹¹, cross-section calc. including momentum depend. transfer factors 8=16105
 Cu, K⁺, (Σ^0) prod. cross sections, 120 MeV 8=11917
 Cu(π^-), π^+ prod. at 0°, 2-6 BeV/c 8=16104

Nuclear reactions due to—contd

mesons—contd

- He⁸ production from π^- , K⁻ interactions with emulsion nuclei 8=892
 Li⁸, π^- capture rel. to nucleon clusters 8=11865
 Li⁸, rate-meas. on radiative pion capture 8=16066
 N¹⁴(π^- , Li⁸)Li⁸ 8=11916
 O and light nuclei, π^- capture 8=7221
 O¹⁶, π change-exchange scatt., cross-section calc. 8=3950
 O¹⁶, π probes of structure 8=7052
 O¹⁶ radiative π -capture rates rel. to giant resons. 8=955
 O¹⁶(π^- , Be⁷n)Li⁸, reaction suppressed 8=11916
 Pb, K⁻, π^0 prod. cross sections, 120 MeV 8=11917
 Pb(π^-) π^+ prod. at 0°, 2-6 BeV/c 8=16104
 Xe, π^- , $\omega^0 \rightarrow \pi^0\gamma$ obs., 9 GeV/c beam 8=6904

muons

- asymm. of recoil nuclei 8=15740
 capture, ν and γ -quanta correl. 8=7177
 electron pair production in medium and low Z elements 8=7178
 μ pair prod. by cosmic ray μ 8=15909
 μ^- capture, Siegent's theorem 8=11871
 nuclei, capture rel. to radiative π absorpt. 8=20775
 ν - γ ang. correl. det. from Doppler broadening of γ 8=16065
 ν and γ directions correl. formula 8=11870
 nuclei capture, total probability relativistic effect var. 8=11869
 p spectra, CVC theory anomaly 8=11872
 telescope for μ reactions, rejection of stops 8=1048
 B¹⁰ capture, ν and γ -quanta correl. 8=7177
 B¹⁰, correlation of capture 8=11870
 B¹¹ \rightarrow B¹¹ capture rate rel. to inversion of shell model states in Be¹¹ 8=11873
 Ca⁴⁰, capture rate calc. in hole-particle model 8=3916
 F(ν), corrections to Fermi gas model for finite nuclear size 8=20648
 Li⁸, rate-meas. on capture 8=16066
 Li⁸, total capture rate assuming nuclear clustering 8=3915
 N¹⁴ capture, ν and γ -quanta correl. 8=7177
 N¹⁴, correlation of capture 8=11870
 O¹⁶ \rightarrow N¹⁶, pseudoscalar coupling effects 8=11873
 Pb, μ trident prod. obs., 12 BeV, rel. to μ statistics 8=20392

neutrinos

- Cl³⁷ solar ν capture rate and low energy nuclear cross-sections 8=23718
 PCAC hypothesis tested rel. to π cross-section 8=11862
 pion production threshold, current algebra calc. 8=751

neutrons

- See also Nuclear fission.
 activation cross-sections for fast n, comments on calc. from 0.5 to 2 MeV 8=7201
 capture data at stellar temps. 8=5872
 capture, radiative, spectrometer 8=6785
 cellulose nitrate target, fast neutron detection 8=11619
 complex nuclei, single N transfer, cross-section 8=16127
 cross-section meas., thermostat 8=11893
 cross sections, total, and giant resonances 8=1067
 deuterium capture, cross-section 8=6988
 Doppler-broadening of resonances, note on temp.-invariance of integrals 8=7202
 fission isomer prod. by (n, γ) reactions 8=20847
 in foils irradiated in reactor beam, rig for meas. of emitted disintegrating nuclei 8=4031
 γ rays, prompt, from 14 target elements and prod. processes, 14.7 MeV 8=7211
 graphite, scattering law S(α, β), values at 1300°K and 1800°K 8=11898
 inelastic scattering of 14 MeV neutrons by light nuclei 8=16050
 (n, α) activation energy for various nuclei, 13.7-14.67 MeV 8=20805
 (n, γ) in Ba¹³⁸, La¹³⁹, Pr¹⁴¹, 14.0 MeV, rel. to statistical model 8=11896
 (n, γ), β spectrometer for conversion electrons 8=11470
 (n, n, γ), (np, γ) total and differential cross sections 8=7154
 ($n, 2n$) activation energy for various nuclei, 13.7-14.67 MeV 8=20805
 ($n, 2n$) in Ba¹³⁸, Ce¹⁴⁰, Pr¹⁴¹, Nd¹⁴², Sm¹⁴⁴ 14.0 MeV, rel. to statistical model 8=11896
 ($n, 2n$), cross-section at 14 MeV, shell effect search 8=11895
 (n, p) activation energy for various nuclei, 13.7-14.67 MeV 8=20805
 (n, p), exciton model, precompound decay particles 8=16087
 (n, p) and (n, α) cross-sections at 14.8 MeV 8=1081
 (n, p) in Ba¹³⁸, La¹³⁹, Ce¹⁴⁰, Pr¹⁴¹, Nd¹⁴² 14.0 MeV rel. to statistical model 8=11896
 optical model 8=1049
 primary energy obs. 8=11874
 radiative capture, collective model including spin-orbit interaction 8=11875
 radiative capture cross-sections for 28 nuclei for 3 MeV/n 8=7200
 radiative capture, thermal, isomeric state excitation 8=11703
 resonance energies by time-of-flight methods, obs. correl. 8=3930
 scintillation tank for meas. ratio of capture and fission events 8=11958
 stars, rel. to heavy element synthesis 8=10143
 stellar synthesis of heavy elements 8=10140
 synthesis of heavy nuclei by n capture at high density 8=1068
 A(n, γ), γ -ray spectrometer meas. 8=3576
 Al²⁷(n, α)Na²⁴, cross-section fluctuation around 14 MeV 8=1077
 Al²⁷(n, α)Na²⁴, 6.1-19.4 MeV, activation cross-section rel. to U²³⁵ fission 8=3937
 Al²⁷(n, p) activation cross-section meas. 8=20810
 Am²⁴¹(n, γ)Am^{242m}, 14 ms spontaneously fissioning isomer obs. 8=1107
 Am²⁴¹(n, γ)Am²⁴², study of Am²⁴² 8=11792
 As⁷⁵(n, γ)As⁷⁶, levels of As⁷⁶ 8=20811
 As⁷⁵(n, d)Ge⁷⁴, 14.4 MeV, levels of Ge⁷⁴ compared to shell model 8=7212
 As(n, p), (n, α) cross-sections at 14.8 MeV 8=1081
 As, total cross-section, 3 to 5 MeV 8=11904
 Au, rel. to flux meas, corrections for 4 π - γ coincidence meas. 8=6966
 B in Si, determ. by irradiating with thermal neutrons 8=5765
 B, thermal absorption cross-section 8=20808
 B¹⁰(n, α)Li⁷, branching ratio and Q-value 8=20807
 B¹⁰(n, α)Li⁷, thermalized n distrib. obs. 8=852
 B¹⁰(n, α)Li⁷, 30-500 keV, cross-section from inverse reaction 8=11900
 B¹⁰, radiative capture, high sensitivity spectrometers 8=6783
 B¹¹(n, p)Be¹¹, cross-section of 7.1±2 mb 8=16072
 Ba¹³⁸(n, γ) isomeric cross sections ratio 8=16100
 Be⁹(n, α)He³ \rightarrow Li⁶, determ. of conc. and diffusion 8=8672
 Be⁹($n, 2n$)2He⁴, effective cross-section determ. 8=16089
 Bi, ($n, 2n$) effective cross-sections, meas. by Fermi-water-tank method 8=3944
 Br(n, p), (n, α) cross-sections at 14.8 MeV 8=1081
 Br⁸¹(n, γ)Br^{82m} in liq. bromobenzene, chem. effects 8=18752
 C¹², (n, α) in liquid scintill. α -p discrimination 8=1075
 C¹²(n, d)B¹² 14.5-22 MeV, excitation function for ground state 8=16090
 C¹², α , radiative capture, high sensitivity spectrometers 8=6783
 Ca isotopes activation cross-section meas. 8=20810
 Ca, total cross-section 8=7207
 Ca⁴⁰(n, α_0) ang. distrib. curves, E_a = 2.90 and 3.28 MeV 8=16094
 Ca⁴⁰(n, α_0), 5.13 MeV, ang. distrib. 8=16095
 Ca⁴⁰, (n, d) and (n, p) at 14.4 MeV 8=16096
 Ca⁴⁰(n, d)K³⁹, 14.4 MeV, levels of K³⁹ compared to shell model 8=7212
 Cd¹¹³ total cross-section 0.025-1 eV and 0.181 eV reson. params. 8=3941
 Cl³⁵(n, d)S³⁴, DWBA and spectroscopic factors, shell and collective models 8=1078
 Cl³⁵(n, d)S³⁴, 14.4 MeV, levels of S³⁴ compared to shell model 8=7212
 Cl³⁵(n, γ)Cl³⁶, crystal γ spectrometer meas. 8=11442
 Cl³⁵(n, γ)Cl³⁶, γ - γ directional correlation 8=20697
 Cl³⁵(n, γ)Cl³⁶, 2 new levels of Cl³⁶ 8=20811
 Cl³⁷, radiative capture at 0.15-1.4 MeV 8=16093
 Cr, total cross-sections, 3 to 5 MeV 8=11904
 Cu, natural, cross-section, 0.0001 eV to 15 MeV 8=11906
 Cu^{63,65}, cross-section, 0.0001 eV to 15 MeV 8=11906
 Cu⁶³(n, α)Co⁶⁰, excitation functions 8=3938
 Cu⁶³($n, 2n$)Cu⁶⁴, cross section fluctuation around 14 MeV 8=1077
 Er¹⁶⁶(n, γ)Er¹⁶⁷, thermal n-capture 8=1083
 Er¹⁶⁷, thermal neutron cross section meas. 8=11910
 F¹⁹($n, 2n$)F¹⁸, cross-section fluctuation around 14 MeV 8=1077
 F¹⁹($n, 2n$)F¹⁸, 12.7-19.4 MeV, activation cross-section rel. to U²³⁵ fission 8=3937
 Fe⁵⁴(n, γ), γ -ray spectrometer meas. 8=3576
 Fe⁵⁶, thermal-capture, γ circular polarization obs. 8=11905
 Fe⁵⁷(n, γ)Fe⁵⁸, thermal n-capture γ -ray spectrum 8=1080
 Ge, thermal capture, gamma ray spectra 8=3810
 Ge^{70,74,76}, isomeric ratios for thermal capture 8=16099
 He³ spectrometer using reaction 8=6968
 H^{17,178}(n, γ) isomeric cross sections ratio 8=16100
 Hg¹⁹⁹(n, γ)Hg²⁰⁰ γ radiation and excited states of Hg²⁰⁰ 8=11911
 Hg²⁰²(n, p)Au²⁰² half-life, β end-point energy 8=11828
 Hg²⁰⁴(n, p)Au²⁰⁴, decay of Au²⁰⁴ and lifetime 8=11828
 Ho¹⁶⁵(n, γ)Ho¹⁶⁶ cross-section rel. to U²³⁵ fission 8=3943
 Ho¹⁶⁵(n, γ), 2.5-10⁵ eV, spin assignments of Ho¹⁶⁶ resonances 8=16101
 Ho¹⁶⁵($n, 2n$)Ho^{164m}, 12.7-19.4 MeV, activation cross-section rel. to U²³⁵ fission 8=3937
 In¹¹³(n, γ)In^{114m, s}, activation energies, activation cross-section meas. 8=11909
 In¹¹³(n, n')In^{113m}, activation energies, activation cross-section meas. 8=11909

 $\text{Cf}^{251}(\text{Ni}^{62}, \text{xn})$ rel. to production of 126^{310} 8=3972
 $\text{H}^2[\text{N}^{14}, \text{O}^{15}(\text{N}^{15})]$, 30 MeV lifetime of mirror states of N^{15} and O^{15} 8=3793
 Li^6 , elastic scatt. on C^{12} at 20 MeV 8=7238
 $\text{Li}^6(\text{Li}^6, \text{n})\text{C}^{11}$, 4.1 MeV n distrib. obs. for all levels except ground state 8=11950
 $\text{Li}^6(\text{Li}^6, \text{p})\text{B}^{11}$, p ang. distrib. compared with n ang. distrib. in $\text{Li}^6(\text{Li}^6, \text{n})\text{C}^{11}$ 8=11950
 $\text{Li}^7(\text{O}^{18}, \gamma)\text{Li}^{23}$ radiative capture, resonance structure obs. 8=3974
 $\text{N}^{14}(\text{N}^{14}, \text{N}^{14})\text{N}^{15}$ virtual Coulomb excitation in nucleon transfer 8=3976
 $\text{N}^{14, 15}(\text{B}^{11}, \text{B}^{10})$, 115.9 MeV, reaction spectra, mechanism 8=11951
 $\text{Nd}^{144}(\text{C}^{12}, 7\text{n})\text{D}^{149}$, recoil range distrib. 8=1103
 $\text{Ne}^{20}(\text{B}^{11}, \text{B}^{10})$, 115.9 MeV, reaction spectra, mechanism 8=11951
 $\text{Ne}^{22} + \text{Au}$, α particle distrib. and spectra 8=11955
 $\text{Ne}^{22} + \text{Th}$, α particle distrib. and spectra 8=11955

Nuclear reactions due to—contd**nuclei of $Z > 2$ —contd**

- $O^{16}(B^{11}, B^{10})115.9$ MeV, reaction spectra, mechanism 8=11951
 $O^{16}(Li^7, t)Ne^{20}$, excitation of rotational states 8=16128
 $O^{16,18} + P^{32}$, $Z=102$ isotope production 8=1206
 $Pa^{231}(Br^{79}, s^4xn)$, rel. to production of 126^{310} 8=3972
 $Pb^{208}(O^{16}, X)Y$, 123, 163 MeV, recoil products for bombard. of Al foils 8=11952
 $Pd^{102} + C^{12}$, Te^{111} delayed proton emitter in $Pd^{102} + C^{12}$ reaction obs. 8=7137
 $Pu^{239} + C^{12}$, $Fm^{240,247}$ prod. 8=7239
 $Sm^{147} + Ar^{40}$ radioactive isotope prod. 8=7148
 $Sn(Ar^{40}, xn)$, cpd. nucleus ground-band collective levels population, γ -rays obs. 8=11953
 $Te(Ar^{40}, xn)$, cpd. nucleus ground-band collective levels population, γ -rays obs. 8=11953
 $Tm^{169} + Ne^{22}$ radioactive isotope prod. 8=7148
 $U^{238}(O^{18}, xn)$ rel. to production of 126^{310} 8=3972
 $Y^{170} + Ne^{20}$, radioactive isotope prod. 8=7148

photons

- bremsstrahlung irradi. of water, and secondary reaction $O^{18}(p, n)F^{18}$ 8=16081
 cross-section det. by statistical method 8=1033
 fission of nuclei, up to 1600 MeV 8=7169
 (γ, n) reactions, $N \approx 56$, ang. distrib. of 75 MeV neutrons 8=11857
 meson production threshold 8=1034
 meson resons. prod. on nuclei with zero spin and isospin 8=11558
 photodisintegration, theory using Franz-Stech classification e. m. multipoles 8=16056
 photodisintegration of three-particle nuclei and Majorana exchange forces 8=7162
 photofission fragments, ang. distrib., and conservation of K quantum no. 8=11964
 photoneutron liq. detector, cross section meas. 8=20560
 photonuclear cross sections rel. to low-lying shells obs. 8=20659
 π^+, K^+, p^+, e^+ prod., 16-18 GeV electron accelerator on metal targets 8=20768
 rare earth elements, photoactivation anal. with 20 MeV bremsstrahlung 8=7161
 ρ meson production on nuclei, 2.8-4.5 GeV/c 8=7164
 20 MeV bremsstrahlung, γ -ray spectra study of activation products 8=7163
 $Al^{27} \rightarrow Na^{24}$, yield, 100-1250 MeV 8=1036
 $B^{11}(\gamma, \pi^+)Be^{11}$, obs. rel. to independent particle model 8=1035
 $B^{11}(\gamma, \pi^-)C^{11}$, obs. rel. to independent particle model 8=1035
 $Be^8(\gamma, n)Be^8$, model with single-particle states coupled to core rotations 8=3907
 $Be^9(\gamma, n)Be^8$, photoneutron cross-section 8=3906
 Be^9 from core-plus-n model of $Be^9(\gamma, n)Be^8$ 8=3908
 $C(\gamma, p)$, and angular distrib. and absorption up to 170 MeV 8=11859
 $C^{12} \rightarrow C^{11}$, yield, 100-1670 MeV 8=1036
 $Co^{59}(\gamma, n)Co^{58}$, isomer ratio obs, spin cutoff parameter calc. 8=20707
 Cu^{60} , photoneutrons energy spectra time of flight obs. 8=7165
 $F^{19}(\gamma, n)$, absolute cross-section, rel. to nuclear shape 8=7167
 $Fe, (\gamma, Tn)$ cross-sections, behaviour 8=3909
 $Fe^{56}(\gamma, n)Fe^{55}$, levels of Fe^{56} 8=3811
 H liquid, π^+ photoproduction 8=15763
 He^3, H^3 photodisintegration, Cabibbo-Radicati sum rule appls. 8=695
 $I^{12m}(\gamma, xn)$, $x = 1-M$, ≤ 830 MeV, cross-sect. obs., photomeson threshold anomaly 8=11861
 $I^{127}(\gamma, xn)$ yields, redetermination 8=20770
 $Nb(\gamma, \alpha)$, α -emission energy obs. 8=1041
 $Ni^{60}(\gamma, np)Co^{58}$, isomer ratio obs, spin cutoff parameter calc. 8=20707
 $O^{16}(\gamma, \rho)O^{16}$ for partial scatt. amplitude, determ. 8=11858
 $O^{16}(\gamma, \chi)N^{13}$, cross-section and $C^{12}(\gamma, t)$ yield 8=1039
 $O^{16}(\gamma, \chi)C^{12}$, cross-section and $C^{12}(\gamma, t)$ yield 8=1039
 $O^{16}(\gamma, p)$ and (γ, n) , resonance widths 8=1038
 O^{16} photodisintegration 8=7166
 O^{16} photoneutrons energy spectra time of flight obs. 8=7165
 P^{31} , photoneutrons energy spectra time of flight obs. 8=7165
 $Pr^{141}(\gamma, n)Pr^{140}$, cross-section calc. from e^+ decay of Pr^{140} 8=16060
 $S^{32}(\gamma, n)S^{31}$, 20-32 MeV, large dipole strength above 22 MeV 8=11860
 $Se, (\gamma, Tn)$ cross-sections, behaviour 8=3909
 $Si^{28} \rightarrow Na^{24}$, yield, 300-1250 MeV 8=1036
 U , attenuation cross section from 10-300 keV meas. 8=7170
 U^{238} photofission, Cd^{115} yield, 5.3-6.5 MeV bremsstrahlung 8=16135
 $Y^{89}(\gamma, n + \gamma, pn)$, $(\gamma, 2n)$ up to 30 MeV 8=1040
 $Zr^{90,91,92,94}(\gamma, n + \gamma, pn)$, $(\gamma, 2n)$ up to 30 MeV 8=1040
 $Zr^{90}(\gamma, p)$ isobaric analogue states in eigenchannel theory 8=3819

Nuclear reactions due to—contd**photons—contd**

$Zr^{94}(\gamma, 3n)$ up to 30 MeV 8=1040

protons

- deuteron production by 1-BeV protons 8=3735
 heavy emulsion nucleus, complete disintegration, 24 GeV/c proton 8=16076
 interactions of protons with tritium 8=16050
 of momentum 24 BeV/c, energy and angular characts. 8=16074
 nuclear emulsion nuclei disintegration and d emission, 9 GeV 8=15867
 nuclear emulsions, 24 and 27 GeV/c 8=7181
 nuclei, light, at 660 MeV, He^3 production 8=16071
 optical model 8=1049
 (p, n) , extinction of optical parameter data 8=1096
 (p, n) , 94 MeV, isobaric analogue states, isospin term in optical pot. 8=16070
 $(p, p\alpha)$ reactions at medium-energy and alpha-clustering correlations in light nuclei 8=1055
 $(p, p'\gamma)$, $(p, n\gamma)$ total and differential cross sections 8=7154
 p and n secondary spectra, 30-340 MeV, anomalies 8=1051
 p prod. on various nuclei, 158 MeV cross-section obs. 8=20781
 photographic emulsion in pulsed mag. field, obs. 8=16073
 primary energy obs. 8=11874
 radiative capture, collective model including spin-orbit interaction 8=11875
 radioactive isotopes produced from Al, Fe, Cu 8=1061
 recoil-charged from 14.5 MeV n , average cross-section 8=16072
 in stellar surface layers, rel. to abundance anomalies in peculiar A stars 8=5871
 $Ag, 1, 2, 3$ GeV, star prod., light fragment, α and Li^8 emission cross-sections obs. 8=11891
 Ag, Li^8 production, 660 MeV 8=7194
 $Ag, 200-400$ MeV, p, n knockout, Metropolis cascade model 8=11890
 $Ag, 200-400$ MeV, Pa, Ag spallation 8=11892
 $Ag, 3$ and 29 GeV, prod. of 60 radionuclides, cross-sections 8=20799
 $Al^{27}(p, \gamma)Si^{28}$, Q-value meas. of γ -ray energy 8=3574
 $Al^{27}(p, \gamma)Si^{28}$, resonant widths 8=959
 $Al^{27}(p, 2p)Mg^{26}$, deformation of Al^{27} 8=11884
 $Ar^{40}, 3, 5, 6, 0$ MeV, levels of K^{41} 8=964
 $Ar^{40,36}(p, d)Ar^{39,35}$, 27.5 MeV, levels of $Ar^{39,35}$ 8=11887
 Au , spallation, Pt^{188} γ -ray study 8=1024
 B , formation by spallation 8=3922
 $B^{10}(p, \gamma)C^{11}$, analog state to B^{11} 8=11721
 $B^{10,11}(p, d)B^{9,10}$ 33.6 MeV, difficulties with pick-up and stripping 8=20788
 $B^{11}(p, \alpha)2\alpha$, 2.65 MeV, coincidence meas. 8=3903
 $B^{11}(p, 2\alpha)He^4$, 163 keV, ang. distrib. 8=7190
 $B^{11}(p, n)C^{11}$, rel. to polarization of neutrons 8=7189
 $Ba, 730$ MeV p , spallation yield of Xe 8=20797
 Ba^{138} , rel. to isobaric analog resonances and particle-hole states 8=985
 Be , formation by spallation 8=3922
 $Be^{8,9}(p, d)$ at 33.6 MeV compared with DWBA analysis, isotopic spin mixing 8=3923
 $Be^8(p, n)B^8$, fast n -spectra 8=1056
 $Be^8(p, d)Be^8$, leading to d singlet state 8=20787
 $Be^8(p, d)Be^8$, rel. to detect. of singlet deuteron d 8=871
 $Be^8(p, d)$, 100 MeV, spin depend. models compared 8=7188
 $Br, 1, 2, 3$ GeV, star prod., light fragment, α and Li^8 emission cross-sections obs. 8=11891
 $Br^{79}(p, n)Kr^{79}$, Kr^{79} excited state, half-life and g-factor meas. 8=11752
 C , cross-sections for p energies 10^{10} - 10^{12} eV, meas. by satellite Proton 1 8=16080
 C , spallation, formation ratios of Li, Be and B 8=3922
 $C^{12}(p, d)$, 100 MeV, spin depend. models compared 8=7188
 $C^{12}(p, n)N^{12}$, 18.9-50 MeV variation of cross-section leading to ground state of N^{12} 8=16079
 $C^{12}(p, pn)C^{11}$, 385 MeV, cross-section obs. 8=20789
 $C^{12}(p, p'\gamma)$, 23 MeV, first excited state 8=954
 $C^{12}(p, pn)C^{11}$, 7500 MeV, activation meas. suitable for dosimetry 8=11603
 $C^{12}(p, pn)C^{11}$, from threshold to 85 MeV obs. 8=20790
 $C^{12}(p, 2p)$, cross-section and diffraction effect 8=3925
 $C^{12}(p, t)C^{10}$, $L = 0.2$ ang. distrib. shapes energy var., 20-54 MeV 7=1060
 $C^{13}(p, \gamma)N^{14}$, meas. of van de Graaff beam energy spread 8=20228
 $C^{13}(p, He^3)$, 49.6 MeV rel. to 2N transfer theory 8=11877
 $C^{13}(p, He^3)$, 2N transfer theory, inclusion of spin-depend. forces 8=11877
 $Ca^{42}(p, \alpha)K^{39}$, 10.6-11.1 MeV, spins and mixing ratios of levels of K^{39} 8=15967
 $Ca^{48}(p, n)Sc^{48}$, obs. for Sc^{49} analogue resonance 8=15972
 $Cd(p, n)$, 8-14 MeV, cross-section obs. 8=7193
 $Cd(p, 2n)$, 8-14 MeV, cross-section obs. 8=7193
 Cd^{114} , isobaric analog resonances, 7-10 MeV comparison with p scatt. 8=983
 $C^{137}(p, \gamma)Ar^{38}$, 1.0-1.8 MeV, levels of Ar^{38} 8=11737
 $Cr(p, n)$, 8-14 MeV, cross-section obs. 8=7193
 $Cr(p, 2n)$, 8-14 MeV, cross-section obs. 8=7193

Nuclear reactions due to—contd

protons—contd

- Cr⁵³(p,n)Mn⁵³, 2, 3, 2, 4, 2, 5 MeV, ang. correl. meas. 8=3926
- Cu⁶³(p,n)Zn⁶³, gamma ray ang. distrib. 8=11948
- Cu⁶⁵(p,p')Ni⁶⁵ cross-section calc. including momentum depend. transfer factors 8=16105
- Dy¹⁵⁶(p,xn), prod. of Ho isotopes 8=3883
- Er¹⁶⁶(p,2n)Tm¹⁶⁵, 5–17.5 MeV, isomeric levels and decay 8=3828
- F¹⁹, p capture, intermediate structure resonances as particle-hole states 8=3931
- F¹⁹(p,α)O¹⁶, expt. for senior students 8=1059
- He⁸ production from p \bar{p} reactions with emulsion nuclei 8=892
- In, 200–400 MeV, Pa, Ag spallation 8=11892
- In, 200–400 MeV, p, n knockout, Metropolis cascade model 8=11890
- K³⁹(p,(t,He³)K³⁷(Ar³⁷), 45 MeV, T = ½ levels mass determ. 8=20656
- K⁴¹(p,α)Ar³⁸, E_p=1400–1750 keV 8=16082
- K⁴¹(p,α)Ar³⁸, excitation functions and angular distributions 8=16083
- K⁴¹(p,γ)Ca⁴², E_p=1400–1750 keV 8=16082
- K⁴¹(p,n)Ca⁴¹, E_p=1400–1750 keV 8=16082
- Li, formation by spallation 8=3922
- Li⁶(p,pα)H², 9–10 MeV, sequential decay and knock-out obs. 8=7187
- Li⁶(p,pd)He⁴, 9–10 MeV sequential decay and knock-out obs. 8=7187
- Li⁶(p,p)He³H³, quasi-elastic, scatt. 156 MeV 8=16078
- Li⁶(p,2p)He⁵ rel. to α-d cluster structure of Li⁶ 8=11717
- Li⁶(p,2p) rel. to nucleon clusters 8=11865
- Li⁶,⁷(p,d) at 33.6 MeV, compared with DWBA analysis, n pickup indicated 8=3923
- Li⁷(p,α)He⁴, polarization effects, α-particle asymmetry as function reaction angle 8=11882
- Li⁷(p,d), 100 MeV, spin depend. models compared 8=7188
- Li⁷(p,n)Be⁷ (431 keV), total cross section and effective interaction 8=3924
- Li⁷(p,p')Li⁷ (478 keV), total cross section and effective interaction 8=3924
- Li⁷(p,t,He³)Li⁵, He⁸ search for analog states of H⁸ 8=11659
- Mg²⁴(p,α)Na²⁰, Na²⁰ prod. method 8=3865
- Mg²⁴(p,t)Mg²², excited states 8=11883
- Mg²⁵+p → 2 Mg²⁴+d, test of time-reversal invariance 8=11924
- Mg²⁶(p,γ), Al²⁷ resonant state decay, pγγ correl. of γ-rays, E = 10.480 MeV 8=7079
- Mg²⁶(p,t)Mg²⁴, L = 0.2 ang. distrib. shapes energy var. 20–54 MeV 8=1060
- Mn⁵⁵(p,γ)Fe⁵⁶[Fe⁵⁶], 1, 3–1.85 MeV 8=15977
- Mn⁵⁵(p,n)Fe⁵⁵, 510 and 680 keV levels of Fe⁵⁵ rot. obs. 8=3927
- Mo (p,n), 8–14 MeV, cross-section obs. 8=7193
- Mo (p,2n), 8–14 MeV, cross-section obs. 8=7193
- N, spallation, formation ratios of Li, Be and B 8=3922
- N¹⁴(p,He³)C¹³, 43.7 MeV C¹³ transitions spin and parity assignments 8=20791
- N¹⁵(p,n)O¹⁵, check on photodisintegration of O¹⁶ 8=1038
- N¹⁵(p,t), 43.7 MeV, rel. to 2N transfer theory 8=11877
- N¹⁵(p,t), 2N transfer theory, inclusion of spin-depend. forces 8=11877
- N¹⁵(p,t)N¹⁵, 43.7 MeV, N¹⁵ transitions, spin and parity assignments 8=20791
- N¹⁵(p,t(He³))N¹³, C¹³, DWBA approx. 8=20791
- Na²³(p,t)Na²¹, 42 MeV, lowest T = ¾ level in Na²¹, mass determ. 8=20656
- Ne, spallation, formation ratios of Li, Be and B 8=3922
- Ni⁵⁸(p,p')Ni⁵⁸ level anomalies rel. to shell model 8=3928
- Ni⁵⁸(p,pn)Ni⁵⁷, 370 MeV cross-section anomaly explained by nuclear skin thickness 8=20796
- Ni⁶²(p,α)Co⁵⁹, inverse reaction cross section to Fe⁵⁶(α,p)Co⁵⁹ 8=3900
- O, spallation, formation ratios of Li, Be and B 8=3922
- O¹⁶, 130, 550, 19 GeV, prod. of Li, Be, B isotopes, meas. of ratios 8=20792
- O¹⁶(p,d), 100 MeV, spin depend. models compared 8=7188
- O¹⁶(p,p)O¹⁶, lowest states of F¹⁷ 8=3799
- O¹⁶(p,α)N¹⁵, cross-section meas. apparatus 8=3897
- O¹⁶(p,n)F¹⁸, secondary reaction in bremsstrahlung irradi. of water 8=16081
- P³¹(p,α)Si²⁸ fluctuation analysis, no evidence of direct interaction or doorway states 8=11886
- P³¹(p,α_s), Si²⁸, for Si²⁸ target 8=963
- Pb (p,d), isobaric spin forbidden effects 8=20800
- Pb²⁰⁸(p,γ), collective mechanism 8=11875
- Pb²⁰⁸(p,t)Pb²⁰⁶, Pb²⁰⁶ excited levels obs. 8=3839
- Pd¹⁰²(p,2n)Ag¹⁰¹, decay of Ag¹⁰¹ 8=1015
- Pd¹⁰²(p,3n)Ag¹⁰⁰, possible reaction 8=1016
- Pd¹⁰²(p,4n)Ag⁹⁸, half-life of Ag¹⁰⁹ 8=1016
- Pt¹⁹⁶(p,2n)Au¹⁹⁵, stacked foil meas. 8=1066
- Pu isotopes, cross-sections for prod. of Am, ground state and self-fissioning isomers 8=20843
- Rb⁸⁷(p,n)Sr⁸⁷, 4, 1–5.8 MeV, Rb⁸⁸–Sr⁸⁸ isobaric analogue reson. 8=16084
- Rb⁸⁷(p,n)Sr^{87m}, compound nucleus—cross sections far below Coulomb barrier 8=1064

Nuclear reactions due to—contd

protons—contd

- Ru⁹⁹(p,n)Rh⁹⁹, γ-ray decay 8=978
- S³⁴(p,γ)Cl³⁵, ang. distrib., resonances 8=11736
- S³⁴(p,γ)Cl³⁵, Cl³⁵ analog states of S³⁵ 8=11735
- S³⁴(p,γ)Cl³⁵, at 2079 keV, pγγ-correlation 8=1063
- Sc (p,n), 8–14 MeV, cross-section obs. 8=7193
- Sc (p,2n), 8–14 MeV, cross-section obs. 8=7193
- Se^{78,80,82}(p,n)Br^{78,80,82}, 3, 6–5.8 MeV, isobaric analogue resonances, Se⁷⁹–Br⁷⁹ 8=16084
- Se⁸¹–Br⁸¹, Se⁸³–Br⁸³ 8=16084
- Si²⁸(p,d)Si²⁷, 27.6 MeV, spectroscopic factors 8=11885
- Si²⁹(p,γ)P³⁰ at energies 1460–1860 keV 8=7192
- Si³⁰(p,γ)P³¹, 0, 5–2.3 MeV, levels of P³¹ 8=11733
- Si³⁰(p,γ)P³¹, excited states of P³¹ 8=961
- Si³⁰(p,γ)P³¹, source of γ rays for resonant absorpt. by P³¹, level parameters 8=15965
- Sr, 730 MeV p, spallation yield of Kr 8=20797
- Sr⁸⁸(p,γ)Y⁸⁸, decay of analogue resonance 8=11754
- Sr⁸⁸(p,xn), isomer ratios 8=11888
- Sr⁸⁸(p,2p,4n) at 660 MeV, giving Kr⁸³ Mössbauer source 8=3817
- Sr⁸⁸(p,p3n), isomer ratios 8=11888
- Ta¹⁸¹(p,2n)W¹⁸⁰, 5–17.5 MeV, isomeric levels and decay 8=3828
- Tb¹⁵⁹(p,n)Dy¹⁵⁹, 5–17.5 MeV, isomeric levels and decay 8=3828
- Th, Li⁸ prod., 660 MeV 8=7194
- Ti^{47,48,49}, photoproton yield 8=7168
- V⁵¹(p,n)Cr⁵¹, cross-section, rel. to channelling effects 8=20795
- W and Si crystals, channelling behaviour in 2–30 MeV 8=11954
- W (p,n), 8–14 MeV, cross-section obs. 8=7193
- W (p,2n), 8–14 MeV, cross-section obs. 8=7193
- Y⁸⁹(p,γ)Zr⁹⁰, evidence for isobaric splitting of giant resonance 8=11753
- Y⁸⁹(p,γ)Zr⁹⁰, 11, 9–13.5 MeV, dipole resonances of Zr⁹⁰ 8=976
- Y⁸⁹(p,n)Zr⁸⁹, 3, 6–5.8 MeV, optical model parameters, Zr⁸⁹ states 8=11889
- Y⁸⁹(p,n)Zr⁸⁹, 5, 503 MeV, low-lying states of Zr⁸⁹ 8=977
- Yb¹⁷³(p,n)Lu¹⁷³, 5–17.5 MeV, isomeric levels and decay 8=3828
- Yb¹⁷³(p,2n)Lu¹⁷², 5–17.5 MeV, isomeric levels and decay 8=3828
- Zn⁶⁸(p,n)Ga⁶⁸, gamma ray ang. distrib. 8=11948
- Zr⁹¹(p,d)Zr⁹⁰, charge exchange 8=20798
- Zr⁹⁶(p,d), 19, 4 MeV, ang. dist. compound to DWBA calc. 8=3929

tritons

- (t,n_γ), (t,p_γ) total and differential cross sections 8=7154
- (t,p), stripping with two nucleon transfer 8=7223
- Bi²⁰⁹(t,α)Pb²⁰⁸, 13 MeV, levels of Pb²⁰⁸ deduced 8=11936
- Ca^{40,42,44,46,48}(t,p), 10–12 MeV isotope transitions 8=1094
- Ca^{40,44}(t,p)Ca^{42,46}, 7.5 MeV, levels and spin assignments of Ca^{42,46} 8=11741
- Ca^{46,48}(t,p)Ca^{48,50} absolute cross sections rel. to f_{γ2} neutron shell closure at N = 28 8=1093
- Ca⁴⁸(t,p)Ca⁵⁰, low lying states of Ca⁵⁰ 8=7083
- Cr⁵⁰(t,α)V⁴⁹, 13 MeV, level structure of V⁴⁹ 8=11750
- Mg²⁶(t,p)Mg²⁸, total cross-section 8=11807
- O¹⁶(t,n)F¹⁸, rel. to prod. of F¹⁸, after n irradi. of LiOH 8=4024
- O¹⁶(t,p)O¹⁸, shell-model amplitudes and relative phases for J = 0⁺, 2⁺ states of O¹⁸ calc. 8=20826
- Pb²⁰⁴(t,p)Pb²⁰⁶, Pb²⁰⁶ excited levels obs. 8=3839
- Si²⁸(t,p)Si³⁰, sign of interaction matrix element 8=3958

X-rays. See Nuclear reactions due to/photons.

Nuclear reactors, fission

- boiler, dynamic analysis 8=16140
- boundary layer turbulence promoters, improved heat transfer 8=21510
- control rods in multiregion reactor cores, worth evaluation by diffusion codes 8=4012
- control rods., studies on effectiveness 8=7321
- critical expts., organic-moderated assemblies 8=7316
- Dancoff corrections for square and hexagonal rod lattices 8=4006
- DIDO source, n intensity improvement by rethermalization 8=20556
- Doppler-broadened functions, calc. 8=11616
- Doppler effect, maximum 8=11615
- epithermal absorpt. by control rods, black-white model for calc. 8=12008
- fast, large, Na-cooled reactors, dynamic anal. stability and safety factors 8=20862
- fast reactor, reactivity effects in empty channels 8=12006
- foils irradi. in reactor beam, rig for meas. of emitted disintegrating nuclei 8=4031
- gamma rays heating calc. 8=7345
- γ-ray meas. with Ge detectors 8=1127
- GETR, core change effects on neutron spectra 8=7270
- heat source for m. h. d. generator 8=10839
- high-temperature type, gas cooled, fuel cycles 8=20906
- intrinsic thermocouples, transient response 8=10786
- JEN-2, pulsed determ. of parameter, α=β/1* 8=20882

Nuclear reactors, fission—contd

- kinetic behaviour in reactor with two loosely coupled cores, rel. to first-flight neutrons 8=16148
 leak-rate testings on containment vessels, calc. methods and results 8=20907
 light water type, macroscopic flux distrib., single $1\frac{1}{2}$ group model 8=20867
 Milne problem with anisotropic scatt., applic. of variational principle 8=11994
 n branching processes, statistical theory 8=11998
 neutron density fluctuations, application of slowing down kernels 8=16158
 neutron diffusion in non-absorbing moderator 8=15850
 neutron flux-densities and its appl. 8=11609
 n flux meas., correction for depression caused by probe introduction 8=7299
 n flux monitoring by N^{16} content in cooling water from $O^{16}(n,p)N^{16}$ reaction 8=7338
 neutron noise anal. in heterogeneous systems, infinite lattice and detector perturb. 8=11985
 n spectra in plain water-Fe-water shield layers, space-depend. calcs. 8=20879
 n spectrometer, LiF crystal 8=3724
 neutron spectrum deformation analysis using threshold detector data 8=3456
 neutron spectra, review 8=7269
 NORA reactor, prompt n decay const., meas. by interval distrib. tech. 8=4010
 pebble bed reactor, neutron flux density 8=11982
 plain water-Fe-water shielding layers, multigroup-diffusion calcs. 8=20878
 pulsed neutron source, thermal, design 8=7282
 radiation field in shields, from meas. at limited mono-directional beam 8=20908
 RI, heavy water, study of 18 cold moderator combinations 8=7315
 reflected reactor, pulsed source reactivity meas. 8=4009
 researches, pulsed neutron method 8=12020
 rocket engines, gaseous-core, nuclear analysis 8=5823
 Rossi- α experiment 8=4027
 space flight, thermionic convertor reactor 8=1122
 steady-state and pulsed, appl. as research instruments 8=7319
 structural engineering research facilities 8=4034
 subcritical assemblies, n-wave propag., eigenfunction anal. 8=11986
 thermal n flux distribution and flux trap effect in active core of UA-RR-1 reactor 8=20871
 thermal-n flux, effects of moderator temp. grads. 8=11996
 thermionic converter for space flight, temp. distrib. 8=1117
 thermionic converter for space flight, parameters 8=1123
 in-core thermionic converters, irradi. studies in UO_2 -fueled Mo emitters 8=15226
 thermionic, for space craft power supply 8=1115
 thermionic, for space flight, with radiation cooling, review 8=1114
 track detectors, solid-state 8=12021
 TRIGA Mk. II, radial neutron temp. distrib. 8=12007
 TRIGA reactors, stochastic fluctuations in power pulses 8=12004
 TRIGA type, delayed-n fraction-n lifetime ratio, meas. from noise anal. 8=12005
 water shields containing ducts, behaviour of thermal n by source-separation techs. 8=12022
 water type, power noise spectra in l.f. region 8=7320
 Windscale AGR, G-(C) values for grade A and other graphites 8=16154
 Al, fragments, energy loss rel. to range 8=2021
 Ag, fragments, energy loss rel. to range 8=2021
 Au, fragments, energy loss rel. to range 8=2021
 Be assembly, anal. of n pulse decay via energy-depend. mean lifetimes 8=7332
 BeO assemblies, pulsed, decay constants 8=7313
 with D_2O -moderated lattices, n spectral indices, thermal and epithermal 8=20866
 F^{18} prod. from n-irrad. of LiOH, in reactions $Li^6(n,\alpha)H^3$ and $O^{16}(t,n)F^{18}$ 8=4024
 Ni, fragments, energy loss rel. to range 8=2021
 U^{235} multiplying assembly, position depend. thermal n spectra 8=11999
 U^{238} capture rates, absolute determ. 87348
 U- H_2O subcritical assembly, meas. of Cd ratio 8=7314
 U-Pd, fragments, energy loss rel. to range 8=2021
 UO_2 /sheath heat transfer 8=7339
 Xe spatial oscillations linear analysis 8=7333

materials

- alkali metals, liquid, heat transfer efficiency 8=8049
 coolants, CO_2 , He, H_2O compared 8=20888
 coolant, gas and liquid compared 8=20887
 deuterium, thermal neutron capture, cross-section 8=6988
 extraction of NO_2 , U and fission prods. with tri-n-octyl-amine, temp. effects 8=5708
 fast reactor, irradiated fuel meltdown 8=20902
 fuel, acoustical thermometer 8=4018
 fuel burning up rel. to fission prod. migration 8=16164
 fuel burnout, pool boiling, nonhydrodynamic aspects 8=7343
 fuel elements, integral superheat 8=7337
 fuel elements with liquid metal coolants, temperature fields 8=7329

Nuclear reactors, fission—contd materials—contd

- fuel element temperature calculation methods 8=7277
 fuel element with variable axial mechanical stress of canning tube, simulator 8=20896
 fuel particle coated, influence of creep 8=20900
 fuel particle coating for 'Dragon' expt. 8=7336
 fuel particles, spherical, of carbides or mixed carbides, from solutions of metal salts 8=16166
 fuel pin temp. meas. by thermocouple 8=4029
 fuel rod in narrow annular coolant channel, stability against thermal buckling 8=12011
 gas cooled, fuel cluster, coolant flow resistance 8=1131
 gas with micron sized particles for heat transfer, behaviour 8=21735
 grain boundary gas bubbles, equilib. conditions 8=1986-9
 graphite, anal. of escape behaviour of Xe captured by nuclear recoil 8=4017
 graphite and cadmium shielding for γ -rays 8=1128
 graphite, diffusion of fission products Xe and I 8=12015
 graphite, Grade A, deform. props. 20-2200°C 8=8829
 graphite moderator, neutron diffusion across temp. discontinuity 8=20872
 graphite, n slowing down time, influence of chem. binding effect 8=7330
 graphite, optical absorpt. rel. to n-irradiation effects 8=14202
 graphite scatt. kernels, comparison via time depend. n spectra 8=16147
 graphites in Windscale AGR, G-value for radiolytic oxidation 8=16154
 heavy water level meas. telemeter 8=1135
 hydrogenated terphenyls as coolants, effects of e-irrad. 8=14445
 neutron moderation length, effect of empty channels 8=208
 nuclear science and technology for ceramists, conference, Washington USA (1966) 8=16167
 pin clusters and rod lattices, collision probabilities 8=7298
 polystyrene, cold neutron cross-section 8=7271
 polyethylene, cold neutron cross-section 8=7271
 rare gas diffusion eqns. following irradiation 8=13404
 rod cluster fuel elements, reson. integrals, initial conversion ratios 8=4023
 spent fuel elements as γ sources in irradi. plants 8=16163
 spent fuel, selective sampling for core burnup and conversion ratio determ. 8=20901
 water, neutron thermalization meas. 8=7331
 Zircalloy-2 corrosion in LiOH solns. rel. to pressure tubes hydriding 8=5719
 Al, γ -ray spectra obs. 8=7345
 Al-Dy-U system, use of Dy as burnable poison 8=13060
 Al-Li alloys, neutron irradi., grain boundary migration and gas bubble growth 8=8456
 Be low temp. moderator, decay of neutron pulse 8=20905
 Be moderator, neutron diffusion across temp. discontinuity 8=20872
 Be reflected, Zr moderated, parameters for thermionic conversion 8=299
 BeO assemblies of bucklings, decay of thermal neutron population 8=16159
 BeO dispersion fuels, fission fragment and β ray damage, X-ray study 8=12018
 D_2 age and fast effect 8=16160
 D_2O age and fast effect 8=16160
 D_2O viscosity at pressures 1-1200 kg/cm², 4-100°C 8=16806
 Dy_2O_3 dispersion in UO_2 , behaviour in steep temp. grad. 8=4694
 Eu_2O_3 dispersion in UO_2 , behaviour in steep temp. grad. 8=4694
 Fe, γ -ray spectra obs. 8=7345
 Hf, ore deposits in Republic of South Africa 8=9792
 K, natural convective boiling 8=12013
 Na ejection from reactor cooling channels 8=16162
 Na, natural convective boiling 8=12013
 Na, study of aerosol prod. by burning, rel. to safety 8=12950
 Na-K eutectic liquid metal alloy reactor coolants, role of impurity admixtures 8=7328
 NaK, flowing through unbaffled rod bundles, heat transfer to 8=21649
 Nb alloys, mechanical and thermal props. 8=5082
 Pb, γ -ray spectra obs. 8=7345
 Pu compounds, undermoderated, criticality 8=20897
 Pu glovebox, thermal gradient apparatus 87334
 Pu isotopes, effect on Doppler coeff. 8=7340
 Pu, study of aerosol prod. by burning, rel. to safety 8=12950
 Pu/1 wt.% Ga alloy, rel. to plastic flow props. from -60 to 77°C 8=13604
 Pu-Al alloy fuel, depleted, atom ratios and effective cross-section ratios 8=12016
 Pu-Be, n emission growth rel. to presence of Pu^{241} 8=16169
 Pu(N and S) fuels, chem. aspects 8=12017
 Pu/U, graphite moderated using lattice code WIMS 8=1133
 Pu^{238} , neutron total and absorption cross sections 8=7335
 Pu^{238} , separation and preparation from n irradiated Np^{237} target 8=20903

Nuclear reactors, fission--contd**materials--contd**

- Pu²³⁹, capture to fission ratios meas. 8=1132
 SiO₂-UO₂ vitroceraamics, irradi. induced vol. changes and annealing 8=8779
 Sm₂O₃ dispersion in UO₂, behaviour in steep temp. grad. 8=4694
 ThO₂ based fuels, vib. compacted sol-gel-derived, props. and prospect 8=20895
 ThO₂-UO₂, in-reactor microstructure for thermal simulation 8=1130
 U enrichment in fuel problems 8=20889
 U enrichment by gaseous diffusion 8=20890
 U enrichment technology in Japan 8=20891
 U, graphite moderated using lattice code WIMS 8=1133
 (U/Al) fuel alloys, use of Sm as burnable poison 8=13059
 U-M alloys, (M=Fe, Al and Si), irradiated, phase comp. changes rel. to resistivity meas. 8=8283
 U(N, P and S) fuels, chem. aspects 8=12017
 U²³⁵, ²³⁸ capture and fission, Doppler effect obs. 8=7248
 U²³⁵, new production techniques 8=20892
 U²³⁵, prompt n emission 8=20853
 U²³⁵ thermal neutron fission, total γ energy release 8=7247
 U²³⁷, enriched, prod. and specific activity 8=16165
 U²³⁸ shielding effect on epi-cadmium fissions in U²³⁵ and Pu²³⁹ 8=7246
 U^{VI} extraction by methyl propyl ketone 8=20898
 UC rods, fast fission ratios meas. 8=16170
 UC rod, temp. coeff. of resonance integral 8=12019
 UC¹⁴, C¹⁴ determ. 8=12014
 U_L, α self irradiation 8=17105
 UO₂, burnup, mass spectrometric determ. 8=7344
 UO₂, fission-gas release, activation energies in defect-trap model 8=3980
 UO₂ fuelled cores moderated by H₂O, material buckling and reaction rates 8=20904
 UO₂, irradi., microstruct. 8=8469
 UO₂, in-reactor microstructure from thermal simulation 8=1130
 UO₂ pellets, irradiation obs. 8=20883
 UO₂ powder compacted fuel, effective thermal cond. in simulated conds. 8=13398
 UO₂, calc. of temp. depend. shear modulus 8=13610
 UO₂, U ions diffusion, lattice and grain boundary, 1900-2150°C 8=13414
 UO₂-graphite mixture, fission gas (Xe and Kr) release during irradi. 8=4022
 UO₂-graphite pellets, n-irradi., γ -ray spectra of fission gases 8=4016
 UO₂ swaged compacts, equiaxed grain growth under temp. grad. 8=8255
 UO₂-SiO₂ vitroceraamics, thermal cond. 8=8664
 UO₂-stainless steel cermet, irradi. behaviour of particles to 4-10% burn-up 8=20893
 UO₂-ZrO₂-CaO fuel system, out-of-pile thermal tests 8=17527
 U-Pt fuel plate, spatial average ion prod. rate by escaping fission fragments 8=11968
 U₂Si, prep. from UCl₄, as first step in prep. of U₂Si 8=23114
 U₂Si, promising fuel for water-cooled reactors 8=4019
 U-Th mixtures, quantitative analysis by delayed n emission 8=12012
 Zr, ore deposits in Republic of South Africa 8=9792
 Zr for pressure tube technology 8=4020
 ZrH, diffusion parameters and capture cross section 8=16161

operation

- activity of radioisotope after n bombard., hybrid computer calc. 8=4025
 circumferential control plates, anal. of mutual interact. 8=16155
 computer programme for time optimal control 8=4015
 control systems, optimization, by Wiener's theory 8=7327
 cooling channels ejection of Na 8=16162
 cooling systems, hydraulic design calc. 8=16156
 criticality detector, n-sensitive 8=7324
 crossed-in-line tube bundles, heat transfer and pressure drop 8=7325
 Daphne reflector, fast-neutron spectra, experimental and calculated 8=12009
 digital techniques in instrumentation 8=6624
 direct conversion heat source 8=295
 E Fermi, pressurized water, power exhalation 8=1126
 FR2 optimisation of efficiency, second core of UO₂ 8=4013
 fast critical experiments and their analysis, Conference, Argonne National Laboratory, Oct. 1966 8=7240
 flowmeter, magnetic for Na-cooled 8=7317
 γ , n field dosimetry 8=11313
 Garigliano, core performance and safety margins at increased output 8=1124
 gas as heat transport medium, Conference, London, March 1967 8=7326
 generator, pulse rate 8=3144
 heat transfer to thermionic converter, simulation apparatus 8=1134
 Latina, core reactivity build up, expt. determ. 8=1125

Nuclear reactors, fission--contd**operation--contd**

- n counting system containing fission detection 8=4028
 n flux meas. channel detection 8=4026
 n spectrometer for polyethylene-beryllium cooled moderator 8=3725
 neutron slowing-down times in water 8=1129
 point, Xe- and temp.-controlled, rel. to asymptotic stability 8=16157
 pressure tube technology, use of Zr 8=4020
 recombination system of H₂-O₂-gases in BER reactor 8=4014
 stability analysis, sampled-data controlled system 8=7322
 stability analysis, sampled-data controlled system 8=7323
 stresses, acoustically induced, meas. with piezoelectric strain gauges 8=20884
 thermal gradient apparatus for Pu glovebox 8=7334
 thermionic, Ar-filled, thermionic converter 8=298
 thermionic for space flight, criticality and n flux density 8=1116
 vibr. of high pressure gases, piezo-electric transducers for meas., temp. limitation 8=20885
 vibr. problems in commissioning Dungeness power plant 8=20886
 N¹⁶ power control system 8=4011
 PuBe n source, scattering moderator effect 8=1121
- theory**
- asymptotic stability of coupled reactor 8=20865
 Boltzmann eqn. in plane geometry with linear-anisotropic scatt. funct. 8=135
 burnout, alternative forms for correls. 8=12003
 collision probabilities for finite cylinders and cuboids 8=11993
 collision probabilities, first-flight, in pin clusters and rod lattices 8=7298
 collision probability code, Minos program 8=7295
 coolant and fuel element temp., calc. from convection and radiation 8=7342
 critical system, perturbation formula for changes in freq. ratios of processes 8=16144
 critical systems, reactivity integral theorem 8=16153
 criticality in heterogeneous media 8=7272
 cross- and autospectral density obs. 8=16141
 cylindrical reactors, boundary value problems in p- ρ geometry 8=3989
 design, nuclear calc. 8=3987
 dynamic parameter estimation 8=11989
 eigendistributions in slowing down theory, with continuous energy variable 8=20876
 Enrico Fermi PWR, theoretical and experimental transients 8=20881
 fast, collapsing many-group n cross-sections to few-group cross-sections 8=3997
 fast critical experiments and their analysis, Conference, Argonne National Laboratory, Oct. 1966 8=7240
 fast system, power build-up rel. to core isotope comp. and fuel management 8=20863
 finite moderator, iterative method of multipole source-sink calc. 8=4021
 fuel elements with liquid metal coolants, temperature fields 8=7329
 fuel element temperature calculation methods 8=7277
 generalized albedo method, applications 8=15023
 Green's funct. with boundary conds. containing non-normal directional derivs. 8=6017
 heterogeneous, two-zone, compact, anal. method for calc. 8=7279
 hot-channel factors, for "flat" power reactors 8=7280
 kinetics according to P₁-approximation 8=3990
 kinetics eqn, two-point approx. for coupled reactors 8=7268
 Lie series application 8=7309
 long-term change of basic parameters 8=12001
 low power, sinusoidal anal. by WKB approx. 8=7289
 low temperature, design and operation 8=7283
 Milne's problem for 2 adjacent spaces, solution 8=1119
 model for estimation of states and parameters 8=3988
 monoenergetic neutrons, extrapolation distance, calc. 8=11979
 Monte Carlo analysis of reactor systems 8=7291
 multigroup diffusion theory, boundary perturbations 8=4001
 multigroup n transport eqns., convergence of source iteration tech. in soln. 8=11997
 multi-region, multi-group reactors, Fortran IV programme 8=16142
 natural mode approximation applied to space-time problems 8=7290
 neutron counting statistics, interval distrib. 8=7276
 neutrons, delayed, effective fraction rel. to source strength 8=16145
 neutron flux, at plane black boundary, boundary conditions 8=6947
 neutron leakage from 2-dimens. system, collision probability calc. 8=7296
 neutrons, low-energy, heating up in cryst. moderators 8=7293
 neutron multiplication, new concept for subcritical system with reflector 8=7275

Nuclear reactors, fission—contd
theory—contd

- neutron path length probability calc. 8=15011
- neutron pulse decay in moderator, anal. via simple model 8=4007
- neutron scatt. in media with spherical geometry, Boltzmann eqn. soln. 8=20542
- neutron scattering multiple, calc. using combination of Monte Carlo and analytical methods 8=6946
- neutron slowing down, multiple collision soln. 8=7304
- neutron space-time group diffusion eqns., soln by time-discontinuous techn. 8=4002
- neutron spectra in D_2O , time-dependent 8=6948
- n source width, perturbation method analysis 8=20873
- neutron streaming, pulsed-source technique 8=7273
- neutron thermalization, in Be, analysis 8=7303
- neutron thermalization, initial value problem 8=11980
- neutrons, thermalized, population kinetics in heterogeneous media 8=4000
- neutron transport eqns., two-group 8=11991
- neutron transport, invariant imbedding method 8=7307
- neutron transport operator in spherical assembly, fundamental mode 8=7302
- n transport operator fundamental mode calc. 8=20877
- neutron transport in plane geometry 8=20547
- neutron transport equation, time behaviour and ergodic theory of semigroups 8=3992
- neutron transport, two-region problem 8=7306
- neutron transport, two-region problem 8=7305
- neutron transport, variational problems, transforms. 8=7308
- noise-equivalent source 8=3991
- noise, threefold correls. and third order moments 8=11984
- noise in zero-power reactor, equiv. source 8=3995
- nonlinear reactor dynamics 8=11987
- particle sources, anisotropic, path-length formalism 8=7284
- plane-parallel core, analysis of equations 8=7278
- point reactors kinetics eqns. soln. by analytic continuation 8=4008
- pulsed, n pulse half-width calc. 8=3996
- reactor group cross sections calc. 8=20864
- real and adjoint n fluxes, bi-linear functionals, perturb. anal. 8=7294
- reflected lattice of moderator, heterogeneous theory of n spectrum 8=4004
- reflected slab, reactor kinetics 8=20870
- Rossi- α expt., point reactor theory 8=7300
- slow neutron spectra determination from foil activations 8=846
- spherical-cavity, prompt n population, time depend. kinetics 8=4003
- stability domains, in point reactor dynamics 8=7301
- thermal-group constants in three-region lattices, calc. 8=11988
- thermoelastic dynamics, pulse reactor 8=7281
- time decay, constant in pulsed multiplying assemblies 8=1120
- wave propag. in graphite, effects of Bragg cut-off 8=7285
- D_2O lattices, RESCUE method for resonance escape probability calc. 8=20880
- Na-cooled fast reactor kinetics 8=12002
- Pu^{240} , neutron resonance escape probability, Monte Carlo calc. 8=16152
- U lattices, H_2O moderated, microparameters, δ^{25} , δ^{28} , ρ^{28} , semi-emp. formulas 8=7274
- UO_2 lattices, H_2O moderated, microparameters δ^{25} , δ^{28} , ρ^{28} , semi-emp. formulas 8=7274

Nuclear reactors, fusion

- burn-out under transient condition, film flow model prediction 8=20861
- engineering and economics 8=16138
- leakage, magnetic bottles 8=7318
- plasma, sputtered atom impurities, search with neutrons 8=16600
- two group diffusion code with burnup, MAGOG, 3-d 8=20868

Nuclear relaxation. See Nuclear magnetic resonance and relaxation.**Nuclear-solid interactions.** See Mössbauer effect; Solids.**Nuclear spallation**

- complex nuclei, mechanism 8=1028
- hypernuclei prod. by 6 GeV/c K⁻ on heavy emulsion 8=3949
- Ag, induced by 1, 2, 3 GeV p obs. 8=11891
- Ag, p 200-400 MeV, Pa, Ag prod. 8=11892
- Br, induced by 1, 2, 3 GeV p obs. 8=11891
- C^{12} , by 70-200 MeV protons 8=1058
- In, p 200-400 MeV, Pa, Ag prod. 8=11892
- Ni^{58} (p, pn) Ni^{57} , 370 MeV cross-section anomaly explained by nuclear skin thickness 8=20796
- O^{16} , by 70-200 MeV protons 8=1058

Nuclear track emulsions

- antiproton scattering 8=1050
- chamber for about 10^{13} eV particle interactions 8=627
- cosmic ray stars in photographic emulsion at high altitude 8=15882
- dosimetry use of small β rad. doses 8=1001
- hole diameter meas. for particle energy 8=11293

Nuclear track emulsions—contd

- ionization loss at relativistic vel. by π , p beams 8=15647
 - K⁻ interaction, Ξ intermediate hyperfragment production 8=11912
 - latent image, erasure by pulsed elec. field 8=11330
 - n-p interaction 20 GeV, multiple meson production 8=831
 - Ag nuclei interaction with 9 GeV protons, d emission obs. 8=15867
- Nucleation.** See Clouds; Crystallization; Freezing.
- Nucleic acids.** See Macromolecules.
- Nucleons and antinucleons**
- See also Neutrons and antineutrons; Protons and antiprotons.
 - β -decay in presence of strong interactions, e.m. corrections 8=11581
 - boson-N coupling parameters from N-N scatt. potential 8=3700
 - Compton effect amplitude sum rules 8=6942
 - coupling constant e.m. isobar-N 8=15864
 - coupling constant, η -N in $\pi^- + p \rightarrow n + \eta$, $\gamma + p \rightarrow p + \eta$ 8=20490
 - decay, leptonic, weak, pole-dominance version of PCAC hypothesis 8=3696
 - distribution in nuclei by finite Fermi system theory 8=7036
 - e.m. form factor, Regge-pole model 8=3693
 - e.m. form factors and γNN^* (1238) coupling constant 8=3733
 - e.m. isovector form factor from π - π scatt. 8=11578
 - e.m. mass splitting rel. to n-p mass difference 8=11587
 - form factors, analytic continuation 8=820
 - form factors dominated by $N^*(1400)$ resonance, tested by calc. of $g_{\gamma NN}/g_{\gamma NN}$ 8=20515
 - form factor, e.m. asymptotic behaviour examined with superconvergent sum rules and $SU(6)_v$ 8=20514
 - form factor e. m. form special mixing scheme for $U(3) \otimes U(3)$ algebra 8=20253
 - form factor, magnetic, isoscalar, fitted with poles 8=3694
 - $g_{\gamma NN}/g_{\gamma NN}$ calc. rel. to domination of N form factors by $N^*(1400)$ 8=20515
 - internucleon forces and n-d scatt. length 8=11648
 - isobar decay, effect of cosmic γ spectrum 8=23489
 - isoscalar form factor from $O(4, 2)$ dynamics 8=6919
 - K-N coupling constants from 2 sum rules for meson-N scatt. 8=20469
 - $\Lambda\pi$ and $N\bar{K}$ composite model of Σ 8=11633

 - $\gamma + N \rightarrow \pi + N$ 8=11507
 - $\gamma N \rightarrow \pi N$, test for conspiracy 8=6775

Nucleons and antinucleons—contd**interactions—contd**

- $\gamma N \rightarrow \pi N^*$, threshold cross-section calc. from current algebra 8=11504
 $\gamma + N \rightarrow \pi^+ + N, N^* + \pi$, varying γ polarization as test for Regge cuts 8=20331
 $\gamma + N \rightarrow \Sigma + K$, consistency conditions for non-Born amplitudes 8=20344
 $K\bar{N}$, current algebra calc. of Λ/Σ ratio 8=15858
 $KN \rightarrow K^*(890)N$, 3 GeV/c, absorpt. model, π and vector meson exchange 8=6889
 KN , multichannel phase-shift analysis from 0-555 MeV/c 8=3663
 $\bar{K} + N \rightarrow \Sigma + \pi$, use of dispersion relations and Regge trajectories to calc. Y_0^* BP coupling 8=20580
 Λ -N rel. to hypernuclear binding energy 8=20734
 Λ -N rel. to Λ nuclear pot.-well depth 8=11795
 ΔN , nuclear, C violation and existence of ${}_{\Lambda}Li^0$ 8=11793
 ΛN , 2 π and K range, calc. from ${}_{\Lambda\Lambda}Be^{11}$ hypernuclear events 8=3649
 ν -N interaction, with formation of μ , spin depend. 8=20370
 $\nu_1 + N \rightarrow N^* + l, N^*$ polarization 8=3586
n-d scatt. length using pot. with several variables 8=881
N-neutral pseudoscalar mesons, sum rule in perturbation theory 8=821
N pair correl. effect on 2 N transfer (pick-up) nuclear reactions 8=16053
NAK and NEK coupling constants determination 8=3664
N-N pot. determ. for nuclear forces 8=11684
 $N^*(2825) \rightarrow \rho + N^*(1236)$, cascade decay, theory 8=3734
nuclear, Kuo-Brown, analysis generation of states of O^{18} and F^{18} 8=3759
nucleus, pair absorpt. of pion and emission 8=16102
nucleus, π -N, rel. to nuclear structure 8=1086
particle-hole in nucleus, disagreement with Q-Q force 8=11683
with photons, to form K and π mesons 8=6842
 $PN \rightarrow P^*N$, VN Regge pole model 8=20318
 π electroproduction as function of momentum transfer 8=6840
 π photoproduction at high energy, O(4) symm. 8=3627
 π photoproduction, pole terms in fixed angle approach 8=3622
 πN channel, P_{11} resonance model 8=11513
 πN charge exchange, applic. of finite energy sum rules for Regge analysis 8=20296
 π -N collisions, multiple π production constraint 8=3619
 $\pi N \rightarrow \rho \Delta$ conspiracy consequences 8=6867
 πN , N/D formula for calc. of Regge trajectory 8=3554
 πN isobar prod. cause of TY anomaly in OPE model of $\pi N \rightarrow \pi \pi N$, 1-10 GeV 8=15770
 $\pi N \rightarrow Ne^+e^-$ amplitude reconstruction from expt. data 8=6803
 $\pi N \rightarrow \pi N^*$, below 1 GeV, ang. distribution using Legendre series 8=6849
 $\pi N \rightarrow \pi N^*$, N^* resonance 8=6849
 $\pi N \rightarrow \pi \pi N$ 1-10 GeV, OPE model, Treiman-Yang angle anomaly due to πN isobars 8=15770
 $\pi N \rightarrow \pi \rho N$, mass distrib. from Regge-pole exchange model 8=20440
 $SU(2) \times SU(2)$, chiral, method of phenomenological Lagrangians 8=6744
triton binding energy using pot. with several variables 8=881
 ΞN , low energy meson exchange plus hard core model 8=6977

interactions, nucleon—nucleon

- boson approx., s and d, in nuclear matter 8=15917
conference, Florida (USA) 1967 8=20516
excited baryons, search 8=20517
low energy, polarized proton target for investigation use 8=822
n-d scatt. length from N-N separable pot. 8=11647
 $NN \rightarrow KK$, predictions 8=825
 $NN \rightarrow MM$, rel. to baryon exchange model of MN scatt. 8=825
 $NN \rightarrow NN_0$ absorptive peripheral model 8=6920
 $NN \rightarrow \pi\pi$ predicted from πN scatt. 8=825
nuclear forces, free-potential, 3-body force inclusion 8=7032
nuclear rearrangement energy 8=923
 π exchange contribution to weak parity violating N-N potential, calc. 8=6922
potential form rel. to nuclear forces 8=15916
potential theory from p-p bremsstrahlung 8=833
separable potential 8=823
three nucleon system, inverse power parameter, perturbation theory appl. 8=11579
t binding energy from N-N separable pot. 8=11647

scattering

- baryon resonance-N from p-He⁴ and B prod. interaction 8=3736
Compton, new low-energy theorems 8=20521
Compton scatt., low-energy with π photoprod., use of $\pi\pi$ phase shift 8=20345
electron scatt., e.m. form factors 8=6941
e-N, inelastic, review of kinematics and sum rules, inequalities 8=20377

Nucleons and antinucleons—contd**scattering—contd**

- e-N inequality 8=6923
 η -n as Regge pole in $\pi^- + p \rightarrow \eta + n$, phase shift calc. 8=20433
Glauber formalism, correction to Johnson-Trieman relation 8=20419
He⁴, high energy scatt. and N-N correlation 8=891
meson-N, amplitude determ., neutral scalar meson models 8=11496
meson-N, amplitude expansion using Lorentz group representation 8=15696
meson-N amplitude at high energy, Regge asymptotic behaviour 8=11495
meson resonance—N from π -He⁴ and meson resonance prod. interaction 8=3736
on mesons, cross-sections, in $SU(3)$, asymptotic limits 8=742
n-d, second quantization formalism appl. 8=11853
n-d, soln. of Fadeev eqns. 8=11403
nuclear, polarization to separate direct and compound nucleus effects 8=1029
KN dispersion relations and coupling constants determ. 8=11550
KN forward dispersion relation for ΛKN coupling constant calc. 8=802
K-N, s-wave absent with t-channel singularities, K-B coupling constants 8=20483
KN superconvergence sum rules and vector meson Regge poles 8=3681
KN superconvergence sum rules and Regge pole parameters 8=3666
K⁺N, dispersion relations, $SU(3)$ invariance violation 8=6891
 ΛN , one-boson-exchange model, cross-section calc. 8=20573
MN baryon exchange model rel. to $NN \rightarrow MM$ 8=825
M-N factor from $\pi + d \rightarrow M + d$ 8=3736
meson-N, 2 sum rules and meson-N coupling constants 8=20469
 μ -N inequality 8=6923
NN phase shifts from Fadeev theory of $NN\pi$ system 8=6925
N-N potential to suit nuclear binding energy 8=3758
 $N\pi$ superconvergence relations for all values of momentum transfer 8=20455
 $NN\pi$ system, Fadeev theory Lovelace approx., phase shifts for N-N scatt. 8=6925
N-nucleus, exchange and Pauli principle effect 8=7179
 ω -N, superconvergent sum rules 8=3553
particle-N cross-sections from π prod. by p on nuclei 8=20778
 πN AW and spin-flip sum rules derived from dispersion relations without current algebra 8=11531
 πN amplitudes, static crossing matrix soln. 8=11533
 πN charge-exchange amplitude in terms of homogeneous Lorentz group 8=766
 πN charge exchange, sum rule for ρ -like singularities in complex J-plane 8=11530
 π -N, differential cross section, charge exchange and high-energy dynamics 8=15786
 πN dispersion sum rules, high energy 8=763
 πN fermion, N and Δ trajectories 8=20328
 πN form factor type contributions to s and p waves 8=765
 π -N, high energy behaviour and Regge pole model 8=6868
 πN interference model description, 2-6 GeV/c 8=11526
 πN integral eqn. reduced to Tarmarkin form, removal of singularity 8=20314
 πN , isospin effects, triangular CI diagram 8=762
 πN , Lagrangians, unified treatment 8=11535
 π -N, multi-GeV, spin-flip parameter determ. 8=11534
 πN , N/D approach, coupling constants 8=761
 πN below 1.6 GeV, elastic, phase-shift analysis 8=20458
 πN , 1-5 BeV/c Regge pole-plus-resonance model, modifications 8=20456
 πN p-wave, low energy by PCAC and CCR 8=11527-8
 πN p-wave low-energy sum rules derived 8=6833
 π -N partial-wave amplitudes, Regge-pole model 8=15784
 π -N phase shift of P_{33} state, CDD pole approach 8=20453
 π -N, phase shift parametrization based on generalized dispersion relation 8=20430
(π , K)-N, phenomenological model of diffraction 8=6894
 πN , π production amplitude, constraints 8=3636
 πN polarization effects 8=15785
 πN pot., generalized computed from known phase shifts for P_{33}, P_{11}, D_{13} partial waves 8=20454
 πN for prediction of $NN \rightarrow \pi\pi$ 8=825
 πN Regge exchange amplitudes rel. to resonance spectrum 8=764
 πN Regge-pole theory, constraint eqns. 8=20321
 π -N resonances, contrib. to helicity amplitude of $\pi\pi \rightarrow NN$ 8=11517
 πN , Roper resonance, magnetic moment relations using dispersion relations 8=3605
 πN , s-wave, low energy, semiphenomenological calc. 8=3641
 π -N, semiclassical theory with ρ, N^{**} prod. 8=20452
 πN sum rules from superconvergence relations 8=3635
 πN superconvergence relations correcting BBM and MMM coupling constant 8=3640
 πN superconvergent sum rules and existence of resonances 8=6866

Nucleons and antinucleons—contd**scattering—contd**

- polarization parameter for N-N, 300-700 MeV 8=6927
- Σ N, one-boson-exchange model, cross-section calc. 8=20573

 Ge⁷² from Ga⁷² decay 8=16021
 Ge⁷², 2' assignment 8=1013
 Ge⁷⁴ from As⁷³(n, d)Ge⁷⁴, 14.4 MeV 8=7212
 He, in planetary nebulae, 2S state depopulation rate 8=5913
 He³, T = $\frac{1}{2}$ states from p-H² scatt. 8=3739
 He³ search for excited states in reaction $^3\text{He}(p, p')^3\text{He}^*$ 8=11653
 He³, p-d final states, 5, 5-12.0 MeV rot. obs. in p reactions on Li⁶, 9-10 MeV 8=7187
 He⁴, odd-parity calc. 8=887
 He⁴ rel. to particle hole interaction 8=7003
 He⁴, product of nuclear reaction, excited states obs. 8=15953
 He⁶ estimated 8=3847
 He⁶ from H²-H², H²-He³, He³-He³ scatt. 8=11656
 Hf^{172, 174, 178}, half-lives and moments of inertia 8=20726
 Hf¹⁷⁴, deform. parameters and elec. quadrupole transitions 8=20953
 Hg¹⁹⁸, E2/M1 mixing ratio for 2'-2' transition 8=975
 Hg¹⁹⁸, first excited state, g-factor 8=16002
 Hg¹⁹⁸, 675 keV transition, E2/M1 mixing ratio from ang. correl. meas., $\gamma\gamma$ cascade 8=11782
 Hg^{198, 200, 202}, 2p holes and vibrating core model 8=3838
 Hg²⁰⁰ from Hg¹⁹⁹(n, γ)Hg²⁰⁰, vibrational model anomaly 8=11911
 Ho^{161, 163} isomeric, half-life 8=3826
 Ho^{165, 166}, resonances induced by n scatt., 35-750 eV and capture, 2.5-10⁵ eV, spin assignments 8=16101
 I^{125, 127} lifetimes, M1, E2 transition probabilities 8=11760
 I¹²⁷, n scatt., 60-900 keV, spin assignments, discrepancy 8=7096
 I^{130m}, disintegration of and transition from I^{130m} 8=7097
 I¹³¹, parity assignments from internal conversion decay of Te^{131m} 8=3878
 In^{112, 114}, prod. in In^{113, 115}(n, 2n)In^{112, 114} 8=20814
 In¹¹⁵, from β^- decay of Cd^{115m, 6} 8=3822
 In¹¹⁵, lifetimes of 579, 829 and 864 keV states 8=981
 In¹¹⁵, 600 and 830 keV photoexcitation 8=20714
 In¹¹⁷, g-factor of $\frac{3}{2}^+$ 660 keV 8=3823
 In¹¹⁷ from Cd^{117, 117m} decay, rot. band and multiplet identified 8=15984
 In¹⁹⁴ from In^{194m} decay 8=7147
 Ir, from gamma ray spectra by neutron capture 8=3810
 Ir, rel. to shell and unified models 8=3833
 Ir¹⁸⁸, from Au spallation 8=1024
 Ir¹⁹¹, resonance fluorescence with Pt¹⁹¹ source, level determ. 8=993
 Ir^{191, 193}, g factors, for first excited states 8=3836
 Ir¹⁹³ from Os¹⁹³ decay 8=11826
 Ir^{195, 195m}, γ -transitions from α bombard of Os¹⁹² 8=11827
 K³⁷, 2750 KeV level spin and branching 8=3805
 K³⁹, spins and mixing ratios from Ca⁴²(p, α)K³⁹, p-K³⁹ scatt. 8=15967
 K³⁹ from Ca⁴⁰(n, d)K³⁹, 14.4 MeV 8=7212
 K^{39, 41} from inelastic n scatt. and (n, p γ) reactions 8=20809
 K⁴⁰, mean lifetime of 1.64 MeV level 8=15968
 K⁴⁰ spectra 8=7047
 K⁴¹ from p reactions on Ar⁴⁰, 3.5 and 6.0 MeV 8=964
 K⁴⁷, shell model calc. using Hamada-Johnston pot. 8=20700
 Kr⁷⁹ excited state in Br⁷⁹(p, n)Kr⁷⁹, half-life and g-factor meas. 8=11752
 Kr⁸², E2/M1 mixing ratio for 2'-2' transition 8=975
 Kr⁸², 698 keV transition, E2/M1 mixing ratio from ang. correl. meas., $\gamma\gamma$ cascade 8=11782
 La¹³², from disint. of Ce¹³² 8=7101
 La¹³² scheme 8=20720
 La¹³³ from β -decay of Ce^{133, 133m} 8=20722
 La¹³³, deformed levels mean life 8=15990
 La¹³⁶ from Ce¹³⁶ decay, conversion e and γ spectra 8=20721
 Li⁴, product of nuclear reaction, excited states, obs. 8=15953
 Li⁵ resonance obs. in H²(He³, γ)Li⁵, 2-5.5 MeV 8=20581
 Li⁵ ground state obs. in p reactions on Li⁶, 9-10 MeV 8=7187
 Li⁶, odd parity P level, existence using d + α scattering phase shifts 8=15869
 Li⁶, 2.184 MeV state obs. 3.56 MeV not obs. in n scatt. 8=11897
 Li⁶ from H²-H², H²-He³, He³-He³ scatt. 8=11656
 Li⁶, 2.19 MeV (J = 3⁺, T = 0), studied in d-He⁴ collisions 8=20675

Nucleus—cont'd

energy levels—cont'd

- Li⁶, 3.56 MeV level, 60–130 MeV e scatt. 8=11716
 Li^{6,7}, from 50 MeV p scatt. up to 17 MeV level 8=7071
 Li^{6,7}, (p, d) reaction 33.6 MeV, p ang. dist. and DWBA analysis 8=3923
 Li⁷, h.f. calc. 8=3789
 Li⁷, search for 5.5 MeV level 8=20674
 Li⁷, second state excitation energy 8=11720
 Li⁷, branching ratio to ground and first excited state from B¹⁰(n, α)Li⁷ 8=11900
 Li⁷ from He³-He⁴ and He³-He³ scatt. 8=11001
 Li⁷, from n scatt. 8=11897
 Li⁸, cluster structure from Li⁶(He³, n)B⁸
 Lu, rel. to shell and unified models 8=3833
 Lu^{169, 171, 173, 175}, E1 and E3 transition probabilities 8=11778
 Lu¹⁷¹, 71.2 keV state period obs. 8=7107
 Lu¹⁷², lifetimes 8=3834
 Lu¹⁷⁴ isomers in electron capture disintegration 8=11776
 Lu¹⁷⁵, parity admixture obs. from polarization asymm. of γ-rays 8=15997
 Lu^{176, m} decay, half-lives 8=1022
 Mg²⁴, branching and mixing ratios from Mg²⁴(He³, αγ)Mg²³ 9.00 MeV 8=11730
 Mg²⁴, photon scatt. from dipole state 8=3905
 Mg²⁴ predicted from appl. of Wigner-Eckart theorem to central interactions 8=7037
 Mg²⁴, 6 excited states from inelastic p scatt., 49.5 MeV 8=3919
 Mg²⁴ from Na²³(d, n), 2.98 MeV, analog state with T = 1 8=20688
 Mg²⁴ from Na²³(p, γ), 0.7–1.5 MeV 8=958
 Mg²⁴ deduced from Ne²⁰(α, γ)Mg²⁴ 3–6 MeV 8=16121
 Mg²⁴, transitions in 42 MeV α-scatt., 3° indicated 8=11939
 Mg²⁴, excited states in Mg²⁴(p, t)Mg²² reaction 8=11883
 Mg^{24, 26}, β parameter for 26 MeV d scatt. 8=7229
 Mg²⁶ from Mg²⁶(He³, α)Mg²⁵, 4–6 MeV 8=20836
 Mg²⁶, second excited state lifetime 8=11731
 Mn, from gamma ray spectra by neutron capture 8=3810
 Mn, n scatt., deviation from Porter-Thomas distrib. 8=3809
 Mn⁵² from Cr⁵⁰(He³, p)Mn⁵² and Fe⁵⁴(d, α)Mn⁵² obs. 8=20703
 Mn⁵³ from Cr⁵²(He³, d)Mn⁵³, 10, 11, 12 MeV 8=3808
 Mn⁵⁵, from n scatt., 1.0–3.1 MeV, dominant M1 transitions 8=15975
 Mo, n resonance spectroscopy 8=20813
 Mo⁹³ analog states from Mo⁹²(d, np)Mo⁹² 8=1095
 Mo^{93, 95}, d_{5/2} ground state anomaly, rel. to charge exchange effects 8=11755
 Mo⁹⁷ from Nb⁹⁷ decay 8=16023
 Mo⁹⁸, monopole 0⁺ transition, 735 KeV 8=7090
 Mo⁹⁸ from Mo⁹⁷(d, p)Mo⁹⁸, 10–12 MeV 8=11756
 N¹³ resonances obs. in C¹²(p, n)N¹², 18.9–50 MeV 8=16079
 N¹³ in N¹⁴(He³, α)N¹³, 13.9 MeV 8=10835
 N¹³ transitions from N¹⁵(p, t)N¹³, 43.7 MeV 8=20791
 N¹⁴ from core correl. effect on motion of outer N 8=3767
 N¹⁴ from αγ correls. in C¹²(He³, pγ)N¹⁴ 8=953
 N¹⁴, 8.49, 8.96, 9.17 MeV levels from C¹²(He³, pγ)N¹⁴ at 8.92 MeV 8=11724
 N¹⁵, 6.32 MeV level, ground state e.m. widths 8=20684
 N¹⁵, lifetime of mirror states from N¹⁴ bombard. of H² and Be⁹ 8=3793
 N¹⁵, isobaric analog states of O¹⁵ 8=15956
 N¹⁶, T = 2 states, by C¹⁴(He³, p)N¹⁶ 8=20683
 Na²², lifetimes of 3 levels meas. by Doppler shift in C₂F₈ 8=11729
 Na²², from F¹⁹(α, nγ)Na²², and Ne²⁰(He³, pγ)Na²², reactions 8=3801
 Na²², 1.528, 0.891 MeV states, spin assignments, lifetimes using F¹⁹(α, nγ)Na²² 8=20690
 Na²² from β⁺ decay of Mg²² 8=3866
 Na²³, B(E2)₁ value 8=935
 Na²³, unreported levels from 17.5 MeV p scatt. 8=20786
 Na²³(p, γ) 0.7–1.5 MeV, resonances 8=958
 Na²³, rotational model of low-lying states 8=956
 Na²³ rotational from Ne²²(He³, d)Na²³, 10, 12 MeV 8=3802
 Na²⁴ upper limit for lifetime of second excited state 8=11732
 Nb⁹⁰ from Mo⁹⁰ decay, multipolarities of transitions 8=20711
 Nb⁹⁷ from Zr⁹⁷ decay 8=16022
 Nd⁴¹ obs. 8=7102
 Nd⁴¹ isomeric, half-life 8=3826
 Nd⁴³, p, f, h wave states spin assigned from p scatt. off Nd¹⁴² 8=7195
 Nd⁴³, Schrödinger equation with Woods-Saxon potential, solution 8=7055
 Nd⁴⁴, above 1.78 MeV, from Pm¹⁴⁴ decay, scintillation spectroscopy 8=16033
 Nd⁴⁴ deduced from Pr¹⁴⁴ decay 8=11765
 Nd⁴⁵, recoilless resonance absorpt. rel. to scheme 8=20724
 Nd¹⁵¹ from Nd¹⁵⁰(d, p)Nd¹⁵¹, ground-state Q value, levels assigned 8=11767
 Ne²⁰, Hartree-Fock calc. validity before angular momentum projection 8=15960
 Ne²⁰, O⁺ state calc. using adiabatic model for collective vibrations 8=11707

Nucleus—cont'd

energy levels—cont'd

- Ne²⁰ 4.97 MeV 2- and 7.02 MeV 4-, weak γ decay obs. 8=15959
 Ne²⁰, pairing effects in Hartree Fock wave function 8=7076
 Ne²⁰, rotational states from O¹⁶(Li⁷, t) reaction 8=16128
 Ne²⁰, shell model calc. of rot spectrum 8=11726
 Ne²⁰ from F¹⁹(d, n) 2.98 MeV, analog state with T = 1 8=20688
 Ne²⁰ from Na²⁰ decay 8=20745
 Ne²⁰, from β-decay of Na²⁰ 8=3865
 Ne²³, following Ne²²(n, γ), unsuccessful search for 2.285, 2.405, 2.870 MeV levels 8=11806
 Ni even isotopes, quasiparticle calc., E2 transition strengths 8=3824
 Ni isotopes, M1 and E2 using admixture of one and 3-particle states 8=971
 Ni isotopes shell model matrix elements 8=3814
 Ni⁵⁸, β parameter for 26 MeV d scatt. 8=7229
 Ni⁵⁸, E2 transition anomalies from Ni⁵⁸(p, p') 8=3928
 Ni^{58, 60}, 2⁺, 3⁻, polarized proton scatt. asymm. 8=3920
 Ni^{58, 60, 62}, radiative transition probabilities and radii 8=3913
 Ni^{58, 60, 62, 64}, polarized p scatt. transitions 8=11880
 Ni⁶⁰, 16 states from Co⁵⁹(He³, d)Ni⁶⁰ Co⁵⁹-He³ scatt., and p-Ni⁶⁰ scatt. 8=15981
 Ni⁶¹ structure from Co⁵⁹(He³, p)Ni⁶¹, 11.65 MeV 8=15980
 Ni⁶¹, from p scatt. d scatt. and (d, p) reactions 8=3815
 Np^{237, 239}, g-factor meas. by α-γ correl. 8=3846
 Np²³⁹ from U²³⁹ decay 8=11832
 O¹⁵, excited states with isobaric analogs in N¹⁵ 8=15956
 O¹⁵, multipole mixing ratios, high retardation of E1 8=11725
 O¹⁵ lifetime of mirror states from N¹⁴ bombard. of H² 8=3793
 O¹⁶, branching ratio meas. on 6.92, 7.12 MeV states 8=3797
 O¹⁶, elec. monopole and quadrupole excitations 8=20685
 O¹⁶, e. m. transition rates, corrections due to ground-state correls. 8=15957
 O¹⁶, even parity states, pairing-plus-quadrupole model 8=11727
 O¹⁶, 4-particle-4 hole correls. using Eichler-Marumori 2-step method 8=15958
 O¹⁶, 19.08 MeV level, form factor, spin and parity 8=3794
 O¹⁶, O⁺ state monopole excitation at 6.056 MeV 8=3798
 O¹⁶, octupole excitation, e scatt., Woods-Saxon pot. 8=7173
 O¹⁶ odd parity states, Fermi liq. theory 8=20686
 O¹⁶, resonances from (γ, p) and (γ, n) reactions 8=1038
 O¹⁶, rot. structure evidence 8=3796
 O¹⁶, 8 particle-8 hole rotational band in α + C¹² → Be⁸ + Be⁸ 8=7075
 O¹⁶, spectroscopy from F¹⁹(p, α)O¹⁶ reaction, for senior students 8=1059
 O¹⁶, from N¹⁵(d, n)O¹⁶, 6 MeV transitions to 5 states 8=7073
 O¹⁶ from n scatt. resonances 8=1069
 O¹⁶ giant multipole reson. and radiative π-capture rates 8=955
 O¹⁶, low-lying, inelastic 1 GeV p scatt. 8=3918
 O¹⁷, using (O¹⁶) harmonic oscillator function with free N-N pot., spin orbit separation calc. 8=20687
 O¹⁷, resonance parameters from 2.2–4.2 MeV n scatt. 8=1070
 O¹⁷, 5 lowest states obs. after F¹⁹(d, α)O¹⁷ 0.9–4.25 MeV 8=16115
 O¹⁸ from core correl. effect on motion of outer N 8=3767
 O¹⁸, generation from Kuo-Brown N-N force 8=3759
 O¹⁸, J = 0⁺, 2⁺ states, shell model amplitudes and relative phases 8=20826
 O¹⁸ shell-model calc. using Tabakin calc. 8=11728
 O^{18, 19, 20}, shell model calc. 8=11726
 Os^{182m}, rotational transitions 8=16001
 P²⁹ from n-γ ang. correl. in Si²⁸(d, n)P²⁹, 3 MeV 8=16117
 P³⁰ from Si²⁹(p, γ) decay property obs. 8=7192
 P³¹, l = 3 transitions, unreported levels in 17.5 MeV p scatt. 8=20786
 P³¹ 2187 keV reson. parity and width rel. to Si³¹ analogue, p scatt. obs. 8=960
 P³¹, 3.13 MeV state, width determ. by γ scatt. 8=11734
 P³¹ from S³²(d, He³)P³¹ 8=20693
 P³¹ from Si³⁰(p, γ)P³¹, branching ratios and parity assignments 8=961
 P³¹ from Si³⁰(p, γ)P³¹, 0.5–2.3 MeV, branching ratios, resonances and bound states 8=11733
 P³¹, resonant absorpt. of γ-ray from Si³⁰(p, γ)P³¹, level parameters 8=15965
 P³², lifetime of first excited state 8=11732
 P³³ from S³⁴(d, He³)P³³, Si³⁰(α, p)P³³ 8=20693
 Pb, proton shell-model potentials 8=11786
 Pb^{204, 206}, transitions obs. after Tl^{203, 208}(α, t)Pb^{204, 206} 8=20838
 Pb²⁰⁵, Bi²⁰⁵ γ-transitions to 13/2⁺ isomeric level 8=997
 Pb²⁰⁶ in Pb²⁰⁴(t, p)Pb²⁰⁶ and Pb²⁰⁸(p, t)Pb²⁰⁶ 8=3839
 Pb²⁰⁶, structure from Pb²⁰⁷(d, t)Pb²⁰⁶ 8=20730
 Pb^{206, 207, 208}, e.m. transition widths equal 8=11785
 Pb²⁰⁶⁻²⁰⁸, particle-core coupling 8=16004
 Pb²⁰⁷, fine structure of doorway state 8=996
 Pb²⁰⁷ 569.6 keV transition K-conversion coeff. 8=3842

Sm¹⁵², E2 transitions, internal conversion 8=1020
Sm¹⁵², half-lives of 2⁺ states 8=11771
Sm¹⁵², 122 keV, 2⁺ rotational state mag. moment 8=7104
Sn even isotopes, quasiparticle calc., E2 transition strengths 8=3824
Sn¹¹⁵, half-life of 7/2⁺ state of 619 keV isomeric level 8=7095
Sn¹¹⁶, energy spectrum, and effective nuclear forces derived from realistic nucleon-nucleon potentials 8=20715
Sn^{116,120,124}, by inelastic electron scattering at 150 MeV 8=11757
Sn^{117m,119m}, internal-conversion studies of M4, M1 transitions 8=20717
Sn^{118,120}, half-life of first 4⁺ state and 5⁻ state 8=11758
Sn^{118,120,124} from n capture resonances 8=20716
Sr⁸⁸, levels, spin and parity obs. by inelastic 65-70 MeV e scatt., width of E2 8=20710
Sr⁸⁸, from Sr⁸⁸(d, p)Sr⁸⁸, 7.0 MeV 8=11932
Sr⁸⁹ from p scatt. of Sr⁸⁸, 5-8.7 MeV 15 isobaric analog states 8=15982
Ta, rel. to shell and unified models 8=3833
Ta¹⁷⁹ isomer, negative search for high spin three-quasi-particle 8=7108
Ta¹⁸¹, parity admixture obs. from polarization asymm. of γ-rays 8=15997
Ta¹⁸², 16.3 min, study by Ge(Li) detector and e-e coincidence spectrometer 8=20727
Tb^{155,157,159}, transition probability, 5/2⁺[532] → 3/2⁺[411] 8=15994
Tb^{155,157,159,161}, E1 transition life times, possible dipole contrib. 8=3827
Tc⁹⁹, half life of 920 keV level 8=20747
Te, even isotope spectra, drawbacks of conventional interpretation 8=20713
Te isotopes, α-particle scatt. to one- and two-phonon states 8=1098
Te resonance spectroscopy, 15 level widths 8=20813
Te⁵², energy level density parameter from Xe⁵⁴(n, α)Te⁵², 12.5-18.0 MeV 8=3942
Te^{118,120,122,124,126}, half-lives and level schemes 8=20718
Te¹²¹, partial scheme from P¹²¹ decay obs. 8=20752
Te¹²², E2/M1 mixing ratio for 2⁺-2⁺ transition 8=975
Te¹²², 686 keV transition, E2/M1 mixing ratio from ang. correl.meas., γγ cascade 8=11782
Te¹²³, 145 keV, lifetime meas., E2 transition rate 8=11759
Te¹²⁴, g-factor of 603 KeV state obs. 8=20669
Te¹²⁵, half-life of first excited state from Sb¹²⁵, P¹²⁵ decay 8=15986
Te¹²⁹ from Te¹²⁸(d, p)Te¹²⁹, 7.5 MeV 8=3961
Te¹³¹, from Te¹³⁰(d, p)Te¹³¹, 7.5 MeV 8=984
Th²²⁸, asymmetric-rotor model 8=999
Ti⁴², (He³, n) reaction study 8=20694
Ti⁴⁸, mixing and branching ratios following p scatt. 8=11747
Ti^{48,50}, polarized p scatt. transitions 8=11880
Ti⁴⁹, cascades following Ti⁴⁸ thermal n capture 8=11903
Ti⁹⁰, B(E2)† value 8=935
Tl²⁰³, parity admixture obs. from polarization asymm. of γ-rays 8=15997
Tl²⁰⁸, rel. to tensor pairing forces 8=919
Tl²⁰⁸ spectra 8=7047
Tm¹⁷⁰, from d scatt. rot. states, B(E2) values 8=7106
Tm¹⁷⁰, 4.1 μs isomeric state, strongly retarded E1 transitions 8=990
Tm¹⁷¹ energy spectrum from Er¹⁷¹ → Tm¹⁷¹ 8=11775
Tm¹⁷², 0-forbidden transition, level lifetimes 8=15995
U²³³, absolute M1 and E2 transition probabilities 8=20731
U²³⁶, from P²³⁹, rotational parameters for 5 rotational bands 8=11789
U²³⁸, n- and d-scatt. obs. 8=16007
V n scatt., deviation from Porter-Thomas distrib. 8=3809
V^{47,49}, internal conversion coeff. and γ-ray angular distribution 8=15974
V^{47,49,51} from (He³, d) reactions on Ti^{46,48,50} at 10 MeV 8=969
V⁴⁸ from Ti⁴⁶(He³, p)V⁴⁸, 12 MeV 8=20702
V⁴⁹, structure from Cr⁵⁰(t, α), 13 MeV, and Ti⁴⁸(He³, d), 18 MeV 8=11750
V⁴⁹, p excitation in Ti⁴⁸(He³, d)V⁴⁹, 17 MeV, transitions obs. 8=20701
V⁶¹, B(E2)† value 8=935
V⁶¹ quadrupole moment and effective E2 transition moments 8=968

Nucleus—contd

energy levels—contd

- V^{51} reson. integral 8=16098
 V^{51} , from n scatt., 1.0-3.1 MeV, dominant E2 transitions 8=15975
 V^{51} from $Ti^{50}(He^3, d)V^{51}$, 10, 11, 12 MeV 8=3808
 V^{52} , study from $V^{51}(n, \gamma)V^{52}$ reaction 8=1079
 W^{180} from Re^{180} 2.5 min. decay 8=3885
 W^{182} , γ - γ angular correlation obs. 8=20728
 $W^{182, 184, 186}$ from n scatt., 0.3-1.5 MeV 8=1074
 W^{183} , retarded transitions, RPC model 8=992
 W^{186} , low level scheme 8=16043
 Xe^{123} decay, gamma ray and conversion electron spectra 8=7138
 Xe^{128} from I^{128} , Cs^{128} γ decay, no $O^+-2^+-4^+$ triplet obs. 8=3825
 Y , ground state $1/2^-$ from $Zr^{90, 92, 94, 96}(d, He^3)$ $Y^{89, 91, 93, 95}$ 8=20830
 Y^{89} from (p, p') reaction at 14.71 MeV 8=1054
 Y^{89} , giant resonance parameters from photon interactions 8=1040
 Y^{89} , obs. in inelastic 65-70 MeV e scatt. B(E2) of low-lying quadrupole states 8=20710
 Y^{89} , 0.908 MeV from 61.2 MeV p scatt. 8=1053
 Y^{90} , energy diagram 8=7215
 Yb^{172} , spins and parities of rot. bands 8=11823
 Yb^{172} , K=3 rot. band, multipolarities from Lu^{172} decay 8=15996
 Yb^{176} , 8.2n decay 8=3831
 Zn , β parameter for 4 26 MeV d scatt. 8=7229
 $Zn^{63, 65}$, internal conversion coeff. and γ -ray angular distribution 8=15974
 $Zn^{64, 66}$ from $Cu^{63, 65}(He^3, d)Zn^{64, 66}$, 18 MeV 8=3970
 $Zn^{64, 66, 68, 70}$ 50 MeV p scatt., optical analysis 8=7186
 $Zn^{64, 66, 68, 70}$ spectroscopic factors up to 3.5 MeV from 10 MeV (d, p) reaction 8=11929
 Zn^{67} , 184 keV transition, E2/M1 mixing parameter, half-life 8=7085
 Zn^{68} from $Zn^{67}(n, \gamma)$, γ -ray spectrum obs. 7=7213
 Zn^{69m} , 0.436 MeV, k conversion coeff. 8=974
 Zr , shell model p admixture in ground states 8=20830
 Zr^{89} from $Y^{89}(p, n)Zr^{89}$, low lying states obs. 8=977
 Zr^{89} , from $Y^{89}(p, n)Zr^{89}$, 3.6-5.8 MeV 8=11889
 Zr^{90} , dipole resonances from $Y^{89}(p, \gamma)Zr^{90}$ 11.9-13.5 MeV 8=976
 Zr^{90} giant resonance isobaric splitting, evidence from $Y^{89}(p, \gamma_n)$ 8=11753
 Zr^{90} isobaric analogue states in eigenchannel theory 8=3819
 $Zr^{90, 91, 92, 94}$, giant resonance parameters from photon interactions 8=1040
 $Zr^{90, 92, 94, 96}$, resonance structure, s-wave strength function, 2-60 keV 8=11907
 Zr^{91} , Schrödinger equation with Woods-Saxon potential, solution 8=7055
 $Zr^{93, 95}$, $d_{5/2}$ ground state anomaly, rel. to charge exchange effects 8=11755
 Zr^{96} , p elastic and inelastic scatt., spectroscopic factors 8=3929

excitation. See Nuclear excitation.

magnetic moment

models

- adiabatic using HF eqns. for collective vibrations of deformed nuclei 8=11707
 asymmetric-rotor applic. to Th^{228} 8=999
 asymmetric rotor, rel. to rotational states in even-even nuclei 8=948
 breathing mode calc., breakdown for Ca^{40} , Pb^{208} 8=3783
 cascade-evaporation rel. to formation of radioactive nuclides in Ag from p bombard, 3 and 29 GeV 8=20799
 cascade evaporation rel. to U and Ta, 156 MeV p-induced fission 8=11965
 Clebsch-Gordan coeffs. and projection operators for SU₃ 8=15680
 collective, book 8=3760
 collective for $Be^8(Li^7, p)C^{15}$, lifetime of excited state of C^{15} 8=20680
 collective for $Cl^{35}(n, d)S^{34}$ 8=1078
 collective, giant resonances, dipole vibrations 8=7044
 collective interaction from deforming complete optical pot. for p scatt. asymm. 8=3920
 compound for $Mn^{55}(p, n\gamma)Fe^{55}$, 1.8-3.5 MeV 8=3927
 compound nucleus for (Li^7, p) , (Li^7, d) , (Li^7, t) on C^{12} at 3.5 MeV 8=3975
 cranking, rel. to nuclear rotation parameters 8=940
 cranking, rotational states of deformed nuclei 8=11685
 cranking, self-consistent, charge radii calc. 8=15921
 Davydov, non-adiabaticity of β -vibrations in rare-earth even-even nuclei 8=947
 Davydov-Chaban, validity of centrifugal stretching 8=16001
 de-Shalits core excitation and levels of Au^{199} 8=994
 diffraction, with surface absorption 8=11842
 drop, inertial deformation 8=20652
 elementary particle, test in $n + He^3 \rightarrow p + H_2^+$ 8=15873
 Elliot SU₃ shell for particle-hole states of Ca^{40} 8=11745
 Fermi gas, calc. of matrix elements for transitions 8=3780
 Fermi gas, finite size corrections rel. to the function $F(\nu)$ 8=20648
 Fermi liquid, Migdal's, density matrix approach 8=20653
 Fermi liquid theory rel. to O^{16} odd parity state 8=20686
 finite system, effective field eqn. 8=920
 harmonic oscill. core with superimposed N-N interactions in O^{17} 8=20687
 Helm's for electroexcitation of levels, extension 8=3773
 hydrodynamic, density distrib., influence of nonlinear surface vibrs. 8=11686
 impulse, for He^4 radius meas. 8=20590
 independent particle in π photoproduction reactions on B^{11} 8=1035
 isobaric analogue states in heavy nuclei, quasiparticle theory 8=3778
 liquid drop rel. to effective masses for fission 8=7241
 liquid-drop, for studying Coulomb distortion in superheavy-ion reactions 8=11688
 liquid drop rel. to U and Ta, 156 MeV p-induced fission 8=11965
 liquid drop, vibrating, incompressible, irrotational 8=11785
 n particles moving in 2 j-shells interacting via pairing force 8=15923
 Nilsson, of nuclear deformation 8=16005
 Nilsson, appl. to odd-mass rare-earth vibrational states 8=15992
 Nilsson in E1 transition of Eu and Tb isotopes, anomalies 8=3827
 Nilsson and the isomeric decay of Dy^{150} , Tm^{185} , $Lu^{172, 173}$ and W^{180} 8=3828
 Nilsson, and g-factors of $Np^{237, 239}$ 8=3846
 nucleon-phonon interaction model, energy spectra calc. 8=3763
 odd mass, near A ~ 190, systematics of shell and unified models 8=3833
 optical for $\alpha + S^{32}$ scatt., 10-17.5 MeV 8=20832
 optical analysis of π -nucleus scatt. 8=3948
 optical rel. to $Bi^{20, 11}(p, d)B^{9, 10}$ 8=20788
 optical, book 8=3760
 optical for $C^{15}(d, p)C^{14}$, 4-6 MeV compared to DWBA analysis 8=16113
 optical rel. to $Co^{59}(He^3, d)Ni^{60}$ and $Co^{59}-He^3$ scatt. 8=15981
 optical in d scatt. and stripping reactions on Ca^{40} 8=16118
 optical for d elastic scatt. from $Ti^{47, 48, 49, 50}$ 8=20823
 optical for d- Li^6 and He^3-Li^6 scatt. 8=20833
 optical for 50 MeV p scatt. from $Zn^{64, 66, 68, 70}$ 8=7186
 optical and geom., for total cross sections for He^3 8=11937
 optical rel. to $Mg^{24}(d, n)Al^{25}$, 1.38-2.8 MeV 8=11923
 optical for n scatt. from Fe, Al, 1-4 MeV 8=3935
 optical for n scatt. off heavy nuclei, 6-24 MeV 8=16085
 optical and Nilsson for $Ne^{22}(He^3, d)Na^{23}$, 10, 12 MeV 8=3802
 optical, nuclear reactions due to nucleons 8=1049
 optical, parameters for α -particles, influence of expt. errors 8=11941
 optical parameters for low energy α scattering 8=16120
 optical, parameters for polarized p scatt. 8=16067
 optical parameters from p elastic scatt., 3 GeV/c 8=20780
 optical, parameters from p, and d-induced reactions 8=109
 optical rel. to polarized p scatt., ang. asymm. 8=11880

Nucleus—contd**models—contd**

- optical potentials, complex, derivation 8=7038
 optical potential in DWBA calc. of direct interaction part of scatt. S matrix 8=7153
 optical potential of deuteron, link-cluster expansion 8=6991
 optical potential, form of imaginary part 8=3757
 optical potential for isobaric analogue resonance theory 8=7046
 optical pot., isospin dependent term investigated by n, p scatt. off Co⁶⁰, Bi²⁰⁹ 8=7039
 optical potential for neutron scattering on heavy nuclei 8=7197
 optical potential, N, complex symmetry term from n scatt. data 8=924
 optical potential relationship for spherical and deformed nuclei 8=11687
 optical potential, spin-spin interaction during quasi-elastic scattering 8=15936
 optical potential in Te- α scatt. 8=1098
 optical for p elastic scatt. 8=3917
 optical for p scatt. off Mg²⁴ 49.5 MeV 8=3919
 optical rel. to reaction cross-section for α -particles on nuclei of about A = 60 8=7237
 optical, real part of potential for proton diff. elastic scattering 8=11876
 optical, square-well, generalized for n-nucleus scatt. 8=16086
 pairing corrls. in even-even nuclei, ground-state energy calc. 8=922
 particle-hole in collective O⁻ vibration calc. in 8 nuclei 8=11706
 particle hole treatment of corrl. between resonances and surface vibrs. 8=933
 potential, deformed spin-dependent 8=20779
 p holes coupled to vibrating core for energy levels of Hg^{198, 200, 202} 8=3838
 quantal, of double even rotating in plane, energy depend. of ang. momentum 8=11708
 quasiboson approx. rel. to even-parity states of O¹⁶ 8=11727
 quasi-particle excitation, gapless super-conductivity 8=928
 quasi-particle, phenomenological test 8=925
 random phase approx. generalized to include ground state corrls. 8=15920
 rotational anomalies in transitions props. of Si²⁷ 8=3803
 rotational, applic. to low-lying states of Na²³ 8=956
 rotation vibration interaction rel. to E2 transition probabilities in even-even nuclei 8=15939
 rotation-vibration rel. to rotational states in even-even nuclei 8=948
 rotor, asymmetric, +ve parity level of β -vibration bands description 8=946
 schematic interactions for complex problems 8=934
 shell amplitude and relative phase calc. in O¹⁸ (t, p) O¹⁸ 8=20826
 shell, approx. and exact. solns. compared, var. in potential and radius 8=3764
 shell, Be¹¹, evidence from μ capture rate in B¹¹ \rightarrow Be¹¹ 8=11873
 shell, book 8=3760
 shell, bound to error in diagonalization of Hamiltonian 8=3761
 shell, Ca⁴⁰, anomalies revealed by pickup reactions 8=11854
 shell for C¹³ (n, d) S³⁴ 8=1078
 shell, for crossover to E2 transitions in Ni⁵⁸ 8=3928
 shell calc. of d-s states, SU₆, SU₃ selection rules 8=7050
 shell for (d, n) reactions on B¹¹ and N¹⁵, 6 MeV 8=7073
 shell, DWBA approach to nuclear reactions 8=7153
 shell effect in (n, 2n) reactions at 14 MeV 8=11895
 shell, extended, equations-of-motion method 8=15922
 shell calc. for F¹⁸, O¹⁸ 8=11728
 shell, G matrix fit in 1p shell 8=7048
 shell rel. to γ transitions in B¹¹, anomaly 8=11721
 shell rel. to γ transition of 8.96 and 8.49 MeV levels of N¹⁴ from C¹² (He³, p γ) N¹⁴ 8=11724
 shell for ground state configurations in Zr rel. to Zr^{90, 92, 94, 96} (d, He³) Y^{89, 91, 93, 95} 8=20830
 shell and ground state wave function of Te¹²⁸ 8=3961
 shell and (He³, d) reactions on Ti⁵⁰, Cr⁵² and Fe⁵⁴ 8=3808
 shell, hexadecapole equilibrium distortions 8=20645
 shell, invariant field operator formalism 8=3765
 shell rel. to levels of Al²⁷ from Si²⁸ (d, He³) Al²⁷, 34.4 MeV 8=20692
 shell, low-lying from photonuclear cross sections obs. 8=20659
 shell, low-lying states of Ca⁵⁰ compared to obs. of Ca⁴⁸ (t, p) Ca⁵⁰ 8=7083
 shell, matrix element calc. 8=926
 shell, matrix elements statistics 8=20646
 shell calc. of 1f_{7/2}, 1f_{5/2}, 1d_{5/2}⁻¹, configurations for 40 \leq A \leq 48 8=7049
 shell-model potentials for heavy nuclei and stability of superheavy nuclei 8=11786
 shell model calc. of props. of O^{18, 19, 20}, F^{18, 19, 20}, Ne²⁰ 8=11726

Nucleus—contd**models—contd**

- shell for (n, d) reactions on N¹⁴, C¹³, K³⁹, Ca⁴⁰, As⁷⁵ 8=7212
 shell rel. to N⁹⁰ decay 8=18113
 shell for Ni isotope matrix elements 8=3814
 shell, rel. to Ni⁹⁰-p scatt. form factors 8=15981
 shells, use of outer in phenomenological calc. of quasi-particle model 8=925

 radius meas. using optical method 8=7078
 r. m. s. radius, with z protons 8=15950
 rare earth, Y₈₀ and Y₆₀ shape component determ. 8=11713
 shell model var. with approx. and exact calc. 8=3764
 shell struct., trapezoidal and modified Gaussian density 8=11712
 Y₄ moments, behaviour from aligned wave functions 8=11714
 Be⁴⁰, r. m. s. calc. of p, n radii 8=20677

Nucleus — contd

size — contd

- Bi²⁰⁹, charge distrib., possible p halo from muonic X-rays 8=20672
 C¹², r. m. s. calc. of p, n radii 8=20677
 C¹³, charge radius from 250 MeV e scatt. in methane 8=3912
 Ca⁴⁰, shell model, BHF calc. 8=3762
 Er isotopes, radius parameters from n scatt. 8=1073
 He³ perturbation calc. of Coulomb energy and e. m. radius 8=3740
 He⁴, radius meas., use of impulse model 8=20590
 He⁴ shell model, BHF calc. 8=3762
 K⁴⁰, A⁴⁰, mass difference determ. from Q value of various reactions 8=11740
 La¹³⁹ radius, e scatt. at 225 ± 0.7 MeV obs. 8=11866
 Li^{6,7}, 100-600 MeV e elastic scatt., r. m. s. radius determ. 8=1047
 Mg²⁴, equilibrium shape, restoration of axial symmetry by pairing correlations 8=15962
 O^{16,18}, radii 8=943
 O¹⁶, shell model, BHF calc. 8=3762
 W¹⁸³, large inertial parameter for high-lying bands 8=992
 Yb even-even isotopes, moment of inertia anomaly 8=3832

spin and parity

- See also Gyromagnetic ratio; Molecules/nuclear coupling.
 angular correl. coeff. with transitory formations betw. dipole-quadrupole mixtures 8=7063
 ang. momentum dependence of off-shell amplitudes 8=3895
 asymmetric-rotor applic. for negative parity levels in deformed nuclei 8=999
 compound nucleus, γ -ray emission ang. dist. effect 8=932
 (d, p) reaction in 1p shell, ang. distrib. calc., J-depend. effects 8=11921
 dipole resonance, influence of spin-orbit splitting 8=7053
 g-factor meas. of short-lived states, sum-coincidence method 8=20669
 heavy nuclei, rotation theory using cranking model and superfluid matter 8=940
 isospin for A = 24, 28 in nuclear level density calc. 8=20658
 isospin dependence of optical pot. 8=7039
 isospin hindered transitions, second-order contrib. 8=1005
 isospin mixing in d induced reactions 8=1088
 isospin term in nuclear pot. for (p, n) reactions, 94 MeV 8=16070
 J π = O $^-$ states calc. for 8 nuclei 8=11706
 level density spin depend. in evaporation analysis 8=11699
 moment of inertia, HF calc. for doubly nuclei 8=7033
 moment of inertia, Inglis formula generalization 8=11708
 nuclear e. m. transitions, role of applied field and ang. correl. instead of polarization 8=3775
 odd-odd nuclei, moments of inertia 8=15948
 odd triplet states, N-N potential 8=3777
 n pairing energy as a function 8=3770
 quadrupole-octupole interaction rel. to two phonon states 8=15927
 residual, A(x, yz)B produced, polarized target 8=3898
 rotation matrices, orthogonality and completeness 8=7062
 spin-orbital potential, large momentum 8=7064
 spin-orbit splitting in spherical H-F theory 8=15947
 spin-quadrupole interaction rel. to β -decay ratio to O $^+$ and ground states 8=11801
 spin-spin interaction in optical potential during quasi-elastic scattering 8=15936
 T = % of 7 nuclei, mass determ. by reaction 8=20656
 2I + 1 rule obs. in F¹⁹(d, α)O¹⁷, 0.9-4.25 MeV 8=16115
 2s-1d shell, moment of inertia calc. method 8=11709
 violation of parity, and time reversal, possible tests 8=939
 Ag¹⁰², spin 2 state by magnetic resonance technique obs. 8=7094
 Ag¹⁰⁹ from Pd^{109g} → Ag^{109g}, anomalies 8=16026
 Al²⁶, isospin selection rule in Si²⁸(d, α)Al²⁶ 6.98-11.06 MeV 8=20829
 Al²⁶ level assignments from Mg²⁵(He³, d)Al²⁶, 12 MeV obs. 8=16122
 Al²⁷, assignments from Si²⁸(d, He³)Al²⁷, 34.4 MeV 8=20692
 Al²⁹ in Si³⁰(d, He³)Al²⁹ 8=20693
 Am²⁴² prod. by (n, γ) 8=20847
 Am²⁴⁵ following Pu²⁴⁵ decay 8=11833
 Ar³⁸ assignments from Cl³⁷(p, γ)Ar³⁸, 1.0-1.8 MeV 8=11737
 Ar³⁸, 4.88 and 5.36 MeV, from Cl³⁵(α , p γ) reactions at 10.6 MeV 8=3804
 Ar³⁸, spin measurement by spectroscopic techniques 8=11739
 As⁷⁵ levels from α and O¹⁶ scatt. 8=3816
 Au¹⁹⁷ from 0.15-1.5 MeV n scatt. 8=11899
 Au¹⁹⁹ from Pt¹⁹⁹ decay 8=994
 Au¹⁹⁹ obs. 8=7112
 B⁹ levels from B¹⁰(p, d)B⁹, 33.6 MeV 8=20788
 B¹⁰, 2 $^-$ state from Li⁷(He³, γ)B¹⁰, 3-6 MeV 8=11943
 B¹¹ level assignments in Be⁹(He³, p γ)B¹¹, 3, 4 MeV 8=20681
 B¹¹ from Li⁷(α , γ)B¹¹, of 9.87, 10.26, 1062 MeV states 8=11721
 B¹², 0.95, 1.67, 2.62 MeV, spin assignments from γ - γ correl. meas. 8=20679
 Be⁷ from He³-He⁴ and He³-H³ scatt. 8=7001
 Be⁸, isotopic spin mixing in high excited states from (p, d) reaction 8=3923
 Be⁸, 16.82 level, J π = O $^+$ in Be⁹(He³, α)Be⁸ → α + α 8=20834
 C¹¹ from α γ correls. in C¹²(He³, α γ)C¹¹ 8=953
 C¹¹ level assignments after C¹²(He³, α γ)C¹¹, 4-12 MeV 8=20681
 C¹², from B¹¹(d, n)C¹², 6 MeV, spectroscopic factors 8=7073
 C¹² levels from inelastic 100-200 MeV e scatt. 8=16063
 C¹², 19.4 MeV level, 2 $^-$ assignment from e scatt. 8=20682
 C¹³ assignments from 52 MeV d bombard. of N¹⁴ 8=7228
 C¹³ assignments from N¹⁴(p, He³)C¹³, 47.3 MeV 8=20791
 Ca isotopes, assignments from (t, p), 10-12 MeV 8=1094
 Ca⁴⁰(d, α)K³⁸, isospin mixing in compound nucleus 8=7230
 Ca⁴⁰, 1 $^-$ assignment from 31 MeV α -scatt. 8=11746
 Ca⁴⁰, 6.91, 6.95 MeV, γ -scatt. rel. to spin, lifetime assignments 8=11743
 Ca⁴⁰, spin of 5.21 MeV state, parities of 5.25 MeV triplet 8=11744
 Ca^{40,42,44,48}, 31 MeV α scatt., new multipole states, spin-parity assignments 8=3807
 Ca^{42,46} from Ca^{40,40}(t, p), 7.5 MeV 8=11741
 Ca⁴⁷, low level of positive parity states, spectroscopic factors calc. 8=20700
 Ca⁵⁰ from Ca⁴⁸(t, p)Ca⁵⁰, low lying states obs. compared to shell model calc. 8=7083
 Ce¹³⁸, level assignments from Pr¹³⁹ decay 8=7141
 Ce¹⁴⁰ levels from Fm²⁵³ decay 8=11836
 Cl³⁵ analog states of S³⁵ from S³⁴(p, γ)Cl³⁵ 8=11735
 Cl³⁵, 8.385 MeV level 8=1063
 Cl³⁵ from S³⁴(p, γ)Cl³⁵, level assignments 8=11736
 Cl³⁷, level from β decay of S³⁷ 8=16018
 Co⁵⁶, from internal conversion coeff. and γ -ray angular distribution 8=15974
 Co⁵⁷, 1.22, 1.68 MeV levels from Fe⁵⁴(α , p)Co⁵⁷, 10.5 and 11 MeV 8=15978
 Co⁵⁸ spin cutoff parameter calc. from isomer ratios 8=20707
 Co⁵⁹, scatt. levels, from O¹⁶, d scatt. 8=3813
 Cs¹³⁸, and mag. moment, at beam investigation 8=7098
 Dy¹⁶¹, 75 keV level, by Mossbauer effect 8=3829
 Er¹⁶⁰, ground-state spin using atomic beam magnetic resonance 8=11777
 Eu¹⁵⁵ levels from Sm¹⁵⁵ decay 8=7105
 Eu¹⁵⁶, isobaric spin impurity calc. 8=1019
 F¹⁸, 1.131 MeV level, from O¹⁶(He³, p γ) 8=3800
 F¹⁹(d, α)O¹⁷, 0.9-4.25 MeV obs. of 2I + 1 rule 8=16115
 Ga⁶⁸, from internal conversion coeff. and γ -ray angular distribution 8=15974
 Gd¹⁵⁵, 86.5 and 105.3 keV states, and attenuation coeffs. 8=20725
 Ge⁷¹ from Ge⁷⁰(d, p)Ge⁷¹ at 7.5 MeV 8=11931
 Ge⁷², from Ga⁷² decay 8=1013
 Ge⁷² from Ga⁷² decay 8=16021
 He³-He⁴ solutions, polarization enhancement 8=256
 He⁴, calc. of odd-parity states 8=887
 Hf¹⁷⁸, 3 I = 0 states, positive parity obs. 8=11766
 Ho^{165,166}, resonances induced by n scatt., 35-750 eV and capture, 2.5-10⁵ eV 8=16101
 I¹²⁷, 60-900 keV n scatt., level spin 8=7096
 I^{130m}, isomeric transition and disintegration, levels 8=7097
 I¹³¹, parity assignments from internal conversion decay of Te^{131m} 8=3878
 K³⁷, 2750 KeV level, established as $\frac{5}{2}^+$ 8=3805
 K³⁹ de-excitation following Ca⁴²(p, α)K³⁹ and p scatt. 8=15967
 K^{39,41} level assignments from inelastic n scatt. and (n, p γ) reactions 8=20809
 K⁴⁰, J π = O $^+$, for 1.64 MeV level 8=15968
 K⁴¹ from p induced reactions 8=964
 K⁴⁷, ground state $\frac{1}{2}^+$ instead of $\frac{3}{2}^+$ in other K isotopes 8=20700
 Kr⁸², 1821 keV 8=11782
 La¹³³ from β -decay of Ce^{133,133m}, β -deformation 8=20722
 La¹³⁵ level assignments from Ce¹³⁵ decay 8=20721
 Li⁵ level $\frac{3}{2}^+$ deduced in H²(He³, γ)Li⁵ 2-5.5 MeV 8=20581
 Li⁵, $\frac{3}{2}^+$ state obs. in p- α scatt. 22-25 MeV 8=20532
 Li⁶ from d- α scatt., 3-14 MeV 8=11651
 Li⁷ from He³-He⁴ and He³-H³ scatt. 8=7001
 Li⁷(p, n)Be⁷ (431 keV), spin-flip and isospin-flip 8=3924
 Li⁷(p, p')Li⁷ (478 keV), spin-flip and isospin-flip 8=3924
 Lu^{169,170,171}, ground-state spin using atomic beam magnetic resonance 8=11777
 Lu¹⁷⁵ level, parity admixture obs. from polarization asymm. of γ -rays 8=15997
 Mg²³, level assignments from Mg²⁴(He³, α γ)Mg²³ 9.00 MeV 8=11730
 Mg²⁴, level assignments deduced from Ne²⁰(α , γ)Mg²⁴ 3-6 MeV 8=16121
 Mg^{24,26}(α , γ)Si^{28,30}, isospin allowed giant dipole resonance 8=11944
 Mn, 200 keV n scatt., resonance levels 8=3809
 Mn⁵⁵ assignments from n scatt., 1-3.1 MeV 8=15975
 N¹³ assignments from N¹⁵(p, t)N¹³, 43.7 MeV 8=20791

Nucleus—cont'd

spin and parity—cont'd

N¹⁴ from $\alpha\gamma$ correls. in C¹²(He³, p γ)N¹⁴ 8=953

N¹⁴, 8.86 MeV level from C¹²(He³, p γ)N¹⁴ at 8.92 MeV 8=11724

Na²², J = 5(or 3) for 1.528 MeV state, J = 4 for 0.891 MeV state 8=20690

Na²², from linear polarization meas. on γ de-excitation 8=15961

Na²² from Ne²⁰(He³, p γ)Na²², 6.56 MeV 8=3801

Nd¹⁴¹ obs. 8=7102

Nd¹⁴³, p, f, h-wave states from 12 MeV p scatt. off Nd¹⁴² 8=7195

Nd¹⁴⁴ deduced from Pr¹⁴⁴ decay 8=11765

Nd¹⁴⁴, 2.86 MeV, spin zero obs., positive parity 8=11766

Nd¹⁵¹ from Nd¹⁵⁰(d, p)Nd¹⁵¹, band mixing 8=11767

Ni⁵⁸(p, p' γ) levels, parity determ. 8=3928

O¹⁶, level assignments, multipole mixing ratios obs. 8=11725

O¹⁶, J π = 2+ and 4+ at 6.92 and 10.36 MeV, rot. structure 8=3796

O¹⁶, 19.08 MeV level, J π = 2 $^-$ from e scatt. 8=3794

O¹⁶, n scatt. negative parity states 8=1069

O¹⁶ from N¹⁵(d, n)O¹⁶, 6 MeV spectroscopic factors 8=7073

O¹⁶ odd parity states, Fermi liq. theory 8=20686

O¹⁷, J = 5/2 and J = 3/2, level separation calc. 8=20687

O¹⁷, 2, 2.4-2 MeV n scatt. 8=1070

P³¹ from Si³⁰(p, γ)P³¹ 8=961

P³³ in S³⁴(d, He³)P³³ 8=20693

Pb²⁰⁸, excitation obs. from e scatt., 28-73 MeV 8=11785

Pb²⁰⁸ levels from Bi²⁰⁹(t, α)Pb²⁰⁸, 13 MeV 8=11936

Pd¹⁰⁶ level assignments from Ag^{106m} decay 8=7092

Pm¹⁴⁷, from Nd¹⁴⁷ decay 8=3881

Pr, spin of compound nucleus in n resonance spectroscopy 8=20813

Pr¹⁴³, from Ce¹⁴³ β decay, 8 levels 8=11764

Pu²³⁹, α emission in fission, ang. momentum effect 8=3977

Rb⁸⁸, in S γ electronic ground state nucleus² 8=20708

Re¹⁸³ from Ta¹⁸¹(He⁴, 2n γ)Re¹⁸³, 19.8 MeV 8=20729

Re¹⁸⁶ deduced from thermal n capture by Re¹⁸⁷ 8=11780

Rh¹⁰², 2 year, rel. to γ -ray spectra 8=20751

Ru⁹⁹ from Rh⁹⁹ γ -decay 8=978

Ru¹⁰³, assignments from internal conversion β -spectrum 8=11815

S³² from Si²⁸(α , γ)S³², 3.7-4.3 MeV 8=963

S³⁶, positive parity, from Cl³⁷(d, He³) 8=20696

S³⁷, ground state 8=16018

Sb^{117, 119, 121}, low-lying levels 8=3971

Sb¹¹⁹, spin assignments from Te^{119m} decay 8=3877

Si²⁷ levels from Si²⁸(He³, $\alpha\gamma$)Si²⁷ 8=3803

Si²⁸(α , γ)S²⁸, 7-12 MeV, isospin allowed giant dipole resonance 8=11944

Si²⁸ levels from AP²⁷(He³, d)Si²⁸, 37.7 MeV 8=15963

Si³⁰, 3786 keV excited state, positive parity 8=20695

Si³⁰, transition from n pickup reactions 8=3959

Si^{118, 120, 124} from n capture resonances 8=20716

Sr⁸⁸ level obs. from inelastic 65-70 MeV e scatt. 8=20710

Sr⁸⁹ from p scatt. of Sr⁸⁸, 5-8.7 MeV 8=15982

Ta¹⁸¹, circular polarization of 482 keV γ transition obs. 8=11779

Ta¹⁸¹, e. m. transitions, symm. props. 8=3775

Ta¹⁸¹, parity admixture obs. from polarization asymm. of γ -rays 8=15997

Te isotopes, α -particle scatt. to one- and two-phonon states 8=1098

Te¹²⁸(d, p)Te¹²⁹, orbital ang. momentum for transferred n 8=3961

Ti⁴⁶ assignments from p scatt. 8=11747

Ti⁴⁹ assignments following Ti⁴⁸ thermal n capture 8=11903

Ti²⁰³, parity admixture obs. from polarization asymm. of γ -rays 8=15997

Tm¹⁶⁵, ground-state spin using atomic beam magnetic resonance 8=11777

Tm¹⁷⁰, from d scatt., 5.5 and 12 MeV 8=7106

Tm¹⁷¹ assignments from Er¹⁷¹ \rightarrow Tm¹⁷¹ 8=11775

U²³⁸, spin depend. of n cross-section 8=20849

V, 200 keV n scatt., resonance levels 8=3809

V^{47, 49}, from internal conversion coeff. and γ -ray angular distribution 8=15974

V^{47, 49, 51} from (He³, d) reactions on Ti^{46, 48, 50} at 10 MeV 8=969

V⁴⁸, isospin impurity deduced from β - γ circular polarization correl. 8=7131

V⁴⁸, 305 keV state, parity determ. from γ polarization meas. 8=11749

V⁵¹ assignments from n scatt., 1-3.1 MeV 8=15975

W¹⁸⁰ from Re¹⁸⁰ 2.5 min. decay 8=3885

W⁹⁰ level obs. from inelastic 65-70 MeV e scatt. 8=20710

Yb¹⁷² levels, rot. and vib. bands 8=11823

Zn^{63, 65}, from internal conversion coeff. and γ -ray angular distribution 8=15974

Zn^{64, 66} from Cu^{63, 65}(He³, d)Zn^{64, 66}, 18 MeV 8=3970

Zn^{64, 66, 68, 70} spectroscopic factors up to 3.5 MeV from 10 MeV (d, p) reaction 8=11929

Zn^{68, 66} from γ polarization meas. following thermal n capture 8=11905

Zn^{69m}, 0.436 MeV level 8=974

Nucleus—cont'd

theory

 radar sea return, Doppler shift dependence on waves 8=23240
 radioisotope sediment tracing, digital computer processing of data 8=18835
 reflection of collimated light, time-average evaluation 8=18840
 reverberation under Arctic sea-ice 8=5788
 rotating basin of parabolic depth profile, horizontal transport 8=18839
 San Diego Trough, acoustic reverberation, spatial and spectral dependence 8=9819
 sea currents detect. by satellite, i. r. obs. 8=9855
 sea currents, dynamics of non-periodic, USSR studies review 8=9811
 shallow water, bottom friction layer 8=9812
 ship waves in stratified ocean, surface and internal 8=9818
 sonar detection in the present of interference 8=23241
 sonar, optimum waveform for 8=23249
 sonar, volume reverberation tests as function of pulse lengths and sweep rates 8=23242
 sound fluctuations and random inhomogeneities 8=3054
 sound, refl. and scatt., ocean bottom 8=2572
 sound signals scattered from bottom, time fluctuation characteristics calc. 8=23244
 sound transmissions, surface/bottom reflected in divergent channel 8=18844
 spherical waves, cavitation and induced nonlinear losses 8=9820
 spray droplets as function of wind speed and height (< 1.2 m) 8=23243

Oceanography—contd

- spreading of ocean floor, steady state model 8=9821
 surface layer, organized convection due to slicks and wave radiation 8=14571
 surface temp. meas. using airborne i. r. thermometer 8=2570
 surface, time varying, scattering of monochromatic acoustic plane wave 8=6167
 surface waves diffraction by a wedge 8=9815
 surface waves spatial-freq. struct. by correl. polarization 8=9808
 surface waves wind prod., spectrum recorder and 0.01-5.5 Hz obs. 8=9807
 swells, law of logarithmic distrib. 8=5784
 temperature meas. by airborne i. r. radiometer 8=18845
 third-order tides, calc. from spectral anal. of gravimetric obs. 8=18842
 tidal currents, turbulent mixing 8=14574
 tidal drift of floating ice, vel. and direction 8=9799
 tidal flow and mass transport in Humber estuary 8=5785
 tidal forces of sun and moon, long period vars. 8=19241
 tidal var. in force of gravity, spectral analysis 8=9817
 underwater acoustics applications, book 8=10751
 underwater explosions, $\pi/2$ phase shift at caustics 8=19546
 underwater explosion, phase shift due to total internal reflection 8=19547
 underwater sound transmission, effect of internal water wave propag. 8=3051
 upper sea layer, boundary flow, organic dye obs. 8=14570
 wave trapping along a discontinuity of depth in a rotating ocean 8=23234
 waves, generation, dissipation and prediction 8=18836
 wave generation, surface contamination effect 8=14573
 waves, longit., prod. by periodic press. rel. to surface and interface disturbances 8=9805
 waves, progressive, air interface, aerodynamic press. distribution, laboratory 8=5791
 waves, random, statistical props. 8=14575
 waves, wind amplification 8=16776
 wind-driven currents vel. components spectra and wind energy transfer process 8=9810
 wind-driven homogeneous ocean, transient Rossby waves, numerical study 8=23235
 wind-driven waves spectra and statistics, theory 8=9809
 Al²⁶ in sediment, atmospheric origin 8=23236
 CaCO₃ aragonitic oolites, solubility in sea water pressure coeff. obs. 8=8012
 H³, rainfall input to North Pacific rel. to water mixing time calc. 8=23247
 U isotope deposition meas. 8=9813
Octet theory. See Elementary particles; Field theory, quantum.
Omegatrons. See Leak detection; Mass spectrometers; Vacuum technique.
Onsager relations. See Statistical mechanics; Thermodynamics.
Optical activity. See Optical rotation.
Optical constants
 See also under individual headings, e.g. Absorption/light; Reflectivity.
 ADP, photoelastic consts. 8=14244
 calcite, in region of fund. freq. 8=9512
 crystals, and electro-optical effects, rel. to anisotropy 8=9495
 extinction coeff., collimated and diffuse fluxes of light, reln. between 8=3375
 eye spectral sensitivity, visual task effect 8=3390
 pigments in white emulsion paint, rel. to colour strength and shade 8=9574
 polyethylene, black, 4-50 μ 8=14289
 reflection and refraction coeffs., polarization angle rel. to impedance matching 8=3256
 refractive index and extinction coeff. determ., effect of meas. error 8=15517
 solids, determ. from weakly absorbing layers 8=18486
 superconducting lens, aperture and chromatic aberration 8=19791
 thin films, non-normal incidence meas. methods 8=14167
 white tin films, analysis over 0.1 to 27.5 eV energy region 8=2456
 Ag, thick films, least squares method 8=2403
 Au thick films, least squares method 8=2403
 AuAg alloy, deform., recryst. and ordering effects, 276-1200 nm 8=22958
 AuCu alloy, deform., recryst. and ordering effects, 276-1200 nm 8=22958
 AuCu₃ alloy, deform., recryst. and ordering effects, 276-1200 nm 8=22958
 Bi, liq. and dielec. const. $\epsilon_1 + i\epsilon_2$ 8=12877
 BrO₃Na monocrystals, and effect of cooling on spectrum 8=18509
 Cd, liq., and dielec. const. $\epsilon_1 + i\epsilon_2$ 8=12877
 Hg, clean surface, as function of temp. 8=4582
 Hg, liq., and dielec. consts. $\epsilon_1 + i\epsilon_2$ 8=12877
 Hg, liq., non-agreement with free-electron theory 8=16846
 Hg-In alloys, liq., rel. to free-electron theory 8=16846
 KBr in the far i. r. 8=5613
 KCl, absorpt., and reflectivity spectra rel. to exciton states 8=14230
 Mg crystal, electronic structure from optical properties 8=14239

Optical constants—contd

- MgO, from reflectance data rel. to electron energy losses 8=9550
 NaClO₃, and reflecting power, cooling effects 8=9555
 Pb, liq., and dielec. const. $\epsilon + i\epsilon_2$ 8=12877
 PbO, single crystal, yellow form, absorption coeffs. 8=5628
 δ -Pu, at 5461 Å 8=23009
 Sn films, in u.v. reflecting power, and dielectric constants deduced 8=5638
 p-SnTe, visible and i.r. obs. 8=18562
 Ti₂O₃ layers, between 0.2 and 4.5 μ m rel. to electronic carrier props. 8=23017

Optical dispersion. See Dispersion, optical.

Optical fibres. See Optical systems.

Optical films

- See also Filters, optical.
 advanced optical techniques, book 8=15489
 progress in optics, book V 8=15542
 reversibility of rays, generalized theorem 8=11169
 surface, influence on metal meas. 8=11168
 Ag, 0.4-1 μ range, reflection and transmission coeffs. 8=5580
 Ag, non-linear reflection on laser-radiation 8=18497
 Ag-Cr, 0.4-1 μ range, reflection and transmission coeffs. 8=5580
 Cr₂O₃, reactively evaporated, transmission characts. 8=9517
 Cr, 0.4-1 μ range, reflection and transmission coeffs. 8=5580
 Ge, complex index and optical thickness from meas. of reflecting powers at oblique incidence 8=18530
 Hf oxides, transparency in u.v., temp. depend. and effect of Cl⁻ and NO₃⁻ 8=5605

Optical filters. See Filters, optical.

Optical images

- See also Aberrations, optical; Resolving power, optics.
 advanced optical techniques, book 8=15489
 bright field, with partially coherent illumination, nonlinear transfer 8=15513
 Brocken observation, quantitative 8=11166
 from concave spherical mirror, form. for wide beams of rays and arbitrary incidence 8=469
 deflectors, achromatic 8=472
 of diffuse object, noise-like structure in holograms 8=11217
 distorted images, linear least-squares filtering 8=483
 electroluminescence Gudden-Pohl effect appln. for recording, storage and reproduction 8=6496
 evaluation techniques, accuracy test procedure 8=20051
 focus of coherent beam, behaviour of Poynting vector and energy flow 8=6499
 formation using systems with resolving power enhanced in one direction 8=20049
 Fourier transform use 8=11136
 holograms, appl. to bubble chambers 8=6567
 holograms, binary Fraunhofer, computer generation and reconstruction 8=6576
 holograms, construction with direct reference beams 8=3381
 holograms, cylindrical 8=11206
 holograms, inexpensive method 8=6569
 holographic interferometry, 3-beam with single emulsion exposure 8=6541
 hologram copying by Gabor holography and spurious images, theory 8=6575
 holography, photographic film nonlinearities effects 8=6574
 holograms, point, as optical elements 8=6568
 holography, principles and film requirements 8=20106
 holography with pulsed laser of front-illum. moving objects 8=11218
 hologram storage capacity of photochromic glass, meas. 8=6570
 holograms synthesized on cathode-ray tube 8=11207
 holograms, tanning bleach bath, variation of method 8=20119
 holographs, techniques and limitations 8=6566
 holograms, using total internally reflected light 8=3378
 interference patterns from double-exposed holograms, white-light reconstruction 8=15557
 laser intracavity processing of phase object and information recovery 8=6578
 laser, reconstruction from acoustical hologram 8=524
 lasers, holographic application, review 8=6479
 light dist. analysis by Fourier transformation 8=11164
 low-angle holograms using Tri-X Pan film 8=6571
 many discrete elements of area, limitations on obs. system 8=6498
 nonpseudoscopic real image from holograms, technique 8=6577
 object-image relns., demons. with flexible mirror 8=476
 optimum image plane position, in system with chromatic aberration 8=477
 out-of-focus images, props. and uses 8=475
 processing (max. likelihood) after propag. through turbulent atmosphere 8=23288
 of quasi-monochromatic source, meas. of degree of coherence 8=6483

Optical images—contd

- reactive information processing 8=531
 resolution and correlation by transfer function 8=11138
 restoration after random-media degradation 8=15507
 restoration, atmospherically degraded 8=473
 restoration and code translation, holographic production of spatial filters 8=519
 rod, partially submerged in water, "shadow-sausage effect", rel. to surface tension 8=6495
 scanning by rotation of hologram 8=523
 size analyser for 350 μ m diameters 8=14915
 spectrometers with concave diffr. gratings, luminance distrib. calc. 8=487
 transfer function with partially coherent illumination 8=3340
 velocity sensing with moving reticle scanners 8=6497
 wavefront reconstruction by hologram transmitted on television circuit 8=6573

Optical instrument testing

- lenses, quality control meas. apparatus 8=11129
 ruby laser, beam divergence 8=15478
 telescope, Queen Elizabeth II 8=10101

Optical instruments

- Some instruments are listed separately, e.g.
 Refractometers.
 advanced optical techniques, book 8=15489
 air light absorption, spherical mirrors apparatus involving repeated reflection 8=7935
 apertometer, precision, for microscope objectives 8=6507
 astronomical, for annular eclipse 20 May 1966 obs. 8=19288
 binoculars, compact streamlined, use of erecting prism systems 8=15509
 cornea, for measuring contour 8=20129
 detector using metastable atoms 8=20059
 dew-point instrument, minimizing effect of contamination on mirror 8=14581
 dielectrics, transparent, damage due to laser light 8=8755
 ellipsometer for liquid metals 8=16836
 end windows of laser tube, set near Brewster angle, rel. to transmission 8=6426
 focused collimator, resolution calc. 8=11139
 four part quartz plate in phase difference meas. 8=15512
 Fresnel zone plates, variable patterns 8=507
 high pressure cell for absorpt. and luminescence studies at 77°K 8=6502
 lasers, thin film monitor, industrial applications 8=6479
 for Laue pattern direct interpretation 8=8496
 light beam, meas. of small displacements, and optical ranging, novel method 8=20056
 light chopper, feedback-stabilized with continuously variable frequency 8=6509
 light scanner, solid-state acoustoelec. 8=5309
 mica cryst. retardance meter 8=6510
 Moiré fringe technique, appl. 8=506
 part. size distribn., photograph-projection comparator, nonautomatic, descr. 8=5
 plummet, using cells of liq. prisms, with apex angle varying as tilt 8=3350
 progress in optics, book V 8=15542
 progress in optics, book VI 8=15541
 rangefinder, automatic, proposed 8=475
 ranging system using a high power laser 8=14918
 reflectometer, single mirror, normal incidence 8=6504
 reflectometers, elimination of errors 8=15517
 resonator, single longitudinal mode Michelson-type, auxiliary-mirror curvature determ. 8=6519
 resonators, Fabry-Perot, for vibr. meas., quantum effects 8=10683
 rotation dispersion and circular dichroism meas. 8=20061
 simplified coherent optical correlator 8=20055
 size analyser for 350 μ m particles and images 8=14915
 superposable spherometer 8=20053
 thermal cond. meas. of molten NaNO₃ and KNO₃, plane source technique 8=21658
 time-to-amplitude converter, photoelectric correlation measurements 8=15496
 for transfer function meas. 8=11137
 transfer function, rel. to the autocorrelation function of the complex luminous amplitude 8=15514
 transverse surface velocity meas. 8=15518
 triplets, spherical aberration evaluation 8=15501
 use in teaching, geometrical optics, Fourier optics and wave theory 8=15502
- Optical materials**
 See also Filters, optical.
 focusing by quartz crystals 8=14261
 glass, i.r. gallate, transmission props. 8=22954
 glasses, i.r. aluminate, optical, mech. and thermal props. 8=22954
 glasses, i.r. selenide, transmission props. 8=22954
 i.r. refractive index, thermal change 8=479
 mat surfaces, i.r. reflectance 8=18485
 refractive index meas., near ultraviolet to middle infra red 8=478
 surface-coated reference flats, for testing aluminised surfaces in Fizeau interferometer 8=11171
 transmittance from 0.17 μ to 3.0 μ , studied 8=11140
 Al₂O₃ powders, reflection and polarization properties 8=14266

Optical materials—contd

- CsBr and CsI i.r. windows, polishing 8=495
 $K_{0.6}Li_{0.4}NbO_3$, stable nonlinear 8=5618
 SiC powders, reflection and polarization properties 8=14266
 SiC/ Al_2O_3 powder mixtures, reflection and polarization properties 8=14266
- Optical model.** See Nucleus/models.
- Optical properties of substances**

 absorption, electronic edge in strongly anisotropic substs. 8=9482
 acetone, Ar laser beam thermal defocusing obs. 8=16845
 alcohol, Ar laser beam thermal defocusing obs. 8=16845
 alkali halides, ion overlap meas. by strain polarization ability 8=23003
 alkali metal niobates with filled tetragonal W-bronze like structs., nonlinear appls. 8=22959
 n-alkanes, anisotropies, mol. calc. 8=12248
 alloys, reflecting surface preparation 8=14163
 anthracene and plastic scintillator, radiation damage by 4 → 10 keV electrons 8=23029
 anthracene, two-photon photocarrier generation 8=13918
 benzene and derivatives, structure of $\nu(CH)$ vibration bands, 300 and 80 °K 8=12260
 bulk, determ. using internal reflection meas. 8=22934
 cholesteric liq. crystals, rotatory power 8=12876
 colour indices of some cosmic and earth surfaces 8=2816
 Cotton-Mouton effect obs. in alkali metal gases 8=4485
 crystal class C_{6v} , waveguide, generation of second harmonic 8=5577
 crystal excitation by absorption and scatt. expts. 8=5095
 crystal impurity atoms, vibrational and optical props. from morphic effects 8=4966
 crystals, KDP type, second harmonic generation 8=5569
 crystals, non-linear optics, adiabatic approx. 8=18481
 crystals, uniaxial, electro-optical effects 8=18494
 DNA with complexed carcinogen 8=18093
 dielectric, multilayer coatings, for white light interferometry 8=6540
 dielectrics, internal friction of dislocations rel. to optical props. 8=14165
 dye solns., kinetics of photodichroism 8=8070
 dielectrics, nonlinear propag. of laser beam 8=22931
 electromag. surface waves on semiinfinite metals 8=14164
 filaments trapped in liquids in intense laser beams 8=16832
 garnet, Ce-activated 8=2474
 gas, laser beam filaments, Raman scatt., electrostriction and Kerr effect theory 8=8067
 gases, inert, third-harmonic generation 8=1479
 gases, magnetic birefringence 8=7934
 gases, organic mixtures in air, optical-acoustic effect using cm e.m. waves 8=21520
 gases, Raman active vibrations, relaxation 8=9485
 glass, gallate, for i.r. use 8=22954
 glass, rough, reflection at large incidence, indicatrices with two maxima 8=5631
 glasses, selenide, for i.r. use 8=22954
 graphite, transverse and longitudinal 8=2407
 hexafluoroacetone sesquihydrate, third harmonic generation anomalous dispersion 8=8072
 insulators, absorpt. calc. from exciton resonances 8=8947
 liquid crystals, review of data 8=1527
 liquid, laser beam filaments, Raman scatt., electrostriction and Kerr effect theory 8=8067
 liquid surface, scattering of light rel. to capillary waves on surface 8=16852
 liquids, anisotropic, mol. scatt. 8=1555
 liquids, Brillouin scatt., spatial correlation of density functions 8=12875
 liquids, laser beam self-trapping obs. 8=21670
 liquids, nonlinear refractive index, mol. orientation effect 8=12871
 liquids, Rayleigh-Wing scatt. of laser beam polarization effect 8=8092
 liquids, refractive index increase, due to mechanisms sensitive to energy density 8=8066
 liquids, self-focusing kinetics and channel instability 8=21668
 liquids, self-focusing of light of different polarizations, expt. to test a. c. Kerr effect mech. 8=12870
 liquids, self-trapped filaments of laser light, theory 8=4577
 liquids, stimulated Rayleigh scattering obs. 8=12874
 liquids, stimulated thermal Rayleigh scatt., theory 8=6561
 lossy media, propag. of higher-order coherence functions 8=5570
 metal surfaces, rough, plasma resonant radiation 8=9488
 mat surfaces, i.r. reflectance 8=18485
 metals, liquid, ellipsometry 8=16836
 metals, pseudopotential Fourier components determ. from opt. meas. 8=22442
 metals, second harmonic generation, nonlinear polarization vector calc. 8=18483
 methanol, multiple stimulated Brillouin scattering 8=4584
 4-methyl umbelliferone, aq. soln., stimulated emission at 454 m μ 8=6478
 mixing of waves of different polarization by non-linear crystal 8=14237
 molecular crystals, e.m. wave dispersion 8=18479

Optical properties of substances—contd

- molecular crystals, scatt. of e.m. waves 8=18480
 molecular extinction coefficients of the triplet-triplet transitions, kinetic method of meas. 8=16257
 nitrobenzene- CCl_4 mixts. stimulated Rayleigh scatt., obs. 8=16843
 nitrobenzene, Rayleigh line wing, four photon interaction obs. 8=21667
 nonlinear crystals., second harmonic generation by focused laser beams 8=14166
 organic liquids, light intensity in wing of Rayleigh line rel. to vibrating molecule model 8=16851
 organic liquid quenches of light pulse in GM counter 8=11297
 organic liquids, stimulated scatt. in Rayleigh line wing, obs. 8=16842
 paraelectric-resonance transitions, linewidths 8=14187
 perovskite oxides in paraelectric and ferroelectric phases, optical props. 8=18504
 piezo-optic coefficients by pulsed u.s. light diffraction, 24 liquids obs. 8=8064
 plasma excitation in e. m. shock tube 8=1337
 plasma, generalized approximation for e. m. wave scatt. 8=16534
 polyacetylene, use in understanding electronic structure 8=9576
 polymer solutions, activity 8=8065
 polymethine dyes, liquid solutions, stimulated light radiation 8=16848
 polymethylphenylsiloxane chains, anisotropy 8=12391
 polyvinyl chloride films, rheo-optical properties 8=2076
 pulse shape functions rel. to absorption and loss coefficients 8=2394
 quartz, bent crystals for X-ray focusing 8=14261
 quinoline-ethyl alcohol mixts. stimulated Rayleigh scatt., obs. 8=16843
 Raman scatt. by polarization waves in crystals 8=9485
 ruby, optical phonon breakdown theory 8=22952
 second harmonic generation from short pulses 8=18495
 semiconductors with nonparabolic nonspherical energy surfaces, mixing of two freqs. 8=5571
 sodalites, photochromic, e.s.r. 8=14120
 solids, fundamental spectra, review 8=9475
 sols, birefringence, electric and magnetic field effects 8=12878
 III-V compounds, second order optical susceptibility 8=18484
 transition metal cpds. rel. to crystal field calc. 8=4669
 transparent media, anisotropic, Brewster angle generalization 8=22947
 uniform gas, frequency-integrated radiation due to weak lines 8=12690
 Vavilov-Cherenkov radiation by charged ring motion in transparent uniaxial crystal 8=21148
 Vavilov-Cherenkov radiation by motion of charged ring in transparent crystal 8=22949
 water, Ar laser beam thermal defocusing obs. 8=16845
 O-xylol, Rayleigh line wing, four photon interaction obs. 8=21667
 A^{IVBVI} semiconducting cpds., (A=Zn, Cd, Hg; B=S, Se, Te) 8=18023
 ADP, crystal modulation of laser light 8=23002
 Ag, bilinear polarizability calc. 8=18498
 Ag colloidal solutions in water, extinction coefficients 8=4579
 Ag, 0.4-1 μ range, reflection and transmission coeffs. 8=5580
 Ag-Cr, 0.4-1 μ range, reflection and transmission coeffs. 8=5580
 AlSb, second order optical susceptibility calc. 8=18495
 AlN semiconductors 8=2185
 Ar, crystalline, optical regions rel. to growth parameters 8=2238
 Au colloidal solutions in water, extinction coefficients 8=4579
 BP, second order optical susceptibility calc. 8=18496
 Ba₂NaNb₂O₁₀, nonlinear coeffs. 8=9508
 BaTiO₃, ferroelectric, soft modes, and acoustic modes, mixing 8=22665
 BaTiO₃, optical phonon, i. r.-active, directional dispersions at room temp. 8=17478
 BaTiO₃, temp. dependence of l.f. transverse optic lattice vibration 8=17479
 CaCO₃, phase-matched 4-freq. mixing obs. 8=14203
 CaF₂:Nd³⁺, effect of rare earth ion on Nd³⁺ optical centres 8=5593
 CaF₂:Nd³⁺, stimulated emission, high-temp. effects 8=22960
 CdF₂:R, semiconducting, e.s.r. and i.r. studies 8=22901
 CaF₂:Sm²⁺ crystals, spectrum 8=9513
 CaI₂, excitation max. 8=5654
 CdCl₂:Ag, γ -irradiated, absorption bands 8=9419
 CdF₂, transmission and refraction 8=8409
 CdS, excitons lines, emission intensity var. rel. to u.v. laser beam excitation intensity, 4.2 °K 8=22964
 CdS, two-photon absorpt. obs. 8=18516
 CdSe, stoichiometric, in thin film, and structural and elec. props. 8=17127
 CdSe(S), rel. to electronic structure 8=8928
 CdTe, pressed, far i.r. props. 8=18518

Optical properties of substances—contd

Cd_{1-x}Zn_xS, mixed single crystals, optical quenching effect on photoconductivity 8=18227
 CeO₂, single crystal growth 8=1740
 Co, rel. to reflectance data 8=22975
 Cr, 0.4–1- μ range, reflection and transmission coeffs. 8=5580
 CsI(Na), scintillation single crystal 8=2480
 Eu chelates, u.v. irradiat., optical emission losses, study of causes 8=18571
 Fe–I–boracite, ferroelectric orthorhombic phase, study 8=22980
 GaAs injection lasers with compensated p-type region and elec. props. 8=15482
 GaAs, laser induced changes 8=5633
 GaAs, second order optical susceptibility calc. 8=18496
 GaAs, two-photon absorpt. obs. 8=18516
 GaF, second order optical susceptibility calc. 8=18496
 GaSb, Faraday rotation and spectral emittance 8=22587
 GaSe, generation of second optical harmonic 8=5600
 Ge, energy gap, pressure coeff. meas. 8=14220
 Ge film, complex index and optical thickness from meas. of reflecting powers at oblique incidence 8=18530
 Ge, photon emission from indirect band-to-band Auger recombination 8=14221
 Ge, screw dislocations, Hall effects 8=1979
 Ge, thermoreflectance spectra in region of a critical point, calc. and obs. 8=14217
 He liquid second sound, laser beam scatt. photostatistics 8=11192
 HF oxides, transparency in u.v., temp. depend. 8=5605
 Hg, liquid, and Drude theory 8=12881
 α -HgS, second harmonic generation 8=5606
 HgS–HgSe solid solns. 8=5607
 I₂–CCl₄ solns., stimulated thermal Rayleigh scatt. obs. 8=8068
 In film, e.m. radiation from surface excited by micro-wave phonons 8=4903
 InAs, light absorpt. by free carriers, 300 °K and 80 °K obs. 8=18536
 InAs, second-harmonic generation by laser interact. with drifting carriers 8=5610
 InAs, second order optical susceptibility calc. 8=18496
 InAs thin films 8=18535
 InP, coherent emission after laser excitation 8=6470
 InP, second order optical susceptibility calc. 8=18496
 InSb, second order optical susceptibility calc. 8=18496
 InSb, two-photon absorpt. obs. 8=18516
 KF, thin layers, u.v. 8=9546
 K(Ta–Nb) crystals 8=9199
 LaF₃:Nd³⁺, stimulated emission, high-temp. effects 8=22960
 LiNbO₃ crystal for converting near i.r. to visible light by optical mixing 8=11118
 LiNbO₃, image conversion from 1.6 μ to visible 8=22998
 Li₂NbO₃, mixing of ruby and Nd laser emissions 8=14237
 LiNbO₃, second harmonic generation from short pulses 8=18495
 LiNbO₃, second-harmonic phase-matching temp., dependence on melt composition 8=22997
 LiNbO₃: Yb³⁺, Nd³⁺, Cr³⁺, and e.s.r. spectra 8=22999
 Li–NH₃ metallic solns., ϵ_1 and ϵ_2 consts. 8=12884
 LiTaO₃, Yb³⁺, Nd³⁺, Cr³⁺, and e.s.r. spectra 8=22999
 MgCl₂:Ag, γ -irradiated, absorption bands 8=9419
 MnF₂, Co doped, magnon sidebands and local order 8=23001
 Mo, rel. to conduction band transitions 8=9553
 Na–Li liq. mixtures, near demixing temp., crit. opalescence 8=1558
 NH₄Cl, harmonic generation and critical pt. correl. 8=23007
 NH₄Cl, harmonic generation near second-order phase transform. obs. 8=14245
 Pb, visible to i.r., room to He temp. meas. 8=14253
 PbSe–SnSe, optical energy gap 8=5629
 PbSe–SnTe, optical energy gap 8=5629
 PbTe–SnSe, optical energy gap 8=5629
 PbTe–SnTe, optical energy gap 8=5629
 Sb₂Se₃ films, anisotropy 8=14259
 SbSi, optical principal axes 8=2448
 SF₆ gas, self-induced transparency using 10.6 μ laser radiation 8=1478
 Si, laser induced changes 8=5633
 Si, screw dislocations, Hall effects 8=1979
 Si, three-photon stepwise absorption 8=5635
 SiC, band edge absorption 8=9122
 SiC crystals, energy spectrum of acceptor states 8=5668
 SiC, vapour-deposited films 8=17137
 Sn films, in u.v., reflecting power, optical and dielectric consts. 8=5638
 SnTe, rel. to electronic band structure 8=8943
 SnTe, visible and i.r. obs. 8=18562
 Sr_{1-x}Ba_xNbO₃, uniaxial negative character 8=21966
 Te, non-linear props. 8=18563
 Th oxides, transparency in u.v., temp. depend. 8=5605
 ThO₂, single crystal growth 8=1740
 VO₂, change in constants, for radiant self-stabilization of temp. 8=23019
 V₂O₅ single crystals 8=23020
 ZnS crystals in X band travelling-wave light-intensity modulator 8=23025

Optical properties of substances—contd

ZnS, rel. to electronic structure 8=8928
 ZnTe, submillimetre-wave generation by difference-frequency mixing of ruby laser lines 8=18569

Optical pumping
 alkali atoms reson. states lifetimes, inert gases and vapour press. effects 8=20976
 alkali metal vapours, relaxation pulse study 8=12086
 alkali vapour, with buffer gas, rate eqns. 8=20978
 alkali vapour, polarization modification of light beam 8=4088
 cathode luminescent in solid state laser, efficiency 8=6454
 of chloro-aluminium phthalocyanine and diethylthiatricarbo-cyanine iodide by ruby laser, spectra comparison and interpretation 8=452
 dye, flashlamp excitation obs. 8=451
 dye laser by flash lamp 8=6477
 glass, silicate, 7% Nd, multimode generation, luminescence broadening 8=2487
 laser active materials, study 8=11010
 laser, coupling efficiency 8=413
 laser, use of surface spark discharge 8=6412
 lasers, optimum design of spherical and ellipsoidal chambers 8=11019
 lasers, solid, cavity geometry and continuous operation 8=19980
 lasers, threshold of oscillation 8=6413
 masers, power minimization 8=19918
 masers, push-pull, four level quantum systems 8=392
 nonuniform, solid state laser, spectrum 8=15474
 operator formalism, absorption of monochromatic light 8=1180
 organic laser, optimal homogeneity 8=11114
 parametric oscillator, theory and appl. to threshold cond. deriv. 8=11029
 plasma, density fluctuations due to monochromatic pumping, theory 8=12546
 progress in optics, book V 8=15542
 quartz, by ruby laser, behaviour as Raman oscillator rel. to mode pulling 8=2453
 ruby laser, power and efficiency calc. 8=3331
 ruby maser, by laser at 77°K 8=19920
 ruby, non-radiative relax. time between ⁴T_{1,2} and ²E states 8=9503
 semiconductor laser, rel. to saturable transmission by multiphoton absorpt. 8=9478
 solids and liquids for nuclei polarization 8=13016
 spherical reflector 8=11108
 water-cooled systems for continuous operation of lasers 8=432
 AgCl vapour, vibr. energy level population 8=1235
 CaF₂:Sm²⁺ laser, pumped by giant pulse ruby laser 8=11089
 Cd¹⁰⁹ and Cd¹¹¹ oriented by, relaxation on silica walls 8=16233
 Cs–inert gases, collisional J reorientation within the sublevels, with D₂ pumping 8=1194
 GaAs spherical recomb. drodes as pumping element characts. 8=23074
 HCN, CW submillimeter laser lines, absolute freq. meas. 8=422
 He atom, aligned, scatt. of resonance fluorescence depolarization 8=20982
 He³, r.f. field resonance 8=16219
 He³, transverse optical pumping and detection of modulation resons. 8=16195
 He–Ne mixture by He–Ne laser, Hanle and saturation effects obs. 8=20983
 Hg vapour, polarization modification of light beam 8=4088
 InSb Raman laser, by a 10.6 μ CO₂ laser, rel. to tuning 8=11104
 K³⁹, intensity modulation of transmitted light 8=12085
 Na and inert-gas atoms collision, depolarization cross-section 8=7436
 Nd glass, measurement cross-section stimulated emission 8=449
 Ne, laser pumped microwave emission in excited states 8=12071
 Rb magnetometer 8=19739
 Rb, relax. in collisions with Kr atoms, correl. times 8=7472
 YAlG:Nd laser, repetitively Q-switched 8=6474
 ZnS crystals, u.v. emission excitation 8=9632

Optical quantum generators. See Lasers.

Optical rotation
 See also Magneto-optical effects; Optical constants; Polarimeters; Polarized light.
 amides, molec. theory 8=12250
 amoebic ectoplasm and endoplasmic flow differentiation 8=2869
 benzil cryst., dispersion, compared with absorpt. and circular-dichroism spectra 8=2463
 cholesteric liq. crystals, rotatory power 8=12876
 crystals, microscopic rel. to macroscopic optical analogies 8=14181
 dispersion study of transient species excited by flash photolysis 8=12258

Optical rotation—contd

- ϵ -caprolactones, rel. to molec. conformation 8=12879

 coupling 8=12252
 n-alkyl fluorides, n.m.r. 8=12315
 alkyl halides, effects of molec. motions on n.q.r. 8=2388
 alkyl iodides, γ -irrad. at -196°C , ionic processes 8=14275
 alkyl radicals, chem. activated, competitive
 decomp. 8=14359
 alkynes, field-ion mass spectra of eleven
 compounds 8=1372
 allene, two rotational lines 8=21112
 allyl halides, vibr. spectra 8=21111
 N-allylmonoamides of maleic and succinic acids,
 radiation polymerization 8=23131
 alstoveninemethiodide, single crystal X-ray study 8=17439
 alternant hydrocarbons, atomic orbital changes rel. to
 valence states of C 8=4135
 amides, liq. photolysis, e.s.r. 8=14435
 amides, spectra, theory 8=12250
 amides, subs., chem. shift nonequiv. of diastereotopic p
 rel. to rot. round aryl-N bonds 8=4175
 amines, deuterated, vapour press. 8=12995
 amines, effect on rubber soln. viscosity 8=21625
 amines, primary aliphatic, i.r. absorption spectra 8=16313
 amino acid anal., sensitive linear flowing-stream
 photometer 8=5762
 amino acids derivatives and metal complexes, crystal
 structures 8=1814
 α -aminoacid hydrochlorides, i.r. spectra 8=7556
 amino acids, polarizability anisotropy from refractive
 indices 8=2462
 aminoacids, temp. coeff. of piezoelec. resonance
 freq. 8=9224
 p-aminobenzamide, crystal structure 8=22075
 p-aminobenzoic acid, crystal structure 8=8570
 α -p-aminobenzoic acid, crystal structure 8=17443
 aminobutadiene, SCF-CI calc. 8=16306
 aminobutadienone, SCF-CI calc. 8=16306
 aminoethylene, SCF-CI calc. 8=16306
 aminoferrocene, MO calcs. and excitation energies 8=4197
 3-aminophthalimide solution in frozen dioxane,
 fluorescence 8=5682
 2-aminopurine, fluoresc. quantum yield 8=4595
 aminopurines, electronic spectra 8=7594
 aminopyridines, π -electron distrib. and n.m.r. chem.
 shift 8=12296
 ammonium acetate structure, rel. to H bonding 8=8503
 amyl stearate, crystal structure 8=22057
 amylose, asymm. interaction with DL-mandelic acid
 and DL-ethyl mandelate 8=18696
 5 α -androstan-3,17-dione(ANDR), crystal packing
 calculation 8=13311
 aniline, in dilute solns. of CS_2 and CCl_4 , dependence of
 nuclear relaxation times on viscosity 8=8126
 aniline, phosphoresc. and spin-orbit coupling 8=12252
 aniline, photoionization efficiency 8=7724
 aniline solution in benzene, CCl_4 and chlorobenzene,
 vap. press. and excess free energies 8=8056
 anilines, disubstituted, dielectric constant and loss in r.f.
 region 8=5357
 anthracene and plastic scintillator, radiation damage
 by $4 \rightarrow 10$ keV electrons 8=23029
 anthracene, autoionization and exciton
 annihilation 8=17890
 anthracene, carrier formation from excitons and charge
 transport 8=17858
 anthracene, charge carrier generation with polarized
 light 8=2268
 anthracene crystals., morphology, planes, twinning,
 etching 8=8381
 anthracene, d.c. dark Hall mobility obs. 8=22523
 anthracene in diethylaniline, luminescence 8=7560
 anthracene derivatives, absorption and emission
 displacement due to dispersion interaction 8=4176
 anthracene, dislocations 8=17648
 anthracene, elastic constants 8=5093

Organic compounds—contd

- anthracene, excimer fluoresc. in rigid matrices 8=14339
 anthracene, exciton theory, band theory and photo-
 conductivity meas. 8=13671
 anthracene crystals, fluorescence and absorpt. spectra
 symmetry 8=18631
 anthracene crystals, delayed fluoresc. decay time,
 2-300°K 8=23065
 anthracene crystals, e states rel. to carrier prod. 8=22434
 anthracene, delayed fluoresc. rel. to triplet-triplet inter-
 action and triplet exciton diffusion, obs. 8=23066
 anthracene, far i.r. absorption 8=23028
 anthracene, fluoresc. decay curve 8=18633
 anthracene fluoresc. spectrum fine struct. and vibr.
 analysis, 23 000-28 000 cm^{-1} 8=1274
 anthracene frozen in n-paraffin forms,
 fluorescence 8=23067
 anthracene, γ -irrad., colour centres 8=17689
 anthracene, Hall and drift mobilities of carriers 8=18178
 anthracene, luminesc. quenching by mag. field, distinction
 of excitons 8=18632
 anthracene, molecule, photo-ionization cross-section
 calc. 8=21259
 anthracene, radiation damage to optical absorption
 props. 8=9565
 anthracene, recombination luminescence in mag.
 field 8=18630
 anthracene, reflection spectra near exciton excitation
 low temp anomaly 8=23030
 anthracene, 9,10-dimethylantracene excimers fluoresc.
 quenching 8=1575
 anthracene-oxygen complex stabilization constants from
 solubility in compressed O_2 8=2499
 anthracene, photocond. depend. on temp., and carrier
 generation 8=2269
 anthracene, photoconductivity, mag. field effects,
 theory 8=22691
 anthracene, polarization of triplet factor group
 states 8=2494
 anthracene, pulsed photoconductivity rel. to carrier
 decay 8=2267
 anthracene scintillator, light output under influence
 of α -particles 8=2495
 anthracene, singlet-exciton collisions 8=17891
 anthracene, space-charge-limited crystal
 currents 8=17859
 anthracene, triplet exciton dynamics, spectroscopic
 approach 8=13672
 anthracene, triplet-triplet absorption under Shpol'ski's
 condition 8=21147
 anthracene, two-photon photocarrier generation 8=13918
 anthracene, u.v. irradiated, fluorescence and photo-
 conductivity rel. to carrier generation 8=2266
 anthracene, vapour- and melt-grown crystals., purity and
 perfection 8=21942
 anthracene vapour, structured fluoresc. spectrum 8=21113
 anthracene, vibr. effects in radiationless
 transitions 8=21114
 anthracite, reduction of paramag. absorption by
 heating 8=5441
 anthraquinone, 1,5-dihalo derivs., crystal and mol.
 structure 8=22048
 9-anthranilaldehyde in alcohol and hexane solutions,
 singlet-triplet conversion 8=21693
 9,10-anthraquinone, sensitized emission spectrum in
 visible region 8=4177
 aromatic and condensed ring, polyvinylchloride plastici-
 zation obs. 8=23141
 aromatic amino-acids, delayed luminesc. 8=9650
 aromatic compounds, triplet-triplet absorption under
 Shpol'ski's condition 8=21147
 aromatic crystals, photoconductivity 8=5403
 aromatic hydrocarbon-tetracyanoethylene complexes,
 self-consistent MO calc. 8=12253
 aromatic hydrocarbons, Hückel coeffs. 8=12251
 aromatic hydrocarbons, oriented, e.s.r. multiplet
 struct. 8=2363
 aromatic hydrocarbons, π -electron polarizabilities 8=12254
 aromatic hydrocarbons, pyrolysis, e.s.r. 8=2513
 aromatic hydrocarbons, radiation and photochem. induced
 tritium substitution 8=23166
 aromatic hydrocarbons in solns., mixed excimer
 fluoresc. 8=4593
 aromatic hydrocarbons, triplet-ground-state
 transitions 8=4180
 aromatic hydrocarbons, zero-field splitting of triplet
 states 8=4181
 aromatic, ionization probabilities correl. with geometric
 charge cross-sections 8=4318
 aromatic, molecular crystals, electronic plates 8=13671
 aromatic mols, overcrowded, conformational
 analysis 8=21115
 aromatic phosphors, intensity measurements in vacuum
 u.v. region 8=11159
 aromatic solns., excimer formation 8=8094
 aromatic, triplet-triplet absorpt. at 77°K 8=7561
 aromatics absorpt. spectra rel. to conjugated π -bonds
 obs. 8=4178
 aromatics in boric acid glasses, direct and sensitized
 photo-oxidation 8=23160

Organic compounds—contd

aromatics, cryst. triplet excitons props., theory 8=22479
 aromatics, molten, lifetime of excited states prod. charge carriers 8=12904
 aromatics, transient absorpt. bands 8=4179
 aryl oxalates, electronegatively substituted, reactions with H_2O_2 and fluorescent compounds, chemiluminescence 8=18672
 L-ascorbic acid, crystal and mol. structure 8=13303
 aspirins, substituted, rate of hydrolysis rel. to intra-molec. catalysis 8=5727
 auramine perchlorate, crystal structure, correl. with refl. spectroscopic obs. 8=13302
 azaretrabenzoporins, polarization and absorpt. spectra rel. to porphyrin ring e struct., obs 8=21116
 azides, i.r. spectra, anomalous band splittings 8=21118
 azidopurine from 6-hydrizinopurine + HNO_3 , and structure 8=21117
 azines, CNDO SCF calcs. 8=16331
 azacyclic aromatics, electronic structure 8=7562
 azaindoles, electronic spectra, oscillator strengths meas. 8=7580
 azines, additivity of p.m.r. solvent shifts 8=12931
 1-aziridinepropionitrile, solvent and anisotropy effects in n.m.r. obs. 8=16895
 azoalkanes, electron states 8=12255
 azobenzene, vibr. spectra, continuous bands 8=4182
 azo-compounds decomp. tracing by n.m.r. spectroscopy 8=8127
 azo cpds., vapour press. and ht. of sublimation 8=16958
 azomerocyanines optical absorpt. in elect. field rel. to Kerr effect 8=4573
 p-azoxyanisole, nematic, in mag. fields, X-ray structure investigations 8=4532
 azoxymethylcinnamic acid-dialkylester liq. crystals, calorimetry 8=4533
 barbitol, fragmentation patterns by mass spectrometry 8=12031
 barbitol, mass spectrum obs. 8=20912
 benzaldehyde at 77°K, influence of solvent on time resolved phosphorescence 8=18635
 1,2-benzanthracene, triplet-triplet absorption under Shpol'ski's condition 8=21147
 benzodioxins, u.v. and e.s.r. spectra calc. 8=7575
 benzene, absolute Raman scatt. cross section, 992 cm^{-1} line 8=16858
 benzene, adsorbed on silica gel, change in dielec. behaviour on gel purification 8=1663
 benzene, Brillouin shifts, temp. dependence, hypersonic velocity and compressibility deduction 8=1502
 benzene in compressed O_2 , 3300 Å transition 8=12259
 benzene-cyclohexane, vapour-liquid equilibrium data 8=4653
 benzene and derivatives, structure of $\nu(CH)$ vibration bands, 300 and 80°K 8=12260
 benzene derivs. liq., l.f. Raman lines 8=1563
 benzene-dioxan crystallized mixture, i.r. absorption spectrum at 80°K 8=18572
 benzene, electronic struct. 8=12256
 benzene, emission from liq. excited by electrons 8=12893
 benzene, freezing, under press., differential thermal analysis 8=9684
 benzene, gas chromatograms and i.r. spectra 8=9759
 benzene, gas, scatt. of K, Rb and Cs, compared with cyclohexane 8=1205
 benzene hydrogenation to cyclohexane, effect of support on Ni catalyst 8=9707
 benzene, induced Raman scatt. intensity rel. to sample length 8=8076
 benzene ion reactions with benzene 8=16452
 benzene, and ionized states, SCF calc. 8=7565
 benzene-isobutanol vapour-liquid equilibrium data 8=4653
 benzene, large-angle electron-impact spectra 8=16224
 benzene, liq., Cotton-Mouton effect 8=12869
 benzene, liquid and crystalline state, sub-millimeter wave spectra 8=7568
 benzene, liq., electrode effect on current transport 8=8116
 benzene, liq., hot-electron injection from tunnel junction, effective barrier 8=257
 benzene, liq., l.f. Raman lines 8=1563
 benzene, long transversal n.m.r. relaxation time 8=2380
 benzene, luminesc. in cryst. matrices 8=9651
 benzene, mag. circular dichroism 8=21123
 benzene on Mg-Fe mixed hydroxides, adsorpt., obs. 8=17023
 benzene mol. config. rel. to cryst. absorpt. spectrum 8=5645
 benzene, molecular orbital pair correlations 8=4185
 benzene mol., SCF-MO-CI theory, empirical params. choice 8=21127
 benzene mols. crystal, exciton states, Faraday effect and spin-orbit interaction calc. 8=9568
 benzene, N and Ar excit. luminesc. in solid solns., obs. 8=13036
 benzene, 992 cm^{-1} spectral line, Raman scatt., rel. to solvent and conc. 8=21672
 benzene, overtones of combination scattering 8=1559

Organic compounds—contd

benzene-oxygen complex stabilization constants from solubility in compressed O_2 8=2499
 benzene, phosphoresc. cryst. e.p.r. 8=14095
 benzene, π -electron density distrib. and free-electron model 8=7563
 benzene, pressure separation from H_2O system 8=8180
 benzene radical anion, electron exchange with neutral benzene 8=5692
 benzene, σ ionization potentials 8=12257
 benzene in solid solns., matrix effects on spectra and state of dispersion, 77°K 8=13037
 benzene, sorption into drawn and undrawn poly-ethylene 8=8349
 benzene, stimulated Raman effect, cyclic temp. depend 8=21125
 benzene sulphonyl chlorides, parasubstituted, crystal growth and structure 8=13133
 benzene, u.v. absorpt. spectra 8=7567
 benzene, vibr. exciton spectrum 8=9567
 benzene, vibronic interaction, lower electronic states 8=7564
 benzene-in-water emulsions, particle size and distrib. 8=12953
 benzene-water, interfacial tension 8=12827
 benzene, X-ray absorpt. spectra 8=12277
 benzenes, microwave relaxation times 8=7599
 benzenes, paradisubstituted, far i.r. absorption 8=7566
 benzenes, Raman scatt. cross-sections 8=12130
 benzenes, substituted, p.m.r. chem. shifts 8=12316
 benzenes, substituted, proton chemical shifts and π -electron densities 8=12262
 benzene, u.s. velocity, absorption and relaxation obs. 8=12687
 benzenes, unsymmetrical, ortho-disubstituted, n.m.r. 8=4625
 benzil cryst., optical rotatory dispersion, molec. origin 8=2463
 benzoates, mass spectrum obs. 8=20912
 benzoic acids, mass spectrum obs. 8=20912
 benzoin, optical rotatory dispersion of transient species 8=12258
 benzole, methyl alcohol diffusion, mechanism 8=12834
 benzonitrile, freezing and polymerization, under press., differential thermal analysis 8=9684
 benzophenone, absorpt. spectrum, by flash photolysis 8=4184
 benzophenone and derivatives, triplet-triplet absorpt. spectra 8=12263
 benzophenone, far i.r. absorption 8=23028
 benzophenone, u.v. flash photolysis, e.s.r. study of free radicals prod. 8=12339
 benzophenone, viscous liq., wing of Rayleigh line obs. 8=21671
 benzophenones, polarized absorpt. spectra 8=9566
 p-benzosemiquinone, reson. absorpt. in Zeeman region 8=16348
 benzo-thiopyrone, crystal structure 8=22051
 benzotropones, reactivity indices 8=18673
 o-benzoyl benzoic acid, space group 8=17441
 benzyl, lumines. of single cryst. and solid solns. in polystyrene 8=18634
 benzyl radical fluoresc. in methylcyclohexane, cyclopentane and methylcyclopentane, 4°K 8=12342
 benzyl radicals fluoresc. spectra in solid solns. and vibr. analysis 8=13032
 4-benzoyloxyphenol, packing relationship 8=17440
 N-benzyl-N, 2, 4, 6-tetramethylbenzamide, n.m.r. line shapes 8=12331
 2-(benzylthio) imidazoline hydrochloride, structure 8=8582
 2-(benzylthio) tetrahydropyrimidine hydrochloride, structure 8=8582
 benzimidazolone derivatives, spectra 8=4186
 5, 5'-biisoxazole crystal and mol. structure 8=22067
 p-biphenylaldehyde in alcohol and hexane solutions, singlet-triplet conversion 8=21693
 biphenyl derivs. of group IV b, u.v. spectra anal. by heteroatom model 8=8090
 2, 2'-biphenyldisulphide, crystal structure 8=22071
 biphenyl, far i.r. absorption 8=23028
 biphenyl in methylcyclohexane glass, radiophoto-luminescence 8=9652
 bis-[2-chlorobenzene-(1-azo-1')-naphthol-2'] Cu(III) e.p.r. rel. to e delocalization in azo groups 290 and 77°K 8=8122
 cis- and trans-bis(dialkyl sulphide) dichloroplatinum (II) complexes, struct. and inversion mech. n.m.r. obs. 8=16355
 bis-[2, 6-dichlorobenzene-(1-azo-1')-naphthol-2'] Cu(II) e.p.r. rel. to e delocalization in azo groups 290 and 77°K 8=8122
 p-bis(dimethylhydroxysilyl) benzene, cryst. struct. 8=22065
 bis(triphenylacetic) oxalic anhydride, chemiluminescent reactions with H_2O_2 and fluorescent cpds. 8=18685
 borazine and derivatives, as slow neutron scintillators 8=6963
 p-bromoacetanilide, Br 79 n.q.r., temp. var. and Zeeman effect 8=4228

Organic compounds—contd

- bromoacetone, rotational isomerism in all states 8=1271
 p-bromoanisole, i. r. absorpt. spectrum obs. 8=21682
 9, bromoanthracene, 9,10-dimethylanthracene excimers fluoresc. quenching 8=1575
 bromobenzene, molec. motion in liq. by n.m.r. 8=8132
 p-bromobenzoyldimethylamine mol. struct., obs. 8=21129
 p-bromobenzoylenimine mol. config. rel. to ethyleneamide group struct, obs. 8=21129
 2-bromocyclobutanone, vibr. spectra 8=12266
 2-bromo-1,1-diphenyl-prop-1-ene, crystal and molecular structure 8=4187
 bromomalonalddehyde anion, i. r. spectra 8=21144
 bromomalonalddehyde, i. r. spectra 8=21144
 bromomethyl diazine, electronic absorpt. spectra 8=12268
 bromomexicanin E. crystal and mol. structure 8=21151
 bromo-naphthalenes, n.m.r. meas. 8=7613
 N-(p-bromophenyl) benzene sulphonamide mol. structure and intramolecular interactions 8=1278
 β -bromopropionitrile, 2 rot. isomers, virial H-H couplings from n. m. r. solvent depend. 8=21158
 3-bromopyrene, double intersystem-crossing 8=21128
 3-bromothiophene-2-aldehyde n.m. double-r. 8=6408
 2-bromo-2,4,4-trideuterocyclobutanone, vibr. spectra 8=12266
 (3:1) bullvalene-AgBF₄ complex, cryst. and molec. structure 8=4890
 butadiene polymerization catalysis by π -crotyl NiII and -NiCl rel. to structs., obs. 7=8576
 1,3-butadiene, photodissoc., primary processes 8=23155
 1,3-butadienes, n.m.r., theory 8=7604
 butane, evaporating in H₂O or NaCl solns., rel. to ice cryst. growth 8=13137
 butane gas, sorption and diffusion in synthetic Na mordenite 8=13109
 n-butane-He system, phase and volumetric behaviour showing gas-gas equil. for low He conc. 8=12979
 n-butane-He mixtures, second virial coeffs. determ. 8=12980
 butane, ionization probability, mass spectrometry 8=21283
 n-butane, photoionization 8=4319
 1,3 butanediol, shear rigidity and free volume 8=1537
 n-butanol complexes in amine solns., dipole moments 8=12909
 butatriene, force field, mean amplitudes of vibration, shrinkage effect and Coriolis coupling constants 8=16314
 butatriene, vibrational force constants, amplitude of thermal motion and polarizabilities calc. 8=12264
 butyl alcohol, stimulated and thermal Mandel'shtam Brillouin scattering and dispersion of sound 8=21665
 butyl alcohol-water mixtures, hypersonic meas. 8=4572
 tertiary butyl fluoride gas, mol. struct. meas. 8=7569
 butyl PBD, fluoresc., concentration effects 8=4594
 butyl phthalate, spin-lattice relax. rel. to dielec. relax. and viscosity 8=9459
 caffeine salts, i. r. spectra 8=14277
 canthaxanthin, crystal structure 8=22053
 ϵ -caprolactones, optical rotation and molec. conformation 8=12879
 carbamylphosphonates, long-range P³¹-H¹ spin-spin coupling 8=16353
 carbon tetrachloride, Raman spectrum, difference bands 8=7570
 carbonium ion yield in radiolysis of liq. hydrocarbon-alcohol mixtures 8=5756
 carbonyl acids in perethers, spectrochem. determ. 8=2549
 carbonyl cpds., reversible hydration study, limitations of u. v. spectroscopy 8=9682
 carbonyl group coupling in cyclic anhydrides and imides rel. to solvent effect on valence vibrations 8=16857
 carboxylic acid C₂₀, persistent electric dipole moment obs. at -78°C 8=13890
 carboxylic acids, H-bonded, i. r. spectra 8=7571
 Δ^3 -carene and oxide, mol. structure from gas-e-diff. meas. 8=21161
 β carotene, all-trans optical, spectroscopic and elec. props. obs. 8=2465
 carotenoids, photocond. 8=18240
 catalase, crystal structure 8=8575
 cellophane membrane NaCl uptake rel. to ion exchange props., obs. 8=23084
 cellulose acetates, macromol. characts. from speed sedimentation in acetone 8=4262
 cellulose hydroxyl groups, reactivity to N oxides in presence of P₂O₅ 8=5721
 cellulose triacetate films, amorphous and cryst., transition temps. 8=4724
 cellulose, ZnO₂ diffusion and absorpt. in membranes 8=21645
 cetylpyridinium bromide, ion sublation studies by radioactive tracers 8=23075
 chelated amino acids, p exchange and mutarotation via carbanion intermeds. 8=5691
 chloranil, absorption spectrum in near u.v. 8=21126
 p-chloranil, space-charge limited currents meas. 8=9137
 chlorins, optically active, mag. circular dichroism 8=16317
 chloro-aluminium phthalocyanine and diethylthiatricarbo-cyanine iodide, stimulated emission obs. 8=452

Organic compounds—contd

- chloroaluminum phthalocyanine, fast fluorescence meas. 8=16869
 chloro-Al phthalocyanine, new laser oscillations 8=6475
 chlorobenzenes in CS₂ soln., i. r. intensity meas. of C-H out-of-plane vib. bands 8=21684
 chlorobenzenes, LCAO-CUV calc. 8=21124
 chloro-diphenyl-sulphone-urethanes, i. r. absorpt. spectra 8=9571
 chloroethylene, ion-molecule reactions in, study by ion cyclotron reson. spectroscopy 8=16453
 chloroferrocene, MO calcs., and excitation energies 8=4197
 chloroform, acetone diffusion, mechanism 8=12834
 chloroform, intermolecular potential and viscosity, 30-200°C 8=21523
 chloroform molec. complex with benzene, i. r. spectra 8=2464
 chloroform, near i. r. spectra, using high resolution grating spectrometer 8=20078
 chloroform, in nonpolar solvent, intensity meas. of i. r. band 8=21680
 chloroform-triethylamine system, equil. and H-bond formation 8=18649
 chloroform, ν_8 bands, gas and liq. 8=12265
 chloromethyl diazine, electronic absorpt. spectra 8=12268
 chloromethyl thiocyanate, i. r. spectrum 8=4201
 p-chloro-phenol, OH stretching band struct. 8=4211
 chlorophyllide a and b fluoresc. polarization and absorpt., spectra, 390-440 μ 8=21700
 3-chloropyridine, near u. v. absorption spectrum 8=21130
 chlorosilyl dialkylamines, vibr. spectra 8=1300
 chlorotoluenes, LCAO-CUV calc. 8=21124
 α -chloro-6-valerolactam, crystal structure 8=8597
 chlorpromazine, crystal structure 8=8592
 cholestric liq. crystals, optical rotatory power 8=12876
 cholesterol liquid crystals, structure by optical obs. 8=21612
 cholesterol derivatives, dipole moments 8=1279
 cholesteryl-caprinate, heat of transformation 8=16917
 cholesteryl caprinate, liquid crystals, heat of formation and critical size of centres 8=16918
 cholesteryl mynstate liquid cryst. mesophase polymorphism, obs. 8=12802
 chrysene-d₁₂, plastic scintillators 8=9656
 cinnoaline vapour, electronic spectrum 8=16318
 complexes formed by H-bonding, i. r. spectra 8=12242
 configuration interaction, improving convergence 8=16267
 copper formate tetrahydrate, cell doubling at antiferro-electric phase transition 8=9222
 copper phthalocyanine, e. s. r. 8=9441
 coronene in CCl₄, phosphoresc. rel. to mol. deform. by lattice interactions, 77°K 8=1577
 coronene-d₁₂, plastic scintillators 8=9656
 coronene, excited singlet state, nsec absorpt. 8=9728
 coronene, mag. circular dichroism 8=21123
 coronene, π transitions, free-electron and MOLCAO calcs. 8=4139
 corrosion inhibitors for metals in acids, specificity rel. to reaction kinetics 8=2509
 p-cresol, OH stretching band struct. 8=4211
 π -crotyl NiX, (X=Cl, I), structure rel. to butadiene polymerization catalysis, obs. 8=8576
 cryptocyanine, fast fluorescence meas. 8=16869
 cryptopine, C₂₁H₂₃O₂N, crystal structure 8=22055
 crystal chemistry, studies in USSR 8=8368
 crystals as adsorbents for gas-solid chromatography 8=18763
 crystals, diimag. anisotropies 8=18295
 crystals, oscillation spectrum and charact. temp. from thermodynamic props. 8=17470
 crystals, thermodynamic props. from structure 8=13360
 cyanethylacetylcellulose dielec. relax. rel. to acetate and cyanethyl groups motion, -160-200°C 8=22662
 cyclic moles, anal. of i. r. type A bands rel. to asymmetry 8=1277
 cyclic paraffins, molecular structure interatomic distances, chain folding 8=1827
 cyclic polyenes, π -electron model 8=16174
 cycloalkanes and alkylcycloalkanes semidiones, struct. and conformation, e. s. r. obs. 8=22898
 cyclobutadiene, MO calc. of stability and geometry 8=21131
 cyclobutane, freq. factor for rate const. 8=14364
 cyclobutane photolysis, energy distrib. in reaction products 8=5753
 cyclobutane photolysis, mechanism rel. to curved Stern-Volmer plot 8=5752
 cyclohexadiene-1,4 (and 1,3), X-ray absorpt. spectra 8=12277
 cyclohexane as α dosimeter 8=20592
 cyclohexane-aniline, critical binary fluids, spectral width temp. and angular dependence 8=21778
 cyclohexane-benzene mixtures, irradiated, charge transfer 8=9731
 cyclohexane benzene, near u. v. absorption spectrum 8=16861
 cyclohexane, gas, scatt. of K, Rb and Cs, compared with benzene 8=1205
 cyclohexane-isobutanol vapour-liquid equilibrium data 8=4653
 cyclohexane, liq., hot-electron injection from tunnel junction, effective barrier 8=257

Organic compounds—contd

- cyclohexane on Mg-Fe mixed hydroxides, adsorpt. and desorpt., obs. 8=17023
- cyclohexane, overtones of combination scattering 8=1559
- cyclohexane, X-ray absorpt. spectra 8=12277
- cyclohexane-2,2,4-trimethyl pentane mixture, H_2 yield on radiolysis 8=18748
- cyclo octatetraene anion radical, e.s.r., ion pairing effects 8=4614
- cycloparaffins, chem. ionization mass spectra 8=1374
- cyclopentadiene, i.r. and Raman spectra 8=12267
- cyclopentadiene nickel nitrosyl, laser-excited, Raman spectrum 8=21155
- cyclo-pentane-hexane and -heptane, translational diffusion in CCl_4 , expt. and theory 8=16814
- cyclopentene, i.r. absorpt. spectrum 8=7590
- cyclopentene, i.r. spectra and ring puckering 8=16304
- cyclopropane derivatives, C-C coupling 8=12320
- cyclopropane, gas and liq. i.r. and Raman spectra 8=1298
- cyclopropane, solubility in polyethylene 8=17188
- cyclopropanes and cyclopropenes, strain energies, SCF MO calc. 8=4190
- cyclopropanes, substituted, C^{13} chem. shifts 8=1303
- cyclopropylcarbanyl cations, equilibrating 8=5693
- p-cymene, oxidation with t-butyl chromate 8=9687
- L-cysteine hydrochloride monohydrate, Patterson sharpening function $[\sum Z_j / \sum f^2 - 1]$ 8=8577
- deca-trans-3, trans-7-dienedioic acid 8=8578
- decane, C-C and C-H bond electrons momentum distrib. rel. to β^+ annihilation 8=16324
- n-decane-water, interfacial tension 8=12827
- n-decanol in non-polar solns., microwave relax. 8=21711
- 15,15'-dehydrocanthaxanthin, crystal structure 8=22053
- depsides, lichen, i.r. and u.v. spectra 8=4191
- depsidones, lichen, i.r. and u.v. spectra 8=4191
- deuterobenzenes, vibr. band structure 8=21683
- deuteriochlorobenzenes, o-, m- and p-, i.r. and Raman spectra 8=7574
- deuterotoluenes, o-, m- and p-, i.r. and Raman spectra 8=7574
- diacetylene- H_2 , d_2 , absorpt. spectrum in vacuum u.v. to 1000 Å 8=12245
- dialkoxytetrahydropyrans, spin-spin coupling-models 8=12292
- diaminodiphenylsulphone, crystal structure 8=22075
- 2,3 diazabicyclo[2.2.1]hept-2-ene, photolysis products, distrib. of excess vib. energy 8=5751
- diaziridin rings, methylene-group n.m.r. spectroscopy 8=12940
- diazopropyne photolysis, C_3 and C_3H_2 radicals absorpt. spectra obs. 8=16368
- dibenzenechromium iodide, i.r. spectra and C-H out-of-plane force consts. 8=14276
- dibenzofuran, e.s.r. study of reactions of radical anion formed by e addition 8=14350
- dibenzosuberone, absorpt., phosphoresc. and polarization spectra 8=8096
- dibenzoylperoxide decomp. tracing by n.m.r. spectroscopy 8=8127
- 1,4-dibenzylxybenzene, packing relationship 8=17440
- cis-bis(dibenzyl sulphide) dichloroplatinum(II), struct., inversion and AB chemical shifts, n.m.r. obs. 8=16356
- dibenzyl sulphoxide, n.m.r. obs., comparison with cis-bis(dibenzyl sulphide) dichloroplatinum(II) 8=16356
- dibromoacetone, i.r. spectra 8=12281
- 4,4'-dibromobenzophenone, absorpt. phosphoresc. and polarization spectra 8=8096
- 4,4'-dibromo-dibenzoyl peroxide, crystal and mol. structure 8=17442
- 1,4-dibromonaphthalene, triplet states 8=2467
- 2,3-dibromo-1,4-naphthoquinone, crystal structure 8=8588
- di-tertiary-butyl nitroxide solns., spin exchange 8=8121
- dicalcium strontium propionate, $Ca_2Sr(C_2H_5CO_2)_6$, dielectric critical slowing down 8=2248
- dicalcium strontium propionate, $Ca_2Sr(C_2H_5CO_2)_6$, structure in ferroelectric phase 8=4892
- dicalcium strontium propionate, $Ca_2Sr(C_2H_5CO_2)_6$, structure in paraelectric phase 8=4891
- m-dicarbene, e.p.r. of quintet ground states 8=4221
- dicarboxylic acids, structure determ. from appl. of close-packing principle 8=22056
- 2,4(5)-dichloroaniline, near u.v. absorption spectrum in vapour phase 8=21132
- 2,5(6)-dichloro-p-benzoquinone, absorption spectrum in near u.v. 8=21126
- 4,4'-dichloro-dibenzoyl peroxide, crystal and mol. structure 8=17442
- di-p-chlorobenzoylperoxide decomp. tracing by n.m.r. spectroscopy 8=8127
- dichlorodifluoromethane, solution H in, spectral simultaneous transitions 8=21675
- dichloroethane, overtones of combination scattering 8=1559
- trans-dichloroethylene adsorbed on silica gel, laser Raman spectra 8=23031
- dichloromethane, CH_2 valence vibrations in vapour and condensed phases 8=16328
- 2,4-dichlorophenoxyacetic acid, n.q.r. 8=2390
- dichloro 1-2 propane, i.r. dispersion 8=8074

Organic compounds—contd

- dichlorotoluenes, 2,4-, 2,6- and 3,4 molecules with benzene solvent, dipole moment 8=21121
- 9-dicyanomethylene-2,4,7-trinitrofluorene crystal structure 8=8580
- 2,4-dicyanopentanes, high-resolution n.m.r. 8=16884
- dicyclopentadienyl nickel, electron capture ratio of Ni^{56} and Ni^{57} 8=3914
- di-ethyl ether, heat transfer in nucleate boiling 8=16948
- diethyl ether, thermal conductivity rel. to temp. 8=7925
- diethyl ethers, catalytic decomp. on W films 8=14404
- diethyl phthalate, ht. capacity, cryst., glass and liq. 8=1870
- diethyl sulphide-urea cpds., X-irrad., e.s.r. of $R\dot{C}HSR'$ type free radicals 8=1314
- diethylthiatricarbocyanine iodide and chloro-aluminium phthalocyanine stimulated emission obs. 8=452
- difluorobenzenes, microwave spectra 8=1285
- 1,1-difluoro-1,2-dibromodichloroethane, spin-echo n.m.r. and internal rot. 8=4622
- 1,3-difluoro-4,6-dinitrobenzene, n.m.r. 8=21178
- 1,1-difluoroethylene in soln., nuclear spin relax. 8=16889
- difluoromethylene, triplet-to-singlet conversion 8=1293
- 2,6 difluoropyridine, i.r. and Raman spectra 8=16341
- p-dihalobenzenes, C^{13} -H satellite spectra 8=21174
- dihalogenomethanes in CCl_4 , methylene group valence vibr. bands rel. to weak intermol. interaction 8=1292
- di-n-hexyl sulphide-urea, X-irrad., e.s.r. of $R\dot{C}HSR'$ type free radicals 8=1314
- dihydroanthracenes and their Li salts, n.m.r. rel. to ion-pair structure 8=7559
- dihydrofuran, i.r. spectra and ring puckering 8=16304
- 2,5-dihydrofuran, ring puckering 8=12271
- dihydronicotinamides, SCF-CI calc. 8=16306
- dihydropyridines, SCF-CI calc. 8=16306
- dihydrothiophene, i.r. spectra and ring puckering 8=16304
- dihydroxydurene cation radical, e.s.r. spectrum 8=1589
- dihydroxyethylalkylamine oxide micellar solns., potentiometric studies 8=8158
- diiodomethane, CH_2 valence vibrations in vapour and condensed phases 8=16328
- di-iodo-L-tyrosine dihydrate, crystal structure 8=1826
- diisopropylcyclohexane, heat loss to turbulent flow 8=8050
- 2,6 di-isopropyl phenol, elec. field induced spectral shifts in vib. lines 8=1572
- diketene, rot. spectrum, config., dipole moment and ring deform. vibr. 8=4200
- α -diketones, emission spectra and excited state geometry 8=1297
- 4,4'-dimethoxyazobenzene anion, e.s.r. 8=12303
- p-dimethoxybenzene, near u.v. absorption and emission spectra 8=21133
- dimethoxydurene cation radical, e.s.r. spectrum 8=1589
- 1,1-dimethoxy-2,4,6-trinitro-benzene ion, structure 8=8572
- dimethyl acetamide, n.m.r., solvent-solute interactions 8=12936
- dimethylacetylene mols. normal modes, Coriolis coupling and centrifugal distortion 8=16330
- dimethylacetylene, vib. spectrum, theory necessary for anal. 8=1294
- dimethylalkylamine oxide micellar solns., potentiometric studies 8=8158
- 4-dimethylamino-4'-nitrodiphenyl in decalin, frozen solution, luminescence 8=5684
- N-N-dimethylaniline and deuterated derivatives, p.m.r. 8=21179
- dimethylaniline, α,β -unsaturated ketone derivatives in toluene electronic absorption and luminescence spectra 8=21702
- N,N-dimethylaniline cation radicals, hyperfine splitting, substituent effects 8=4620
- 9,10-dimethyanthracene excimers fluoresc. quenching by anthracene and 9-bromoanthracene 8=1575
- 2,6-dimethylbenzoic acid, crystal structure 8=8571
- 2,6-dimethyl benzoic acid, crystal structure rel. to mol. distortion effects 8=22049
- 2,5-dimethyl-p-benzoquinone, structure and electron density 8=8573
- 2,6-dimethylbenzosemiquinone, monoprotonated, e.s.r. solvent depend. 8=8125
- 4,4-dimethylcyclohexenone radical anion, e.p.r. 8=12304
- 1,2-dimethylcyclopropane, cis- and trans-, vibration spectra, calc. and interpretation 8=7587
- dimethyl formamide, n.m.r., solvent-solute interactions 8=12936
- meso- α,α' -dimethylglutaric acid, molecular and crystal structure refinement 8=1819
- 2,3-dimethylnaphthalene, mol. and cryst. structure from i.r. spectra and diamag. anisotropy 8=18574
- 2,3-dimethyl-naphthalene in n-hexane rigid matrix at 77°K, absorpt. and emission spectra 8=14286
- 1,2- and 2,3-dimethylnaphthalene, triplet-triplet absorption under Shpol'ski's condition 8=21147
- 2,3-dimethyl-1,4-naphthoquinone crystal structure 8=8587
- 2,5-dimethyl-1,3,4-oxadiazole, i.r. spectrum 8=12285
- 0,0-dimethyl phosphorochloridodithioate, i.r. and Raman spectra 8=21146

Organic compounds—contd

- dimethyl phthalates, in soln., high-resolution proton mag. res. 8=1601
- 2,2-dimethyl propane, C-C distance and covalent rad. of C atom 8=7586
- dimethylsilylamine, cryst. struct. and penta co-ord. Si 8=4894
- α, α' -dimethylsuccinic acids, microstructure and molecular structure obs. 8=22000
- dimethyl sulfoxide, base-catalysed tritiation and ionization 8=4610
- dimethylsulfoxide, solid, n. m. r. study of methyl group movement 8=9466
- m-dinitrene, e. p. r. of quintet ground states 8=4221
- p-dinitroanisole radical anion, hyperfine coupling consts. of N^4 , solvent depend. 8=8124
- p-nitrobenzene alkali-metal salts, e.s.r. 8=8120
- p-nitrobenzene radical anion, hyperfine coupling consts. of N^4 , solvent depend. 8=8124
- dioctylphthalate aerosol, particle conc., by turbidity meas. 8=8153
- 1,4-dioxane, solvent shift obs. and structure 8=16862
- dioxazines, electronic spectra, MO calc. 8=4205
- 1,1-diphenylacetylene, e.s.r. study of reactions of radical anion formed by e addition 8=14350
- 9,10-diphenylanthracene, electronic structure and luminescence 8=4207
- 1,2-diphenyl benzene, solidification kinetics into under-cooled melt 8=8401
- 1,1,-diphenyl-2-bromo-prop(1)ene, crystal structure 8=22058
- diphenyl, crystal growth in constant electric field 8=21949
- diphenyl- α, α' -dipyridyl system, constitution diagram 8=4725
- diphenylboron halides, thermodynamic properties 8=1863
- 1,1-diphenylethylene, e.s.r. study of reactions of radical anion formed by e addition 8=14350
- diphenyl-picryl-hydrazyl, Faraday effect at 8.78 GHz 8=7600
- diphenyl, n. m. r. line shape 8=14132
- diphenyls, 4-monosubstituted, absorpt. spectra rel. to ionization pot. and conjugated π -bonds, obs. 8=4212
- 4,4'-diphenylstilbene in polymethyl methacrylate, solid soln. fluoresc. 8=9654
- 9,10-di-n-propylanthracene excimers fluoresc. quenching by anthracene and 9-bromoanthracene 8=1575
- di-n-propyl ethers, catalytic decomp. on W films 8=14404
- dipyridyl mononegative ion and alkali metal ion biradical, e.s.r. and structure 8=4247
- 1,4-distyrylbenzenes, 4-monosubstituted, absorpt. spectra rel. to ionization pot. and conjugated π -bonds, obs. 8=4212
- p-dithiane, i.r. absorpt. 15° and 300°K 8=18575
- dithiono-4-oxo-1,3-thiazane, unit cell and space group 8=4898
- ditoluenechromium iodide, i.r. spectra and C-H out-of-plane force consts. 8=14276
- 1,1,-di-para-tolyl-2-bromoethylene, crystal structure 8=22058
- dioxanthogens i.r. spectra, anomalous band splittings 8=21118
- DNA with complexed carcinogen, elec. and optical props. 8=18093
- n-dodecylaminum hydrochloride, ion sublation studies, by radioactive tracers 8=23075
- dodecylthiuronium chloride, ion sublation studies by radioactive tracers 8=23075
- DPPH, paramagnetic resonance at low fields 8=14122
- DPPH stable free radical, cryst. structure 8=1317
- durene, doped crystals, luminesc. mechanism 8=18637
- durene, far i.r. absorption 8=23028
- durene, irradi. cryst., e.p.r. of free radicals 8=5528
- durene, single cryst., progressive fluoresc. and delayed induced luminesc. 8=18636
- durene-tetracyanobenzene complex, e.s.r. of charge-transfer triplet state 8=12306
- durosemiquinone, e.s.r. in 1,2-dimethoxyethane 8=1591
- dye laser flashlamp excitation 8=451
- dye solns, two-photon absorpt., geometrical model and meas. 8=16834
- dyes, adsorbed, ionization energy 8=5424
- dyes, photocond., localized model 8=13920
- dyes, photocond., thermal activation energy 8=13919
- dyes, sorption dynamics 8=17149
- dye-like mol. induced optical activity, free-electron model 8=12382
- dyestuffs, elec. energy storage 8=18176
- EDTA chelates of Cd^{2+} and Hg^{2+} , comp. study by ultrasonic vel. meas. 8=23170
- elastomer viscoelastic props., tensile test obs. 8=22400
- electrolyte-water-phenol system 8=18714
- eosin, fluorescence spectrum, effect of conc. 8=21701
- epoxy, cold hardened, plasticized and filled, elec. cond. rel. to elec. field strength 8=22498
- epoxy resin, polymerization, interpretation of elect. resistivity meas. 8=18707
- esters, gas chromatograms and i.r. spectra 8=9759
- esters interaction with SO_2 8=18688
- esters, long-chain, crystal structure 8=22057

Organic compounds—contd

- estrone-related cpds., lattice constants 8=8579
- ethane, diffusion in zeolites containing H_2O 8=8685
- ethane, dissociation kinetics 8=16363
- ethane gas, sorption and diffusion in synthetic Na mordenite 8=13109
- ethane, i.r. spectrum, high resolution 8=490
- ethane, internal rot. barrier, free-electron treatment 8=4194
- ethane molecule, freq. of torsional vib., meas. 8=1284
- ethane, photoionization 8=4319
- ethane-1,1,1-d₃, Raman spectrum and rot. consts. obs. 8=16321
- ethane, solid films, far u.v. spectra 8=14283
- ethane, staggered and eclipsed, barrier to int. rotation 8=1281
- ethane, transpiration through membrane 8=12662
- ethane, vibr. excited, kinetics 8=18675
- ethanol adsorption on Y_2O_3 and decomp., mechanism, i.r. obs. 8=4768
- ethanol, at room temp., liq. structure and bonding 8=1523
- ethanol, crit. supersaturation for homogeneous nucleation from vapour 8=1621
- ethanol, evaporation into O_2 and CO_2 , effect of interface motion on mass transfer 8=16711
- ethanol- H_2O mixtures, cond. with electrolytes in soln. 8=4604-5
- ethyl acrylate polymerization by a.f. elec. field, obs. 8=9709
- ethyl alcohol, intermolecular potential and viscosity, 30-200°C 8=21523
- ethyl alcohol microwave spectra in region 13-50 kMc/sec obs. 8=4192
- ethyl alcohol, molecule, microwave spectrum 8=21135
- ethyl alcohol-water mixture, thermal diffusion meas. of separation 8=12838
- ethylamine and its deuterated analogs, dissociative mechanism by mass spectra 8=16326
- ethylamine molecule, microwave spectra 8=7578
- ethyl benzene, liq. and in hexane, excimer fluoresc. 8=21699
- ethyl caproate, in nonpolar solvent, intensity meas. of i.r. band 8=21680
- ethyl chloride, absorption of microwaves 8=7579
- ethylether, evaporation into He and CO_2 , effect of interface motion on mass transfer 8=16711
- ethyl ether, stimulated Brillouin scatt., quasi-steady state 8=21687
- ethyl ether, X-ray scatt. meas. 8=8077
- ethylgermane, vibr. spectra 8=1280
- ethyl iodide, electron spin polarization meas. 8=1232
- ethyl iodide, gas-phase photolysis, hot radical reactions 8=5749
- ethyl iodide, n.m.r. in nematic phase 8=8135
- ethyl ketone, vapour heat capacity and heat of vapourization 8=1471
- DL-ethyl mandelate, asymm. interaction with amylose 8=18696
- 2-ethyl naphthalene, emission from liq. excited by electrons 8=12893
- ethyl nitrite, gas, soln. and solid, i.r. spectra and rot. isomerism 8=16329
- ethyl propyl ketone, vapour heat capacity and heat of vapourization 8=1471
- ethyl-1-thio- α -D-glucopyranoside crystal structure 8=8581
- ethylene adsorbed on activated charcoal, mol. motions from n-scattering studies 8=21901
- ethylene adsorption on Y_2O_3 and decomp. mechanism, i.r. obs. 8=4768
- ethylene catalytic oxidation rel. to Ag surface struct., chemisorpt. obs. 8=18706
- ethylene, chem. overshoot in shock pyrolysis 8=9690
- ethylene-chlorhydride-water system, pressure effects 8=16938
- ethylenediamines, intramolec. H-bonds 8=1283
- ethylenimine, dipole moments meas. by benzene solvent method 8=1583
- ethylenimine, solvent and anisotropy effects in n. m. r. obs. 8=16895
- ethylene, large-angle electron-impact spectra 8=16224
- ethylene, LCAO-SCF calc. 8=21139
- ethylene, nonplanarity of first Rydberg state 8=21134
- ethylene, oxidation and pyrolysis in shock waves 8=18676
- ethylene oxide- H_2O clathrates, thermal and composition expansion 8=17447
- ethylene polymerization on CrO_3 , chain transfer reactions, obs. 8=23129
- ethylene, proton spin-spin coupling calc. 8=21136
- ethylene, radiolysis, H_2 production as dosimeter 8=614
- ethylene, Raman spectra and electrooptical parameters compared with trichloroethylene 8=21138
- ethylene in solution, reactions in presence of O 8=14446
- ethylene-type mols., coriolis coupling coeffs. 8=4195
- ethylidene-NN-diacetamide crystals, atomic structure obs. 8=1817
- ethylsilane, vibr. spectra 8=1280
- excitons in mol. crystals, meas. and obs. 8=8952

Organic compounds — contd

- ferrocene, effect of pressure on Mössbauer resonance 8=1652
 ferrocene, MO calcs., and excitation energies 8=4197
 ferrocene-tetracyanoethylene complex, cryst. struct. 8=1792
 ferrocenylbenzene, ortho-substituted mass spectral decomposition 8=4183
 fluorenylidene in diazofluorene crystals, spin densities from ENDOR 8=5555
 fluoroacetone, rotational isomerism in all states 8=1271
 fluoroacetylene, ground-state electron struct. 8=12246
 fluorobenzaldehydes, emission spectra 8=21122
 fluorobenzene, F spin lattice-relax. 8=1594
 fluorobenzene, H-H and H-F couplings 8=12325
 fluorobenzene, n.m.r. and coupling consts. 8=12326
 fluorobenzenes, CNDO/2 MO calc. 8=12261
 2-fluoro- α -chloro- α , α difluorotoluene, J^{FF} temp. depend. 8=4227
 2-fluoro- α , α -dichloro- α -fluorotoluene, J^{FF} temp. depend. 8=4227
 fluoronitrobenzenes, CNDO/2 MO calc. 8=12261
 fluoro-olefines on oriented polymer fibres, radiation graft-copolymerization 8=23138
 p-fluoro-phenol, OH stretching band struct. 8=4211
 fluorotetrachloroethane, liquid, internal rotation 8=8137
 fluorotitanate complexes, F-F coupling consts. 8=4230
 fluorotoluene derivatives, signs of spin-spin coupling consts. 8=16358
 m-fluorotoluene, microwave spectrum, rot. and dipole moment 8=21164
 formaldehyde, doubling energy of molecules 8=7525
 formaldehyde, K-type doubling lines in h.f. spectra 8=21140
 formaldehyde, oscillator strength of singlet-triplet transition 8=16322
 formaldehyde, π -electronic struct, test of Ohno's formula and constraining Koopman's theorem 8=1286
 formaldehyde, vibrational-rotational interactions for force field determ. 8=4198
 formate ion, reln. between geometry and isoelectronic AB, mols. 8=1269
 formic acid adsorbed on ZnO, i.r. spectra 8=18705
 formic acid, catalytic dehydration over Al_2O_3 and SiO_2 gel 8=9701
 formic acid, cryst., i.r. spectra 8=14279
 formic acid, doubling energy of molecules 8=7525
 formic acid, etching of NaCl crystals 8=17658
 formic acid, K-type doubling lines in h.f. spectra 8=21140
 Freon 113 horiz. strip, transition and film boiling, heat flux and surface temp. fluctuations 8=12986
 freon-113, i.r. dispersion 8=8074
 fuchsin red prod. anomalous dispersion for phase-matched third harmonic generation in hexafluoroacetone sesquihydrate 8=8072
 furan, cryst., i.r. absorpt. spectra at liq. N_2 temp. 8=14280
 furan, $Hg(^3P_1)$ photosensitized, struct. of excited states 8=14434
 furan, u.s. velocity, absorpt. and relax. obs. 8=12687
 furane- α , α' -dicarboxylic acid, crystal and mol. structure 8=17448
 galactital, crystal structure 8=22059
 gas-liquid chromatography, sample injection port 8=14450
 gases, mixtures in air, optical-acoustic effect using cm e.m. waves 8=21520
 α -germyl ketones, electronic spectra 8=21159
 glyceride aqueous systems, struct. of mesomorphic and micellar phases 8=12804
 glycerine, liquid, Brillouin scatt., 23-90°C, background due to relaxation 8=21689
 glycerol, n scatt. rel. to molecular diffusion 8=21609
 glycerol, shear rigidity and free volume 8=1537
 glycerol and water mixture, acoustic absorpt. rel. to macromolecule formation 8=8057
 glycine, kinetics of γ -radiolysis 8=5757
 glycine silver nitrate, i.r. absorption spectrum 8=5646
 glycine, thermal cond. obs. at 60° and 82°C 8=22135
 glycol sulphate, pyroelectric props. 8=13894
 α -glycylglycine, crystal structure 8=13307
 glyoxal, π -electron struct., MO calc. 8=16310
 gramicidin C, iodohydrate, crystallographic investigation 8=4893
 guanidinium $Al_2(SO_4)_3 \cdot 6H_2O$, cryst. struct. 8=17449
 guanidinium aluminium sulphate, $6H_2O$, structure refinement 8=17450
 guanidinium $Al_2(SO_4)_3 \cdot 6H_2O$, ferroelec. moment 8=18195
 guanidinium $Cr_2(SO_4)_3 \cdot 6H_2O$, cryst. struct. 8=17449
 guanidinium $Cr_2(SO_4)_3 \cdot 6H_2O$, ferroelec. moment 8=18195
 hemoglobin, association with O_2 , statistical mech. anal. 8=1311
 haemoglobin, quadrupole splittings and isomer shifts 8=16344
 haloacetonitriles, i.r. and Raman spectra 8=16323
 halogenated benzenes, excimer phosphoresc. in organic glasses 8=9653
 halogenated ethanes, i.r. spectra and internal rot. barriers 8=12269

Organic compounds — contd

- halogeno cyanoacetylenes, force consts. 8=1270
 halogenophenanthrenes, n.m.r. spectra 8=9461
 halonaphthalenes, phosphoresc. in host crystals 8=5683
 haloquinone complexes in polymer matrices, absorpt. spectra at high press. 8=14274
 haloxine, new alkaloid crystal and mol. structure 8=17451
 heterocyclic, triplet-triplet absorpt. at 77°K 8=7561
 heterocyclic cpds., u.v. spectra 8=21142
 N-heterocyclic-iodine complexes, assignment of donor transitions 8=16332
 heterocyclics, dipole moments, MO calc. 8=12272
 heterocyclics, five-membered with C, N and O, CNDO SCF calcs. 8=16331
 N-heterocyclics, ionization potentials 8=12455
 heterocyclics, transient absorpt. bands 8=4179
 hexachlorocyclopentadiene, two solid phases, C_{15}^s n.q.r. 8=8289
 hexachloroethane, far i.r. fundamentals, discussion of freqs. 8=16320
 hexafluoroacetone, fluoresc. in gas phase 8=12247
 hexafluoroacetone, photolysis in Hg vapour, primary process 8=23154
 hexafluoroacetone sesquihydrate, phase-matched third harmonic generation by fuchsin red prod. anomalous dispersion 8=8072
 hexafluorobenzene, photochem. valence tautomerization, kinetics and mech. 8=2537
 hexafluoroethane, F coupling 8=8134
 hexafluoroethane, secondary ion-mol. reactions, ion cyclotron reson. 8=21284
 hexahelicene, optical rot. and circular dichroism 8=12883
 hexamethylbenzene, molec. motions, n.m.r. 8=14143
 hexamethyldisiloxane polymerization on Al surface, in glow discharge 8=5731
 hexamethylphosphotriamide, i.r. dispersion 8=8074
 hexane, behaviour of negative charge carriers 8=21717
 hexane, C-C and C-H bond electrons momentum distrib. rel. to β^+ annihilation 8=16324
 hexane, crit. supersaturation for homogeneous nucleation from vapour 8=1621
 n-hexane, dielec. const. as function of temp. and press. 8=1582
 n-hexane, elec. cond., u.v. and γ radiation effects 8=21714
 n-hexane-nitrobenzene syst., diffusion in crit. separation region 8=21644
 n-hexane, oxidative adsorpt. on Pt electrodes 8=5737
 n-hexane stimulated Brillouin scatt., quasi-steady state 8=21687
 n-hexane, theory of elec. cond. after irradiation by γ -rays 8=6628
 hexatrienes, substituted, HMO calc. of electronic spectra 8=12273
 holmium ethyl sulphate, far-infrared high resolution spectroscopy on e.p.r. lines 8=14110
 hydrazines electrochem. oxidation, hydrazyls form., e.p.r. obs. 8=5722
 hydrocarbons, adsorpt. and oxidation on Pt electrodes 8=9714
 hydrocarbons, CNDO calcs. 8=16325
 hydrocarbons, effect of nonbonded interactions on geometry and energy 8=12166
 hydrocarbons, flames, excited CH and C_2 8=7509
 hydrocarbons, free-radical doped, proton polarization 8=4672
 hydrocarbon gases, photolysis by CO, laser 8=2538
 hydrocarbons, generalized free-electron molecular orbital 8=12284
 hydrocarbons, liq., energy to create ion pair 8=21723
 hydrocarbon liqs., interaction with surfactants 8=8147
 hydrocarbons, liq., thermal props. from similarity theory 8=21646
 hydrocarbon mols., C^{13} -H coupling 8=7510
 hydrocarbons, nonbonded potential parameters calc. from cryst. 8=13002
 hydrocarbons, nuclear spin coupling consts., MO calc. 8=12328
 hydrocarbons, saturated, theory of C^{13} chem. shifts 8=7606
 hydrocarbons, saturated, perturbed orbital energies in radiolysis 8=18742
 hydrocarbons, semiempirical SCF MO calc. 8=4199
 hydrocarbons, simple, reactions with free O and H atoms, e.s.r. study 8=14376
 hydrocarbons, unsaturated, ion-molecule reactions 8=9671
 hydrochinalines, spectral parameters of K and B bands 8=21677
 8-hydroxy-1-methyl quinolinium hydroxide soln. in chloroform, light absorption 8=1566
 hydroxybenzoates, mass spectrum obs. 8=20912
 imidazole, microwave spectra and struct. 8=21162
 imide, liq. photolysis, e.s.r. 8=14435
 2-imino-4-thiazolidinone 5-acetic acid unit cell and space group 8=4898
 indene polyassociates, conjugated, photoelectric emission 8=13938
 indole, electronic spectra, oscillator strengths meas. 8=7580
 indole, excited state dipole moment, calc. 8=21143
 indole in polar solns., red shift in fluoresc. rel. to exciplex state 8=4591

Organic compounds — contd

- indolene in CCl_4 , shape intensities of i.r. absorpt. bands 8=8080
 1-iodo-2-4-dinitrobenzene isotope exchange with KI^{131} in acetone- H_2O , solvent effect 8=2504
 1-iodo-2-4-dinitronaphthalene isotope exchange with KI^{131} in acetone- H_2O , solvent effect 8=2504
 α -iodododecanoic acid methyl ester, crystal structure 8=22057
 β -iodophenylacetylene, polymerization and props. of polymers obtained 8=23130
 isobutane, gas-phase photolysis and radiolysis 8=23158
 isobutyric acid- H_2O system near crit. mixing pt., correl. effect in conc. fluctuations 8=12882
 isopropyl alcohol, adsorpt. on Graphon 8=1700
 isopropyl iodide form. by $\text{C}_2\text{H}_6 + \text{I}_2$ irradiation with visible light 8=5745
 isothiazole, microwave spectra and struct. 8=21162
 isothiocyanates, anomalous band splittings 8=21118
 kerosene, degraded by HNO_3 , removal of fission prods. with $\text{K}_2\text{Cr}_2\text{O}_7$ and H_2SO_4 soln. 8=20854
 ketene-benzene mixture, photochem. and reactions of methylene radicals 8=5748
 ketene, microwave, Zeeman effect of rotational transitions 8=7581
 ketene, photochem. and reactions of methylene radicals 8=5748
 ketene, photodecomp. as source of triplet methylene 8=23157
 ketones, alcoholized, vapour phase, $\nu_{\text{C=O}}$ frequency 8=7582
 ketones, aromatic, ion decomp., influence of charge and radical sites 8=4308
 ketones, dipole moments at 3 cm. 8=21108
 ketones, gas chromatograms and i.r. spectra 8=9759
 ketones interaction with SO_2 8=18688
 ketones, intermolecular forces 8=1287
 latex particles, high-speed beam 8=12952
 lauryl aldehyde, oxidation by u.s. radiation 8=9735
 L-leucine hydrobromide, crystal structure 8=8583
 D-leucyl glycine hydrobromide, min. function Fourier integral approach to crystal structure 8=22061
 liquid binary mixtures, volume changes 8=1528
 liquid mixtures, eutectic forming, normal freezing and constitutional subcooling 8=12973
 liquid quenches of light pulse in GM counter, properties 8=11297
 liquids, heats of transformation rel. to sound velocity 8=16829
 liquids, l.f. Raman lines 8=1563
 lupolen, X-ray scatt., small-angle 8=14282
 magnesium hexa-antipyrine perchlorate, crystal and mol. structure 8=8593
 malonaldehyde anion, i.r. spectra 8=21144
 malonic acids, n.m.r. and intramolec. H-bonding 8=16894
 DL-mandelic acid, asymm. interaction with amylose 8=18696
 D-mannitol, α - and β -forms, crystal structures 8=22062
 mass spectrometry, lecture 8=12030
 Meisenheimer salts, crystal structure 8=22058
 metal carbonyls, i.r. spectra 8=4189
 methacrylic acid, vinylchloride copolymerization, relative reactivities obs. 8=23136
 methacrylonitrile, sigma-type complex with metal chlorides 8=2527
 p-methacryloxybenzoic acid, kinetics of polymerization in soln. 8=14410
 methane- Ar-H_2 system, unsteady diffusion 8=12712
 methane, chem. overshoot in shock pyrolysis 8=9690
 methane, dissoc. attachment of electrons, isotope effects 8=16454
 methane gas, sorption and diffusion in synthetic Na mordenite 8=13109
 methane, gas, liq. and solid, molecular dynamics, study by slow n. scatt. 8=16374
 methane, h.p. boiling apparatus 8=16944
 methane, ionization and electronic energy levels 8=1373
 methane, ion molecule reactions at pressure 8.10^{-4} – 10^{-3} mm Hg 8=4258
 methane, i.r. spectrum, high resolution 8=490
 methane, liquid, proton spin-lattice relaxation 8=4617
 methane, liq. slow n. scatt., with rot. relax. functions of order 3 and 4 8=12798
 methane, magnetic susceptibility calc. 8=7584
 methane, melting curve to 30 kb, obs. 8=1610
 methane, nuclear spin isomerization 8=18681
 methane, nuclear spin relaxation rel. to density and temp. 8=7938
 methane- O_2 mixtures, vibr. energy transfer 8=21200
 methane, photolysis in Ar and N_2 matrices, i.r. spectrum of CH_3 8=18737
 methane-propane mixtures, viscosities and densities at low temp., high press. 8=12819
 methane, residual, effect on BaO cathode emission 8=18663
 methane, rotating mol., scattering curves rel. to interatomic distances 8=7572
 methane, SCF calcs, correlation energies and Hartree-Fock limits 8=1263
 methane, solid films, far u.v. spectra 8=14283
 methane, solid, phase transition calcs. using James-Keenan model 8=17110

Organic compounds—contd

- methane, solid, slow neutron scatt. 8=13038
 methane, sorption in Ba films 8=17160
 methane, sorption in methane in picture c. r. t., effect of silicate binder residues 8=15325
 methane, spin-rotation interaction constants determ. by nuclear spin relax. meas. 8=7573
 methane-tetrafluoromethane system, PVT relations 8=7912
 methane-water vapour mixture, acoustic vel. dispersion and Napier time 8=4481
 methane, X-ray absorpt. spectra 8=12277
 methanes, isotopic, vapour press. and hindered rot. 8=12994
 methanol, adsorpt. by silica gel for surface meas. 8=21742
 methanol, adsorpt. of vapour on AgI 8=8337
 methanol adsorption on Y_2O_3 and decomp. mechanism, i.r. obs. 8=4768
 methanol, crit. supersaturation for homogeneous nucleation from vapour 8=1621
 methanol/Hg interphase, adsorption 8=18721
 methanol, liq., nuclear spin relax, effect of proton exchange 8=1596
 methanol, multiple stimulated Brillouin scattering 7=4584
 methanol, at room temp., liq. structure and bonding 8=1523
 methanol, X-irrad., u.v. photolysis at 77°K 8=5750
 3-methoxy- β , 19-cyclo-5, 10-secoandrosta-1(10), 2-4-trien-17 β -ol p-bromobenzoate, structure 8=22063
 p-methoxyphenol, near u. v. absorpt. spectrum 8=21156
 methyl acetate and stearate, adsorption by Graphon and Spheron 6 8=8340
 methylacetylene, methyl-triple bond interact. MO calc. anal. 8=1291
 methyl alcohol, diffusion into benzole, mechanism 8=12834
 methyl alcohol, intermolecular potential and viscosity, 30–200°C 8=21523
 methyl alcohol, overtones of combination scattering 8=1559
 methylamine- NH_3 gas mixtures, viscosity 8=4492
 methyl 1-aziridinepropionate, solvent and anisotropy effects in n.m.r. obs. 8=16895
 trans N-methyl-N-benzilthioformamide crystal and mol. structure 8=22050
 methylbenzenes, hindered rot., from neutron scat. 8=17484
 N-methyl-N-benzylformamide, int. rot., determ. by n.m.r. and equilibration methods 8=4623
 methyl bromide, microwave spectrum 8=12280
 2-methylbutane, condensed-phase photolysis and radiolysis 8=18739
 methyl chloride, microwave spectrum in excited vibr. states 8=21149
 methylcyclohexanes, C^{13} magnetic resonance, chemical shifts 8=16359
 methylchlorotriphosphate, rotational isomers 8=4203
 1-methyl-1, 4-dihydronicotinamide, dimeric acid product, crystal structure 8=1822
 methylethoxy silanes, integrated intensity of i.r. spectra 8=7551
 methylethyl ketone, chain propag. and breaking 8=7623
 methylethyl ketone, oxidation reactions 8=7623
 methylfluorosilanes, F n.m.r. 8=7608
 methyl formate, config. in soln. 8=12276
 methylgermane and deuterioisotopes, vibration spectra calc. 8=21148
 methyl-1-indanones, n.m.r., ring geometry 8=12329
 methyl iodide, anisotropy of C chem. shift 8=4234
 methyl iodide, i.r. dispersion 8=8079
 methyl iodide, photolysis in organic matrices 8=23156
 methyl isobutyl ketone, drops rising in H_2O and H_2O -sugar soln., vol. of continuous phase translated in water 8=2159
 methyl isobutyl ketone-salt water emulsion, drop size distrib. rel. to mixing and coalescence 8=12956
 methylisocyanate, microwave spectrum and molec. consts. 8=12278
 methyl isopropyl ketone, vapour heat capacity and heat of vapourization 8=1471
 methylisothiocyanate, microwave spectrum and molec. consts. 8=12278
 methyl lithium monomer, i.r. spectrum 8=12282
 methyl β -maltopyranoside crystal structure 8=8584
 methyl mercaptan, far i.r. spectrum from 15 to 45cm^{-1} 8=21145
 methyl methacrylate, sigma-type complex with metal chlorides 8=2527
 methylmethoxysiloxane polymerization on Al surface, in glow discharge 8=5731
 methyl methoxysilanes, films on base, i.r. structure study 8=4738
 1-methylnaphthalene, excimer fluoresc. in rigid matrices 8=14339
 β -methyl-naphthalene i.r. spectra and conductivity in polycrystalline, dissolved and melted state 8=16866
 2-methyl-1, 4-naphthoquinone vapour, near u. v. spectrum 8=7585
 methyl nitrite, gas, soln. and solid, i.r. spectra and rot. isomerism 8=16329
 methyl oxocarbonium ion, Friedel-Crafts acylation intermediate, crystal structure 8=22064

Organic compounds—contd

- C-methyl-B-pentaethyl-2-carbahexaborane (9)
mol. struct. 8=21119
- 3-methylpentanal, direct and sensitized photolysis 8=9725
- methyl phenyl ether, vapour heat capacity and heat of vapourization 8=1471
- methylphosphine, vibr. spectra and force consts. 8=1289
- N-methyl-piperidine-3, 4-semidione, struct. and conformation, e. s. r. obs. 8=22898
- 4-methyl pyridine, microwave spectrum 8 to 37 GHz 8=12295
- methylsilane derivatives, p. m. r. 8=16360
- methylsilane and deuterioisotopes, vibration spectra calc. 8=21148
- methylsilylacetylene mols. normal modes, Coriolis coupling and centrifugal distortion 8=16330
- methylsilyl dialkylamines, vibr. spectra 8=1300
- methylstannate and deuterioisotopes, vibration spectra calc. 8=21148
- methylthiocyanate, microwave spectrum and molec. consts. 8=12278
- methyltrichlorosilane, H reduction on C substrates, SiC growth 8=21963
- methyltrichlorosilane, thermal-decomp. and texture of SiC formed 8=21994
- 4-methyl umbelliferone, aq. soln., stimulated emission at 454 m μ 8=6478
- methyl vinyl sulphide, microwave spectrum 8=12283
- methyl viologen cation, aq. and alcoholic solns., e. s. r. spectra, rel. to water induced dimerization 8=8123
- methylene blue, absorpt. spectrum, depend. on solvent, dye conc. and solutes conc., rel. to water induced dimerization 8=8123
- methylene bromide, solid, i. r. spectra 8=14284
- methylene chloride, solid, i. r. spectra 8=14284
- methylene chloride, sorption into drawn and undrawn polyethylene 8=8349
- methylene iodide, solid, i. r. spectra 8=14284
- methylene radicals in photochem. of ketene 8=5748
- methylene triplet, from photodecomp. of ketene 8=23157
- molecular complexes exhibiting polarization bonding 8=8585
- molecular-crystals, structural class and subclass determ. 8=21917
- molecular dimens., determ. by effect of vapour mols. on viscosity of H and He 8=1485
- molecular interaction with superconductors 8=9668
- molecules spectra in solid solns. and vibr. analysis 8=13032
- monobromoacetonitrile, i. r. vib. spectra, and Raman spectra 8=12281
- monochlorobenzene, u. v. absorpt. 8=7567
- monodeuteromethane, 2 ν_4 band resonance 8=7583
- monoglycine nitrate, i. r. absorption spectrum 8=5646
- monohalogen diacetylenes, i. r. spectra 8=1270
- multi-configuration self-consistent field theory 8=16261
- myoglobin in soln., effects of solvent on X-ray scatt. 8=21206
- naphthacene in aggregates of anthracene in n-heptane fluorescence 8=23067
- naphthalene at liquid He temp., i. r. spectrum, interpretation of fundamental vibrations 8=18577
- naphthalene, crystal attenuated total refl. spectrum 8=9569
- naphthalene, cryst., impurity mols effect on phosphoresc. 8=23069
- naphthalene derivatives as donors in reson. energy transfer 8=18639
- naphthalene-d₈ in ethanol and methylpentane glasses, biphotonic T \rightarrow T transitions, obs. 8=23161
- naphthalene-d₈-naphthalene-h₈ mixed crystals, in triplet state, e. s. r. 8=18433
- naphthalene-d₈, triplet state, e. s. r. and phosphoresc. 8=9655
- naphthalene-1, 4-diol, crystal and mol. structure 8=8586
- naphthalene, effect of ultrasound on zone melting 8=13139
- naphthalene ENDOR study of metastable triplet state 8=21169
- naphthalene, expansion tensor meas., 78-323°K 8=17533
- naphthalene, far i. r. absorption 8=23028
- naphthalene, four-photon absorpt. from laser beam 8=18517
- naphthalene, i. r. spectra and conductivity in polycrystalline, dissolved and melted state 8=16866
- naphthalene-h₈ mol. pairs e. s. r. in naphthalene-d₈, exchange energy and optical spin polarisation, obs. 8=22911
- naphthalene-oxygen complex stabilization constants from solubility in compressed O₂ 8=2499
- naphthalene in PMMA, triplet-triplet annihilation 8=2114
- naphthalene, polarization of triplet factor group states 8=2494
- naphthalene, polycrystalline, self-diffusion 8=4960
- naphthalene, Raman spectrum 8=14174
- naphthalene, sublimation in air flow, calc. 8=21784
- naphthalenes, substituted, zero-field splitting meas. 8=9435
- naphthodioxane, low-temp. n. m. r. spectrum meas. 8=12939
- naphthols, dichroic spectra in PVA sheets, rel. to vibronic transitions 8=14285
- naphthols, solid, intra-molecular motion of OH, n. m. r. study 8=16989
- naphthols, triplet state, optical and mag. props. rel. to electronic structure 8=21152

Organic compounds—contd

- 1, 4-naphthoquinone, visible emission spectrum in vapour phase 8=7589
- α - β -naphthylaldehyde in alcohol and hexane solutions, singlet-triplet conversion 8=21693
- 2-(1-naphthyl)-5-phenyloxazol in polymethyl methacrylate, solid soln., fluoresc. 8=9654
- neopentane-D exchange, effects of desorption, diffusion and surface exchange 8=23083
- nickelocene, MO calcs., and excitation energies 8=4197
- nitriles interaction with SO₂ 8=18688
- nitrilotriacetic acid, crystal structure 8=1815
- nitroanilines, singlet-singlet transition energy calc. 8=7557
- nitrobenzene alkali-metal salts, e. s. r. 8=8120
- nitrobenzene-CCl₄ mixts. stimulated Rayleigh scatt., obs. 8=16843
- nitrobenzene, decay of free radical in alkali 8=21187
- nitrobenzene, dielec. permittivity, laser prod. vars. obs. 8=21712
- nitrobenzene, 1345 cm⁻¹ spectral line, Raman scatt., rel. to solvent and conc. 8=21672
- nitrobenzene, Rayleigh line wing, four photon interaction obs. 8=21667
- nitrobenzene, stimulated Raman and Brillouin scattering 8=4580
- nitro-cpds. adsorbed on MgO surface, rel. to electron donor props. 8=8343
- p-nitro-p'-dimethylaminoazobenzene, cryst., in KBr, Raman spectra 8=9570
- nitroglycerine, low velocity detonation, mechanism 8=21582
- nitroglycerine, shock initiation of detonation 8=6148
- nitrosobenzene, electrochem. oxidation in organic media, e. s. r. 8=14426
- non-alternant hydrocarbons, spin densities, UHF/AA calc. 8=12348
- n-nonane + p-xylene + CCl₄, luminesc. quenching and decay 8=8097
- norbornene derivs, endo- and exo-, coupling consts. in n. m. r. spectra 8=1306
- norbornene-2, 3-dicarboxylic acid mono-potassium salt dihydrate, structure 8=22052
- nucleic acid components, delayed luminesc. 8=9650
- nucleotides, excited states, energy transfer 8=16334
- octahydroanthracene crystals, impurities rel. to polymorphic transitions 8=17109
- octamethylcyclotetrasiloxane polymerization, MWD change of polydimethyldisiloxane elastomers 8=14409
- octyl stearate, crystal structure 8=22057
- oil, mean adsorpt. time obs. 8=17156
- oil, mineral, prebreakdown luminosity waves 8=4598
- oil molecules, mean adsorpt. time obs. 8=17156
- oils, diffusion pump, secondary electron emission 8=13942
- 1, 2-rearrangements, MO description of non-classical ion 8=21057
- organotin cpds., fluorinated, n. m. r. spectra 8=12318
- organotin-Sn cpds., Sn bonds with Co, Mn, Mo and Re, Mössbauer obs. 8=4668
- L-ornithine hydrochloride, crystal structure 8=8591
- oxyacetylene flame, in air or N₂, temp. determ. from rot.-vib. spectrum of OH 8=18692
- 1, 2, 4-oxadiazole, microwave spectra and struct. 8=21162
- 1, 2, 4, oxadiazole and methyl derivatives, i. r. spectra obs. 8=4204
- 1, 3, 4-oxadiazole, i. r. spectrum 8=12285
- 1, 2, 5-oxadiazole, vapour and liq. spectra rel. to vib. assignments 8=16335
- oxalate, NH₄(C₂O₄)₂·H₂O, crystal structure 8=8590
- oxalate ion, i. r. and Raman spectra and symmetry 8=21154
- oxalic anhydrides, reactions with H₂O₂ and fluorescent compounds, chemiluminescence 8=18685
- oxalyl chloride, triplet-singlet transition 8=2468
- d-oxamide, vibr. spectrum 4000-400 cm⁻¹ obs. 8=23032
- oxamide, vibr. spectrum 4000-400 cm⁻¹ obs. 8=23032
- 1, 3 oxathiodanes, 2-substituted, n. m. r. rel. to ring system and free energies 8=1595
- oxaziridin rings, methylene-group n. m. r. spectroscopy 8=12940
- paraffin with NaI(Tl) detector for KeV n 8=11624
- n-paraffins, crystallization kinetics of binary mixtures 8=1733
- paraffins, gaseous, reaction with Hg(P₁) atoms 8=9688
- paraffins, long-chain, intermolec. vibrations 8=13341
- paraffins mols., e. irr. rad., energy transfer to vibr. degrees of freedom 8=4206
- n-paraffins, sound vel. and adiabatic compressibility 8=21517
- paraoxyanisole, heat of transformation 8=16917
- paraoxyanisole, liquid crystals, heat of formation and critical size of centres 8=16918
- PBD, fluoresc., concentration effects 8=4594
- pentachlorotoluene i. r. spectrum and vibr. assignments, obs. 8=9575
- pentadeuteropyridine, i. r. spectra, structure of vibration bands 8=7597
- pentaerythrite, mono, di and trihalogen derivatives, vibr. spectra 8=7576
- pentamethylenetetrazole-1Cl complex, cryst. and molec. struct. 8=17453

Organic compounds—contd

- pentane-air mixtures, effect of vessel size and turbulence on explosion press. 8=6147
- pentane, enthalpy calc. from Redlich-Kwong eqn. 8=16689
- n-pentane, solidification at high press. 8=21747
- n-pentane, sorption into drawn and undrawn polyethylene 8=8349
- pentanol, slow neutrons, quasi elastic scattering 8=8000
- perethers, carbonyl acid determ. 8=2549
- perfluoro-aza-propene, $\text{CF}_3\text{N}=\text{CH}_2$, u.v. absorpt. band of NCF_2 radical 8=7626
- n-perfluorobutane, conformational energies 8=1324
- perfluorodimethyl peroxide, reaction with NO 8=14371
- perfluoropropene, reaction with O atoms 8=14377
- perfluoro-o-xylene, F-F spin-spin coupling 8=16357
- perylene, excimer fluoresc. in rigid matrices 8=14339
- perylene, π transitions, free-electron and MOLCAO calcs. 8=4139
- phenanthroline, π electron density and proton signals in n.m.r. spectra 8=4236
- phenanthrene, cryst. spectrum 8=5648
- phenanthrene- d_{10} in solidified solvents, thermoluminesc. and delayed fluoresc., mech. 8=23070
- phenanthrene- d_{10} , triplet state, e.s.r. and phosphoresc. 8=9655
- phenanthrene, far i.r. absorption 8=23028
- phenanthrene, fluoresc. in viscous soln. 8=12894
- phenanthrene heat capacity anomaly obs. 8=13378
- phenanthrene i.r. spectra and conductivity in polycrystalline, dissolved and melted state 8=16866
- phenanthrene, n.m.r. spectra 8=9460
- phenanthroline, electron excitation spectra 8=4208
- 1,10-phenanthroline-mercury (I) nitrate, cryst. struct. 8=17454
- phenazine, polarization of triplet factor group states 8=2494
- p-phenetidine vapour, near u.v. abs. spectrum 8=21157
- phenol-aqueous sodium salicylate- α -methyl naphthalene, solubility and equilib. data 8=4641
- phenol, 2750 Å band system, extended vib. assignments, and band contour anal. 8=16337
- phenol- d_6 , vibrational spectrum and torsion 8=16336
- phenol H complexes with benzene and ethers, spectra 8=4213
- phenol, H-bonding with N,N-dimethylacetamide 8=1571
- phenol, OH stretching band struct. 8=4211
- phenol, polymeric forms, H-bond stretching freq. 8=21141
- phenols, association constns. from dielec. constns. 8=12908
- phenols, substituted, in benzene soln., e.s.r. study of oxidation 8=14378
- phenolphthalein and congeneric mol. crystals, plastic deformation effects at high pressure 8=23033
- phenanthroline, crystal structure refinement 8=22070
- phenoxide ion, phosphoresc. and symmetry of lowest triplet state 8=14340
- phenylacetylene, singlet and triplet electronic states 8=4210
- phenylalanine rotamers, n.m.r. study 8=12289
- phenylboron dihalides, thermodynamic properties 8=1863
- phenylhydrazine, crystal and mol. structure 8=22069
- phenylindole derivatives, scintillation of supercooled melts 8=8089
- phenyl phosphine, migration polymerization with di-isocyanates 8=14411
- o-phenylenediamine, intramolec. H-bonds 8=1295
- phosphine oxides, $\text{R}_1\text{R}_2\text{R}_3\text{PO}$ (R_{1-3} are different hydrocarbon radicals), prep. and config. 8=16345
- phosphoramidates and phosphoramidothioates, i.r. spectra and structure 8=7591
- photoconductivity and photopot. rel. to solar cell use 8=9260
- phthalimiden compounds, fluorescence, quantum yield in anti-Stokes region 8=18640
- phthalocyanine blue adsorption of poly(dimethyl siloxane) from CCl_4 and xylene solns. 8=8336
- phthalocyanine lanthanides, acid adducts, absorption spectra 8=4589
- phthalocyanine, π MO calc. 8=4214
- γ -picoline-halogen complexes, i.r. spectra 8=7592
- picolinium tetrabromobismuthate, cryst. struct. 8=8574
- picolinium, tetraiodobismuthate, cryst. struct. 8=8574
- pinacanol due in alcohol, absorption and luminescence bands 8=8091
- α -pinene and oxide, mol. structure from gas-e-diff. meas. 8=21161
- piperazine, u.v. irradi., rel. to thermostability increase of polyamides 8=17182
- piperidinium picrates in chlorobenzene containing ligands tetrahydrofuran and triphenylphosphine, elec. cond. rel. to cation-oxide ligand complexes stability 8=16338
- piperine, supercooled, dipole polarization relax. time obs. 8=21710
- polar cpds., adsorpt. on Cr 8=13107
- polycyclic monoazines, vibronic spin-orbit interactions 8=8095
- polycyclic, monolayer, isotherms rel. to mol. struct., obs. 8=17178

Organic compounds—contd

- polynuclear hydrocarbons, heating for e.s.r. spectra 8=1230
- porphyrin vanadyl complexes, luminesc. 8=5685
- porphyrins, π -electron conjugation 8=4215
- PPO + o-xilen, and butyl-borate, radioluminescent properties 8=1578
- proaporphine-type alkaloids, mass spectra 8=12032
- procaine in scala tympani cochlear pot. changes 8=19617
- promazine, crystal structure 8=8592
- propane gas, sorption and diffusion in synthetic Na mordenite 8=13109
- propane ion reactions with mols. 8=14381
- propane, i.r. spectrum, high resolution 8=490
- propane- O_2 - N_2 mixtures, detonation velocity 8=172
- propane, oxidative adsorpt. on Pt 8=2534
- propane, photoionization 8=4319
- propane, pyrolysis in shock tube for temp. range 830 to 1180°C 8=14380
- propane, solid films, far u.v. spectra 8=14283
- propane, transpiration through membrane 8=12662
- propanol- H_2O mixtures, cond. with HCl in soln. 8=4607
- propanol- H_2O mixtures, cond. with NaCl in soln. 8=4606
- n-propanol, n scatt. rel. to molecular diffusion 8=21609
- 1 propanol, shear rigidity and free volume 8=1537
- n-propanol soln. of bromoform, thermal diffusion coeff. by heterodyning light 8=4553
- propionate groups, retarded motion and phase transitions 8=8229
- propionic acid, u.s. absorpt. 8=12860
- propyl alcohol, subcooled boiling in tube, heat-transfer rate 8=21657
- propylene, hydrogenolysis 8=14379
- propylene imine, microwave spectrum 8=12291
- trans-propyleneimine, microwave spectra and molec. constns. 8=12290
- propylene polymerization, catalysis with α - TiCl_3 - $\text{Al}(\text{C}_2\text{H}_5)_3$ - H_2O 8=5730
- protopine, $\text{C}_{20}\text{H}_{19}\text{O}_2\text{N}_3$, crystal structure 8=22072
- pseudocyanine dye in alcohol, absorption and luminescence bands 8=8091
- pterines, mass spectrum obs. 8=20912
- pure liquids, new correlation for surface tension 8=12824
- purine, electronic spectra 8=7594
- purines, mass spectrum obs. 8=20912
- pyrazine, phosphoresc. 8=14342
- pyrazine, Zeeman splitting of phosphoresc. at 4.2°K 8=14341
- 2-pyrazolines, trisubstituted, spectra and structural analogues 8=12293
- pyrene, excimer fluoresc. in rigid matrices 8=14339
- pyrene, π transitions, free-electron and MOLCAO calcs. 8=4139
- pyrene-tetracyanoethylene complex, crystal structure refinement 8=22073
- pyrene, vibr. effects in radiationless transitions 8=21114
- pyridazine, singlet-triplet transitions 8=9573
- pyridazine, 3700 Å transition and geometric parameters 8=12297
- pyridine-2-aldehyde-2-quinolyldiazine complexing reagent spray for Ni, Co, Cu analysis 8=23176
- pyridine complexes, far i.r. spectra 8=1296
- pyridine, in dilute solns. of CS_2 and CCl_4 , dependence of nuclear relaxation times on viscosity 8=8126
- pyridine, hydrogenated, e.s.r. 8=12310
- pyridine, i.r. spectra, structure of vibration bands 8=7597
- pyridine positive ion, all-electron SCF wavefunctions 8=12294
- pyridine, pulse radiolysis 8=18746
- pyridine, Raman scatt. cross-sections 8=12130
- pyridine and related N-heterocyclics, e.s.r. of radical anions 8=21171
- pyridine, substituted, charge transfer complexes with iodine, rel. to structure and stability 8=4216
- 3-pyridinesulphonic acid and salts, i.r. spectra 8=16339
- pyridines, electrophilic substitutions 8=18687
- pyridines, solvent effects in p.m.r. 8=1600
- pyridines, substituent effects on ring proton coupling 8=12332
- pyridine, u.s. velocity, absorption and relaxation obs. 8=12687
- pyridocyanines, electron spectra and modelling 8=7596
- pyrimidine, i.r. spectra, liq. N temp. meas. 8=9572
- pyrimidines, mass spectrum obs. 8=20912
- pyrones, mass spectra, metastable ions 8=12239
- γ -pyrones, monocyclic, mass spectral fragmentation 8=21023
- pyronine B, luminesc. 8=5686
- pyrrole, cryst., i.r. absorpt. spectra at liq. N_2 temp. 8=14280
- pyrrole, SCF-CI calc. 8=16306
- pyrrole, spin-spin coupling and spin-lattice relax. 8=21180
- 2-pyrrolidone, vibration spectra, 3500-250 cm^{-1} 8=7595
- p-quaterphenyl derivatives scintillation of supercooled melts 8=8089
- p-quaterphenyl, photoelec. props. of polycryst. layers, obs. 8=22703
- p-quaterphenyl polycrystals, thermally stimulated currents 8=13906

Organic compounds—contd

- quinaldic acid, crystal structure, dimer formation and H-bonding at low temps. 8=1825
- quinaldic acid, decarboxylation, isotope effects 8=9697
- quinaldic acid, Remlinger effect 8=17457
- quinhydrone, monoclinic, crystal structure refinement 8=22070
- quinine sulphate, fluoresc. quantum yield 8=4595
- quinoline-ethyl alcohol mixts. stimulated Rayleigh scatt., obs. 8=16843
- quinols, solid, intra-molecular motion of OH, n. m. r. study 8=16989
- quinoxaline, optical detect. of e. s. r. transitions 8=14343
- radicals, hyperconjugation and spin delocalization 8=4172
- radicals spectra in solid solns. and vibr. analysis 8=13032
- rare-earth chelates, exchange-reson. energy transfer overlap integrals calc. 8=1656
- refamycins B and Y, crystal structure by X-ray analysis 8=22074
- reserpine, crystal structure and mol. configuration 8=13310
- resin, mica-resin superimposed layers subject to alternating field, elec. stress distrib. 8=9235
- retusamine, α' -bromo-D-camphor-trans- π -sulphonate monohydrate crystal structure 8=1816
- rhodamine B dye lasers, emission 8=21694
- rhodamine B, luminesc. 8=5686
- rhodamine B, use in obs. sea upper boundary layer flow 8=14570
- rhodamine 6G and B, and mixtures, laser, mode locking 8=20009
- ribonucleic acid derivatives, Raman spectra and molec. structure 8=7598
- ring cpds., non-aromatic, conformation 8=8597
- rubrene, chemiluminescent reaction with H_2O_2 and bis(2,4-dinitrophenyl) oxalate 8=18672
- salicylaldehyde soln., H bonding, n. m. r. obs. 8=16883
- salicylate mixed complexes with La aminoacetate, aqueous, fluorescence 8=21703
- salicylic acid adsorpt. on portland cement component hydration products 8=21902
- salicylic acids, mass spectrum obs. 8=20912
- salol, viscous liq., wing of Rayleigh line obs. 8=21671
- scattering, stimulated, in Rayleigh line wing in liquids, obs. 8=16842
- 1,2,5-selenadiazole and its methyl derivative, p. m. r. 8=12333
- 1,2,5-selenadiazole, i. r. and Raman spectra 8=16342
- 1,2,5-selenadiazole, microwave spectrum 8=12298
- selenobenzanide, N^4 chemical shifts 8=7614
- selenocyclopentane dibromide, crystal and mol. structure 8=22068
- selenocystine-selenocysteine, polarography 8=18760
- semiconductors, r. f. spectroscopy, review 8=14088
- semiquinones in alcoholic soln., hyperfine interactions 8=7627
- semiquinones, e. s. r. in solid state 8=5521
- silazanes, mass spectra 8=1275
- α -silyl ketones, electronic spectra 8=21159
- solutions, two-photon fluoresc. excitation 8=4592
- spiropentane, vibration spectra calc. and interpretation 8=7588
- stearic acid aerosol, particle conc., by turbidity meas. 8=8153
- stilbene crystals with anthracene impurities, luminescence 8=5687
- stilbene, scintillation counter for n-detection 8=6965
- stilbene scintillator, light output under influence of α -particles 8=2495
- stilbene, triplet-triplet energy transfer and "phantom triplet" 8=21160
- trans-stilbenes, 4-monosubstituted, absorpt. spectra rel. to ionization pot. and conjugated π -bonds, obs. 8=4212
- styrene grafting to polypropylene films and copolymers tensile strength, obs. 8=23139
- styrene, n. scatt. before and after reactor irradi., showing prod. of cross-bindings 8=16969
- styrene scintillators radioluminesc. yield rel. to polymerization, obs. 8=14346
- succinimide-dimethyl sulphoxide, n. m. r. and H-bond 8=12334
- sucrose crystal, dislocations 8=4983
- sucrose soln., aq., supercooled, ice growth velocities 8=17236
- sulphanilamide monohydrate, three dimensional structure refinement 8=17458
- sulphanilamide polymorphs and hydrate, crystal structure 8=22075
- surface tension, binary liq. mixtures, theory 8=12826
- sydnones, molec. geometry of bonding 8=12299
- taurine, e. p. r., paramagnetic susceptibility 8=5540
- TCNQ derivatives of cyanine dyes, supercond. 8=17977
- tedrodotoxin in scala tympani, cochlear pot. changes 8=19617
- Teflon 6, immersion heats in hydrocarbons 8=13361
- terpenes, bicyclic, and oxide derivs., mol. structure from gas-e-diff. meas. 8=21161
- p-terphenyl, plastic scintillators 8=9656
- terphenyls, 4-monosubstituted, absorpt. spectra rel. to ionization pot. and conjugated π -bonds, obs. 8=4212

Organic compounds—contd

- 1,1,2,2-tetrabromofluoroethane, medium effects on n. m. r. and thermodynamic props. 8=21181
- tetrabutylammonium perchlorate soln., elec. cond. meas. 8=8105
- tetracene dimer, association const, absorpt. and emission spectra 8=1301
- 1,2,4,5-tetrachlorobenzene, in nonpolar solvent, intensity meas. of i. r. band 8=21680
- tetrachloroethylene Raman spectra and electrooptical parameters compared with trichloroethylene 8=21138
- tetrachloroethylene, sorption into drawn and undrawn polyethylene 8=8349
- tetrachlorophthalic anhydride complex, polarization of charge-transfer fluoresc. 8=1576
- 2,3,5,6-tetrachlorotoluene i. r. spectrum and vibr. assignments, obs. 8=9575
- tetrachloro-p-xylene i. r. spectrum and vibr. assignments, obs. 8=9575
- tetracyanoethylene complexes, polarization of charge-transfer fluoresc. 8=1576
- tetracyanoethylene, kinetics of free-radical formation 8=9686
- tetracyanoethylene-naphthalene complex, structure 8=8585
- tetracyanoquinodimethane anion, aq. and alcoholic solns., e. s. r. spectra, rel. to water induced dimerization 8=8123
- 7,7,8,8-tetracyanoquinodimethane-anthracene complex, crystal and mol. structure 8=17460
- tetradecanol, persistent electric dipole moment obs. at $-78^\circ C$ 8=13890
- tetraethylammonium perchlorate soln., elec. cond. meas. 8=8105
- tetraethylammonium triiodide, two modifications crystal structure 8=1818
- tetraethyl compounds, group IV elements, mass spectra 8=18766
- tetrafluoro-borate laser, narrow-band continuously tunable, longit. pumped 8=20006
- tetrafluoroethylene-hexafluoropropylene copolymers, γ -irrad. effects on permittivity and loss 8=9202
- tetrafluoromethane, solution H in, spectral simultaneous transitions 8=21675
- tetrahydrofuran, i. r. dispersion 8=8074
- tetrakis-[dimethylamides] of group IV, vibr. spectra 8=1290
- tetramethyl lead, C^{13} spin-spin coupling 8=12317
- tetramethylammonium fluoride tetrahydrate, crystal structure 8=1821
- tetramethyl compounds of gp. IV, indirect nuclear spin coupling 8=4233
- tetramethyl compounds, group IV elements, mass spectra 8=18766
- 2,2,6,6-tetramethylpiperidin-4-ol-1-oxide, radical structure 8=16370
- tetramethylpyrazine e. p. r. and luminesc. 77 and $4.2^\circ K$ 8=22907
- 1,3,7,9-tetramethyluric acid: 3,4-benzpyrene, 2:1 mol. complex, crystal structure 8=1823
- 1,1,4,4-tetraphenylbutadiene in polymethyl methacrylate, solid soln., fluoresc. 8=9654
- tetraphenylhydrazine, photodissoc., diphenyl-amino radical dimer prod. 8=7625
- tetraphenylporphin and Ag tetraphenylporphin, solid solution 8=1658
- tetraphenylporphyrin, cryst. and molec. struct. 8=4896
- s-tetrazine, anal. of i. r. type A bands rel. to asymmetry 8=1277
- tebromine salts, i. r. spectra 8=12300
- thiazoles, monosubstituted, i. r. and Raman spectra, vibr. and coupling 8=4217
- thienylphenyl-ketones and -thioketones, n. m. r. and electronic spectra, steric effects obs. 8=4218
- thioamides, N^4 chemical shifts 8=7614
- thiobutylolactam, dimerization, values of ΔH° , ΔG° and ΔS° 8=4241
- thiocaprolactam, dimerization, values of ΔH° , ΔG° and ΔS° 8=4241
- thiophene, cryst., i. r. absorpt. spectra at liq. H_2 temp. 8=14280
- thiophenes, reactivity theory 8=5720
- thiourea, ferroelec., i. f. modes from neutron scatt. 8=13340
- thiourea inhibition of Fe corrosion in H_2SO_4 ; $K_2Cr_2O_7$, NH_4CNS and KI effects 8=2518
- thiourea, lattice vibr. freq. and intensities calc. 8=13339
- thiovalerolactam, dimerization, values of ΔH° , ΔG° and ΔS° 8=4241
- thioxanthone anion radicals, e. p. r. and coupling consts. 8=4613
- thioxanthone sulfone anion radicals, e. p. r. and coupling consts. 8=4613
- TMPD-chloranil crystals, X-ray, e. s. r., elec. cond., u. v. and visible meas. 8=8595
- tobacco mosaic virus, polydisperse sample, distrib. of lengths 8=8073
- tolane-dimethyl Si addition cpd, crystal and mol. structure 8=22046
- toluene, Brillouin shifts, temp. dependence, hypersonic velocity and compressibility deduction 8=1502

Organic compounds—contd

- toluene- CCl_4 mixtures, drops rising in H_2O and H_2O -sugar soln., vol. of continuous phase translated in water 8=21592
 toluene, drops rising in H_2O and H_2O -sugar soln., vol. of continuous phase translated in water 8=21592
 toluene, emission from liq. excited by electrons 8=12893
 toluene, glow discharge prod. polymer films comp., spectra and elec. props. obs. 8=21894
 toluene, hydrogenolysis 8=14379
 toluene, Raman scatt. cross-sections 8=12130
 toluene, self-induced isotopic exchange of T 8=5695
 toluene, sound absorption and velocity, improved method 8=12858
 p-toluidine, crystal and mol. structure by X-ray and n-diffr. 8=22077
 p-toluidine, Raman bands, broadening and freq. variation as function of temp. 8=5649
 p-tolunitrile, emission bands 8=21163
 transition metal complexes, undergoing ligand exchange, e.s.r. linewidth 8=4616
 triacetate films, proportioning electron beam 8=10890
 triacetin, liq., e distrib. from X-ray scatt. obs. 8=16794
 triacetin, viscous liq., wing of Rayleigh line obs. 8=21671
 2H-1,4-triazines, spin-spin coupling obs. 8=21166
 2,4,6-tribromoaniline, crystal structure 8=8569
 tri-tertiary butyl phenoxyl radical, proton-electron double reson. 8=12312
 2,4,6-trichloroaniline, crystal structure 8=8569
 trichloroborazole, Cl^{35} n.q.r. spectra 8=6409
 trichloroethylene, Raman spectra, absolute intensities and depolarizations 8=21138
 3,4,5-trichlorotetracyclod 4.4.0.0³-90⁴-8] decan-Z-one, crystal structure 8=17446
 α, α, α -trichlorotoluene, vac. u. v. absorpt. spectrum 8=4219
 tricyclohexylboron, thermodynamic properties 8=1863
 1,3,5-trideutero benzene, molec. motion in liq. by n.m.r. 8=8132
 triethylamine-water syst., diffusion in crit. separation region 8=21644
 triethylborane, in upper atm., BO_2 emission spectrum 8=23330
 triethylphosphine, vibr. spectra 8=21137
 trifluoroacetone, n. m. r. and i. r. spectra in proton donor solvents 8=16887
 trifluorocyclopropanes, F^{19} coupling consts. and chem. shifts 8=12321
 2,2,2-trifluoroethanol, H bonding acid, i. r. and n. m. r. spectra rel. to bonds 8=16863
 4,4,4-trifluoro-3-hydroxy-3-trifluoromethylbutyrophenone, phosphoresc. 8=18638
 trifluoromethyl nitrobenzene radical anions in acetonitrile e.s.r. 8=4615
 2,4,6-trifluoropyrimidine, i. r. and Raman spectra 8=16340
 triglycerides, long-chain, cryst. growth rates and kinetics 8=8412
 triglycine fluoroberyllate, dielectric props. under hydrostatic press. 8=9221
 triglycine fluoroberyllate, ferroelec., e.p.r. study of Cu^{2+} ion 8=14105
 triglycine selenate, crystalline, transition from ferroelectric to paraelectric at high press. 8=8288
 triglycine sulphate crystals, pyroelectric effect, by dynamic method 8=18198
 triglycine sulphate, deuterated, electro-optical effects 8=5647
 triglycine sulphate, elec. resistance meas. 8=19707
 triglycine sulphate, kinetics of γ -radiolysis 8=5757
 triglycine sulphate, temp. coeff. of piezoelec. resonance freq. 8=9224
 triglycine sulphate, u.s. relaxation near ferroelec. transition 8=1858
 3,4,5-trimethoxyphenylglyoxal semidiones, e.s.r. spectra 8=12305
 trimethylaluminum, cryst. struct. 8=4895
 trimethylaluminum, vibrations 8=16327
 trimethylplatinum (IV) iodide and its misrepresentation as hexamethyldiplatinum 8=13308
 trimethylplatinum (IV) iodide and methylsodium reaction product identification 8=14382
 trimethylsulphonium cnds., i. r. vib. spectra 8=16864
 trimethylsulphoxonium cnds., i. r. vib. spectra 8=16864
 trimethylene oxide, i. r. spectra and ring puckering 8=16304
 s-trinitrobenzene complex with anthracene, polarization of charge-transfer fluoresc. 8=1576
 2,4,6-trinitrophenetole, crystal structure 8=13309
 tri-n-octylamine, temp. effect on extraction of NO_3 , U and fission products 8=5708
 trioxane, crystal structure determ. at -170°C 8=22066
 trioxane in benzene soln, cationic polymerization in presence of SnCl_4 , effect of temp. regime 8=23134
 trioxane in soln, molec. weight as function of conversion to polymer, temp. depend. 8=18708
 s-trioxane in nematic solvent, n. m. r. 8=4618
 trioxan, n.m.r. line shape 8=14132
 trioxane polymerization in soln., reaction order and kinetics 8=14407
 trioxane, pre-irrad., polymerization kinetics, 30-64°C 8=23133

Organic compounds—contd

- trioxane, solid, SnCl_4 initiated cationic polymerization, kinetics, obs. 8=23132
 triphenylaluminum, i. r. spectrum between 4000 and 300 cm^{-1} 8=12287
 triphenylboron, thermodynamic properties 8=1863
 triphenylphosphate aerosol, particle conc., by turbidity meas. 8=8153
 triphenyl phosphine complexes, far i. r. spectra 8=1296
 triphenylphosphine, modified Mataga SCF calc. 8=4209
 triphenyltin pentacarbonyl manganese, structure 8=8594
 triphenylene in CCl_4 , phosphoresc. rel. to mol. deform. by lattice interactions, 77°K 8=1577
 triphenylene- d_{12} , energy transfer with rhodamine B in rigid soln. 8=9584
 triphenylene, e. s. r. of negative ions in soln. 8=21170
 triphenylene, mag. circular dichroism 8=21123
 triphenylene, triplet state, e. s. r. and phosphoresc. 8=9655
 triphenylenethyllanionium-tetracyanoquinodimethan single crystals, optical absorption 8=14287
 triptycene, p. m. r., effect of mag. anisotropy 8=1305
 triscyclooctatetraen-ditanium crystal structure 8=13304
 tris(hydroxymethyl)aminomethane and HCl , heat of reaction 8=9677
 trispyridinecupriacetate, crystal structure 8=17456
 trithiane, polymerization to polythiomethylene due to radiation 8=17184
 tryptaflavin in lucite, α -phosphoresc. and fluoresc. spectra 8=2496
 tryptophan, excited state dipole moment, calc. 8=21143
 unsaturated, triplet-state energies and spin densities, VB calc. 8=12240
 uracil, crystal structure 8=8596
 uranyl cpds., luminescence spectra, intramolec. vibrations manifestation 8=12235
 urea aq. soln., dielec. dispersion 350-3600 MHz 8=8103
 urea, i. f. modes from neutron scatt 8=13340
 urea, mixed aqueous solns., v. p. meas. 8=12996
 d,l-valine radical, hindered rotations, e. s. r. study 8=4248
 vanadium (III) tris(salicylaldehydes) and tris(salicylaldehydes) complexes, n. m. r. obs., synthesis and stereochemistry 8=16343
 vinylchloride copolymerization with acrylic and methacrylic acids, relative reactivities obs. 8=23136
 vinyl cpds., pulse radiolysis and free radicals 8=18745
 vinyl monomers, liquid, polymerization by a. f. elec. field, obs. 8=9709
 vinylacetate, polymerization initiation efficiency and temp. depend. 8=14413
 4-vinylcyclohexene, mass spectra, preferential ass. of pos. charge with butadiene fragment 8=4320
 4-vinylpyridine, kinetics of polymerization 8=5728
 vinylene carbonate in aqueous soln., initiation of polymerization 8=5729
 vitamin K and antivitamin K, rel. to antagonism studies in pharmacetics 8=23765
 Wurster's blue perchlorate, cryst. reflect. spectra 8=14288
 Wurster's blue perchlorate, susceptibility rel. to triplet excitons 8=22763
 xanthane mols. $\pi\pi^*$ and $n\pi^*$ levels location, absorpt. and luminesc. obs. 8=1302
 xanthilium salt reagents, dissoc. consts. 8=18713
 xanthine oxidase, mech. of action, e. s. r. study 8=14406
 xylene, hydrogenolysis 8=14379
 p-xylene + CCl_4 + n-nonane, luminesc. quenching and decay 8=8097
 xylenes, Raman scatt. cross-sections 8=12130
 O-xylol, Rayleigh line wing, four photon interaction obs. 8=21667
 xylyl radicals fluoresc. spectra in cryst. xylenes, vibr. analysis obs. 8=12356
 Al acetylacetonate in benzene solution, electrical polarization and microwave absorption 8=12905
 Al acetylacetonate, polarity and atomic polarization 8=16872
 Al phthalocyanines, absorpt. spectra in soln. 8=21688
 $[\text{Al}(\text{CH}_3)_2\text{C}_6\text{H}_4\text{O}_2]$, cryst. and molec. struct. 8=8568
 $\text{Al}_2\text{Me}_2\text{Cl}_2$, force field and thermodynamics 8=4143
 Al_2Me_2 , force field and thermodynamics 8=4143
 BF_3 , dimethyl sulphide complexes, B^{10} and B^{11} , i. r. and Raman spectra 8=1569
 $\text{BrC}(\text{CH}_3)_3$ mols. dielec. relax. in solid and liquid, 9GHz, 10 and 200kHz 8=18179
 CCl_4 free radical, electronic and vib. spectra 8=1315
 CCl_3 radicals, photochemical production 8=12343
 CCl_4 adsorbed on silica gel, laser Raman spectra 8=23031
 CCl_4 , Brillouin shifts, temp. dependence, hypersonic velocity and compressibility deduction 8=1502
 CCl_4 + cyclohexane system, flow-cell meas. of Soret coeff. 8=1542
 CCl_4 , dissolved coronene and triphenylene mols. deform., phosphoresc. obs., 77°K 8=1577
 CCl_4 , liquid and crystalline state, sub-millimeter wave spectra 8=7568
 CCl_4 molec. complex with benzene, i. r. spectra 8=2464
 CCl_4 mols. vibr. transitions and gas and liquid spectra rel. to intermol. interactions 8=16274

Organic compounds—contd

- CCl₄, overtones of combination scattering 8=1559
 CCl₄, Raman spectrum at 64°K 8=18576
 CCl₄, 71°C, spectrum of scatt. microwave radiation 8=21686
 CCl₄, thermal cond. temp. depend. rel. to radiative transfer 8=12853
 CCl₄ solid, shear strength from 187° to 247°K 8=22401
 CCl₄ soln. of SO₂, absolute i. r. intensities meas. and calcs. 8=1560
 CCl₄, translational diffusion of cyclo-pentane, -hexane and -heptane, expt. and theory 8=16814
 CCl₄ + p-xylene + n-nonane, luminesc. quenching and decay 8=8097
 CCl₄-CCl₄, intermolecular potential in benzene 8=4524
 CD, C²Σ⁺ decay rates and predissociation probability 8=21185
 CD₃, mono, di- and tri-substituted compounds, far i. r. torsional vibration spectra 8=4196
 CD₃CD₂Cl, far i. r. spectrum 8=4193
 CD₄, d.m.r. studies 8=18460
 CD₄ mol., nuclear hyperfine interaction theory 8=12119
 CD₄, vibration spectra, anharmonic calc. 8=12133
 CFCl₃, microwave spectrum, h. f. s. 8=16315
 CF₂, absorpt. spectrum and rot. structure analysed 8=4188
 CF₂, triplet-to-singlet conversion 8=1293
 CF₂N₂, mol. struct. 8=12186
 CF₂(OF)₂, i. r. spectrum 8=12279
 CF₃, mono, di- and tri-substituted compounds, far i. r. torsional vibration spectra 8=4196
 CF₃, radiation grafting to polypropylene, polyethylene-terephthalate and polycapromide fibres rel. to adhesion props., obs. 8=22410
 [(CF₃)₂CF]₂CF₂, i. r. spectra 8=16273
 CF₃I, photolysis in matrices at 4.2°K, e. s. r. 8=14440
 CF₃OF, low-temp. photolysis, e. s. r. 8=9727
 CF₃OOFCF₃, low-temp. photolysis, e. s. r. 8=9727
 CF₃P(O)F₂, prep., props., n. m. r. and i. r. spectra 8=21177
 CF₃SF₃, i. r. spectra 8=16273
 CF₄, clathrate hydrate, F¹⁹ mag. reson. absorpt. 8=7607
 CF₄, liquid, sound vel. meas. 8=12868
 CF₄, radiative lifetimes of u. v. emission systems 8=7501
 CF₄, single-centre LCAO SCF calc. 8=7524
 CF₄, spin-lattice relax. gaseous 8=21176
 CF₄-He, compressed mixtures, nonresonant absorpt. and dispersion 8=1486
 CH, absorption and emission spectroscopy, in low-press. oxyacetylene flames 8=21189
 CH, electronically excited in hydrocarbon flames 8=7509
 CH(A²Δ-X²Π) line profiles in solar spectrum 8=10389
 CH, C²Σ⁺ decay rates and predissociation probability 8=21185
 CHBr₂-CFBr₂, rotational isomers, n. m. r. 8=4226
 CHClF₂, gas, F n. m. r. press. dependent chemical shifts 8=12324
 CHCl₃, microwave spectrum, h. f. s. 8=16315
 CHCl₃, Raman spectrum at 64°K and -120°C 8=18576
 CHD₃, ground state molec. consts. 8=12275
 C-H-N-O explosives, calc. of detonation props. 8=23122
 CH₂, centrifugal distortion effects in spectra 8=21089
 CH₂, in lowest bent state, effects of quasi-linearity 8=1243
 CH₂Br₂, gaseous, sound absorption by multiple relaxation 8=1475
 CH₂Cl₂, Raman spectrum at 64°K 8=18576
 CH₂Cl₂ soln. of SO₂, absolute i. r. intensities meas. and calcs. 8=1560
 CH₂Cl₂, thermodynamic props., to 750°K and 200 atm. 8=16819
 CH₃, mono, di- and tri-substituted compounds, far i. r. torsional vibration spectra 8=4196
 CH₃, one-centre expansion SCF calc. 8=4202
 CH₃Br, vibration-rotation band near 6000 cm⁻¹ 8=16859
 (CH₃)₂CCl mols. dielec. relax. in solid and liquid, 9GHz and 200kHz 8=18179
 (CH₃)₂CCl, γ irradi. at 77°K, C(CH₃)₃ radical struct., e. p. r. obs. 8=12349
 (CH₃)₂CCl₂, γ irradi. at 77°K, C(CH₃)₂CCl radical struct., e. p. r. obs. 8=12349
 CH₃CH₂CH₂OH mol. rot. consts. and Q^a, Q^b branches transitions, 10-32 GHz 8=7593
 CH₃CH₂OD mol. rot. consts. and ^aR, ^bP branches transitions, 18-33.5 GHz 8=1282
 CH₃CH₂O¹⁸H mol. rot. consts. and ^aQ branch transitions, 18-33.5 GHz 8=1282
 CH₃CN soln. of SO₂, absolute i. r. intensities meas. and calcs. 8=1560
 CH₃CO₂⁻ free radical trapped in γ-irrad. Na acetate, e. s. r. 8=4242
 CH₃. CR₂ radical in X-irradiated acetyl-(d,l)-alanine, spin-lattice relax. time 8=22906
 CH₃Cl, Fermi and Coriolis resonances in the ν₄ band 8=16319
 (CH₃)₂N. NiCl₂, crystal structure 8=22076
 (CH₃NH₂)₂CuCl₂, e. s. r. and optical spectra 8=14104
 (CH₃)₂O, n. m. r. linewidth as function of pressure 8=16354
 CH₃OH-H₂O solns., sp. ht. using calorimeter with adiabatic shell 8=21647
 (CH₃)₂POCl, i. r. and Raman spectra 8=12286

Organic compounds—contd

- (CH₃)₂PSBr, i. r. and Raman spectra 8=12286
 (CH₃)₂PSCl, i. r. and Raman spectra 8=12286
 (CH₃)₂SiCl, γ irradi. at 77°K, CH₂(CH₃)₂SiCl radical struct., e. p. r. obs. 8=12349
 CH₃SiF₃, n. m. r., sign of coupling consts. 8=4232
 CH₄, equilibrium vapour pressure data 8=21779
 CH₄, inelastic scattering of cold neutrons 8=12274
 CH₄, Jupiter, 3ν₃ band image tube obs. 8=14839
 CH₄ mol., nuclear hyperfine interaction theory 8=12119
 CH₄, Raman intensities and depolarizations 8=12131
 CH₄, spin-rotation interaction constants determ. by nuclear spin relax. meas. 8=7573
 CH₄ thermal cond., mag. field effects, 290°K 8=4469
 CH₄, vibration spectra, anharmonic calc. 8=12133
 CH₄-CF₄ dense mixtures, thermal conductivity 8=21511
 CS₂, adsorbed on silica gel, laser Raman spectra 8=23031
 CS₂, overtones of combination scattering 8=1559
 CT₄, vibration spectra, anharmonic calc. 8=12133
 C₂, absorption and emission spectroscopy, in low-press. oxyacetylene flames 8=21189
 C₂ClF₂-He mixtures, microwave absorption and dispersion 8=7936
 C₂H₂, equiv. orbitals 8=21110
 C₂H₂ reaction with H- and O-atoms, e. s. r. investigation 8=2511
 2C₂H₂+SO₂ mixture, continuous combustion in annular channel, rot. rate of luminesc. heads 8=23121
 C₂T₂, i. r. absorpt. spectrum and ν₃ fundamental 8=12244
 C₂H₄, equilibrium vapour pressure data 8=21779
 C₂H₄, equiv. orbitals 8=21110
 C₂H₆, equiv. orbitals 8=21110
 [(C₂H₅)₄N]₂Cu(C₂B₃H₁₁)₂, cryst. struct. 8=13305
 [(C₂H₅)₄NH₄]₂Pt(CN)₄(X=1 to 3) crystal structure, atomic 8=13306
 C₃H₂ radical absorpt. spectrum, diazopropyne photolysis obs. 8=16368
 (nC₄H₉)₂NBr, non centrosymmetric, morphology 8=22054
 C₃H₅N₂O₂. HCl, crystal and molecular struct. 8=17452
 (C₅NH₅)[NbCl₄O], deviation from superposition structure 8=13279
 C₆H₅CH=NC₆H₄CH₃ solns. and powder vibr. assignments, 400-3200 cm⁻¹ 8=1562
 C₆H₅CH=NC₆H₅ crystals and solns. spectra, vibr. assignments, 400-3200 cm⁻¹ 8=1562
 C₆H₅CH=NC₆H₂ crystals and solns. spectra, vibr. assignments, 400-3200 cm⁻¹ 8=1562
 C₆H₅F⁺, lowest electronic states 8=12257
 C₆H₅F⁺, position of electronic states 8=21120
 C₆H₅OD anharmonicity variation effect on frequency perturbations ν(OH) and ν(OD) 8=16316
 C₆H₅OH anharmonicity variation effect on frequency perturbations ν(OH) and ν(OD) 8=16316
 [(C₆H₅)₂PCH₃]₂(TCNQ)₂, proton n. m. r. 8=5551
 C₆H₆⁺, lowest electronic states 8=12257
 C₆H₆⁺, position of electronic states 8=21120
 C₈H₈ isomers, chem. ionization mass spectra 8=9745
 C₁₀H₁₂N₂O₈, condensation product of diaminosuccinic acid and pyruvic acid, X-ray studies 8=17437
 Ca dicarboxylates(malonate to sebacate), i. r. spectra and thermal decomp. 8=23095
 Ce ethylsulphate, spin-bath relaxation, Kapitza resistance 8=19700
 Ce ethyl sulphate, thermal cond., mag. field effect rel. to spin-phonon scatt. 8=13393
 Co complexes, inversion-vibr. levels and splitting 8=4121
 Co complex ions, specific activity values obtained by Sziland-Chalmers react., interpret. 8=18749
 Co(II) chelate complexes, in soln., isotropic nuclear res. shifts 8=1598
 Co²⁺ octahedral systems, theory of nuclear resonance shifts 8=1597
 Cr acetylacetonate, polarity and atomic polarization 8=16872
 Cr oxalate, ²E-⁴A₂ emission spectra, rel. to Cr³⁺ conc., and vibronic struct. 8=18578
 Cs ethylate-ethyl picrate complex, crystal structure 8=22058
 Cs methoxide-methanol solvates comp. and Cs ions coordination number obs. 8=2497
 Cu(II) complex ions in ethylenediamine-water solns., n. m. r. and e. p. r. 8=4621
 Cu(II) formate, normal vibrs. 8=2466
 Cu formate tetrahydrate, sp. ht. and entropy at anti-ferroelectric transition pt. 8=8638
 Cu-phthalocyanines cryst. growth from vap. phase 8=21946
 Eu chelates, mag. props. 8=9306
 Eu chelates, three-ligand β-diketones, under u. v. irradi., absence of stimulated emission 8=18571
 Fe(III) porphyrins, zero-field splitting determ. by far i. r. spectra 8=2469
 HCNO, microwave spectrum, struct. and l-type doublet 8=12270
 He-methane solid-vapour equil., 55°-91°K, to 140 atm. 8=16953
 Hg dimethyl, coupling constants, signs 8=7610
 K ethylate-ethyl picrate complex, crystal structure 8=22058

Organic compounds—contd

- K methoxide-methanol solvates comp. and K ions coordination number obs. 8=2497
- KH di-p-hydroxybenzoate hydrate, crystal structure 8=22060
- La (III) oxalate decahydrates, structures 8=8529
- Li methoxide-methanol solvates comp. and Li ions coordination number obs. 8=2497
- Li salts of dihydroanthracenes, electronic spectra rel. to ion-pair structure 8=7558
- LiBr (Cl), $2\text{NH}_3 \cdot \text{CH}_3 \cdot \text{CH}_2 \cdot \text{NH}_2$, ethylene diamine addition cpds. crystal structure 8=1820
- Mg-azatetraphenylporphyrins, polarization and absorpt, spectra rel. to porphyrin ring e struct., obs 8=21116
- Mn complexes, inversion-vibr. levels and splitting 8=4121
- Mn^{2+} in hexa- and tetracoordinated cpds., spectra 8=9551
- $\text{Mn}(\text{HCOO})_2 \cdot 2\text{H}_2\text{O}$, heat capacity between 1.4 and 20°K 8=13375
- Na acetate, γ -irrad., e. s. r. of trapped free radical $\text{CH}_3\text{CO}_2^\cdot$ 8=4242
- Na cyclopentadiene, u.v. photolysis 8=5754
- Na methoxide-methanol solvates comp. and Na ions coordination number obs. 8=2497
- Na tetradecyl sulphate, ion sublation studies, by radioactive tracers 8=23075
- Na tetraphenylborate in aqueous soln., photolysis products 8=5746
- Nd ethyl sulphate, crystal field parameters from ground state splitting of paramagnetic 8=18445
- Nd ethyl sulphate, mag. resonance saturation of Faraday effect, and spin-lattice relax. 8=14278
- NH_4 quaternary salts, in water-glycine mixtures, elec. cond. 8=8104
- Ni(II) chelate complexes, in soln., isotropic nuclear res. shifts 8=1598
- Ni(II) complexes of glycine peptides in aqueous soln., form. 8=9664
- $\text{Ni}_2(\text{CO})_8[\text{P}(\text{C}_2\text{H}_5\text{CN})_3]_4$, cryst. struct. with tetrahedral Ni cluster 8=8589
- Os carbonyl halide complexes, solvent effect in i. r. 8=16856
- P^{31} in soln. with radicals, nuclear-electron Overhauser effect, rel. to scalar interact. 8=4626
- Pb diethyl-dithiocarbamate, crystal structure 8=17445
- Rb methoxide-methanol solvates comp. and Rb ions coordination number obs. 8=2497
- S-N cpds., bond stretching freqs. 8=1299
- $\text{SbCl}_5 \cdot \text{CH}_3\text{CN}$, n. q. r. 8=2391
- Sr tartrate tetrahydrate, gel-grown, X-ray study 8=17459
- $\text{UO}_2[\text{S}_2\text{CN}(\text{C}_2\text{H}_5)_2]_2 \cdot [\text{H}_2\text{N}(\text{C}_2\text{H}_5)_2]$, monoclinic crystal structure 8=4899
- Zn diethyl-dithiocarbamate, crystal structure 8=17445
- Zn 2, 2-lquinoline mols., oriented in rigid-glass matrix, e. s. r. 8=9448
- Zr acetylacetonate, polarity and atomic polarization 8=16872

Orthicons. See Electron tubes.

Oxidation—contd

oxygen-peroxide electrode, exchange current 8=9695
 precipitation deoxidation kinetics, collision model 8=18658
 rare-earth ions, trivalent, in fluorite-type crystals,
 radiochemical reduction giving divalent centres 8=18740
 rutile, partial reduction rel. to defect nature from e.p.r.
 study 8=18436
 semiconductors, thermal oxidation, impurity
 redistrib. 8=18015
 silane, controlled, for deposition of SiO₂ films 8=13095
 solids, induced by u.s. radiation 8=9735
 steel, 18Cr-8Ni, thin film identification by electron
 microscopy 8=8319
 substituted phenols, in benzene soln., e.s.r.
 study 8=14378
 transition metal cpds. with concurrent shrinkage 8=4936
 wustite reduction in CO, promoters 8=5702
 zinc film evaporated 8=1691
 Al, anodic oxidation in presence of hydrated oxide 8=18729
 Al, controlled, in radio-freq. excited glow discharge 8=8310
 Al, effect on electron emission 8=9270
 Al film, effect on photocurrent 8=18221
 Al films in low-pressure O₂ atmosphere 8=18669
 Al, oxidation and removal by diffusion of Mg 8=18670
 Al reoxidation in electrolysis 8=23151
 Al, work function changes during and following 8=5407
 Al-Mg alloys, oxidation and removal by diffusion of
 Mg 8=18670
 B₁₂H₁₂²⁻, electrochem. controlled in acetonitrile 8=5732
 C, vitreous, and pyrolytic graphite, comp. of pitting 8=8292
 CO, catalytic, rel. to Ag surface struct., chemisorpt.
 obs. 8=18706
 CO preadsorbed on Pd film, induction period 8=5700
 CaF₂·Eu³⁺, radiochemical reduction giving Eu²⁺
 centres 8=18740
 Cr surface, rel. to Cr₂O₃ epitaxial growth 8=4828
 Cr-Ni stainless steel, intercrystalline, theory 8=8460
 Cu, vacuum deposited films, rel. to temp. 8=18674
 Cu_{1-x}Mg_xFe₂O₄, oxygen content on quenching in high
 oxygen pressure furnace 8=2516
 Er, thin films, electron microscope study 8=5701
 Fe, distribution of additions 8=1917
 Fe, liq., deoxidation by Al, rel. to form. of cloud group
 of inclusions 8=22183
 Fe, in water vapour at 550°C, effect of cold work 8=23101
 Fe-Al alloys, effect of storage 8=9666
 Fe-Cr alloy, after lifting and breaking Cr₂O₃ protective
 scales 8=23099
 Fe-Cr alloys of 25-95%Cr comp., at 1000° to
 1300°C 8=18677
 Fe-28%Cr alloy, form. and stability of oxide nuclei, and
 structure of film 8=21882
 Fe-12 at.%Ni alloy, finely dispersed system, effect on
 phase comp. 8=17280
 H, catalytic, rel. to Ag surface structure., chemisorpt.
 obs. 8=18706
 La metal, high temp. 8=18680
 Mg, reduction processes in silico-thermal prod., radioactive
 tracer study 8=23776
 (Mg, Fe)O₂ (magnesiowustite), depend. on temp., oxygen
 press., and crystal composition 8=23108
 MgFe₂O₄, and reduction effects on thermal
 conductivity 8=17543
 Mo alloys, anti-oxidation metallurgy 8=23779
 Mo, attack at high temp. by atomic O 8=14370
 Nb alloys, anti-oxidation metallurgy 8=23779
 Ni-base alloy, oxidation resistance to 2200°F 8=22387
 Ni hydroxide, electrochem., γ NiOOH form.,
 obs. 8=18716
 Ni, kinetics of diffusion-controlled reactions at
 cylindrical surfaces 8=14372
 Ni-base alloys molten, during vacuum induction melting
 by refractory-reduction 8=9694
 2PbCO₃ anodization and PbO₂ struct. obs. 8=23148
 PbO anodization and PbO₂ struct. obs. 8=23148
 Pb(OH)₂ anodization and PbO₂ struct. obs. 8=23148
 PbSO₄ anodization and PbO₂ struct. obs. 8=23148
 Pb₃O₄ anodization and PbO₂ struct. obs. 8=23148
 Pt, gaseous oxides 8=5716
 Pt, oxidative adsorpt. of propane 8=2534
 Pu in air rates 8=5717
 Si, high-temp., Al impurity redistrib. and depletion depth,
 obs. 8=22606
 Si, thermal, by wet O₂ stream 8=18689
 SiO₂, effect of dissolved O₂ on C-V characts. 8=5284
 Si-SiO₂ interface, thermal oxidation, effect of Na
 impurity 8=14384
 Sn electrodes in alkaline solns above pH9, mech. of
 passivation processes 8=18733
 SO₂ solns., effect of ullage 8=23111
 Ta alloys, anti-oxidation metallurgy 8=23779
 Ta, controlled, in radio-freq. excited glow discharge 8=8310
 U, protection given by UAl₃ coating 8=21892
 UC, high-temp. behaviour obs. 8=23115
 U-Ti alloys in CO₂ at 450°C 8=5718
 V-Ga alloys, anodic, and phase anal. 8=8286
 W alloys, anti-oxidation metallurgy 8=23779
 W, attack at high temp. by atomic O 8=14370

Oxidation — contd

ZnFe₂O₄, and reduction effects on thermal
 conductivity 8=17543
 Zr, low-press. 8=14391
 Zr-Nb alloy 8=14390

Oxide cathodes. See Cathodes/oxide.

Oxygen

adsorbed on Mo crystals, surface exam. by LEED and
 work function studies 8=17165
 adsorption on impure ZnO, i.r. absorpt. studies 8=4769
 adsorption on Ta ribbon, work function changes 8=9276
 absorption oscill. strengths of O I lines in vac.
 u.v. 8=7417
 association with hemoglobin, statistical mech.
 anal. 8=1311
 Atlantic undercurrent, equatorial, obs. 8=14569
 atmosphere, gas constituent number density determ. using
 laser beams 8=14585
 atmospheric, calc. of radiowave absorpt. coeff. 8=9888
 atmospheric, Raman scatt., N₂ u.v. laser obs. 8=23289
 atom, spectral absorption coeffs. compilation 8=12060
 atoms, reaction with Cl₂ 8=9696
 atomic beam, photoionization 8=21021
 atomic at 120 km altitude, mass spectrometric
 meas. 8=18920
 atomic spectra, vac. u.v., metastable states 8=12072
 atoms, in b.c.c. Fe, migration energy and
 solubility 8=22150
 atoms, e loss in collisions with H⁺ 8=7461
 atoms, H-O, collisions excitation of fine structure
 levels 8=1193
 atoms, interaction with inert gases 8=12104
 atoms, reaction with CO in shock wave tube 8=1342
 atoms, reaction kinetics with SO₂ 8=5715
 aurora, λ 5577 and λ 6300 O I, ratio of spectral intensity
 to Hβ 8=23340
 burning stars, evolution, and pre-supernova
 models 8=5874
 chemisorbed on Al films, stability and work function
 changes 8=5726
 chemisorption on carbon 8=5725
 combustion of single drops of liq. fuel, influence of O₂
 content of ambient gas, rel. to drop size 8=19657
 concentration effects in n-irradiated silicon 8=5279
 D content, neutron spectrometry 8=9765
 desorption, electron-stimulated, from W surface,
 mechanism 8=17177
 diffusion in α-Nb₂O₅, near-stoichiometric 8=1922
 diffusion in polymethylmethacrylate, meas. by quenching
 of phosphorescence 8=8687
 discharge, h.f. electrodeless, e density cinemato-
 graphy 8=16398
 discharge, r.f., dark-sheath form, mechanism 8=12399
 dissociation in elec. discharge and resulting ionization
 process 8=7722
 dissolved in Nb, with N₂, effect on props. 8=9011
 effect on creep strength on niobium at 800-1200°C over
 stress range 1500-5000 lb/in² 8=13593
 electron microscope investigation of condensed O₂ 8=8465
 e.s.r., O₁₆⁻¹⁸, O₁₇⁻¹⁸, O₁₈⁻¹⁶ 8=4222-3
 forbidden ¹D₂→³P₁ transitions obs. 8=1182
 free atoms, reactions with simple hydrocarbons, e.s.r.
 study 8=14376
 gas, low temp. flame, O, H or O, CO 8=9699
 gas, rotational relaxation, high temp. u.s. obs. 8=1251
 gettering rate obs. in colour picture c.r.t. 8=15324
 heat transfer props. in reduced gravity 8=16692
 interaction with B in Ge melt 8=23104
 interdiffusion with org. vapours and diffusion
 into N₂ 8=14452
 ionization coeffs., secondary, at press. up to atm. 8=4316
 ionization cross-section, electron impact 8=7700
 ionization, electron and proton impact, classical
 model 8=12444
 ionization energy per ion pair formed by H³β
 particle 8=4315
 ionosphere, line excitation rel. to heating 8=18975
 isotope chem. of ancient charts rel. to Precambrian
 ocean 8=5779
 isotope mixtures, thermal diffusion props. 8=1492
 isotope ratio in snow and firn at South Pole, rel. to air
 temp. 8=23227
 ions in solar wind, Vela satellite meas. 8=23715
 in liquid Na, solubility data 8=16798
 liquid, significant structure theory, application 8=4528
 molecular, electron impact cross sections 8=1349
 molecular, ionization by e collisions 8=16451
 molecules in mesosphere, temp. determ. from microwave
 spectra 8=23258
 molecules, O₂-p e capture excitation of 3s, 4s states
 of H 8=7462
 molecules, single and double electronic
 transitions 8=1262
 mol., used as ion source with Xe beams 8=12454
 molecular, mm. wave permeability, lower atm. 8=18906
 negative ions in O discharge, sputtering of Au
 films 8=21877
 neutral, solar lines, obs. rel. to temp. distrib., profile
 damping and abundance in photosphere 8=23704

Oxygen—contd

- in oxides of heavy elements, X-ray microanalysis 8=14475
 oxygen-acetylene flame temp. meas. by molecular spectroscopy 8=3109
 oxyhydrogen mixtures detonation waves, induction zone obs. at low initial pressures 8=170
 parameters of manganese vanadate, and degree of conversion, neutron diff. determ. 8=8534
 partial photoionization cross-sections, determ. by photoelectron spectra 8=1369
 permeation rate in W, pressure, thickness and temp. dependence 8=4958
 photoionization cross sections for $\lambda > 25\text{\AA}$, atomic 8=12452
 polarization effects in elastic e scatt., and photo-detachment from O^- 8=4101
 pumping speed-press. data, getter-ion pump 8=1495
 radiolysis, ion lifetimes meas. 8=23163
 reaction with acetylene, upper atm. 8=23307
 recombination system of $\text{H}_2\text{-O}_2$ -gases in BER reactor 8=4014
 scattering of K, atomic differential spin-exchange scattering 8=12109
 solid, abs. spectra of α, β, γ forms, $3400\text{-}42000\text{ cm}^{-1}$ 8=5625
 solid, α, n -diff. study of structure 8=4882
 solid, transform. characts. and thermal expansion 8=4938
 solubility and activity coeff. in liq. Cu-Co alloys 8=8011
 sorption on (111) face of W crystal, mechanism and kinetics 8=8348
 sorption on W surface, rel. to work function charges 8=4767
 stable isotopes, microanal. by nuclear reactions 8=14453
 stars, Am, abundance 8=23514
 stratosphere molecules, microwave emission spectra 8=23256
 translation accommodation coeff., on W surface 8=17113
 u. s. velocity and absorpt., $300^\circ\text{-}1300^\circ\text{K}$ 8=4478
 X-ray microanalysis using network method analyser, obs. 8=14489
 in Al, radioactivation anal. 8=5764
 Ar- O_2 gas mixtures, mechanism of laser action 8=11975
 BaO cathode emission, residual gas effects 8=18663
 in Cs 8=15224
 $\text{H}_2 + \text{O}_2$, slow reaction rate, computer calcs. 8=18678
 and H_2O , mixture of vapours, sound absorption obs. 8=1476
 Mo tip, absorption, field emission study 8=21905
 in Ge, activation meas. by He^3 bombard. 8=18083
 $\text{N} + \text{O} \rightarrow \text{NO}^+ + \text{e}$, ionization cross section calc. 8=4111
 in Na-K reactor coolants, effect on efficiency of coolant, corrosion activity and residual radioactivity 8=7328
 Ne- O_2 gas mixtures, mechanism of laser action 8=11975
 in Ni, diffusion rel. to CO evolution 8=16745
 $\alpha\text{-O}_2$, light absorpt., bands at 4.2°K , effect of 170 kOe mag. field 8=5626
 $\alpha\text{-O}_2$, solid, absorpt. line splitting in strong mag. field 8=14252
 $\text{O}(\text{D})$ reaction with H_2 8=5744
 $\text{O}(\text{D})$ deactivation 8=4098
 O/Fe relative abundances in solar corona 8=23748
 O-O system, 2nd virial coefficient for different electron states at 2000-6000 K 8=1469
 [OI] 5577 \AA and 6300 \AA in night airglow, rocket obs. 8=18935
 [OI] λ 5577 and λ 6300 spectra auroral luminosity spatial var. obs. 8=14649
 OI forbidden lines in sunspot spectrum obs. 8=14880
 O II electrostatic interaction integrals using screened hydrogenic orbitals calc. 8=7394
 O II, equilibrium population of states in plasma 8=7418
 O III, radio galaxies emission rel. to fine struct. const. time var., obs. 8=14727
 O(III and IV), mean lines of some excited levels 8=4097
 O IV lines in vacuum u. v. 8=20964
 O VIII in solar corona, L_α and L_β lines intensity ratio calc. 8=10434
 O, O_2 , energy deposited in electron slowdown 8=2634
 O+P(PH_3) reactions, stoichiometry and chemiluminescence 8=23109
 $\text{O}^{16}\text{O}^{16}$ molecule, e. p. r. spectrum 8=12309
 O^{16} and O^{18} relative abundances in minerals, mass spectrometry 8=12112
 O^{17} in acidified H_2O , n. m. r. linewidth rel. to proton exchange 8=1599
 O^{18} , in enriched- UO_2 coherent neutron scattering length 8=8553
 $\text{O}^+ + \text{O}_2 \rightarrow \text{O}_2^+ + \text{O}$ rate constants energy var., drift tube meas. 8=14667-8
 O^+ , cathode poisoning from feralma anode 8=15330
 O^+ concentration, equatorial ionosphere obs. 8=18974
 O^+ reaction with O_2 and N_2 in ionosphere, rate coeff. study 8=14666
 $\text{O}^+ + \text{N}_2 \rightarrow \text{NO}^+ + \text{N}$ rate constants energy var., drift tube meas. 8=14667-8
 O_2^- in alkali halides, thermal quenching of luminescence 8=2485
 O_2 e. s. r. in H_2O_2 -urea addition compound, γ -irradiated at 77°K 8=2373
 O_2^- in KI, reorientation at $1.5\text{-}4.2^\circ\text{K}$ 8=13123
 $\alpha\text{-O}_2$, crystal structure rel. to mag. props. 8=17406
 O_2 absorption line equivalent width rel. to atmospheric temp. 8=2577

Oxygen—contd

- O_2 , configuration interaction calc. 8=12028
 O_2 , electronically excited, photoionization 8=16450
 O_2 , electronic structure 8=16297
 O_2 ionization by Fe atoms, ionization ratio meas. 8=1359
 O_2 , photoionization and dissociation continua 8=12453
 O_2 thermal cond., mag. field effects, 290°K 8=4469
 O_2 , thermal electron capture 8=7723
 O_2 , H^+ , H_2^+ , He^+ charge exchange, 40-1500 eV 8=21275
 O_2 -Ar gas mixtures, thermal conductivity 8=4474
 $\text{O}_2 + \text{Ar}$ mixture, conversion of positronium atoms 8=7476
 O_2 -Nb system at very low pressure, adsorption, absorption and degasing 8=4763
 O_2 and $\text{O}_2\text{-N}_2$ mixtures, e density decay rates, microwave meas. of temp. depend 8=21240-1
 $\text{O}_2(\Delta_g)$ collisional-radiative reaction 8=12220
 O_2^{16} molecules, millimetre transfer radiation, influence of Earth's mag. field 8=23284
 O_2^+ ionosphere, dissociative recombination rate 8=9961
 O_2^+ reaction with N_2 and NO in ionosphere, rate coeff. study 8=14666
 O_2^+ dissociation by e impact, 10-500 eV, cross-section 8=1312
 on PuO_2 , adsorption, sites and sintering effects, obs. 8=8345
 in Si, activation meas. by He^3 bombard. 8=18083
 Si oxidation by wet stream 8=18689
 in UO_2 , self-diffusion 8=23113
 from W, desorption by electron impact 8=21912

Oxygen compounds

- hydroxyl normal emission in interstellar dust clouds 8=23573
 metal oxide, hypostoichiometric, partially ordered defects, statistical model 8=17600
 metal oxides, X-ray spectroscopic investigation of chem. bonding 8=9499
 oxides of heavy elements, O X-ray microanalysis 8=14475
 oxide matrices, trace element determ. by mass spectrometry 8=18769
 oxide powder reduction by gases, micromechanism from O_2 pressure change meas. 8=18683
 oxygen fluorides, F^{19} n. m. r. 8=4231
 pyrochlores, crystal chemistry 8=13117
 OCS absorpt. spectrum and vibr. analysis, 1350-1420 \AA 8=16296
 OCS cryst., i. r. intensity of librational mode 8=14201
 OCS pyrolysis in shock tube with quadrupole mass filter 8=14361
 OD, OH, transition $\text{B}^2\Sigma^+ \rightarrow \text{A}^2\Sigma^+$, high resolution obs. 8=21095
 OF_2 , ground state, minimal-basis-set LCAO-SCF-MO calc. 8=21096
 OF_2 , spectrum, Fermi diad 8=4164
 OH^- ions rel. to activator solubility in NaCl:Ni , KCl:T and KCl:Pb obs. 8=21824
 $\text{OH}^-(\Sigma^+)$, Hartree-Fock wavefunctions and molec. props. 8=4165
 OH^- in KCl, adiabatic depolarization rel. to crystal cooling to 0.36°K 8=1874
 OH^- , SCF calcs, correlation energies and Hartree-Fock limits 8=1263
 OH, absorption and emission spectroscopy, in low-press. oxyacetylene flames 8=21189
 $\text{OH}(8,3)$ band, OI 5577 \AA line, night airglow, mid-latit. rocket obs. 8=2631
 OH 18 cm lines, cosmic, polarization theory from maser studies 8=7543
 OH 18 cm cosmic rad., anomalous elec. polarization 8=23582
 OH, emission spectrum 8=12222
 OH emission bands in nightglow photometric obs. 8=9928
 OH galactic, radio emission, brightness and temporal variation 8=10253
 OH, luminesc., from $\text{H}(\text{P}) + \text{O}$, reaction 8=14366
 OH, microwave spectrum, low-field Zeeman effect 8=4246
 OH mols. in interstellar space, maser action mechanism 8=5927
 OH, oscillator strengths in $^2\Sigma^+ \rightarrow ^2\Pi$ band system 8=7544
 OH, predissociation in chemiluminescence spectrum 8=12223
 OH radical, interstellar radio absorpt. 8=23581
 OH radical and trapping site in γ -irrad. ice, e. s. r. identification 8=9438
 OH, reaction with itself and with CO 8=18684
 OH reaction with oximes, e. p. r. 8=14394
 OH retention on MgO 8=1703
 OH rotational temps. and intensities in nightglow 8=14647
 OH stretching band struct. in phenol and substituted phenols 8=4211
 OH, vib.-rot. interact. and the transition moment 8=7545
 OH, vib.-rot. spectrum from oxyacetylene burning in air or N_2 , rel. to flame temp. 8=18692
 OH $^+$, fine structure of $^3\Sigma^+$ and $^3\Pi$ states 8=7541
 OH_3^+ , one-centre expansion SCF calc. 8=4202

Ozone

- Antartica (90°S), monthly variations 8=9897
 atmospheric concentration, S. Africa, up to 45 km 8=14588

- Ozone**—contd
 atmospheric, eclipse effect, u.v. obs. 8=9871
 atmosphere, 8mm absorption and emission 8=18934
 atmospheric from satellite meas. 8=2576
 eclipse effect in sun spectrum 8=23692
 heating and radiative equilibrium in stratosphere 8=2579
 mesosphere during solar eclipse, rocketsonde obs. 8=18852
 molecule, ground state, MO calc. 8=21096
 oscillation, quasi-biennial, from meteorological data 8=2581
 reaction with H and OH 8=5744
 spectra, 9.6 μ absorbance band, empirical formulas 8=12221
 tropospheric and stratospheric distribution, obs. 8=18853
 troposphere and stratosphere, soundings over N and central America 8=18851
 $O_2(a^1\Delta_g) + O_3 \rightarrow 2O_2 + O$, reaction rate 8=16450

- Palladium**
 adsorption of CO , i.r. spectra 8=4764
 diffusion in Al 8=8671
 electronic states density from X-ray spectroscopy of alloys 8=17884
 films, obliquely deposited, struct., effect of atom mobility 8=8296
 film, preadsorbed CO oxidation, induction period 8=5700
 gravimetric determ., appl. of tetrazoline-5-thiones 8=14188
 hydride phase, solubility of H_2 , isotherm 8=1924
 lattice vibrations, 16% accuracy in freqs 8=22080
 Lorentz number from 2.5-19°K 8=5184
 magnetic moment data, limits of exchange enhancements, 4.2°K 8=13973
 magnetic susceptibility spin-orbit coupling dependence 8=2332
 photoexcited electrons, discrete energy loss by plasmon excitation 8=2279
 specific mag. susceptibility, temp. depend. above melting point 8=5439
 twins formation during diffusion between films of Au and Pd 8=13127
 D diffusion at 0° to 100°C 8=17582-3
 Fe⁵⁹ diffusion mobility obs. 8=17579
 H diffusion at 0° to 100°C 8=17582-3
 H_2 definition, spectral-isotopic method 8=9743
 Pd(II), spectra in fused LiCl-KCl 8=1567
 Pd:Fe spin polarization around local mag. impurity 8=18317
- Palladium compounds**
 alloys, thermoelec. power meas. 2-120°K 8=18216
 Pd based double cyanide complexes, mean diamagnetic susceptibility 8=22751
 Pd complex, trans-dichlorobis(dimethyl sulphoxide)Pd(II), mol. and crystal structure 8=1804
 Pd-Ag, H and D diffusion at 0° to 100°C 8=17582-3
 Pd-Au-D system, α phase, neutron diffraction 8=17407
 Pd-Au-H system, α phase, neutron diffraction 8=17407
 Pd-Ba alloy, work function 8=18245
 Pd-Co alloys, (8.3 to 0.03 at. %Co), effective mag. field at Co⁶⁰ nuclei 8=5463
 Pd-Co alloys, ferromagnetic specific heat 8=8642
 Pd-Fe alloy containing H, hyperfine fields and isomer shifts temp. dependence by Mössbauer effect 8=13020
 Pd-Fe alloys, ferromagnetic specific heat 8=8642
 α -Pd-H, diffusion of H, study by n. scatt. 8=17581
 Pd-H, α -phase, diffusion of H, by small energy transfer neutron scattering 8=13411
 β -PdIn, reflectance and other optical props 8=2402
 Pd-Mn alloys, structural and mag. props. 8=4714
 ζ -Pd₃Mn, antiferromag. structure 8=18385
 Pd-Ni alloys, magnetic moment, rel. to hydrostatic pressure 8=9351
 Pd-Ni alloys, s-electron-paramagnon scattering 8=9015
 Pd-Ni alloys, specific heat, paramagnon mass enhancement theory 8=17524
 Pd-Ni alloys, paramag. susceptibility and sp. ht. 8=18300
 PdNi alloys, dilute, elec. resist., local exchange enhancement effects 8=13634
 PdNi alloys, thermoelectric power anomalies 8=13904
 Pd-Sn, H and D diffusion at 0° to 80°C 8=17583

 DPPH, r.f. field depend. 8=14122
 DPPH, sidebands from many photon transitions obs. 8=22904
 m-dicarbene cpds, e.p.r. of quintet ground states 8=4221
 dielectric solids, spin-spin relax. rel. to nuclear spin relax. and dynamic polarization 8=18443
 diethyl sulphide-urea cpds, X-irrad., e.s.r. of RCHSR' type free radicals 8=1314
 dihydroxydurene, cation radical, e.s.r. spectrum 8=1589
 N,N-dimethylaniline cation radicals, hyperfine splitting, substituent effects 8=4620
 2,6-dimethylbenzosemiquinone, monoprotonated, e.s.r. solvent depend. 8=8125
 4,4-dimethylcyclohexenone radical anion 8=12304
 4,4'-dimethoxyazobenzene radical anion 8=12303
 dimethoxydurene, cation radical, e.s.r. spectrum 8=1589
 m-dinitrene cpds, e.p.r. of quintet ground states 8=4221
 di-n-hexyl sulphide-urea, X-irrad., e.s.r. of RCHSR' type free radicals 8=1314
 dinitrobenzene alkali-metal salts 8=8120
 dinitrobenzene anion radicals, dynamic freq. shifts 8=4244
 p-dinitrobenzene radical anions, solvent depend. of N¹⁴ hyperfine coupling 8=8124
 diphenyl-amino radical dimer 8=7625
 diphenyl-picryl-hydrazyl, Faraday effect at 8.78 GHz 8=7600
 dipyrityl mononegative ion and alkali metal ion biradical, e.s.r. and structure 8=4247
 di-tertiary-butyl nitroxide solns., spin exchange 8=8121
 durene, irradi. cryst., free radicals 8=5528
 durene-tetracyanobenzene complex, charge transfer triplet state 8=12306
 durosemiquinone in 1,2-dimethoxyethane 8=1591
 dynamic proton polarization, model using spin-spin interaction 8=2361
²E state, effect of linear Jahn-Teller coupling 8=18402
 effect on γ - γ angular correl. 8=20761
 e.s.r. spectra at liq. He temp. cryostat to study effects of light 8=15135
 electron spin echo, effect of weak mag. field 8=15429
 exchange narrowing influence on nuclei dynamic polarization 8=22893
 ferrites: Fe²⁺ powders, electron relax. study 8=18419
 fluorides: Mn²⁺, hyperfine coupling constants temp. dependence 8=18429
 field modulation, microwave cavity 8=15427
 four-level system, susceptibility at saturation 8=393
 fluorenylidene in diazofluorene crystals, spin densities from ENDOR 8=5555
 free radicals of biological interest, e.s.r. study 8=12341
 free radicals in polymerization, and polymer oxidation, e.s.r. study 8=14414
 free radicals in soln., saturation in e.s.r. spectra 8=3278
 garnets: rare earth ions powders, electron relax. study 8=18419
 gaseous atom reactions, e.s.r. study 8=14376
 gaseous free radicals, results and anal. of spectra rel. to structure 8=12340
 gas phase, double quantum transitions 8=12308
 gases, reaction kinetics by e.s.r. 8=14351
 glass, irradi. effect, suppressed by synthesis render high press. H 8=4996
 glasses and Li borate cpds., of Mn²⁺ in 8=5536
 glasses of Na₂O-TeO₂ system, γ -irradiation effects 8=9434
 graphite, monocrystalline, free charge carriers, thermal variation of line width anisotropy 8=5524

Paramagnetic resonance and relaxation—contd

- group IV hydrides, geminal coupling consts., from ENDOR meas. 8=21175
 Heisenberg paramagnets, linewidths asymptotic behaviours near critical points 8=22757
 helicon relaxation 8=17901
 hydrocarbon radicals, e.p.r. spectroscopy meas. of g factor 8=12301
 hyperfine interacts. from perturbed angular corrls. 8=18401
 ice, γ -irrad., e. s. r. identification of OH radical and trapping site 8=9438
 ice, γ -irrad., e. s. r. of OH radical 8=9439
 intermodulation in spin systems obeying Bloch's equations 8=10992
 laser, acoustic, mag. pumped paramag. salts appls. 8=15473
 laser, gas, rel. to non-linear Zeeman effect theory 8=6435
 laser, i. r., mag. pumped paramag. salts appls. 8=15473
 line moments in systems with dominant exchange interaction 8=18403
 line profile parameters dependence on external elec. fields 8=18399
 lineshapes with exchange among many sites, rapid computation 8=3277
 line shapes of systems undergoing intermolec. exchange 8=12302
 linewidth calc. by methods of moments 8=14086
 magnetic resonance and relaxation, conference 8=22889
 magnetoacoustic, double electron-nuclear, at local electron centres 8=8623
 many photon transitions, ang. mom. det. 8=22904
 many-quantum transitions in rotating reference frame 8=18400
 metals, electron-nuclear relax. at low temps. in strong mag. fields 8=9449
 methanol, X-irrad., u.v. photolysis at 77°K 8=5750
 met-myoglobin, single cryst. 8=9433
 methyl viologen cation, aq. and alcoholic solns., e.s.r. spectra, rel. to water induced dimerization 8=8123
 molecules, matrix-trapped at 4°K 8=4116
 Mössbauer spectra in presence of electron spin relaxation 8=1644
 myoglobin azide, single cryst. 8=9433
 naphthalene- d_8 -naphthalene- h_8 mixed crysts. in triplet state 8=18433
 naphthalene- d_8 of naphthalene- h_8 mol. pairs, exchange energy and optical spin polarisation, obs. 8=22911
 naphthalene- d_8 , triplet state and phosphoresc. 8=9655
 naphthalene ENDOR study of metastable triplet state 8=21169
 naphthalenes, substituted, zero-field splitting meas. 8=9435
 natrolite, (Na_2 (Al, Fe) Si_3O_{10} , $2H_2O$), of Fe^{3+} , at 4.2 and 293°K 8=18432
 (nd)² ions in rutile-type crystals, crystalline field theory explanation 8=9411
 p-nitroanisole radical anions, solvent depend. of N^{14} hyperfine coupling 8=8124
 nitrobenzene alkali-metal salts 8=8120
 nitrosobenzene, electrochem. oxidation in organic media 8=14426
 nitroxide polymers 8=4270
 nonlinear response, formal theory 8=2989
 nonmetallic crystals, impurity centres, lineshape theory 8=14085
 nonoriented solids, weak fine struct. components 8=14098
 nuclear ultrasonic fast passage 8=10983
 organic glasses, γ -irrad., e. s. r. of trapped electrons 8=9729
 paraelectric-resonance transitions, linewidths 8=14187
 phenols, substituted, in benzene soln., e. s. r. study of oxidation 8=14378
 phenanthrene- d_{10} , triplet state and phosphoresc. 8=9655
 phosphates glassy and cryst., γ -irrad. 8=22913
 plant tissues and isolated chloroplasts, photoinduced changes in Mn^{2+} content 8=23763
 poly(glycol methacrylate), X-irrad. 8=18422
 polymethylmethacrylate, γ -irrad., trapped free radicals, e. s. r. spectra obs. 8=4682
 poly(methyl methacrylate), X-irrad. 8=18422
 polynuclear hydrocarbons, spectra 8=12307
 polyphenyls, spin-spin interactions 8=2374
 polyphenylacetylene, crystalline, and struct. obs. 8=8600
 polypropylene, free radicals 8=12352
 polypropylene, free radicals prod. on γ -irrad., e. s. r. obs. 8=7628
 powders, free radicals in simple chamber 8=7619
 proteins, internal rot. and ang. corrl. functions 8=16384
 pyridine, hydrogenated 8=12310
 pyridine and related N-heterocyclics, radical anions 8=21171
 quinoxaline, optical detect. of e. s. r. transitions 8=14343
 radical anion reactions formed by e addition to unsaturated mols. 8=14350
 relaxation, phonon superheating, model 8=5518
 Rochelle salt: Cu^{2+} ferrocyclic, e.p.r. Stark effect obs. 8=14101
 Rochelle salt: Cu^{2+} , influence through external elec. field 8=14111

Paramagnetic resonance and relaxation—contd

- rochelle salt, γ -irrad., e. s. r., analysis of centre No. 2 8=9442
 ruby: Cr^{3+} , second-harmonic generation, microwave 8=22896
 ruby crystal in liquid He, spin echo behaviour 8=14091
 ruby, microwave absorpt. spectra 8=14089
 ruby, spin lattice relax. times at He temp, Cr^{3+} conc. and temp. depend. 8=14092
 ruby, spin-lattice relaxation time at room temp., determ. 8=5523
 ruby, spin-lattice relax. time meas. 8=9416
 rutile analysis rel. to trace characterization 8=18771
 rutile, partially reduced, at 77°K rel. to defect nature 8=18436
 sapphire, Fe^{3+} -doped, u. s.-induced changes in spectra 8=18407
 sapphire, spin-lattice relax. time meas. 8=9416
 saturation and double-reson. effects, coherence 8=3278
 scalar relax., Bloch eqns. and memory effects 8=15428
 semiconductors with magnetic impurities, spin-lattice relaxation of conduction electrons, theory 8=5519
 semiconductors, organic, r. f. spectroscopy 8=14088
 semidiones of cycloalkanes, alkylcycloalkanes and N-methylpiperidine, struct. and conformation, e. s. r. obs. 8=22898
 semiquinones in alcoholic soln., hyperfine interactions 8=7627
 semiquinones, in solid state, hindered motion 8=5521
 σ -radicals, comparison of calc. electron densities and e.p.r. coupling consts. 8=12347
 silicate glasses, of Mn^{2+} , 293-4°K 8=18408
 sodalites, photochromic 8=14120
 spin-lattice relax. for Kramers doublets, dynamical spin Hamiltonian and anisotropy 8=9413-14
 spin-lattice relaxation of paramagnetic ions in ionic crystals 8=9415
 spin-phonon coupling in conc. salts and effect on thermal cond. 8=18405
 spin relaxation theory, book 8=18446
 spin-spin relax. with strong coupling in strong external field 8=5520
 spin systems, irreversibility, free induction decay and spin diffusion 8=22894
 symmetrical lines contracted by exchange interaction, evaluation 8=6407
 taurine, paramagnetic susceptibility 8=5540
 tetrafluoroethylene-hexafluoropropylene copolymers, photo-induced and thermal radical conversions 8=1326
 tetrafluoroethylene-hexafluoropropylene copolymers, γ -irrad., e. s. r. of radicals formed 8=1325
 tetracyanoethylene, kinetics of free-radical formation 8=9686
 tetracyanoquinodimethane anion, aq. and alcoholic solns., e. s. r. spectra, rel. to water induced dimerization 8=8123
 tetramethylpyrazine rel. to triplet state struct., 77°K 8=22907
 thioxanthone anion radicals, e.p.r. and coupling consts. 8=4613
 thioxanthone sulfone anion radicals, e.p.r. and coupling consts. 8=4613
 thortveitite, (Y, Sc) Si_2O_7 8=9447
 TMPD-chloranil crysts. 8=8595
 triphenylene, negative ions in soln. 8=21170
 transition metal ion complex in soln., undergoing ligand exchange, e. s. r. spectra 8=4616
 traveling wave helices in e.s.r. spectrometers, characts. 8=3276
 trifluoromethylnitrobenzene radical anions in acetonitrile 8=4615
 triglycine fluoroberyllate, ferroelec., of Cu^{2+} ion 8=14105
 3,4,5-trimethoxyphenylglyoxal semidiones 8=12305
 triphenylene, triplet state and phosphoresc. 8=9655
 triplet mols. oriented in rigid-glass matrix 8=9448
 triradical in soln. 8=12350
 ultrasound absorpt. rel. to spin-lattice relax., quantum theory appl. 8=17487
 d,l-valine, hindered rotation study 8=4248
 xanthine oxidase, e. s. r. study of mechanism of action 8=14406
 Ag in irrad. metaphosphate glass 8=4990
 AgBr:Se, studies of $Se_2^{\cdot-}$ centres 8=13464
 AgCl: Ag^{2+} , Ag^{2+} detection by e. s. r. 8=14090
 AgCl:Se, studies of $Se_2^{\cdot-}$ centres 8=13464
 Al, conduction e. s. r., g-factors range and breakdown 8=5522
 Al silicates, irradiated 8=23044
 $Al_2O_3:Cr^{3+}$, electron and acoustical, in elec. field, profiles 8=18406
 $Al_2O_3:V^{3+}$, longit. relax. times by spin echo method 8=5541
 $AlSiO_4F_2$, e.p.r. of Fe^{3+} , hyperfine structure 8=2368
 $AlSiO_4F_2:Fe^{3+}$, fine structure 8=9412
 Au, small particles, conduction electrons 8=14093
 Ba(ClO_3) $_2 \cdot H_2O$ and Ba(ClO_3) $_2 \cdot D_2O$, irradiated with X-rays 8=18409
 Ba(ClO_3) $_2 \cdot H_2O$, X-irradiated, spectral changes in u.v. irradiation 8=18410
 BaF $_2:Mn^{2+}$, hyperfine coupling constants temp. dependence 8=18429

Paramagnetic resonance and relaxation—contd

BaTiO₃, cubic and tetragonal phases, of Eu²⁺ 8=14094
 BaTiO₃, reduced, e. s. r. interpret. at Ti³⁺ resonance 8=2375
 BaCl₂·2H₂O:Mn²⁺ 8=14115
 Ba₂Cu(H₂COO)₆·4H₂O:Cu²⁺, e.s.r. study 8=14103
 BaF₂: Eu²⁺, at 77-964°K 8=9424
 BrO, gas-phase double quantum transitions 8=12308
 BrO, gas-phase electron reson. 8=12345
 C, e. s. r., effect of halogens 8=18411
 C(CH₃)₃ in (CH₃)₂CCl₂, radical struct. obs. 8=12349
 C(CH₃)₂CCl in (CH₃)₂CCl₂, radical struct. obs. 8=12349
 CF₃I, photolysis in matrices at 4.2°K 8=14440
 CF₃OF, photolysis at low temp. 8=9727
 CF₃OOCF₃, photolysis at low temp. 8=9727
 C₂H₂ reaction with H- and O-atoms, e. s. r. investigation 8=2511
 C₂H₅ cyclic radicals, total splitting parameters 8=4243
 CH₂(CH₃)₂SiCl in (CH₃)₂SiCl₂, radical struct. obs. 8=12349
 CH₃CO₂⁻ trapped in γ-irrad. Na acetate, e. s. r. 8=4242
 (CH₃NH₂)₂CuCl₂ 8=14104
 CaCO₃, X-irrad., radical formation 8=5105
 CaF₂ containing Mn²⁺, OH⁻ and oxygen 8=2371
 CaF₂, ENDOR study of F centre 8=9417
 CaF₂: Cu²⁺ rel. to impurity-ion siting 8=9422
 CaF₂: Eu²⁺, at 77-964°K 8=9424
 CaF₂:Eu²⁺, stress induced quad. splitting using ENDOR tech. 8=22928
 CaF₂: Fe³⁺ 8=9437
 CaF₂, of Ho²⁺, stress effects 8=14128
 CaF₂:Mn²⁺, hyperfine coupling constants temp. dependence 8=18429
 CaF₂: Nd³⁺ cubic 8=5539
 CaF₂: N³⁺ 8=9437
 CaF₂: Ti³⁺ 8=9422
 CaF₂:Ti³⁺ and optical spectrum 8=14126
 CaF₂:Yb³⁺, rel. to polarization effects in cubic cryst. field 8=21800
 CaF₂: Yb³⁺ spin-lattice relax for Kramers doublets 8=9414
 2(Ca₂Mg₆Si₆O₃₂(OH)₂)·fMn²⁺, e.s.r. 8=18414
 CaMoO₄: Er³⁺, spectra at 4.2 and 10°K 8=18412
 CaO e.s.r. of F centres 8=13456
 CaSO₄, of Mn²⁺ allowed and forbidden transitions 8=14116
 CaWO₄:Ce, charge-compensated sites 8=9418
 CaWO₄:Nd³⁺, uniaxial pressure effect meas. 8=14121
 CaWO₄:Tb³⁺ spin-lattice relaxation time obs. 8=22914
 CaWO₄:Yb³⁺, charge compensation effect of Na⁺ on symmetry of Yb³⁺ by e. p. r. study 8=18413
 CaZrO₃:Mn²⁺, hyperfine transitions, obs. 8=14118
 CdCl₂:Ag, γ-irradiated, spectra 8=9419
 CdCl₂:Cu²⁺ layer, exchange coupled pairs spectrum 8=18416
 CdCl₂:Mn²⁺, study 8=22902
 CdCO₃:Co, rel. to antiferromag. props. 8=18372
 CdF₂:R, semiconducting, and i. r. studies 8=22901
 CdS, rel. to surface centres 8=18415
 CdS:Au, of photosensitive carriers 8=2362
 CdSe powder, surface investigation 8=8294
 CdS:Ti²⁺ single crystals 8=22900
 CdTe:Mn²⁺ cubic crystals, obs. 8=14119
 Ce³⁺ cpds in various solvents at 4.2°K rel. to mol. and phase props. 8=9436
 Ce ethylsulphate, spin-bath relaxation, Kapitza resistance 8=19700
 CeCl₃, relax. 1. 07°-4. 2°K 8=14097
 CeCl₃·7H₂O, spin-lattice and cross relaxation, 1. 1 to 4. 2°K 8=14096
 CeO₂: Er³⁺, at 3, 9. 4 and 36 Gc betw. 1. 5-77°K 8=5530
 ClO, gas-phase double quantum transitions 8=12308
 ClO, gas-phase electron reson. 8=12345
 CoCO₃, rel. to antiferromag. props. 8=18372
 Cr³⁺ trivalent ion hyperfine structure obs. 8=5553
 Cr(I) bistoluene complex, e. s. r. spectra 8=12311
 Cr³⁺ alum, weak fine struct. components 8=14098
 Cr³⁺ in alum lattice, relaxation behaviour 8=22903
 Cr(NH₃)₆NO²⁺ ion in soln., e. s. r. and N hyperfine splitting 8=1592
 CrO₂K₂, γ and n irradiated, e. s. r. 8=18417
 CrO₂(NH₄)₂, γ and n irradiated, e. s. r. 8=18417
 CsAl(SO₄)₂·12H₂O:Ti³⁺, single crystal obs. 8=18418
 CsCl: Mn²⁺, spin-Hamiltonian parameters 8=5534
 Cu in BeO 8=2366
 Cu(II) in ethylenediamine-water solns., e. p. r. 8=4621
 Cu(NH₃)₄SO₄·H₂O, exchange and "10/3 effect" 8=2365
 Cu(NH₃)₂Br₂·2H₂O 8=9423
 Cu²⁺ rhombic e. s. r. spectra, angular dependence of applied mag. field 8=5526
 CuCl₂·2H₂O, thermal detect., obs. 8=14100
 CuSO₄, anhydrous cryst. 8=2364
 CuSO₄·5H₂O, thermal detect., obs. 8=14100
 D₂O, at 77°K, γ-irrad., e. s. r. of OD radical 8=9439
 EuM₂, (M=Pt, Pd, Zn, Rh), mag. props. by Mossbauer e. p. r. 8=18334
 Fe-group ions, spectrum calcs. allowing for electron-phonon interaction 8=9410
 FeCl₂:Fe³⁺, Mn²⁺ at low temps. rel. to impurity nature and exchange coupling 8=14108

Paramagnetic resonance and relaxation—contd

α-FeOOH antiferro-paramag. ferromag. transition temps., obs. 8=22879
 Ga glasses 8=18420
 GaAs, of shallow Cd acceptors, at 77°K 8=18421
 Ga_{0.85}Fe_{0.15}O₃ magnetically ordered crystal in presence of external electric field 8=14087
 Ge, acoustic-donor spin resonance rel. to attenuation coeff. determ. 8=22096
 H, atomic, changes in spin states of up to 3 neighbouring protons 8=16227
 H atoms trapped in irrad. frozen aq. solns. 8=18423
 H₃C-CR₂R₂ radical in X-irradiated acetyl-(d, l)-alanine, effect of rotational quantization 8=22906
 HO₂ in Ar at 4. 2°K 8=18424
 H₂O at silica gels, proton-paramag. impurity interaction 8=12932
 H₂O₂-area addition compound, single crystal, γ-irradiated at 77°K, of O₂ 8=2373
 Ho ethyl sulphate, far-infrared high resolution spectroscopy with laser 8=14110
 InAs, e. s. r. at 4. 2°K 8=9429
 KAlF₄: Fe³⁺ 8=9426
 KCl:Ag, colour centres assoc. rel. to relax. process 8=8743
 KCl: Eu²⁺ 8=5529
 KCl:Mn²⁺, X-ray irradiated, superhyperfine structure 8=14117
 KCl:Pb²⁺, Tl⁺ and Ag⁺, resonance due to electrons in conduction band 8=14112
 KCl:RbCl crystals, of Q₁ colour centre 8=22905
 K₂Co(CN)₆:Fe³⁺, spin-spin interaction temp., 3 cm, 1. 8°K 8=18425
 K₂Cr(CN)₆, spin-phonon transition probabilities, meas. 8=5544
 K₂CuFe(CN)₆, tetragonal, and i. r. spectra, rel. to X-ray analysis 8=13265
 KH₂PO₄, ferroelec. domain switching by irradiation damage 8=18184
 KH₂PO₄, paraelectric, proton dynamics 8=9214
 KMgF₃:Ni²⁺, acoustic, propag. factor changes near reson. 8=22912
 K₂NiFe(CN)₆, cubic, and i. r. spectra, rel. to X-ray analysis 8=13265
 K₂SO₄:Mn²⁺, single cryst. 8=22910
 KTaO₃: Fe³⁺ 8=9425
 KTaO₃: Ni³⁺ 8=9425
 LaAlO₃:Cr³⁺, spectrum at room temp. 8=18426
 LaBr₃, e. s. r. spectra of Gd³⁺ rel. to temp. 8=2369
 LaCl₃, e. s. r. spectra of Gd³⁺ rel. to temp. 8=2369
 Li donors in Si, acoustic 8=9443
 Li solid and liquid alloys, conduction spin-lattice relax. time 8=9430
 LiAl(SiO₃)₂ (spodumene) natural crystals e. p. r. of Mn²⁺ 8=22908-9
 LiF, rel. to F-centre exchange interactions 8=17684
 LiF, ENDOR study of V_K centre rel. to lattice distortion 8=2009
 LiF, n-irrad., of Li, rel. to colloidal Li distrib. 8=9431
 LiF, n-irradiated, centre due to atomic H³ 8=18427
 LiF:Fe³⁺ system, crystal field distortions, e. s. r. study 8=13005
 LiH, rel. to F-centre exchange interactions 8=17684
 LiNbO₃:Cr³⁺, e. p. r. 8=18428
 LiNbO₃:Dy³⁺, e. p. r. 8=18428
 LiNbO₃:Er³⁺, e. p. r. 8=18428
 LiNbO₃:Nd³⁺, e. p. r. 8=18428
 LiNbO₃: Yb³⁺, Nd³⁺, Cr³⁺, and optical spectra 8=22999
 LiTaO₃: Yb³⁺, Nd³⁺, Cr³⁺, and optical spectra 8=22999
 MTiO₃, (M=Mn, Fe, Co and Ni), meas. 8=9398
 MgCl₂:Ag, γ-irradiated, spectra 8=9419
 Mg: Er, linewidth anisotropy 8=5531
 MgO: Co²⁺, spin-lattice relax. for Kramers doublets 8=9414
 MgO: Fe²⁺, microwave phonon interaction 8=9450
 MgO: Fe²⁺, ultrasonic, temp. depend. 8=2367
 MgO:Mn²⁺, angular depend. of intensities of "forbidden" transitions 8=18430
 MgO:Mn²⁺, stress induced quad. splitting using ENDOR tech. 8=22928
 MgO:Mn²⁺, transition probability temp. dependence 8=14113
 MgO: Ni²⁺, line investigation from spin-phonon interactions 8=5532
 MgO: Ni²⁺, microwave phonon interaction 8=9450
 Mn ferrite, simultaneous parallel pumping of electron and nuclear spin waves 8=14107
 MnCl₂·4H₂O, thermal detect., obs. 8=14100
 Mn(Mg)SO₄·4H₂O, of Mn²⁺, temp. dependence and spin-lattice relax. 8=9432
 MnSO₄·4H₂O, thermal detect., obs. 8=14100
 N, gaseous atoms, spin-relax. effects 8=12098
 ND₂Br, spin-lattice relax. and phase transitions 8=4713
 NH₄Br:Cu²⁺ 8=14102
 NH₄Cl: VO²⁺ 8=5542
 NH₄H₂PO₄, antiferroelectric, nuclear and electron studies 8=22671
 NO, gas-phase double quantum transitions 8=12308

Paramagnetic resonance and relaxation—contd

- NO molecule, electric field effect, obs. of transitions 8=16349
 NO₂ in irradi. KNO₃ at 4°K 8=5537
 NO₂ radical, interpretation 8=7621
 NaBrO₃, γ -irradi., asymmetric e. s. r. spectrum due to paramag. centres 8=2372
 NaCl:Ag, colour centres assoc., rel. to relax. process 8=8743
 NaCl:Mn²⁺, hyperfine interaction, influence of lattice defects 8=18431
 NaNO₃, X-irradi., radical formation 8=5105
 NaSbF₆, X-irradi. cryst. 8=5538
 Nd ethylsulphate, for determ. of crystal field parameters 8=18445
 Nd ethyl sulphate, saturation of Faraday effect and spin lattice relax. 8=14278
 Nd³⁺ cpds in various solvents at 4.2°K rel. to mol. and phase props. 8=9436
 O atom reaction with SO₂, e. s. r. study 8=5715
 O₂(¹ Δ) collisional-radiative reaction 8=12220
 O + D₂ → OD + D reaction, e. s. r. detect. 8=14375
 OH reaction with oximes, free radical inter-mediate 8=14394
 O¹⁶O¹⁸ molecule, e. p. r. spectrum 8=12309
 O¹⁸-O¹⁷, O¹⁷-O¹⁸, O¹⁸-O¹⁸ 8=4222-3
 PF₄, electron spin resonance spectrum and second-order hyperfine effects 8=4224
 P₂O₅, glassy and cryst., γ -irradi. 8=22913
 Pr(NO₃)₃.6H₂O:Gd³⁺ spectrum, obs. 8=14109
 RbMnF₃, simultaneous parallel pumping of electron and nuclear spin waves 8=14107
 Ru, in solid Ar matrix, X-band and optical absorpt. spectra 8=18558
 SH, gas-phase electron reson. 8=12345
 SO, gas-phase double quantum transitions 8=12308
 SO(¹ Δ), gas-phase electron reson. 8=12345
 SSe⁻ in alkali iodide crystals. 8=14123
 S³³O¹⁸, gas phase 8=12353
 Se₂⁻ in alkali iodide crystals. 8=14123
 Si, acoustic-donor spin resonance rel. to attenuation coeff. determ. 8=22096
 Si:P, e-irradiated, spin-lattice relax. rel. to defect production 8=18434
 SiC, electron states study 8=9122
 Si²⁹Cl₃, hyperfine coupling const. rel. to struct., obs. 8=12349
 SmCl₃.6H₂O: Gd³⁺ single crystal 8=9427
 Sm(NO₃)₃.6H₂O:Gd³⁺ 8=18345
 SrCl₂ crystals., reaction intermediate with F₂ 8=14124
 SrF₂, F-centres obs. 8=2014
 SrF₂: Eu²⁺, at 77-964°K 8=9424
 SrF₂: V²⁺ 8=9446
 SrMoO₄: Er³⁺, spectra at 4.2 and 10°K 8=18412
 SrTiO₃, of Fe³⁺, axial spectrum, study at mm. wavelengths 8=14106
 SrTiO₃: Ti³⁺, electronic structure 8=9445
 TeO₄K₂, γ -irradi., e. s. r. spectra 8=9444
 TeO₄Na₂, γ -irradi., e. s. r. spectra 8=9444
 ThO₂, of Yb³⁺, stress effects 8=14128
 Ti, 4-valent, cpds. with OH and O₂H radicals, e. s. r. 8=2522
 TiCl₃ + H₂O₂ reaction 8=2521
 Ti₂O₃, e. s. r. at 77°K rel. to semiconductor-metal transition 8=14125
 TmN, excited state, crystal field, exchange effects 8=2376
 UF₆M (M = Li, Na, Cs, K, NH₄, Rb, Ag, Tl), absorption 8=14127
 UO₂, spin-lattice interaction, ground-state and spin-wave excitations 8=18437
 V(CO)₆, e. s. r. spectrum at liq. He temps. 8=18438
 V(O)₂ bisaromatic complexes, e. s. r. spectra 8=12311
 V₂O₅:Cr, spectral line explanations 8=9421
 V₂O₅:Mn crystals., 77°K 8=14144
 Y(Al, Cr)₃(BO₃)₃, of Cr³⁺ at room temp. 8=18439
 YFe garnet:CuO, and preparation 8=21968
 YGa garnet:Ru³⁺ and YAl garnet:Ru³⁺, data 8=18440
 YVO₄: Gd³⁺ 8=9428
 Zn 2,2-liquoline, oriented in rigid-glass matrix 8=9448
 Zn(NH₄)₂(SO₄)₂.6H₂O: Co²⁺ forbidden hyperfine spectra 8=9420
 ZnS:Cr⁺, photo-induced, decay obs. 77°-325°K 8=18441
 ZnTe: Cr⁺, photo-excited paramag. reson. 8=5525
 ZnTe: Pb³⁺, photo-induced res. at 77°K 8=9440
 ZnWO₄: (Cr³⁺, Li⁺), electric broadening of lines 8=18442
 ZnWO₄:Cr³⁺, theory 8=14085
 ZnWO₄: Cu²⁺, 8=5527
 ZnWO₄: Mn²⁺ rel. to conc. and temp. 8=5535

measurement

- ang. momentum method at low fields 8=14122
 computer of average transients, for rapidly changing spectra 8=6405
 cryostats, room temp. to 4.2°K 8=10793
 instrumentation, 100 kHz amplifiers, signal and power 8=6406
 positioning of samples in microwave cavities at low temp. 8=5517
 sensitivity, dependence on cavity resonator geometry 8=387
 spin-lattice relax. temp., meas. by optical Faraday rot. 8=22895

Paramagnetic resonance and relaxation — contd
measurement — contd

- thermal-noise and voltage decrease across tuned circuit as e. p. r. meas. method 8=19906
 by thermocouple for substs. with broad absorpt. lines, obs. 8=1590
 ultrasonic, continuous wave microwave spectrometer 8=19905

Paramagnetism

 sprays, determ. from fluorescent photography using Q-switched laser light source 8=4636
 superconductor, granular, size effect 8=17955
 suspensions, from relax. of transient elec. birefringence 8=16899
 thoria sols, meas. by scatt. 8=12958
 tin, effect on melting point 8=16925
 wustite, and Mg doping dependence of Seebeck coeff. rel. to p to n transition 8=5387

Particle size—contd

- Al nuclei on MoS₂ substrate, effect on elastic strain 8=8823
- Au films, rel. to recrystallization obs. in electron microscope 8=8314
- CoFe₂O₄, coprecipitated, distribution 8=4843
- Dy₂O₃ dispersion in UO₂, behaviour in steep temp. grad. 8=4694
- Eu₂O₃ dispersion in UO₂, behaviour in steep temp. grad. 8=4694
- Fe, limits for magnetostatic accretion in solar system 8=23632
- Fe-whiskers, rel. to nucleation mag. field strength investigations 8=5467
- Fe-12at. %Ni alloy, finely dispersed system, effect on phase comp. 8=17280
- H₂ solid-liquid mixture obs. 8=19067
- H₂SO₄ aerosols, distrib., by light scatt. 8=12951
- Li-silicate glass, of second phase particles, distrib. 8=21847
- Mg, cold-worked, and strain determ. by variance method 8=1761
- MgF₂, sintered, effect of additives on density and grain size 8=17026
- MnFe₂O₄, effect on mag. props. 8=14022
- NaCl, elec. conductivity depend., obs. 8=17913
- NaCl, rel. to fracture strength 8=22382
- Nb foil, effects on dislocation density and flow stress 8=4980
- Ni:Al₂O₃ sintered, compressive strength grain size dependence 8=2048
- NiO, Co⁵⁷-doped, effect on Mössbauer spectra rel. to magnetization state temp. dependence 8=4680
- Sm₂O₃ dispersion in UO₂, behaviour in steep temp. grad. 8=4694
- in UO₂ powders, and shape, rel. to sintering props. 8=21834
- Y vanadate phosphors, rel. to preparation 8=13048

Particle spectrometers

- See also Alpha-ray spectrometers, etc.
- beam structure analysing circuit 8=617
- clipping problems, circuit for solution 8=6671
- cosmic rays, primary, nuclear charge obs. 8=15878
- current-pulse use with semiconductor detectors 8=610
- electrostatic analyser with high energy resolution in (p, γ) reactions on Na²³ and Al²⁷ 8=958
- energy meas. in track detectors by hole diameter 8=11293
- long magnetic lens, alternating direction implicit method of magnetic field meas. 8=6337
- magnetic analyzer with homogeneous field 8=11294
- magnetic, appl. of Fermat's princ. to trajectories 8=6629
- magnetic, 60° double focusing, design construction and performance 8=6627
- magnetic spectrographs, semi-popular review 8=604
- magnetic spectrograph, split-pole, ion optics 8=3228
- nuclear beam, high energy, high frequency, impulse operation 8=11332
- photoproduction in GeV range 8=6776
- preamplifier allowing use of 10-stage photo-multiplier 8=3474
- pulse generator and rectifier circuit 8=15632
- pulse-height analyzer for charged-particle spectroscopy on lunar surface 8=20214
- scintillation, system for instantaneous plotting of output 8=15636
- semiconductor oxygen conc., activation spectrometry 8=18083
- for solar X-ray spectrum, proportional counters 8=23709
- spectrograph, focus, effect of fringing field 8=10920
- Ge 2 detector telescope for separation of p and heavier particles 8=6654
- Ge(Li) detectors, fabrication and appl. 8=15630
- NaI crystal scintillation, bremsstrahlung meas. 8=3582

Particle track visualization

- See also Bubble chambers; Cloud chambers; Luminescence chambers; Nuclear track emulsions; Spark chambers.
- analogue computer method 8=6680
- bubble chambers, appl. of holography 8=6567
- computer controlled precision film scanner 8=3481
- dielectric plastic particle detector using rate of chemical etching 8=11331
- emulsion chamber for about 10¹³eV particle interactions 8=627
- film scanner cathode ray, computer directed 8=3482
- plastic detectors for light nuclei 8=20220
- plastics, cosmic ray nuclei 8=3741
- solid-state detectors for reactor expts. 8=12021
- streamer chambers, discharge mechanisms obs. 8=11326
- streamer tracks, ang. depend. of brightness 8=20226
- telecentric system 8=3349
- AgCl crystals, α-track decoration technique 8=15644
- As ions in olivine and hypersthene crystals. 8=11325
- I ions in olivine and hypersthene crystals. 8=11325

Particle tracks

- See also Particle range.
- bubble chamber exposures, electronic co-ordinate measurements 8=482

Particle tracks—contd

- fission fragments, excitation of N₂ gas along entire track 8=7531
- fission track densities, etched in int. and ext. surfaces, comparison after n irradi. 8=20852
- "hammer"; having no associated β particle 8=20221
- latent image in nuclear emulsions, pulsed-field erasure 8=11330
- in meteorites, cosmic-ray intensity obs. 8=20599
- in meteorites, heavy cosmic-rays, identification 8=20596
- mica, caused by e showers 8=22246
- momentum and direction, multiple scatt. effect 8=6683
- photographs in track chambers, calc. of kinematic parameters 8=11323
- spark chamber, multiwire, magnetostructure delay line 8=625
- spark chamber, wire, cylindrical, strategy for recognizing straight tracks 8=11329
- three-dimensional pictures, accuracy rel. to camera characts. 8=11324
- AgCl crystals, recording technique 8=15644

Particle velocity analysis

- See also Alpha-ray spectrometers; Beta-ray spectrometers; Ion velocity; Mass spectrometers; Particle range.
- atomic and mol. beams, time-of-flight method 8=16379
- cylindrical mirrors and spherical deflectors, comparison 8=15309
- fission fragment meas. using sandwiched acetylcelluloid foils 8=20860
- in single crystal, energy-loss distrib. calc. 8=20186
- spherical deflectors and cylindrical mirrors, comparison 8=15309
- rocket propulsion, laser-Doppler meas. 8=23457
- time-of-flight obs., large-area isochronous scintillation counters 8=15631

Particles. See Elementary particles; Particle range;

Scattering, particles; and under individual particles, e.g. Protons and antiprotons.

Paschen-Back effect. See Spectra.

Patterson diagrams. See X-ray crystallography/calculation methods.

Peierls-Nabarro force. See Crystal imperfections/dislocations; Internal friction.

Peltier effect. See Thermoelectricity.

Pendellösung fringes. See X-ray crystallography.

Pendulums

- bifilar, dynamics 8=6043
- inverted, stabilized, small oscillations 8=10527
- period meas., electronic system, ± 600 ns. 8=10481
- period meas. using phototransistor output triggering oscilloscope 8=10479
- properties of conjugate axes 8=2914
- reed, apparatus for internal friction meas. 8=13495
- spring suspensions 8=32
- stability with oscillating suspension 8=14944
- temp. control, electronic system 8=10480
- torsion, for automatic elastic moduli meas. 8=5006
- torsion, internal friction meas. in alloys 8=8839
- torsional for plastic materials under tensile strain 8=8880
- truncated ring, equivalence 8=10528
- vibrating solid friction, high frequency behaviour 8=3023

Periodic system

- See also Elements.
- atomic props., analysis 8=20918
- electronshell filling order, pressure effects 8=7364

Permalloy. See Iron alloys; Nickel alloys.

Permeability, magnetic. See magnetic properties of substances; Magnetization process.

Permeability, mechanical

- See also Diffusion in solids.
- inert gases through rubber membrane 8=1487
- liquids, through polyethylene membrane temp. effects 8=1508
- transpiration of propane and ethane 8=12662
- Fe-Mn austenite, H, effect of plastic deform. and annealing 8=17573
- Ni, kinetics of H₂ permeation 8=8682
- W, of H₂ and O₂, rates pressure, thickness and temp. dependence 8=4958

Permittivity. See Dielectric properties of substances.

Perturbation theory. See Field theory, quantum; Quantum theory.

Phase-contrast microscopy. See Microscopy.

Phase diagrams. See Phase equilibrium; Phase transformations.

Phase equilibrium

- See also Solubility; Solutions.
- acetic acid-water system, vapour-liquid 8=12974
- alkali metal-NH₃ solns., model 8=12808
- n-alkane derivative isomers with OH groups and n-heptane mixtures 8=16949
- alloys, finely dispersed two-phase, recrystn. behaviour 8=8395
- austenite, alloyed, C activity at 1000°C 8=17008
- benzene-cyclohexane, vapour-liquid equilibrium data 8=4653
- benzene-H₂O system, pressure effect 8=8180
- benzene-isobutanol, vapour-liquid equilib. data 8=4653

Phase equilibrium—contd

binary systems, conc., central X-ray diffusion, theory 8=13197
 coexistence curve for liquid and gas near critical point 8=21769
 cooperative phenomena in triangular lattice 8=89
 crystals of higher order, relation to other super-phases 8=8363
 crystal surface curvature, thermodynamic anal. 8=8377
 cyclohexane-isobutanol, vapour-liquid equilib. data 8=4653
 diphenyl- α , α' -dipyridyl system, constitution diagram 8=4725
 ethylene-chlorhydrine-water system, pressure effects 8=16938
 form of finite crystals, surface energy 8=21866
 garnet-pyroxene in MgSiO_3 - CaSiO_3 - Al_2O_3 , press. depend. obs. 8=1676
 ice phases, selective nucleation using different org. nucleators 8=4805
 ice, superheated, metastable, in liq.-water inclusions under high neg. pressure 8=1609
 ice/water interface, electrostatic potentials 8=18723
 iron alloys saturated with oxides, liquid, first-order interactions rel. to oxide solubilities 8=16797
 iron oxide scale, hematite phase physico-chemical state 8=17201
 lanthanide distrib. between pyroxene and garnet 8=5780
 Laves structure formation rel. to MgM_2 , ($\text{M} = \text{Cu}, \text{Zn}, \text{Ni}$) 8=13071
 levitation melting apparatus 8=1669
 liquid-gas supercritical region, C_1 and C_2 extrema calc. from phenomenological theory 8=12978
 liquid-vapour phase diagram, student expt. 8=21768
 liquids, quaternary systems 8=1529
 metal-interstitial systems, phase boundary motion and polyphase diffusion 8=17035
 molten salts, ternary mixtures 8=21648
 mullite, stability from CoO - Al_2O_3 - SiO_2 equilibrium 8=9669
 oscillations round steady state in systems of chem. reactions 8=2500
 phase diagram determ. by e probe microanalysis 8=17034
 phenol-aqueous sodium salicylate- α -methyl naphthalene, solubility and equilib. data 8=4641
 polyamides, increase in thermostability, based on piperazine after u. v. irradiat. 8=17182
 polymer fibres, supermolec. order, study by polarized light scatt. 8=18581
 semiconductor alloys, $\text{A}_x\text{I}^{\text{VI}}\text{B}_{1-x}\text{I}^{\text{III}}\text{C}_3^{\text{VI}}$ ($\text{A} = \text{Cu}, \text{Ag}; \text{C} = \text{Te}, \text{Se}; \text{B} = \text{In}$), equilib. diagrams and structure 8=8266
 steel, temp. determ. by mag. meas. 8=17062
 surface phase theory, experimental test 8=21530
 vapour-liquid, at high press. 8=16939
 vapour pressure of simple liquids 8=21779
 Zircaloy-2, annealed in α and $(\alpha+\beta)$ regions, H_2 terminal solubility 8=8250
 Ag-Cu-Sn system, electronic phases rel. to chemical displacements 8=17002
 AgI-Ag₂S, phase distrib. 8=21838
 Al distrib. in schistic biotites, phengites and chlorites 8=13055
 Al₁₅-type phases, binary, containing transition elements, atomic ordering 8=17419
 in Al-Dy-U system, rel. to use of Dy as burnable poison in (U/Al) nuclear fuel 8=13060
 Al-Fe-Si alloy, Al-rich, phases 8=13058
 α -AlFeSi, four possible phases 8=13057
 Al-U-Sm system, rel. to use of Sm as burnable poison in Al-U fuels 8=13059
 Al₂WO₃ bronzes, struct. evolution with temp., phase stability 8=17048
 Ar, adsorbed in equilibrium with gas in ultrahigh vacuum, obs. 8=21530
 Au₇₇Mg₂₃ phase, crystal structure 8=13251
 Au-Mg system, some phase structures 8=17043
 Bi-O system, new tetragonal phase, crystal structure 8=17347
 B₂O₃-SiO₂ system, metastable immiscibility 8=21748
 Bi-Tl-Te systems, in Te-rich regions 8=4703
 Ca phosphate, stoichiometry 8=13135
 CaAl_2O_4 - CaAl_2O_6 - $\text{Ca}_2\text{Al}_2\text{SiO}_7$ - MgAl_2O_4 , liquidus relations in quaternary subsystem 8=21763
 Ca₂WO₃ bronzes, struct. evolution with temp., phase stability 8=17048
 CdS, thin films, structure and phase composition 8=4746
 Cd-Se system 8=16955
 Cr-Fe-C-N alloys, 18% Cr, constitutional diagrams 8=21822
 Cu-InAs system 8=17011
 CuO-"FeO"-SiO₂ solid solutions, activity-composition relns. 8=17009
 CuSO₄-H₂O system, phase boundaries to 40 kilobars 8=4640
 of Cu-Te system in thin layers, electron-diff. obs. 8=17057
 Cu-Zn system 8=13546
 Fe alloy, levitation melting apparatus 8=1669
 Fe-C alloys, diags. from density and emissive power meas. 8=1673

Phase equilibrium—contd

Fe-In binary system, no intermetallic cpds. 8=8160
 Fe-M, ($\text{M} = \text{Mn}, \text{Ni}, \text{Sb}, \text{Sn}, \text{W}$) systems α - γ equilib. 8=4709
 Fe-Ni phase diagram, e probe microanalysis obs. 8=17034
 Fe-Ni-As constitution diagram, up to 50 wt.%As 8=17074
 FeO-Fe₂O₃-ZrO₂-SiO₂ system 8=17072
 Fe-Ta system, liquid and solid δ -phases 8=8161
 GaAs vaporization at 900-1200°K and vapour pressures 8=4664
 Ga-As-M ($\text{M} = \text{Au}, \text{Ag}, \text{Cu}$), ternary liquidus-solidus diags. 8=4639
 Ga-As-Zn system, vapour pressure on liquidus lines 8=21764
 Ga-Fe system, and comp. and struct., obs. 8=21749
 Ga-P-Te system 8=17082
 H₂ liquid-solid mixture storage obs. 8=19067
 H₂ terminal solubility and partitioning in α -Zr, Zircaloy-2 and Zircaloy-4 8=8249
 He-methane solid-vapour system, 55°-91°K, to 140 atm. 8=16953
 HgX₂-TLX, ($\text{X} = \text{I}, \text{Br}, \text{Cl}$) systems, cpds. formed 8=17085
 InSb-NiSb, eutectiferous type of constitution 8=4691
 K-graphite system lamellar cpds 8=4712
 KBr-KI system, thermal analysis 8=17092
 KCl-NaCl, solid-liquid 8=8164
 K₂O-SiO₂ solutions, activities 8=21620
 K₂V₂O₈ system, new phases of narrow homogeneity range, cryst. features 8=17086
 La telluride system, isostructural phases, crystal chemistry 8=17202
 La₂O₃-Al₂O₃ system, alumina-rich phase diagram 8=21740
 LiMSiO₄, ($\text{M} = \text{Al}$ with Ga and Ge substitution), with SiO₂ and GeO₂ 8=17013
 Li₂O-SiO₂ solutions, activities 8=21620
 MgM₂, ($\text{M} = \text{Cu}, \text{Zn}, \text{Ni}$), Laves structure formation 8=13071
 MgO-Al₂O₃ system, phases in splat-quenched melts 8=1677
 MgO-Al₂O₃-Cr₂O₃ system, rel. to coherent precip. 8=21848
 MgO-MgSiO₃ system, reaction product distrib. from cathodoluminesc. device 8=18641
 Mn-O, high-temp. diagram 8=16954
 MnSe-MnS system 8=17014
 Mn-Zn ferrite, phase diagram determined from cation diffusion coefficient 8=9691
 NH₃-H₂O-N₂-H₂ system, high press. vapour-liq. equilib. 8=12977
 NaCl-KCl system, thermal analysis 8=17092
 Na-K-NH₃ solns. 8=8014
 Na-NH₃ solns., with added NaBr and NaN₃ 8=8013
 Na₂O-SiO₂ solutions, activities 8=21620
 Nb-Fe alloys, diagram 8=8272
 Nb-Mo-C alloys, solid solubility, phase diagram, constitution 8=8275
 Nb-Ni-Al alloy, M phase structure determ. 8=17403
 Nd telluride system, isostructural phases, crystal chemistry 8=17202
 Ne-H₂ liquid-vapour system, 26°-42.5°K, 10-25 atm. 8=16937
 Pb-PbO-As₂O₃ system, slag-metal 8=8277
 PbO-TiO₂-ZrO₂ system 8=17099
 Pb-S-O system, equilib. relns., diagrammatic representation 8=16920
 PbTe-Au pseudobinary section 8=17098
 PbTe-Fe pseudobinary section, diag. 8=17097
 Pr telluride system, isostructural phases, crystal chemistry 8=17202
 in Pu-Th system 8=21854
 Pu-Zr phase diagram, obs. 8=8279
 Rh-Hg system, phase diagram 0-500°C 8=8280
 Se phase identification in V₂VI_{3+x} alloys 8=17102
 Sn-Te, about 840°C and 12.0 kb, liquid and two solid polymorphs. 8=1614
 Ta-O system, new phases, e-diff. study 8=17101
 Te phase identification in V₂VI_{3+x} alloys 8=17102
 Ti-Al-Co alloys, and microstructure rel. to Ti-rich corner 8=4851
 Ti-3 wt.%Fe alloy, quenched from β -sphere, study of martensites 8=21859
 TiFe₂, atomic arrangement in homogeneity range of Laves phase 8=1813
 α -Ti/H₂(D₂) system, thermodynamic props. 8=21858
 ϵ -Ti-N, high-temp. stability 8=21857
 in UAl₃ coatings on U, protection against U oxidation 8=21892
 U-C system, phase diagrams 8=21860
 in UC-Fe-Cr system, compatibility relationships 8=21861
 in UC-Fe-Ni, compatibility relationships 8=21861
 UN_(x) + U₍₁₎ + N_(g) system, N equil. pressure and UN thermodynamic props. 8=18646
 in U-Ni-C system, compatibility relationships 8=21861
 U-O system, non-stoichiometric oxides 8=21788
 U-O system, phase diagrams 8=21860
 U-O-C system, phase diagrams 8=21860
 UO₂-PuO₂ system, ideality, heats of fusion obs. 8=8284
 UO₂-PuO₂ system, solid-liquid phase diagram 8=8169
 U-UH₃ phase diagram \leq 150 atm and 860°C 8=8190
 V-Fe-Si alloy, D phase structure determ. 8=17403
 V-Ga alloys, anal. rel. to anodic oxidation 8=8286

Phase equilibrium—contd

- W-Mo-UC phase diagrams and ternary peritectics, obs. 8=9710
 Y_2O_3 - Al_2O_3 system, liquidus curve meas. 8=16921
 Y_2O_3 - ZrO_2 , cubic phase stabilization at low temps. 8=8287
 Zn-Te system 8=16956
 $ZrFe_2$, atomic arrangement in homogeneity range of Laves phase 8=1813
 Zr-H-C system, ZrC_{xH_y} cpd. formation and structure analysis 8=17433
 Zr-H-N system, ZrN_{xH_y} cpd. formation and structure analysis 8=17433
 ZrM_2 - H_2 systems, (M = Cr, V, Mo), betw. 0° and 900°C 8=4723
 Zr-2.5wt%Nb, annealed in α and ($\alpha+\beta$) regions, H_2 terminal solubility 8=8250
 ZrO_2 - HfO_2 system, by metallograpy, X-ray diffr. and microprobe analysis 8=21863

Phase meters. See Electrical measurement.

Phase transformations

- alloys, above solidus temp., fracture and deform. rel. to liquid content 8=22304
 anatase-rutile, enthalpy obs. 8=13074
 beryl and beryl melts, thermal decomposition at high temps., press. depend. 8=18645
 b.c.c. to σ -phase, atomic mechanism 8=17030
 Bose gas, quantum theory of second kind 8=10651
 calorimeter obs. 8=6221
 cholesterol mynstate liquid cryst. mesophase polymorphism, obs. 8=12802
 coexistence curve for liquid and gas near critical point 8=21769
 composite growth from melts 8=4647
 correlation function near critical point, thermodynamic behaviour 8=16914
 critical binary fluids, spectral width temp. and angular dependence 8=21778
 critical points, density fluctuations and Yang-Lee theory 8=10620
 at critical point, dynamical props. from generalized scaling laws 8=2346
 critical point thermodynamics, fundamental problems 8=12962
 cyclohexane-aniline, critical binary fluids, spectral width temp. and angular dependence 8=21778
 Curie point, dynamical susceptibility in Ising model 8=14985
 earth, phase boundary motion rel. to pressure, calc. 8=23201
 ethanol, critical supersaturation for homogeneous nucleation 8=1621
 eutectic systems, three-component, triple and binary points 8=12961
 gas, critical, sound attenuation 8=12688
 hard sphere fluid 8=12578
 heat insulation coatings, heat cond. eqns., numerical solns. 8=237
 heat transfer problems for time-depend. surface temp., approx. soln. appl. to Stefan problem 8=16913
 hexane, critical supersaturation for homogeneous nucleation 8=1621
 Ising model, second order 8=14986
 kinetic phase transitions 8=21743
 lattice gas model, props. of coexistent phases 8=4638
 liquid-crystal transition of quantum system at T = 0 8=119
 liquid-gas supercritical region, C_1 and C_2 extrema calc. from phenomenological theory 8=12978
 liquids and solids, simple, changes of state 8=17032
 liquid-vapour, anal. of change using irreversible thermodynamics 8=21766
 metals, supercooled, dynamic nucleation 8=21760
 metastable, state-area principle 8=12963
 methanol, critical supersaturation for homogeneous nucleation 8=1621
 near critical point, deceleration, thermodynamics 8=8162
 one-dimensional systems with hard cores, absence of transitions 8=19455
 n-pentane, solidification at high press. 8=21747
 points of second kind, theory of light scatt. 8=9489
 polynucleotides, synthetic, helix-coil transition 8=16387
 polypeptides, helix-coil transition, proton mag. resonance obs. 8=21211
 Portland cement clinker, Ca_3SiO_5 and Ca_2SiO_5 phases, high-temp. microscopic investigations 8=21841
 propionate groups, and retarded motion 8=8229
 regelation, expt. using objects of different geometries and thermal props. 8=8167
 regelation expts. with wires 8=8168
 regelation, theory 8=8165
 regelation, theory, supplementary note 8=8166
 second kind, hypothesis of correlation similarity in theory 8=19449
 sound waves coupled to infinities in transport coeffs. 8=10669
 square-well fluid 8=12581
 stars, eqns. of state for equilibrium 8=5861
 steam, thermodynamic props., near critical point 8=7920
 surface tension near crit. pt., quasichem. approx. 8=21635

Phase transformations—contd

- vapour to liquid, surface resistance 8=12975
 water, critical supersaturation for homogeneous nucleation 8=1621
 Al-Cu alloys, dendrite arm spacing rel. to coarsening effect 8=4820
 Al_2O_3 vapour-deposited, 300-1200°C 8=13061
 Au-Cd binary system, point defect segregation at melting rel. to comp. 8=17624
 Bi, Sn and Te doped, solid and liq. phase boundary, Peltier coeff. 8=9238
 CO_2 near critical point, admixture density distrib. 8=21744
 Fe-Cr-N ternary system, point defect segregation at melting rel. to comp. 8=17624
 Bi, Sn and Te doped, solid and liq. phase boundary, Peltier coeff. 8=9238
 CO_2 near critical point, admixture density distrib. 8=21744
 Fe-Cr-N ternary system, point defect segregation at melting rel. to comp. 8=17624
 Ga-Fe system, and comp. and struct. obs. 8=21749
 GaS, thermal stability 8=21786
 Ge undercooling 8=4649
 H, liq.-solid mixtures, quality determ. 8=15138
 He-3, 4, solid liquid density prediction 8=10813
 He-n-butane system, P-V-T-x relns. showing gas-gas equilib. 8=12979
 He⁴, liquid, λ -transition, Patashinskii-Pokrovskii theory 8=255
 He⁴, turbulently flowing, λ -point shift 8=19694
 K vapor, supersaturation and condensation shocks 8=12982
 $K_4Fe(CN)_6 \cdot 3H_2O$, ferroelectric, Mössbauer test for lattice-dynamical model 8=22667
 Mn-Zn eutectics, shock-decanted, interface examination 8=8170
 N_2 adsorbed on W, caused by e-impact 8=21913
 N_2 , liq. solid, dramatic demons. 8=1607
 $NaH_2(SeO_3)_2$ and $Na_2(SeO_3)_2$, order-disorder, isotope effects in crystal symm. and nature 8=21849
 Ni_2SiO_4 (cubic nickel orthosilicate), synthesis from stoichiometric compound 8=21853
 Pb-Sn alloys, composite growth from melt 8=4648
 Pb-Sn eutectic, interphase boundary energy 8=16933
 in Pu-Th system, peritectic at 596°C and eutectoid at 582°C 8=21854
 SF_6 - CO_2 , critical binary fluids, spectral width temp. and angular dependence 8=21778
 W-Mo-UC ternary peritectics and phase diagrams, obs. 8=9710
 ZrO_2 - TiO_2 liquidus curve, specular reflection method in solar furnace 8=1608
- solid-state**
- alkali aluminogermanates, at high press., rel. to geochem. 8=8261
 alkali aluminosilicates, at high press., rel. to geochem. 8=8261
 Alni A, magnetization coercive field strength, time- and temp.-depend. 8=5460
 Alnico, structure on formation at different ageing temps. (300-800°C) 8=17077
 anatase formation at high temps. 8=1684
 antiferromagnetism in a mag. field, mol. field treatment 8=14062
 austenite formation from spheroidized ferrite-carbide aggregate, kinetics 8=21844
 austenitic steel, sigma phase precip., from thin-foil transformation studies 8=1674
 binary cpds., kinetic, in crystallization, computer model 8=4794
 boehmite to γ - Al_2O_3 , rel. to anodic oxidation of Al in presence of hydrated oxide 8=18729
 β -brass, martensitic transform., deformation effects 8=21843
 β -brass, order-disorder transition, study by n diffraction 8=17051
 cellulose triacetate films, amorphous and cryst., transition temps. 8=4724
 Conference, Rennes, April 1965 8=8259
 copper formate tetrahydrate, antiferroelectric, cell doubling 8=9222
 freezing rate, effect of heat evolution, semi-infinite slab 8=16932
 glass, four new oxide phases, rapid quenching techniques 8=5087
 goethite dehydration and haematite/magnetite formation rel. to c.c.p. orientations 8=4875
 hexachlorocyclopentadiene, two phases 8=8289
 and holomorphy, scaling law for mag. systems 8=22740
 ice, amorphous \rightarrow hexagonal, enthalpy and ht. capacity changes 8=21846
 ice doped with Mössbauer ions, cubic to hex. 8=13069
 isothermal, time-dependent theory of interface stability 8=1667
 ionic crystals, under high static pressures, review 8=4699
 lattice parameters change around interface, meas. 8=8489
 magnetic films, ageing, analytic solution 8=22784
 magnetic structures, periodic 8=13990
 martensite-austenite, habit planes, with the aid of Kossel diagrams 8=4853
 metallic alloys, order-disorder and ageing, crystalline structure changes in early stages 8=17036
 metal bond interfaces, diffusion-induced strains variation during ageing 8=13506
 metals, under high static pressures, review 8=4699

Phase transformations—contd

solid-state—contd

- methane, transition calcs. using James-Keenan model 8=17110
 model I-D lattice 8=2965
 Mössbauer spectrometry, extension of range 8=20362
 multiphase diffusion couples, lattice transform. at interface on supercooling 8=17552
 nucleation theory of reactions 8=23090
 octahydroanthracene crystals, polymorphic transitions, impurities influence 8=17109
 ordering of ternary b. c. c. alloys having three types of sites, theory 8=17033
 perovskite structure, second-order phase, symmetry change theory 8=22663
 perovskite-type crystals, distorted, rel. to lattice dynamics of atomic displacive transitions 8=17332
 polyalkyl methacrylates, multiple transitions 8=21864
 polymethylmethacrylate, temp. depend. of conformation transitions and dipole moment 8=17111
 polyurethanes, linear, kinetics of glass form. in amorphous and cryst. state 8=22110
 PVC, effect of u. v. irradiation on glass transition temp. 8=17181
 quartz, α - β assoc. lattice modes from Raman scatt. -196-615°C 8=1682
 quartz, high-low inversion, press. 6 to 35 kb, obs. 8=1681
 quasi-binary crystals of continuously variable comp., order-disorder kinetic model 8=4701
 rare earth oxides, X-ray and spectrographic investigations 8=4722
 rocks, under shock compression 8=9800
 rubbers, study by radio-thermoluminesc. 8=13077
 second order rel. to Husimi-Templey model in ferromagnetism 8=13977
 second-order, Landau theory, $[\Gamma]^3$ and $[\Gamma]^2$ for crystallographic point groups 8=17031
 second order, specific heat, singularity using complex temperature plane 8=13365
 second-order, thermodynamic discontinuities 8=1668
 second order transitions as critical phenomena of phase equilibrium 8=8260
 semiconductors, under high static pressures, review 8=4699
 spinodal decomposition in multicomponent system, thermodynamic conditions 8=4700
 spinodal decomp., Institute of Metals lecture 1967 8=21835
 H36XII steel, austenitic, strain ageing dynamic and static. 8=13569
 steel, austenitic, containing 4% Ti, ageing and zone formation study 8=17071
 steel, carbide transformations during creep 8=17081
 steel EI-702, deformation and hardening temp. effect on mechanism of precipitation 8=17078
 steel, equilibrium partition between ferrite and cementite, temperature dependence 8=17279
 steel, high-carbon, carbide formation mechanism during tempering 8=17073
 steel, high strength, dynamic strain ageing 8=17782
 steels, low alloy, effect of martensite on kinetics of bainite formation 8=4708
 steel, quenching in mag. fields, review 8=22343
 steels, stainless, precip.-hardening rel. to retained austenite, X-ray meas. 8=4848
 strain ageing rel. to stress-assisted diffusion to dislocations 8=4969
 strain contrast on electron microscope images due to new phase 8=1773
 styrene graft-copolymer to butadienestyrene rubber, thermal ageing struct. changes 8=17112
 thermoluminescence of inorganic cpds during transitions 8=23040
 thiourea, ferroelec. 8=13340
 Ticonal, structure on formation at different ageing temps. (300-800°C) 8=17077
 transition metals, phase diagrams 8=13003
 Wurster's blue perchlorate 8=14288
 wustite, p to n transition rel. to Seebeck coeff. grain size and Mg doping dependence 8=5387
 X-ray and electron diffuse scattering by lattice particles in new phase 8=1773
 Zircalloy-2, cold rolled, age hardening and recovery, obs. 8=8872
 Al alloys, ageing, natural, effect on subsequent artificial ageing 8=17764
 Al garnet, phase change with symmetry enhancement as function of magnetic field 8=21839
 Al, rolling and recrystallization texture orientation relationships 8=1755
 Ag-5.64 wt. % Al alloys, grain boundary precipitation 8=17038
 Ag-Au-Zn system, $\beta' \rightarrow \xi$, temp. dependence 8=17037
 Ag-Cu-Zn alloys, low-temp. martensitic 8=13056
 Al-Cu-Mg alloys, atomic diffusion within lattice on ageing 8=17041
 AlF₃, anhydrous cryst., high temp. 8=4929
 Al-Mg alloys, various ageing regimes and recovery 8=17765
 Al-Mg alloy, deformation and ageing effect on structure 8=17004

Phase transformations—contd

solid-state—contd

- Ag-Mg alloys, order-disorder transition in range 17-16 at. % Mg 8=21820
 Al-Zn-Mg alloys, quenching rate rel. to age hardening 8=8817
 AlZn, ageing rel. to metastable α' phase appearance and stability 8=8262
 Au films, morphological changes following deposition 8=4743
 Au-Cd, thermodyn. investigation 8=8263
 Au₂Cu, shear modulus change during ordering 8=17769
 Au-Cu-Zn ternary alloys, phase relation and kinetics 8=13063
 β -AuMn, change to f. c. c. structure on cold working 8=17042
 Au-Ni alloys, modulated structure formation, conc. and temp. dependence 8=17044
 Au-Zn system, $\beta' \rightarrow \xi$, temp. dependence 8=17037
 Ar-F₂ phase diagram 8=1670
 Ba I-II transition, pressure determ. with single-piston apparatus 8=4702
 BaCO₃, aragonite/disordered rhombohedral polymorphic transition 8=21840
 BaTa₂O₆, polymorphism 8=4780
 BaTiO₃-Cr₂O₃ systems, rel. to changes in ferroelectric props. 8=17045
 Bi on 2-4°K, superconducting modification 8=2155
 in Bi₂O₃-WO₃ and Bi₂O₃-MoO₃ system, comp. and crystal structure determ. 8=17047
 Bi-Sn, intermetallic phase, superconducting props. 8=2156
 C steels, austenite form. and tempering under high rate heating 8=13067
 Ca hydrosilicate, in presence of gypsum and Al₂O₃ rel. to cement setting 8=1738
 CaF₂:Nd³⁺, 'ageing' by stimulated rad. conds. 8=8765
 CaF₂:YF₃:Nd³⁺, 'ageing' by stimulated rad. conds. 8=8765
 CdS, recovery of rocksalt structure to room press. at 77°K 8=1671
 CdSnAs₂ and CdGeAs₂, high-temp. modifications 8=21842
 Ce-Ni-Si system, ternary cpd. formation. comp. and structures 8=17200
 Ce₃S₄, γ -phase stabilization with additives 8=8264
 Co, f. c. c.-h. c. p. martensitic, thermodynamics 8=17049
 Co films, changes, thickness depend. 8=17050
 Cr-Ni steel, γ - α transform., pulsed mag. field effect 8=17063
 CsCl at 470°C, transition energy determination 8=1672
 Cu, plastically deformed, annealing behaviour, effect of dispersed phases 8=17772
 Cu-Al-Mn alloys, study of surface relief effects, rel. to supercond. transition 8=19686
 Cu₂Au, shear modulus change during ordering 8=17769
 Cu-2 wt. % Be, ageing investigated by electron microscopy 8=17056
 Cu-Be, X-ray and electron diffuse scattering by lattice particles in new phase 8=1773
 Cu:Cu-12.5 wt. % Al multiphase diffusion couples, lattice transform. on supercooling 8=17552
 Cu formate tetrahydrate, sp. ht. and entropy at antiferroelectric transition pt. 8=8638
 Cu-Mn-Al system, effect of quenching and ageing on mag. phases 8=14010
 Cu-Sn alloys, structural changes on natural ageing 8=17052
 Cu-Sn alloys, structures of metastable states during eutectoid transform. 8=17055
 Cu-Te system in thin films, and structure 8=17054
 β_1 Cu-Zn, martensite, after repeated thermal cycling 8=17053
 β_1 Cu-Zn, martensitic transformation temps. from elec. resistivity meas. 8=4704
 Cu-Zn-Si β -phase alloy, inhomogeneity effect on martensite transform. 8=4707
 Cu-Zr, supersaturated solid soln., n. m. r. study of decomposition 8=8265
 D₂, rel. to pressure changes 8=4711
 Dy garnet, phase change with symmetry enhancement as function of magnetic field 8=21839
 Er-H₂ system, by X-ray analysis 8=17058
 Fe, α to γ point, thermal etching in vacuum 8=17652
 Fe(III) oxide, cubic-trigonal, mobility evidence from Zn ferrite form. at 470°C 8=23117
 FeAl alloys, kinetic order-disorder transform. by X-ray investigation 8=17076
 Fe-C alloys, from density and emissive power meas. 8=1673
 Fe-C and Fe-N system, thermodynamics of martensite transform. 8=17075
 Fe-C-Ni-Mn alloys, martensitic magnetic field effect 8=17079
 Fe-Co-Ni-Cr, new ferromagnetic state during recrystallisation 8=9342
 Fe-Cr, 500°C 8=13068
 Fe-7.9 Cr-1.1 C alloy, isothermal transforms. betw. 750 and 285°C 8=17068
 Fe-30%Cr, yield and fracture stress, before and after ageing 8=13558
 Fe-Ni alloy, martensitic transformation, calorimetric study 8=17069

Phase transformations—contd

solid-state—contd

- Fe-Ni alloy, phase-hardened, condition for thermal stability 8=17066
- Fe-Ni alloy, rapid heating effect during reverse martensitic transform. on high temp. stability 8=17065
- Fe-Ni alloys, study of surface relief effects, rel. to supercond. transition 8=19686
- Fe-26%Ni-0.4% C alloy, effect of prior plastic deformation of austenite on M_s 8=4710
- Fe-Ni base alloy: 9 at %Cu, microstructural changes on ageing 8=1759
- Fe-Ni-Ti alloys, $\alpha \rightarrow \gamma$ martensitic 8=17070
- Fe-Ni-Ti alloy, structural changes during martensite ageing 8=17064
- Fe_2O_3 , $\gamma \rightarrow \alpha$, liquid N_2 temp. 8=13066
- Fe_3O_4 , order-disorder transition, constant entropy below transition 8=17067
- α -FeOOH antiferro-paramag., e. s. r. obs. 8=22879
- Fe-Rh alloys, crystal lattice parameters, structural defects 8=9395
- Ge, metallic modification formation under shock compression 8=17083
- GeTe-SnTe alloys $\alpha = \beta$ transition, at high press. 8=17084
- H and D, crystal-structure changes in ortho- and para-states, X-ray exam. 8=13263
- H, λ , due to quadrupole-quadrupole interaction between mols. 8=8267
- H_2 , ortho, mol. rot. excitation near absolute zero 8=8233
- H_2 , rel. to pressure changes 8=4711
- H_2 solid, fcc and hcp, electron microscope investigation 8=8465
- He^4 , hexagonal-b. c. c., birefringence obs. 8=15155
- He^4 II-I, under rot., higher than first order 8=10814
- In, diffuse X-ray reflections in order-disorder transition near melting pt. 8=8525
- InS crystals, on e-irradiation, and twinning 8=17209
- K and NaCl solid solns., decomp. mechanism from X-ray scattering studies 8=13070
- $KAlSi_3O_8$, polymorphic transform. at 120 kbar and 900°C 8=8268
- KBr, under dynamic compression due to shock loading 8=22376
- KCl, compressed by shock waves 8=17029
- KCl, under dynamic compression due to shock loading 8=22376
- KD_2PO_4 , dynamic disorder due to deuteron intrabond jumping at ferroelectric transition 8=9212
- KD_2PO_4 , order-disorder ferroelectric, transition studies, calorimetric investigations 8=22668
- KH_2PO_4 , high temp., isotope effect 8=9213
- KH_2PO_4 -type crystals, ferroelectric phase transition dynamics 8=9215
- K_3MoCl_6 mag. ordering from specific heat 1.5-20°K 8=1872
- K_3MoCl_6 mag. state, dynamic susceptibility obs., 4-14°K 8=2297
- $1K_2O-26Li_2O-73SiO_2$ (mol. %) glass, second-phase particle growth, diffusion controlled 8=21847
- $K_2SO_4:Mn^{2+}$ 8=22910
- K_2ZrCl_6 8=8640
- $LiBO_2$, β and γ high-pressure forms 8=8269
- Li_2SO_4 with Na_2SO_4 , Rb_2SO_4 or $CsSO_4$, differential thermal anal. 8=8270
- Mg-9 wt. % Al alloy, age hardening mechanism and precip. process 8=13583
- $MgCd_3$, Mg_3Cd kinetics of ordering and disordering 8=8271
- $MgCr_{2-x}Mn_xC_4$, $MgGa_{2-x}Mn_xO_4$ tetragonal distortion of Jahn-Teller type study X-ray and neutron diffr. 8=13269
- Mg-In, order-disorder, energy 8=13072
- $Mg_2SiO_4-Fe_2SiO_4$ system, olivine-spinel solid soln. equilibria, 43 to 96 kb at 800, 1000 and 2010°C 8=23218
- Mn ferrite, (and mixed with Zn), Mössbauer study of intermed. phases in formation 8=17087
- Mn. effect of multiple $\gamma = (\epsilon, \epsilon')$ transformations on strength and structure 8=17785
- Mn steel, on heat treatment rel. to crystal structures 8=17090
- Mn steel, martensitic, rel. to elec. resist. 8=17061
- Mn-Ni system, rel. to crystal and mag. structures 8=17088
- Mn-Pd alloys, structural and mag. props. rel. to compos. 8=4714
- $MnT'O_3$, ($T' = Ho, Er, Tm, Yb, Lu$), hexagonal, transform. to perovskite under high press. 8=17089
- ND_4Br , ht. capacity data 8=22117
- ND_4Br , low-temp. 8=4713
- $(ND_4)_2Cr_2O_7$, correl. with i. r. spectra 8=23006
- NH_4Cl , harmonic scatt. and critical pt. correl. 8=23007
- NH_4Cl , ordering, anomalous changes in vol. 8=21850
- NH_4Cl , II \rightleftharpoons III transition, energy and temp. meas. 8=17091
- $(NH_4)_2Cr_2O_7$, low temp. 8=14250
- NH_4I , modifications II and III, lattice parameters 8=17398
- $(NH_4)_2SO_4$, correl. with i. r. spectra 8=23005
- Na, martensitic rel. to shear wave temp. dependence 8=1838
- $NaAlGeO_4$, high pressure formation and crystal structure 8=1678

Phase transformations—contd

solid-state—contd

- NaCl compressed by shock waves 8=17029
- NaCl, pressure-induced 8=17093
- $NaH_3(SeO_3)_2$, ferroelectric, second, meas. 8=2245
- NaN_3 , crystal structures of α and β forms 8=17387
- Na_2ZrCl_6 8=8640
- $Nb_3(Al, Ge, Sn)$ solid solns., rel. to superconducting transitions 8=17967
- Nb_3Sn , cubic \rightarrow tetragonal martensitic, low temp. 8=8273
- Ni-2.2 wt. % Be, ageing investigated by electron microscopy 8=17056
- Ni_3Fe , order-disorder transition, n-diffr. exam. 8=17095
- Ni-H system, lattice parameter H conc. dependence at -40°C 8=17404
- Ni-Mo alloys, quenched, deformation effects during annealing 8=17094
- NiPb formation by simultaneous evaporation of Ni and Pb 8=21852
- Ni-Ti martensite, rel. to detailed atomic movements 8=21851
- O_2 , abs. spectra of α, β, γ forms, 34 000-42 000 cm^{-1} 8=5625
- O_2 solid, α, β and amorphous, electron microscope investigation 8=8465
- O_2 solid, characts. and thermal expansion 8=4938
- PbO, orthorhombic and tetragonal forms, conversion at low temps. 8=8276
- Pb. 0.4 wt. % Mg alloy, structural ageing process at room temp., X-ray study 8=22389
- Pd-Mn alloys, structural and mag. props. rel. to compos. 8=4714
- Pb-PbO- As_2O_3 system, slag-metal equilibria, phase diagrams 8=8277
- PbTe-Sb $_2$ Te $_3$ alloy system, thermoelectric props. and phase relations 8=4716
- Pb-Tl(In) alloys, order-disorder from superconducting transition temp. meas. 8=1680
- PbZrO $_3$ ageing rel. to elec. cond. near antiferroelec.-ferroelec. transition 8=2249
- [PtPd]Co [PtPd]Fe order-disorder transform. temp. obs. 8=22837
- Pu-0.85 at. % Ga, metastable δ -phase, effect of thermal cycling on transform. behaviour 8=8278
- PuZr peritectoid reaction and PuZr $_2$ form., obs. 8=8279
- PbZrO $_3$ polycrystals, temp. changes of polarization 8=13888
- R-Ni-Si, (R=rare-earth), system, ternary cpd. formation, comp. and structures 8=17200
- Sb, shock-induced 8=4715
- $SbCl_5$ 8=2391
- SbSI, photosensitive 8=2159
- Se, growth of hexagonal from orthorhombic by polymorphic transition 8=8426
- Si, metallic modification formation under shock compression 8=17083
- Sm_2O_3 verification of existence by nondestructive analysis 8=9738
- Sn, $\beta \rightarrow \alpha$ 8=21856
- Sn alloys, dilute, microsegregation nodes and cellular solidification substructures 8=16919
- SnO-SiO $_2$ glasses, crystallization and decomposition 8=21965
- SnTe-Bi $_2$ Te $_3$ alloy system, thermoelectric props. and phase relations 8=4716
- SrCO $_3$, aragonite/disordered rhombohedral polymorphic transition 8=21840
- SrZrO $_3$, at 700-1170°C, X-ray investigations 8=8281
- Ta-O, X-ray and electron diffuse scattering by lattice particles in new phase 8=1773
- Ti alloys, Fe and Nb additions 8=22563
- TiGaLiO $_4$, structure of ordered phase on annealing at 600°C 8=17423
- ϵ -Ti $_3$ N, high-temp. stability 8=21857
- Ti-22 at. % Nb alloy, ω phase precip. rel. to superconducting critical transport currents 8=4718
- Ti-O system, $\beta \rightarrow \alpha$, bainitic 8=17103
- TiO $_2$ II modification at 40-120 kbar and 400-1500°C 8=17104
- TiO $_2$, under shock-wave compression, from X-ray studies 8=1685
- TiI, and compressibility and thermal expansion 8=1683
- U-Cr alloys, martensite nucleation and growth in β - α transform., temp. dependence 8=4717
- UL $_6$, α self irradiation effects obs. 8=17105
- U-M alloys, (M=Fe, Al and Si), irradiated, phase comp. changes rel. to resistivity meas. 8=8283
- U-1.5 wt. % Mo structures rel. to cooling rate from γ phase, obs. 8=8285
- UC $_2$, 300-5°K, by n diffr. exam. 8=1810
- U $_2$ N $_3$, heat of form. calc. from press. of decomposition 8=9660
- UO $_2$, spin lattice interaction, first-order transition theory 8=22886
- UO $_2$ -ZrO $_2$ -CaO nuclear fuel system, stability over cycling tests 8=17527
- U $_2$ Ru $_3$, formation in peritectoid transform and crystal structure 8=22043
- in U-UH $_3$ and phase diagram \leq 150 atm and 860°C 8=8190
- V-H alloy, at low temps. rel. to anomalous props. of V 8=5186
- V-V $_3$ Si system 8=9061

Phase transformations—contd**solid-state—contd**

Phosphorus

- atom, K-shell fluorescence obs. 8=16208
 diffusion in Si, appl. of dynamical theory of X-ray scattering 8=13412
 diffusion in Si, dislocation motion rel. to coefficient, enhancement by vacancy generation 8=1925-6
 impurity addition to steel, effect on temper brittleness 8=17797
 inhibitor, in Cu-Zn alloys, selective corrosion 8=23100
 isolation diffusion in Si, integrated circuits 8=1929
 red, energy levels from X-ray spectroscopy data 8=9559
 sulphides, i. r. spectra, dispersed in AgCl 8=18553
 sp²d config., 3d-radial functions 8=1172
 P³⁺ in UP₂ U₃P₄, in paramag. state, Knight shift temp. dependence and meas. 8=5563-4
 P₂, rotational analysis of the (2, 3) band of a new transition ²II → ²II 8=16299
 P IV, spectra, transition probabilities 8=7411
 αP₄, supercooled, solid/liq. interface temps. 8=21755
 P+O reaction, stoichiometry and chemi-luminescence 8=23109

Phosphorus compounds

- alkali phosphates, glassy and cryst., γ-irrad., e. s. r. 8=22913
 covalent bonds, mag, rot, and partial ionic charact. 8=21098
 phosphates, molten, rigid sphere model 8=7999
 pyrophosphates, divalent metal, far i. r. spectra 8=21097
 X-ray fluoresc. line shift 8=2443
 P III and V systems, nuclear-electron Overhauser effect, rel. to scalar interacts. 8=4626
 PCl₃, potential function 8=12226
 PD, emission spectra, vibrational and rotational 8=4167
 PF₃, general force field 8=4157
 PF₄, electron spin resonance spectrum and second-order hyperfine effects 8=4224
 PF₅, mean amplitudes of vibration 8=16298
 P₂F₄, n. m. r. 8=16361
 PH, fine structure of ³Σ⁺ and ³II states 8=7541
 PH₂, ²A₁-²B₁ transition mol. const., spin-rotational interaction 8=4166
 PH₃ adsorption on Si(111) surface, low energy electron diffraction study 8=4765
 PH₃+O reaction, stoichiometry and chemi-luminescence 8=23109
 P₂N₅Cl₂Br, i. r. dichroism 8=5627
 PO, A²Σ⁺-X²π system, r-centroids and FC factors 8=1264
 PO radical, β-systems subsystem analysis, electronic struct. 8=12224-5
 P₂O₅, glassy and cryst., γ-irrad., e. s. r. 8=22913
 P₄S₁₀, 273°K to 720°K, thermodyn. props. 8=4933

Photochemistry

- See also Photographic process.
 acetone, photo-oxidation, methyl hydroperoxide prod. 8=14437
 acid amides, liq. photolysis, e. s. r. 8=14435

Photochemistry—contd

- annual review of nuclear science, book XV 8=15628
 aromatics in boric acid glass, direct and sensitized photo-oxidation 8=23160
 aromatic hydrocarbons, induced tritium substitution 8=23166
 benzophenone, flash photolysis absorpt. spectrum 8=4184
 p-benzoquinone, dimers of anions in soln. 8=21186
 1,3-butadiene, photodissoc., primary processes 8=23155
 cyclobutane photolysis, energy distrib. in reaction products effects of curved Stern-Volmer plots 8=5752-3
 2,3 diazabicyclo[2.2.1]hept-2-ene, photolysis products, distrib. of excess vib. energy 8=5751
 diazopropene photolysis, C₃ and C₂H₂ radicals absorpt. spectra obs. 8=16368
 ethyl iodide, gas-phase photolysis, hot radical reactions 8=5749
 flash excitation reactions, obs. with modulated optical null spectrophotometer 8=3359
 flash photolysis, gas phase, vacuum-u. v. light source 8=14433
 flash photolysis and optical rotatory dispersion of transient species 8=12258
 furan, Hg(²P₁) photosensitized, struct. of excited states 8=14434
 hexafluoroacetone, photolysis in Hg vapour, primary process 8=23154
 hexafluorobenzene, photoisomerization, kinetics and mech. 8=2537
 hydrocarbon gases, photolysis by CO₂ laser 8=2538
 imide, liq. photolysis, e. s. r. 8=14435
 isobutane, gas-phase photolysis 8=23158
 isopropyl iodide form. by C₃H₈ + I₂ photolysis 8=5745
 ketene-benzene mixture, reaction of methylene radicals 8=5748
 ketene, Hg-sensitized decomp. as source of triplet methylene 8=23157
 ketene, reaction of methylene radicals 8=5748
 laser, continuously tunable, applications 8=15485
 laser photolysis in nsec range 8=9728
 mechanistic determ. rel. to curved Stern-Volmer plots 8=5752
 methane, photolysis in Ar and N₂ matrices, i. r. spectrum of CH₃ 8=18737
 2-methylbutane, condensed-phase photolysis 8=18739
 methyl iodide, photolysis in organic matrices 8=23156
 3-methylpentanal, direct and sensitized photolysis 8=9725
 naphthalene-d₈ in ethanol and methyl-pentane glasses, biphotonic T → T transitions, obs. 8=23161
 nitroso dimers, photodissociation on irradiation with u. v. light 8=9726
 photolysis mapping of orientation of transition moment in gas photodissociation 8=1307
 tetraphenylhydrazine, photodissoc., diphenyl-amino radical dimer prod. 8=7625
 u. v. flash photolysis, e. s. r. spectrometer for study of short-lived free radicals produced 8=12339
 vacuum u. v., Ar resonance light source 8=18378
 Wüster's salts, dimers of cations in soln. 8=21186
 xylenes, cryst., photolysis for xylol radicals fluoresc. obs. 8=12356
 Al₂O₃ systems, surface effects 8=14441
 CCl₄ radicals production 8=12343
 CF₃I, photolysis in matrices at 4.2°K, e. s. r. 8=14440
 CF₃OF, low-temp. photolysis 8=9727
 CF₃OOFCF₃, low-temp. photolysis 8=9727
 C₂O₂-olefin mixtures, photolysis, product isomerization 8=5747
 CIOO radical, matrix i. r. spectra 8=12344
 DF laser action in flash photolysis of UF₆ in presence of D 8=424
 H reaction with O₂, dissociation of HO₂* 8=5743
 HF laser action in flash photolysis of UF₆ in presence of H 8=424
 HNCO, matrix-isolated photolysis, spectra of NCO 8=16369
 Hg*(³P₁) atoms, quenching by H₂, phase-space theory 8=14436
 Hg(³P₁) atom reaction with gaseous paraffins 8=9688
 N₃CN photolysis with Cl₂ to prod. free radical CCl₂ 8=1315
 NH₃, photodissoc. in vac. u. v. 8=16365
 NO, far u. v. photolysis, N₂O yield 8=23159
 Na cyclopentadiene, u. v. photolysis 8=5754
 Na tetraphenylborate in aqueous soln., photolysis products 8=5746
 N₂O, photolysis at 1470 Å and for vac. u. v. actinometer 8=14438-9
 O₂ photolysis at 1470 Å 8=4098
 O₃-H₂ mixtures, photolysis 8=5744
 α-PbN₃, solid-state decomp. 8=9724
 Rh, photoinjection into liq. hydrocarbons 8=8113
 SbH₃, flash photolysis, SbH radical 8=12354
 ZnSe interface with electrolyte 8=13837

Photoconductivity

- all-trans β carotene crystals, obs. and theory 8=2465
 anthracene, charge carrier generation with polarized light 8=2268
 anthracene crystals, pulsed, in the 250-400 nm region 8=2267

Photoconductivity—contd

anthracene, mag. field effect, theory 8=22691
 anthracene, photocurrent intensity depend. after two-photon photocarrier generation 8=13918
 anthracene, temp. depend., and carrier generation 8=2269
 anthracene, u. v. irradiated, rel. to fluorescence and carrier generation 8=2266
 aromatic crystals, exciton and conduction band 8=5403
 avalanche-photodiode frequency response 8=2257
 carotenoids 8=18240
 cell resistance as meas. of photographic granularity 8=6581
 diamonds, particle-counting, spectra, model 8=5395
 dyes, localized model 8=13920
 homogeneous photoconductors, slow high field domains 8=5392
 i. r. detectors, generation-recomb. noise limited detectivities 8=22708-9
 lifetime-gradient photovoltages meas. in photoconductors 8=9246
 metals, calc. from Kubo-Greenwood formulae 8=5393
 metals, electronic optical transitions, self-consistent theory 8=5394
 metals, rel. to excitons 8=5129
 model photodetectors, image characteristics 8=9263
 molten aromatics, lifetime of excited states 8=12904
 organic dyes, thermal activation energy 8=13919
 organic materials rel. to solar cell use 8=9260
 photoelectret regime, thermally stimulated currents rel. to traps and inner polarization 8=5372
 photon counting with photoconductors 8=15717
 photoresistors, appl. to voltage-controlled attenuators 8=15181
 photoresistors, neg. and pos., electron beam exposure and polymerizing threshold 8=22236
 polyethylene, high density 8=13921
 polystyrene:anthracene:chloranil and excit. spectrum obs. 8=9261
 quartz, cryst., and fused, laser prod. by multiphoton excit. rel. to dielec. breakdown 8=18239
 semiconductors, differential spectral sensitivity 8=2220
 semiconductor, limited bipolar, in crossed elec. and mag. fields 8=22687
 semiconductors, negative photocond. instability and polarization induction 8=18218
 semiconductors, photoelectron diffusion in mag. field rel. to spectral singularities 8=13909
 soda glass, laser prod. by multiphoton excit. rel. to dielec. breakdown 8=18239
 solids, processes and analyt. expressions 8=13908
 spherical semiconductor photocell using lateral photoeffect 8=22705
 thermally stimulated cond. for single trap in presence of deeper traps 8=1940
 Ag₃AsS₃ properties 8=18220
 AgBr, charge compensation of trapped holes 8=22688
 Al₂O₃, single crystal and sintered, γ photoconductivity 8=18222
 BaTiO₃, hole transit time temp. dependence 8=18223
 Bi₁₂GeO₂₀, photo-induced changes in optical polarization 8=2404
 Bi-Se layers, vitreous, as near-infrared photo-detectors 8=22704
 CdS cell, as integrating radiation detector 8=5404
 CdS, double injection, current kinetics 8=22692
 CdS, effect of optical radiations and water vapour on trapping spectrum 8=5396
 CdS, field distrib. and current saturation meas. by electro-optic effect 8=9250
 CdS, h.f. current oscillations on multiple band illumination 8=5397
 CdS, impurity, stationary lux-ampere characts. 8=22693
 CdS layers, field effect freq. and temp. dependence 8=18228
 CdS, at low temps. 8=9248
 CdS, and luminescence induced by double photon absorpt. 8=14313
 CdS, optical quenching spectrum temp. dependence 8=9249
 CdS polycrystalline, microwave and d.c., spectral distribution 8=5400
 CdS, response and interpret. rel. to donor and acceptor levels 8=14312
 CdS, ruby laser excited 8=22690
 CdS, thermally stimulated currents and i. r. luminescence 8=5661
 CdS: Au, photosensitive carrier e. s. r. 8=2362
 CdS-CdSe films, thermal quenching 8=5399
 Cd(SSe), sintered, decay, rel. to temp. 8=2262
 Cd(S:Se), spectral distrib. rel. to band gap, 100 and 300°K 8=2261
 CdSe crystals, at high injection levels (on laser excitation) 8=18224
 CdSe layers, current saturation and negative resist. 8=18229
 CdSe polycrystalline, microwave and d.c., spectral distribution 8=5400
 CdSe, sintered, control of props. 8=18231
 CdSe, spectra dependence on light intensity over 0.55-0.75 μ 8=18226
 CdSe, as target in vidicon 8=3215

Photoconductivity—contd

CdSe whiskers, photoinjected space-charge-limited currents 8=18230
 CdSe:Mn, rel. to Mn deep donor level 8=2259
 n-CdTe, rel. to surface recombination velocity determ. 8=18225
 p-CdTe, thermally stimulated currents and trap levels 8=2260
 Cd_{1-x}Zn_xS, mixed single crystals, rel. to comp. and defect nature 8=18227
 Cr³⁺ in ZnTe, rel. to paramag. reson. 8=5525
 CsBr crystals with F⁻ and M-centres, wavelength and temp. dependence 8=22694
 CuCl spectrum rel. to optical absorpt. and excitons, 4°K 8=9251
 Cu₂O, neutron-irrad., and absorpt. 8=5597
 Cu₂-Te-CdTe photoconverter, efficiency 8=6276
 Cu and Zn complexes, tetraphenylporphine and tetraphenylchlorine 8=9117
 GaAs, intrinsic and extrinsic, rel. to carrier recomb. 8=2194
 GaAs:Cr 8=2263
 GaAs:Cr, semi-insulating, and i. r. quenching 8=18232
 GaP crystals, very high-ohmic, anomalous response 8=18241
 Ge, magneto-photocond., 300°-200°K, fields up to 22.3 kG 8=9109
 p-Ge:Ga, nature of oscs. in impurity spectra 8=13912
 Ge:In, detector for pulsed far infrared laser radiation 8=9262
 (HgTe)_{1-x}In_xTe₃ alloys, single-crystals, and optical energy gap 8=5608
 In₂S₃, photosensitivity, spectral distrib. 8=22695
 InSb films, slow photoconduction 8=9254
 InSb, spark machining for i. r. detectors 8=15096
 InSb, 10.6 μ m wavelength 8=22696
 n-InSe crystals, thermal and i. r. quenching 8=18233
 K, calc. from Kubo-Greenwood formula 8=5393
 KBr, elec. and mag. field dependence at low temps. rel. to F-centres 8=2264
 KBr:In rel. to impurity C excit. delocalization mechanism 8=8903
 KCl:Ag, B-centre meas. 8=2006
 KI:In rel. to impurity C excit. delocalization mechanism 8=8903
 Li, calc. from Kubo-Greenwood formula 8=5393
 Li₃Bi films, prep. and props. 8=8325
 Na, calc. from Kubo-Greenwood formula 8=5393
 Na, liquid, optical absorpt. and electronic structure 8=8111
 PbI₂, rel. to absorption edge at 0.525 μ 8=2444
 PbO, yellow, surface effect 8=22697
 PbS films, Hall effect due to space-charge layers on crystallite surfaces 8=5273
 RnI, intrinsic, in 5.5-6.5 eV range 8=5401
 Sb₂S₃, recomb. centres and trap levels, obs. 8=22698
 Se, amorphous layers activated by Hg, obs. 8=13914
 Se, effect of cooling to 100°K 8=1808
 Se films, anomalous, activated by Hg 8=9256
 Se, hexagonal, meas. during cooling from 300°K to 4.2°K 8=18238
 Se, photosensitivity spectrum dependence on crystallinity and oxygen impurities 8=18237
 Se, polycrystalline, hexagonal, local (conduction) levels, X-ray-induced 8=18236
 Se, trigonal, thermally stimulated currents after u. v. irradiation 8=22683
 Si doped with B, Al, Ga, P, As or Sb, extrinsic i. r. 8=9257
 Si photocells, rectifying props., effect of accelerated electron irradiation 8=22699
 Si:In, electron and hole-capture coeff. at low temps. 8=13915
 Si:Zn, slow rise photoresponse 8=5402
 ZnIn₂S₄ monocrystals, voltage-controlled negative differential resist. 8=13917
 ZnS, changes, during luminescence excited by alternating field 8=22701
 β -ZnS film, spectral distrib. of X-ray cond. 8=17143
 ZnS, optical quenching spectrum temp. dependence 8=9249
 ZnS phosphors, photoimpedance, a. c. field freq. and excitation intensity dependence 8=14335
 ZnS, and photovoltage meas. rel. to minority carriers 8=22700
 ZnS, spectra rel. to recomb. mechanisms, conduc. and lumines. changes 8=9258-9
Photodisintegration. See Deuterons/photodisintegration; Nuclear reactions due to photons.
Photodissociation. See Photochemistry.
Photoeffect, nuclear. See Gamma-rays/effects; Nuclear reactions due to photons; Photons/interactions.
Photoelasticity
 See also Double refraction/mechanical.
 anvil, high pressure, stress analysis by 8=2038
 correlation measurements of optical field with time-to-amplitude converter 8=15496
 criteria of materials for acoustic light modulators and scanners 8=9496
 diamond and diamond-type crystals, bond bending and stretching model for constants 8=8830
 diamond-like crystals, rel. to electrostriction and first-order Raman effect 8=9486

Photoelasticity — contd

- elastic waves, longit. and transverse, laser excit. thresholds 8=17831
- elastically restrained plate, analysis of thermal stresses 8=2926
- quartz, elastic waves, longit. and transverse, laser excit. thresholds 8=17831
- quartz, rel. to light amplification and hypersound generation 8=2451
- quartz, rel. to stimulated Brillouin scatt. 8=5634
- quartz, suitability for acoustic light modulators and scanners 8=9496
- r.f. stress analysis of opaque bodies 8=22267
- stress analysis, review of theory and exptl. details 8=5015
- strip, apertured, stress concentration, photoelastic study 8=55
- styrene network copolymers with dimethacrylate or ethyleneglycole, effect of crosslinking 8=22395
- GaAs, GaP, suitability for acoustic light modulators and scanners 8=9496
- Ge, bond bending and stretching model for const. 8=8830
- NH₄Cl crystals, temp. variation, obs. 8=2440
- NH₄H₂PO₄ photoelastic const. 8=14244
- Si, bond bending and stretching model for const. 8=8830

Photography—contd

xerography, electrostatic voltmeter used in conjunction with sample illumination 8=3133

applications

astronomical, device for spatial filtering 8=14744
calibration curves, stars spectra 8=2785
comet Iyeka-Seki (1965), history 8=19258
computer controlled film scanner, particle tracks 8=3481
detectors, air to ground viewing, meas. of contrast and range 8=20126
detectors, radiation absolute meas. 8=537
elec. arcs formation in rectifier valves and switches, obs. by image converter camera 8=20125
electrodeless discharge, high-speed cinematography 8=16398
fluorescent, spray droplets, with Q-switched laser as light source 8=4636
fracture of metals, obs. 8=22293
fracture tests, recording 8=6584
 γ , X-ray monitor using CsI(Tl) crystal 8=11444
holographic stereogram from sequential component photographs 8=15555
3-d images, computer-generated subjects, recording and reconstruction by Lippmann's method 8=20127
laser beams, orientation of crystal for second harmonic 8=3322
magnetic spectrometer for recording 400 MeV/c spectra 8=11292
particle behaviour during electrostatic precipitation 8=10836
spark electrode erosion obs. 8=16423
spark type, for study of pulsed high-pressure jets 8=16778
ultracentrifugation, simultaneous automatic sequence and photo control system 8=4631
Weissenberg photographs, giving rectified representations of reciprocal lattice 8=4864
C arc electrode particle trajectory 8=16428
Si photocell for recorders spot-brightness control 8=2271

colour

multistage, integrity preservation 8=15569
photomicrography, of biological objects, app. using image intensifier 8=11226

high-speed

cinemicrophotography 8=11220
exposure methods extended to X-ray 8=15567
image converter camera, operation and applications 8=20125
microplasma production at solid surface by laser beam 8=21353
C arc electrode particle trajectory 8=16428

e-beam scatt., emission 8=711

Photons—contd

- e-photon cascades in Pb plates, meas. in scintillator 8=6804
- energy density range 10^{17} - 10^{25} ergs.cm⁻³, by exponential laser amplification 8=6421
- form factor, coupling to 1^- mesons 8=6905
- $g_{\gamma NN}/g_{\pi NN}$ calc. rel. to domination of N form factors by $N^*(1400)$ 8=20515
- interference, wave theory, corpuscular interpretation 8=15547
- laser counting distrib. rel. to intensity noise theories 8=19939
- laser field, 3-photon effect on frequency 8=408
- laser light, development of photographic grain 8=15563
- in light fields, equil. and non-equil., distrib. obs. 8=19954
- light field statistics from photon count distrib., meas. 8=20014
- light statistical props. meas., photodetect. e emission distrib. 8=15493
- Low soft-photon theorem rel. to unpolarized, nonradiative cross section 8=15714
- in masers, interaction with atoms with angular momenta 8=19921
- mass increase in Schwinger models, solns. 8=11286
- model photodetectors, image characteristics 8=9263
- multi-photon absorption, probability 8=104
- multiphoton processes, resonance case, double photon contrib. 8=20011
- noise, excess, in multimode lasers 8=11039
- noise in lasers 8=11023
- pair production and annihilation, quantum electrodynamics 8=11445
- photoelectron distrib. rel. to probab. density 8=20016
- photon-meson coupling in Fubini sum rule from K^+ decay 8=20474
- photostatistics of laser beam, second sound effect 8=11192
- processes, low energy theorems, amplitudes 8=20341
- propagators, covariant and vertex functions for any spin 8=20336
- quantum statistics of fields, coherent-state techniques appls. 8=19450
- reflection, wave theory, corpuscular interpretation 8=15547
- self-energy graph, asymptotic behaviour 8=20170
- shot noise in lasers 8=11022
- spin-phonon interaction, ultrasonic waves in paramagnetic crystal 8=5516
- stability in absence of external field, proof for zero rest mass parts 8=6773
- stability in absence of mag. field, reply to criticism 8=6774
- statistics, rel. N-mode laser field 8=412
- 2 detectors, in photon field, correl. of output and quantum theory 8=6623
- two-photon process, theory using density matrix formalism 8=3339
- two-photon processes in 2-level atomic system, field statistics 8=20948
- wave function renormalization constant, divergence in quantum electrodynamics 8=6620
- Co⁶⁰ emission, exposure meas. 8=11427
- H scatt., analytic expression and numerical computation 8=1196
- MgO, powdered, mag. quenching, "anomalous", of three photon annihilations of positrons 8=17908

interactions

- coalescence in uniform e.m. field, quantum electrodynamics 8=590
- cross-section det. by statistical method 8=1033
- d disintegration, meson exchange contribution 8=872
- d photodisintegration theory 8=16056
- d photo-disintegration, 170-450 MeV p polarization obs. 8=20533
- e-pair photoprod. and test for q. e. d. 8=20390
- e.m. S-matrix theory formulation and dressed amplitudes 8=20343
- with field and intense e.m. wave, rel. to e^-e^+ pair prod. 8=717
- form factors, canonical 8=3512
- $\gamma + d$, at 285-345 MeV, π^0 prod., multiple scatt. correction 8=3620
- $\gamma + \text{He}^3 \rightarrow d + p$, with Cabibbo-Radicati sum rule 8=6999
- $\gamma + \text{He}^4 \rightarrow \rho^0 + \text{He}^4$, determ. of particle scattering amplitudes 8=11858
- H³, photodisintegration cross-section calc., normalization anomaly 8=11655
- K_L photoproduction method 8=11548
- $K^-p \rightarrow \Lambda\eta$, 1.2-1.7 BeV/c 8=6888
- $\gamma + N \rightarrow \Lambda + K$, consistency conditions for non-Born amplitudes 8=20344
- $\gamma + N \rightarrow N + \pi$ 8=11507
- $\gamma N \rightarrow \pi N$, test for conspiracy 8=6775
- $\gamma N \rightarrow \pi N^*$, threshold cross-section calc. from current algebra 8=11504
- $\gamma^+ N \rightarrow \pi^0 + N$, varying γ polarization as Regge cut test 8=20331
- $\gamma + N \rightarrow \Sigma + K$, consistency conditions for non-Born amplitudes 8=20344
- $\gamma p \rightarrow N^*$, missing mass determ. of excitation function of N_{15}^* (1688) 8=11638

Photons—contd**interactions—contd**

- $\gamma p \rightarrow n\pi^+$ at large angle, differential cross section, 260, 290, 320 MeV 8=752
- $\gamma p \rightarrow \Lambda K^+$ Regge-pole calc. of cross-sections 8=3621
- $\gamma + p \rightarrow \eta + p$ amplitude, unitarity and S-matrix analysis 8=3569
- $\gamma\pi \rightarrow \rho\pi$, sum rules rel. to e.m. widths of ω , A_1 , A_2 8=11566
- $\gamma + p \rightarrow N^* + \pi^+$, up to 6 BeV 8=6986
- $\gamma + p \rightarrow n + \pi^+$, ang. depend. of cross-section rel. to π^+ prod. 8=6841
- $\gamma + p \rightarrow n + \pi^+$, Regge pole model 8=20425
- $\gamma + p \rightarrow p + \eta$, N pole and vector meson resonance below c.m. energy 1700 MeV 8=20490
- $\gamma + p \rightarrow p + \pi^0$, angular distribution, E_0 , M_{1-} , M_{1-} calc. 8=6845
- $\gamma + p \rightarrow p + \pi^0$, differential cross section, E_γ =4-5.8 GeV 8=20426
- $\gamma + p \rightarrow p + \eta^0$, recoil p polarization 8=838
- $\gamma + p \rightarrow p + \rho^0$, 3.2-4.9 GeV 8=16057
- $\gamma + p \rightarrow \pi + N^*(1238)$, test of e.m. C noninvariance 8=694
- $\gamma + p \rightarrow \pi + N_{33}^*$ and current algebra 8=6985
- $\gamma + p \rightarrow \pi^+ + n$, GeV region absorption correction, choice of parameters 8=15764
- $\gamma + p \rightarrow \pi^+p$ in backward direction 8=15762
- $\gamma + p \rightarrow K^+ + (\Lambda^0, Z^0)$ at 3.4 and 5.0 GeV 8=6887
- $\gamma p \rightarrow \pi^+n$, pion-exchange, Regge-pole model 8=11516
- $\gamma p \rightarrow \pi^+n$ Regge-pole calc. of cross-sections 8=3621
- $\gamma p \rightarrow \Sigma^+ K^0$ Regge-pole calc. of cross-sections 8=3621
- $\gamma p \rightarrow \pi^+$, rel. to energy-depend. of recoil-p polarization 8=835
- $\gamma p \rightarrow \pi^+p$ Regge-pole calc. of cross-sections 8=3621
- $\gamma + p \rightarrow p + \pi^0$, 163-234 MeV, ang. dist. of π^0 8=750
- graviton prod. cross-section 8=19422
- high-energy diffraction photoproduction, of ϕ , expt. limit 8=20500
- isobar, $T = J = \frac{1}{2}$ production, soln. of dispersion relations 8=3732
- Λ/Σ^0 photoproduction cross sections, ratio 8=15859
- meson photoproduction, Regge-pole assumptions 8=3611
- meson photoproduction on nuclei, threshold 8=1034
- muon anomalous mag. moment contrib. 8=6815
- on nucleons, to form K and π mesons 8=6842
- ω^0 photoprod., OPE, diffraction contribs., polarization prediction 8=20502
- photopion production below 500 MeV 8=11509
- photoprod. at high energy, absorpt. derived using Regge amplitude 8=20342
- photoprod. on spin-1/2 target, superconvergence relations and current algebra identities 8=20376
- photoprod. of strange particles, PCAC and current algebra study 8=20344
- photoprod. of spinless particle, non-existence of poles 8=20249
- photoprod. rel. to isovector form factor 8=15864
- $p + \gamma \rightarrow p + \pi$, Mandelstam branch cuts rel. to scatt. and prod. amplitudes 8=11594
- π pair, dipion mass spectrum obs. 8=20507
- π pairs, charged, prod. from hydrogen, up to 1500 MeV energies 8=6844
- π photoproduction and electroprod., dispersion relation theory 8=11508
- π photoproduction at high energy, O(4) symm. 8=3627
- π photoproduction on N, pole terms in fixed angle approach 8=3622
- π photoproduction on p ang. distrib. parameters 8=11511
- π photoproduction on p, 553-850 MeV analysis in second reson. region 8=6843
- π photoprod. Regge pole residues, kinematical singularities 8=11415
- π photoproduction, violation of Knoll-Ruderman limit 8=6743
- π^0 photoproduction from deuterium, test of symmetry in e.m. current 8=670
- π^0 photoproduction, w and B exchange at low energy 8=11510
- π^+ photoprod., $1 < E_\gamma < 3$ GeV, simple isobar ansatz in fixed-t dispersion relations 8=20437
- π^+ photoprod. forward peak obs. 8=6846
- π^+ photoproduction, finite energy sum rules, parity doublet conspiracy 8=20423
- π^+ photoproduction, 300-600 MeV at small angles 8=3624
- π^+ , π^0 and K^+ photoproduction 8=15766
- π prod. 220-380 MeV near $P_{33}\pi N$ resonance 8=11506
- $\pi^+p \rightarrow \pi^+n$, $\pi^+\pi^+p$, rel. to phase shifts in $\pi\pi$ scatt. 8=6870
- ρ^0 photoprod. cross-section calc. on N 8=20508
- single pion photoproduction near threshold 8=20424
- spectrometer magnetic, for photoproduction reactions 8=6776
- two-photon absorpt. processes, model calcs. 8=16286
- three-particle nuclei disintegration cross section 8=11652
- vector meson prod., storage rings 8=15669
- Ag, $\eta \rightarrow \gamma\gamma$ decay obs. 8=806
- $\gamma + \text{He}^3 \rightarrow \pi^+ + \text{H}^3$, using PCAC and current algebra 8=15765
- $\gamma + \text{He}^4 \rightarrow \text{H}^3 + n + \pi^+$, impulse approximation 8=888
- $\text{H}^3(\gamma, n)d$, $\text{H}^3(\gamma, p)^3\text{He}$, $\text{H}^3(\gamma, 2n)p$, cross sections and ang. distrib. 8=11432
- H liquid single- π^+ prod. 5-16 GeV 8=15763

- Photons—contd**
interactions—contd
 H^3 , two- and three-body disinteg. cross section calc. 8=15870
 He^+ , photodetachment cross-section 8=20944
 He^3 , diffusion cloud chamber for investigation 8=7000
 He^3 , two- and three-body disinteg. cross section calc. 8=15870
 $He^4(\gamma, p)H^3$, 50 MeV, cross-section 8=889
 He^4 , photodisintegration, calc. using Levinger-Bethe sum rules and vel. depend. pot. 8=11658
 $Pb, \eta \rightarrow \gamma\gamma$ decay obs. 8=806
 Sb -Be photoneutrons, energy estimate using meas. of γ -ray of Sb^{24} 8=11622
 $Zn, \eta \rightarrow \gamma\gamma$ decay obs. 8=806
- polarization**
bremsstrahlung prod. from e bombard. of crystal 8=13465
Bremsstrahlung, thin-target linear polarization 8=11446
Compton scatt. off spin- $\frac{1}{2}$ particle with charge and anomalous magnetic moment 8=20348
meas. from e pair production 8=3572
meson photoproduction, Regge-pole assumptions 8=3611
n-th rank tensor, appl. to photon-photon interaction 8=6815
parity admixture determ. in nuclear energy levels 8=15997
photoprod. reactions on N, with π prod., test for Regge cuts by varying γ polarization 8=20331
- scattering**
atomic fluids, light, three-photon 8=4044
Compton, in intense fields, freq. shift 8=20349
Compton, off spin- $\frac{1}{2}$ particle with charge and anomalous magnetic moment 8=20348
Compton scatt. off spin-0, $-\frac{1}{2}$ particles, sum rules 8=20350
Compton, second harmonics, spectral profile 8=11426
Compton subtraction constants in sum 8=20347
diffusing in plane layer 8=3567
by electrons, rel. to Friedmann cosmology 8=23465
e, moving in a radiation field 8=20346
 $\gamma + C \rightarrow C + e^+ + e^-$, phase and magnitude of virtual Compton scattering 8=3904
 γd , sum rules for forward scatt. 8=6992
 γN , interaction constants of σ, f, η and X^0 calc. 8=6741
 $\gamma + Pb \rightarrow Pb + e^+ + e^-$, phase and magnitude of virtual Compton scattering 8=3904
 $\gamma\pi$, interaction constants of σ, f, η and X^0 calc. 8=6741
 $\gamma-\pi$, threshold vector dominance hypothesis and Compton scatt. of isovector photon 8=6864
giant resonances, dynamic collective model, sum rule 8=11856
Klein-Nishina formula, Legendre polynomial expansion 8=3370

- polyacrylonitrile, density changes rel. to atomic-pile-irrad. 8=17709
- polyethylene, cross-bindings prod. by reactor irrad., showed by n scatt. 8=16969
- polyethylene, irradiated, at melting point 8=9201
- poly(glycol methacrylate), e. s. r. 8=18422
- poly(methyl methacrylate), e. s. r. 8=18422
- polypropylene films and blocks, melting and recryst. or evap. due to laser pulse irrad. 8=17710
- polytetrafluoroethylene, carbon-black filled 8=17700
- polythene film, laser-produced formation mechanism 8=23034
- PVC, effect of u. v. irrad. on glass transition temp. 8=17181
- quartz, X-ray irradiated, influence on permittivity, luminescence and thermoluminescence 8=13871
- radiation research, space radiation biology, conference, Berkley USA (1965) 8=23456
- refraction and reflection of resonance radiation through crystal 8=8752
- resonance rad. from Cs discharge, prod. of Cs plasma 8=4362
- resonant elastic response of matter to intense light pulse, transient effects, bibliography 8=19925
- rubber, cross-bindings prod. by reactor irrad., showed by n scatt. 8=16969
- ruby crystals, destruction by powerful laser radiation, mechanism 8=22247
- semiconductor devices, nuclear radiation damage estimation by equivalent circuits 8=13838
- semiconductor surfaces, damage by ruby laser 8=2028
- solid targets, laser induced emission of electrons, ions and X-rays 8=13947
- steels, stainless, irradiation effects on tensile and shear props. at cryotemps. 8=17763
- styrene, cross-bindings prod. by reactor irrad., showed by n scatt. 8=16969
- TFE-HFP copolymers, γ -irrad., dielectric props. 8=9202
- trioxane polymerization rate, 30-64°C 8=23133
- trithiane, polymerization 8=17184
- A_2B_3 type crystals, illumination effect on u. s. absorption 8=4915
- Ag, fission fragments energy loss rel. to range 8=2021
- Al-1 at. %Zn, electron irradiation hardening 8=8822
- Al alloys, irradiation effects on tensile and shear props. at cryotemps. 8=17763
- Al, atomic-stopping cross sections for H^+ and He^+ 8=2022
- Al and AlM, (M = Mg, Ga, Ag), e-irradiated, stage II and III recovery temp. and impurity conc. dependence 8=1935-6
- Al, fission fragments energy loss rel. to range 8=2021
- Al_2O_3 , 5×10^{21} fast neutrons cm^{-2} , damage 8=22244
- Au, fission fragments energy loss rel. to range 8=2021
- Ba silicate glasses, γ -ray induced defects 8=13479
- Ba(ClO_3) $_2$.H $_2$ O, X-irradiated, e. p. r. spectral changes in u. v. irradiation 8=18410
- BeO dispersion fuels, X-ray study of fission fragment damage 8=12018
- BeO, n-irradiated, electron microscope examination of damage 8=22250
- C, laser-induced 'blow-off' plasma, density and temp. 8=12467
- CaF $_2$.Nd $^{3+}$, 'ageing' and photoreduction to Nd $^{2+}$ by stimulated rad. conds. 8=8765
- CaF $_2$ -YF $_3$.Nd $^{3+}$, 'ageing' and photoreduction to Nd $^{2+}$ by stimulated rad. conds. 8=8765
- Cu, e irradiation, length change 8=22338
- Fe, critical magnetic scattering of neutrons, spin correlation 8=2026
- n-InSe crystals, thermal and i. r. quenching of photo-conductivity 8=18233

Physical effects of radiations—contd

- KH $_2$ PO $_4$, ferroelec. domain switching 8=18184
- KH $_2$ PO $_4$, fission fragment irrad., structural changes 8=8773
- LiD target for laser light, plasma prod. 8=8774
- LiF, anisotropy of orientation of U fission fragment tracks 8=17706
- LiF crystals, radiation heating in reactor 8=13488
- LiF, formation of macrodefects and metallic Li colloids 8=12947
- LiF, formation of radiation defects 8=13487
- LiH target for laser light, plasma prod. 8=8774
- NaCl, illumination effects on dislocation mobility 8=4979
- NaCl, spectral characts. of emission, and damage, due to laser beam 8=14246
- Ni alloy, irradiation effects on tensile and shear props. at cryotemps. 8=17763
- Ni, critical magnetic scattering of neutrons, spin correlation 8=2026
- Ni, fission fragments energy loss rel. to range 8=2021
- Pt, damage on e-irradiation at 90°K rel. to built-in annealing damage 8=1947
- Si, energy given to lattice by primary ions 8=2033
- Si:Li, radiation defects, effect on annealing rate 8=2067
- Si photoconverters, irradiation stability 8=2226
- SiO $_2$ -UO $_2$ vitroceraamics, irrad induced vol. changes and annealing 8=8779
- Te, fission-fragment irradiation effect on low-angle subgrain boundaries 8=8737
- Ti alloy, irradiation effects on tensile and shear props. at cryotemps. 8=17763
- U-Pd, fission fragments energy loss rel. to range 8=2021
- W, ion emission due to laser irrad., masses, energies and numbers 8=13948
- ZnO, damage 8=22255
- ZnO single crystal, γ -irradiated, defect structure 8=22168
- ZnS, electroluminesc. enhancement 8=14344
- ZnS, radioactive S 35 incorporation, photoluminescence spectra, dark conductivity 8=5000

dielectric, elastic, constants from lattice theory calcs. 8=13177

Piezoelectricity-contd

- elastic deform. of piezoelec. disc with inhomogeneous rigid inclusion 8=10542
 ferroelectrics, acoustic and polarization waves interaction, elastic consts. 8=18182
 linear eqns. of state, first and second order effects 8=2250
 phonon-electron interaction, rel. to nonlinear phonon damping 8=2079
 piezoelectric ceramics, sensitivity to high stress perpendicular to polar axis obs. 8=19556
 piezoelectrics, ultrasound generation under Gunn effect 8=22100
 piezo-optic coefficients by pulsed u.s. light diffraction, 24 liquids obs. 8=8064
 polaron, motion at zero temp. 8=13677
 polaron, strong coupling limit 8=8955
 quartz, elec. conductivity in a.c. field, 10^8 - 10^9 Hz, 20-700°C 8=18197
 quartz, rel. to microwave rectification 8=9227
 quartz resonator at 2°K 8=18204
 quartz thermometer, high-sensitivity 8=6220
 Raman-active vibrations and internal-strain rel. to elasticity and piezoelectricity 8=5013
 rectangular retaining wall, with pressure of loose material, piezoelectric analogue of elastic problems 8=6054
 resonator, meas. of heat transfer coeff. into surroundings 8=1884
 semiconducting crystals, transient acousto-elec. phenomena 8=13346
 semiconductors, acoustic amplification, critical electron drift velocity 8=19571
 semiconductors, acoustoelectric domain formation during thermal noise amplification 8=18001
 semiconductors, non-linearity of elec. props. during u. s. wave propag. in a. c. field 8=18022
 semiconductors, I-V characteristic under sound amplification conditions 8=18021
 semiconductors, stimulated Brillouin scattering 8=17495
 strain gauges for determ. of stress caused by acoustic excitations in nuclear structure 8=20884
 stress, static and dynamic, apparatus for combined application 8=5018
 transducer for meas. of vibr. of high pressure gases in reactor 8=20885
 transducer, with prescribed input, electrical response 8=15064
 ultrasonic holography by electronic scanning of piezo-electric crystal 8=19580
 in III-V cpds., rel. to phenomenological analysis of piezoelectric effect 8=13893
 Ba(NO₃)₂·H₂O, single crystal., meas. of coeff. in range 80-3000°K 8=5051
 CdS, polarons, cyclotron resonance theory 8=9220
 GaP, interband piezo absorpt. 8=18529
 Ge, piezothermal e.m.f., anisotropy 8=5390
 KBr, KCl and LiF polarization rel. to lattice imperfection prod. during shock wave plastic deformation 8=9225
 LiTaO₃ single cryst. 8=8853
 PbTiO₃-PbZrO₃-PbMg_{0.5}W_{0.5}O₃ domain orientation processes 8=5367
 Pb(Zr-Ti)O₃ ceramics, addition of Cr₂O₃ 8=13043
 Si, piezothermal e.m.f., anisotropy 8=5390
 Te, piezoresistance coefficient 8=5376
 ZnO, rel. to microwave rectification 8=9227

Piezoresistance

 measurement in semiconductors 8=268
 BaTiO₃ semiconductors 8=9095
 n-Ge, piezomagneto-resistance for mixed scattering mechanism 8=18047
 n-Mg₂Sn at 80-300°K rel. to valence-band structure 8=2204
 n-SiC, α -phase, constants rel. to uniaxial deformation 8=18073

Piles, nuclear fission. See Nuclear reactors, fission.**Pinch effect.** See Discharges, electric; Plasma/confinement; Semiconducting materials.**Pions**

- Adler-Weisberger relation, π dominance implication 8=11424
 beam, meas. with filmless spark chamber system 8=3486
 charge radius determ. from $e^+ + e^- \rightarrow \pi^+ + \pi^-$ 8=15761
 Cherenkov counter, Pb glass for det. 8=6877
 composite, Goldberger-Treiman relation, bootstrap theory 8=3617
 cosmic ray attenuation length 8=899
 detection in H₂O with Si(Li) counter 8=7347
 e. m. form factor calc. 8=3615
 e. m. form factor determ., independence of $\pi\pi$ phase shift 8=15811
 e. m. form factor, from $\pi^+ \rightarrow \alpha$ scatt. 24 MeV 8=3616
 e. m. mass difference between charged and neutral 8=747
 e. m. mass difference, $\mu_{\pi^+} - \mu_{\pi^0}$ 8=749
 e. m. mass difference sum rule 8=748
 e. m. mass difference from Weinberg sum rules, corrections 8=3521
 e. m. mass, from source theory of gauge fields 8=20158

Pions-contd

- exchange theory, applied to various reactions 8=6847
 form factors calc., and violation of isotopic invariance 8=3614
 form factor fit in time-like region of Omnes-Mushkelishvili soln., $\pi-\pi$ P-wave dynamics 8=20435
 form factor from $e + p \rightarrow e + n + \pi^+$ 8=6834
 four-pion coupling const., sum rule resulting from current algebra 8=743
 $G_{\pi NN}$ in $G_{\pi NN}/G_{\pi NN}$ calc. rel. to domination of N form factors by $N^*(1400)$ 8=20515
 ionization loss at relativistic vels. in nuclear emulsions 8=15647
 $\Lambda\pi$ and $N\bar{K}$ composite model of Σ 8=11633
 mass determ. from 4f-3d transition in pionic Ca and Ti 8=6839
 $m_{\pi^+}^2 - m_{\pi^0}^2$ e. m. mass difference, divergences in gauge-field algebra 8=737
 mass, e. m. effects 8=20251
 mass smallness rel. to strong interaction 8=15760
 N-N scatt., 2π exchange contrib. 8=824
 NN $\pi\pi$ dynamics, bootstrap model, e. m. perturbation effect 8=11486
 OPE contrib. to ω^0 photoprod. 8=20502
 OPE model of $\gamma + p \rightarrow \pi^+ + n$ GeV region, absorpt. correction 8=15764
 OPE model for nuclear pot. 8=15919
 OPE model for $\pi N \rightarrow \pi\pi N$, 1-10 GeV, Treiman-Yang anomaly due to πN isobar prod. 8=15770
 OPE model for $\pi-\pi$ scatt., J = 1, I = 1 partial wave 8=15789
 OPE model in pp interactions, 10 GeV/c 8=11591
 parity doublet conspiracy, from finite energy sum rules in π^+ photoproduction 8=20423
 πN coupling constant related to that for πNN^* 8=11554
 pion field $\pi(x)$, identification with operators $\pi(x, \eta)$ 8=11498
 π^0 spectrum anal. in $K_L^0 \rightarrow \pi^+ \pi^- \pi^0$ decay 8=6879
 $\pi^+ - \pi^-$ mass difference, calc. on basis of isospin current algebra 8=6838
 $\pi^+ - \pi^0$ mass difference, field theoretic model 8=20415
 $\pi^+ - \pi^0$ mass difference, e. m., superconvergence dispersion relation approach 8=11485
 $\pi^+ \pi^-$ interference in K^0 decay CP violation 8=778
 Regge particle rel. to $\pi \rightarrow \mu + \nu$ and $B + \bar{B} \rightarrow \mu + \nu$ 8=11502
 secondary particles in (π^-, N) reactions, momentum spectra 8=1085
 3- π -exchange contrib. to N-N scatt. 8=15824
 vertex functions obeying SU(2) \otimes SU(2), calc. 8=744
- decay**
 β , Lagrangian approach to current algebra 8=20251
 leptonic, rel. to axial vector current consisting of pseudoscalar octet. 8=6743
 $\pi\beta$ with intermediate boson, e. m. corrections rel. to current algebra 8=6836
 $\pi \rightarrow l \nu \gamma$ structure-depend. axial-vector form factor, low energy theorem 8=6837
 $\pi \rightarrow \mu + \nu$, $K \rightarrow \mu + \nu$ evaluation of a_K/a_π using SU(3) algebra and PCAC 8=15798
 $\pi^- \rightarrow e^- + \bar{\nu} + \gamma$, in static quark model 8=746
 $\pi^0 \rightarrow 2\gamma$, $\pi^+ \rightarrow e^+ + \nu + \gamma$, relation 8=11500
 $\pi^0 \rightarrow 3\gamma$, C violating, upper limit on rate 8=745
 $\pi^+ \rightarrow \mu^+ \rightarrow e^+$, in 140,000 Oe field, e^+ asymmetry 8=3618
 $\pi^+ \rightarrow \mu^+ \rightarrow e^+$ and e spectrum in interstellar medium 8=19094
 $\pi^+ \rightarrow \pi^0 + e^+ + \nu$, rate obs., branching ratio 8=11503
 $\pi-\mu$ disintegration anisotropy based on 1062 π^+ data 8=6835
 $\pi\mu$ with intermediate boson, e. m. corrections rel. to current algebra 8=6836
 $\pi \rightarrow \mu\nu$ superconductivity model with SU(3) \times SU(3) symm. 8=11501
 $\pi \rightarrow \mu + \nu$, with π as Regge particle 8=11502
 $\pi \rightarrow \mu + \nu$, ν mass limit 8=6839
 $\pi^+ \rightarrow \mu^+ + \nu$, μ momentum and ν_μ mass upper limit 8=6814
- interactions**
 d photodisintegration exchange contribution 8=872
 $\gamma\pi \rightarrow \rho\pi$, sum rules rel. to e. m. widths of ω , A_1 , A_2 8=11566
 by nuclei, radiative absorpt., rel. to μ capture 8=20775
 $\omega + \pi \rightarrow \pi + \pi$ amplitude and Regge trajectory bootstrap 8=11563
 $\pi B \rightarrow V\Delta$, Regge-pole couplings 8=6903
 $\pi + d \rightarrow M + d$, and M-N scatt. factor 8=3736
 $\pi^+ + d \rightarrow p_\pi + p + \text{neutrals}$, 2.7 GeV/c search for e^+ 8=11488
 $\pi^0\gamma$ resonances, search for in $\pi^- + p$ reaction 8=3675
 π^- -He₃ π^+ yield obs. 8=7220
 $\pi^- + \text{He}^4$, inelastic at 140 MeV, excited and multineutron final states 8=6848
 $\pi + \text{He}^4 \rightarrow M + \text{He}^4$, M-N scatt. factor 8=3736
 $\pi + \text{He}^4 \rightarrow M + \text{He}^4$, magnitude and phase of meson scatt. amp. 8=890
 $\pi + \Lambda \rightarrow \pi + \Sigma$, simultaneous s-t analyticity 8=6740
 $\pi^+ + n \rightarrow \Sigma^+ + K^+$, in polyethylene, 1 GeV/c, Σ polarization 8=864
 $\pi^+ n \rightarrow \omega p$, Regge-pole model with L-S coupling 8=20444
 $\pi-N$ coupling constant from N-N scatt., anomalies 8=20519

Pions—contd**interactions—contd**

- $\pi\pi$ phase shift analysis 600-1000 MeV 8=757-8
 pion pair prod. by 12, 18 GeV/c π , OPE analysis 8=20439
 $\pi^+p \rightarrow K^+\Sigma^+$, mass difference effect in Wali-Warnock model, violation of SU(3) 8=3692
 π^- , stars in nuclear emulsions, multiple scattering measurements 8=1084
 p-p, bremsstrahlung production, exchange 8=830
 SU(2) \times SU(2), chiral, method of phenomenological Lagrangians 8=6744

 four-momentum transfer distrib., high energy and high multiplicity 8=6862
 π^- , charge exchange on bound H nuclei, theory 8=3628
 πp at 650 MeV, elastic and charge exchange cross-sections 8=6854
 π exchange theory 8=6847
 $\pi p \rightarrow \rho N^*$, ρN^* , ang. correls. in decay 8=11636
 π^+p , A_2 -meson spin and parity and decay obs., 3.25 GeV/c 8=6909
 $\pi^+ + p \rightarrow n + \eta$ N pole and resonances below c.m. energy 1700 MeV 8=20490
 $\pi^+ + p \rightarrow \eta + n$, 561-1300 MeV partial wave analysis, S, P, D, F waves 8=11520
 $\pi^+p \rightarrow \eta n$, partial wave analysis in terms of Lorentz group 8=6856
 $\pi^+p \rightarrow \Lambda k^+\pi^-$ at 6 GeV/c, Λk^+ enhancement at 1.7 GeV 8=3630
 $\pi^+p \rightarrow \Lambda K^0, \Sigma^+ K^0, \Sigma^- K^+$, 1.5-4.2 BeV/c 8=6861
 $\pi^+ + p \rightarrow n + \eta, \Sigma^- + K^+, \Lambda + K^0, \Sigma^0 + K^0$, phenomenological model 8=15758
 $\pi^+p \rightarrow \eta^+ n$ and charge exchange polarization, ρ' Regge trajectory 8=3665
 $\pi^+p \rightarrow \eta n$, polarization meas., 3.2 and 5 GeV/c 8=15776
 $\pi^+ + p \rightarrow \eta + n$, Regge pole model of polarization 8=11519
 $\pi^+ + p \rightarrow \eta + n$, 670-805 MeV/c obs. 8=20489
 $\pi^+ + p \rightarrow \eta + n$, $T_x = 593$ -704 MeV, calc. of ang. distrib. of η 8=6853
 $\pi^+ + p \rightarrow \eta + N$, N^* resonant states and $N\pi, N\eta$ decay modes 8=11637
 $\pi^+p, K_1^0 K_1^0$ system resonance, 5, 7 and 12 GeV/c 8=794
 $\pi^+ + p \rightarrow K^+ + \Lambda^0/\Sigma^0$ at 4 GeV/c, forward and backward peak 8=3648
 $\pi^+p \rightarrow K^+\Sigma^-$ rel. to analytic structure of Regge-cut amplitude 8=20319
 $\pi^+p \rightarrow K^+\Sigma^-$, Regge cut 8=3631
 $\pi^+ + p \rightarrow n + X_{\gamma\gamma\gamma}$, X resonance identification 8=6858
 $\pi^+ + p \rightarrow \nu^0 + n$, 4.0 GeV/c vector meson decay to e pair 8=808
 $\pi^+p \rightarrow \omega n$, ϕn , 2.1 BeV/c cross-section calc. 8=20442
 πp at 650 MeV, cross-section, for single and multi pion prod. obs. 8=6854
 πp , 4.16 GeV/c scatt., π prod. and charge exchange 8=11522
 π^+p , 5.5 GeV/c, multiple π prod. 8=3633
 π^+p at 10 GeV, secondary π transverse momentum distrib., thermodynamic approx. 8=3625

Pions—contd**interactions, pion-proton—contd**

- π^+p , multiple π production, simple systematic behaviour, 25 GeV/c 8=15767
 $\pi^+p \rightarrow \pi^+n$ rel. to analysis of π -N scatt., 1-10 GeV/c 8=3639
 $\pi^+p \rightarrow \pi^+n$ cross section from π^+p scatt. obs. 8=15778
 $\pi^+p \rightarrow \pi^+n$, polarization meas., 2.0 and 5 GeV/c 8=15776
 $\pi^+p \rightarrow \pi^+n$, Regge pole branch points obs. method 8=3629
 $\pi^+p \rightarrow \pi^+n, \eta n$, Regge-pole model with L-S coupling 8=20444
 $\pi^+p \rightarrow \pi^+\pi^+$, inconsistency of Ferrari-Sellers form factor for π - π scatt. 8=3649
 $\pi^+p \rightarrow \pi^+\pi^0p$ rel. to $\pi^+\pi^0$ scatt. 8=768
 $\pi^+p \rightarrow \pi^+\pi^0p$, 2.77 GeV/c for $\pi^+\pi^0$ scatt. 8=770
 $\pi^+p \rightarrow \pi^+\pi^+n$, 8 GeV/c, 2421 events 8=6851
 $\pi^+p \rightarrow \pi^+\pi^+n$, rel. to $\pi\pi$ interaction 8=6850
 $\pi^+ + p \rightarrow \pi^+ + \pi^+ + n$, $\pi\pi$ phase shift analysis 8=757
 $\pi^+p \rightarrow \pi^+\pi^+n, \pi^+\pi^-p$, rel. to phase shifts in $\pi\pi$ scatt. 8=6870
 $\pi^+ + p \rightarrow \pi^+ + \pi^+ + n$ and $\pi^+ + p \rightarrow \pi^+ + \pi^0 + p$, $\pi\pi$ phase-shift analysis from 600-1000 MeV 8=758
 $\pi^+p \rightarrow \pi^+\pi^+n$, 870 MeV π^+ momentum spectrum obs. cross-section of π^+n deduced 8=20445
 $\pi^+p \rightarrow \pi^+\pi^+n$, 3.1.36¹ GeV/c, I=0 enhancement obs. 8=15773
 $\pi^+ + p \rightarrow \pi^+ + \pi^+ + n$, 1.38-3.00 GeV/c ρ^0 formation and decay ang. dist. 8=3685
 $\pi^+ + p \rightarrow p + \pi^+ + \pi^+$, 3.2-4.9 GeV 8=16057
 $\pi^+ + p \rightarrow \pi^+ + \pi^+, \pi^+ + \pi^+ + n$, 7.0 and 25 BeV 8=15768
 $\pi^+p \rightarrow \pi^+\pi^+p$ at 2.77 GeV/c, ρ^- meson production and decay 8=20503
 π^+p , 720 MeV, cross-section for ($\pi^+\pi^0$), ($\pi^+\pi^+n$), (2 π prod.), ($\eta\pi^0$) obs. 8=15772
 π^+p , 3 GeV/c $\rightarrow \pi^+\pi^+\pi^-p$, prod. of $N^{*++}(1238), \rho^0$ and A_2^- 8=20446
 π^+p , 3.2, 4.2 GeV/c obs. of multipion prod., $\pi\pi^+\pi^-\pi^-$, $\pi\pi^+\pi^0\pi^-\pi^-$, $\pi\pi^+\pi^+\pi^-\pi^-$ 8=20448
 $\pi^+p \rightarrow \pi^+\pi^-\pi^+p$, 8 GeV/c, meson and baryon resonance prod. 8=20447
 $\pi^+p \rightarrow \pi^+p n$, 8 GeV/c, obs. in bubble chamber 8=6857
 $\pi^+ + p \rightarrow p + R^+$, structure of R^+ 8=3676
 $\pi^+ + p \rightarrow p + X^-$ at 1.8 GeV/c, δ^- (960 MeV) resonance search 8=756
 $\pi^+p \rightarrow \Sigma^- K^+$, 1170 MeV/c, cross-section obs., C independence confirmed 8=20449
 π^+p , secret for $\pi^0\gamma$ resonances 8=3675
 π^+p , strange particle prod., 1.5-4.2 BeV/c 8=6860
 $\pi^+p \rightarrow X^0 n$, cross sections obs. 8=20501
 $\pi^+ \rightarrow N^*(225) \rightarrow \rho + N^*(1236)$, cascade decay theory 8=3734
 π^+p , at 8 GeV/c, 6-prong interactions, cross-sections 8=3632
 π^+p , 8 GeV/c, resonances obs. 8=20428
 π^+p , elastic, through 90° and Δ_2 Regge trajectory in S-channel 8=20460
 $\pi^+ + p \rightarrow \eta + \Delta^{*+}(1238)$, cross-section and Δ^{*+} spin density 8=6855
 π^+p , inelastic interactions at 8 GeV/c, van Hove's overlap function obs. 8=11521
 $\pi^+ + p \rightarrow N_{238}^+ + \pi^0$, 0.5-1.46 GeV, ang. distrib. of π^0 8=15780
 π^+p , 900 MeV π prod. through N_{33}^+ isobar 8=11523
 $\pi^+p \rightarrow N^{*++}\rho^0$, shrinkage effects and one-pion exchange 8=20429
 $\pi^+p \rightarrow N^{*++}\rho^0, N^{*++}\omega^0$ or $N^{*++}\eta^0$, cross-sections and ang. distrib. 8=755
 $\pi^+p \rightarrow \pi^+p + 4\gamma$, search for decay $\eta \rightarrow \pi^0\gamma\gamma$ 8=3670
 $\pi^+p \rightarrow \pi^+n$, $N\pi\pi$ decay mode of $\Delta(1920)$ and $\Delta(2420)$, possible evidence 8=15774
 $\pi^+ + p \rightarrow \pi^+ + \pi^0 + p$, 968 MeV/c search for scalar meson decaying to $\pi^+\pi^0$ 8=11553
 $\pi^+ + p \rightarrow \pi^+ + p + \pi^0$, < 1070 MeV, ang. distrib. 8=15779
 $\pi^+p \rightarrow \pi^+\pi^+p, \pi^+\pi^-n$, below 1 BeV 8=6859
 $\pi^+ + p \rightarrow \Sigma^+ + K^+$, in polyethylene, 2 GeV/c, Σ polarization 8=864
 $\pi^+ + p \rightarrow \Sigma^+ + K^+$, phenomenological model 8=15758
 $\pi^+ + p \rightarrow \Sigma^+ + K^+$, quark model for backward process 8=11480
 $\pi^+p \rightarrow K^+\Sigma^+$, 3.23 GeV/c, ang. dist., Σ polarization 8=6852
 $\pi^+p \rightarrow K^+\Sigma^0(\Lambda^0)$, Regge-pole model based on K^*, K^{**} exchange 8=15777
 $\pi^+p, I = \frac{1}{2} N^*(1400)$ prod. at 6 GeV/c 8=15775
 π^+p , total cross section from 8-29 BeV/c obs. 8=774
 p transfer distrib. obs., Regge-pole exchange model suggested 8=20441
 radiative capture as symm. test for e.m. current 8=670
- production**
 $A_1 \rightarrow \rho + \pi$ current algebra calc. 8=11565
 $A_1 \rightarrow \rho\pi$, current algebra and pole-dominance appls. 8=3684
 $A_1 \rightarrow \rho\pi$, decay constant anomaly, d-wave coupling constant 8=6907
 $A_1 \rightarrow \rho\pi$ S/D wave ratio determ. 8=11566
 charged pairs, photoproduction from hydrogen, up to 1500 MeV γ energies 8=6844
 $e^+e^- \rightarrow \pi^+\pi^-$, 775 MeV 8=15738
 $e^+ + e^- \rightarrow \pi^+ + \pi^-$ rel. to π e.m. structure and p-wave phase shift in π - π scatt. 8=15761
 $e^+ + p \rightarrow e^+ + n + \pi^+$, π form factor meas. 8=6834
 electroprod. on N, as function of momentum transfer 8=6840

Pions—contd

production—contd

electroprod. on p obs., single and multiple 8=11505
 $\eta_{3\pi}$ decay, suppression of $3\pi^0$ mode 8=3673
 $\eta \rightarrow 3\pi$, current algebra approach, review 8=15808
 $\eta \rightarrow$ neutrals, $\pi^+\pi^-\pi^0$ branching ratio, rel. to $K^-\rho \rightarrow \Lambda\eta$ 8=6888
 $\eta \rightarrow \pi^+\pi^-\pi^0\gamma$ in terms of $\eta \rightarrow \pi^0\gamma\gamma$ using CA and PCAC 8=20488
 $\eta \rightarrow \pi^0\pi^+\pi^-$, $\pi^+\pi^-\pi^0$, ratio obs., T = 1 sufficient 8=20485
 $\eta \rightarrow \pi^0 e^+ e^-$, C-conservation, vector-meson model, decay width calc. 8=3674
 $\eta^0 \rightarrow \pi^0 e^+ e^-$, unsuccessful search 8=804
 $\gamma + A$ reactions on $9 \leq A \leq 207$ nuclei, 4.35 and 6.02 GeV $\pi^+\pi^-$ pair prod. 8=7164
 $\gamma + H$ at 5-16 GeV single π^+ prod. 8=15763
 $\gamma H, \pi^+$ photoprod. 8=3626
 $\gamma + He^3 \rightarrow \pi^+ + H^3$, using PCAC and current algebra 8=15765
 $\gamma N \rightarrow \pi N$, test for conspiracy 8=6775
 $\gamma N \rightarrow \pi N^*$, threshold cross-section calc. from current algebra 8=11504
 $\gamma + N \rightarrow \pi^0 + N, N^* + \pi$, varying γ polarization as test for Regge cuts 8=20331
 γp reaction, π^+ prod., Regge-pole calc. of cross-sections 8=3621
 γp , of π^+ , Regge pole model 8=20425
 $\gamma + p \rightarrow \pi^+ + n$, GeV region, absorpt. correction, πN parameters 8=15764
in $\gamma p \rightarrow n\pi^+$ interact., ang. depend. of cross-section 8=6841
in $\gamma p \rightarrow \pi N^*(1238)$, test of e.m. C noninvariance 8=694
 $\gamma + p \rightarrow N^* + \pi^+$, up to 6 BeV 8=6986
 $\gamma + p \rightarrow p + \pi^0$, 163-234 MeV, ang. dist. of π^0 8=750
hypernuclear decay final state interactions 8=16008
 $K+K \rightarrow 2\pi$ extension of domain of validity of dispersion relations 8=6895
 $K \rightarrow \pi\pi$, CP violation, phenomenological analysis 8=3652
 $K \rightarrow 3\pi$, p-wave interaction calc. using Fadeev formalism 8=11547
 $K_1^0 \rightarrow 2\pi$, SU_3 -breaking effect and hyperon decay 8=3729
 $K_2^0 \rightarrow \pi^+ + \pi^-$, calc.. 8=3659
 $K_2^0 \rightarrow \pi^+\pi^-$, CP violation, energy depend. on branching ratio 8=11569
 $K^0 \rightarrow \pi^+ + \pi^- + \gamma$ CP violation, interference effect theorem 8=3653
 $K^+ \rightarrow \pi^+\pi^0$, rel. to e.m. $\pi^0\eta$ mixing 8=791
 $K^+ \rightarrow \pi^+\pi^0\gamma$ (π^+, γ) ang. distrib. obs. 8=3655
 $K^+ \rightarrow \pi^+\gamma\gamma$, use of η -pole approx. 8=791
 $K^+ p \rightarrow K^* \pi^+ n$, 6 GeV/c ang. correl. in final states 8=798
 $K^+ + p \rightarrow N + \pi + K^*$, peripheral model, diffraction dissociation 8=15815
 $K^+ p \rightarrow \Sigma^- \pi^+$, mass difference effect in Wali-Warnock model, violation of $SU(3)$ 8=3692
 $K^+ p \rightarrow \pi^+ \Sigma^+$, Regge-pole model based on K^*, K^{**} exchange 8=15777
 $K^+ p \rightarrow \pi^+ \pi^- \Sigma^0$, 6 GeV/c, ang. correls. rel. to spin parity of exchanged particles 8=798
 K^* radiative decay 8=6911
 $\Lambda \rightarrow N\pi$, amplitude derived in superconductivity model with $SU(3) \times SU(3)$ 8=11501
matrix element calc. for multiple emission 8=15769
multiple, in 25 GeV/c πp collision 8=15767
multi- π and hadron elastic scatt. 8=20530
neutrino nuclear reactions, thresh. 8=751
nuclear reactions due to 600 MeV p, surface prop. sensitivity 8=20778
by N, virtual photoprod., dispersion sum rules in static model 8=20457
 $NN \rightarrow \pi\pi$ predicted from πN scatt. 8=825
 N^* decay modes from $\pi^+ + p \rightarrow \eta + N$ 8=11637
 $\omega + \pi \rightarrow \pi + \pi$ amplitude and Regge trajectory bootstrap 8=11563
 $\Omega^- \rightarrow \Xi^- + 2\pi^0$, comparable with $\Omega^- \rightarrow \Xi^- + \pi$ 8=6979
 π^+ photoproduction, finite energy sum rules, parity doublet conspiracy 8=20423
 π^+ photoprod. forward peak obs. 8=6846
 π^+ photoproduction, 300-600 MeV at small angles 8=3624
 $\pi^+\gamma p$ reactions, π^+ at large angle, differential cross sections, 260, 290, 320 MeV 8=752
 π^+ photoprod., $1 < E_\gamma < 3$ GeV, simple isobar ansatz in fixed-t dispersion relations 8=20437
 π^+ , zero-degree, by π^- incident on nuclei, 2-6 BeV/c 8=16104
 πp , 900 MeV, through N_{33}^+ isobar obs., ρ -exchange model compared 8=11523
 $\pi^+ p \rightarrow \rho^0 N^{*++} \rightarrow \pi^+ \pi^+ \pi^- p$, peripheral models 8=11515
 $p + \gamma \rightarrow p + \pi$, Mandelstam branch cuts rel. to amplitudes 8=11594
 $\tilde{p}n \rightarrow \pi^+ \pi^- \pi$ in D bubble chamber, 3-pion state analysis 8=20436
 $p\bar{p}$ annihilation, 12 decay modes calc. 8=11605
 $p\bar{p} \rightarrow KK\pi, K^*(891)$ prod., $K\bar{K} J^P = 2^+$ resonance at 1280 MeV 8=6940
 $p\bar{p} \rightarrow \pi^+ \pi^-$, 2.7 GeV/c, 2 meson final states 8=843
p-p collisions, high energy π, k, \bar{p} prod. cross-section depend on longitudinal and transverse momentum components 8=20478
 $pp \rightarrow pn\pi^+$, 10 GeV/c and OPE model 8=11591
 $p + p \rightarrow \pi^+ + d$, 6 GeV/c cross-section meas. 8=20525

Pions—contd

production—contd

$\rho \rightarrow \pi + \pi$ current algebra calc. 8=11565
 $\rho^0 \rightarrow \pi^+\pi^-$, e^+e^- branching ratio, 600-900 MeV/c² 8=6908
 $\Sigma^+ \rightarrow n\pi^+$, purely p wave 8=3728
 $\Sigma^+ \rightarrow n + \pi^+$ S-wave theory using quark model of baryons 8=6975
soft- π emission, current algebra calc., avoidance of kinematic zeros 8=20468
sum rules, additive quark model 8=11512
 $Y_1^* + \pi^- \rightarrow \Sigma^+ \pi^+ \pi^- \pi^-$, spin and parity of Y_1^* 8=6987
 $Al(\gamma, \pi^+ \pi^-)Al$, 3.2-4.9 GeV 8=16057
 $Bi^{11}(\gamma, \pi^+)Bi^{11}$, obs. rel. to independent particle model 8=1035
 $Bi^{11}(\gamma, \pi^-)C^{11}$, obs. rel. to independent particle model 8=1035
 $C(\gamma, \pi^+ \pi^-)C$, 3.2-4.9 GeV 8=16057
pairs, by 12, 18 GeV/c π , OPE model analysis 8=20439
phenomenological analysis 500-700 MeV, in partial waves and isobars 8=20438
photoprod., theorem obtained 8=20341
photoproduction and electroproduction, dispersion relation theory 8=11508
photopion production below 500 MeV 8=11509
photo, electroproduction, evaluation of multipoles, low energy region 8=753
photoproduction, O(4) symm. in presence of unequal masses 8=3627
photoprod. of $\pi^+\pi^0, K^+$ 8=15766
photo, Regge pole residues, kinematical singularities 8=11415
photoproduction single, near threshold 8=20424
photoproduction, violation of Knoll-Ruderman limit 8=6743
photoproduction from deuterium, test of symmetry in e.m. current 8=670
photopions from nucleons 8=11507
photoprod. in Compton effect on N, use of $\pi\pi$ scatt. models 8=20345
photoproduction on N, pole terms in fixed angle approach 8=3622
photoformation on nucleons, and quark model 8=6842
photonuclear reactions, 16-18 GeV e acceleration, with metal targets 8=20768
photoproduction on p, ang. distrib. parameters 8=11511
photoproduction on p 220-380 MeV near $P_{33}\pi N$ resonance 8=11506
photoproduction on p, 553-850 MeV analysis in second reson. region 8=6843
photographic emulsion in pulsed mag. field, obs. 8=16073
 π -N collisions, multiple π production constraint 8=3619
 πN scatt, constraints on production amplitude pions 8=3636
 $\pi^- p$, 720 MeV, 2π prod. cross-section 8=15772
 $\pi^- p \rightarrow \pi^- \pi n$, 720 MeV cross-section obs. 8=15772
 $\pi^- p \rightarrow \pi^- \pi^+ n$, rel. to $\pi\pi$ interaction 8=6850
 $\pi^- p \rightarrow \pi^+ \pi^- n$, 3.1 36^1 GeV/c, I = 0 enhancement obs. 8=15773
 $\pi^- p \rightarrow \pi^+ \pi^- p$, $\pi^+ \pi^- p$, rel. to phase shifts in $\pi\pi$ scatt. 8=6870
 $\pi^- p$, 3.2, 4.2 GeV/c obs. of multipion prod., $p\pi^+\pi^-\pi^-$, $p\pi^+\pi^0\pi^-\pi^-$, $n\pi^+\pi^-\pi^-\pi^-$ 8=20448
 $\pi^- p \rightarrow \pi^+ p\pi^+$, inconsistency of Ferrari-Sellers form factor for $\pi-\pi$ scatt. 8=3649
 $\pi^- p$, 5.5 GeV/c, multiple π prod. 8=3633
in $\pi^- + p$ at 10 GeV, transverse momentum distrib., thermodynamic approx. 8=3625
 π^0 backward photoproduction 8=15762
 π^0 , by $\gamma + d$, at 285-345 MeV, multiple scatt. correction 8=3620
 π^0 , from $\gamma + p$, angular distribution E_{0+}, M_{1+}, M_{1-} calc. 8=6845
 π^0 from $\gamma + p$, differential cross section, $E_\gamma = 4-5$, 8 GeV 8=20426
 π^0 , by γp interact., energy-depend. of recoil-p polarization 8=835
 π^0 , in γp reaction Regge-pole calc. of cross-sections 8=3621
 π^0 in high energy nuclear interactions due to cosmic rays obs. 8=20618
 π^0 ang. distrib. in $\pi^+ + p \rightarrow N_{133}^+ + \pi^0$ 8=15780
 π^0 in $\pi^+ + p \rightarrow \pi^+ + p + \pi^0$, up to 1070 MeV 8=15779
 π^0 , multiple, emission cross-section in arbitrary scatt. processes 8=3623
 π^0 photoproduction ω and B exchange at low energy 8=11510
 $\pi^0\pi^0$ and $n\pi^+n$ from $\pi^- + p$ reaction at 7.0 and 25 BeV 8=15768
 $\pi^0\pi^+ p$, from $\pi^- p$, 720 MeV cross-section obs. 8=15772
scattering
 $A_2-\pi$ superconvergence sum rules 8=20421
Chew-Low eqns., soln. props. 8=6863
Compton scatt. low-energy theorem and sum rule 8=760
 π^+ , Coulomb and nuclear, contrib. to error formulae in bubble chamber analysis 8=6681
 $\gamma-\pi$, threshold vector dominance hypothesis and Compton scatt. of isovector photon 8=6864
 $K^*-\pi$ superconvergence sum rules 8=20421
nucleus, density parameters and π rms change radius 8=3948

 - N isovector anomalous mag. moment, contrib. to sum rule 8=3698
 - overlap function analysis 8=6874
 - phase shift analysis for 9 possible new N^* 8=15865
 - $\pi p \rightarrow A_1(A_2)p, 2\pi$ exchange model 8=3650
 - $\pi^+ + p \rightarrow p^+ + \pi^+ + \pi^+, 3.2-4.9$ GeV 8=16057
 - $\pi^+ p$ amplitude, real part, in Coulomb interference region at 3.48 and 6.13 GeV/c 8=15790
 - $\pi^+ p$, backward elastic, ang. distrib., 3.3 GeV/c 8=771
 - $\pi^+ p$, backward, modified Regge representation 8=3651
 - $\pi^- - p$, charge exchange at 96.6 MeV, γ ray ang. distrib. meas. 8=6876
 - $\pi^- p$ charge exchange, real-to-imaginary ratio of amplitudes not a proof of Regge theory 8=20459
 - $\pi^- p$ at 180°, cross-section meas., N resonance evidence 8=11540
 - $\pi^- p$, 875-1579 MeV/c, p polarized obs. of resonances 8=20443
 - $\pi^- p \rightarrow \eta n$ asymptotic cross sections from separability and unitarity 8=772
 - $\pi^- + p \rightarrow \eta + n, J=1/2^-$ scatt. length and phase shift calc. 8=20433
 - $\pi^- p$ near 180° in 4-7 GeV/c π^- beam 8=6873
 - $\pi^- p \rightarrow \pi^+ n$ asymptotic cross sections from separability and unitarity 8=772
 - $\pi^- p \rightarrow \pi^+ \pi^+ p$ at 2.77 GeV/c, $\pi^+ \pi^-$ data, Chew-Low method 8=770
 - $\pi^- p \rightarrow \pi^+ \pi^- p$ data at 2.77 GeV/c rel. to $\pi^+ \pi^-$ cross-section 8=768
 - $\pi^- p$, 720 MeV cross-section obs. 8=15772
 - $\pi^+ p$, backward elastic, ang. distrib., 2.85 and 3.3 GeV/c 8=771
 - $\pi^+ p$, backward elastic, multiplate spark chamber for meas. 8=775

Pions—contd

scattering-pion—proton—contd

- π^+p , mass difference effect in Wali-Warnock model, violation of SU(3) 8=3692
- $\pi^+ - p$ at 97.1 MeV, differential cross section and phase shifts meas. 8=6875
- π^+p , Adler Weisberger, sum rule, S-wave πN lengths 8=773
- π^+p backward elastic rel. to N_α and Δ_δ Regge exchanges, $\pi^+p \rightarrow \pi^+n$ cross section calc. 8=15778
- π^+p polarization, analysis, high energies 8=776
- π^+p rel. to analysis of π^-N scatt., 1-10 GeV/c 8=3639
- Regge-pole model at small momentum transfer 8=20461
- review, high energies, new results 8=3647
- ρ' trajectory in charge exchange, Regge parameter evaluation and cut 8=11538

- Venus, effects of volcanic effluents on observation in the atm 8=23673
- Venus enhanced, r.f. reflectivity areas obs. 8=10355
- Venus, hard X-ray fluxes, upper limits 8=23670
- Venus, ionosphere, re-examination of porous model 8=14848
- Venus, Mariner 2 microwave obs., anal. in hot-surface context 8=5957
- Venus, microwave emission, electrical discharge model 8=5959
- Venus radio brightness temp. distrib., 1.9 and 1.35 cm 8=14847
- Venus, rotation rate, radar astronomical observation 8=19326
- Venus, rotational velocity 8=14845
- Venus, scale height of scatt. centre 8=14849
- Venus, 6-cm observations and microwave spectrum 8=2825
- Venus, structure of lower atmosphere 8=23674
- Venus, surface, life possibilities 8=23675
- Venus vicinity, absence of high energy electrons and protons, Mariner 2 obs. 8=23676

Plasma

- See also Discharges, electric; Electrons; Ions; Space charge; Thermonuclear reactions.
- accelerated, current density from progressive waves 8=7743

Plasma—contd

acceleration, velocity limitation, theory 8=1381
 air containing electrophilic gases, microwave meas. behind shock waves 8=7754
 air permittivity and conductivity variations with freq. and electron density 8=4346
 alkali-halogen, drift wave excitation, collisionless limit 8=16577
 alkali, temp. meas. by spectral line reversal, effect of absorbing dimer 8=16695
 in alternating electric field, changes due to perp. magnetic field 8=16490
 anisotropic electron, linearised Vlasov equation solutions 8=7732
 anisotropic, relax. due to collisions of two kinds of particles 8=4323
 arcs, coaxial and nonsteady, in fully developed flow 8=7689
 argon permittivity and conductivity variations with freq. and electron density 8=4346
 Astron E layer, self-consistent, with spread in energy and angular momentum 8=12463
 atom distrib. function of excitation level 8=7730
 beam-plasma discharge, steady state condition 8=21294
 beam-plasma systems, beam generated, interacting components 8=21289
 beam system, two-stream interactions, suppression by a. c. fields 8=16507
 Cerenkov heating in radially non-uniform cylinder 8=16485
 cold, in Knudsen discharge, hot-cathode low-voltage 8=12414
 collisional rate for ions 8=12470
 columns, cylindrical, kinetic model 8=16457
 column, pseudo-sound wave excitation by electron beam 8=16570
 comet interaction with solar wind, laboratory simulation 8=23678
 conductivity, determination by r.f. probe 8=1382
 conductivity rel. to emissivity and absorpt. coeff. 8=4347
 conference, Dallas 1967 8=12480
 correlation functions and pressure for nonisothermal case 8=7733
 correlationless with time-dependent background state, charge density, calc. 8=4344
 Coulomb interactions, Green's functions 8=7739
 current carrying, charged particle beam deflection 8=6336
 current-convective instability of electron beam 8=21292
 current patterns, nonequilibrium, effect of convection 8=16486
 cyclotron-resonance attenuation in mag. fields 8=7744
 cylinder, thermal radiation resonances 8=16476
 dense and hot, production 8=7725
 dense, implosion by hypervelocity macroparticle impact for controlled thermonuclear explosion 8=16601
 dense, low temp., thermodynamics 8=21304
 dense, study by double floating probe method 8=21302
 density gradient effect on energy transfer to and from magnetoacoustic wave 8=16514
 dielectric-compressible plasma interface boundary condits. 8=4325
 dielectric-plasma interface, boundary conditions 8=7727
 dielectronic recombination, influence of radiation fields 8=23750
 diffusion in multipoles 8=21318
 dipole mag. field interaction with moving plasma with geophysical appl. 8=12465
 discharge column in magnetic field, low-pressure, steady-state theory 8=4283
 in discharge, d. c., electron temp. gradient effect on space-charge field 8=4278
 dispersion function, two-pole approx. 8=16475
 duoplasmatron ion source with plane plasma boundary 8=15340
 effect on small tuned dipoles 8=6398
 electrical cond., particle impenetrability 8=7745
 electrical conductivity in strong mag. field 8=21321
 elec. microfield at neutral and charged points, calc. 8=12479
 electrodeless discharge, fast e population conditions 8=21229
 electrodynamics on space and time dependent fields, guiding centre approximation in lowest order 8=3191
 e.m. waves negative absorpt. at e cyclotron reson. 8=12502
 e, extremely hot due to e beams 8=21306
 electron beam injection, prod. temp. distrib. and oscillations 8=21287
 electron beam-plasma interaction with transverse modulation 8=4368
 electron cyclotron harmonics, non-linear generation with current instability 8=16573
 electron densities of afterglow plasmas, determ. from Langmuir probe characts. 8=21355
 electron density and temp. using self-focused laser beams 8=16544
 electron distribution function with excitation collisions 8=4329

Plasma—contd

electron drift motion, collision effects 8=1380
 electron and ion streams, warm interpenetrating, non-linear interaction 8=7752
 electron heating, anomalous, during adiabatic compression 8=12471
 electron temp. and density in He coaxial accelerator 8=4337
 electron transport coeffs., fifth and sixth approx. 8=21260
 electron transport theory, and electron-ion collisions, rel. to thermionic converters 8=15235
 emissivity and absorpt. coeff. calc. 8=4347
 energy losses due to neutrino processes 8=10137
 equivalent circuit 8=7746
 excitation process in e.m. shock tubes 8=1337
 films, plasma reson. transmission of p-polarized u.v. light 8=12516
 flow in electric shock tube, pressure, trajectory and density profiles from spectrographic obs. 8=16510
 flow past unmagnetized obstacles, rel. to simulation of satellites in magnetosphere 8=12475
 flows and shocks, collision free, magnetic obstacle effects, wind tunnel obs. 8=16513
 fluctuations, nonlinear, correl. functions with Coulomb interact. 8=16458
 fluid eqns., singularities and relation to anomalous diffusion 8=21310
 free energy, second virial coeff. contribution at high temp. 8=12468
 free-streaming and spatial Landau damping 8=21291
 gas discharge, electron distrib. function 8=1328
 Gibbs entropy calc. outside equilb. 8=4334
 gyrotropic, bounded, new multipolar mode 8=21347
 Harris' quasi linear eqns., modification 8=12459
 heating by large amp. ion cyclotron wave, efficiency 8=4332
 heating by laser radiation in magnetic field 8=7735
 heating, turbulent in mirror, by current 8=4333
 high-density Z-pinch, ArII lines, Stark broadening parameters 8=20949
 high-frequency, discharge, energy transfer from e.m. field 8=16397
 high-pressure, radiation from 8=16533
 high-temp., dispersion relation 8=16471
 high temperature, in thermodynamic equilibrium, quantum theory 8=16468
 historical survey of concept 8=1375
 homogeneous, electron distrib. function under the effect of a frequency modulated electric field 8=16526
 hot-electron, shell-structure form., plasma prod. and e heating obs. 8=4335
 ignition, at second harmonic of e cyclotron freq. 8=21305
 incoherent scatt. spectrum, unequal e and ion temps. 8=16483
 inhomogeneities, motion and diffusion eqns. 8=12478
 inhomogeneous, current density, 2nd harmonic and sum and difference freq. components 8=12481
 inhomogeneous, imperfectly Lorentzian, Boltzmann equation solution 8=16464
 inhomogeneous, imperfectly Lorentzian, electron distribution function 8=16480
 inhomogeneous, warm, gradient coupling 8=16473
 interaction between ion-acoustic waves, transverse waves and plasma oscillations 8=16569
 interplanetary, shock wave propag., brightness temp. obs. 8=10432
 ion acoustic wave, nonlinear, evolution in Vlasov plasma 8=16463
 ion density and elect. field perturbations caused by acoustic-wave pulse in weakly ionized gas 8=21324
 of ions and drifted electrons, kinetic eqn. 8=4324
 ion spectrum, shifts due to e impact, semiempirical formulas 8=12511
 ionic waves, interaction with beam of charged particles 8=7822
 ion waves, longitudinal, propag. near and above ion plasma freq. 8=21297
 jet, coating of metallic materials 8=19337
 jets, dense, accel. to thermonuclear speeds by hypervelocity impact 8=16137
 kinetic equations for distrib. function 8=21303
 kinetic eqns. with inelastic processes 8=1379
 kinetic equation, various expressions 8=21314
 kinetics, partially ionized in time dependent mag. and e. m. fields 8=16466
 kinetic theory, Compton effect in astrophysics for intense radiation 8=21296
 lasers, gaseous in magnetic field 8=3306
 laser-heated, radiation spectra 8=16200
 laser irradi., absorption rel. to magnetic field 8=1400
 laser-produced in monatomic gases 8=7697
 laser-produced in polythene films, formation mechanics 8=23034
 laser-produced, in vacuum chamber, characteristics 8=4322
 laser-produced, vacuum u.v. emission spectra 8=7777
 longitudinal wave echoes, temporal and spatial 8=16571
 longitudinal waves, multiple echoes 8=16572
 losses, in toroidal mag. field 8=21235
 low-voltage arc, e beam disintegration 8=16425

 - thermodynamic props. rel. to radiation 8=5887
 - thermonuclear reaction in θ -pinch, n yield and laser scatt obs. 8=1399
 - thermonuclear, sputtered atom impurities, search with neutrons 8=16600
 - theta pinch, temp. and density of ions and electrons, laser scatt. expt. 8=16553
 - 3-component, in thermionic converter transport eqns by tech. of irreversible thermodynamics 8=15234
 - toroidal, possible stationary motion 8=4339
 - transfer phenomena in rarefied plasma in toroidal trap 8=4342
 - transport coeffs. from inelastic collisions 8=7939
 - transport phenomena, appl. Fokker-Planck eqn. 8=4328
 - transport in r.f. discharges, anomalous 8=16401
 - travelling-wave field in strophoton, interact. with electrons 8=10911
 - turbulent, accel., scatt. and diffusion of charged particles calc. 8=7741
 - turbulent, collision theory 8=7738
 - turbulent, Coulomb collisions calc. 8=16474
 - turbulent heating in current nonisothermal plasma 8=1383
 - two-component, equilibrium correlation functions 8=21307
 - two-fluid, jump conditions 8=4358
 - two-fluid plasma equations, singularities, and their relation to boundary conditions 8=4330
 - two-fluid plasma eqns., singularities and relation to boundary conditions, comments 8=21299
 - two-fluid plasma eqns., singularities and relation to boundary conditions, reply to comments 8=21300
 - two temp., dielect. constant analysis 8=7742
 - unstable sac, randomization at constriction in discharge column 8=1338
 - variable density discharge obs. 8=16406
 - viscosity in strong mag. field influencing particle collisions 8=16482
 - Vlasov eqn. with collision terms and external mag. fields, operator soln. 8=16469
 - Vlasov eqn, relativistic covariant form, derivation 8=4326
 - waves, nonlinear, in plasma pierced by quasi-neutral charged particle beam 8=1391

Plasma—contd

- waves, trapped electroacoustic, fast randomization of electron gas 8=16580
 weakly turbulent, local determ. of wave-particle interaction 8=21309
 Ar arc, Stark broadening of Ar I lines 8=12057
 Ar containing alkali metal additions, elect. conductivity 8=12482
 Ar downstream flow in uniform guide field structure probe obs. 8=12472
 Ar, flowing, specific energy and electric field for intense stable discharge 8=16402
 Ar, laminar flow heat transfer in entrance region of circular tube 8=16477
 Ar, microwave induced for spectrochem. anal. of metals 8=18785
 Ar, partially ionized, supersonic source flow expansion into vacuum 8=16658
 Ar, partially ionized, viscosity and thermal conductivity 8=7734
 Ar, thermal plasma, continuous emission spectrum 8=16207
 Ar-Cs and Ar-K in pulsed discharge with ionization confined to impurity atoms, props. 8=1346
 Ba, ion density, rel. obs. of resonance radiation scattering 8=4331
 C, laser induced 'blow-off' plasma, density and temp. 8=12467
 CO₂-N₂, i.r. emission spectra 8=12510
 CO⁺, cometary, prod. and flow under influence of solar wind 8=14854
 Cs, diffusion coeff. of ions, and reflection coeff. from plasma boundary, meas. 8=12473
 Cs, effective electron-Cs heavy particle momentum transfer collision freq. 8=12476
 Cs, electron current flow under influence of d.c. fields and plasma grads. 8=12477
 Cs, migration of ions and electrons in elec. field, conc. and temp. grad. 8=15212
 Cs, particle losses due to charge exchange 8=21288
 Cs, prod. by resonance rad. from Cs discharge, and parameters 8=4362
 Cs, vapour, physical props. 8=12474
 D, e and ion temps., laser incoherent scatt. obs. 8=21354
 D, homogeneous high-density, profiles of D _{α} line 8=16194
 H, e temp. and density, laser incoherent scatt. obs. 8=21354
 H, heating by large amp. ion cyclotron wave, efficiency 8=4332
 H, laser-produced, temp. and density meas. rel. to absorpt. at laser freq. 8=12514
 H, post shock 8=16646
 H, thermodynamic functions calc. for free p and e 8=12469
 H₂, positive column, cross wave of moving striations 8=4281
 H _{α} , Stark broadening of line profiles 8=4063
 He discharge with hot cathode, behaviour in alternating electric field 8=16489
 He discharge, mag. field stabilised, press. built-up 8=7691
 He in theta pinch discharge, electron densities and temp., spectroscopic meas. 8=21349
 He-Cs and He-K in pulsed discharge with ionization confined to impurity atoms, props. 8=1346
 in He-Ne d.c. discharge, relation between electron temp. and conc., and discharge parameters 8=7666
 He-Xe, population inversion in positive column 8=12405
 Hg discharge, ion-acoustic wave propagation 8=4313
 Hg vapour positive column zeroth order distrib. changes 8=7667
 K foils, reson. emission excited by light 8=7776
 Kr, thermal plasma, continuous emission spectrum 8=16207
 Li line broadening in LiH plasma by microfields 8=12515
 Li, parameters and thermodynamic characteristics, calc. 8=12462
 LiD and LiH target for laser light, energetic plasma prod. 8=8774
 Mg films, reson. transmission of p-polarized u.v. light 8=12516
 N, excitation temps. from multiplet intensities 8=1376
 Na gas discharge, line excitation rel. to cascade transitions 8=20962
 NaK seeded, in elec. field, temp. meas. 8=21308
 Ne, thermal plasma, continuous emission spectrum 8=16207
 Ne-He, cross section for second kind collisions, meas. 8=21016
 SF₆, electrical conductivity, 2400-9000°K 8=7737
 Xe, thermal plasma, continuous emission spectrum 8=16207

confinement

- in adiabatic trap with 'min. B', ion-cyclotron instability 8=4387
 air, θ -pinch effect use in electrodeless shock tube 8=6136
 bottle, use of field from ring-shaped coils 8=21372
 coaxial electrode gun, plasmoid field requirement 8=16609
 collisionless, boundary conditions 8=21363
 collisionless, equilibria config. 8=12538
 collisionless sheath, with transverse flow 8=21362
 compression by a mag. field 8=12535
 density contour meas. using mol. ion beam break-up 8=7791

Plasma—contd**confinement—contd**

- drift of plasma ring in toroidal mag. field 8=21367
 double space-charge sheaths, negative-ion effects 8=16549
 guide field for plasma betatron 8=16563
 injection of, in a closed magnetic configuration 8=16554
 instabilities hindering thermonuclear reaction control 8=12561
 instability, negative mass, with B_z field 8=16566
 inverse pinch discharge, current sheet dynamics 8=12534
 ion beam confinement of magnet field, geomag. appl. 8=1417
 magnetic bottles, leakage 8=7318
 magnetic bottle, superconducting 8=16555
 magnetic, drift-dissipative oscills. 8=7805
 magnetic and e.m. methods for controlled nuclear fusion 8=11977
 mag. field, rotating, integrodifferential eqn. for each mode of deformation 8=16565
 magnetic fields, structural analysis 8=19741
 magnetic field, toroidal, theory 8=1411
 magnetic mirror trap, asymmetric, motion of charges 8=7806
 magnetic mirror trap, charged particle lifetimes, obs. 8=16558
 magnetic mirror trap, heating by current 8=4285
 magnetic mirror trap rel. to electron cyclotron instability 8=7837
 mag. quadrupole field, ballooning instability 8=12537
 magnetic trap, non-adiabatic, particle motion, integral eqn. soln. 8=16557
 magnetic trap for "Sirius" stellarator 8=16556
 mirror magnetic field, charge exchange loss 8=21374
 multipole mag. field, spherical, as mag. trap 8=4393
 particle motion in e.m. field 8=19764
 Pascal mag. device, surface ionization of Cs 8=1415
 pinch solns., one-dimensional static 8=7802
 pinch, ultra-fast thetatron, obs. 8=7803
 reflection by linearly increasing magnetic field 8=7804
 relaxation time, appl. of var. principle 8=7797
 reviews of plasma physics, book II 8=16461
 ring-current configurations, possibilities as fusion device 8=21373
 sheaths at the electrodes of a plasma diode 8=296
 sheath, e, reflection of electrostatic waves 8=12532
 sheath, ion extraction in presence of secondary e 8=4389
 sheath, microwave diagnostics 8=21364
 sheaths, plane collisionless, between field-modified emitting electrodes and thermally ionized plasmas, e.g. Ce 8=21365
 sheet, pinch, finite-resistivity stabilities 8=1413
 single pulsed plasma, by short circuiting current of plasma gun 8=4420
 spire, tetrahedral, mag. field inside, obs. 8=16561
 stellarator field, toroidal, single particle motion 8=12536
 stellarator mag. surface destruction by mag. field irregularities 8=16562
 stellarator, trapping efficiency of non-adiabatic injection 8=7848
 stellarators, toroidal, trajectories of magnetic field lines 8=4388
 stochastic heating expt. in mag. mirror 8=4336
 symmetrical magnetohydrostatic fields, variation principle 8=305
 θ -pinch, collisional rate coeff. for C ions 8=12470
 θ -pinch compression for shock wave study 8=7798
 theta-pinch density distrib. meas., bremsstrahlung method 8=12525
 theta pinch dynamic stabilization 8=7801
 theta pinch, effect of welding joint in discharge tube 8=21369
 θ pinch, factors determining beta 8=16551
 theta-pinch, high and low pressure, measurement of β , n, T, 8=4391
 θ -pinch, large diameter, refractive diagnosis with series interferometer 8=7788
 θ pinch, low energy, mass pickup coefficient obs. 8=12533
 θ pinch, low energy, resistive instabilities, obs. 8=16552
 θ -pinch parameter meas., azimuthal magnetic field 8=7799
 theta-pinch profiles, adiabatic time development 8=4392
 theta pinch with sharp boundary, stability 8=4390
 theta pinch, slow, and stabilization effect 8=7800
 in slow theta pinch, axial behaviour 8=21368
 theta pinch, temp. and density of ions and electrons, laser scatt. expt. 8=16553
 θ pinch, travelling periodic bumpy, instabilities 8=16550
 in toroid geometry, cond. for flute instability 8=7796
 toroidal column, equilibrium in d.c. and h.f. mag. fields 8=16559
 toroidal discharges without axial magnetic field reproducibility conditions 8=1414
 toroidal magnetic trap with zero rot. 8=1416
 toroidal pulsed discharge in crossed fields 8=21371
 toroidal scheme, magnetohydrostatic equilibrium 8=16548
 toroidal systems, trapped particles, effect of static, radial elect. fields on stability 8=16564
 toroidal traps, antisymmetric, with arbitrary mag. axis 8=21366

Plasma—contd

confinement—contd

- toroidal trap, rarefied, transfer phenomena 8=4342
 z-pinch discharges, press. -depend. transition
 behaviour 8=4275
 H ion, in mirror machine, cyclotron resonance and non-
 adiabatic trapping 8=21370
 He, slow theta pinch, axial behaviour and end loss 8=1412
 InSb, e-hole plasma, 250°K, θ pinch effect 8=13821

devices

- alkali metal purification in magnetoplasma device
 using preferential contact ionization 8=4302
 antenna in nuclear environment 8=4422
 arc air heater for re-entry simulation 8=21408-9
 arc jet, thrust calc., mass flow rate 8=4421
 betatron, negative-mass instability, obs. 8=21393
 Circe plasma injected in Pleiade u.h.f. cavity, obs.
 compared with theory 8=21405
 coaxial accelerator, energy ang. distrib. obs. 8=16610
 coaxial electrode gun, plasmoid obs. 8=16609
 diode, stationary regimes 8=296
 duoplasmatron, comp. of H ion beam 8=3222
 duoplasmatron source, energy-spread parameters 8=16608
 flames, induction-coupled, in air and Ar, spectroscopic
 obs. 8=21411
 generator, discharge chamber, heat transfer meas. in
 mag. field 8=7847
 generator, with vortex stabilization, rotation of electrode
 segments of arc 8=16607
 gun, short circuiting current for single pulsed plasma
 production 8=4420
 gun-terrella, model expts. on solar wind-magnetosphere
 interact., scaling 8=14643
 gun with Ti electrodes, used for filling 50 litre mag
 trap 8=12568
 Hall current, acceleration process 8=12483
 h. f. source for emission spectrometry 8=20086
 hydromagnetic coaxial accelerator, production of dense
 plasma focus discharge 8=21221
 instability, nonlinear, in beam systems, calc. 8=12563
 ion beam, intense, production using magnetized
 plasma 8=15349
 ion beam source, density and temp. meas. 8=1432
 ion removal, excitation of ambipolar acoustic
 waves 8=12569
 J×B device, current distrib. in non-equilib. state 8=7849
 jet generator, nozzle electrodes 8=21412
 jet, u.h.f. diagnostics 8=1435
 jets, temp. meas. techniques 8=12572
 light sources 8=484
 magnetoplasmadynamics accelerator, phenomena in
 cathode region 8=7652
 microwave amplifier, electron beam interaction 8=12570
 MPD arcs, current and potential distrib., effect of
 electrode geometry 8=16495
 neutralizer for ion beams 8=6335
 Pascal, mag. confinement, surface ionization of Cs 8=1415
 plasmatron, a.c., 6 electrode, for temp. 2000-4000°K
 and press. 1-3 atmospheres 8=1434
 plasmatron jet, electrodynamic structure rel. to
 nozzle geometry 8=12573
 plasmatron jet, heating of condensed powder particles,
 calc. 8=12574
 plasmatron, vacuum gas-dynamic unit for studying
 operation 8=12531
 probe, electrostatic for artificial satellite 8=2764
 propulsion, ion-electron beams emitted by a plane,
 neutralization 8=3225
 Q, shock formation 8=21325
 rotating plasma expt., analysis 8=21404
 sources, optical density and degree of inhomogeneity from
 spectral distribution 8=7728
 stellarator field, toroidal, single particle motion 8=12536
 stellarator, non-adiabatic injection 8=7848
 C-stellarator ohmic heating discharges in H, computer
 description 8=21407
 stellarator, "Sirus", magnetic trap assembly 8=16556
 stellarator, stability with anisotropic pressure 8=7832
 stellarator, stochastic destruction of magnetic
 surface 8=1428
 stellarator, strong negative- v torus 8=21406
 stellarators, toroidal, trajectories of magnetic field
 lines 8=4388
 stellarator, toroidal and 1=3, plasma
 equilibrium 8=7846
 supersonic jet, structure and formation mechanism 8=16611
 symmetrical column equil. at high pressures 8=7833
 thermionic convertor, classification of operating
 regimes 8=3159
 thermionic convertor, transport equations 8=3158
 thermonuclear reactors, engineering and economics 8=16138
 thetatron discharge, microwave excitation and
 propag. 8=16523
 thruster, calorimetric probe to determine energy 8=4382
 TM-3, neutral atom density distrib. 8=1433
 torches, as source of thermal plasmas 8=21410
 torch, thermal r. f., energy-transfer mechanism and
 typical operating characts. 8=16612

Plasma—contd

devices—contd

- 2-phase m. h. d., liquid metal 8=19729
 verneuil plasma torch for crystal growth, heat
 transfer 8=21936
 waveguide, nonlinear coupling of slow and fast
 waves 8=4401
 Ar duoplasmatron, relative abundance of ions 8=7780
 Ar, h.f. torch, power developed at atmos
 press 8=21236
 Ar-H₂ jet, radial temperature distribution,
 determination 8=12571
 Ba source, fully ionized 8=4419
 for B₄C coating prep. for antiradiation screens 8=20551
 H supersonic jet in high vacuum, as charge exchange
 target 8=21451
 He accelerator, coaxial, electron temp. and
 density 8=4337
 Hg arc tube producing large volume of plasma 8=16606
electromagnetic wave propagation
 acceleration with microwaves near cyclotron
 resonance 8=4373
 adiabatic transformation of e. m. wave spectrum 8=21339
 Alfvén waves, for mag. field parallel to gravitational
 field 8=7771
 along unmagnetized column, for various guide
 structures 8=19885
 amplification, by charged particle beam for transient
 radiation at media boundary 8=12494
 amplitude modulation by a. c. magnetic fields 8=15391
 anisotropic, homogeneous, distortion of pulse
 carrier 8=16525
 antenna, current distrib. propag. const. and radiation
 resist. 8=16528
 antennas and propagation conference, Ann
 Arbor 1967 8=15401
 aperture field model for plane wave 8=16519
 in beam-plasma systems 8=7765
 beams-plasma interaction 8=21329
 beam shape in focal region of microwave lens,
 calc. 8=21356
 beat frequencies and harmonic generation 8=7758
 between antennas, effects of refr. and absorpt. 8=7783
 boundary layer on slender entry vehicles 8=14709
 bounded, collisionless absorption and emission 8=7770
 bounded plasma, nonlinear theory 8=12496
 bremsstrahlung, relativistic correction and electron-ion
 spectrum and energy loss rate in relativistic
 limit 8=21343-4
 Buchsbaum-Hasegawa wave excitation in low-temp.
 plasma cylinder 8=21337
 cold, motion in magnetic field with h. f. e. m.
 wave 8=21322
 collision-induced instabilities near electron cyclotron
 harmonics 8=7841
 collisionless, along applied mag. field 8=4372
 compressible, wave excitation and equivalence
 relations 8=4374
 conference, I.E.E.E., New York, 1967 8=1398
 Coriolis force, Hall current and self-gravitation
 effects 8=16515
 coupling due to inhomogeneous region 8=16518
 cyclotron harmonic emission along mag. field 8=21327
 cyclotron harmonic radiation from plasmas,
 theory 8=21328
 cyclotron instability in hot electron plasma with double-
 humped velocity distrib. 8=21398
 in cylindrical plasma with mag. field 8=7768
 demodulation, nonlinear, of an amplitude-modulated
 wave 8=1395
 diffraction by structure 8=4371
 dipole resonance of column, nonlinear effects 8=7763
 dispersion in hot inhomogeneous slab 8=4365
 Doppler shift, theory 8=12499
 drift wave with finite amplitude 8=7772
 edge condition and "intrinsic loss" in uniaxial
 plasma 8=16530
 effect on symmetric waves in a rectangular
 helix 8=6396
 electrostatic ion cyclotron waves, exptl. study 8=12500
 enhanced microwave emission due to irrad. by intense
 microwave 8=1396
 in external elec. field, fluctuations and scatt. of e. m.
 waves 8=4369
 Faraday rotation in semiconductors and ionosphere 8=22948
 guided waves, transformation theory 8=378
 gyromag. or synchrotron radiation, relativistic,
 amplification dependence on polarization 8=21345
 gyrotropic, bounded, new multipolar mode 8=21347
 half-bounded, e. m. fluctuations inc. surface waves 8=4377
 helix in plasma, symmetric wave behaviour 8=7766
 hydrodynamic solitary waves, nonlinear 8=7756
 imbedded in moving dielec. medium, governing eqns. for
 e. m. fields and waves 8=12507
 impedance meas. of quarter wave monopole,
 isotropic 8=19897
 inhomogeneous, asymptotic solution of waves 8=7774
 inhomogeneous with longit. mag. field, asymptotic
 solns. 8=21330

Plasma—contd

electromagnetic wave propagation—contd

- inhomogeneous magnetoactive medium, e. m. wave amplification by charged particle flow for transient radiation 8=21348
- in inhomogeneous warm magnetoplasmas, first-order coupled diff. eqns. 8=16532
- interaction, longitudinal and transverse waves 8=16524
- interaction of plasma waves 8=4364
- ion-acoustic wave excitation 8=7815
- ionizing shock, moving, interaction with transverse wave 8=12504
- klystron operation from wave coupling on beam modulation by low freq. 8=1397
- Landau damping and entropy 8=12505
- lateral wave on symmetrical Epstein transition 8=19840
- longitudinal, excitation at diffuse reflection of electrons from surface 8=12498
- magnetic field \parallel to plasma boundaries 8=1392
- magnetized column, radiation from dipole 8=7762
- magnetized, non-uniform, e. m. freq. near 2nd electron cyclotron harmonic 8=4367
- magneto-, warm, whistler mode propag., effect of longitudinal elect. field 8=19008
- magnetoacoustic resonance for non-linear excitation in cold plasma 8=21333
- in magnetoactive, one-component, unbounded plasma, anisotropic press. 8=7773
- magnetoplasma, a. m. wave, non-linear demodulation, theory 8=16521
- magnetoplasma, cold slab, radiative modes of e. m. oscillns. 8=16527
- magnetoplasmas, inhomogeneous wave, eqns. 8=12466
- magneto-plasmas, warm slightly ionized, interact. of e. m. fields 8=16517
- metal foils with rough surfaces 8=8958
- microwave nonlinear high-power coupling to electroacoustic resonances 8=12506
- microwave scattering by turbulence, numerical expt. 8=16516
- microwaves through turbulence, anomalous transmission 8=7759
- non-linear cross modulation due to time-dependent electron density 8=21334
- oblique incidence on plasma layer 8=21331
- oblique wave in drifting isotropic warm plasma 8=21323
- partially-filled waveguide, non-linear coupling dispersion eqns. 8=10958-9
- plane field perpendicular to plasma layer, independence 8=12508
- plasma layer in mag. field, kinetic theory 8=12497
- propag. refl. and absorpt. of e. m. waves 8=1392
- r.f. sources in ionized medium, behaviour 8=12495
- radiation by test particle in helical motion along mag. field 8=12501
- radiation characts. of linear resonant antenna, comments and reply 8=12492-3
- radiation from charge moving in magneto-active plasma with l. f. oscillations 8=21385
- radiation from plasma, photon bremsstrahlung calc. for e gas 8=12503
- radiation from warm plasma, freq. near electron cyclotron resonance second harmonic 8=21336
- radiation loss of finite dipole in moving plasma 8=7764
- radiation shown by antenna with dielectric sheath before surrounding plasma layer 8=10978
- reflection and transmission from magnetized nonuniform slab 8=21342
- refraction and focusing of spherical waves in parabolic layer 8=7761
- refractive index, relativistic, for drifting magnetoionic plasma 8=18977
- rarified, of thetatron discharge, microwave excited due to instability 8=16523
- resonant layer, absorption at oblique incidence 8=4376
- resonance phenom. in reflection and transmission from magneto-plasma column 8=1394
- scattering by collinear plasma waves 8=7757
- scattering by dielect. const. fluctuation 8=21338
- scattering in free-electron atmosphere 8=15028
- scattering, generalized physical optics approximation 8=16534
- scattering from immersed conducting cylinder 8=16529
- scattering by inhomogeneous spheres, collisionless approximation 8=4366
- slab, isotropic and incompressible, excitation by parallel plate guide with one plate truncated 8=21335
- space charge waves in electron beam 8=7767
- short antenna impedance, quasi-static approximation 8=15423
- shock tube, reflection by moving plasma 8=16531
- in stratified magnetoplasma, using energy propagation 8=23368
- surface microwaves along column 8=12456
- TE waves in collisionless sheet, dispersion relations and stability 8=21346
- transient oscillations excited by small antenna 8=21332
- transmission cross sections of infinite slit, excited by H-polarized plane wave 8=15395

Plasma—contd

electromagnetic wave propagation—contd

- transverse waves in magnetized laboratory plasma 8=21341
 - turbulent heating, intensity of e. m. rad. and noise 8=4370
 - turbulence, microwave investigation 8=7760
 - turbulent, skin layer, anomalous thickness obs. 8=7769
 - u. h. f., radiated rel. to instability mechanism 8=16520
 - warm, dipole impedance, effect of induced acoustic sources 8=4386
 - warm plasma loaded waveguides, surface waves 8=16522
 - waveguide, nonlinear coupling of slow and fast waves 8=4401
 - wave guide partially filled with plasma in infinite axial mag. field 8=3266
 - waveguide, solid-state, circular, and Faraday effect 8=10968
 - waveguide, stratified, study of orthogonal natural or eigen waves 8=10960
 - Ar afterglow, msec microwave pulses nonlinear interactions 8=21340
 - Ar, resonance scatt. of c.w Ar ion laser light 8=12513
 - Cs, ion-acoustic wave, non-linear Landau damping 8=4375
 - Ne afterglow, msec microwave pulses nonlinear interactions 8=21340
 - Xe afterglow, msec microwave pulses nonlinear interactions 8=21340
- magnetohydrodynamics**
- acceleration by self-induced mag. field 8=1327
 - acoustic mode, dipole magnetization field 8=1393
 - Alfvén waves, large-amplitude, nonlinear effects in propagation 8=21376
 - anisotropic, discontinuities, transition solns. 8=4353
 - atmosphere, upper, long period geomag. micropulsations explanation 8=2731
 - bounded beam-plasma system, axially symmetric oscills. 8=16568
 - boundary between stream and cavity with plane dipole, effect of external mag. field 8=16496
 - charge interaction with space-perturbed magnetic field, asymptotic calculation 8=3232
 - cold, electrostatic waves, nonlinear interaction of three 8=4355
 - cold, l. f. non-electrostatic waves in field excited by ion beam, instabilities 8=4348
 - cold, motion in magnetic field with h. f. e. m. wave 8=21322
 - collision damping including Hall current and Larmor radius 8=12486
 - collisionless, transverse wave propag. along applied field 8=4372
 - collisionless, viscosity, in weakly turbulent mag. field 8=18929
 - depolarization currents in curved magnetic field 8=16500
 - diffusion across mag. field, effect of boundary conditions for metal and glass cylinders 8=16502
 - diffusion and rot. in conducting container of finite length 8=4349
 - diffusion, transverse, across uniform mag. field, kinetic theory 8=4341
 - electron beam, gyrating, interaction with cold plasma 8=16501
 - electron current, stability 8=7836
 - electron density, redistribution by microwave field 8=7729
 - electron mode coupling in finite field 8=7840
 - energy conversion principles, by collision and gyration 8=288
 - energy exchanges for various excitation modes 8=7749
 - equations, study of instability 8=12556
 - equilibrium flow accompanying compression 8=16493
 - exosphere conc. by sounding 8=23314
 - Ferraro-Rosenbluth problem, computer expt. 8=1384
 - flows, temp. dependence of elect. conductivity 8=16491
 - flute growth, large amplitude stabilization 8=4350
 - generator boundary flow calc. 8=19725
 - generator, linear, analysis in uniform state 8=10840
 - gravitating rarified plasma, axially symmetric motion 8=21301
 - half-jet, compressible, inviscid stability 8=354
 - Hall current device, acceleration process 8=12483
 - heating by fast wave, rel. resistivity and damping 8=12484
 - horizontal strata, m. h. d. wave propag. 8=7748
 - hydrodynamic solitary waves, nonlinear, propagation 8=7756
 - instabilities, parametric, production by pumping wave of high implitude 8=12485
 - instability, transverse drift l. f., rel. to auroral bombardment 8=4356
 - localized modes in multipole configurations 8=16498
 - magnetized, space-charge effects by nonthermal ions 8=4351
 - MPD arcs, current and potential distribs, effect of electrode geometry 8=16495
 - magnetoplasma dynamics accelerator, phenomena in cathode region 8=7652
 - model, physical interpretation 8=6342
 - motion of oppositely charged particles 8=16497

- Plasma—contd**
magnetohydrodynamics—contd
 moving through transverse field, 2D time independent solns. 8=4354
 non-equilibrium and enhanced mixing at a plasma-fitted interface 8=5841
 nonequilibrium props. of seeded plasma, radiation effect 8=16484
 nonuniform electrical conduction in MHD channels 8=16437
 non-uniform, e. m. propag., freq. near 2nd electron cyclotron harmonic 8=4367
 oblique m. h. d. shock waves, stability 8=16456
 oblique wave propagation in drifting isotropic warm plasma 8=21323
 pinch solns., one-dimensional static 8=7802
 plane parallel flow, influence of viscosity anisotropy 8=16494
 plasmoid, laser-produced, expansion against mag. field 8=16505
 poloidal resonances of plasma magnetized by dipole field 8=18925
 positive column, l.p., in transverse mag. field 8=7661
 quantum mechanics of nonlinear phenomena in strong mag. field 8=16503
 reacting medium, effect of ionization and recombination 8=4357
 reviews of plasma physics, book II 8=16461
 shock, propag. perpendicular to mag. field, one parameter family of profiles 8=12489
 single electron motion, superphase velocity and wave excitation 8=12487
 spatial dispersion and Landau damping 8=1385
 stability in magnetic traps, theory 8=7843
 stratified anisotropic, gravitational internal instability 8=10241
 supersonic flow, investigation technique 8=7793
 theta pinch with sharp boundary, stability 8=4390
 toroidal confinement scheme magnetohydrostatic equilibrium 8=16548
 turbulent flow correl. with Langmuir probe current fluctuation 8=1406
 upper atmosphere, toroidal resonance, math. viability 8=2723
 warm, streaming, and a confined mag. field, boundary layer between 8=7750
 wave correlations, uniformly turbulent weakly nonlinear systems 8=4352
 waves, longitudinal excitation near electron-cyclotron harmonics in axial mag. field 8=16581
 wave modes behind normal ionizing shock waves 8=19535
 wave propag., dispersion relations and damping rel. to transport coeffs. 8=16499
 waves quasilinear transform. and nonlinear interactions 8=12552
 waves and theory of stability, book 8=16455
 wave, transverse, interaction with moving ionizing shock 8=12504
 Ar₂ gas-ionizing shock fronts, hydromagnetic, non-equilibrium structure 8=16504
 He, axial injection into mag. dipole field, obs. 8=16506
- measurement technique**
 arc jet temperatures, spectroscopy and calorimetry 8=12572
 beam shape in focal region of microwave lens, calc. 8=21356
 density contour meas. using mol. ion beam break-up 8=7791
 density distribution, Mach-Zender interferometric analysis 8=7786
 density distrib. in θ -pinch, bremsstrahlung method 8=12525
 density, spectroscopic, spectral line intensity and broadening 8=16538
 detector-characteristic method at intermediate pressures 8=12517
 diagnosis by coupled cavity interferometry with He-Ne and CO₂ lasers 8=12522
 diagnostics in microwave cavities using whistler resonance temp. effect 8=3272
 diagnostics, spectral line contour self-reversal 8=12521
 diamagnetism, using external coil near conducting wall 8=16543
 discharge model, relative abundance of ions 8=7780
 discharges, r. f., high voltage, current meas. 8=4277
 electron concentration by broadened hydrogen lines 8=4062
 electron conc., crossed interferometric-spectrographic method 8=12523
 electron concentration by 4mm microwave interferometer, low-density 8=7790
 electron conc., homodyne phase meter 8=7785
 electron density using complex reflection coeff., plasma boundary errors 8=16535
 electron density, microwave free-space method 8=16537
 electron-hole decay rate, double-pulse variable-decay circuit 8=15177
 electron temp. and density, methods 8=7799
 electron temp. due to shock waves 8=21326
 electron temps. and densities from transient He-like ion line emission 8=21358
- Plasma—contd**
measurement technique—contd
 Fabry-Perot resonator, microwave, electron density, collision freq. and Q change 8=16542
 Faraday cup for solar plasma 8=1403
 fluctuating, electron distrib. function meas. by Langmuir probes 8=4385
 fractional-fringe holographic interferometry 8=7779
 induction method, parameters, theory reviewed 8=4380
 ionospheric probe, resonance relaxation sounder 8=19012
 isotherms, visualization by seeding 8=7781
 Langmuir probe characts., determ. of e densities in afterglow plasmas, comp. of methods 8=21355
 Langmuir probe description 8=4382
 Langmuir probe, microwave, diagnostic techniques, comparison 8=1409
 Langmuir probes, exptl. investigation 8=7794
 Langmuir probes, modulated, spurious second harmonics 8=1410
 Langmuir probes, theory applic. to saturated-ion-current density, anomaly explanation 8=12529
 laser beams, self-focused for electron density and temperature 8=16544
 laser light incoherent scatt. 8=21354
 magnetoplasma dielectric in resonant cavity, absorpt. spectrum 8=21352
 magnetoplasma, resonance rectification effects 8=1407
 mass pickup in low energy θ pinch and obs. 8=12533
 microwave diagnostics 8=4379
 microwave diagnostics of plasma sheath 8=21364
 microwave diagnostic systems at 8, 4 and 2mm, ceramic window for 8=7789
 microwave, electron density and ionization time 8=12518
 modified-Langmuir-probe analysis, comp. with computer solns. of electrostatic probes 8=21360
 multiplexer for multifrequency microwave sounding 8=12524
 optical interferometry of laser induced discharges 8=16403
 orbit analyzer probes, for plasma temp. 8=12530
 pilot tube for supersonic flow investigation 8=7793
 probe, double with h. f. multistep pulse voltage 8=4384
 probe, electron charact. in magnetized plasma 8=16547
 probe, electrostatics for electrodeless r. f. plasma 8=21361
 probes, electrostatic, for lightly ionized gas, continuum theory 8=16545
 probes, mag., calibration by separate r. f. elect. and mag. field generation 8=4381
 probe, optical, laser phase contrast system for phasography 8=7792
 probe, structure, downstream flow in uniform guide field 8=12472
 e probe for supersonic flow investigation 8=7793
 pulsed, lasers, production and diagnostics 8=21353
 pulsed pressure causing electrode cleavage near axis 8=1336
 resonance probe effect near ion plasma frequency 8=4383
 resonance and r. f. impedance probes, freq. characts. in mag. field 8=1408
 sheath, ruby laser pulse photography 8=12526
 shock tubes, e density by i. r. laser interferometry 8=16541
 spectrophotometer, electron-temp. isotherms meas. using scattered laser light 8=3357
 spectroscopic, exptl. device for high temps. 8=16539
 spectroscopic, high-temp. preliminary expts. 8=16540
 speed of streams, application of correlation method 8=12519
 spherical resonance probe behaviour in mag. field 8=16546
 superconducting electromagnets, appl. 8=6281
 temperatures, discharges for CO₂ lasers 8=15459
 temperature, spectroscopic, spectral line intensity and broadening 8=16538
 temperature, from Stark-effect shift and broadening of spectrum lines 8=7787
 θ -pinch, large diameter, refractive diagnosis with series interferometer 8=7788
 toroidal resonator for elec. cond., elec. field config. 8=16536
 transmission coeff. between antennas, effects of refr. and absorpt. 8=7783
 turbulence, microwave investigation 8=7760
 two-probe detector-characteristic method 8=12528
 u. v. detector, e channel multiplier 8=6506
 vacuum gas-dynamic unit using arc heater, for studying plasmatron operation 8=12531
 warm, dipole impedance, effect of induced acoustic sources 8=4386
 waveguide discrimination method 8=12520
 waveguide method of determining electric characteristics behind shock front 8=1389
 X-ray spectroscopy, 15-150 Å 8=22945
 Ar, moving striations, electron temp. var. display 8=16407
 C, laser-produced, two-wavelength interferometry 8=21357
 Cs arc, use of Mo probe 8=7782
 Cs, diagnosis by spectra interpretation, molec. effects 8=12527
 Cs diode, pot. and particle energies, meas. by simultaneous obs. of ion and electron energy spectra 8=15210
 Cu cold electrodes in moving H plasma, V-I characts. 8=21359

Plasma—contd

measurement technique—contd

- Cu, exploding wire, temp. determ. 8=7784
- D, diagnosis using neutrons from d-d reactions 8=1404
- He₂ discharge, positive column, correlator for 10-200 kHz signals 8=1405
- He-Ne laser, use of Mo probe 8=3318

oscillations

- acoustic mode damping of hydromagnetic plasma 8=12486
- acoustic in turbulent plasma, existence of second sound 8=12560
- Alfvén waves, Cherenkov emission by moving force source 8=6343
- Alfvén waves in finite conductivity plasma 8=12545
- Alfvén wave propag., for mag. field parallel to gravitational field 8=7771
- Alfvén waves, guided propag., appl. to magnetosphere 8=23327
- Alfvén waves, large-amplitude, nonlinear effects in propagation 8=21376
- Alfvén waves in solar wind 8=23719
- axially symmetric, in bounded beam-plasma system 8=16568
- beam-plasma interaction, ion excitation 8=12548
- beam-plasma system, h.f. and l.f. interactions 8=12539
- cold two-fluid, propag. of point disturbance along mag. field 8=16582
- collision-free waves, collective damping interpret. as simple energy exchange phenom. 8=21311
- with Coulomb interact., soln. for nonlinear fluctuations 8=16458
- cyclotron, ion and e, excit. by charged particle beams 8=12540
- cyclotron waves in moving cold plasmas, theory 8=16586
- density fluctuations due to monochromatic pumping, theory 8=12546
- density variation, conducting boundary, electron plasma wave 8=1420
- detonation waves measurement using double probe 8=4384
- dipolar resonance in waveguide 8=12456
- drift-dissipative, spectrum from eikonal eqn. 8=7805
- drift wave instability in column, correlation study 8=12553
- drift waves, meas. of resulting enhanced plasma losses 8=4400
- e, hot, due to e beam 8=21306
- echo experiment and theory 8=16585
- in electric field 8=7817
- electron cyclotron harmonics, non-linear generation with current instability 8=16573
- at electron cyclotron reson., e.m. waves negative absorpt. 8=12502
- electron discharge, pot. and density distrib. 8=1329
- electronic movement at low temp., solution of equations 8=7845
- electrostatic oscs., longit., higher order approx. in theory 8=16583
- electrostatic waves, absorption by plasma electrons 8=21382
- electrostatic waves, reflection at an electron sheath 8=12532
- excitation, four-plasmon parametric, theory and expt. 8=4399
- excitation non-linear, by magnetoacoustic resonance 8=21333
- excitation by phased electron beam 8=7813
- flute instability, gravitational analogy 8=7829
- flute, stability effect of incoherent precession 8=12567
- flute, of tenuous plasma, effect of elect. field 8=21378
- generation with relativistic electron beam 8=7818
- half-bounded, e. m. fluctuations inc. surface waves 8=4377
- helical waves in magnetoactive plasma, scatt. and transform. 8=21379
- high frequency, with large B, rel. to anisotropy of vel. distrib. function 8=12564
- h. f. waves, longit., generated by high current electron beam 8=21387
- hydrodynamic solitary waves, nonlinear, propagation 8=7756
- hydromagnetic waves damping rel. to stochastic electron heating 8=7821
- inhomogeneous, quasilinear wave transformation 8=12544
- interaction with ion-acoustic and transverse waves 8=16569
- interaction, longitudinal and transverse waves 8=16524
- ion-acoustic, excitation in strong field 8=7808
- ion acoustic waves, damping by Coulomb collisions rel. e and ion temp. 8=12550
- ion-acoustic waves, effect of electron temp. var. 8=16574
- ion-acoustic waves, e. m. excitation 8=7815
- ion-acoustic waves, propagation in bounded plasma 8=16575
- ion-acoustic waves, turbulence effects 8=12559
- ion cyclotron harmonics, angular spectrum 8=7820
- ion plasma oscillations, propagation, rel. to geometry 8=1422
- ion waves, collisionless plasma 8=16576
- ion waves in inert gases 8=1424
- ion waves, interaction with charged particle beam 8=7822
- ion-waves, parametric excitation 8=7807

Plasma—contd

oscillations—contd

- isotropic electron, Landau waves, expt. verification 8=7827
- isotropic, homogeneous plasma, supra-luminous waves and power spectrum 8=21380
- Landau damping, expt. confirmation, inherent errors 8=16587
- Landau damping, external mag. field effects 8=7826
- Landau damping in Maxwellian plasma as $t \rightarrow 0$ 8=21375
- Langmuir wave freq. correction, turbulent 8=7823
- laser probe scatt. for calc. of e density 8=1401
- longitudinal, in bounded one-dimens. nonuniform plasma 8=21386
- longitudinal, coupling to l. f. ion-sound wave 8=16579
- longitudinal, excitation across plasma column with axial mag. field 8=16581
- l. f. excited, radiation from moving charge 8=21385
- l. f. partially ionized gas, described by operation of plasma continuity eqns. 8=12541
- magnetoacoustic, instability in low pressure plasmas 8=21390
- magnetoacoustic, ion heating 8=7824
- magnetoplasmas, warm, resonance-rectification effects 8=7825
- mixing, non-linear, with velocity dependent collisions 8=16578
- modulated beam interactions, charge density distrib. 8=1418
- moving plasma in shock tube, electrically-driven, nature 8=4359
- near-steady transition waves 8=16481
- non-linear ion-cyclotron, theory 8=7812
- nonlinear, in magnetoactive plasma 8=12551
- nonlinear in uniform mag. field, soln. of Vlasov-Maxwell eqns. 8=16567
- nonlocal reflection in inhomogeneous media 8=21383
- overstable modes, resistive, in current-carrying column, obs. 8=12542
- parametric build-up in high freq. elect. field 8=21388
- parametric excitation due to density grad. 8=1421
- parametric res. and nonlinearity, from field modulation 8=4396
- potential surface waves, mag. field effects 8=7811
- in presence of Langmuir wave, ion osc. propag. in opposite direction 8=4397
- quasi-static ion cyclotron waves 8=4395
- quasi-stationary, amplification by electron beam 8=7816
- random in turbulence, effect of collisions 8=7738
- relativistic Vlasov-Maxwell eqns. initial value soln. 8=21381
- resonance of particles and Alfvén waves 8=7814
- resonance waves formed by interact. with e. m. waves 8=1394
- rotating cylinder pulsations at zero temp. gradient 8=20401
- second-harmonic cyclotron resonance, electron temp. and density var. 8=1419
- shock wave prop. along magnetic field 8=12491
- spatial ion-wave echo obs. 8=16588
- stratification wave, determ. from transient wave 8=141
- surface, dispersion by Al surfaces 8=12547
- surface waves, excitation by linear mag. currents 8=7810
- surface waves along magnetized column, symmetric modes 8=12549
- and temp. distrib., electron beam injection prod. 8=21287
- transconductance due to Landau waves, theory 8=7828
- transverse wave instabilities in plasma with axially symmetrical velocity distrib. 8=12554
- turbulence, Coulomb collisions calc. 8=16474
- turbulent, interaction of ion-acoustic waves 8=7809
- wave energy, transform. from energy accumulated in active medium 8=4402
- wave excitation by external currents 8=4394
- wave interaction, nonlinear, beam instability 8=16598
- wave propagation, models 8=12543
- waves in inhomogeneous warm magnetoplasmas, first-order coupled diff.-eqns. 8=16532
- waves at plasma-mag. field interface 8=21384
- waves, nonlinear, in plasma pierced by quasi-neutral charged particle beam 8=1391
- waves quasilinear transform. and nonlinear interactions 8=12552
- waves, small- and large-amplitude, collisionless damping obs. 8=4403
- waves, steady-state decay instability 8=4405
- waves, in weak turbulence, nonlinear interaction and ion sound 8=1423
- weakly ionized gases, propag. of longit. ion waves 8=4398
- weakly turbulent 8=4404
- Cs ion beam, synthesized, electrostatic oscillation obs. 8=16584
- Cs, thermal, in Q device, noncorrelation with magnetic cross-field transport 8=7819
- Hg, ion acoustic waves dispersion relation and phase vel., 10^{-3} torr 8=21377
- Hg, longit. waves second harmonic generation, 10^{-3} torr 8=21389

stability

- alkali halogen, drift waves in collisionless limit 8=16577

- Plasma—contd**
stability—contd
- anisotropic pressure in helical mag. field 8=7832
 - ballooning in mag. quadrupole confining field 8=12537
 - beam instability of current 8=7837
 - beam instability, nonlinear wave interaction 8=16598
 - beta in θ pinch, determining factors 8=16551
 - cold, l. f. non-electrostatic waves in field excited by ion beam 8=4348
 - cold, multiperiodic h. f. field rel. to two-stream instability 8=21402
 - collision-induced instabilities near electron cyclotron harmonics 8=7841
 - collisionless compression, with anomalous friction, numerical investigation 8=21399
 - collisionless plasmas in cylindrical geometry, and equilibrium 8=21397

 alloy, ordering, rel. to dislocations and antiphase boundaries 8=17634
 in anelasticity, yielding of cylinder rel. to stress rate 8=22275

Plastic deformation—contd

- asymmetrical bending of beams 8=10558
 b.c.c. metal, crystallographic study of yield condition 8=17727
 beams, iterative procedure 8=8797
 β -, brass, effect on martensitic transformation 8=21843
 block, indented by opposed narrow punches, deformation analysis, theoretical 8=10562
 bombs, tubular, behaviour, and modes of fracture 8=22292
 in composite bar, wave propag. at elastic-plastic interface 8=19394
 curved panels, buckling, edge restraint effect 8=19401
 cylindrical shells, axisymmetric collapse under pressure 8=10554
 ductile fracture with rotation, influence of inclusions and stress-state 8=17729
 f.c.c. alloy polycrystals, computer simulation and derived rolling texture 8=13512
 f.c.c. metal polycrystals, computer simulation and derived rolling texture 8=13512
 glass-ceramic from SiO_2 - Li_2O - ZnO system 8=17829
 high pressure effects 8=8796
 ice, and dislocation structure 8=4977
 ionic mats, necessary conds 8=13511
 iron, armco, strain-aged, rel. to tensile stress strain relations 8=17792
 limiting load theory, punching of a plate 8=13510
 in mechanism of excessive grain growth during recrystallization 8=17259
 rel. to metals destruction by cavitation and droplet impact in magnetostriction oscillator 8=22306
 metals, latent elastic strain energy due to residual stresses 8=22269
 metals, on cutting and grinding at high velocities 8=19338
 microdeformation of solids, measuring technique 8=22273
 mild steel beams, dynamically and statically tested, energy absorption 8=13574
 Permalloy, ferromagnetic, rel. to maximum mag. susceptibility 8=18338
 Permalloy films, effect of defects on mag. anisotropy 8=14031
 phenolphthalein and congeneric mol. crystals, effect on props. 8=23033
 polymers, theory 8=17844
 polystyrene, glassy, bands 8=22411
 pure non-cubic crystals, increase with temperature cycling 8=22276
 rectangular plates, stability, perturbation method 8=59
 shells, inelastic, membrane, with rotation symmetry, creeping at finite deformations 8=10571
 steel by dynamic compression and plasticine, Na use as models, 1000°C 8=13556
 steel, mild, yield stress rel. to strain 8=22368
 steel, stainless rel. to magnitude of Mössbauer effect 8=8219
 steel, type 1H18N9T, austenitic, mag. qualities, and influence of elastic deform. 8=9291
 zone length in moving brittle crack path direction, theory 8=57
 Ag crystals, plane strain compression 8=17662
 Al block, indented by opposed steel punches, deformation, theoretical and actual, comparison 8=10562
 Al, grain boundary sliding, constant-stress shear test 8=22220
 Al, grain boundary sliding, isothermal sheartest 8=22221
 Al, lattice distortion, e microprobe-Kossel obs. 8=21978
 Al, microdeformation measuring technique 8=22273
 Al, rel. to elasto-plastic behaviour obs. 8=8848
 Al, thin wall circular cylinders, buckling at 500°F 8=17757
 Al-2% Mg alloy, dislocation network knitting on stress-induced climb 8=17644
 Al-Mg alloy, effect on structure 8=17004
 Al-Zn eutectoid alloy, superplasticity rel. to grain boundary shear 8=17766
 Au, microdeformation measuring technique 8=22273
 Au, quenched, slip channel formation and other defects 8=17663
 Au, vacancy introduction at 4.2°K 8=13421
 BaF_2 , colorability enhancement 8=22228
 BeO polycrystals, high temp. dislocation 8=13539
 CaF_2 , colorability enhancement 8=22228
 CaO , colorability enhancement 8=22229
 Cd, dislocations and slip planes 8=8725
 Co hexagonal single crystal surface due to friction against sapphire ball 8=17771
 Cu, annealing behaviour, effect of dispersed phases 8=17772
 Cu crystals with dispersed Co/ SiO_2 phases, and dislocation distrib. 8=4974
 Cu, electron irradiated, yield stress increase 8=17773
 Cu, microdeformation measuring technique 8=22273
 Cu, rel. to recrystallization and mech. props., at low temp. 8=8403
 Cu, role of dislocation rearrangement in elastic mod. recovery 8=22337
 Cu_2O , by motion of a {100} dislocations on {100} glide planes 8=22327
 Fe, and annealing, rel. to X-ray diffraction line intensity 8=21989

Plastic deformation—contd

- Fe, coarse grained polycrystalline, under tensile stress 8=1985
 Fe crystals with 8-20 p.p.m. C, n-irradiated, yield stress rel. to radiation hardening 8=17800
 Fe crystals, having [100] and [110] axes, -70°C to 250°C 8=13553
 Fe, ferromagnetic, rel. to maximum mag. susceptibility 8=18338
 Fe, neutron irradi., stress-strain curves 8=22348
 Fe, neutron irradi., work-hardening parameters 8=22349
 α -Fe, rel. to dislocation structure 8=4975
 Fe, rel. to elasto-plastic behaviour obs. 8=8848
 Fe single crystals, yield props. 8=22340
 Fe-Mn austenite, and annealing rel. to H permeability 8=17573
 α -Fe, 3.28% Ni addition, effect on yield and fracture behaviour at low temps. 8=22346
 Fe-26% Ni-0.4% C alloy, austenite deformation effect on M_s 8=4710
 Fe-Ni invar, rel. to Fe^{57} Mossbauer spectrum, obs. 8=21811
 Fe-Si alloys, ferromagnet after-effect 8=5466
 Ge point contact diode, etch pits 8=5326
 in Mg-Al spinel, rel. to slip parallel to {111} plane 8=17664
 MgO whiskers, ductility obs. 8=13586
 MgZn_2 , dynamic and creep tests 8=5081
 NH_3 crystals, at liq. N₂ temps. 8=17820
 NaCl crystals, pure and doped, by indentation, rel. to pot. differences 8=16978
 NaCl, photostimulated exo-emission from F-centre crystals 8=5409
 NaCl, rel. to acoustic n.m.r. 8=5561
 NaCl, slip lines, electron microscopic study 8=22213
 Nb-Mo alloy single crystals, comp., temp. and orientation dependence 8=17819
 Ni alloys, resistance recovery 8=13722
 Ni, ferromagnetic, rel. to maximum mag. susceptibility 8=18338
 Ni-Co, rel. to positron annihilation 8=17909
 Ni-Fe, rel. to positron annihilation 8=17909
 Ni-Mo alloys, quenched, effects on transformation during annealing 8=17094
 Pu, electrorefined, and concurrent recrystallization, 24-115°C 8=21961
 Si, in brittle fracture region 8=5084
 Si, internal friction and elec. resist. on repeated alternating bending 8=17828
 Si-Fe, influence on temp. dependence of magnetic properties 8=14014
 Si-Fe, [110], necking and fracture at 293 and 473°K 8=13607
 SrF_2 , colorability enhancement 8=22228
 SrO , colorability enhancement 8=22229
 U-C alloys, around UC comp., die-forming and texture of extruded rods 8=22396
 Zn, dislocations and slip planes 8=8725
 Zn, rel. to elasto-plastic behaviour obs. 8=8848
 Zn-Al alloy, superplastic, effect of stress, temp. and heat-treatment 8=5090
 ZrO_2 , Y_2O_3 - and MgO- stabilized, in stress relief mechanism 8=17839
- Plastic flow**
 See also Rheology.
 advances in applied mechanics, book IX 8=16747
 in anelasticity, yielding of cylinder rel. to stress rate 8=22275
 Armco iron, lower yield stress rel. to grain size 8=17798
 cohesionless bulk solid, gravity flow in converging conical channel 8=13514
 ice, polycrystalline, at low stresses and small strains 8=22373
 martensite, flow stress rel. to temp. and strain rate 8=22351
 metal, deformations and probability of fracture 8=17736
 nylon, dislocation motion interpretation 8=2074
 plate, thin flat, and fracture under uniform stress 8=13513
 steel cylinders, tensile stress and natural strain 8=22353
 steel, stabilized sheet 8=8836-7
 velocity depend. on elastic interact. between dislocation loops 8=8720
 Zircaloy-2 tubing, ductility, effect of hydride 8=13615
 Be ductility rel. to prestraining, 50, 100 and 200°C 8=8825
 Cu, u.s. work hardened 8=22336
 CuZn (β brass), hydrostatic extrusion effects obs. 8=5059
 Fe-Al alloys, yield effect from elevated temp. constant strain-rate tests 8=13555
 Ge, at room-temp., obs. 8=22372
 KCl crystal dependence of dislocation density on compressive force obs. 8=8731
 NaCl crystal dependence of dislocation density on compressive force obs. 8=8731
 Nb foil, tensile stress, and dislocation density, effects of grain size 8=4980
 Pu1 wt. % Ga alloy, at -60, 30 and 77°C 8=13604
 Si-Fe alloy, dislocation structure and ductility, low-temp. creep effects 8=13571

Plastic flow—contd

- Te, dislocation theory 8=4984
 TiNi, hydrostatic extrusion effects obs. 8=5059
 Zn, basal slip, Al impurity effects 8=17836

Plasticity

See also Viscoelasticity.

- advances in applied mechanics, book IX 8=16747
 anodic oxide films, ductility 8=2047
 bending, asymmetrical, of beams 8=10558
 combined loadings, classification 8=10561
 coupled thermoplasticity, continuity at wave fronts 8=10577
 cylinder, hollow, changes in geometry during compression 8=10563
 cylindrical wafers, under compression plates, press. and stress distrib. anal. 8=19394
 deformable surface, theory, simple force multi-poles 8=2918
 disc edge, stress distrib. 8=2927
 elastic-plastic analysis, numerical methods 8=19400
 elastic-plastic continua, eigenmodal deform., crit. conds. and character 8=19399
 elasto-plastic crack behaviour under longit. shear 8=13519
 elastoplastic stress waves, cylindrical and spherical, soln. by unified direct anal. 8=14952
 flush nozzles in pressure vessels, stress analysis 8=10557
 general variational theorem 8=10559
 glass-reinforced, high-strength prop. meas. at cryotemps. 8=17840
 granular substances, theory 8=8798
 graphite, nuclear grade A, and deform. props. 20-2200°C 8=8829
 inequality conditions, obs. 7=58
 intermetallic compounds, press. effects on ductility 8=13535
 limiting load theory, punching of a plate 8=13510
 metal, micro-, study by strain effects on the a.c. resistance 8=5036
 metal sheets, incremental theory for anal. of bore-expanding test 8=22272
 metal shells ductility and rupture rel. to strain rate and thickness obs. 8=5037
 plane elastic-plastic waves of 1-dimens. strain, propag. anal. 8=19522
 plane-strain problem with two yield conditions 8=2041
 quartzite, precursor decay for cylindrical and spherical flow 8=13605
 reinforced fibre, cyclic extension 8=19403
 resonance of shock wave, longitudinal, in elastic-plastic bar 8=15052
 shells, cylindrical under piecewise pressure, ring forces and moments, and energy losses 8=41
 steel structures, application of theory to limit design 8=8846
 tensile instability, effect of variation of Poisson's ratio 8=8799
 stress-strain relations in elastoplasticity 8=8790
 Al alloys, wrought-, ductility and strength rel. to ingot structure 8=5046
 Al-Ag alloys, rel. to GP zones and stacking faults 8=8821
 Al-Zn eutectoid alloy, superplasticity rel. to grain boundary shear 8=17766
 CCl₄ solid, shear strength from 187° to 247°K 8=22401
 σ -FeCr alloy, ductility rel. to atomic ordering and co-ordination 8=17030
 Ge, at room-temp., obs. 8=22372
 Mo, structure and low-temp. ductility, deform.-induced changes 8=13589
 σ -2NbAl, ductility rel. to atomic ordering and co-ordination 8=17030
 Pb-Tl alloys, superplasticity during creep 8=13603
 β -Pu, superplasticity 8=17826
 V, ductility-brittle transition rel. to terminal H solubility 8=5088
 ZrO₂, super-, during monoclinic \rightleftharpoons tetragonal transform. 8=5091

Plastics

See also Polymers.

- cellulose nitrate and acetate, stress/strain isothermal curves 8=22406
 creep under hydrostatic press, linear strain and recovery 8=22280
 epoxy composites, filled and porous, Young's modulus obs. 8=13620
 fibre glasses, thermal expansion, unsteady regime meas. method 8=8645
 glass reinforced, adiabatic shock curve at pressures up to 130 thousand atm. 8=22409
 glassy thermoplastics, stress/strain isothermal curves 8=22406
 plates, fibre-glass-reinforced, crack extension, appl. of fracture mech. 8=22294
 plexiglass as material for accelerator tube 8=20233
 polyethylene, relation between adhesion and wettability 8=8879
 polyurethane, compression modes, obs. 8=22271
 polyurethane foam, under small deformations, elastic characts. 8=22261
 polyvinylchloride, conformation changes from i.r. spectra and dielec. losses 8=8360

Plastics—contd

- polyvinylchloride plasticization by aromatic and condensed ring cpds., obs. 8=23141
 PVC, stress/strain isothermal curves 8=22406
 β -ray spectrometer, 2-20 MeV 8=20388
 scintillation counter for n det., 10-70 MeV 8=11621
 scintillating fibres, light-conducting characts. 8=9586
 scintillator, light output under influence of α -particles 8=2495
 scintillating, muonium, behaviour in 8=723
 specialised applications in electronic and other industries 8=13876
 thermal mass thickness variation at elevated temperature, electron microscope examination 8=17186
 track detectors for light nuclei 8=20220
 triacetylcellulose films, thermomech. curves of elongation at const. strength, rel. to plastifier content 8=22407
 vinyl, tensile strength and struct. disintegration, obs. 8=17843

Platinum

- annealed, anelastic effect at low temps. 8=22211
 annealing damage, effect on further e-irradiation damage at 90°K 8=1947
 anodic oxidation in LiCl-KCl 8=5738
 atom, e-binding energy effect on incoherent γ scatt. 8=17703
 cyclotron effective mass, anisotropy and mass enhancement 8=22487
 deuteron-irradiation, damage and recovery 8=8697
 electrodes, adsorpt. and oxidation of hydrocarbons 8=9714
 electrodes, oxidative adsorpt. of n-hexane 8=5737
 electrodes, oxidative adsorpt. of propane 8=2534
 epitaxial growth, by sublimation in vacuum 8=4752
 Fermi surface determ. from de Haas-van Alphen effect 8=22752
 film, electrical conductivity, island structure, on quartz glass and BaTiO₃ substrates 8=13709
 films, obliquely deposited, struct., effect of atom mobility 8=8296
 heated wire, catalysed CO₂-N₂-He laser system 8=3308
 hemispherical reflectance, rel. to λ and surface roughness 8=2399
 in liquid Pb, thermodynamic props. 8=8043
 microcrystals, uniform, obtained from hydrosols 8=1745
 n-irradiation damage and recovery rel. to defect doping effect 8=1953
 n.m.r. spin echoes, Knight shift 8=2387
 refinement by annealing in air 8=4812
 resistance bridge thermostat for $\pm 25\mu^\circ\text{C}$ 8=15123
 resistivity, elect., and thermal conductivity, 373 to 1373°K, obs. 8=22521
 specific heat meas. from 1.4-100°K 8=22119
 specific mag. susceptibility between 80° and 1850°K 8=5439
 thermoelectric power, high press. effects 8=13902
 two-band conduction model for resistivity, contradictions 8=2107
 vacancies, divacancies and self-diffusion from quenching and recovery expts. 8=17612
 Au¹⁹⁹ ion exchange removal from n irradi. Pt 8=23168
 Co sorption 8=18701
 Pt(II), spectra in fused LiCl-KCl 8=1567
 Pt-Ir alloys electrodeposition and deposits hardness and stress obs. 8=23153

Platinum compounds

- alloys, thermoelec. power meas. 2-120°K 8=18216
 oxides, gaseous, thermodynamic data 8=5716
 rare-earth alloys, conduction electron polarization 8=17857
 PtAs₃, decomp. press. and enthalpy of formation 8=12338
 Pt-Ba alloy, work function 8=18245
 PtC, gaseous, dissociation energy 8=4240
 [PtCl₂(NH₃)_{4-n}]²⁻ⁿ complexes electronic struct., MO calc. 8=4168
 Pt-Co alloys, coercivity and remanence obs. 8=22835
 Pt-Co alloys, high (BH)_{max}, criticism 8=22836
 PtCo mag. props. rel. to prep. and purity, obs. 8=22837
 PtCo ordered alloys, effect of symmetry on field ion images 8=4881
 Pt₃-Co alloy, ordered, field-ion microscope study 8=1764
 Pt-Fe alloys, internal magnetic fields at Pt nuclei 8=2334
 PtFe mag. props., obs. 8=22837
 Pt₃Fe, mag. structure dependence on atomic ordering 8=18348
 Pt-Fe natural alloys, e probe microanalysis obs. 8=14477
 Pt-Fe-Mn alloys, antiferromag. order dependence on comp., n-diff. study 8=18387
 [PtPd]Co Curie and order-disorder transform. temps., obs. 8=22837
 [PtPd]Fe Curie and order-disorder transform. temps., obs. 8=22837
 Pt-Rh alloy, quenching expts. 8=13423

Pleochroism

- all-trans β carotene crystals, dichroism obs. 8=2465
 benzene, mag. circular dichroism 8=21123
 benzil cryst., circular-dichroism, compared with absorpt. and rotatory dispersion 8=2463
 chlorins, optically active, mag. circular dichroism 8=16317
 coronene, mag. circular dichroism 8=21123
 crystals, i.r. dichroism meas. by attenuated total refl. 8=18490

Pleochroism—contd

- dye solns., photodichroism, wavelength dependence 8=8070
 hexahelicene, circular dichroism 8=12883
 infrared dichroic polarization textures 8=11204
 linear dichroism in the u.v. meas. 8=6563
 naphthols, dichroic spectra in PVA sheets, rel. to vibronic transitions 8=14285
 nylon fibres dichroic ratios for molecular orientation 8=16394
 polyenes, prep. of films for dichroism meas. 8=18580
 polymers, i.r. dichroism meas. by attenuated total refl. 8=18490
 polymers, mag. circular dichroism, theory 8=12384
 triphenylene, mag. circular dichroism 8=21123
 Er ferrite-garnet, dichroism and mag. anisotropy 8=18523
 $P_3N_3Cl_6Br$, i.r. dichroism 8=5627
 PrF_3 , i.r. dichroism and absorption 8=9560
 $RbCl$, circular dichroism of K band 8=14256
 $RbCl$, Z_2 centre circular dichroism 8=22224
 $RbNiF_3$, ferrimagnetic, mag. circular dichroism and rot. of light polarization plane 8=18557

Plexiglas. See Plastics.

Plutonium

- α and β , transverse magnetoresistivity 8=2350
 α phase foils, electron microscope study 8=21887
 aerosol produced by burning, characts. rel. to reactor safety 8=12950
 α -Pu, specific heat comparison with α -Mn 8=17512
 β -Pu hardness anomalies rel. to α and γ parent phases, 120-190°C 8=8860
 β -Pu, superplasticity 8=17826
 containing sample preparation for electron probe microanalysis 8=4831
 δ -phase, optical consts. at 5461 Å 8=23009
 electrorefined, recrystallization and concurrent plastic deformation, 24-115°C 8=21961
 glovebox, thermal gradient apparatus 8=7334
 isotope shift constants 8=16234
 isotopes, effect on reactor Doppler coeff. 8=7340
 oxidation rate in air, 8=5717
 solubility in Fe 8=13041
 X-ray emission spectra, 8 to 75 Å 8=14255
 Pu^{244} abundance in early solar system 8=23468
 $Pu^{238-242}$, arc spectrum, rel. isotopic shift 8=20965

Plutonium compounds

- Pu-Ga alloy (3 at. %) alloy, α -phase precipitation in δ phase due to cold working 8=21855
 Pu-Ga alloys, microhardness 8=8859
 Pu/1 wt. % Ga alloy, plastic flow at -60, 30 and 77°C 8=13604
 Pu-0.85at% Ga, metastable δ -phase, effect of thermal cycling on transform. behaviour 8=8278
 PuO_2 adsorption of O, sites and sintering effects, obs. 8=8345
 PuO_2 , m. p., rel. to UO_2 - PuO_2 solid-liquid phase diagram 8=8169
 PuO_2^{2+} , M-O bond force consts. in various media 8=21094
 Pu-Th system, phase diagrams, peritectic and eutectoid of transform S 8=21854
 Pu_2Zn_{29} , crystal structure 8=17409
 PuZr peritectoid reaction, 615°C 8=8279
 Pu-Zr phase diagram, obs. 8=8279
 PuZr, synthesis from Pu and Zr, obs. 8=8279

Polar cap absorption. See Electromagnetic wave propagation/ionosphere.

Polar cap glow. See Airglow.

Polarimeters

- Compton improved sensitivity by replacing NaI(Tl) scintillator by an organic one 8=6788
 ellipsometer, following, computer-operated for film growth monitoring 8=6562
 laser light apparatus for determ. polarization 8=11074
 n from reactions by α avalanche gas counter method 8=6952
 photoelectric control for rotary power meas. 8=15549
 photoelectric, two-cell, using rotatable achromatic half-wave plate, astronomical 8=10106
 polariscope, Savart-type, astigmatism when used as polarization interferometer 8=514
 reflection ellipsometer, use with permalloy films 8=9409
 for starlight, interstellar effect meas. 8=23541
 CdS soleil i. r. compensator 8=15550

Polarized light

- See also Double refraction; Optical rotation; Photoelasticity; Polarimeters.
 alkali vapour, optically pumped, modification 8=4088
 anthracene, generation of charge carriers 8=2268
 atmospheric depolarization by turbulent inhomogeneities 8=14619
 circularly and linearly polarized beams, self-focusing mech. in liqs. 8=12870
 comet Ikeya-Seki, tail polarization obs. 8=10358
 depolarization from backscattering 8=19839

Polarized light—contd

- dibenzosuberone, polarisation of $S_1(n\pi) \leftarrow S_0$ transition 8=8096
 comet Ikeya-Seki (1965) head and tail, 3890-5875 Å 8=10360
 dielectric rough-surface reflection 8=11200
 by elec. and mag. anisotropic media 8=515
 electromagnetic waves, angle rel. to impedance matching, small-reflection wall application 8=3256
 ellipsometric meas., quick response 8=11201
 ellipticity of light scatt. by atmos. air, rel. to haze aerosol microstruct. 8=9877
 far u. v., Te crystal reflectivity obs. 8=15551
 fluorescence polarization, effect of self-quenching 8=21698
 fluorescence, self-depolarization, "critical distances" in theories 8=21697
 fluorescence, self-depolarization, mathematico-physical models 8=21696
 fluorescent source, quantum statistics of polarization 8=23036
 4,4'-dibromobenzophenone, polarisation of $S_1(n\pi) \leftarrow S_0$ transition 8=8096
 four part quartz plate in phase difference meas. 8=15512
 graphite, transverse and longitudinal optical props. 8=2407
 helicoidal nematic films 8=16837
 infrared dichroic polarization textures 8=11204
 interference-polarization filters with transmission-band shift 8=11203
 interferometer, for spectral modulation transfer functions of monochromators 8=488
 laser, Pérot-Fabry cavity obs. 8=19976
 lasers, solid, apparatus for determ. 8=11074
 liquids, Rayleigh-Wing scatt., analysis showing increased gain 8=8092
 mica cryst. retardance meter 8=6510
 phase functions for light scatt. from atmos. surface layer 8=9876
 polymer fibre scatt. rel. to supermolec. order 8=18581
 polymers, preferred orientation, polarized-fluorescence experiment, mathematics 8=1721
 porosity-polarization relationship applicable to lunar surface 8=23646
 quasars, circular polarization, detectability 8=23631
 radial field distributions in a self-focusing light beam 8=11202
 scattering by Dirac particle 8=15713
 sky, obs. and object contrast improvement 8=18875
 starlight, interstellar polarization meas. 8=23541
 stars, most within 200 parsecs, obs. in galactic plane and direction of galactic poles 8=23521
 transparent media, anisotropic, Brewster angle generalization 8=22947
 Al_2O_3 powder reflection and polarization 8=14266
 Ba, emitted on slow electron bombardment, and excited levels lifetime 8=21019
 in $Bi_{12}GeO_{20}$, photo-induced static changes 8=2404
 CdSnAs₂, absorption at 295°K 8=22966
 CN laser, far i. r. 8=11054
 n-GaAs in mag. field, circularly polarized, waves, doping rel. to optical absorpt. 8=22981
 Hg, liquid, Drude theory and optical props. 8=12881
 Hg vapour, optically pumped, modification 8=4088
 OH, 18 cm cosmic rad., anomalous elec. polarization 8=23582
 $RbNiF_3$, ferrimagnetic, rotation of plane of polarization and mag. circular dichroism 8=18557
 SbSI, light polarization near ferroelec. phase transition 8=18559
 SiC powder reflection and polarization 8=14266
Polarography. See Chemical analysis/electrochemical.

Polymerization
 adipimide, anionic, triacetamide activated 8=9708
 alkylacrylates copolymers with methacrylamide, coalescence rel. to particle and film struct. 8=17189
 anionic polymers, effect of impurities and initiation and transfer rate consts. on statistical character 8=12388
 benzonitrile, under press., differential thermal analysis 8=9684
 β -iodophenylacetylene, synthesis and props. 8=23130
 butadiene, π -crotyl NiI and -NiCl, catalyst props., rel. to structs., obs. 8=8576
 bis(2-carballyloxyalkyl)phenylphosphanes, oxides and sulphides, for thermostable glasses 8=13110
 copolyesters, formation, and degree of randomness by high resolution n.m.r. spectra 8=12387
 copolymerization, cationic, mechanism and copolymer comp. 8=23135
 dioxolane in mass, equilib. conc., molec. weight rel. to temp. 8=18709

Polymerization—contd

- emulsion, kinetics 8=14415
 ethyl acrylate by a.f. elec. field, obs. 8=9709
 ethylene on CrO_2 , chain transfer kinetics and polyethylene mol. weight, obs. 8=23129
 epoxy resin, interpretation of elect. resistivity meas. 8=18707
 fluoro-olefines on oriented polymer fibres, radiation graft-copolymerization 8=23138
 glass-forming systems, radiation-induced 8=18711
 graft-copolymers of polydimethylvinylsiloxanes with polar vinyl monomers, synthesis and struct. 8=23137
 hexamethyldisiloxane on Al surface, in glow discharge 8=5731
 kinetics at low conversions, study by polarographic maxima 8=5728
 liquid phase, of monomers, e.s.r. study of free radicals concerned 8=14414
 p-methacrylbenzoic acid in liq. cryst. state, rate and molec. weight 8=18710
 p-methacryloxybenzoic acid in liq. state 8=14410
 methylmethoxysiloxane on Al surface, in glow discharge 8=5731
 octamethylcyclotetrasiloxane, study by MWD change of polydimethylsiloxane elastomers 8=14409
 organic adsorbed layers on metal films 8=2251
 phenyl phosphine, migration type with di-isocyanates 8=14411
 photopolymerization photography 8=23140
 polar monomers, sigma type complexes with metal chlorides 8=2527
 polycapraamide fibres, CF_3 radiation grafting rel. to adhesion props., obs. 8=22410
 polycarbonates, P containing, synthesis 8=14412
 polyethyleneterephthalate fibres, CF_3 radiation grafting rel. to adhesion props., obs. 8=22410
 polypropylene fibres, CF_3 radiation grafting rel. to adhesion props., obs. 8=22410
 polypyromellitimide kinetics i.r. spectra study 8=14408
 polytrioxane mol. weight rel. to preirrad. dose and temp., obs. 8=21210
 poly(vinyl chloride), tacticity, by i.r. spectroscopy 8=21217
 propylene, kinetics with catalytic system $\alpha\text{-TiCl}_3\text{-Al}(\text{C}_2\text{H}_5)_3\text{-H}_2\text{O}$ 8=5730
 semiconductors, polymeric, new, synthesis 8=5286
 statistics of substitution polymers 8=18659
 styrene grafting to polypropylene stabilized and unstabilized films, obs. 8=23139
 trioxane, in benzene soln, yield and molec. weight depend. on temp. regime 8=23134
 trioxane, pre-irrad., kinetics, 30-64°C 8=23133
 trioxane, solid, SnCl_4 initiated cationic polymerization, kinetics obs. 8=23132
 trioxane in soln., kinetics and reaction order 8=14407
 trioxane in soln, molec. weight rel. to temp. and catalyst conc. 8=18708
 trithiane, radiation induced formation of polythiomethylene 8=17184
 vinylacetate, initiation efficiency and temp. depend. 8=1413
 vinylchloride copolymerization with acrylic and methacrylic acids, relative reactivities obs. 8=23136
 vinyl monomers, liquid, by a.f. elec. field, obs. 8=9709
 4-vinyl-pyridine, reactivity 8=5728
 vinylene carbonate, in aqueous soln, with O_2 , initiation 8=5729
 N-allylmonoamides of maleic and succinic acids, in solid state by Co^{60} γ -rays 8=23131

Polymers

- See also Plastics.
 additives to water, effect on turbulent shear flow 8=16764
 adhesion to porous substrates, joint form. and strength 8=17751
 adhesion, wettability data 8=17841
 n-alkanes, eqn. of state correl. with chain length 8=16790
 alkylacrylates copolymers with methacrylamide, latex particles and films, struct. rel. to coalesc. 8=17189
 amylose triacetate I, cryst. struct. 8=17461
 anelastic and dielectric effects, book 8=22658
 anionic, effect of impurities and initiation and transfer rate consts. on statistical character 8=12388
 band theory, relevance to conduction and optical studies 8=17872
 biaxially oriented, triangular orientation function plot rel. to spherical harmonic expansion coeffs. 8=17462
 birefringence dispersion in amorphous, oriented polymers 8=9578
 from bis(2-carballyloxyalkyl)phenylphosphane oxides and sulphides as thermostable glass 8=13110
 cellulose acetates, characts. from speed sedimentation in acetone 8=4262
 cellulose fibres, surface structure, effect of ionic etching 8=13083
 cellulose nitrate and acetate, stress/strain isothermal curves 8=22406
 cellulose nitrate, α -ray spectrometer target 8=11293
 cellulose nitrate target, fast neutron detection from nuclear reactions 8=11619
 chain mol., rotary diffusion const. 8=16816

Polymers—contd

- chain twisting, effective barrier to reorientation 8=1716
 chains, distrib. function of distances between ends, volume effects in swelling 8=21215
 copolyesters, formation, and degree of randomness by high resolution n.m.r. spectra 8=12387
 copolymer comp. and cationic copolymerization mechanism 8=23135
 copolymers in dilute solution, physical chemistry, recent aspects 8=8020
 copolymers in soln., effect of interaction between unlike segments 8=4541
 copolymers in soln. molec. dimens. 8=12811
 cross-linked, under tension 8=17845
 crosslinked, viscoelasticity theory 8=8873
 crystalline, polyamellar habits 8=1766
 crystalline, unoriented, creep mechanisms 8=13619
 crystalline, u.s. propag. 8=1859
 crystallization of chain-folded crystals 8=1734
 crystallization, ciliation and fractionation 8=8390
 crystallization kinetics, a modified equation 8=8424
 crystals, fold surface packing from moiré patterns 8=17299
 de-oxyribonucleic acid, u.v. spectra of dichroic films, meas. 8=6563
 depolymerization, u.s., at elevated static press. 8=4568
 dichroism, i.r., meas. by attenuated total refl. 8=18490
 dilute solns., flow through curved pipes 8=21570
 dilute solution, Pitot-tube and hot film obs. 8=7981
 of 2, 3-dimethylbutadiene-1, 3, mol. struct. rel. to polymerization conditions, obs. 8=21212
 elasticity, statistical mechanics 8=8875
 electrical conduction properties, conference, Pasadena USA (1966) 8=13701
 as engineering mats., background to reln. between struct. and mech. props. 8=23773
 epoxy composites, porous, strain-rate dependence of elastic modulus 8=13621
 epoxy, micropenetrator for surface characterisation 8=8876
 epoxydimethyl siloxane, orientation birefringence temp. dependence rel. to structure 8=9577
 equilibrium distrib. between soln. and small voids 8=16801
 etch-resisting, cross-linking by electron beam, rel. to integrated cct. prod. 8=15279
 ethylene-butene-1 copolymers, crystalline structure 8=8598
 ethylene/propylene copolymers, orientation birefringence temp. dependence rel. to structure 8=9577
 ethylene-trifluoropropylene copolymer, microstruct. study by i.r. spectra 8=17298
 ethylene/vinyl acetate copolymers, orientation birefringence temp. dependence rel. to structure 8=9577
 fibres, low angle polarized light scatt. rel. to supermolec. order 8=18581
 fibres, X-ray small-angle scatt., review 8=8438
 film, trapping of electrostatic changes in surfaces 8=13891
 films on base, structure, i.r. spectra study 8=4738
 flexible, radius of gyration, probability distrib. 8=7644
 fracture, conference, Boston, USA (1966) 8=13518
 glass transition, pressure effects 8=8359
 glassy thermoplastics, stress/strain isothermal curves 8=22406
 Grüneisen number 8=1866
 guar gum in tap water, aging and degradation from Pitot tube obs. 8=12744
 heat shield material ablation obs. 8=1860
 high, crystalline regions, lattice strains, along and across fibre axis 8=8877
 high resolution n.m.r. spectroscopy 8=16886
 homo- and graft co-, in soln., intrinsic viscosity and free energy 8=1536
 hydrocarbon chains, effective masses estimation 8=17873
 hydroxyethyl cellulose aqueous soln, non-Newtonian, drag coeff. on falling sphere 8=12724
 latexes, size distrib. from light scatt. 8=16900
 linear chain, theory of expansion in solvent 8=4264
 linear chains, excluded-vol. effects, differential eqns. 8=12383
 linear, in aqueous solutions, in the turbulence vortices 8=12946
 lucite, Cherenkov time resolution function obs. 8=5690
 lucite, tensile strength and struct. disintegration, obs. 8=17843
 magnetic optical rot. and mag. circular dichroism, theory 8=12384
 Makrolon films stress cracking and crystallization obs. 8=8473
 melting, with diluents, under press. 8=4642
 melts, flow-induced crystallization, fibre nuclei formation mechanism 8=1532
 melts, strength and elasticity 8=16748-9
 methylmethacrylate copolymers with methacrylic acid, ht. capacities, 25-190°C 8=1579
 methylmethacrylate copolymers with styrene and p-chlorostyrene, dielec. relax. 8=12906
 methylmethacrylate-methylacrylate copolymers, dielectric relaxation 8=5358
 for microstructure exam. by X-ray diffr., crystallite randomization nondestructive methods 8=8440
 microstructure in ultrathin sections 8=17297

Polymers—contd

- molecular size distrib. changes on cross linking 8=12385-6
 molecular weight determ. from heat of condensation of solvent vapour into polymer solns. 8=18643
 Mössbauer-effect doublet spectra, line asymmetries and anisotropic lattice dynamics 8=13022
 Mylar films, electrical conduction in high fields 8=13877
 nitroso dimers, photodissociation on irradiation with u.v. light 8=9726
 nitroxide, prep. and mag. resonance 8=4270
 n. m. r., high resolution 8=21216
 non-Newtonian flow, rel. to molec. wt. 8=16759
 nylon, adsorpt. of polyethers at soln. solid interface 8=1709
 nylon fibres molecular orientation by polarized internal reflexion spectroscopy 8=16394
 nylon, plastic flow rates, dislocation motion interpretation 8=2074
 nylon 66, static electrification 8=5356
 nylon thread temp., i. r. pyrometer meas. 8=17187
 oligomers, reticulate crystalline nature from X-ray and thermomechanical tests 8=17192
 oxidation of high polymers, e.s.r. study of free radicals concerned 8=14414
 PDMS solns., form effect, conc. depend. 8=12895
 p-(perfluorovinyl)-toluene co- with styrene, molecular motion 8=17191
 phenol-formaldehyde, i. r. spectra during thermal treatment 8=4269
 plastic deformation, theory 8=17844
 p polarization by "solid effect", 3150-19 200 Oe and 1.65-4.2°K 8=13015
 in polyacene solid solns., energy transfer, 1965-66 bibliography 8=14162
 polyacetylene, study of optical properties 8=9576
 polyacrylamide in tap water, aging and degradation from Pitot tube obs. 8=12744
 polyacrylonitrile, atomic-pile-irradiated, density changes 8=17709
 polyacronitrile drawn film, anisotropy of mech. tan δ 8=17847
 polyacrylonitrile, pyrolytic products, analysis by mass spectrometry 8=23174
 polyalkylacrylates, crystallization rel. to lengths of side branches 8=21941
 polyalkyl methacrylates, dielectric props. 8=9203
 polyalkyl methacrylates, multiple transitions 8=21864
 polyamide, non- α -helical, H-D exchange 8=14349
 polyamides, increase in thermostability 8=17182
 polybenzoxazoles with O and S in chains, film synthesis 8=4772
 poly- γ -benzyl-DL-glutamate, dielectric props. rel. to mol. motion 8=2241
 poly-L- γ -benzyl glutamate, dielec. absorpt. in soln. 8=21705
 poly- γ -benzyl-L-glutamate, liquid crystal orientation in mag. fields 8=8006
 polybromoprene dielec. polarization rel. to mol. motion, obs. 8=22660
 polybutadiene-active C black, n. m. r. line widths 8=5550
 trans-1,4-polybutadiene, random-coil configs., interpretation 8=16388
 trans-1,4-polyisoprene, random-coil configs., interpretation 8=16388
 1.4 trans-polybutadiene, structure by i.r. polarized spectra obs. 8=4773
 polybutadienes, stereoregular, n. m. r. line widths 8=5550
 polybutylmethacrylate viscoelasticity freq. depend., obs. 8=22404
 polycaproamide, elastic modulus, molec. theory 8=22405
 polycaproamide fibres adhesion and wetting, CF₃ radiation grafting effects, obs. 8=22410
 polycaproamide fibres, fluoro-olefines radiation graft-copolymerization 8=23138
 polycaproamide, melting temp. rel. to nature and dispersity of filters, hardness, density and spherulite size of polymer 8=21914
 polycaprolactam, type II, p polarization by "solid effect", 3150-19 200 Oe and 1.65-4.2°K 8=13015
 polycarbonate, elec. conductivity under electron irradiation 8=9204
 polycarbonate films, BaTiO₃ and organic cpds. loaded, dielec. props. 8=22661
 polycarbonate films, deformation rel. to chem. structure 8=22403
 polycarbonates, phosphonated, synthesis of transparent films 8=14412
 polychloroprene dielec. polarization rel. to mol. motion, obs. 8=22660
 polydimethyldiphenyl siloxanes, copolymer, in soln., peculiarities of conformation 8=16802
 polydimethyldisiloxane elastomers, MWD changes rel. to octamethylcyclotetrasiloxane polymerization 8=14409
 poly(dimethyl siloxane) adsorption on solids from CCl₄ and xylene solns. 8=8336
 polydimethylvinylsiloxanes with polar vinyl monomers, graft-copolymers, struct. and synthesis 8=23137
 polydioxolane, i. r. spectra, cryst. and molec. vibs. 8=18584
 polydisperse solns., sedimentation equilb. 8=1531
 polyelectrolyte solns., osmotic coeffs. meas. during phase separation 8=16817

Polymers—contd

- polyelectrolyte solns., osmotic press. from e.m.f. meas. 8=16818
 polyelectrolyte solns., u.s. vibr. potentials 8=8061
 polyelectrolytes in salt solns., excluded vol. effect 8=12810
 polyelectrolytes, 2nd virial coeff. 8=4540
 polyene chain, antiferromagnetic spin structure in mols. with conjugate bonds 8=21208
 polyene, polarizability due to π -electrons 8=16390
 polyenes, prep. of films for dichroism meas. 8=18580
 poly- ϵ -caprolactones, optical rotation and molec. conformation 8=12880
 polyester foil, e⁺ annihilation fraction 8=13693
 polyester resins, water damage 8=13622
 polyesters, unsaturated, hardened, n.m.r. determ. 8=5565
 polymeric materials, engineering appls., design problems 8=23773
 polymethyl methacrylate in Aroclor, viscosity 8=8023
 polymethylmethacrylate graft copolymers viscosity solutions 8=8027
 polystyrene in Aroclor, viscosity 8=8023
 polystyrene graft copolymers, viscosity of solns. 8=8027
 polyetherdioxes, surface tension and parachor 8=4552
 polyethers, adsorpt. on carbon soln.-solid interface 8=1708
 polyethers, adsorpt. on nylon at soln.-solid interface 8=1709
 polyethers, adsorpt. on SiO₂ soln.-solid interface 8=1707
 polyethylene, adhesion and wettability 8=8874
 polyethylene, black, optical constants, 4-50 μ 8=14289
 polyethylene chain, methylene wagging 8=4265
 polyethylene, cold neutron cross-section 8=7271
 polyethylene, cryst., intermolec. vibrations 8=13341
 polyethylene, crystalline regions, lattice strains, along and across fibre axis 8=8877
 polyethylene, crystallinity degree, X-ray and density obs. 8=8472
 polyethylene, deformation, dislocation mechanism 8=2072
 polyethylene, derived elastic modulus 8=8608
 polyethylene, dielec. degradation by partial discharge 8=21214
 polyethylene, draw and undrawn, sorption of organic vapours 8=8349
 polyethylene, dynamic birefringence 8=18582
 polyethylene, elec. conductivity under electron irradiation 8=9204
 polyethylene, electron irradi. and not irradi., i. r. absorpt. spectrum, 150-310°K, 700-2100 cm⁻¹ 8=21165
 polyethylene, e emission and mol. wt. vars. in vibro-mech. treatment, obs. 8=18253
 polyethylene electron microscopy below 20°K 8=13159
 polyethylene ethyl and methyl branched copolymers, crystallization 8=17233
 polyethylene, filled, effect of substrate chem. nature on adhesion 8=13617
 polyethylene film, I-doped, current oscillations at high field strengths 8=8985
 polyethylene films, I-doped, elec. conductivity meas. 8=8984
 polyethylene films, oriented, structure and low angle X-ray scatt. 8=17144
 polyethylene, fold-surface struct. 8=17214
 polyethylene, fragment shapes in hypervel. impact rel. to lunar surface struct. 8=13609
 polyethylene, ht. capacity 2.5°-30°K 8=1875-6
 polyethylene, heat of fusion 8=8171
 polyethylene, high-density, creep behaviour 8=22408
 polyethylene, high density, photoconduction 8=13921
 polyethylene, irradi., etching with fuming HNO₃ 8=17216
 polyethylene, irradiated, properties at melting point 8=9201
 polyethylene membrane, temp. effects on permeation of liqs. 8=1508
 polyethylene melt, steady flow elasticity 8=12735
 polyethylene, melting temp., effect of crystallinity and mol. wt. 8=12971
 polyethylene, molecular structure, chain folding, inter-atomic distances 8=1827
 polyethylene mol. wt. and ethylene polymerization chain transfer reactions, obs. 8=23129
 polyethylene, n scatt. before and after reactor irradi., showing prod. of cross-bindings 8=16969
 polyethylene, noncryst. regions, changes during annealing 8=17183
 polyethylene obtained by xylene-stream method for electron microscopy 8=4852
 polyethylene, orientation birefringence temp. dependence rel. to structure 8=9577
 polyethylene, for π - π and π -p interactions, Σ production and polarization meas. 8=864
 polyethylene, point defects, molecular mechanics 8=1938
 polyethylene, regulation of degree of crystallinity 8=21932
 polyethylene, relation between adhesion and wettability 8=8879
 polyethylene, relax. X-ray diffr. obs. 8=21213

Polymers—contd

- polyethylene, short branches, quant. det. by γ radiolysis 8=16392
- polyethylene, slow n scatt. and thermal n spectra, using Nelkin-kernel 8=20802
- polyethylene, solubility of cyclopropane 8=17188
- polyethylene in soln., n. m. r. 8=16891
- polyethylene, supercooled liquid, nucleation rel. to temp. 8=1533
- polyethylene, surface struct. of single crystals. 8=17215
- polyethylene in tap water, aging and degradation from Pitot tube obs. 8=12744
- polyethylene targets for accelerators, characteristics 8=11291
- polyethylene, time-depend. birefringence 8=18583
- polyethylene- α -chloronaphthalene, melting under press. 8=4642
- polyethylene oxide aqueous soln, non-Newtonian, drag coeff. on falling sphere 8=12724
- poly(ethylene oxide), config. 8=12390
- polyethylene oxide solns., five, turbulent pips flow 8=4510
- polyethyleneterephthalate, determ. of crystalline fraction content, by i. r. spectra 8=17190
- polyethyleneterephthalate fibres adhesion and wetting, CF₃ radiation grafting effects, obs. 8=22410
- polyethyleneterephthalate fibres, fluoro-olefines radiation graft-copolymerization 8=23138
- polyethylene terephthalate film solar furnace 8=19675
- polyethylene terephthalate, rel. to space-charge effects 8=9185
- polyethylenimine, spectrophotometric analysis via Cu chelate 8=16393
- poly(glycol methacrylate), X-irrad., e. s. r. 8=18422
- poly(hexene-1 sulphone), dielectric relax. in soln. 8=1585
- poly(hexene-1 sulphone), dipole moment from dielec. meas. in soln. 8=1584
- polyisobutene viscoelasticity freq. depend., obs. 8=22404
- polyisobutylene in petrol, u. s. induced structural modifications, concentration dependence 8=21622
- poly-L-lysine, u. v. spectra of dichroic films, meas. 8=6563
- polymethacrolein reduction with LiAlH₄ and polymethanol prep., obs. 8=23107
- poly-p-methacrylbenzoic acid, struc. rel. to mesomorphic phase 8=18710
- polymethacrylic acid in alcohol-water mixtures 8=12822
- polymethacrylic acid solns., sedimentation and diffusion 8=12817
- polymethine dyes, liquid solutions, stimulated light radiation 8=16848
- polymethine dyes, Q-switching of laser 8=430
- polymethine-merocyanine dyes, n. m. r. spectra solvent depend. and rot. inhibition 8=12929
- polymethylacrylate and copolymers, solns. rheology rel. to bond networks, obs. 8=21552
- poly-3-methyl-butene-1, isostatic, single crystals. growth and structure, obs. 8=8599
- polymethyl methacrylate, cycle dependent fracture 8=2073
- polymethylmethacrylate, effect of impulse γ -neutrons on permittivity 8=18180
- polymethylmethacrylate, e emission and mol. wt. vars. in vibro-mech. treatment, obs. 8=18253
- polymethylmethacrylate, γ -irrad., trapped free radicals, e. s. r. spectra obs. 8=4682
- poly(methyl methacrylates) in soln., n. m. r. 8=16890
- poly(methyl methacrylate) in θ solvents, negative thixotropy 8=16758
- poly(methylmethacrylate), interface tension, tacticity determ. 8=4551
- polymethylmethacrylate, O₂ diffusion, meas. by quenching of phosphorescence 8=8687
- polymethylmethacrylate, rotational isomerism in ester group 8=4220
- poly(methyl methacrylate), stereoblock, low-temp. dielec. absorpt. 8=18175
- polymethyl methacrylates, stereoregular, broad line n. m. r. obs. 8=18462
- polymethylmethacrylate, temp. depend. of conformation transitions and dipole moment 8=17111
- polymethylmethacrylate tube torsional oscillations rel. to ht. generation 8=4946
- poly(methyl methacrylate), X-irrad., e. s. r. 8=18422
- poly(2-methylpentene-1 sulphone), dielectric relax. in soln. 8=1585
- poly(2-methylpentene-1 sulphone), dipole moment from dielec. meas. in soln. 8=1584
- polymethylphenylsiloxanes, optical anisotropy 8=12391
- polymethylpolysiloxanes, liq., dipole moment, dielec. relax. 8=4597
- poly(α -methylstyrene), in soln., viscosity and sedimentation 8=12823
- poly- α -methylstyrene, i. r. spectra in soln. 8=21692
- poly- α -methylstyrene, monodisperse, tensile creep behaviour 8=5094
- poly- α -methylstyrene, sedimentation, Johnston-Ogston effect 8=21729
- polymethylene chains, longitudinal acoustic vibrs. 8=8608
- polymethylene chains, polarizability anisotropy 8=16385

Polymers—contd

- polyoxymethylene, epitaxy and molec. struct. 8=17255
- polyoximethylenes, high molec. weight, form. using variation of temp. regime 8=23134
- polyoxymethylene system in solid trioxane matrix n. m. r. during polymerization 8=22921
- polypentene-1, polymorphism 8=17463
- polyphenols, mass spectrometry 8=1204
- polyphenoxyacetylene, structure and conjugated bonds 8=4266
- polyphenylacetylene, crystallinity, struct. and e. s. r., obs. 8=8600
- polyphenylacetylene, structure and conjugated bonds 8=4266
- poly-DL-phenylalanine, dielec. absorpt. in soln. 8=21705
- polyphenyl benzenes, triplet states, zero-field splitting 8=12288
- polyphenyl diffusion pump fluid film thickness continuous meas. 8=7949
- polyphenyl ester fluid, use in oil-vapour pump 8=7952
- polyphenyl ether, in unrefrigerated diffusion pumps for vacuum of 10⁻⁹ torr 8=7953
- polyphenyls in n-butanol glass, triplet lifetimes and T-T extinction coeff., obs. 8=23071
- polyphenyls, spin-spin interactions 8=2374
- poly-L-proline, i. r. spectra in aq. soln. 8=12891
- poly-2,2-propyl-bis-4-phenylcarbonate chemiluminesc. obs. 8=23072
- polypropylene fibres adhesion and wetting, CF₃ radiation grafting effects, obs. 8=22410
- polypropylene fibres, fluoro-olefines radiation graft-copolymerization 8=23138
- polypropylene, films and blocks, action of laser impuses, melting and recryst. or evaporation 8=17710
- polypropylene, free radicals, e. s. r. spectra 8=12352
- polypropylene, γ -irrad., free radicals e. s. r. obs. 8=7628
- polypropylene, styrene grafting to films and copolymer tensile strength, obs. 8=23139
- polypropyleneoxide, isothermal crystallization, calorimetric study of kinetics 8=4811
- polypyromellitimide, kinetics of formation, i. r. spectra study 8=14408
- polysiloxane-polyether block copolymers, equilib. surface tensions 8=8155
- polystyrene, activated, and in benzene soln. chemiluminesc. obs. 8=23072
- polystyrene, adsorbed, conformation meas. 8=8350
- polystyrene:anthracene:chloranil photocond. and fluoresc. obs. 8=9261
- polystyrene in benzene solns., flow birefringence 8=12732
- polystyrene in chlorinated biphenyl solns., dynamic mech. props. 8=12818
- polystyrene, cold neutron cross-section 8=7271
- polystyrene, conc. solns. viscosity, dependence on molecular weight and concentration 8=8026
- polystyrenes, of controlled molec. wt., characterization by n. m. r. 8=18473
- polystyrene, dielec. props. rel. to molec. weight 8=5360
- polystyrene di-n-butyl phthalate solns., u. s. meas. of shear impedance 8=4547
- polystyrene, e emission and mol. wt. vars. in vibro-mech. treatment, obs. 8=18253
- polystyrene, effect of crosslinking on photoelasticity 8=22395
- polystyrene, glassy, plastic deform. bands 8=22411
- polystyrene latex particles, aqueous suspensions, atomization 8=8154
- polystyrene matrix, dielec. meas. on polar solutes 8=9205
- polystyrene, oriented, birefringence dispersion 8=9578
- polystyrene soln., conc. fluctuations near critical temp. 8=21616
- polystyrene solns., excluded-volume effect 8=8019
- polystyrene soln., laser scatt., for verification of Brownian motion 8=1557
- polystyrene solns., viscoelastic props., mol. wt. depend. 8=8030
- polystyrene+solvent system, diffusion anomalies 8=12829
- polystyrene, vac. u. v. absorpt. spectrum 8=14290
- polystyrene viscoelasticity 8=8878
- polystyrenes, dielec. props., v. low temp. 8=5359
- polysulfone films, BaTiO₃ and organic cpds. loaded, dielec. props. 8=22661
- polysulphinimide, elec. props. 8=9138
- polysulphinimide, elec. props. 8=22615
- polytetrafluoroethylene, carbon-black filled, effects of γ -irrad. 8=17700
- polytetrafluoroethylene, conformational energies 8=1324
- polytetrafluoroethylene, fibril structure 8=1665
- PTFE, thermal cond. 8=17544
- polytetramethyl-p-silphenylenesiloxane, cryst. struct. 8=22065
- poly(tetramethylene oxide), config. 8=12390
- poly(tetramethylene oxide), dielec. meas. during crystallization 8=17240
- polythene film, laser-produced plasma formation mechanics 8=23034
- polythene-metal contact in vacuum, generation and dissipation of static charge 8=18159
- polythiomethylene, from trithiane by radiation 8=17184

Polymers—contd

- polytrioxane mol. weight rel. to preirrad. dose and temp., obs. 8=21210
- polyurethane coats, effect of Al bed on density of network in surface layer 8=17145
- polyurethane, compression modes, obs. 8=22271
- polyurethane elastomer, triaxial fracture in tensile field 8=2075
- polyurethane foam form., surface elasticity 8=8156
- polyurethane foam plastic under small deformations, elastic characts. 8=22261
- polyurethane foam, use in construction of faceted solar concentrators 8=19677
- polyurethane, layers for Zn alloys atmospheric corrosion prevention 8=14389
- polyurethanes, linear, temp. depend of heat capacity 8=22110
- polyurethanes, polyester- and polyether-based, extensional mech. props. 8=13623
- poly(vinyl acetate), conc. solns. viscosity, dependence on molecular weight and concentration 8=8026
- polyvinylacetate, dielec. props. rel. to molec. weight 8=5360
- polyvinyl alcohol, e emission and mol. wt. vars. in vibro-mech. treatment, obs. 8=18253
- polyvinyl alcohol film crystallization, i.r. study 8=13101
- polyvinyl alcohol film dichroic i.r. polarizers 8=11204
- polyvinyl alcohol films dyed in solutions of iodine in iodides and bromides, absorption spectra 8=5650
- polyvinyl alcohol, intrinsic viscosity in aq. salt solns. 8=21634
- 1, 2, 3% polyvinyl alcohol laminar-turbulent transition, obs. 8=4512
- polyvinyl alcohol, pyrolytic products, analysis by mass spectrometry 8=23175
- polyvinyl alcohol, sheets, dichroic spectra, naphthols vibronic transitions obs. 8=14285
- polyvinylchloride, conformation changes on plasticizing 8=8360
- polyvinylchloride, crystallinity degree determ. by X-ray analysis 8=1717
- polyvinyl chloride films, rheo-optical properties 8=2076
- PVC, effect of u. v. irradi. on glass transition temp. 8=17181
- polyvinylchloride, ht. capacity and sp. ht. values from studies at 60-300°K 8=1547
- polyvinylchloride, influence of high pressure on crystallinity 8=4774
- polyvinyl chloride, mechanism of Andrade creep 8=13624
- polyvinyl chloride, n.m.r. linewidth dependence on correlation time distrib. 8=18471
- polyvinylchloride plasticization by aromatic and condensed ring cpds., obs. 8=23141
- PVC, pyrolytic products, analysis by mass spectrometry 8=23175
- PVC single crystals of low mol. wt. 8=17300
- PVC solns., light scatt. 8=16850
- PVC, stress/strain isothermal curves 8=22406
- poly(vinyl chloride), tacticity, by i. r. spectroscopy 8=21217
- polyvinyl ethers, crystallization rel. to lengths of side branches 8=21941
- poly(vinyl formate), n. m. r. study of tacticity 8=16897
- polyvinylphthalimide with impurity acceptors, triplet-triplet energy transfer and triplet excitons, 15000-40 000 cm⁻¹ 8=12389
- poly-2-vinylpyridine, n. m. r. 8=16391
- polyvinyltoluene, solid solns. with phosphors, solubility and diffusivity of CO₂ 8=20386
- polyvinylidenechloride, ht. capacity, entropy and free energy studies, 60-300°K 8=1547
- polyvinylidene chloride, pyrolytic products, analysis by mass spectrometry 8=23174
- poly(vinylidene fluoride)-poly(vinyl fluoride) solid solns. melting point rel. to comp. 8=8173
- poly-p-xylene films, molecular orientation, cell dimensions 8=1828
- preferred orientation, polarized-fluorescence experiment, mathematics 8=1721
- reinforced, spiral fracture characteristics 8=2043
- relaxation times, from birefringence relax. 8=16849
- scanning electron microscope examination, sample preparation technique 8=17180
- semiconductors, new, synthesis and properties 8=5286
- silicones, # 200 series, ultrasonic absorption in range 30-350 MHz and -30° to +30°C, rel. to viscosity 8=8063
- solutions, critical opalescence 8=21669
- solutions, drag-reducing effects in turbulent flow past cylinders 8=16754
- solutions, flow in pipes, drag reduction 8=1511
- solutions, influence of intermolecular hydrodynamic interaction on viscosity and streaming birefringence 8=4505
- solutions, intrinsic viscosity determ. from meas. at a single point 8=16808
- solutions, intrinsic viscosity rel. to sedimentation 8=12823
- solutions, kinetics of solvent evaporation at film formation 8=12972
- solutions, optical activity 8=8065

Polymers—contd

- solutions, polynomial expansion of log relative viscosity 8=16805
- solutions, quasi-elastic scattering, effects of hydrodynamic interactions 8=4542
- solution, second osmotic virial coeff. calc. using lattice model 8=8039
- solutions, 2nd virial coeff., cryometric determ. 8=8017
- solutions, turbulent shear flow 8=12743
- solutions, u.v. refractive indices 8=8350
- solutions, viscosity, concentration var., compression of chains 8=4545
- solutions, viscosity, Newtonian 8=8025
- solutions, viscosity theory tests 8=8029
- solutions viscous flow, conc. depend. of activation energy 8=16807
- spherulite polydispersity rel. to low angle scatt. of polarized light 8=8358
- spin-lattice relax., side chains thermal motion obs. 8=22915
- statistics of substitution 8=18659
- styrene graft-copolymer to butadienestyrene rubber, thermal ageing struct. changes 8=17112
- styrene network copolymers with dimethacrylate or ethyleneglycole, cross linking effect on photoelasticity 8=22395
- styrene scintillators polymerization rel. radioluminesc. yield, obs. 8=14346
- Teflon films, electrical conduction in high fields 8=13877
- Teflon friction on steel, adhesion component modification by e irradi., obs. 8=17842
- teflon, I and AgCl, melting and pyrolysis, high pressure 8=4644
- Teflon 6, surface area and particle struct. 8=13047
- Teflon, tensile strength and struct. disintegration, obs. 8=17843
- tetrafluoroethylene-hexafluoropropylene copolymers, γ -irrad. effects on permittivity and loss 8=9202
- tetrafluoroethylene-hexafluoropropylene copolymers, γ -irrad., radical conversions 8=1326
- tetrafluoroethylene-hexafluoropropylene copolymers, γ -irrad., e. s. r. of radicals formed 8=1325
- tetrahedral lattice, self-avoiding walks 8=1768
- toluene glow discharge prod. films, comp., spectra and elec. props. obs. 8=21894
- triacylcellulose films, plastified, thermomech. curves of elongation at const. strength 8=22407
- ultimately uniaxially oriented, molec. theory of elasticity 8=22405
- vibrational effects in absorption spectrum of rod 8=7645
- vibrational spectra theory 8=21039
- vinylchloride, ht. capacity, entropy and free studies, 60-300 K 8=1547
- vinylchloride with vinylidenechloride copolymers, crystallinity degree 8=1717
- vinyl plastic, tensile strength and struct. disintegration, obs. 8=17843
- vinylidene fluoride-vinyl fluoride copolymers solid solns. melting point rel. to comp. 8=8173
- viscoelastic behaviour, meas. method based on Volterra operator 8=13616
- viscoelastic behaviour and structure 8=8869
- viscoelastic relax., Isakovich-Chaban theory 8=16771
- viscoelasticity and rheology, temp. dependence 8=2071
- viscose fibres, fluoro-olefines radiation graft-copolymerization 8=23138
- wettability rel. to melts heterogeneous nucleation, substrate effects 8=8298
- X-ray meas., small-angle method 8=17185
- C fibres reinforced, friction and wear 8=13618
- (CF₂)_n, peroxide radicals spin-lattice relax., 14 and 4°K 8=2377
- (CF₂CFH), peroxide radicals spin-lattice relax., 14 and 4°K 8=2377
- (CF₂CFCl), peroxide radicals spin-lattice relax., 14 and 4°K 8=2377
- S chains, rotational isomeric state models 8=21207
- S, relaxation mechanisms 8=4267
- Se chains, rotational isomeric state models 8=21207

Polymorphism

See also Crystal structure.

- 4'-n-alkoxy-3'-nitrodiphenyl-4-carboxylic acids, liq. crystals, modifications 8=21614
- anatase formation at high temps. 8=1684
- cholesteryl mynstate liquid cryst. mesophase struct. obs. 8=12802
- crystals of higher order, relation to other superphases 8=8363
- diamond, "lonsdaleite", hexagonal form, natural occurrence and crystal analysis 8=13121
- fresnoite, Ba₂TiSi₂O₈, isomorphism with pyrogermanate 8=18506
- isomorphism of cryst. pair from statistical analysis of normalized Bijvoet differences 8=22007
- isomorphous replacements 8=13120
- liquid crystals, smectic trimorphism 8=21613
- mica complex polytype, Li fluorophlogopite 8=8531
- polypentene-1 8=17463
- tetraethylammonium triiodide, two modifications crystal structure 8=1818

Polymorphism—contd

- BaTa₂O₆, orthorhombic, tetragonal and hexagonal forms prep. 8=4780
 Ca₂SiO₄ and solid solutions 8=13064
 CaYb₂O₄, Ca ferrite isomorph, crystal structure 8=4870
 CdI₂, two new polytypes crystal structure 8=1786
 CdTe films, from multiple refl. studies 8=1694
 GaP films, vacuum deposited 8=21883
 Ir₂Se₃, Rh₂S₃ and Rh₂Se₃, octahedron pairs 8=1807
 KAlSi₃O₈, transform, at 120 kbar and 900°C 8=8268
 LiMSiO₄ and related sulphates, (M = Al with Ga and Ge substitution) 8=17013
 Li₂SO₄, H₂O, high-pressure, and incongruent melting 8=12970
 Mo₂C, rhombic modifications and polymorphic transitions 8=8561
 NaAlSiO₄, isomorph of high pressure NaAlGeO₄, rel. to formation in earth's mantle 8=1678
 PbO, at low temps. 8=8276
 Rh₂S₃, Rh₂Se₃ and Ir₂Se₃, octahedron pairs 8=1807
 SiC, X-ray topographic obs. of polytypes 8=13115
 TiI, and compressibility and thermal expansion 8=1683
 TiO₂ II modification at 40-120 kbar and 400-1500°C 8=17104
 W₂C, rhombic modifications rel. to annealing temp. 8=8561
 YAl₃, two forms, crystal structures 8=1811
 YTaO₄, M¹-phase of fergusonite, lattice structure 8=8562
 ZnS, polytype families 8=8564
 ZnS polytypes 8=8563
 ZnS polytypes of family 24L-72R, unit cell and Zhdanov symbols 8=17194
 ZrO₂ and rare-earth oxides, X-ray and spectrographic investigations 8=4722

- annihilation, and Compton wavelength of electron 8=15739
 atom conversion on O₂ and NO mols. 8=7476
 atoms and mols. of chem. cpds., crystal colour centres as models 8=13451
 e⁻-H collisions, cross-section calc. 8=16223
 e⁻-H scatt., formation, soln. improvements by including polarizability 8=1195
 energy approx. computation, upper bounds to error 8=681
 formation and decay 8=6812
 formation, by e⁺ + H 8=12095
 h.f. splitting as test for Q.E. 8=11285

Positrons

- See also Electron pairs; and Electrons, which include both negative and positive electrons when the differences between them are of no special significance.
 annihilation in pure Fermi gas, ladder-graph approx. 8=22492
 annihilation, single-quantum, higher-shell contributions and polarization correlations 8=22491
 annihilation in solids, efficiency of crystal spectrometers 8=17905
 backscattering by various targets 8=1044
 (β⁺γ⁺) coincidence method, investig. of positron emitting nuclides 8=20743
 chemical compounds, crystal colour centres as models of positronium atoms and mols. 8=13451
 complex bound systems in crystals 8=6812
 in cosmic rays, evidence for secondary origin 8=19093
 emission from radioactive atoms in crystal, spacial dependence, wave mechanical treatment 8=17910
 emitters, disintegration rate meas. 8=11848
 e⁻-p backward scattering, ratio R = σ(e⁺ + p)/σ(e⁻ + p) meas. 8=15733
 e⁺-p scatt., 800, 1200 MeV, cross-section obs., energy meas., ratio to e-p cross-section calc. 8=20383
 lifetime in water, liq. and solid state, temp. depend. 8=16871
 in metals, temp. depend. of mean lives 8=2127
 scattering by proton, differential cross section, comparison with e⁻-p scattering 8=3600
 slow, scattering by mols. 8=12168
 spectrum in 31.5 MeV e tridents in Cu 8=20392
 in stars evolution, ν radiation from β⁺ capture 8=10138
 storage, and e⁻e⁺ colliding beams in alternating magnetic field storage rings at 280 MeV 8=20243
 zero-energy, scatt. by H and He atoms 8=20995
 Ag¹⁰¹ decay scheme 8=1015
 + H, positronium formation 8=12095
 H-e⁺ scatt., positronium formation calc. 8=1195
 in Hf¹⁷² + Lu¹⁷² decay, number 8=11824
 MgO, powdered, mag. quenching, "anomalous", of three photon annihilations 8=17908
 Ni-Co, deformed, annihilation 8=17909
 Ni-Fe, deformed, annihilation 8=17909

Potassium

- atom, ²F level, polarization by outer electron 8=7413
 atom, ⁴P_{1/2}, selection rules for transitions from collisions with inert gases 8=12064
 atomic absorption cross section, 580 Å to 1000 Å, experimental values 8=12065
 atomic beam, scatt. by benzene and cyclohexane beams, comp. 8=1205
 atomic beam, surface ionization on Pt and W 8=12110
 atoms, excitation by low energy electrons, absolute cross sections 8=12087
 atoms, pseudopotentials 8=7409
 atoms, reaction with Br₂ and I₂ molec. beams, kinetics 8=1202
 atoms, stimulated emission from 4P_{3/2,1/2} - 4S_{1/2} 8=20984
 conduction electrons, u.s. attenuation 8=22104
 crystal, approx. dispersion relations 8=17480
 deformation by thermal activation at low temps. 8=1957
 desorption from emitter of field emission microscope 8=3211
 electron-impact ionization, empirical calculations 8=12448
 electron scatt. differential spin-exchange cross section and differential cross section, 0.5 eV 8=12097
 elastic moduli and pressure derivs. at absolute zero 8=17818
 feldspar content of upper mesozoic graywackes California north 8=2565
 film condensation of saturated vapour 8=21770
 films, optical absorption 8=5612
 flares on astron. spectrograms, real or artificial? 8=14753
 foils, plasma reson. emission excited by light 8=7776
 helicon waves, nonlocal damping 8=17904
 ions, charge composition effect of target state 8=1365
 ions K⁺ on Hg electrode, partial charge transfer react. 8=18722
 ions, range distrib. in amorphous Al₂O₃ 8=13476
 lamp, line shape dependence on current 8=15523
 light modulation by K³⁹ at ground-state, optical pumping 8=12085
 liquid, effective ion-ion potential 8=8237

Potassium--contd

- liquid, elec. resistivity, appl. of structure factor and pseudo pot. relation 8=12920
 liquid, wavenumber-dependence of elastic moduli 8=1499
 magnetoacoustic effect, shear wave 8=22105
 melting, invariance of photocurrent and work function 8=13939
 molten, electronic band struct., density of states, and resistivity calc. 8=16789
 one-electron energy levels, for extended Thomas-Fermi-Dirac pot. 8=1167
 photoconductivity calc. from Kubo-Greenwood formula 8=5393
 photoionization of vapour 8=12447
 plasma, elect. conduction and condensation obs. 8=4343
 radioactive, abundance in crystalline shield rocks 8=9794
 scattering from O_2 , atomic differential spin-exchange scattering 8=12109
 size effect, r.f., line shapes for surface reactance and resist. derivatives 8=13719
 spectroscopy r.f. reson. lamp for kgauss fields use 8=6536
 sputtering ratio, differential, (energy spectrum) meas. for incident Ar and Xe ions 8=2029
 surface impedance near cyclotron edge for helicons 8=13686
 vapor, supersaturation and condensation shocks 8=12982
 vapour, charge exchange H^+ to H^- 8=12441
 vapour exchange to improve He ion source for accelerator 8=6693
 K absorption spectra in MnSe rel. to chemical bonding 8=14242
 in K methoxide-methanol ions coordination number and solvates comp. obs. 8=2497
 K⁻ e affinity calc. by superposition of configurations 8=21281
 K⁺ cochlear microphonic depend. on conc. in endolymph 8=19616-7
 K⁺, dipole polarizability from spectra 8=7414
 K₂ vapour, nonlinear absorpt. of ruby laser light, and resonance fluoresc. 8=7527
 K⁴¹, Larmor freq. rel. to Ge⁷³, and H² 8=5558
 K-Ar, interatomic potential, χ^2 minimum method 8=12205
 K-graphite lamellar cpds., phase equilib. 8=4712
 K-NH₃ dilute solns., absence of vol. change on dilution at -34°C 8=1530
 K+NaCl=KCl+Na, electronic pot. energy surfaces 8=23106
 Na, K radioactive ion separation, spacers in electrophoresis 8=5742
 Na²² impurity, diffusion 8=8680

Potassium compounds

- alum, chrome, n. m. r. obs. 8=2385
 halides, phonon scattering by monatomic impurities 8=4904
 transition metal halides, Raman and i. r. spectra 8=9542
 KAgI₃, cryst. struct. rel. to ionic mobility 8=17379
 KAlF₆·Fe³⁺, e. p. r. spectrum 8=9426
 KAl(SO₄)₂·12H₂O, isothermal dissoln. and growth, mag. field effect 8=8411
 KAlSi₃O₈, enthalpy of fusion 8=21753
 KAlSi₃O₈, polymorphic transform. at 120 kbar and 900°C 8=8268
 K₂B₂O₄ glass, γ -irrad., induced absorption bands assoc. with Tl⁺, Pb²⁺ or Bi³⁺ 8=5639
 KCN, elec. cond. of single cryst. 8=5352
 K₂CO₃, i. r. cryst. spectra 8=18556
 2K₂CO₃·3H₂O, cryst. struct. 8=8528
 KCa₂(Be, Al)₂Si₂O₁₀·0.8H₂O, crystochemical analysis and structure refinement 8=17338
 KCa₄H₁₆Si₄O₂₆ (apophyllite) crystals, etch pits rot. on basal cleavages 8=8384
 K₂Ca(SO₄)₂·H₂O, syngenite, crystal structure 8=13268
 KClO₃, effect of X-irrad., new absorpt. bands in i. r. region 8=22993
 KClO₃, X-ray irrad., colour centres 8=22233
 K₃Co(CN)₆·Fe³⁺, e. p. r. spin-spin interaction temp., 3 cm. 1.8°K 8=18425
 K₃Co(CN)₆·Fe³⁺ spin-lattice relax. rel. to maser material 8=10994
 KCoF₃, thermal and thermodynamic props., 80°-300°K 8=17519
 K₃Cr(CN)₆, spin-phonon transition probabilities, meas. 8=5544
 K₃Cr₂(C₄O₃)₂·3H₂O, anomalous mag. behaviour, between room and liq. O₂ temps. 8=18298
 K₂Cr₂O₇, effect on Fe acid corrosion inhibition by thiourea 8=2518
 K₂Cu(CN)₄, crystal structure and refinement 8=17361
 KCuF₃, antiferromagnet, F¹⁹ n. m. r. shifts on a and c axes 8=5505
 KCuF₃, antiferromagnet, one-dimensional, formation in perovskite structure 8=5504
 K₂CuFe(CN)₆, tetragonal, X-ray analysis, i. r. and e. s. r. spectra 8=13265
 KDF₂, i. r. absorpt. study of lattice vibrations 8=5617
 K₂PO₄, dynamic props. due to deuteron intrabond jumping 8=9212
 K₂PO₄, ferroelectric props. pressure dependence 8=5366
 K₂PO₄, mag. susceptibility thermomagnetic obs., 80-380°K 8=13974

Potassium compounds--contd

- KD₂PO₄, spec. heat and permittivity 8=1873
 KF, alkali halides, F-band peak, Mollwo relation 8=17688
 KF, dichroism, mag. circular, of R₂ band 8=14235
 KF, dipole moment 8=4154
 KF, elastic constants meas. from 300-4.2°K 8=2056
 KF, monocrystals, slow electron diffraction 8=8527
 KF, thin layers, u. v. optical props. 8=9546
 KF-SnF₂-H₂O system 8=4781
 K₂Fe(CN)₆, heat capacity below 1°K, meas. 8=13372
 K₂Fe(CN)₆, Mössbauer effect at high press. 8=4673
 K₂Fe(CN)₆, Mössbauer effect at high press. 8=4673
 K₂Fe(CN)₆·3H₂O, dielectric dispersion 8=9211
 K₂Fe(CN)₆·3H₂O, ferroelectric phase transition, Mössbauer test for lattice-dynamical model 8=22667
 K₂Fe(CN)₆·3H₂O, proton relax. and translational diffusion 8=14145
 K₂[Fe(CN)₆], Mössbauer effect at high press. 8=4673
 KFeF₃, exchange and spin-orbit coupling 8=22881
 KFeF₃:Fe²⁺, isomer shift, calibration 8=16988
 KHCO₃·2H₂O, i. r. cryst. spectra 8=18556
 KH₂(D₂)PO₄, conductivity rel. to isotope effect 8=2130
 KHf₂ and KDF₂, elec. cond. of crystals. 8=13704
 KHf₂, i. r. absorpt. study of lattice vibrations 8=5617
 KH₂F₃, i. r. spectra 8=2425
 KH₂PO₄, anisotropic crystal, analysis of stimulated Raman effects 8=9543
 KH₂PO₄, anomalous incoherent scattering of thermal neutrons in Laue-case 8=13267
 KH₂PO₄ cryst. in 1-bromonaphthalene, refl. second-harmonic intensity obs. 8=5611
 KH₂PO₄ crystal growth in static system, pH effects 8=17239
 KH₂PO₄, dielectric const. just above transition temp., freq. and temp. depend. 8=22666
 KH₂PO₄, ferroelec. domain switching by irradiation damage 8=18184
 KH₂PO₄, ferroelec., transition temps. shifts by hydrostatic press. 8=18189
 KH₂PO₄ films, i. r. absorption spectrum, internal vibrations 8=9545
 KH₂PO₄, mag. susceptibility thermomagnetic obs., 80-380°K 8=13974
 KH₂PO₄ n. m. r. of K³⁹ at 77°K (ferroelectric phase) 8=22924
 KH₂PO₄ optical parametric amplifier, quantum noise, 0.5-0.6 μ m 8=15526
 KH₂PO₄, paraelectric, proton dynamics 8=9214
 KH₂PO₄, 90° phase matching, elec. field control to alter birefringence 8=14234
 KH₂PO₄, phase transition, high temp., isotope effect 8=9213
 KH₂PO₄, reactor and fission fragment irrad., structural changes 8=8773
 KH₂PO₄, rel. to second harmonic generation of Nd-glass laser 8=15486
 KH₂PO₄-type crystals, ferroelectric phase transitions, dynamics 8=9215
 KH₃(SeO₃)₂, fundamental absorpt. edge near ferroelectric phase transition pt. 8=9548
 KI, alkali halides, F-band peak, Mollwo relation 8=17688
 KI aqueous solution, possible applications as dosimeter 8=6664
 KI cathodoluminescence, e microprobe obs. 8=14317
 KI, containing H₂O, solubility, diffusion absorpt. spectrum 8=4953
 KI, crystals, bremsstrahlung absorpt. 8=6795
 KI, diffusion of inert gases at energies up to 85 keV and release behaviour 8=22156
 KI effect on Fe acid corrosion inhibition by thiourea 8=2518
 KI, F¹ centre formation quenching 8=8744
 KI, Hartree-Fock multiplet strengths 8=4081
 KI:Cu⁺, lifetime of excited Cu⁺ 8=23057
 KI:In luminesc. and elec. cond. thermostimulated rel. to impurity C excites delocalization mechanism 8=8903
 KI(In) self-luminesc. due to X-rays, decay 8=14318
 KI intrinsic electroluminesc. and excit., 77°K and 5 × 10⁴ V/cm 8=14320
 KI monocrystals, photoelectric emission 8=18280
 KI:(Ni, Cu, In, Pb and Tl), roentgenoluminesc. and F-flash temp. depend. obs. 8=9626
 KI:P radioluminesc. rel. to hole storage at centres, obs. 8=9625
 KI, pure and doped, transmission and reflection spectra, low temps. 8=18540
 KI, reflection, 5-25 eV rel. to band level transitions 8=22995
 KI, reorientation of O₂, 1.5-4.2°K 8=13123
 KI, second order Raman scattering spectrum, exptl. study 8=5615
 KI self-luminesc. due to X-rays, decay 8=14318
 KI: Tl⁺, absorpt. and emission at 77°K rel. to Tl⁺ clustering 8=23056
 KI:Tl⁺, B band symmetry assignment 8=5616
 KI with Tl impurities, growth using vacuum furnace 8=17237
 KI, Tl⁺ and In⁺ activated F-centre form. spectrum rel. to mechanisms, 5-21.2 eV 8=2008
 KI:Tl roentgenoluminesc., elec. field stimulation mechanism, obs. 8=9618

Potassium compounds—contd

- KI: Tl roentgenoluminesc. and F-flash build-up obs. 8=9616
 KI: Tl, Zeeman effect of A absorption bands 8=9504
 KI, van-der-Waals dipole-dipole coeffs. 8=1625
 KI-NaI, (-RbI), (-KCl) solid solns., absorpt. edge temp. dependence, 80-100°K 8=22994
 K-Li_{1/2}Li_{1/2}M_{1/2} and quasi-stationary states 8=2432
 K₃Li₂Nb₅O₁₅, electro-optic and nonlinear optic characts. 8=22959
 K₂Li₂NbO₃ single crysts., growth 8=21952
 K₂Li₂NbO₃, stable nonlinear optical material 8=5618
 KMF₃, (M = Mg, Mn, Co, Ni), i.r. reflectance spectra rel. to lattice vibrations 8=2426
 KMF₃ (M = Mg, Mn, Co, Ni, Zn, Mg/Ni), i.r. transmission spectra rel. to multiphonon processes 8=2427
 KMgF₃, i.r. spectra and lattice vib. anal. 8=2428
 KMgF₃:Ni²⁺, acoustic p. r., propag. factor changes near reson. 8=22912
 KMgF₃:Ni²⁺, i.r. luminesc. emission 8=18626
 KMnCl₃, prep. and crystallographic props. 8=13138
 KMnCl₃·2H₂O, crystal structure 8=17411
 K₂MnF₄, antiferromagnetic anisotropy 8=14070
 KMnF₃, critical antiferromag.-scattering of neutrons 8=22882
 KMnO₃, Raman spectra 8=21085
 K₃MoCl₆ specific heat rel. to mag. ordering, 1.5-20°K 8=1872
 K₂MoO_xF_y·H₂O (x=1, 2, 3; y=5, 4); crystal structure 8=17381
 KNO₃ containing KNO₃ impurity, analysis by i. r. and Raman spectra of solns. 8=23177
 KNO₃, dynamic compression by explosive impact loading 8=22377
 KNO₃, elec. resistivity rel. to other props including transforms and thermodynamic charact. 8=18191
 KNO₃, irradi. cryst., e. p. r. of NO₂ at 4°K 8=5537
 KNO₃, molten, optical determ. of thermal cond. 8=21658
 KNO₃, molten, refr. index meas. by interferometry 8=4583
 KNO₃ and other nitrates, molten mixtures, u.v. absorption 8=8085
 KNO₃, Raman spectrum 8=14174
 (K, Na)(Ba, Cl) solid soln., constitutional supercooling, convection cells 8=8417
 K-Na alloys, density 0 to 300°C 8=21624
 KNbO₃ crystals, ferroelectric, absorpt. edge temp. dependence 8=2430
 KNbO₃, hydrothermal synthesis of crystals, 2-3 mm in size 8=8418
 KNbO₃-AgNbO₃, system, elec., X-ray and thermal expansion studies 8=21823
 KNiF₃, antiferromagnetic, magnetic exchange dichroism 8=14257
 KNiF₃, antiferromagnetic, optical absorpt., anomalous temp. depend. 8=22996
 KNiF₃, i. r. spectra and lattice vib. anal. 8=2428
 KNiF₃ and K₂NiF₆, comparative study of mag. props. 8=9397
 K₂NiFe(CN)₆, cubic, X-ray analysis, i. r. and e. s. r. spectra 8=13265
 KOH impurity in ice, dielec. dispersion obs. 8=18188
 K₂O-SiO₂ solutions, activities 8=21620
 K₂O-SrO-SiO₂ system, diffusion, effective binary coeff. 8=22155
 K₂PtCl₆ lattice images with electron microscope 8=8500
 K₂SO₄:Mn²⁺, e. p. r. in single cryst. 8=22910
 K₂S₂O₈, rotatory, dispersion, interpretation 8=18539
 K₂S₂O₈, oxidation of acetate ion, Ag catalysis 8=23094
 KSO₃F, i. r. spectra and mag. props. 8=9562
 KSO₃NH₂, crystal structure by neutron diffr. meas. 8=4897
 K₂Sr₂Nb₅O₁₅, ferroelec. and electro-optic props. 8=5365
 KTa_{0.65}Nb_{0.35}O₃ electrooptical effects obs. in 8=14232
 KTa_{0.65}Nb_{0.35}O₃ paraelectric and ferroelectric phases, optical props. 8=18504
 KTa_{0.5}Nb_{0.5}O₃, elec. resistivity comp. dependence and effect of Sn doping 8=22503
 KTaO₃, Fe³⁺ and Ni³⁺ e. p. r. spectra 8=9425
 KTaO₃, hydrothermal synthesis of crystals, up to 1 mm in size 8=8418
 KTaO₃, paraelectric and ferroelectric phases, optical props. 8=18504
 KTaO₃, u.s. velocity meas. between 2-300°K 8=22088
 KTh₂(PO₄)₃, crystal structure 8=17382
 K(UO₂AsO₄)₃H₂O, abernathyite, e-diffr. meas. 8=17360
 K₂V₂O₆, new phases of narrow homogeneity range, crystallog. features 8=17086
 KZnF₃, i. r. spectra and lattice vib. anal. 8=2428
 K₂ZrCl₆, thermal props. 8=8640
 (Li, K)₂(SO₄, WO₄) system, molten, elect. cond. up to 1100°C 8=8112
 Na-K-NH₃ solns., liq.-liq. phase separation 8=8014

potassium bromide

- acoustic phonons, first and zero sound, elastic const. variation 8=13357
 cathodoluminescence, e microprobe obs. 8=14317
 colour centre studies by pulsed irradiation 8=13460
 from crossed-beam reactions K + HBr 8=9689
 crystals, bremsstrahlung absorpt. 8=6795
 crystals, impure, cation vacancy generation during electrolysis 8=9718

Potassium compounds—contd**potassium bromide—contd**

- diffusion of inert gases at energies up to 85 keV and release behaviour 8=22156
 dipole moment 8=4154
 dislocations, dynamic characts. by internal friction method 8=8730
 dislocation mobilities, temp. depend. 8=8729
 dynamic compression, shock wave propag. and phase transforms. 8=22376
 e emission, photostimulated, by F-centres, mechanisms, obs. 8=9278
 electron transport props. in high fields at low temps. 8=2264
 F-band absorption, u. s. strain modulation 8=22232
 F-band peak, Mollwo relation 8=17688
 F-centre form. spectrum rel. to mechanisms, in Tl⁺, In⁺ activated, 5-21.2 eV 8=2008
 F-centres, thermal stability 8=8750
 H centre aggregates 8=2005
 i. r. spectra rel. to complexes formed when doped with Ca²⁺ or Ba²⁺ with NOC⁻ 8=14233
 n.m.r. and quadrupole effects 8=14146
 optical constants in far i. r. 8=5613
 2-photon transitions to exciton states, oscillator strengths 8=8953
 polarization rel. to lattice imperfection prod. during shock wave plastic deformation 8=9225
 polaron cyclotron resonance 8=2124
 Raman scattering in polarized light, second order 8=14231
 self diffusion entropy and enthalpy from elec. cond. 8=8679
 structure factors, and electron distrib. in K and Br ions 8=17861
 U-centre local mode absorption 8=1831
 V-bonds, effect of stress, obs. 8=2000
 vacancy conc. changes during electrolytic coloration at 460-670°C 8=17609
 van-der-Waals dipole-dipole coeffs. 8=1625
 volume expansion, X-irrad. induced, by relaxs. at Frenkel defects 8=13486
 water vapour adsorption on cleavage surface 8=17166
 Ca doped, growth of optical absorpt. bands by X-irrad. 8=2429
 H₂O mols., solubility, diffusion absorpt. spectrum 8=4953
 KBr:Ca, conductance and capacitance distortion at low freq. 50 and 330°C obs. 8=5154
 KBr-In, inner-centre luminescence, spectral-kinetic investigations 8=14319
 KBr:In luminesc. and elec. cond. thermostimulated rel. to impurity C excites. delocalization mechanism 8=8903
 KBr:KCl solid soln(64:36), diffuse scatt. rel. to ion shift in lattice 8=17378
 KBr-KI system, thermodynamic studies 8=17092
 KBr:Li⁺, impurity displacement calcs. 8=8243
 KBr:NO₃, CO₃²⁻, SO₄²⁻, SeO₃²⁻ and Cu, centres nature, obs. 8=8745
 KBr:O₂, effect anharmonic vibrations on isotopic displacement of luminescence 8=22937
 KBr:OH, i. r. absorpt. spectra rel. to temp. dependence of intensity of OH vibrations 8=18538
 KBr:P radioluminesc. rel. to hole storage at centres, obs. 8=9625
 KBr:Pb, Zeeman effect of A absorption bands 8=9504
 KBr:Sm²⁺, one-phonon sideband of 6890Å transition at 7°K 8=9614
 KBr:Tl e emission, photostimulated, by F-centres, mechanisms, obs. 8=9278
 KBr:Tl F-centres luminesc. rel. to hole processes, obs. 8=8888
 KBr:Tl, Zeeman effect of A absorption bands 8=9504
 KBr-KI solid solns., free energy of formation, and gap of solubility 8=16998
 and KCl, mixed, Raman scattering 8=18541
 KCl(Br) foils, P-polarized light absorption at plasma resonance freq. 8=2123
 KCl: Br lifetime of excited Cu⁺ 8=23057
 KCl-KBr diffusion pairs, pore migration during counter-current diffusion 8=17569
 KCl-KBr solid solns, optical absorpt. 8=2431
 KCl-KBr solid solns., reflection, 5-25 eV rel. to band level transitions 8=22995
 NaBr-KBr solid solutions, fundamental absorption 8=18549
 Ni, Cu, In, Pb and Tl activated, roentgenoluminesc. and F-flash temp. depend. obs. 8=9626

potassium chloride

- absorption, in i. r., induced by monovalent impurities 8=9544
 aqueous solns., elec. cond. under high press. 8=12922
 Bragg spots origin 8=17380
 cathodoluminescence, e microprobe obs. 8=14317
 colour centre in crystal with blocking electrode 8=22230
 colour centre in crystal with blocking electrode, photoelectric polarization 8=22231
 conductivity, electrical, kinetics of radiational change 8=22501
 crystals, bremsstrahlung absorpt. 8=6795
 crystals, deformed, absorpt. of ultrasound by dislocations, rel. to freq. 8=8630

Potassium compounds—contd**potassium chloride—contd**

- crystal growth from aq. soln., effect of PbCl_2 8=8415-16
 crystals, impure, cation vacancy generation during electrolysis 8=9718
 dichroism, mag. circular, of R_2 band 8=14235
 diffusion of inert gases at energies up to 85 keV and release behaviour 8=22156
 dipole-lattice relaxation times for OH^- dipoles 8=8202
 dislocation density and plastic flow stress obs. in crystal 8=8731
 doped with Pb^+ , Ti^+ and Ag^+ , electron spin resonance obs. 8=14112
 doped and pretreated, diffusion of Ti^+ 8=13410
 dynamic compression, shock wave propag. and phase transforms. 8=22376
 elastic constants, higher order, theoretical calcs. 8=17811
 electric breakdown, directional, single crystals 8=18167
 electrolyte solns., self-thermal diffusion 8=21640
 e emission, photostimulated, by F-centres, mechanisms, obs. 8=9278
 electronic states of M_1 -centres 8=2003
 F-band absorption, u. s. strain modulation 8=22232
 F-band peak, Mollwo relation 8=17688
 F-centre, double electron-nuclear magnetoacoustic reson. 8=8623
 F-centre form. spectrum rel. to mechanisms, in Ti^+ , In^+ activated, 5-21.2 eV 8=2008
 F-centre half-width and effective lattice freq. calcs. 8=4993
 F centres, thermal stability 8=8750
 γ -irradiated at room temp., defect production and annihilation 8=8696
 heat of soln. meas. 8=9677
 impurity in ice, dielec. dispersion obs. 8=18188
 i.r. spectra rel. to complexes formed when doped with Ca^{2+} or Ba^{2+} with NCO^- 8=14233
 metal film epitaxial growth on KCl substrates 8=13147
 monocrystals, slow electron diffraction patterns 8=8527
 photoelectric emission 8=18280
 polarization rel. to lattice imperfection prod. during shock wave plastic deformation 8=9225
 powder, energy absorption during compression 8=13592
 pressed disc prep., reactions of Na_2CO_3 8=14373
 Raman scattering in pure and doped crystals 8=5614
 reflectivity spectra and absorpt. constant rel. to exciton states 8=14230
 solid soln. with NaCl , decomp. mechanism by X-ray scattering studies 8=13070
 solution grown crystals, distrib. of Pb^{2+} impurities 8=17238
 specific heat obs., by cryostat, 0.05 \rightarrow 2°K 8=22112
 third-order elastic constant, obs. 8=13579
 transformation of OH centres into U centres by electrolytic decoloration 8=13458
 transmission dynode, secondary electron emission, Polya statistics 8=5420
 tunneling states of OH^- 8=2101
 van-der-Waals dipole-dipole coeffs. 8=1625
 volume expansion, X-irrad. induced, by relaxs. at Frenkel defects 8=13486
 water vapour adsorption on cleavage surface 8=17166
 X-irradiated, α -centre production and thermal annealing 8=17685
 Z center, Faraday rotation 8=14229
 Ag and Pb activated, Cl_2^- centres conc. temp. depend., e.p.r. obs. 8=8742
 Ag, Pb and Tl activated, Cl_2^- centres conc. temp. depend., e.p.r. obs. 8=8742
 $\text{Ar}^{39,41}$ diffusion and trapping, n irradiated 8=1920
 Ca-doped, thermal conductivity, 20-90°C, influenced by segregation processes 8=13394
 H_2O mols., solubility, diffusion absorpt. spectrum 8=4953
 and KBr, mixed, Raman scattering 8=18541
 KCl:Ag, Ag colour centres form. rel. to point defects, obs. 8=8746
 KCl:Ag (from AgI), optical absorpt. of impurity rel. to E-band models 8=14228
 KCl:Ag, B-centre, luminescence and photocond. 8=2006
 KCl(Ag), colouration, impurity centres produced 8=1994
 KCl:Ag colour centres e.p.r. absorpt. rel. to relax. process 8=8743
 KCl:Ag:OH, Ag colour centres form. rel. to point defects, obs. 8=8746
 KCl:Ag:Sr, Ag colour centres form. rel. to point defects, obs. 8=8746
 KCl:Be $^+$, substituent behaviour from ionic thermocurrent spectra 8=8702
 KCl(Br) foils, P-polarized light absorption at plasma resonance freq. 8=2123
 KCl: Cu^+ , lifetime of excited Cu^+ 8=23057
 KCl:Eu $^{2+}$, e.p.r. 8=5529
 KCl, excited F centre lifetime below 100°K 8=2004
 KCl:KBr solid soln., (36:64), diffuse scatt. rel. to ion shift in lattice 8=17378
 KCl:Li $^+$, impurity displacement calcs. 8=8243
 KCl:Mn $^{2+}$ e.p.r. spectrum, resolution obtained by X-radiation 8=14117
 KCl:Na, luminescence of F, centers 8=9615
 KCl:OH $^-$, cooling to 0.36°K by adiabatic depolarization of OH^- 8=1874

Potassium compounds—contd**potassium chloride—contd**

- KCl:OH, i.r. absorpt. spectra rel. to temp. dependence of intensity of OH vibrations 8=18538
 KCl, paramagnetic rare-earth activated, magneto-optic rotation 8=5590
 KCl:P radioluminesc. rel. to hole storage at centres, obs. 8=9625
 KCl:Pb phosphor, tetragonal symmetry 8=18607
 KCl:Pb, Zeeman effect of A absorption bands 8=9504
 KCl:RbCl crystals, Q_1 colour centre e. s. r. study 8=22905
 KCl:Sr, F- Z_2 colour centre conversion, thermal equil. 8=2007
 KCl:Tl e emission, photostimulated, by F-centres, mechanisms, obs. 8=9278
 KCl:Tl, induced local 3p states on Cl^- ions nearest Ti^+ , calc. 8=8930
 KCl:Tl photostimulated luminesc. rel. to optical and thermal electrons roles in recomb., 77-300°K 8=9617
 KCl, U_2 -centre, electronic structure rel. to correlation effects 8=13459
 KCl(ZnCl_2)- H_2O , crystn. interphase equil. 8=21933
 KCl-In, inner-centre luminescence, spectral-kinetic investigations 8=14319
 KCl-KBr diffusion pairs, pore migration during counter-current diffusion 8=17569
 KCl-KBr, Kirkendall and Frenkel effect 8=8676
 KCl-KBr solid solns, optical absorpt. 8=2431
 KCl-KBr solid solns., reflection, 5-25 eV rel. to band level transitions 8=22995
 KCl-NaCl phase equilibrium diagram 8=8164
 in Mg fused electrolyte, elec. cond. and density obs. 8=23143
 Ni, Cu, In, Pb and Tl activated, roentgenoluminesc. and F-flash temp. depend. obs. 8=9626
 Pb activator solubility, OH $^-$ ions effects, obs. 8=21824
 Tl activator solubility, OH $^-$ ions effects, obs. 8=21824

 LaB₆ suspension in N₂ as m. h. d. generator working fluid 8=15199
 NaCl, energy absorption during compression 8=13592
 NaCl-KCl mixtures, energy absorption during compression 8=13592
 NaCl, Na²³ n.m.r. 8=5562
 Si, paramagnetic centres 8=22762
 TiCl₃·α, X-ray diffraction spectra 8=22041
 UO₂, sintering behaviour rel. to particle size and shape 8=21834
 UO₂ swaged compacts, equiaxed grain growth under temp. grad. 8=8255
 ZnO, elec. cond. effect of O₂ adsorption 8=22612

Praseodymium

- atoms, Lα_{1,2} lines meas. 8=7420
 magnetism rel. to crystalline field splitting and exchange interactions 8=2292
 H₂ definition, spectral-isotopic method 8=9743
 Pr³⁺ in SrTiO₃ vibronic structure in luminescence spectra 8=14333
 Pr³⁺, wave functions 8=7419

Praseodymium compounds

- telluride phases, crystal chemistry 8=17202
 PrC₂, antiferromag. structure 8=18386
 PrCl₃, cryst. field, exchange charge effects 8=13011
 PrF₃, i.r. absorption and dichroism 8=9560
 Pr₂Fe₁₇, crystal structure refinement 8=17408
 PrH₃, mag. props. and cryst. struct. 8=22761
 Pr(NO₃)₃·6H₂O:Gd³⁺ e.p.r. spectrum obs. 8=14109
 Pr₂(SO₄)₃·8H₂O, Pr¹⁴¹ n.m.r. meas. 8=14155

Precipitation

- See also Atmosphere/precipitation.
 austenitic steel of sigma phase from thin-foil transmission studies 8=1674
 deoxidation product growth and separation, collision model 8=18658
 grain-boundary, growth kinetics 8=13445
 iron, liq.-silica deoxidation product growth and separation, collision model 8=18658
 martensite decomposition effect of thermomechanical treatment during low-temp. tempering 8=21845
 microanalysis in alloys by e-microscopy and energy analysis 8=17276
 spinodal decomp., Institute of Metals lecture 1967 8=21835
 steels, CrMoV cast, carbide, rel. to load-time curves in breaking-strength meas. 8=17804
 EI-702 steel, effect of deformation and hardening temp. 8=17078
 steel rel. to mech. strength, hot working effects 8=22356
 steel, of Nb carbon-nitrides, their dissolution and age hardening effects 8=1660
 systems, colloid stability 8=12949
 in thin foils, electron microscope images 8=13152
 Ag-5.64 wt. %Al alloys, grain boundary 8=17038
 Ag-Cu alloys, age hardenable, electron microscope study 8=21837
 Al-4wt. %Cu alloy, precip. phase microanalysis by e-microscopy and energy analysis 8=17276
 Al-Cu-Ag alloys, nucleation of precipitates 8=17040
 Al-Cu-Cd alloys, rel. to deformation before and during ageing 8=17039
 Al-Mg-Zn alloys, and defects rel. to ductility 8=17646
 Al-10 %Zn alloy, n-irrad., pre-precipitation rate at 78°K 8=21980
 Al-Zn-Mg alloys, pre-ageing and quenching effects 8=13062
 Be sheet rolled from ingots, grain boundary 8=17046
 Co alloys, f.c.c., of C and Mo atom segregation on ageing 8=17622
 Co mag. recording films deposition and props., obs. 8=22790
 Co-Cr alloy with W, Ta or Nb; precip. hardening rel. to cpd. structure 8=17621
 Co-8Cr-Ta, on hardening at 700°C 8=17621
 Co-M alloys (M = Cr, Fe, Ni, Cr-Ni), structural defects and precip. 8=17621
 Co-Ni mag. recording films deposition and props., obs. 8=22790
 Co-P mag. recording films deposition and props., obs. 8=22790

Precipitation—contd

- CrC at stainless steel grain boundaries, e probe obs. 8=17677
 Cu-2%Be alloy, and twinning on ageing 8=17625
 Cu-Be-Ag alloys, nucleation of precipitates 8=17040
 Cu-Mg from solid solns. of Mg in Cu 8=4705
 Cu-Ti alloys, direct obs. 8=13065
 Cu-Zn alloys, rel. to decomposition of β' 8=4706
 Cu-Zr, supersaturated, n.m.r. study 8=8265
 Fe carbides, in tempered martensite 8=17080
 α-Fe, of C, n-irrad. effects 8=17059
 in Fe-Cu, of Cu rel. to ferromag. props., obs. 8=22809
 Fe-Mo alloys, Fe-rich, and solid solns. from Mössbauer spectra and Young's modulus 8=4678
 Fe-N supersaturated solutions, of nitrides rel. to n-irrad. 8=17060
 GaAs, Zn-diffused 8=17617
 Li disilicate, cryst., from Li₂O-SiO₂ glasses 8=21953
 Mg-9 wt. %Al alloy, and age hardening mechanism 8=13583
 MgO:Fe solid solutions, superparamagnetic magnesioferrite 8=1675
 MgO-Al₂O₃-Cr₂O₃ system, coherency 8=21848
 Mn in Mg binary alloy, isothermal growth 8=4688
 NaCl, Cd doped, aggregation of divalent impurities 8=13425
 Nb, of nitride by equilibrating in N₂ atmos. 8=8274
 NbC in steel, brittleness 8=22358
 in Nb-Mo steel, heat-treated strengthening effect and mechanism 8=22386
 NbO, from supersaturated solutions electron microscope examination 8=1679
 Nb-Zr alloy, of nitride by equilibrating in N₂ atmos. 8=8274
 Ni-Co-Mo steels, reversion 8=17096
 Pu-Ga (3 at%) alloy, cold working and α-phase precipitation in δ-phase 8=21855
 Ra synchronised, solid-liquid phase 8=9737
 Ra, synchronised, technique, solid-liquid phase 8=9736
 Si containing oxygen, X-ray diffr. obs. at 1000, 1150 and 1300°C 8=13073
 Si, Au-diffused 8=17620
 Ta-Cr solid soln., precip. of TaCr₂, cellular from 1200-1450°C 8=8282
 TiC, B-doped, of TiB₂ rel. to defect structure 8=4967
 Ti-22 at. %Nb alloy, ω phase precip. rel. to superconducting critical transport currents 8=4718
 US crystals 8=21862
 V, of hydride phase rel. to ductility 8=5088

Pressure

- See also Atmospheric pressure and density; High-pressure phenomena and effects; Radiation pressure; Vapour pressure.
 drop across packed beds, for two-phase cocurrent flow, correls. 8=12651
 earth, interior distrib. 8=18826
 effect on spark discharge cavity configuration in oil 8=21249
 gases, modification due to formation of bound double molecules 8=12357
 Mössbauer effect depend., energy shift 8=1641
 random continuous field, representation by discrete set of point excitations 8=19509
 surface distribns. on sharp cones in rarified hypersonic flow 8=16681
 on surface, generated by pistons on spherical and cylindrical baffles 8=6134
 viscosity of water, effect 8=8021
 Al circular foils, hydrostatic deform. 8=5044
 He-n-butane system, P-V-T-x phase relns., showing gas-gas equilib. for low He conc. 8=12979
 He-Ne mixture, partial rel. to laser pulse delay 8=3314

Pressure measurement

- See also Manometers; Vacuum gauges; Vapour pressure measurement.
 acoustic radiator, circular plates, nearfield distribution calc. 8=6152
 barometer with digital output 8=9832-3
 Bayard-Alpert gauges, ion current anomalies 8=16734
 corrosive gases, sensitive differential gauge 8=4448
 dead weight piston gauge for press. to 26 kbar 8=5999
 gas, from atmos. to 10⁻⁴ mm Hg, sonic gauge design 8=7889
 gases, temp. coeff. meas. apparatus 8=7922
 hydrostatic to 60 kbar, technique 8=7971
 impulsive, strain-gauge transducer performance 8=14925
 internal in solid-filled pistons, by u.s. meas. of expansion 8=10580
 liquid metal-oxygen solns., by solid electrolytic cell 8=16951
 loss in high pressure cylinders, unsymmetrical friction 8=14909
 micro-manometer, modified Chattock 8=7891
 Penning gauge used as low pressure ion source 8=15338
 quartz spoon gauges, at elevated temps. 8=5990
 shock, in kbar range 8=6149
 soil pressure cell, effect of diaphragm flexibility on calibration 8=9803
 transducers systems, flush mounted, as spatial and spectral filters for turbulent boundary 8=10731
 ultrasonic gauge to 20 kbar for solid rods 8=19341

Pressure measurement—contd

- by n-Ge, with adsorbed gas, due to conductivity hydrostatic pressure dependence 8=18045
- He II flow, subcritical 8=19695

Prisms, optical

- actual Littrow and Wadsworth systems, deviation, scanning equation and spectral widths of slits 8=15531
- Cervit R, modification of Danjon astrolabe 8=10105
- cube-corner, optimum incident-ray direction 8=3346
- erecting systems, use in compact binoculars 8=15509
- gimbaled systems, matrix anal. 8=3348
- monocrystalline, angles meas. 8=11124
- as reflecting prism, conditions 8=3344

Probability

Protons and antiprotons—contd

- beam, emittance in duoplasmatron source linked to single gap accelerator 8=20229
- charge time var. from Re¹⁸⁷, Os¹⁸⁷ terrestrial, occurrence 8=15826
- coupling parameter, axial vector, p-n 8=20253
- $e \sim p$ charge difference, cosmological consequence 8=23480
- electric dipole moment, sensitive test for existence 8=11588
- excited state 8=11585
- form factor found to be equal to that of π 8=6834
- linear accelerators for, improvements 8=15656
- low-energy, precipitation at high-latitudes, satellite meas. 8=9954
- magnetosphere and tail, Explorer 33 flux obs. 8=23324
- mass difference from n using Dashen-Frautschi method 8=20267
- mass difference n-p, rainbow graph model calc. 8=11587
- mass difference p-n, rel. to bootstrap model of hadron dynamics 8=11486
- mass difference p-n, field theoretic approach 8=11586
- minimum size in nonrelativistic theory, from hyperfine structure 8=826
- as nuclear probe, high-energy 8=11604
- n-p pairing interaction, charge-independent 8=3771
- plasma, interaction of proton and electron plasma waves 8=4364
- p-e charge inequality determ. 8=11455
- proton-neutron mass difference calc. 8=15825
- p-n mass difference in terms of p-e and n-e cross-sections 8=655
- redox reactions of living cell, separation of positive and negative charges 8=23762
- reflection and emission from crystals, wave/particle duality 8=2018
- secondary particles in (π^- , N) reactions, momentum spectra 8=1085
- 70 GeV beam, ν flux spectra prod. 8=20369
- 730 and 45 MeV beams in thin absorbers, energy loss distrib. 8=13471
- storage rings, damping oscils. 8=640
- structure effect on pot. for p-e interactions 8=11590
- synchrocyclotron beam, increase by electrostatic focussing 8=3499

absorption

- photon-absorpt., sum rule applied to N, d, H³, He³ 8=3577
- statistical atomic model, evaluation of swift p stopping 8=20534
- in water, slowing down, n-irrad. 8=644

angular distribution

- aurora, rocket meas., and electrons, also precip. and spectra 8=5798
- Λ -p 400-1300 MeV/c scatt. 8=859
- p-d scatt., rel. to T = $\frac{1}{2}$ state of He³ 8=3739
- p-p scatt. semi-empirical formulae 8=11595
- from B¹⁰(α , p_n)C¹³, rel. to reaction mechanism 8=7236
- from C¹²(α , p_n)N¹⁵, rel. to reaction mechanism 8=7236
- C¹²(He³, p_n)N¹⁴, p_n corrs., N¹⁴ energy levels 8=953
- C¹³(α , p_n), 10.6 MeV and levels of Ar³⁸ 8=3804
- F¹⁹(d, p_n)F²⁰, 1.6 MeV rel. to reaction mechanism 8=16116
- Fe⁵⁴, asymm. scatt. from 2⁺, 3⁻ levels 8=3920
- He³(d, p)He⁴ 8=7002
- Li⁶(Li⁶, p)B¹¹, rel. to n ang. distrib. in Li⁶(Li⁶, n)C¹¹, 4.1 MeV 8=11950
- Na²² energy levels from Ne²⁰(He³, p_n)Na²², 6.56 MeV 8=3801
- Ni^{58,60}, asymm. scatt. from 2⁺, 3⁻ levels 8=3920
- Ni⁵⁸(p, p'_n), levels and transition anomalies 8=3928
- Si²⁸, asymm. scatt. from 2⁺, 3⁻ levels 8=3920
- Si²⁸ p scatt., symm. rel. to isobaric analog states of Si²⁹ 8=15982
- Te¹³⁰(d, p)Te¹³¹, 7.5 MeV, Te¹³¹ energy levels 8=984

detection, measurement

- antiproton, from π following annihilation using scintillation counter 8=6970
- chamber for simultaneous ang. correlations 8=20793
- channel multiplier for space research 8=5799
- coincidence circuit for simultaneous ang. correlations 8=20794
- liquid scintil. for α -p discrimination 8=1075
- p-d discriminator, surface barrier detector 8=6937
- p-e, discrimination by Owen-Batchelor method, theory of high-energy limit 8=6672
- p- μ discrimination by Owen-Batchelor method, theory of high-energy limit 8=6672
- r. f. separated beam at the AGS 8=3491
- recoil dose from DD and DT neutrons, LET distrib. 8=15837
- satellite instrumentation for auroral studies 8=5837
- scintillator output, energy dependence obs. 8=20536
- spark chamber sonic, obs. 8=3484
- spectrometer, e-insensitive for upper atmosphere 8=6938
- secondary-dose equivalent 8=841
- surface barrier detector for spectroscopy 8=6939
- thin metal foil apparatus, 25 μ m slit prod. 8=14904
- Ge total absorption, for 100 MeV proton scattering 8=7180
- Ge 2 detector telescope for separation of p and heavier particles 8=6654
- Si, Ge detectors, nuclear reaction effect 8=20535

Protons and antiprotons—contd

angular distribution—contd
ZnO crystal, change in surface conductivity 8=7475
effects
alkali halide crystals, conductivity, elec., kinetics of
radiational change 8=22501
crystals, reversibility and Rutherford scatt. 8=2016
hydrocarbons, free-radical doped, polarization 8=4672
hydrogen collision, electron capture probability 8=1199
ionization loss at relativistic vels. in nuclear
emulsions 8=15647
reflection and emission from crystals, wave/particle
duality 8=2018
solar cell performance of 400 keV irradi., integral covers
testing 8=10854
sporadic E, prod. near geomagnetic pole 8=19013
Al crystals, X-ray production, orientation effects 8=4995
Au, energy loss by low-energy protons 8=13478
CaF₂, irradiated, change in microhardness,
kinetics 8=22320
Cu crystal, u.v. emission 8=2025
Cu crystals, X-ray production, orientation effects 8=4995
Cu, irradiated, platelets of interstitial atoms rel. to
dislocation loops 8=22202
Ge, range-energy determ. 8=13468
K surface (100) electron emission under bombard-
ment 8=18249
Si, irradi. damage isothermal annealing, 22-158 MeV,
100-300°C 8=22605
Si, paramag. centres produced along range 8=8704
Si, range-energy determ. 8=13468
Si wafers, orientation, by proton channelling 8=8376
Si:B, radiation sensitivity, obs. 8=17414
W crystals, X-ray production, orientation effects 8=4995
W, scatt. intensity and channeling 8=4997
Y(C₂H₅SO₄)₃:Nd, dynamic polarization 8=2035

interactions

Λ-p, low energy 8=11631
Λ-proton stimulation, hyperfragments A = 50,
calc. 8=15861
μ⁻ + p → n + ν_μ, muon capture rate 8=721
N*(1236) production, by polarized γ-quanta 8=868
n-p capture theory 8=827
p-d, low-energy, resonance charge exchange meas. 8=828
pd, at about 2 GeV/c, final state pπ⁺π⁻ 8=15827

Protons and antiprotons—contd

interactions—contd
p + d → B + d and B-N scatt. factor 8=3736
p-e, quasi pot., using two-time Green functions, p structure
effect 8=11590
p + γ → p + π, Mandelstam branch cuts rel. to scatt. and
prod. amplitudes 8=11594
p + He⁴ → B + He⁴, B-N scatt. factor 8=3736
p + K → p + K*, Mandelstam branch cuts rel. to scatt. and
prod. amplitudes 8=11594
p + μ⁻ → n + ν_μ, prop. counter to meas. μ⁻ capture
rate 8=3457
p̄ + n → 2π⁻ + π⁺ in D bubble chamber, (I⁰_π⁺=1-0) 3-pion
state analysis 8=20436
p̄n → N*⁻ (1238)p, at 2.8 GeV/c, isobar and anti-isobar
production 8=844
p-p collisions, high energy π, k, p̄ prod. cross-section
depend on longitudinal and transverse momentum
components 8=20478
p-π high energy collisions, charge ratios of π,
K and Σ 8=11524
p + π → p + A₂, Mandelstam branch cuts rel. to scatt. and
prod. amplitudes 8=11594
p̄ annihilation in H₂ and D₂, rates rel. to initial
state 8=20537
p̄p → YȲ, absorpt. model, U(66) symm. 8=20524
π charged pair photoproduction, up to 1500 MeV γ
energies 8=6844
π exchange theory 8=6847
π photoproduction, ang. distrib. parameters 8=11511
π photoproduction 220-380 MeV near P₃₃πN
resonance 8=11506
π photoproduction on p, 553-850 MeV analysis in second
reson. region 8=6843
π-p, four-momentum transfer distrib., high energy and
high multiplicity 8=6862
πp radiative capture as symm. test for e.m.
current 8=670
π-p transfer distrib. obs., Regge-pole exchange model
suggested 8=20441
π + p → p + π⁺ + π⁺, 3.2-4.9 GeV 8=16057
πp → ρN*, f₀N*, ang. correls. in decay 8=11636
π p, 1.5-4.2 BeV/c, strange particle prod. 8=6860
π⁻p, 5.5 GeV/c, multiple π prod. 8=3633
π⁻p, 3 GeV/c → pπ⁺π⁻π⁻, prod. of N*⁺⁺(1238),
ρ⁰ and A₂⁻ 8=20446
π⁻p, 3.2, 4.2 GeV/c obs. of multipion prod., pπ⁺π⁻π⁻,
pπ⁺π⁰π⁻π⁻, nπ⁺π⁺π⁻π⁻ 8=20448
π-p, 4.16 GeV/c scatt, π prod. and charge
exchange 8=11522
π⁻p at 650 MeV, cross-section, for single and multi pion
prod. obs. 8=6854
π⁻p, 720 MeV, cross-section for (π⁻pπ⁰), (π⁻π⁺n),
(2π prod.) (η⁺n) obs. 8=15772
π⁻p → ηn, partial wave analysis in terms of Lorentz
group 8=6856
π⁻p → ηn, polarization meas., 3.2 and 5 GeV/c 8=15776
π⁻ + p → η + n, Regge pole model of polarization 8=11519
π⁻ + p → η + n, 561-1300 MeV partial wave analysis,
S, P, D, F waves 8=11520
π⁻ + p → η + n, 670-805 MeV/c obs. 8=20489
π⁻ + p → η + n, T₁ = 593-704 MeV, calc. of ang. distrib.
of η 8=6853
π⁻ + p → η + N, N* resonant states and Nπ, Nη decay
modes 8=11637
π⁻p → η⁺n and charge exchange polarization, ρ' Regge
trajectory 8=3665
π⁻p, K₁K₂ system resonance, 5, 7 and 12 GeV/c 8=794
π⁻p → K⁺Σ⁺, Regge cut 8=3631
π⁻p → K⁺Σ⁺ rel. to analytic structure of Regge-cut
amplitude 8=20319
π⁻p → ΛK⁺, Σ⁰K⁺, Σ⁺K⁺, 1.5-4.2 BeV/c 8=6861
π⁻p → Λk⁺π⁺ at 6 GeV/c, Λk⁺ enhancement
at 1.7 GeV 8=3630
π⁻ + p → n + η N pole and resonances below c.m.
energy 1700 MeV 8=20490
π⁻ + p → n + η, Σ⁻ + K⁺, Λ + K⁰, Σ⁰ + K⁰, phenomenological
model 8=15758
π⁻ + p → n + X_{γγ}, X resonance identification 8=6858
π⁻p → ωn, φn, 2.1 BeV/c, cross-section calc. 8=20442
π⁻p → ppn, 8 GeV/c, obs. in bubble chamber 8=6857
π⁻ + p → p + R⁺, structure of R⁺ 8=3676
π⁻ + p → p + X⁺ at 1.8 GeV/c, δ⁻ (960 MeV) resonance
search 8=756
π⁻p → π⁻pπ⁰, inconsistency of Ferrari-Sellers form factor
for π-π scatt. 8=3649
π⁻p → π⁻π⁰p rel. to π⁻π⁰ scatt. 8=768
π⁻p → π⁻π⁰p, 2.77 GeV/c for π⁻π⁰ scatt. 8=770
π⁻ + p → π⁻ + π⁺ + n, 1.38-3.00 GeV/c ρ⁰ formation and
decay ang. dist. 8=3685
π⁻p → π⁻π⁺n, 8 GeV/c, 2421 events 8=6851
π⁻p → π⁻π⁺n, rel. to ππ interaction 8=6850
π⁻p → π⁺n, ηn, Regge-pole model with L-S
coupling 8=20444
π⁻p → π⁰n, Regge pole branch points obs. method 8=3629
π⁻p → π⁺π⁻n, 3.1 36⁻¹ GeV/c, I = 0 enhancement
obs. 8=15773
π⁻p → π⁺π⁻n, 870 MeV, π⁺ momentum spectrum obs.
cross-section of π⁺n deduced 8=20445

Protons and antiprotons—contd**interactions—contd**

- $\pi^+p \rightarrow \Sigma^- K^+$, 1170 MeV/c, cross-section obs., C independence confirmed 8=20449
- $\pi^- + p \rightarrow \nu^0 + n$, 4.0 GeV/c vector meson decay to e pair 8=808
- $\pi^+p, I = \frac{1}{2} N^*(1400)$ prod. at 6 GeV/c 8=15775
- $\pi^+p \rightarrow K^0 \Sigma^0(\Lambda^0)$, Regge-pole model based on K^* , K^{**} exchange 8=15777
- π^+p , 8 GeV/c, resonances obs. 8=20428
- π^+p , at 8 GeV/c, 6-prong interactions, cross-sections 8=3632
- π^+p , 900 MeV π prod., through N_{33}^* isobar 8=11523
- $\pi^+ + p \rightarrow \eta + \Delta^+(1238)$, cross-section and Δ^+ spin density 8=6855
- $\pi^+p \rightarrow K^+ \Sigma^+$, 3.23 GeV/c, ang. dist. Σ polarization 8=6852
- $\pi^+ + p \rightarrow N_{33}^* + \pi^0$, 0.5-1.46 GeV, ang. distrib. of π^0 8=15780
- $\pi^+p \rightarrow N^{*++}\rho^0$, shrinkage effects and one-pion exchange 8=20429
- $\pi^+p \rightarrow \rho^0 N^{*++} \rightarrow \pi^+\pi^-p$, peripheral models 8=11515
- $\pi^+p \rightarrow \pi^+\pi^0p, \pi^+\pi^-n$, below 1 BeV 8=6859
- $\pi^+ + p \rightarrow \pi^+ + \pi^0 + p$, 968 MeV/c search for scalar meson decaying to $\pi^+\pi^-$ 8=11553
- $\pi^+ + p \rightarrow \pi^+ + p + \pi^0$, < 1070 MeV, ang. distrib. 8=15779
- $\pi^+ + p \rightarrow \Sigma^+ + K^+$, in polyethylene, 1 GeV/c, Σ polarization 8=864
- $\pi^+ + p \rightarrow \Sigma^+ + K^+$, phenomenological model 8=15758
- $\pi^+ + p \rightarrow \Sigma^+ + K^+$, quark model for backward process 8=11480
- S8, channelling, anomalous energy losses, 1.5 MeV 8=17708
- H²(p, 2p)n, 9 and 10.5 MeV 8=875
- He⁴(p, B)He⁴, magnitude and phase of baryon scatt. amp. 8=890
- T(p, n), He³, obs. 8=882
- interactions, proton-proton**
- annihilation, statistical unitary-symmetry theory 8=3527
- bremstrahlung production cross-section 8=830
- collision, 24 GeV, transverse momentum of pions and protons 8=11524
- K^+ prod. 2.5-3.0 GeV, disagreement with phase-space, OPE model 8=20479
- mesons prod. synchrotron-radiation model 8=11492
- meson production, 20 GeV, in nuclear emulsion 8=831
- $p\bar{p}$ annihilation, pionic decay modes calc. 8=11605
- $p + \bar{p} \rightarrow B^* + \bar{B}^*$, absorpt. model 8=20526
- $p + p \rightarrow d + \delta^+$, search for resonance δ^+ , 960 MeV 8=6982
- $p + p \rightarrow d + \pi^+$, 1-3 BeV, cross-sections obs. 8=20523
- $p + p \rightarrow$ hyperon + K + N, 6 BeV/c obs., N^+ prod. and decay to hyperon + K 8=20480
- $p\bar{p} \rightarrow KK\pi, K^*(891)$ prod., $K\bar{K} J^P = 2^-$ resonance at 1280 MeV 8=6940
- $p\bar{p} \rightarrow p\pi\pi^+$, 10 GeV/c and OPE model 8=11591
- $p\bar{p} \rightarrow N^{*++}(1238)n$, at 2.8 GeV/c, isobar and anti-isobar production 8=844
- $p\bar{p} \rightarrow N^*N^*$, pion-exchange, Regge-pole model 8=11516
- $p + p \rightarrow p + N^*$, 6-30 BeV obs. 8=15828
- $p\bar{p} \rightarrow pN^* P_{11}$ resonance, mass shift in compound structure model 8=11592
- $p + p \rightarrow p + p$, Mandelstam branch cuts, rel. to scatt. and prod. amplitudes 8=11594
- $p + p \rightarrow \pi^+ + d$, 5 GeV/c cross-section meas. 8=20525
- $p\bar{p} \rightarrow YKN$, OBE model, with approx. 8=20522
- magnetic moment**
- quark shell model of baryons, finite mass correction 8=15819
- polarization**
- beam prod. method in $2S_{1/2}$ state 8=11602
- elastic scattering, interaction of differential cross section and polarization 8=16069
- d photodisintegration, 170-450 MeV obs. 8=20533
- (d, p) stripping reaction, theoretical analysis 8=16107
- $\gamma + p \rightarrow \eta + p$ amplitude, unitarity and S-matrix analysis 8=3569
- $\gamma + p \rightarrow p + \eta^0$, recoil p polarization 8=838
- p- α scatt., 22-25 MeV obs. 8=20532
- p- α , 6-11 MeV, p polarization obs. 7=837
- p-d elastic scatt., 11.6 MeV 8=11644
- p-d scatt. obs., 21.7 MeV 8=878
- p-d scatt., 1.5-11.5 MeV, phase-shift analysis 8=877
- (p, p) data at 19.7 MeV, phase shift analysis 8=3705
- in p-p scatt., asymmetry rel. to spin-orbit interaction, 9.6-19.7 MeV 8=836
- p-p scatt., 144, 1, 140.7 MeV, obs. 8=15832
- pp scatt., 500-1200 MeV 8=11598
- in polycaprolactam by "solid effect", 3150-19 200 Oe and 1.65-4.2°K 8=13015
- in polymers by "solid effect", 3150-19 200 Oe and 1.65-4.2°K 8=13015
- Q-meter circuit for meas. 8=11600
- recoil-p in π^0 photoprod., energy depend. 8=835
- synchrocyclotron beam depolarization 8=3710
- tandem beam, depolarization effects during charge exchange 8=1057
- target for low-energy N-N scatt. 8=6924
- in Al elastic scatt. at 6.6 and 7.4 MeV 8=7183
- Cr⁵², scatt. induced transitions, ang. asymm. 8=11880
- in Cu elastic scatt. at 6.6 and 7.4 MeV 8=7183

Protons and antiprotons—contd**polarization—contd**

- Cu⁶³, scatt. induced transitions, ang. asymm. 8=11880
- D(d, p)T, 8 energies, 2.1-14.1 MeV, p polarization obs. 8=11642
- Fe^{54,56}, scatt. induced transitions, ang. asymm. 8=11880
- He³(d, p)He⁴ 8=7002
- in Mg elastic scatt. at 6.6 and 7.4 MeV 8=7183
- Nd¹⁴², 12 MeV p scatt. 8=7195
- Ni^{58,60,62,64}, scatt. induced transitions, ang. asymm. 8=11880
- in O elastic scatt., meas. 8=20782
- O¹⁶, scatt., 24.5-39.7 MeV resonance effects on ang. distrib. 8=20785
- Ti^{48,50}, scatt. induced transitions, ang. asymm. 8=11880
- in Zn elastic scatt. at 6.6 and 7.4 MeV 8=7183
- production**
- beam, high intensity, production by charge exchange injection 8=839
- cosmic rays as high-energy source 8=7004
- fluxes, quasi-isotopic, 1-10 keV generation technique 8=3704
- $\gamma + p \rightarrow p + \pi^+$, angular distribution E_{0+}, M_{1-}, M_{1-} calc. 8=6845
- ion source for tandem accelerator 8=6694
- low energy beam, apparatus for control and exit in air 8=6936
- photonicuclear reactions, 16-18 GeV e acceleration, with metal targets 8=20768
- photoproduction of antiprotons, photon energy 4.0 to 5.7 BeV 8=20570
- π -N interactions, recoil p transverse momentum and four-momentum transfer, cosmic ray obs. 8=11589
- source for Van de Graaff accelerator 8=6692
- D(d, p)T, 8 energies, 2.1-14.1 MeV, p polarization obs. 8=11642
- H₂-electron collisions, cross section meas. 8=7519
- He³ + $\gamma \rightarrow d + p$, with Cabibbo-Radicati sum rule 8=6999
- He⁴(γ , p)H³, 50 MeV, cross-section 8=889
- scattering**
- antiprotons, by nuclei of ionographic emulsions 8=1050
- atom, ionization, characteristic K X-ray prod., approx. 8=20930
- Coulomb and nuclear, contrib. to error formulae in bubble chamber analysis 8=6681
- crystals, reversibility and Rutherford scatt. 8=2016
- cross sections, $\gamma p \rightarrow N^{*++}\pi^-$ linearly polarized γ -quanta 8=868
- elastic, interaction of differential cross section and polarization 8=16069
- elastic, isobaric analog resonance width calc. using Lane eqns. 8=11698
- elastic, optical model, rel part of potential 8=11876
- elastic, spin-orbit effects in optical-model anal. 8=879
- e-p cross-section data up to 1.1 GeV 8=11459
- e-p in equality derived from v-p backward scatt. sum rule 8=6923
- e-p high-momentum-transfer obs. 8=15731
- e-p N₃₃^{*}(1688), missing mass determ. of excitation function 8=11638
- e-p resonances, isobaric electrical excitation 8=713
- e⁺-p, differential cross section comparison with e⁻p scattering 8=3600
- e⁺-p, 800, 1200 MeV, cross-section obs., energy meas., ratio to e-p cross-section calc. 8=20383
- inelastic, and deformed spin-dependent optical potential 8=20779
- isobaric analogue resonances, optical potential theory 8=7046
- Kp superconvergent sum rule and Regge parameters 8=3667
- K⁺p total and elastic cross sections at 2.66 GeV/c 8=801
- K⁺p, ~ 1 GeV/c, phenomenological model of diffraction 8=6894
- K⁺p \rightarrow K⁺n, K⁺p, resonant partial wave amplitudes 8=6897
- K⁺ + p \rightarrow K⁺ + n, p + R Regge-pole model determ. of parameters 8=6893
- K⁺p, and parity of Λ and Σ 8=3730
- K⁺p, backward elastic, as evidence for baryon exchange 8=803
- K⁺p, backward elastic at 1-3.5 GeV/c 8=6892
- K⁺p, I = 1 P-wave phase shifts from N^{*}(1238) prod. 8=15805
- K⁺p, mass difference effect in Wali-Warnock model, violation of SU(3) 8=3692
- K⁺p phase-shift analysis below 1500 MeV/c 8=20484
- K⁺p, test of PDDAC for A₁⁺ 8=3668
- Λ -p from Λ -N pot. with hard core and Yukawa shape 8=16009
- Λ -p, 400-1300 MeV/c, obs. 8=859
- large angle, elastic, contrib. of statistical scatt. 8=15836
- μ -p, e-p comparison as test for Q.E. 8=11285
- μ -p, 1.5-6.0 BeV/c, obs., e. m. e- μ difference calc. 8=20395
- N isovector anomalous mag. moment, contrib. to sum rule 8=3698
- np \rightarrow pn, one π exchange 8=6847
- n-p, 3-10 GeV, cross-section obs. 8=20539

Protons and antiprotons—contd

scattering—contd

- nuclear optical potential change 8=3917
 nuclei, inelastic light, computer program for excitation function 8=16068
 155 MeV, inelastic, core polarization effects 8=15951
 optical model for polarized, new parameters 8=16067
 π prod. and nuclear surface props. 8=20778
 $\pi p \rightarrow A_1(A_2)p$, 2π exchange model 8=3650
 π -p amplitude calc. from dispersion relations, of unknown parameters 8=20300
 π -p, backward cone, conditions for existence of equal amplitude points 8=20432
 πp , overlap function analysis 8=6874
 πp , Regge-pole model at small momentum transfer 8=20461
 $\pi p, \rho'$ trajectory in charge exchange, Regge parameter evaluation and cut 8=11538
 π -p, similarities to multi- π prod. 8=20530
 π p amplitude, real part, in Coulomb interference region at 3.48 and 6.13 GeV/c 8=15790
 π -p at 180°, cross-section meas., N resonance evidence 8=11540
 π -p at 650 MeV, elastic and charge exchange cross-sections 8=6854
 π^- p, 720 MeV cross-section obs. 8=15772
 π^- p, 875-1579 MeV/c, p polarized obs. of resonances 8=20443
 π^- p, backward, modified Regge representation 8=3651
 π p charge exchange, real-to-imaginary ratio of amplitudes not a proof of Regge theory 8=20459
 π^- p near 180° in 4-7 GeV/c π^- beam 8=6873
 π^- p $\rightarrow \eta n$ asymptotic cross sections from separability and unitarity 8=772
 $\pi^- + p \rightarrow \eta + n$, J=1/2- scatt. length and phase shift calc. 8=20433
 $\pi^- + p \rightarrow K^0 + \Lambda^0/\Sigma^0$ at 4 GeV/c, forward and backward peak 8=3648
 π^- p $\rightarrow \pi^0 n$ asymptotic cross sections from separability and unitarity 8=772
 $\pi^+ p$ backward elastic, ang. distrib., 2.85 and 3.3 GeV/c 8=771
 $\pi^+ p$, total cross section from 8-29 BeV/c obs. 8=774
 $\pi^+ p$, mass difference effect in Wali-Warnock model, violation of SU(3) 8=3692
 polarization parameter in pn, 300-700 MeV 8=6927
 \bar{p} small-angle elastic scatt., 3 GeV/c, optical model 8=20780
 p- α , 6-11 MeV, p polarization obs. 8=837
 p- α , 22-25 MeV, Li⁵ resonance obs. 8=20532
 p-d, 17.1 MeV, elastic, cross-section obs. 15°-165° 8=20529
 p-n, elastic, real part at 8 GeV 8=6929
 pn \rightarrow np evidence for conspiracy of branch cuts in a.m. phone 8=11584
 pn \rightarrow np, Regge-pole analysis, anomalies 8=6932
 pp, general features 8=20530
 p-p polarization asymmetry rel. to spin-orbit interaction, 9.6-19.7 MeV 8=836
 $\bar{p}p$, Regge-pole model at small momentum transfer 8=20461
 pp, tests for symm. invariance 8=3711
 pp $\rightarrow N^*p$, 2π exchange contrib. 8=3650
 p-X, use of storage rings 8=842
 small-angle inelastic, obs. technique 8=20527
 spectrometer, Ge total absorption, for energy resolution at 100 MeV 8=7180
 spin correl. parameter obs. 8=11596
 v-p sum rule used to derive e-p scatt. in equality 8=6923
 Al, elastic at 6.6 and 7.4 MeV, polarization 8=7183
 Al²⁷(6.21 < E_p < 6.74 MeV) six resonances 8=11878
 Al²⁷, 17.5 MeV, from low-lying and excited levels, weak-coupling model fit 8=20786
 Ar⁴⁰, 3.5, 6.0 MeV, levels of K⁴¹ 8=964
 Au¹⁹⁷(p, p)Au¹⁹⁷, Rutherford scatt. at low energy 8=7191
 B¹¹(p, p)B¹¹, Rutherford scatt. at low energy 8=7191
 Ba¹³⁸ 8.6-12 MeV, optical model parameters 8=1096
 Be⁹, optical model parameters for Li^{6,7} (p, d) at 33.6 MeV 8=3923
 Bi, 5 MeV, yield depend. on orientation of crystal and beam 8=20801
 Bi²⁰⁹ rel. to isospin dependence of optical pot. 8=7039
 C, 1 GeV cross-sect. obs., π cross-sect. 8=1052
 C¹², assymmetric obs. rel. to degree of polarization of beam 8=1057
 C¹², inelastic, 1 GeV, from low-lying levels 8=3918
 C¹²(p, p)C¹², Rutherford scatt. at low energy 8=7191
 Ca⁴⁸(p, p)Ca⁴⁸, Ca⁴⁹ ground-state analogue 8=15969
 Cd¹¹⁴, collective states, excited by inelastic scatt. of 55 MeV p 8=15983
 Cd¹¹⁴, isobaric analog, 7-10 MeV levels compared with inelastic scatt. 8=983
 Ce¹⁴⁰ 8.6-12 MeV, optical model parameters 8=1096
 Ce¹⁴⁰(p, p' γ)Ce¹⁴⁰, identification of 1⁺ neutron particle-hole state in Ce¹⁴⁰ 8=20723
 Co⁶⁰ rel. to isospin dependence of optical pot. 8=7039
 Cr⁵², 16.5 MeV polarized, ang. asymm. optical model fits unsatisfactory 8=11880

Protons and antiprotons—contd

scattering—contd

- Cr⁵², 18.6 MeV polarized, ang. asymm. optical model fits unsatisfactory 8=11880
 Cu, elastic at 6.6 and 7.4 MeV, polarization 8=7183
 Cu⁶³, 18.6 MeV polarized, ang. asymm. optical model fits unsatisfactory 8=11880
 D(p, p)D, polarization and phase shift at 3.00 MeV 8=6993
 F¹⁹, 4.26, 5.96, 6.87 MeV, ACC approx. analysis 8=7182
 F¹⁹, 17.5 MeV, from low-lying and excited levels, strong coupling model fit 8=20786
 Fe⁵⁴, polarized, asymm. from 2⁺, 3⁻ levels 8=3920
 Fe^{54,56}, 18.6 MeV polarized, ang. asymm. optical model fits unsatisfactory 8=11880
 Ge, atomic displacement density by Coulomb scatt. 8=1062
 H atoms, simplified second Born approx. 8=20996
 H 3s and 4s state, cross-sections obs. from impact on He, Ar, Ne, N₂, H₂, O₂ 8=7462
 H²-p, 6.7-7.5, 10.3-11.3 MeV, T = 1/2 state of He³ 8=3739
 He atom, excitation of n¹S, n¹P, n¹D states 8=7384
 He, double ionization by fast 1-3 MeV 8=21280
 He, 1 GeV cross-sect. obs., π cross-sect. 8=1052
 p-He³, low energy, spin-dependent interaction theory 8=832
³He(p, p')He*, search for excited states 8=11653
 K³⁹, 7.12-8.51 MeV rel. to mixing ratios and spins 8=15967
 Li⁶, 1 GeV cross-sect. obs., π cross-sect. 8=1052
 Li^{6,7}, 50 MeV 8=7071
 Li^{6,7}, optical model parameters for Li^{6,7} (p, d) at 33.6 MeV 8=3923
 Li⁶(p, p)He³H³, quasi-elastic, 156 MeV 8=16078
 Mg, elastic at 7.6 and 7.4 MeV, polarization 8=7183
 Mg²⁴, 49.5 MeV, elastic and inelastic 8=3919
 Mg²⁴ rel. to Al²⁵ isospin-forbidden analogue resonances 8=20691
 Mg²⁵, 17.5 MeV from low-lying and excited levels, strong coupling model fit 8=20786
 Mg²⁶, inelastic, 8.3-24 MeV, cross-sections in statistical model 8=16077
 Mg²⁶(p, p)Mg²⁶, Al²⁷ resons. 1-2 MeV 8=957
 Mg²⁶(p, p')Mg²⁶, 6.46 MeV, spectrum obs. 8=20793
 N₂-p, collisions, optical emission rel. to Aurora 8=12212
 Na²³, 17.5 MeV from low-lying and excited levels, strong coupling model fit 8=20786
 Nd¹⁴², polarization meas. 8=7195
 Nd^{142,144,146}, 8.6-12 MeV, optical model parameters 8=1096
 Ni⁵⁸, scatt., 3-6 MeV, levels of Cu⁵⁹ 8=973
 Ni⁵⁸(p, p)Ni⁵⁸, Rutherford scatt. at low energy 8=7191
 Ni^{58,62,64}, 18.6 MeV polarized, ang. asymm. optical model fits unsatisfactory 8=11880
 Ni⁶⁰-p, 17.9 MeV, shell model form factors 8=15981
 Ni^{60,62}, 16.5 MeV polarized, ang. asymm. optical model fits unsatisfactory 8=11880
 Ni⁶¹, compound nucleus, levels of Ni⁶¹ below 4.0 MeV 8=3815
 O¹⁶, inelastic, 1 GeV, from low-lying levels 8=3918
 O¹⁶(2⁺, 8.88 MeV) inelastic p scatt. exciting non-normal parity state 8=20783
 O¹⁶, 23.4-46.1 MeV, elastic cross-section and resonances obs. 8=20784
 O¹⁶, 24.5-39.7 MeV, polarized, resonance effects on ang. distrib. 8=20785
 by O, elastic, meas. of p polarization 8=20782
 O, 1 GeV cross-sect. obs., π cross-sect. 8=1052
 P³¹, 17.5 MeV, from low-lying and excited levels, weak-coupling model fit 8=20786
 Pb, 1 GeV cross-sect. obs. π cross-sect. 8=1052
 Pb²⁰⁸, excitation function, isobaric analogs obs. 8=11881
 Pb²⁰⁸, 14-18 MeV into isobaric analog states in Bi²⁰⁹ 8=11784
 Pb²⁰⁸(p, p'), angular distrib. to 18 states in Pb²⁰⁸, total widths calc. 8=7113
 S³²(1⁺, 4.70 MeV) inelastic p scatt. exciting non-normal parity state 8=20783
 Si²⁸, polarized, asymm. from 2⁺, 3⁻ levels 8=3920
 Si²⁸(p, p')Si²⁸, 21.2 MeV rel. to 5 excited levels 8=15964
 Si²⁸ rel. to P²⁹ isospin-forbidden analogue resonances 8=20691
 Si²⁸(3⁺, 6.27 MeV) inelastic p scatt. exciting non-normal parity state 8=20783
 Si²⁸, 27.6 MeV, optical model analysis 8=11885
 Si³⁰(p, p)Si³⁰, P³¹ 2187 keV reson. parity and width obs. 8=960
 Si, atomic displacement density by Coulomb scatt. 8=1062
 Si crystals, 2 MeV, directional effects 8=2034
 Sm¹⁴⁴ 8.6-12 MeV, optical model parameters 8=1096
 Sm¹⁵², 6.05 MeV Rutherford correction due to excited levels calc. 8=11841
 Sn even isotopes, 2⁺ cross section, 16 MeV 8=1065
 Sr⁸⁶ 5-8.7 MeV rel. to isobaric analog states of Sr⁸⁹ 8=15982
 Ti⁴⁶, 6.5-6.8 MeV, transitions and spin assignments 8=11747
 Ti⁴⁸, 4-6 MeV, γ -p ang. correl, p spin flip obs. 8=11879
 Ti^{48,50}, 18.6 MeV polarized, ang. asymm. optical model fits unsatisfactory 8=11880
 W, intensity rel. to channeling 8=4997

Protons and antiprotons—contd**scattering—contd**

$W^{56,60}$, polarized, asymm. from 2^+ , 3^- levels 8=3920

$Y^{89}(p, p')$ at 14.71 MeV rel. to excited nuclear levels 8=1054

Y^{89} , 18.9 MeV, from first excited state, DW calc. 8=3921

Y^{89} , 61.2 MeV, excitation of 0.908 MeV level 8=1053

Zn, elastic at 6.6 and 7.4 MeV, polarization 8=7183

$Zn^{64,66,68,70}$ 50 MeV, optical analysis 8=7186

Zn^{90} , 19.4 MeV, ang. dist. compound to DWBA calc. 8=3929

scattering, proton-deuteron

cross-section obs., 1-2 BeV 8=11645

cross-section and polarization meas. at 150 MeV 8=6930

$D(p, \gamma)He^3$, cross-section from pud wave function 8=11593

$d(p, n)p$, $E_n = 9$ MeV 8=6989

elastic, large-angle, cross-sections, 0.75-2 GeV 8=3709

d polarization obs., 21.7 MeV 8=878

phase-shift analysis, 1.5-11.5 MeV 8=877

p polarization obs., 11.6 MeV 8=11644

scattering, proton-neutron. See Neutrons and antineutrons/scattering, proton-neutron.**scattering, proton-proton**

Quantum theory—contd

many-particle systems—contd

- Ising model lower bound to free energy with small external field at low temp. 8=10647
 Ising spin correl. function, calc. 8=14987
 kinetic eqns., Green function method, causality principle 8=14990
 kinetic and relaxation processes 8=10650
 Kondo scattering problem, ground state 8=5098
 Langevin eqn. of Mori and Kubo derived from theory of stochastic processes 8=10616
 lattices, harmonic, motion of heavy impurity 8=19440
 linear discrete medium, eqns. of motion 8=30
 linear discrete medium, geometry 8=29
 liquid-crystal transition of quantum system at $T = 0$ 8=119
 lower bounds for binding energies 8=6107
 many boson system in coherent states and superfluidity 8=19696
 many-e., HF scheme, new formulation of time-depend. perturbation theory 8=6603
 matter and radiation, equilibrium props., anomalies 8=2990
 metals and solid solns., cohesive and volume props., ab initio calc. 8=4665
 molecules, simple, sums over states at high temp. 8=10634
 N-fermion model, analysis of 2- and 4-point functions 8=15014
 N-particles system bound state approx. solution 8=11579
 N two level systems interacting with single mode, quantized radiation field 8=2970
 nuclear many-body problem, linked-cluster expansions 8=11694
 nuclear matter, binding energy calc. 8=823
 nuclear matter, Brueckner-Goldstone theory 8=11692
 nuclear matter, 3-body problem and Brueckner-Goldstone series convergence 8=11690
 nuclear shell model, group classification of many body interactions 8=3761
 nuclear spin in magnetic field, "negative absolute temperature" concept 8=10642
 one-dimensional interaction, repulsive delta-function problem 8=15010
 one-dimensional systems with hard cores, absence of phase transitions 8=19455
 oscillators coupled, quantum statistics 8=2981
 point quantum-mech. systems, spectral reps. for two-point functions 8=569
 polarized media, ang. momentum laws 8=10636
 polarized media, relativistic energy-momentum tensor 8=10635
 quantum ideal gases, effective potential 8=19456
 quantum plasma, test-particle theory 8=10644
 quantum statistics of system with Coulomb interaction 8=2988
 quasiparticles and contracted description 8=10639
 radiation transport in scatt. media, eqn. deduction 8=3012
 repulsive δ interaction problem in one dimension 8=10648
 scattering theory of N non-relativistic particles 8=10649
 Schrodinger equation, eigen-numbers 8=668
 spin dipole, properties 8=10622
 spin systems, statistical mechanics 8=15006
 spontaneous emission from a system of 2 level atoms interacting with relaxation mechanism 8=20971
 stationary, orthogonality of excited states 8=14995
 statistical mechanics, equilibrium states 8=10627
 statistical mechanics, equil. states, factor type 8=6101
 superconductors, macroscopic quantum phenomena 8=3124
 superfluid systems elementary approach, for understanding simple models 8=15148
 superfluid vortices 8=3125
 3-body problems, 3 families of integrals 8=10646
 three-particle distribution function of extended uniform system 8=115
 three particle, Faddeev's theory 8=6604
 uniform N-particle system, necessary conds. for radial distrib. functions 8=124
 Wigner function, kinetic eqns., Green function method 8=14991
 Wigner method 8=2977
 He, liquid, collective coordinates theory 8=10799
 He, superfluid, vortex lines 8=3124
 KCl, U_2 -centre, electronic structure rel. to correlation effects 8=13459

quantization

- See also Field theory, quantum/quantization.
 energy levels of systems, lower bound, ΔE method 8=561
 geometrical, applns. 8=6600
 Heisenberg type particle eqn. field, according to Fermi statistics 8=3419
 Kirchhoff-Planck radiation law 8=10762
 lattice vibrations, Green's and wave functions 8=8606
 quantized matter field, interaction with classical gravitational field 8=19430
 relativity, general theory, canonical transformation in gravitation theory 8=10597
 superconductors, and thermodynamic fluctuations 8=17987
 thermogalvanomagnetic phenomena 8=18208
 topological properties of theory 8=20154

Quantum theory—contd

quantization—contd

- Al superconducting cylinders, mag. field periodicity in flux expts., temp. depend. 8=22539

wave equations

- approximation by class-C potentials 8=553
 atom irradiated with wide-band coherent light 8=1143
 Bargmann-Wigner eqns. for spin $>1/2$ 8=3401
 Broglie fusion theory and the double solution theory, review 8=551
 Brownian movement of particle within wave 8=91
 Clebsch-Gordon, derivation of coeffs. rel. to nuclear energy levels 8=11704
 collapse time for hidden variable theory 8=15600
 Coulomb matrix elements, recursion relations 8=20144
 Dirac eqn., Drukarev transformation 8=15603
 Dirac matrices, representation adaptable to free particle spinor 8=560
 Dirac, symmetry group props. 8=6593
 discontinuous wavefunctions, variation principle 8=11248
 distributions, notation proposal 8=6011
 eigenvalues, degenerate, introduction 8=3404
 electron transmission through periodic pile 8=3406
 energy eigenvalues, WKB method 8=3396
 equations of motion, non-linearity, asymptotic behaviour and renormalization, connections 8=6595
 error bounds for expectation values 8=554
 fundamentals of quantum mechanics, book 8=6589
 Klein-Gordon eqn. for spinors 8=15621
 K-G, plane wave solution generalization 8=11256
 Klein-Gordon, time-depend., quasi-stationary solns., new method 8=11249
 linear variation methods 8=556
 Maxwell's equations, group theoretical derivation 8=10935
 molecular, energy variance function, and estimate of energy eigenvalues 8=4131
 molecular Schrödinger eqn., correlated polyelectronic wavefunction 8=4129
 phase shifts, Brysk approx. 8=3400
 phase shifts for inverse-power force field 8=20142
 pionic atoms, rel. to strong interactions and finite nuclear charge radius effects 8=7482
 plasma, classical and two-component short distance divergence 8=1378
 radiative transfer in multiple scattering 8=137
 real spinor fields, in modified Dirac theory 8=705
 relativistic, eigenvalue specifies spin 8=3399
 S-wave nonlocal potentials, scatt. soln. 8=15622
 Schrödinger for α -d cluster model of Li^8 8=15954
 Schrödinger, applic. to expansion approach to scatt. 8=672
 Schrödinger, applic. to scattering 8=20285
 Schrodinger in bootstrap calc. 8=11559
 Schrödinger eqn., appl. of displacement and collective variables method 8=3402
 Schrödinger eqn., lower bounds to eigenvalues 8=15605
 Schrodinger equation in imaginary time, integration 8=6590-1
 Schrödinger equation, two-parameter Hamiltonians 8=11250
 Schrödinger, generalized, valid for velocity dependent forces 8=15602
 Schrödinger, lower bounds to eigenvalues, excited states 8=11252-3
 Schrödinger, modification from Coulomb potential between two particles 8=3407
 Schrödinger, molec., evaluation of multidimens. integrals 8=16247
 Schrodinger, numerical solutions, accurate and stable 8=6594
 Schrödinger, new aspect of calc. of energy spectrum 8=3398
 Schrodinger, for n-particle system, scatt. of particle from bound system 8=668
 Schrödinger's perturbational-variational soln. 8=3405
 Schrodinger, radial, perturbation theory for discrete spectrum 8=555
 Schrödinger, Regge trajectories with Yukawa pot. 8=11421
 Schrödinger solns., unique continuation theorem 8=11251
 Schrödinger, spectral function, asymptotic behaviour 8=15604
 Schrödinger's, time-dependent, MacLachlan's variational principle examined 8=11254
 Schrödinger, time-depend., quasi-stationary solns., new method 8=11249
 Schrödinger with Woods-Saxon potential, approximate solution 8=7055
 single-particle Schrodinger eqn., rel. to positive energy bound states 8=2985
 spin $1/2$ particles, relativistic plane motion 8=6619
 spinors, interaction with vector mesons in 2 dimensions 8=15617
 statistics, applied to Schrodinger and Heisenberg force 8=2982
 stimulated Raman scattering in liqs., spontaneous emission and mol. vibr. damping effects 8=4587
 unified, for elementary particles, rel. to mass-spin depend. 8=11373-4
 unstable particles and resonances, application of general function 8=20268

Quantum theory—contd

wave equations—contd

- "vactal" representation, physical meaning 8=6596
- wave function, many electron, natural expansion 8=20920
- for zero rest-mass particles 8=11354
- H⁺, absorption coeff., numerical soln. for two-electron at. systems 8=7382
- He atom params. from wave functions with pole-eliminating correl. factors 8=16197
- L³⁺, (L=Ce, Pr, Nd, Sm, Gd, Dy, Er and Yb), 4f electron radial wave functions 8=1168
- Xe III, ground state Slater integrals 8=4087

Quarks

- antiquarks in baryon model 8=817
- atoms in solar spectrum 8=6718
- in baryon model 8=817
- baryon model, field-theoretic restriction 8=15817
- baryon nuclear shell model, finite mass effect 8=15819
- baryon resonance decay model 8=15821
- baryon resonances, symm. model, mass formula derivation 8=6980
- B-B scatt. model 8=11577
- baryons, model with three-body interaction forces 8=11573
- baryonic states model 8=3688
- Bethe-Salpeter eqn. accurate numerical soln. with Yakawa kernel 8=11476
- boson, meson resonances and SU₃ analysis applied to quark picture 8=11556
- in cosmic rays, negative evidence 8=11474
- cosmic ray search for charges $\geq \frac{2}{3}e$ 8=15742
- diquark, tightly bound state of two quarks in baryon model 8=20511
- elastic scatt. model 8=725
- "elementary particles", nonrelativistic model 8=6822
- experimental search in matter 8=11475
- fermion-antifermion system using Bethe-Salpeter eqn. 8=3603
- fermion interactions, strong-coupling quark-model SU(3) invariance limit, mass formula 8=20276
- galactic production, search 8=3604
- $\gamma + N \rightarrow \pi, K$, model 8=6842
- hadron elec. and mag. polarizabilities model 8=6823
- hadron-hadron scatt., λ -nonstrange and qq scatt. 8=6825
- hadron interactions model, prod. cross-sections, SU(3) breaking 8=20405
- hadron model as deformable sphere, fractional change avoided 8=15673
- hadrons as many-sakaton systems 8=20401
- hadron scatt., high energy, with factorizability assumption 8=15755
- hadron scatt. model for elastic 90° 8=15754
- hyperon decay model, nonleptonic 8=3726
- hyperon non-leptonic S-wave decay 8=6975
- Lagrangian model, mass term, chiral-type interactions 8=11481
- Λ to Σ ratio in $I = 1$ S-wave $\bar{K}N$ reaction 8=15860
- meson-baryon scatt. model assuming tighter meson structure 8=20418
- meson decay rate model 8=736
- meson-N scatt. model, Glauber formalism, correction to Johnson-Trieman relation 8=20419
- mesons as $q-q$ bound states, soln. of Bethe-Salpeter eqn. 8=15687
- mesons, tensor and axial vector, strong decay 8=11557
- model for BM, MM scatt., soln. to superconvergence relations 8=20404
- model and Lagrangian field theory of self-generating interactions 8=20161
- model for elementary particle and hyperon radiational weak decay 8=20571
- model rel. to $K_1^0 K_1^0$ mass spectrum 8=6913
- model rel. to $\pi^- + p \rightarrow n + \gamma, \gamma + p \rightarrow p + \eta$ 8=20490
- multipion production processes, establishment of sum rules 8=11512
- n- and p-quark mass difference explained on e. m. basis rel. to hadron isomultiplet splittings 8=6824
- nucleon model 8=3695
- $\pi^+ + p \rightarrow \Sigma^+ + K^+$, quark model for backward process 8=11480
- population in Fe spheroid determ. 8=11455
- production cross-section 8=726
- quark-antiquark channel, bootstrap calc. for meson solns. 8=3607
- quark-antiquark scatt. and meson nonet mass formulae 8=677
- quasiquarks rel. to fibre bundle C(N) cross sections 8=20407
- sakaton model for 2-body hadron scatt. 8=15753
- search for, in cosmic rays at sea level 8=20402
- search for fractionally charged particles 12 GeV e on Cu 8=20403
- scattering, additivity test from decay distrib. in double reson. prod. 8=11479
- scatt. invariant under group transformation 8=6763
- qq scatt., superconvergence relations 8=11478
- scattering and weak interaction model 8=724
- Schiff model extended to scatt. 8=6826
- search, geophysical, chemical, in cosmic rays and accelerators 8=11477

Quarks—contd

- solar photosphere, search for quark-atom spectra 8=23727
- strong and weak interactions, present problems, conference Erice Italy (1966) 8=15695
- substructure for mesonic and baryonic states, lecture 8=20408
- three-quark interactions 8=3606
- three-quark system, binding with complex charge 8=11473
- with unit and fractional charges in region $m_\pi > m_p$, search in cosmic rays 8=15888
- vector meson decay model 8=6822

Quartz

- alloyed with C, anomalous auto-electron emission 8=22712
- AT-cut plates with partial electrodes, thickness-shear vibrations 8=19501
- attenuation of 3GHz sound waves from 4 to 40°K 8=17490
- Brillouin scattering, stimulated, temp. dependence 8=14265
- conductivity, elec. in a.c. field, 10³-10⁷Hz, 20-700°C 8=18197
- crystal conductivities, appl. in low-temp. elec. termination 8=15137
- crystals, focusing of X-rays 8=14261
- crystal window in double spectrometer, X-ray diffr. profile exam. with monochromatic radiation 8=22004
- crystalline, laser prod. photocond. rel. to dielec. breakdown 8=18239
- crystallization from dil. solns. at low temps. 8=4816
- Debye temp. meas. $\sim 1-4^\circ K$ 8=4934
- discharge bulb, in atomic tritium experiments 8=4276
- dispersion spectrum, anomalous, due to Si-K absorption 8=18560
- elastic waves, longit. and transverse, laser excit. thresholds 8=17831
- film, spark discharge along surface 8=7682
- frequency-controlled oscillators, temp. compensation 8=2252
- fused, laser prod. photocond. rel. to dielec. breakdown 8=18239
- fused, stimulated Mandel'shtam-Brillouin scattering, depend. on excitation intensity 8=5632
- at high press. and temp., hydrolytic weakening 8=14561
- impurities on annealed semiconductor surfaces 8=9087
- light scatt. by u.s. surface waves 8=5636
- natural and cultured, distinction between rhombohedral faces 8=4731
- optical inhomogeneities, screw dislocations 8=4982
- piezoelectric, microwave rectification 8=9227
- phase inversion, high-low, press. 6 to 35 kb, obs. 8=1681
- photoelastic amp. of light, and hypersound generation by stimulated Brillouin scatt. 8=2451
- photoelastic props. rel. to use as acoustic light modulators and scanners 8=9496
- piezoelectric coeff. from 2.6 to 25 kbar, meas. by impact tech. 8=17719
- piezoquartz, surface waves 8=17832
- plates, flexural and shear vibrations, thickness-twist overtones 8=15045
- polished surface X-ray diffr. microscopy 8=17599
- α , isotropic sound velocity, temp. and press. derivative 8=22089
- α - β transition assoc. lattice modes from Raman scatt. -196-615°C 8=1682
- α -quartz, combination scatt., freq. depend. 8=18561
- α -quartz, integrated intensities, expt. test of general formula 8=13480
- quartz-kaolin-microdine reactions during firing, i.r. studies 8=1690
- α -quartz, polariton spectrum 8=2115
- α -quartz, structure factor ratios by Pendellösung method 8=13291
- quartzite, elastic precursor decay for cylindrical and spherical flow 8=13605
- Raman oscillator, stimulated behaviour rel. to mode pulling 8=2453
- reaction in water soln., 400-500°C, 1 kb, molecularity obs. 8=2520
- refractive index in far i.r. 8=14219
- resonator, $Q=120 \times 10^6$ at 2°K 8=18204
- spoon gauges, at elevated temps. 8=5990
- standard metre gauges 8=10475
- stimulated Brillouin scatt., depend. on temp. and photoelastic props. 8=5634
- stimulated Brillouin scatt. of ruby laser light, optical heterodyne detection 8=14267
- stimulated Raman scattering from i.r.-active phonons 8=11112
- synthetic, artificial twinning during plate sawing 8=17210
- thermal expansion 8=13381
- thermal expansion, mean curves 8=17534
- thermometer, high sensitivity rel. to piezoelectric effect 8=6220
- vibrating, microbalance, transistorized temp. regulator 8=19671
- X-cut plates, Rayleigh surface wave vel. 8=155
- X-ray emission spectrum, photon-counting obs. 8=2454
- X-ray irradiation effect on permittivity, luminescence and thermoluminescence 8=13871
- X, Y and Z cut, elastic shock compression obs. 8=13608
- Au coated fibres in high pressure proportional counters 8=11298

biothermal radiometer 8=6204
channel electron multiplier 8=11312
direct obs. of i. r. laser beam patterns 8=19973
directional, for aerial radiometry of ores 8=18829
extreme u. v., detection by retarding potential analyzers 8=20060
far infrar-red, Josephson effect, spectral response curves - and characts. 8=17979
heterodyne for 0.337 mm using maser source 8=6201
i. r., condenser-microphone type, freq. response for interrupted rad. 8=3097
i. r., development trends, review 8=15098
i. r. photocond. materials, generation-recomb. noise 8=22709
i. r. photocond., noise limited detectivities 8=22708
i. r., possible use of optically polished semicond. photo-e.m. elements 8=6203
infrared radiometer for structural stress meas. 8=8794
i. r. (3 to 15 microns), fast InAs, InSb and Hg_{1-x}Cd_xTe detectors 8=11103
for light signals < 10⁻⁴W, methods 8=15495
net pyrradiometer, long wave radiation source for calibration 8=15097
p-n junction detectors, self-filtering with narrow spectral responses 8=9158
photographic, i. r. and visible 8=537
pyroelectric i. r., comparison of various mats. 8=18199
pyroelectric, large-area receiver, description and zonal sensitivity 8=15100
quantum, and emitters, spectral characterization, clarification 8=20054
quantum, stimulated emission, statistics 8=20183
radiometer signal compensation 8=3271
radiometer, thermolec. circular foil type, peculiarities in stationary regime 8=19626
satellite cosmic-ray counter data 8=19089
spectroradiometer with automatic digital recording 8=6202
thermistor flake arrays, optically immersed in Ge and Si lenses, for the i. r. 8=9143

Radiation detectors—contd

- thin-film resistance thermal flux gauge 8=10768
 ultraviolet, book 8=20012
 ultraviolet, sodium salicylate appl. 8=15494
 u.v., with e channel multiplier 8=6506
 X-ray, point-anode proportional counters 8=14497
 InSb infrared, spark machining process 8=15096
 InSb m.o.s., infrared image storage 8=13863
 Si doped with B, Al, Ga, P, As or Sb, for 10.6- μ from CO₂ laser 8=9257
 Si, in rel. to earth reflectivity 8=18834

Radiation effects. See Biological effects of radiations; Chemical effects of radiations; Physical effects of radiations.

Radiation monitoring

 ceramic elect. insulators in thermal neutron flux 8=12010
 dose rate calc. for γ rays from spent fuel rods 8=16163
 γ dose rate in p bombarded spherical shell shield 8=3568
 γ -ray source cavity design 8=1009
 graphite and cadmium shielding for γ -rays 8=1128
 health and safety in U.K.A.E.A., 1966, research and development work 8=19329
 radiotherapy, safety aspects of linear accelerators 8=5985
 sand as side shield for accelerator 8=3490
 shield for γ -ray spectrometry 8=11438
 urinary U determ., simplified method 8=23181
 water shields containing ducts, behaviour of thermal n by source-separation techs. 8=12022
 X-ray generator, remote operation 8=15585
 X-ray powder diffractometer safety shutter 8=15594
 B₄C coatings for antiradiation screens, prep. by plasma method 8=20551
 Cs¹³⁷- γ rays, diff. energy and angle spectra in water and air 8=11819

Radiative transfer

- black-body, interaction with gas, approach to thermal equilib. 8=12673
 through clouds by spherical harmonics method 8=18866
 dispersive medium between non-black walls 8=15106
 Doppler lines for nonisothermal paths, total radiances and equiv. widths 8=10676
 electron-scattering atmosphere, Case's method applied to Milne problem 8=15028
 entropy production, size 8=6118
 flame in cylindrical chamber, effect of recirculation on temp. field 8=15114
 fluctuation meas. theory 8=3010
 fluids, optically dense, volumetric absorpt. rel. to Rosseland approx. 8=10674
 gases, diatomic nongray, infrared, vibr.-rot. theory 8=16693
 in gas, differential approximation, modification 8=222
 in gas layer containing 2- or 3-level atoms, rel. to spectral lines 8=16188
 gas, non-grey, plane-parallel geom., approx. methods 8=6117
 heat, absorbing and anisotropically scattering medium 8=10675
 heat and emissivities of emitting volumes, relations between 8=3099
 heat, in fibrous insulator 8=1883
 heat transfer limits, opaque and transparent case, and rad. and conduction predominant case 8=19624
 interaction of 2 infinite plates, unsteady state 8=10766
 model atmosphere construction, in radiative and thermodynamic equilibrium 8=2777

Radiative transfer—contd

- Monte Carlo method calcs., nonlinear and frequency-dependent 8=6119
 multiple scattering by statistical model 8=137
 nongray gases, differential formulations 8=139
 non-stationary diffusion of rad. in non-uniform stationary medium 8=19481
 organic liquids rel. to thermal cond. temp. depend., obs. 8=12853
 between parallel plates separated by nonisothermal medium 8=19625
 polarized radiation in slightly anisotropic medium 8=6375
 radiation-driven acoustic waves in confined gas 8=4483
 in relativistic medium 8=15029
 Rosseland radiative mean opacity, calc. 8=11163
 with reflection from atmos. boundaries 8=9862
 resonance-radiation transfer theory, H-functions 8=6116
 semi-isotropic model for heat-transfer, rel. to boundary and blackbody intensities 8=15103
 shock layer, radiation coupled, upstream absorpt. effects 8=19545
 solid heated by high temp. source, conductivity calc. 8=13386
 solution of transfer equation in Lyman continuum 8=10124
 source function soln. for heat transfer through absorbing grey gas between heated plates 8=21507
 spectra, regular band, absorptance calc. 8=12125
 spectral line formation, integration of equation by Riccati method 8=3009
 specific intensity, behaviour at infinity in plane parallel atmosphere 8=2774
 spherical shell of absorbing-emitting grey medium 8=10677
 suspensions, with wall, zonal calc. 8=8143
 transport eqn. with anisotropic scatt. 8=138
 uniform gas, frequency-integrated radiation due to weak lines 8=12690
 CCl₄ rel. to thermal cond. temp. depend., obs. 8=12853
 N, uniform, for local thermodynamic equil. 8=7926
- Radiators.** See Acoustic transducers; Electromagnetic waves/radiators.
- Radicals.** See Free radicals.
- Radioactive dating**
 carbon dating, influence of changes of Earth's magnetic field 8=9796
 cosmogenic nuclides in Peace River and Harleton chondrites, cosmic ray history deductions 8=14858
 Kesselwandferner glacier, Pt²¹⁰ and Sr⁹⁰ meas. in firn and ice samples 8=18831
 Norton County achondrite, Rb⁸⁷-Sr⁸⁷ isochron, and K⁴⁰-Ar⁴⁰ ages 8=19278
 nuclear debris, fresh, by activity-ratio determ. 8=7119
 Quaternary samples, use of Th²³⁰ and Pa²³¹ 8=9797
 scintillation liquid radio carbon count 8=9798
 C¹⁴, 42 samples 8=2566
 C¹⁴ in tree rings, rel. to sunspot cycle and Tunguska meteor 8=23225
 K-Ar ages of basalts dredged from E and W Pacific 8=19062
 K-Ar meas. on Brazilian glauconites 8=18830
 Te ore, by isotope anal. of inert gases 8=14455
- Radioactive tracers**
 absorption obs. for Sn self-diffusion 8=22161
 for diffusion in solids, effect of lattice defects conc. 8=22141
 gas flow appl. for particle residence time 8=21454
 ion sublation studies 8=23075
 rubber + benzene mixtures, tracer diffusion 8=21641
 in sediments and silt, digital computer data processing 8=18835
 in semiconductor research, appl. of autoradiography 8=18019
 in trace characterization, symposium 8=18797
 Br⁸², for Fe(OH)₃ suspension flow meas. 8=21727
 Cd-CdCl₂ soln., physico-chemical props. study 8=21615
 Co(II)-Ni(II)-Mn(II)-V(V)-Mo(VI) chloride systems, extraction separation studies 8=23077
 F¹⁹ in HF etches, rel. to fluoride chemisorption in Si and SiO₂ surfaces 8=18697
 HTO, suitability for atmospheric boundary layer mass transfer obs. 8=14594
 H-3, I-131, for groundwater flow obs. 8=2568
 I¹³¹, for metals-iodine reaction kinetics 8=23093
 I¹³¹, suitability for atmospheric boundary layer mass transfer obs. 8=14594
 In^{113m}, generator method 8=14449
 Mg, silico-thermal prod., mechanism 8=23776
 MO(VI) extraction, with 100% TBP mechanism study 8=23076
 N¹⁵ in solids detec. by activation 8=14504
 Na in SiO₂ films, rel. to Na contamination obs. 8=18069
 Na²², cosmic ray prod., meas. for atm. exchange studies 8=18857
 Ra, in Ra-Ba mixed crysts., crystn. study 8=21962
 S³⁵ and O¹⁸, in metals and alloys oxidation study 8=23092
 W¹⁸⁵, in tungstate soln. aggregation study 8=21607
 Xe¹³³, diffusion in zirconium carbide, activation energy, rel. to struct. 8=8686

Radioactivity

 Sm¹⁴³, redetermination from γ-ray spectra 8=986
 Sm¹⁵², half-lives of 2⁺ states 8=11771
 Sn¹¹⁵, 619 keV level, $\frac{1}{2}$ state 8=7095
 Sn^{118,120} 4⁺ and 5⁺ states obs. 8=11758
 Ta¹⁷⁰, using a time-amplitude convertor 8=16042
 Ta¹⁷⁰, rel. to negative search for high spin three-quasiparticle isomer 8=7108
 Ta¹⁸⁰, γ-ray spectra 8=1023
 Ta¹⁸², 16.3 min, study by Ge(Li) detector and e-e coincidence spectrometer 8=20727
 Te^{128,130}, double β-decay 8=1017
 Tl²⁰⁸, half-life, accurate value 8=20758
 Tm¹⁷⁰, 4.1 μs isomeric state, strongly retarded E1 transitions 8=990
 Tm¹⁷⁰, Nilsson model for β-decay 8=1021
 Tm¹⁷⁰ → Yb¹⁷⁰, β-decay lifetime, anomaly in forbidden transitions 8=11822
 Tm¹⁷² Ω-forbidden transition levels 8=15995
 U²³³, absolute M1 and E2 transition probabilities 8=20731
 Vn⁴⁶, β-decay calc. 8=7126
 W¹⁸³, 46.5 keV level 8=15999
 Y⁸⁷ isomer, β decay 8=11812
 Y⁹⁰, obs. 8=7130
 Yb¹⁶³ → Tm¹⁶³ obs. 8=7146
 Z = 104-115 superheavy elements, lifetime predictions 8=7122

Radioactivity—contd

decay schemes

103^{266,267}, α-decay 8=7151
 γ-transitions of 10 nuclei 8=16019
 Ac^{209,215} obs. 8=20759
 Ag⁹⁹ → Pd⁹⁹ 8=1016
 Ag¹⁰⁰, possible obs. 8=1016
 Ag¹⁰¹, γ-trans, positon decay 8=1015
 Ag¹⁰², γ-rays 8=7094
 Ag^{106m}, 8 day, 45 γ-rays 8=7134
 Ag^{106m,r}, γ-decay, energy levels of Pd¹⁰⁶ 8=979
 Ag^{106m} → Pd¹⁰⁶, γ-spectrum 8=7092
 Ag^{110m}, disint. and γ-transitions 8=7135
 Ag¹¹¹ → Cd¹¹¹, new transitions, B(E2) values, energy level lifetimes 8=20712
 Al²⁴, ground state mass, T_z=O analog state 8=16017
 Am²⁴¹, γ-spectrum 8=3846
 Au¹⁹⁹, β-transitions, shape and longitudinal polarization meas. 8=20753
 Au²⁰², β endpoint energy, γ-decay, half-life 8=11828
 Au²⁰⁴, βγ 8=11828
 Ba¹³³, γ Cs¹³³, K conversion coeffs. obs. 8=16031
 Ba¹³³ → Cs¹³³, e. m. transitions, conversion coeffs. determ. 8=11820
 Ba¹³³, γ and X-rays, calibration standard for Ge(Li) detectors 8=6655
 Bi²⁰⁵ → Pb²⁰⁵ γ-transitions 8=997
 Br⁸⁷, in atmosphere 8=2611
 C¹⁰ → B¹⁰, β-decay obs. rel. to anomaly in 1.74 MeV state of B¹⁰ 8=16015
 Cd¹⁰⁹, for meas. of isomeric transition of Ag¹⁰⁹ 8=3820
 Cd^{117,117m} → In¹¹⁷ for levels of In¹¹⁷ 8=15984
 Ce¹⁴¹, β-transitions, shape and longitudinal polarization meas. 8=20753
 Ce^{133,133m} → La¹³³, β-decay, levels of La¹³³ 8=20722
 Ce¹³⁵ → La¹³⁵ 8=20721
 Ce¹⁴³ → Pr¹⁴³, β decay lifetimes 8=11764
 Cf²⁵¹ → Cm²⁴⁷, α, γ 8=11835
 Cl³², ground state mass, T_z=O analog state 8=16017
 Cl³⁵, from S³⁴(p, γ) 8=1063
 Co⁵⁶ → Fe⁵⁶, for calibrating γ-ray detectors up to 35 MeV 8=11428
 Co⁶⁰, for level control 8=1010
 Cr⁴⁶ → V⁴⁶, polarization of 305 keV radiation 8=11749
 Cs¹²⁸, γ-decay rel. to existence of O⁺-2⁺-4⁺ vibrational triplet in Xe¹²⁰ 8=3825
 Cs¹³⁴ → Ba¹³⁴ 8=7139
 Cs¹³⁴ → Ba¹³⁴, β-spectrum 8=16030
 Cs¹³⁴ → Ba¹³⁴, levels obs. 8=7099
 Cs¹³⁶ γ-spectrum obs. 8=11761
 Cs¹³⁷, for level control 8=1010
 Er¹⁷¹ → Tm¹⁷¹, β decay 8=11775
 Er¹⁷³, new isotope 8=20756
 Eu¹⁴⁵, radiation obs. 8=16037
 Eu¹⁴⁹ → Sm¹⁴⁹, γ-ray spectra, K-shell internal conversion coeff. 8=7143
 Eu^{152,154,155,156} γ-intensities 8=11821
 Eu^{152,154}, E2 transitions of Sm¹⁵² and Gd¹⁵⁴ internal conversion 7=1020
 Eu^{152,154}, rel. to Sm¹⁵², Gd¹⁵⁴, β- and γ-vibrational bands obs. 8=16034
 Eu^{152,154} → Gd^{152,154}, first forbidden β-transitions relative intensity of K-components 8=11822
 Fe⁵⁹ → Co⁵⁹ 8=15979
 Fe⁶¹, γ- and β-spectra, Fe⁶¹-Co⁶¹ 8=3869
 Fm²⁵³ → Cf²⁴⁹, α, γ and e spectra 8=11836
 Ga⁷², β-γ circular-polarization parameter 8=1013
 Ga⁷² → Ge⁷², new γ-rays 8=16021
 Gd¹⁴⁹ → Eu¹⁴⁹ → Sm¹⁴⁹, γ-ray spectra, K-shell internal conversion coeff. 8=7143
 Hf¹⁷² + Lu¹⁷², positrons, number 8=11824
 Hg¹⁹⁴ → Au¹⁹⁴, e-capture 8=1025
 Ho^{152,153}, α-decay energies and half-lives 8=3883
 Ho¹⁵⁴, α, half-life, new isotope 8=3883
 Ho¹⁵⁵, α, unsuccessful search 8=3883
 I¹²¹, γ obs. 8=20752
 I¹²⁵ → Te¹²⁵, half-life of first excited state of Te¹²⁵ 8=15986
 P²⁸ γ-decay rel. to existence of O⁺-2⁺-4⁺ vibrational triplet in Xe¹²⁰ 8=3825
 In^{194m}, K X-ray and γ decay obs. 8=7147
 I^{195,195m}, γ-decay scheme disentangled from Rb⁸¹ 8=11827
 La^{132,134} → Ba^{132,134} 8=20720
 Lu¹⁷² → Yb¹⁷² γ, K=3 rot. band of Yb¹⁷², multipolarities deduced 8=15996
 Lu¹⁷⁶, lifetime 8=1023
 Lu^{176g,m} half-lives 8=1022
 Mg^{23,27}, β-γ branching ratios, lifetimes 8=16016
 Mg²², positron, branching ratios 8=3866
 Mn⁵² → Cr⁵², excited states populated in decay 8=15976
 Mo⁹⁰ → Nb⁹⁰, obs. 8=20711
 Na²⁰, β, γ-decay spectra 8=20745
 Na²⁰ → Ne²⁰, β decay meas. by delayed α emission 8=3865
 Na²² positron spectrum, statistical shape obs. 8=20746
 Nb⁹⁰, end-point energy of e⁺, internal-conversion spectrum 8=11813
 Nb⁹⁷ → Mo⁹⁷ 8=16023
 Nd¹⁴⁷ → Pm¹⁴⁷, γ-ray spectrum 8=3881
 Ne¹⁸, β-γ branching ratios, lifetimes 8=16016

Radioactivity—contd**decay schemes—contd**

Ne²³, following Ne²²(n, γ), unsuccessful search for 2.285, 2.405, 2.870 MeV levels 8=11806
 Os¹⁹¹, harder γ -rays 8=3886
 Os¹⁹³ \rightarrow Ir¹⁹³, levels of Ir¹⁹³ 8=11826
 P²⁸, ground state mass, T_x=O analog state 8=16017
 Pb²¹¹ \rightarrow Bi²¹¹ 8=7150
 Pd¹⁰¹, γ -trans, positron decay 8=1015
 Pd¹⁰⁹ \rightarrow Ag¹⁰⁹, excited states of Ag¹⁰⁹ 8=16026
 Pm¹⁴⁴, Nd¹⁴⁴ energy levels above 1.78 MeV 8=16033
 Pr¹³⁹ \rightarrow Ce¹³⁹, γ -rays, e⁻ capture and e⁺ decay 8=7141
 Pr¹⁴⁴ \rightarrow Nd¹⁴⁴, γ -ray schemes 8=11765
 Pt¹⁹⁸, from Au spallation 8=1024
 Pt¹⁹⁹ \rightarrow Au¹⁹⁹ 8=994
 Pu²³⁹ \rightarrow U²³⁵ 8=11789
 Pu²⁴⁵ \rightarrow Am²⁴⁵, β -spectrum, conversion spectrum 8=11833
 Re¹⁸⁰, 2.5 min. 40 γ rays and levels of W¹⁸⁰ 8=3885
 Re^{186,9}, Nilsson model for β -decay 8=1021
 Rh⁹⁹, γ -ray decay 8=978
 Rh¹⁰², 2 year and γ -ray spectra 8=20751
 Rh¹⁰⁶, γ -decay energy levels of Pd¹⁰⁶ 8=979
 Ru¹⁰³, e internal conversion 8=11815
 S³⁷ \rightarrow Cl³⁷ β -decay 8=16018
 Sb¹²⁵ \rightarrow Te¹²⁵, half-life of first excited state of Te¹²⁵ 8=15986
 Sc⁴⁰, ground state mass, T_x=O analog state 8=16017
 Sc^{44m} \rightarrow Ca⁴⁴ 8=3868
 Se⁸³ \rightarrow Br⁸³, β , γ 8=3871
 Si²⁶, β - γ branching ratios, lifetimes 8=16016
 Sm¹⁵³, β - γ ang. correl. obs. 8=16035
 Sm¹⁵⁵ \rightarrow Eu¹⁵⁵, β and γ decay 8=7105
 Sn^{117m, 119m}, internal-conversion studies of M4, M1 transitions 8=20717
 Sn^{123, 125m} \rightarrow Sb^{123, 125} 8=11817
 Sn¹²⁵ \rightarrow Sb¹²⁵, γ -spectra 8=16027
 Sn¹²⁵ \rightarrow Sb¹²⁵, new γ -rays, branching 8=3874
 Ta¹⁸⁰, e-capture search 8=1023
 Ta¹⁸² for meas. of isomeric transition of Ag¹⁰⁹ 8=3820
 Ta¹⁸², 16.3 min, study by Ge(Li) detector and e-e coincidence spectrometer 8=20727
 Ta¹⁸² \rightarrow W¹⁸² 8=11825
 Ta¹⁸⁶ 8=16043
 Tb¹⁵¹-Gd¹⁵¹, by γ -spectrum and γ -coincidence spectra 8=7145
 Tb^{151, 152}, new γ -transitions 8=3882
 Tb¹⁵⁵ \rightarrow Gd¹⁵⁵, internal conversion e spectrum 8=100 keV 8=988
 Tb¹⁵⁵ \rightarrow Gd¹⁵⁵, internal conversion e spectrum 8=600 keV 8=988
 Tb¹⁵⁶ \rightarrow Gd¹⁵⁶, γ -decay, internal conversion coefficients 8=7144
 Tb¹⁵⁸ \rightarrow Dy¹⁵⁸ new level and γ transitions 8=20755
 Tb¹⁶⁰ \rightarrow Dy¹⁶⁰, first forbidden β -transitions relative intensity of K-components 8=11822
 Te¹¹⁷ \rightarrow Sb¹¹⁷, β , γ decay 8=3876
 Te^{119m} gamma and conversion electron spectra obs. transitions 8=7136
 Te^{119m} \rightarrow Sb¹¹⁹, γ -ray cascades 8=3877
 Te^{131m}, decay, multiplicities of transitions 8=3878
 Tl²⁰⁷, γ -ray spectrum 8=7150
 Tm¹⁶⁵ \rightarrow Er¹⁶⁵, by e-capture 8=20757
 Tm¹⁷⁰, β -decay, first-forbidden, conserved vector current theory 8=16040
 Tm¹⁷⁰, Nilsson model for β -decay 8=1021
 Tm¹⁷⁰ \rightarrow Yb¹⁷⁰ β -decay, forbidden transitions, anomaly in in K-mixture calc. 8=11822
 Tm¹⁷² \rightarrow Yb¹⁷², γ transitions 8=11823
 U^{234m}, γ -spectrometry 8=11831
 U²³⁸, γ -spectrum 8=11832
 V⁴⁸, β - γ circular polarization correl. meas. 8=7131
 V⁵² \rightarrow Cr⁵², excited states populated in decay 8=15976
 Xe¹²³, half-life 2.08 h 8=7138
 Xe^{125, 127} \rightarrow I^{125, 127} 8=11760
 Y⁸⁷ isomer, β decay 8=11812
 Z = 56-78 M/L, N + O/ M ratio in internal conversion E2 transitions 8=7140
 Zn⁶⁵ \rightarrow Cu⁶⁵, new γ -rays 8=1012
 Zr⁹⁷ \rightarrow Nb⁹⁷ 8=16022

electron capture

induced capture of orbital electron, cross-section 8=1042
 internal conversion cascade γ , accurate determ. 8=11798
 in stars evolution and ν prod. rel. to matter density 8=10138
 Ag¹⁰⁵, P_L/P_K for transitions to 1088 and 344 keV levels of Pd¹⁰⁵ 8=3873
 Ar³⁷, M/L ratio, for calc. of K _{α} fraction in K-series of Cl 8=20748
 Ba¹³³ 8=11820
 Ba¹³³ \rightarrow Cs¹³³ 8=16031
 Hf¹⁷⁸, Lu, K Auger spectrum 8=1187
 Hg¹⁹⁴ \rightarrow Au¹⁹⁴, half-life 8=1025
 Ho¹⁵³, α -e capture ratio 8=3883
 K⁴⁰, energy from various reactions 8=11740
 K⁴⁰, specific activity of K capture 8=7176
 KX- γ directional correlations 8=20739
 Lu¹⁷⁴ isomers, disint. energies 8=11776
 Na²², evidence of orbital electron exchange 8=20746
 Ni⁵⁶ and Ni⁵⁷, meas. of P_L/P_K using dicyclopentadienyl nickel 8=3914

Radioactivity—contd**electron capture—contd**

Pr¹³⁹ decay, spin and parity assignments to Ce¹³⁹ levels 8=7141
 Rb⁸⁶, $\lambda_{E.C.}/\lambda_{\beta}$ -branching ratio obs. 8=11810
 Sn¹¹³, L and K Auger effect spectra of In¹¹³ 8=4099
 Ta¹⁸⁰, search 8=1023
 Tm¹⁶⁵ \rightarrow Er¹⁶⁵ obs. 8=20757
 Tm¹⁷⁰ \rightarrow Yb¹⁷⁰, 84.3 keV γ conversion coeff. 8=16041
protection. See Radiation protection.
Radioactivity measurement
 See also Dosimetry; Radiation monitoring; and the specific radiation, e.g. Gamma rays.
 autoradiography, quantitative, emulsion density-sample activity characts. obs. 8=23764
 β -emitter weak, automatic compensation for liquid scintillation counters 8=20740
 β - γ emitters, standardization using low-efficiency detectors 8=11797
 β -ray spectra, backscattering deformation, experimental corrections 8=3850
 Doppler, shift attenuation method for low recoil vels. 8=7156
 γ cascade from e capture, from ang. correl. meas. 8=11798
 γ -ray dose from gas cloud, calc. 8=10448
 fallout, from French 1966 Pacific tests 8=18907
 inert gases, radioactive, precision determ. 8=3864
 nuclear radiation 8=601
 source-to-detector solid angle calc. 8=1000
 source-detector solid angle, integral calc. 8=20184
 source to target geometry, computer soln. of activation eqn. 8=3854
 spheroidal source, calc. of γ -dose on axis 8=3855
 tritium liquid scintillation counter 8=3856
 C¹⁴ containing substs., precision determ. in gas phase 8=3864
 C¹⁴, low level β activity, apparatus 8=3852
 Cs¹³⁷, isolation with Cu ferrocyanide-anion exchange resin 8=3879
 H³ containing substs., precision determ. in gas phase 8=3864
 H³, low level β activity, apparatus 8=3852
 K⁴² in aqueous media, det. 8=3867
 Nb⁹³, irradiated α -emission energy 8=1041
 Ne²⁰ β -decay by delayed α emission 8=3865
 Pm¹⁴⁴, Nd¹⁴⁴ energy levels above 1.78 MeV scintillation spectroscopy 8=16033
 Te¹³⁰, double β -decay, by Xe analysis in mineral 8=1017
apparatus
 See also Particle detectors.
 activation of specimens in bremsstrahlung bundles 8=7117
 β emitter standardization, proportional counter 8=16012
 e spectrometer, background signals 8=11467
 4 π gas counter, γ counting efficiency 8=605
 heart, γ -scanning to separate blood flow and muscle 8=5981
 hybrid computer for calc. of radioisotope activity after n flux bombard. in reactor 8=4025
 neutron monitoring for radiological protection, conference Vienna, Austria (1966) 8=15852
 point source assumption effect 8=11288
 portable radiation survey instruments, regulated d.c.-d.c. converter for low standby current 8=3455
 proportional counter, gas for low level β emitters 8=3852
 scintillation camera, autofluoroscope, data processing for 8=5982
 scintill. counter for γ sources, corrections 8=3851
 solid state detectors, suppression of interference pulses by anti-coincidence tech. 8=6650
 source mounts, increasing cond. of metallized plastic films 8=5153
 spark counter for α -activity meas. 8=7120
 tritium low energy β -rays, evacuation of scintill. probe 8=3853
 ultra-stable, for exact meas. 8=20737
 C¹⁴, low energy β -rays, evacuation of scintill. probe 8=3853
 H₂ counter, effect of Cd thickness on response 8=852
 Si detectors, simple laboratory applications 8=11311

Radioastronomy

 crystalline powders, oblique illumination apparatus 8=3360
 diamond-like crystals, first-order effect rel. to electrostriction and photoelasticity 8=9486
 dielectrics, mag. ordered, two-magnon scattering 8=9487
 dielectrics, magnetically ordered, rel. to Faraday effect 8=5575
 directional intensity of Stokes and anti-Stokes lines 8=4122
 electronic Raman effect and vibronic coupling 8=12129
 fluids, laser beam filament formation, linearized theory 8=8067
 gases, rot. and rot.-vibr., obs. 8=6523
 infrared absorpt. and Raman scatt. calc. 8=14176
 insulators, lattice Raman scattering theory 8=2397
 liquids, stimulated, effects of spontaneous emission and mol. vibr. damping 8=4587
 liquids, stimulated scattering, self-focusing 8=4585
 laser line widths obs. 8=6523
 molecules, diatomic, pressure broadening obs. 8=6523
 plasma, laser beam scatt. 8=1401
 powders, He-Ne laser excitation 8=14175
 pulsed mode intense scattering, calc. 8=18488
 resonance effect, connection with absorpt. freq. 8=9484
 and Rayleigh scatt. by molecules in bounded medium 8=21031
 review, expt. and theory since 1962 8=12128
 review of Soviet work 8=12132
 ruby, R, R¹ and B absorpt. linewidth and phonon-induced relaxations 8=14194
 scattering by polarization waves 8=9485
 stimulated, quantum theory 8=3292
 stimulated scatt., molec. mechanism 8=7487
 stimulated, study by second-harmonic-generation technique 8=11018
 totally symmetrical lines, depolarization factor, near resonance 8=16250

Raman spectra—contd

- vibrational frequencies, 54 molecules, data compilation 8=21036
- inorganic substances**
- calcite, stimulated 8=5591
- quartz α - β transition assoc. lattice modes from Raman scatt. -196-315°C 8=1682
- quartz, stimulated scattering under optical pumping rel. to mode pulling theory 8=2453
- sapphire, with Ar⁺ laser source rel. to vib. of cryst. 8=2401
- stimulated emission without resonant cavity 8=12127
- transition metal anions in crystalline phase 8=9542
- water, in concentrated ionic solns. 8=1565
- AgMnO₄ 8=21085
- AlP, and infrared active modes 8=18500
- As(SiH₃)₃, rel. to struct. 8=4144
- B, X-ray scatt. of Cu K α rad. 8=2396
- BaTiO₃ overdamped vibr. made from 30 ft mode line-shape obs. 8=5586
- Be, X-ray scatt. of Cu K α rad. 8=2396
- BeO excited by 6328Å line of a He-Ne laser 8=18507
- Br absorbed on silica gel, laser obs. 8=23031
- BrHBr⁺ and BrDBr⁺ ions 8=12174
- C, X-ray scatt. of Cu K α rad. 8=2396
- CO₂, cryst. 8=9510
- CS₂ adsorbed on silica gel, laser obs. 8=23031
- CsBr, and i.r. absorption spectrum at second order, interpretation 8=5595
- CsMnO₄ 8=21085
- D, solid, anomalous intensities rel. to mol. vibrational motion and coupling 8=9535
- GaAs, scattering by coupled optical-phonon-plasmon modes 8=22984
- GaP, and i.r. spectra near optic phonon modes, dielectric dispersion 8=14215
- H₂ cell, stimulated emission at 8.84 μ m by Nd³⁺:glass laser 8=15484
- H₂, Q(1) line stimulated by laser wave in presence of static field 8=16283
- H₂, Raman scattering cross section calc. 8=7517
- H, solid, anomalous intensities rel. to mol. vibrational motion and coupling 8=9535
- H, solid, intensity anomalies 8=6523
- H₂, solid and liquid, intensity anomaly 8=9536
- H₂, stimulated effect meas. in terms of laser oscillator and amplifier theories 8=21081
- HDO in H₂O 8=21690
- HgI₂, molten state 8=21691
- HgIBr, molten state 8=21691
- HgICl, molten state 8=21691
- IF₃, rel. to vib. assignment, and Fermi resonance 8=1568
- K vapour, stimulated emission from Raman scattering from 4P_{3/2} level 8=20984
- KBr, second order scattering in polarized light 8=14231
- KBr and KCl, mixed, scattering 8=18541
- KCl, pure and doped, scattering 8=5614
- KH₂PO₄, anisotropic crystal, analysis of stimulated Raman effects 8=9543
- KI, second order, exptl. study 8=5615
- KMnO₄ 8=21085
- K_nMⁿX₆ (Mⁿ = Au, Pt, Pd; X = Cl, Br), solid and soln. comparison 8=14189
- K_nMⁿX₆ (Mⁿ = Au, Pt, Pd; X = Cl, Br), solid and soln. comparison 8=14189
- KNO₃ containing KNO₂ impurity, analysis 8=23177
- KNO₃ 1050 cm⁻¹ line, absolute scatt. coeff. determ. 8=14174
- KrF₂, absence of Fermi reson. 8=7528
- KSO₃F 8=9562
- Li, X-ray scatt. of Cu K α rad. 8=2396
- MgF₂, scattering and i.r. absorpt., selection rules 8=5621
- N₂ in atm., scatt. obs. 8=23289
- N₂O, cryst. 8=9510
- NaCl, polarized light study 8=18547
- NbCl₅ cryst. 8=14249
- O₂ in atm., scatt. obs. 8=23289
- S₂Cl₂ 8=12231
- S₈ 8=12227
- Sb(SiH₃)₃, rel. to struct. 8=4144
- SnTiO₃, electric-field-induced, optical-phonon freq. 8=5370
- TiCl₄, difference bands 8=7570
- Zn(NO₃)₂·xH₂O, molten 8=16868

organic substances

- acenaphthene, broadening and freq. variation as function of temp. 8=5649
- acrylyl fluoride, rel. to rot. isomerism 8=16311
- allyl halides 8=21111
- benzene, absolute scatt. cross section of 992 cm⁻¹ line 8=16858
- benzene derivs, liq., l.f. lines, effects of temp. solvents, etc. 8=1563
- benzene, liq., l.f. lines, effects of temp., solvents, etc. 8=1563
- benzene, 992 cm⁻¹ line, rel. to solvent and conc. 8=21672
- benzene, stimulated Raman effect, cyclic temp. depend 8=21125
- 2-bromocyclobutanone 8=12266
- 2-bromo-2,4,4-tridenterocyclobutanone 8=12266

Raman spectra—contd**organic substances**—contd

- carbon tetrachloride, difference bands 8=7570
- chlorosilyl dialkylamines 8=1300
- cloud seeding, results in Australia 8=23280
- cyclopentadiene 8=12267
- cyclopentadiene nickel nitrosyl, laser-excited 8=21155
- cyclopropane, liq. rel. to fundamentals and force consts. 8=1298
- deuterotoluenes, o-, m- and p- 8=7574
- deuteriochlorobenzenes, o-, m- and p- 8=7574
- trans-dichloroethylene adsorbed on silica gel, laser obs. 8=23031
- 2,6 difluoropyridine, liq. 8=16341
- 0,0-dimethyl phosphorochlorodithioate 8=21146
- ethane-1,1,1-d₃, rot. consts. obs. 8=16321
- ethylene, Raman spectra and electrooptical parameters compared with trichloroethylene 8=21138
- haloacetoneitriles 8=16323
- halogenated ethanes 8=12269
- intensities and depolarizations calc. 8=12131
- methylsilyl dialkylamines 8=1300
- monobromoacetoneitrile 8=12281
- naphthalene 1383cm⁻¹ line, absolute scatt. coeff. determ. 8=14174
- nitrobenzene and liquids, quenching with picosecond pulse excitation 8=4580
- nitrobenzene, 1345 cm⁻¹ line, rel. to solvent and conc. 8=21672
- p-nitro-p'-dimethylaminoazobenzene, cryst., in KBr, ruby laser excitation 8=9570
- 1,2,5-oxadiazole, liq., rel. to complete vib. assignment 8=16335
- oxalate free ion, D_{2d} symmetry and freq. assignment 8=21154
- polymethylene chains, longitudinal acoustic vibrs. 8=8608
- 2-pyrrolidone, vibration spectra, 3500-250 cm⁻¹ 8=7595
- ribonucleic acid derivatives, and molec. structure 8=7598
- scattering cross-sections calc. 8=12130
- 1,2,5-selenadiazole 8=16342
- tetrachloroethylene Raman spectra and electrooptical parameters compared with trichloroethylene 8=21138
- thiazoles, monosubstituted, vibrs. and coupling 8=4217
- p-toluidine, broadening and freq. variation as function of temp. 8=5649

 Bingham plastic, settling of spherical particles 8=21553
 bodies, elastic/visco-plastic, compressible, plane strain condition 8=10573
 deformation, controllable, of incompressible simple materials 8=13509
 of Earth's material, rel. to seismic regime 8=14537
 granular substances, plasticity and rupture conditions 8=8798
 hysteresis expts. 8=63
 hysteresis experiments for thixotropic materials, near max. flow resistance 8=7860
 liquid crystals, theory 8=1527
 non-linear problems in fluid mechanics, Newton's approximation application 8=12721
 non-Newtonian flow in porous media 8=7979
 polyethylene melt, steady flow elasticity 8=12735
 polymer solns., rheopectic charges in shear stress 8=8023
 polymers in aqueous solutions, reduction in turbulent skin friction 8=12946
 polymers, rel. to structure and viscoelasticity 8=8869
 polymers, and viscoelasticity, temp. dependence 8=2071
 polymethylacrylate and copolymers solns. rel. to band networks, obs. 8=21552
 Reiner-Rivlin type fluids, rotating flows over rotating discs 8=21561
 shells, inelastic, membrane, with rotation symmetry, creeping at finite deformations 8=10571
 tube, long, cylindrical, under internal pressure and axial tension, elastic/visco-plastic flow 8=10574
 Li₂SO₄, high-temp. modification 8=18169

Rhodium

- brittleness, on hot and cold working 8=22390
 de Haas-van Alphen effect and Fermi surface 8=13643
 electrodes, adsorpt. of CO 8=18726
 electrodes, adsorpt. of CO + H 8=18727
 photoinjection into liq. hydrocarbons 8=8113
 specific mag. susceptibility between 80° and 1850°K 8=5439
 Rh(III), spectra in fused LiCl-KCl 8=1567

Rhodium compounds

- Rh-Ba alloys, work function 8=18245
 RhC, C²⁻-X²⁺ band, Franck-Condon factors and r centroids 8=7548
 RhC, gaseous, dissociation energy 8=4240

Rhodium compounds—contd

- Rh₄(CO)₁₂ twinned, cryst. struct. 8=17412
 Rh-Hg system, phase diagram and heat of form. of cpds. 8=8280
 Rh₂S₃, Rh₂Se₃ and Ir₂Se₃, octahedron pairs, crystal structure 8=1807
 Rh₂S₃, crystal structure 8=17413
Riemann-Cristoffel tensors. See Relativity; Tensors.
Righi-Leduc effect. See Magnetothermal effects.
Ring currents. See Atmosphere; Ionosphere.
Rimeters. See Ionosphere measuring apparatus.
Rochelle salt
 dielectric permittivity and permeability 8=5371
 e.p.r., ferroelec. Stark effect in Cu²⁺ doped, obs. 8=14101
 e.s.r., γ -irrad., analysis of centre No. 2 8=9442
 Rochelle salt:Cu²⁺ e.s.r. spectrum influence through external elec. field 8=14111
 ultrasonic relaxation near ferroelec. transition 8=1858
 X-ray extinction rules and radiation damage effect 8=13266

Rock magnetism

- aero-magnetic obs., Dixie Valley, Nevada and Basin-Range structure 8=23450
 anisotropy, by translation inductometer 8=23451
 Antarctic, mag. props. rel. to mineralogy, methodology 8=10062
 archeomag. obs. suggesting dipole field wobbling over last 2000 years 8=10034
 Atlantic and Pacific cores, stratigraphy of reversals 8=23452
 basalts, dredged, self-reversal of remanent magnetism 8=19058
 basalts dredged from W and E Pacific, and K-Ar ages 8=19062
 Bloomsberg formation, Appalachians, paleomag. obs. 8=14704
 carboniferous glacial varves from C. Africa 8=19060
 contacts, baked, and dykes for tertiary geomag. field determ. 8=2725
 ferrian ilmenites and titanomagnetites, optically homogeneous in basalts, electron probe microanalysis 8=14703
 ferromagnetics grains properties and relation between magnetic-viscosity 8=2754
 Hurley Creek formation, New Brunswick, magnetization stability 8=19059
 igneous, remanent magnetization at low temp. 8=2755
 ilmenite particles, beach sand, props. 8=23454
 late paleozoic 8=14700
 magnetite, magnetostriction and magnetocryst. anisotropy, depend. on hydrostatic press 8=19065
 magnetite, reversible magnetostriction at high temp. 8=23448
 magnetite, reversible magnetostriction rel. microseismic oscills. 8=10063
 magnetization vector direction from statistical parameters of anomalous field 8=23449
 meter, for remanent mag. 8=10058
 microtektites in deep-sea sediments, obs. 8=14568
 Miocene lavas, S. E. Oregon, evidence of geomagnetic polarity transition 8=19057
 Old Red Sandstone, effect of heat treatment on mag. props. 8=5821
 paleo field intensities determ. and mechanisms responsible for non-ideal behaviour in Thellier's method 8=10061
 palaeomagnetism of the Atlantic island Fernando Noronha 8=10060
 palaeomagnetism of carboniferous glacial varves from C. Africa 8=19060
 palaeomagnetism of Kamthi sandstones, upper Permian age, from Godavary, India 8=19063
 palaeomagnetism of Ntonya ring structure, Malawi 8=19061
 palaeomagnetism of Steens mountain, S. E. Oregon and age of geomag. polarity transition 8=19064
 palaeomagnetism self-reversal and field reversal 8=10059
 Permian zhyolites in Corsica, obs. 8=10056
 Permo-Carboniferous, rel. to past dipole moments 8=23453
 plutonic mesozoic, Sierra Nevada, rel. to polar wandering and continental drift 8=14701
 sandstones, Kanthi, upper Permian age, from Godavary, India 8=19063
 spinner magnetometer using mag. shielding to reduce ambient mag. noise 8=14702
 Steens mountain, S. E. Oregon, geomag. polarity transition from reversed to normal 8=19064
 strata, superimposed, remanent magnetization directions from adjacent horizons, serial correlation 8=14705
 tektites, association with geomagnetic reversal 8=14567
 tertiary lavas from Greenland, remanent magnetization reversed to Earth's field 8=5819
 Tirupati sandstones from Godavary Valley, India, n. m. r. study 8=5820
 triassic Manicouagan group, lower, Quebec, obs. 8=2753
 viscosity, effect of exchange anisotropy 8=10057
 Mn nodules from dredged W. Pacific basalts 8=10055
 Ni, plastic deformation effects on mag. props. 8=9363

Rockets

- Aerobee, for obs. of sporadic E positive ion comp. 8=14685

Rockets—contd

- Aerobee-150, for study u. v. radiation from early-type stars 8=10170
 arc jet, thrust calc., mass flow rate 8=4421
 constant accn. flows, appl. to high-speed guns and launchers 8=16668
 electron density perturbations in ionosphere 8=9968
 electron multiplier for study of low energy auroral electron 8=10903
 heat transfer, liquid in zero-gravity field 8=4562
 infrasound spectra, flight and take-off, meas.: report 8=196
 n director, directional 8=6958
 nuclear engine, gaseous-core, nuclear analysis of 8=5823
 propulsion, ion-electron beams emitted by a plane, neutralization 8=3225
 propulsion particle velocity, laser-Doppler meas. 8=23457
 proton aurora meas., precip., spectra and ang. distribs., also electrons 8=5798
 reactor, thermionic as power supply 8=1115
 triethylborane injection in upper atmosphere, obs. of yellow-green luminosity 8=9904
 AIO trails, obs. to determ. temp. and density of upper atmosphere 8=2613
 H₂ fuel storage, liquid-solid mixture obs. 8=19067

Rotating bodies

- See also Angular velocity measurement; Centrifuges; Earth/rotation; Gyroscopes.
 cylinders, thick, steady motion under mech. and thermal loading 8=6047-8
 discs, rough, torque due to friction 8=6044
 double rot., connection of elec. meas. devices 8=13505
 gravitation, extended theory, Mach's principle and rot. masses 8=6087
 gravitation of 8=14975
 liquids, heat transfer in zero-gravity field 8=4562
 macroscopic, eqn. of motion rel. to general relativity 8=2938
 non-central mass within ellipsoid resonance oscills. 8=10522
 nonlinear system, critical resonance 8=14944
 relativity, special, with respect to inertial observer 8=2936
 sphere, boundary layer flow, numerical solution 8=7871
 sphere, parallel to plane wall, motion under influence of streaming flow 8=7866
 sphere, parallel to plane wall, motion through quiescent fluid 8=7865
 spin-rate sensor, two-mirror c.w. laser 8=6004
 stars, ang. momenta and braking systems, rel. to planetary systems formation 8=5853
 stars, exchange of stabilities, onset of convective Lagrangian displacements 8=5856
 transducer for rotational displacement using light sensitive resistors 8=6000
 He II flow transitions in 5 rotating annuli at 1.4°K 8=10812
 He II-I transition, higher than second order 8=10814

Rotation, molecular. See Molecules/rotation.

Rotatory power, dispersion. See Optical rotation.

Rubber

- chloroprene, optically obs. supermolecular structures, morphology 8=13112
 circular sheet, with hole and axially symmetric stretching, stress conc. 8=22263
 elastomer viscoelastic props. tensile test obs. 8=22400
 elastomers, stress/strain relations in multiaxial deformations 8=5010
 latex spheres in H₂O, coherent and incoherent light scatt. rel. to Mie theory 8=20104
 membrane, ht. of transport of inert gases 8=1487
 natural, n scatt. before and after reactor irradi., showing prod. of cross-bindings 8=16969
 polyurethane elastomer, triaxial fracture in tensile field 8=2075
 rubber + benzene mixtures, tracer diffusion 8=21641
 solution in amines, viscosity obs. 8=21625
 stark, partially melted, recryst. and melting 8=4771
 static and dynamic props. using a torsional pendulum, C black filled 8=8880
 transition temps. and composition, study by radio-thermoluminesc. 8=13077
 vulcanizates, diffusion of liqs. 8=1932

Rubidium

- atom, calc. of lifetime of first excited states from obs. of Hanle effect 8=7422
 atom, collisional depolarization of doublets 8=7471
 atoms, excitation by low energy electrons, absolute cross sections 8=12087
 atoms, 5²P_{3/2} state, level crossing expt. 8=1174
 atom, h.f.s. of 7²P_{1/2} state 8=7421
 atoms, optically pumped, collisions with Kr atoms, relax. correl. times 8=7472
 atoms, pseudopotentials 8=7409
 atom, reaction with Br₂ molec. beam, kinetics 8=1202
 atom, stark effect obs. 8=20966
 atomic beam, scatt. by benzene and cyclohexane beams, comp. 8=1205
 atomic beam, surface ionization on Pt and W 8=12110

Rubidium—contd

- collective motions of atoms in liq. state, compared with polycryst. solid 8=12796
 elastic moduli and pressure derivs. at absolute zero 8=17818
 electron-impact ionization, empirical calculations 8=12448
 ions, antishielding factors, by nucl. acoustic quadrupole reson. in RbI 8=9470
 liquid, density in range 50-800°C 8=12813
 liquid, elec. resistivity, appl. of structure factor and pseudo pot. relation 8=12920
 liquid, wavenumber-dependence of elastic moduli 8=1499
 melting, invariance of photocurrent and work function 8=13939
 nuclear spin relax. below 77°K 8=9463
 optical pumping magnetometer 8=19739
 vapour-deposited crystal growth rate 8=13140
 in Ar, solid, optical and X-band e.s.r. spectra 8=18558
 ions Rb⁺ on Hg electrode, partial charge transfer react. 8=18722
 in Rb methoxide-methanol ions coordination number and solvates comp. obs. 8=2497
 Rb^{85,87} g_L g_T optical pumping determ. 8=1173

Rubidium compounds

- F-band absorption, u. s. strain modulation 8=22232
 (Li, Rb)₂SO₄, differential thermal anal. 8=8270
 RbAg₄I₃, cryst. struct. rel. to ionic mobility 8=17379
 RbBr, alkali halides, F-band peak, Mollwo relation 8=17688
 RbCl, adiabatic elastic const. 300°-4.2°K, obs. 8=2058
 RbCl, alkali halides, F-band peak, Mollwo relation 8=17688
 RbCl, circular dichroism of K band 8=14256
 RbCl:CN, thermal props., rel. to rot. degrees of freedom of mols. 8=22120
 RbCl, F-band absorption, u. s. strain modulation 8=22232
 RbCl, Z₁ centre circular dichroism 8=22224
 Rb₂CO₃, i. r. cryst. spectra 8=18556
 RbCoF₃, spin-density oscillation in space at T > 96°K, by n.m.r. meas. 8=18472
 RbFeF₃, effective fields in Fe⁵⁷ Mössbauer spectra 8=1647
 RbFeF₃, magneto-optical properties 8=2450
 RbHCO₃, 2H₂O, i. r. cryst. spectra 8=18556
 RbHCO₃, RbDCCO₃, i. r. cryst. spectra 8=18556
 RbI, alkali halides, F-band peak, Mollwo relation 8=17688
 RbI, elastic constants temp. dependence 8=13591
 RbI, intrinsic photoconductivity 8=5401
 RbI, nucl. acoustic quadrupole reson., antishielding factors of Rb ions 8=9470
 RbI:TL, luminesc. and exciton formation 8=5131
 RbMnCl₃, prep. and crystallographic props. 8=13138
 β RbMnCl₃, 2H₂O, crystal structure 8=17411
 RbMnF₃, absorpt. spectrum 8=2449
 RbMnF₃, i. r. reflectance spectra rel. to lattice vibrations 8=2426
 RbMnF₃, near critical magnetic point, ultrasonic attenuation and velocity 8=17504
 RbMnF₃, spin waves, nuclear and electronic, simultaneous parallel pumping 8=14107
 Rb₂MnF₄, antiferromagnetic anisotropy 8=14070
 RbMnF₃, F¹⁹ nuclear acoustic resonance 8=22922
 Rb(Ni_{1-x}Co_x)F₃, new transparent ferrimagnet single crystal 8=14053
 RbNiF₃, ferrimagnetic, circular dichroism and rot. of plane of polarization of light 8=18557
 RbNiF₃, ferrimagnetic, magnetic exchange dichroism 8=14257
 RbNiF₃, magnon sidebands in optical spectrum 8=23010
 RbNiF₃, new transparent ferrimagnet single crystal 8=14053
 RbNiF₃ structure crystals, magnetic ordering 8=5482
 RbNO₃, molten, refr. index meas. by interferometry 8=4583

Ruby

- absorption linediths, R, R¹ and B, and phonon-induced relaxations 8=14194
 cathodoluminescence, efficiency 8=18586
 colour centres, luminescence meas. 8=1995
 destruction by powerful laser radiation, mechanism 8=22247
 dislocations observation by X-ray topography 8=13434
 electron spin echo behaviour 8=14091
 energy transfer from single Cr ions to closely coupled ion pairs 8=14302
 fluorescence pair lines temp. dependence 8=9597
 γ photoconductivity 8=18222
 growth by floating zone tech., with resistance heating 8=21939
 laser alignment method, rapid and accurate 8=19988
 laser, axial emission modes, self-locking 8=11087
 laser beam divergence testing 8=15478
 laser beam, nonlinear propag. in dielectrics 8=22931
 laser, change and stabilization of operating wavelength 8=19987
 lasers, continuous, power output and efficiency 8=437
 laser, damage on semiconductor surfaces 8=2028
 laser, effect of giant pulse irradi. 8=3327
 laser, effect of internal modes on operation 8=19986
 laser, giant pulse, inversion depend. freq. drifts 8=19984
 lasers, giant-pulse mode selection 8=15479
 laser interferometers for fluid mechanics 8=16618
 laser, with lens system, spectral characts. and radiation kinetics 8=19989
 laser light, plasma scattered, 12-channel Doppler-profile spectrophotometer 8=3357

- ruby**-contd
lasers, loss measurement, new method 8=11085
laser losses of resonant cavity, meas. by R_1, R_2 threshold comparison 8=11080
laser, Lummer-Gerke plate appl. 8=3328
laser, mode self-synchronization in broad spectrum giant pulse 8=11076
laser, non-Q-switched, picosecond substruct. of laser spikes 8=20002
laser oscillator output phase vars. obs. 8=19991
laser, output spectra rel. to mech. of linewidth determ. in YAl garnet:Nd laser 8=11111
laser, picosecond pulses, spontaneous appearance 8=439
laser, pulsed, calorimetric meas. of output energy 8=11084
laser, pulsed, pure transverse modes from special cavity 8=11086
laser, pump power and efficiency calc. 8=3331
laser, Q-switched, energy losses 8=6458
laser, Q-switched, feedback control, expt. and theory 8=11079
laser, Q-switched, formation time and resonator loss, exp. 8=434
laser, Q-switched, giant pulse generation by external signal 8=19983
laser, Q-switched, hologram resolution 8=20110
laser, Q-switched, time resolved beam structure 8=11082
laser, Q-switching using liq. Se mirror as a reflector 8=11078
laser, quenching of one pulsed laser osc. by another, rel. to coupled rate eqns. 8=11075
laser, rad. field structure rel. to optical inhomogeneities in substance 8=3330
laser radar transmitter, single-mode, characts. 8=11077
laser, radiation mixing with Nd 8=436
laser resonators, prism for state and plane of polarization preservation 8=438
laser, rod distortion compensation rel. to brightness gain and mode control 8=11081
laser, with non-resonant feedback due to scatt. 8=11003
laser, simultaneous pulsing 8=15477
laser, single longitudinal mode production 8=6459
laser, single-pulse single mode, with diffractive beam divergence 8=19985
laser, with tilted plates as discriminator, modes and generation kinetics 8=3332
laser, tunable, repetitively pulsed, with solid etalon mode control 8=19993
laser, WC with Czochralski material, diffraction-limited emission 8=11083
light breakdown induced by ruby laser beam mechanism 8=23043
linear Stark effect in U band 8=9501
luminescence spectrum, effect of elec. field 8=2475
maser, C-band, with quarter-wave coupled transmission cavities 8=392
maser, operating in 8 mm range 8=6411
maser, pumping by laser at 77°K 8=19920
maser, three-cavity, 21 cm. 8=19923
microwave resonance absorpt. spectra 8=14089
monocrystals, X-ray luminescence 8=14301
non-radiative relax. time between $^4T_{1,2}$ and 2E states 8=9503
optical phonon breakdown theory 8=22952
optically pumped, absorpt. and emission props., rel. to transitions 8=14196
pink, nonlinear absorption of coherent resonance radiation 8=18499
pulse laser, 50 Hz, emission 8=3326
spin lattice relax. times at He temp, Cr³⁺ conc. and temp. depend. 8=14092
spin-lattice relaxation time at room temp., determ. 8=5523
spin-lattice relax. time meas. 8=9416
Cr³⁺-doped, L-band maser appl. 8=15439
Cr³⁺ resonant two-level spin system, microwave second harmonic generation 8=22896
Po, At range-energy studies 8=13473
Russell-Saunders coupling. See Atoms; Spectra/atoms.
Ruthenium
low work function region in Cs and Cs-Ba vapours, rel. to pot. as collector in converters 8=15213
specific mag. susceptibility between 80° and 1850°K 8=5439
in Ag, liquid, diffusion 8=12836
Ru⁴⁺, substitution in spinel ferrites, wpin wave linewidth variations 8=5495
Ruthenium compounds
RuO₂, resistivity, temp. depend. 8=17939
RuS₂, cryst. struct. 8=8556
RuSe₂, decomp. press. and enthalpy of formation 8=12338
RuTe₂, cryst. struct. 8=8556
Rutile. See Titanium compounds.
- SC (sudden commencement).** See Magnetic storms.
S-matrix theory
See also Dispersion relations.
amplitude-density-functions method 8=12358
auto-interactions, invariance of standard 8=3432
bootstrap conditions, rôle of CDD zeros 8=15712
- S-matrix theory**-contd
causal, properties of cluster expansion 8=577
causality implying analyticity 8=20307
compositeness criteria of particles 8=6764
construction without accompanying pole in non-physical sheet 8=20309
Couture-Newton formalism, relativistic extension 8=15702
CTP invariance in theory of local observables 8=583
decay processes, soluble decay model 8=3413
dispersion relations, n-pole problems, N/D soln. 8=3552
eigenphases and crossing branch points, relation 8=11404
e.m. interactions involving photons, using dressed amplitudes 8=20343
elementary particle interactions 8=683
with extra Coulomb interact., analyticity for complex ang. momenta 8=15703
Feynman rules in statistical mechanics 8=120
 $\gamma + p \rightarrow \eta + p$ amplitude, unitarity and S-matrix analysis 8=3569
gravity, quantum theory, applic. 8=3451
high-isospin system, strong-coupling model 8=6762
interacting infinite fields, invalidity of assumptions 8=11271
Landau singularities, absence from the physical sheet 8=3549
on mass shell elements only, causality cond. 8=582
M-functions, reduced type defined 8=15625
M matrix transformation, 6 parameters, associated functions 8=6765
 πN scatt., generalized to include S-matrix effects, partial-wave analysis 8=20430
q. e. d., gauge dependence of propagators 8=20175
quantum electrodynamics, gauge problem 8=3446
quantum electrodynamics, third-order vertex part of single electron line 8=20385
scatt., high rank, transforming 8=6763
scatt. relativistic, applic. of coupled inhomogeneous Lorentz group 8=20289
scattering with energy losses, covariance matrix 8=20308
uniqueness, expt. tests 8=11405
unitarity and the relationship between spin and statistics 8=20163
unitarity cond. and non-compact symmetry groups 8=578
unitarity in covariant gauge quantum electrodynamics 8=3435
wave-packet formulation, semiclassical approx. time-depend. 8=20153
H²(He³, γ)Li⁶ reaction, 2-5, 5 MeV, analysis of excitation curve 8=20581
- SU₂ group theory.** See Elementary particles; Field theory, quantum/interactions, strong; Group theory.
Safety precautions. See Radiation protection.
Sakata model. See Elementary particles.
Samarium
Sm²⁺, fluoresc. in host lattices 8=14332
Sm¹⁵⁰ in ferromagnetic lattices, hyperfine magnetic field 8=2335
Sm²⁺, in CaSO₄ luminescence 8=23047
in ThO₂, spectrometric determ. 8=18787
in YVO₄, rel. to const. quantum yield 8=5670
Samarium compounds
SmCl₃·6H₂O single crystals, e. s. r. of Gd³⁺ 8=9427
Sm(NO₃)₃·6H₂O:Gd³⁺, e. s. r. 8=18435
Sm₂Y_{3-x}Fe₃O₁₂, magnetostriction anomalies, 4.2-100°K and ≤ 25 kOe 8=18364
Sampling. See Statistical analysis.
Sand
acoustical propagation parameters 8=22107
desert, "singing" phenomenon 8=23232
effect on elec. cond. of ferrites 8=13715
particle accelerator side shield 8=3490
with kaolinite, water saturated sediment, acoustic props. at 4-600 kHz, obs. 8=1857
- Satellites, artificial**
accelerations at high altitude rel. to air density 8=5832
Alouette I obs. of topside ionosphere 8=2652
Alouette 1, polar topside ionosphere, mean structure and storm-time change at sunspot min. 8=19021
Alouette II, outer radiation belt high-latitude boundary, local time asymmetries 8=18955
Alouette II topside-sounder data, m.f. conjugate echoes 8=18981
Alouette 2, Van Allen radiation changes rel. to polar substorms 8=18966
antenna resonance at proton gyrofrequency 8=6400
for astronomical seeing verification 8=14746
atmosphere, upper, density from orbital decay 8=5796
atmosphere, upper, density variations at 280 km from air drag 8=5797
ATS 1, local-time particle asymmetries, obs. 8=9916
auroral precipitation event, Injun 3 and simultaneous balloon obs. 8=6957
Beacon Explorer-C, ionospheric electron content irregularity, obs. 8=2668
bow shock compression, IMP 2 and OGO 1 simultaneous obs. 8=23329
Cosmos 49, analytical representation of mag. field according to obs. 8=19029

Satellites, artificial—contd

- Cosmos-49 mag. field obs. rel. to computed values 8=10030
 Doppler shift data accuracy rel. to ionospheric refraction 8=23371
 drag, obs. geomag. and upper atm. density var. 8=14695
 Early Bird, meas. of e content using Faraday effect 8=2662-3
 earth, near dynamical theory 8=10064
 earth's potential field meas. 8=9769
 in earth's field, stabilization with soft mag. alloys 8=5824
 eclipse times in circular and elliptic orbits 8=14712
 electrostatic probe, theory 8=2764
 for electron content in ionosphere over Texas 8=14663
 electron-emitting, in ionosphere, pot. build-up, theory 8=14710
 electrons trapped in low L shell, 1962-1965 obs. 8=2644
 Elektron 1 and 2, outer radiation belt electron energy spectra 8=18953
 Elektrons 1 and 3, signal obs., ionospheric deductions from 8=18971
 Elektron 2, mag. field obs. at 3-7R 8=19033
 e.m. wave propag., satellite-to-satellite 8=2716
 equatorial, synchronous, equilibrium position rel. to curve of earth's equator 8=2756
 equatorial, 24 hour orbit, resonance phenomena 8=19074
 Explorer 9 drag data rel. to geomagnetic activity 8=5816
 Explorer 12, magnetometer obs. of earth bow shock 8=2619
 Explorer 22, meas. of total e content 8=2658
 Explorer 35 obs. of lunar mag. field 8=10333
 geomagnetic tail, IMP 3 rel. to Lunik 10 obs. 8=23315
 geopotential, odd zonal harmonics from satellite orbits 8=5770
 gravitational perturbations, analytical expressions, automation of deduction 8=14718
 gravity gradient rod temp. distrib. 8=23461
 Hitch-hiker I, for study of energetic electrons in radiation belts 8=2651
 horizon data units, infrared, errors 8=2763
 IMP-2, magnetosphere and near space, meas. of magnet. field, results 8=2832
 IMP 2 plasmopause obs. 8=9917
 Injun 3 and Alouette 1, proton whistlers, dispersion characteristics 8=18958
 Injun 4, geomagnetically trapped α -particles 8=18961
 laboratory simulation of plasma expt. 8=2692
 with large-eccentricity orbits, estimates of lifetime and developments 8=14717
 Love's number determination for Earth 8=5768
 Luna 9 and Luna 10 obs., near Moon 8=5831
 Mariner 4 Doppler tracking data for Sun-Mars mass ratio 8=23671
 Mariner 4 interplanetary mag. field obs. 8=23685
 minimum distance from observer, timing digital device 8=19069
 NRL 1965-93A obs. of eclipse 8=19289
 OGO-A mag. field obs., 4 to 24.5 R_E 8=10024
 ORBIS, e.m. wave propag. expt. 8=2670
 orbital drag coeffs., rel. to atmos. density, computer estimation 8=2612
 orbital motion in earth's shadow 8=2761
 orbits analysis for upper atmos. rotational speed 8=18922
 orbits, cylindrical coordinate systems 8=2757
 orbit determination from Minitrack obs. 8=5833
 orbit determination, survey 8=5836
 orbits rel. to Earth's gravitational field 8=5767
 orbits rel. to gravitational field of Moon 8=5955
 orbit, oscillating transfer, of earth satellite 8=14715
 orbit perturbation by solar radiation pressure 8=23462
 orbit prediction 8=5835
 orbits perturbation by earth's gravit. field asymmetry 8=14716
 orbits, perturbations from spherical harmonics of gravitational potential 8=14719
 OSO-B2, airglow obs. 8=23332
 Pioneer 7 obs. of geomag. tail at 10³ earth radii 8=2748
 Proton 1 and 2, inner radiation belt proton component in Brazilian magnetic anomaly 8=18954
 'proton-2', investigation of nuclear component of primary cosmic rays 8=15893
 radiation belt, inner, electron flux and spectra obs. following Starfish test 8=9953
 resonance with longitude-dependent gravity 8=19073
 S-66, signals from above Haifa, Israel for ionospheric electron content 8=14669
 scintillation, seasonal var. 8=2673
 sea currents, jet streams and noctilucent clouds detect. by i.r. obs. 8=9855
 solar illum. period in circular and elliptic orbits 8=14713
 stream function reln. with vertical vel. rel. to inverse meteorology problems 8=10027
 synchronous, rel. to longitude dependence of geopotential 8=5769
 Syncom-3, meas. of ionospheric e-content 8=2661
 Telstar 1, stat. anal. and modeling of high-energy proton data 8=9955
 terrestrial radiation 7-26 μ , statistical characts. from Cosmos obs. 8=23283
 Tiros VII albedo obs. 8=23285

Satellites, artificial—contd

- Tiros VII, lower stratosphere circulation from temp. obs. 8=18858
 tracking by kinetheodolites 8=5828
 tracking methods, review 8=5834
 tracking by radar, Royal Radar Establishment, Malvern 8=5829
 tracking by radio, at Winkfield 8=5830
 tracking using Schmidt cameras 8=5827
 tracking by Smithsonian Astrophysical Observatory from I. G. Y. photographic stations 8=5826
 transmission fading, means of determining meas field height 8=9998
 and twilight layer noctilucent cloud detection 8=2626
 UK 3, solar cell system 8=19734
 upper atmosphere, deny, from drag meas. 8=14640
 in upper atmosphere, lifetime rel. to density vars., nomogram 8=14711
 upper atmosphere properties, determination 8=5795
 for upper atmosphere rotational speed obs. 8=14642
 Vela, SCNA obs., and X-ray flares 8=2653
 Vela, solar wind ion composition meas. 8=23715
 Vela 3 obs. of solar wind shock waves 8=23687
 visibility latitudes prediction 8=19068
 visual appearance and stellar magnitudes from UK 8=14714
 visual obs. in Finland, January to December 1966 8=5825
 O₂ in earth's atm. microwave spectrum obs. to obtain vertical sense 8=2762
 for O₃, atmospheric, estimation 8=2576
- Scalars.** See Circuits; Counting circuits.
- Scandium**
 band structure, density of states and Fermi surface by cellular method 8=8942
 magnetic susceptibility, anisotropy rel. to electron charge density 8=13965
 Sc III, Hartree-Fock multiplet strengths 8=4081
- Scandium compounds**
 ScF₃, gaseous, electronic states 8=7549
 ScF₃, high-temp. stability 8=7617
 ScF₃, high-temp. stability 8=7617
 Sc₂O₃ rel. to CuMn ferrites mag. props., obs. 8=18359
 Sc₂O₃:Er³⁺ absorption and emission spectra 8=14260
 ScS, gaseous, dissociation energies 8=7616
 ScTiBO₆ (B=Nb, Ta, Sb), crystal structure and fluorescence 8=4879
- Scattering**
 amplitude at high energy, lower bounds to absorptive part 8=11385
 amplitude rel. to new amplitude for charge-conjugating a lepton line 8=20176
 amplitudes in perturbation quantum theory 8=6605
 anisotropic, radiative heat transfer between parallel plates separated by nonisothermal medium 8=19625
 atoms, from continuous media 8=2017
 atom-molecule, quenching of glory undulations 8=7633
 Born approximation in theory, improvement 8=15611
 Brillouin, in damage to materials in lasers 8=403
 cross section, classical differential, calc. 8=6033
 current amplitudes single, non-Regge terms 8=3561
 diffuse edge potentials, Breit-Wigner formula deduced 8=3414
 elastic waves, freq. depend. of amplitudes 8=3027
 e.m. rel. to reconstruction of canonical field theories 8=11275
 Feynman amplitudes, majorization in high-energy limit 8=6754
 field, neutral, scalar, without pairing symmetry 8=20410
 gravitational radiation 8=2954
 gravitational rel. to reconstruction of canonical field theories 8=11275
 Haag-Ruelle asymptotic states, uniqueness 8=15623
 incoherent waves from point source in random medium 8=19366
 inverse, connection with complex ang. momenta 8=15610
 inverse scatt. problem at fixed energy, general method 8=567
 JWKB phase shifts, efficient computation 8=10514
 Laplace transforms, analytic continuation by asympt. series 8=2905
 light source, negative resonance absorpt. 8=11021
 low-energy by singular potentials 8=3415
 methane, rotating mol., curves rel. to interatomic distances 8=7572
 molecules, inelastic, semiclassical theory 8=12364
 multiple processes, singularities 8=10513
 one-dimensional, edge effects 8=6606
 phase shifts, use of upper bound eigenvalue technique of Sturm-Liouville equation 8=2882
 plane compressional step wave by circular obstacle in elastic medium, using Kirchhoff's integral eqn. 8=19523
 polychromatic, in 1-dimens. medium of atoms with 3 energy levels 8=16186
 pot., rel. to d binding energy 8=11641
 potential of wave packets rel. to a proper-time formulation of relativistic quantum mechanics 8=20136
 quartz, stimulated Raman from i.r.-active phonons 8=11112
 radiation, isotropic in finite homogeneous 2D atmosphere 8=2906
 resonance, one-pole approx. to S-matrix description 8=11404

Scattering—contd

- S-wave nonlocal potentials, soln. 8=15622
 scalar sound field, radiative transfer 8=137
 semiclassical approx. for elastic scatt. and eigenvalues 8=20151
 short waves in gas, eqns. 8=7911
 telluric currents, and signal extraction 8=14564
 time delay, application of quantal operator 8=11255
 time-dependent and invariant imbedding 8=2907
 variation procedure for multichannel processes 8=20150
 wave-packet formulation, semiclassical approx. time-depend. 8=20153
 weak, rel. to reconstruction of canonical field theories 8=11275

acoustic waves

- aperture in rigid screen, l.f. 8=10745
 cylinder, elastic 8=15069
 elastic tube, semi-infinite, in moving medium 8=3062
 first-order scattered fields, statistical model construction 8=3043-4
 flexural waves, by point obstacles system 8=3063
 hard surface of arbitrary shape, transient, retarded pot. technique 8=19568
 inhomogeneous medium, effect on scatt. by uneven surface 8=3065
 narrowband signal, by statistically rough surface, correlation 8=3064
 ocean bottom, review 8=2572
 from ocean bottom, time fluctuation characteristics calc. 8=23244
 by penetrable sphere with statistically irregular surface 8=3061
 plane monochromatic, by time varying sea surface 8=6167
 semiconductors, piezoelectric, stimulated Brillouin scattering. 8=17495
 simulation of audience using rows of spheres, experimental results 8=15068
 turbulent media, statistical properties, book 8=10735
 water waves, backscattering energy from, apparatus and method of analysis 8=6168

acoustic waves, ultrasonic

- butyl alcohol, stimulated and thermal Mandel'shtam Brillouin scattering 8=21665

electromagnetic waves

- from absorbing spheres, calc. of Mie cross-sections 8=6386
 antiferromagnetics, fluctuations and scatt., theory 8=5497
 area with Gaussian-distributed random irregularities 8=10956
 axially-symmetric E-wave in waveguide with impedance changing along length 8=19881
 backscattering from dielectric cylinders, geometrical optics method 8=19867
 backscatt. by prolate spheroid conductor 8=19876
 from body, homogeneous and finite conductivity, integral eqns. 8=15407
 by collinear plasma waves 8=7757
 Compton effect on neutral fermions 8=675
 computer soln. of 3-d. problems 8=19858
 cross polarized, from random surface 8=19857
 cross section determ. by Fabry-Perot resonator 8=19861
 curved irregular waveguide, near cut-off freq. 8=19878
 cylindrical passive oscillator 8=3179
 by cylinder, source directivity rel. to pattern 8=15405
 depolarization by compressed inert gas 8=6387
 dipole field, by two spheres 8=15404
 by dipole molecules, classical and quantum theory 8=7486
 from edges, finite, geometrical diff. theory, calc. 8=19859
 e-e. m. wave, non-relativistic quantum field theory 8=15409
 by electrons, classical theory, frequency mixing 8=15408
 by electrons, free, classical theory, frequency mixing 8=15408
 electrons, free, intensity dependent freq. shift 8=19866
 elementary particle behaviour 8=20279
 far field at low frequencies 8=19871
 by free electrons in stellar atmosphere 8=15028
 Fresnel region, errors in meas. of scatt. pattern 8=6390
 by hemisphere 8=3259
 h.f., multiple in random continuum 8=3260
 hollow conducting cylinders, re-radiation 8=19865
 impedance boundary, integral eqn. 8=19872
 infinite cylinder coated with a plasma sheath 8=6389
 infinite strip, absorbing, with arbitrary face impedances 8=6388
 insulators, lattice Raman scattering theory 8=2397
 inverse problem, plane waves by a sphere 8=19863
 ionosphere, "turbidity" and geophysical influences 8=2682
 irregular medium, probability distrib. of field 8=376
 lunar surface, depolarization of backscatter 8=19237
 lunar surface, inhomogeneous, intensity calc. of backscatter field 8=19238
 metal foil roughness rel. to scattered radiation at plasma frequency 8=8958
 molecular crystals, excitation spectrum and polarization theory 8=18480
 moving cylinder in free space 8=10957
 by moving electrons, quantum theory 8=6290

Scattering—contd

electromagnetic waves—contd

- from moving layer in transmission line 8=19869
 multi-element reflector, statistical matrix of scatt. 8=19432
 multiple, by two spheres, multipole expansion 8=19874
 near to far field, l.f. continuation 8=19870
 by perturbed surface formed by semiconducting bodies 8=22943
 plane, infinite perfectly conducting, from a half-loop 8=6391
 by plasma, generalized physical optics approximation 8=16534
 plasma spheres, inhomogeneous, collisionless approximation 8=4366
 plasma, warm, from immersed conducting cylinder 8=16529
 quartz, stimulated Raman, under optical pumping rel. to mode pulling theory 8=2453
 radar signals, backscattered, meas. 8=19864
 radiation from charge moving in magneto-active plasma with l.f. oscillations 8=21385
 resonance scatt. from absorbing spheres 8=511
 rough-surface, phase distrib. 8=19873
 Rytov solution, multiple-scattering interpretation 8=18884
 sea surface, rough, frequency shift 8=10955
 from sharp-edged smooth bodies, anal. 8=19868
 specular, geometrical diff. theory modification 8=19860
 spheres, propag. through an assembly, relations between diffusion multiple theories 8=22
 by spheres, two, using translational additional theorem 8=15406
 strip current approx. by Fresnel integrals 8=19862
 surface, rough and finitely conducting, comment and reply 8=15410-11
 turbulent media, statistical properties, book 8=10735
 water, γ -beam scatt., differential albedo obs. 8=16844
 wave depolarization by rough surface, appl. to earth and moon expt. 8=15412
 by waveguide bifurcation and aperture, ray-optical calc. 8=19882
 wire loop scatt. patterns 8=19895
 Al, γ -beam scatt., differential albedo obs. 8=16844
 CCl₄, 71°C, spectrum of scatt. microwave radiation 8=21686
 C₂ClF₅-He mixtures 8=7936
 Fe, γ -beam scatt., differential albedo obs. 8=16844
 Pb, γ -beam scatt., differential albedo obs. 8=16844

light

- See also Diffusion, light; Raman spectra.
 acacia catechuic acid, during neutralisation 8=8075
 ADP, noncollinear parametric scatt. 8=18489
 by aerosol particles, photon detection 8=21740
 by air, ellipticity of polarization, rel. to atmos. aerosol microstruct. 8=9877
 by atmospheric surface layer, polarization phase functions 8=9876
 atoms reson. fluoresc., forward-scatt. curves 8=20946
 atoms, reson. fluoresc. modulation coherency matrix calc. 8=20974
 benzene, induced Raman in parallel beam, intensity rel. to sample length 8=8076
 benzophenone, viscous liq., wing of Rayleigh line obs. 8=21671
 Bragg scatt. by u. s. waves, rel. to pulse compression 8=8617
 Brillouin, for crystals in hydrodynamic region 8=14177
 Brillouin, intracavity scatt. from CH₃OH solvent in passive Q-spoiling cells 8=16847
 Brillouin, laser obs. 8=6523
 Brillouin, spatial correlation of density functions 8=12875
 Brillouin, spectrum determination, systematic errors 8=16833
 bubbles, in bubble chamber 8=16835
 chemically reacting system 8=9681
 coherent, by spherical particles 8=11198
 coherent, expt. conditions for obs. in turbid media 8=11193
 collimated beams, applicability of Bugar law for fog and smoke 8=510
 collimated beams in turbid media, attenuation 8=11194
 collimated source in scattering medium, discrimination depth, obs. 8=3374
 by colloid solns., transient elec., rot. diffusion const. determ. 8=8073
 colloidal, for turbulence study 8=4440
 concentric spheres, efficiency factors 8=512
 diamond-like crystals, first-order Raman effect rel. to electrostriction and photoelasticity 8=9486
 dielectrics, mag. ordered, two-magnon Raman scattering 8=9487
 by Dirac particle 8=15713
 electrons, rel. to freq. shift meas., e trapping in laser beam 8=19821
 electrons, reflection of 1.6 keV e by laser pulses obs. 8=20378
 ethyl ether Brillouin, stimulated, quasi-steady-state 8=21687
 extinction coeff., collimated and diffuse fluxes, reln. between 8=3375
 fog scattered, comparison with laser 8=14615
 Fresnel region, errors in meas. of scatt. pattern 8=6390

Scattering—contd

light—contd

- gels, ionotropic, low-angle scatt. 8=16911
 glycerine, liquid, Brillouin 23-90°C, background due to relaxation 8=21689
 n-hexane Brillouin, stimulated, quasi-steady state 8=21687
 haze, small-grained, characteristics 8=18882
 holographic arrangement, for samples of scatt. wavefront 8=20115
 inelastic by liquid surface rel. to thermal excitation of capillary waves 8=16853
 interstellar matter, non-spherical particles 8=4296
 isobutyric acid-H₂O system near crit. mixing pt., correl. effect in conc. fluctuations 8=12882
 isotropic solids, and freq. shifting of light reflected from acoustic surface waves 8=9490
 Lambert, from cone and paraboloid of revolution, geometrical optics approx. 8=20103
 laser atmospheric backscatter, Raman component, obs. 8=23263
 laser beam in gas, speckle pattern from particles 8=3286
 laser beam from second sound, photostatistics 8=11192
 laser radiation, by atmosphere 8=18878
 latex spheres in H₂O of coherent and incoherent light rel. to Mie theory 8=20104
 liquid amplifier, stimulated Brillouin scatt., phonon lifetimes meas. 8=21666
 liquids, anisotropic, dipole moment effect 8=1555
 liquid, Brillouin, inelastic, from density fluctuations, and relaxation 8=16840
 liquids, Brillouin, laser stimulated, self-focusing 8=4585
 liquids, depolarized Rayleigh scattering anomaly under pulsed laser excitation 8=16841
 liquids, freq. broadening shifts 8=8083
 liquid, heterodyning as a means of meas. thermal diffusion coeff. 8=4553
 liquids, meas. for calc. of acoustic props. 8=8059
 liquids, multi-harmonic molec. scatt. 8=12872
 liquids, stimulated Rayleigh, Brillouin and Raman 8=12874
 in liquids, stimulated thermal Rayleigh scatt., theory 8=6561
 liquid surface, rel. to capillary waves on surface 8=16852
 liquids, viscoelastic obs. 8=16839
 macromolecules in soln., diffusion consts. 8=12381
 macromolecules, nongaussian 8=16386
 multiply forward-scattered, brightness 8=18885
 near phase transition points of second kind, theory 8=9489
 nematic crystal, rel. to orientation correlations 8=16795
 nitrobenzene, Brillouin with picosecond pulse 8=4580
 nitrobenzene-CCl₄ mixts. stimulated Rayleigh scatt., obs. 8=16843
 nitrobenzene, Rayleigh line wing, four photon interaction obs. 8=21667
 nonlinear medium, new kind involving photon decay 8=6560
 organic liquids, intensity in wing of Rayleigh line rel. to vibrating molecule model 8=16851
 organic liquids, stimulated scatt. in Rayleigh line wing, obs. 8=16842
 particle density distrib., from spectral and angular data 8=18881
 plasma density fluctuations induced by monochromatic pumping 8=12546
 polymer fibres, polarized light scatt. low angle, rel. to supermolec. order 8=18581
 polymer latexes, size distrib. determ. 8=16900
 polymer solutions, critical opalescence 8=21669
 polymer solns., dilute 8=8023
 polymers, polydispersity of spherulites effect on low-angle scatt. of polarized light 8=8358
 polystyrene soln., laser scatt. for verification of Brownian motion 8=1557
 progress in optics, book VI 8=15541
 PVC solns. 8=16850
 quartz, fused, stimulated Mandel'shtam-Brillouin, depend. on excitation intensity 8=5632
 quartz, stimulated Brillouin, rel. to hypersound generation 8=2451
 quartz, stimulated Brillouin scatt., depend. on temp. and photoelasticity 8=5634
 in quartz, stimulated Brillouin scatt. of ruby laser, optical heterodyne detection 8=14267
 quartz, stimulated Brillouin, temp. dependence 8=14265
 quartz, by u.s. surface waves 8=5636
 quasi-coherent studies, field sensitive spectrometer 8=11195
 quinoline-ethyl alcohol mixts. stimulated Rayleigh scatt., obs. 8=16843
 Raman, crystal lattice dynamics 8=14176
 Rayleigh in anisotropic medium, birefringence meas. 8=11197
 Rayleigh, in stellar atmospheres, rigorous calc. 8=5921
 Rayleigh line wing stimulated scattering, four-photon interaction obs. 8=21667
 Rayleigh-Wing of laser beams in liquids, theory 8=8092
 by relativistic (non-linear) oscillator 8=11199
 resonance scatt. from absorbing spheres 8=511
 resonant elastic response of matter to intense light pulse, transient effects, bibliography 8=19925
 salol, viscous liq., wing of Rayleigh line obs. 8=21671

Scattering—contd

light—contd

- scattering media, spectral line profiles near resonance 8=509
 seawater, Mueller phase matrix 8=18843
 from semi-infinite media, light impulse reflection 8=9878
 solutions, activity coeffs. calc. from Brillouin scatt. 8=4576
 spectra of thermal and molecular, stimulated 8=11196
 spectroscopy, principles and methods for scatt. media 8=11151
 by spherulites, ringed, patterns rel. to deform. 8=9491
 stimulated Brillouin scatt. with Stokes feedback, theory 8=11005
 stimulated thermal, rel. to Raman effects 8=15548
 surface thermal ripplon obs. 8=16838
 three-photon, by atomic fluids 8=4044
 three-photon, in isotropic medium, general theory 8=3373
 triacetin, viscous liq., wing of Rayleigh line obs. 8=21671
 by turbid medium with highly directive scatt., of narrow light beam 8=11161
 by turbulence, vel. field meas. from scatt. light spectrum fine struct. 8=12749
 Venus atm. rel. to CO₂ bands in intensities 8=14846
 wideband pulse compression via Brillouin scatt. in Bragg limit 8=10948
 Ar ion laser, resonance scatt. by Ar plasma 8=12513
 Au films, thickness and wavelength dependence between 2000-7000 Å 8=14199
 C particles, computation: results discussed 8=513
 CO₂, Brillouin scatt. in critical temp. region, obs. 8=16708
 CS₂, Brillouin, stimulated, quasi-steady state 8=21687
 CS₂, induced combination scatt. and self-focusing 8=4581
 CS₂, stimulated spectrum, amplification of ruby-laser radiation line R₂ 8=9520
 CaWO₄ laser crystals, possible loss contribution 8=19994
 D plasma e and ion temps., laser incoherent scatt. obs. 8=21354
 FeF₂, tetragonal antiferromagnet, magnon excitation, one- and two- 8=18546
 n-GaAs, Raman scatt. by mixed plasmon-phonon modes, polarization and intensity obs. 8=5599
 H, atomic, coherent elastic 8=7379
 H plasma e temp. and density, laser incoherent scatt. obs. 8=21354
 by H₂ resonance scatt. and level crossings 8=4064
 H₂SO₄ aerosols study 8=12951
 He atoms at resonance, aligned, depolarization 8=20982
 He liquid, by excess electrons 8=19687
 He, liquid, stimulated Brillouin scattering 8=19691
 He⁺ superfluid, scatt. of laser light 8=8078
 I₂-CCl₄ solns., stimulated thermal Rayleigh scatt. obs. 8=8068
 InAs, by plasmons and Landau levels of electron gas 8=22990
 KBr, second order Raman scattering in polarized light 8=14231
 MgF₂, Raman, selection rules 8=5621
 MgO crystals, Compton scatt. power 8=23012
 MnF₂, tetragonal antiferromagnet, magnon excitation, one- and two- 8=18546
 NH₄Cl, harmonic scatt. and critical pt. correl. 8=23007
 NH₄Cl near second-order phase transform., harmonic generation obs. 8=14245
 NH₄SCN polycrystals, diffuse, effect of anisotropy 8=23004
 O-xylol, Rayleigh line wing, four photon interaction obs. 8=21667
 Si crystals, Compton scatt. power 8=23012
 YAl garnet, laser crystals, possible loss contribution 8=19994
 Y(OH)₃ polycrystals, diffuse, effect of anisotropy 8=23004
 X-rays. See X-ray scattering.
- Scattering, particles**
 See also Collision processes; Field theory, quantum/interactions; Elementary particles; Nuclear forces; Nuclear reactions; Particle range; Particle tracks; S-matrix theory; and under individual particles, e.g. Alpha-rays.
 accelerator beam energy meas. on scatt. 8=6691
 amplitude analyticity for particles described by not strictly-local fields 8=20295
 amplitude calc. nonrelativistic, applic. of Schrödinger eqn., coupled energy extended into physical region 8=20285
 amplitude determ. from dispersion relations, of unknown parameters 8=20300
 amplitude determ. from nuclear photoproduction 8=11858
 amplitude, expansion in functions interpolating Legendre polynomials 8=685
 amplitude expansion using Lorentz group representation 8=15696
 amplitude multichannel, calc. with and without coupling effects 8=11401
 amplitudes, relativistic, and asymptotic theorems, integral representations 8=11398
 amplitudes, theory of analytical structure 8=19476
 ang. depend. at high energy of cross-section 8=20297
 ang. distrib. of particles, distortion by medium 8=11844
 antiparticles, high-energy relations for oscillating scatt. amplitudes 8=11400
 Bethe-Salpeter amplitudes, normalization methods 8=3540

Scattering, particles—contd

- Bethe-Salpeter amplitudes rel. to crossing symmetry 8=20282
- Bethe-Salpeter eqn., soln. below threshold, scatt. amplitude extended to physical region 8=20281
- in block of matter 8=3190
- bootstrap, crossing-symm. model of nearly degenerate vector meson octet 8=3565
- bootstrap and S-matrix perturbation theories 8=11367
- bootstrap calc. using Schrödinger eqn. 8=11559
- bound system, Schrödinger eigen-numbers 8=668
- branch-point contributions in complex momentum plane 8=20319
- branch-points, ang. momentum, sum rules and features 8=3541
- channels, low-lying, effect of hidden channels 8=15706
- Chew-Low eqns., deduction, and origin of cut-off function in static models 8=3537
- classical in a force field which is a random function of time 8=14940
- complex nuclei, inelastic, accompanied by excitation of collective states 8=11949
- composite system, nonrelativistic, high-energy collision 8=15012
- cosmic, on random mag. field 8=19086
- by Coulomb field, modified 8=674
- from Coulomb-like pots, generalized Lippman-Schwinger eqns. 8=680
- Coulomb-nuclear S-matrix, analyticity for complex ang. momenta 8=15703
- Coulomb phase shifts, algebraic calc. 8=20280
- Couture-Newton formalism, relativistic extension 8=15702
- diffraction model with surface absorption 8=11842
- diffraction theory of ion scatt. with mutual excitation 8=1102
- Dirac, high-energy, multiple scattering 8=679

- potential, non-relativistic, effect of CDD poles on long range pot. behaviour 8=6751
- quark model due to Schiff 8=6826
- quark model, elastic scatt. 8=725
- quasi-elastic, analog states excitation and spin-spin interaction in optical potential 8=15986
- radiation damage displacement cascade, rel. to law 8=22239
- Regge amplitudes cancelled by daughter trajectories, Toller poles from residue factorization 8=3555
- Regge analysis for spinless particle scatt., extended to lower energies 8=6771
- Regge analysis, finite energy sum rules 8=20296
- Regge analysis of non-forward $N\pi$ superconvergence relations 8=20455

Scattering, particles—contd

- Regge branch-point exchange effect 8=20319
 Regge cuts and absorptive corrections 8=20326
 Regge cuts in ang. mom. plane, photoprod. as test 8=20331
 Regge cuts with superconvergence relations 8=11417
 Regge cuts, rel. to vanishing total cross sections and constant diffraction peaks 8=15709
 Regge daughter trajectory for boson resonances 8=3557
 Regge "daughter" trajectories model depend. 8=11419
 Regge daughter trajectories, operator formalism 8=3563
 Regge-like poles in impact parameter plane 8=11416
 Regge model, multiple Pomeranchuk exchange, violation of unitarity 8=15707
 Regge pole hypothesis, multiple, Toller variables and group theory 8=6769
 Regge pole decomposition of Lorentz poles 8=15696
 Regge-pole model, ghost-eliminating 8=20332
 Regge pole and SU(3) theories, high-energy 8=15708
 Regge poles, classification necessarily Lie Algebra of Lorentz group SL(2, C) 8=20325
 Regge-poles, 0(3, 1) conspiracy, high energy, equal mass. 8=20322
 Regge poles, using generalized algebra of currents 8=3558
 Regge poles, Van Hove model generalized to study unequal mass daughter trajectories 8=20323
 Regge representations for amplitude rel. to pots. 8=11409
 Regge residue function, $\beta(s)$, decrease with $\alpha(s)$ as $s \rightarrow \infty$ 8=11420
 Regge theory of high-energy, with large momentum transfer 8=20329
 Regge trajectories and the Bethe-Salpeter eqn. 8=3559
 Regge trajectories, construction of Green's function 8=687
 Regge trajectories, infinitely rising, kinematic constraints 8=11422
 Regge trajectories, universality of slopes 8=3562
 Regge trajectory formulation of dynamics, with unitarity, and narrow-resonance approx. 8=20324
 Regge-trajectory slopes, props. without assuming 4-particle unitarity eqn. 8=20320
 Reggeization, general scheme and classification of Regge poles 8=20321
 Reggeization of helicity amplitudes 8=11414
 reggeon diagram tech. for branch point anal. in ang. momenta complex plane 8=3556
 relativistic S-matrix, use of complex inhomogeneous Lorentz group 8=20289
 relativistic of spin-zero particles 8=15609
 renormalized coupling consts., and inversion problem 8=6610
 renormalized meson theories, test of existence of stationary singularity 8=20168
 rot. state, 2^+ in doubly even nuclei, corrections to reorientation effect 8=15940
 Rutherford, excited level effect on cross-section 8=11841
 saturation a good approx. to sum rules? 8=3513
 scatt. amplitude, power behaviour and Cerulus-Martin lower bound 8=3544
 scattered particle beams intensity fluctuations and corrls. meas. 8=19776
 S-matrix, causality implying analyticity 8=20307
 S-matrix, construction without accompanying pole in non-physical sheet 8=20309
 S-matrix, reduced, definition of elements 8=6765
 S-wave, off Yukawa potential, expansion approach 8=672
 off-shell partial wave amplitudes, ang. momentum effect 8=3895
 soft particle production model, change invariance and group transformation props. 8=3534
 spin- $\frac{1}{2}$ -spin 0, Austern-Blair theory, cross-section and polarization derived 8=11840
 spinless, O(4) amplitudes of Freedman-Wang symm. props. for Sommerfeld-Watson transformation 8=6771
 spinless off arbitrary spin, relations among superconvergence conditions 8=6758
 spin-one, polarization effects 8=6752
 strong and weak interactions, present problems, conference Erice Italy (1966) 8=15695
 strongly interacting particles, amplitude at vanishing field coupling const. 8=3533
 storage rings, use for p-X scatt. 8=842
 SL(2C), unitary irreducible represent., decomposition, restricted to SU(1, 1) 8=6029
 SU(3), Weyl coefficients 8=2887
 sum rules with divergent integrals from general treatment of current algebra 8=3535
 superconvergence 8=11399
 superconvergence sum rules algebraic struct., rel. to mass formulae 8=656
 superconvergence sum rules and current algebra 8=3564
 superconvergent sum rules from generalization of chiral symm. 8=20310
 superconvergent sum rule, model for saturation using Regge pole theory 8=6756
 superconvergent sum rules, Regge pole contrib. 8=3553
 symm. breaking in vector meson-B scatt. lengths 8=6916
 symmetries of scatt. including mass-splitting 8=676
 systems involving low-dimensional representations of high-rank Lie groups, stability 8=6762

Scattering, particles—contd

- theory and propagation functions 8=6753
 3-body, Amado model, amplitude continued in complex ang. mom. 8=20306
 3-body, approx. from Lovelace-Faddeev eqns. 8=20305
 3-body DWBA, integral eqn. derived, modification 8=11838
 3-body, unitary modifications of impulse approx. 8=682
 3-body, Faddeev's theory, iteration method 8=3545
 3-particle model, Lovelace approx. 8=3546
 3-particle, spinless, Yukawa potential, amplitudes given by Fredholm series 8=3548
 3 point particles, max. number of binary collisions interacting through zero-range forces 8=20304
 time delay, definition, stationary approach 8=678
 time-dependent, theory for singular potentials 8=20303
 Toller poles as sum of constraints for Regge amplitude residue factorization 8=3555
 Toller's 2-body amplitude, covariant inclusion of spin 8=11402
 trajectories with energy losses in matter, covariance matrix 8=20308
 2 different fermions, polarization quantities and cross sections 8=20380
 2-particle amplitude, matrix element of Lorentz group, expansion 8=3542
 2-particle-to-2 particle, kinematics for Regge crossing 8=6760
 unitarity rel. to multiparticle prod. reactions 8=20275
 As⁷⁶, 36-38 MeV O¹⁶, multipolarities, spins and parities of levels 8=3816
 Au foil on C, of O¹⁶ 8=20839
 CDD pole rel. to π N scatt. 8=20453
 Co⁵⁹ of O¹⁶ ions, 36 MeV, spin and lifetimes of levels 8=3813
 H-He-H₂ systems, interaction potentials 8=12376
 In¹¹⁵ (O¹⁶, O¹⁶, γ), 35 MeV, deduced levels 8=3822
 O¹⁶, ¹⁷, ¹⁸- + C¹², elastic, ang. distrib. and radius parameter 8=3973
 Sc₂In phase, magnetization meas. and press. depend. of Curie point 8=17885
 Si and SiO₂ films, re-emission coeffs. in r.f. and d.c. sputtering 8=2032
 Sm¹⁵², 50 MeV O ion, Rutherford correction due to excited levels calc. 8=11841
 in W and Si crystals in 2-30 MeV rel. to channelling behaviour 8=11954

 photo, differential spectral sensitivity 8=2220
 Schottky photodiodes, carrier generation and spectral response, model 8=9264
 space-charge-limited, thermal noise 8=18132
 space-charge-limited, transit-time effects 8=18119
 space charge noise, suppression and amp. rel. to no. of traps 8=5380
 surface-barrier, on SiC, fabrication and properties 8=22625
 thin-film heterojunction, fabrication process, props. 8=13861
 Al-Al₂O₃-Al thin film, noise meas. 8=13851
 Au-CdS-In, elec. props. rel. to CdS electroluminesc. excit., obs. 8=9608
 Au-GaAs Schottky barriers, thermionic emission 8=13931
 Au/CdS/Te, d.c. and a.c. behaviour of CdS film 8=13852
 Fe(Li) γ -ray detectors 8=15630
 GaAs, Gunn, high-field dipole domains in, steady-state and transient charact. 8=18121
 GaAs, electroluminescent, fabrication 8=5323
 GaAs, electroluminescent, temp. depend. of recombination lifetimes 8=2222
 GaAs, electroluminesc., with thermoelec. cooling, efficiency 8=22684
 GaAs, Gunn type, ageing effects 8=22627
 GaAs injection devices (tunnel diodes, electroluminescent diodes, injection lasers), degradation 8=9140
 GaAs injection laser, lasing wavelength rel. to threshold current and impurities 8=15483
 GaAs injection lasers with compensated p-type region, elec. and optical props. 8=15482
 GaAs, laser, increased efficiency and output 8=428
 GaAs, reverse-biased, light emission position and waveform 8=9160
 GaAs, spherical recomb. diodes, shift luminesc. band and use in optical pumping 8=23074
 n-GaAs-Al Schottky barriers, photoelectric barrier energy dependence on electric field 8=13924
 n-GaAs-Au surface barrier diode application to photocapacitors 8=13925
 GaAs:Si Gunn diode, non-ohmic contact formation by liq. epitaxy 8=5321
 GaAs, X-band Gunn, epitaxial layer selection 8=5246
 GaP, green electroluminescence at room temp. 8=9161
 GaSb, laser diode, spectrum fine structure 8=444
 Ge, backward, curvature coefficient 8=5327
 Ge, double injection and high freq. noise, obs. 8=13854
 Ge, Frenkel effect 8=18129
 Ge, gamma detector, low noise preamplifier for 8=6780
 n-Ge, inverse current surface recombination velocity dependence 8=9162
 Ge, microwave-oscillator, admittance measurements 8=2223
 Ge, minority carrier lifetime, mag. field effect 8=13853
 Ge, neutron irradiated, L-shaped current characteristic 8=22630
 Ge n-i-p, as detector for γ -radiation from Bi²¹⁴ 8=11788
 Ge, negative differential resistance during injection of minority carriers 8=5325
 Ge photodiodes, shot-noise meas. at high freqs. 8=22706
 Ge, p-i-n and p-n-i-n, avalanche breakdown voltage evaluation 8=13855
 Ge, point contact, etch pits due to plastic deform. 8=5326
 Ge, reverse current and lifetime of minority carriers, anisotropic press. 8=9163
 Ge, reverse static characts. in pre-breakdown region, theory 8=18128
 Ge, thermal breakdown rel. to temp. dependence of forbidden zone width 8=18127
 Ge with deep levels, impedance and transient processes 8=5324
 Ge: Au double injection, N- and S-type negative resistances and relax. oscs. 8=22628
 Ge(Li) in multiple arrays for spectrometry 8=6656
 Mo-Si epitaxial Schottky, reverse characteristics 8=13857
 Ni and GaAs surface barrier, elec. props. 8=22629
 Si alloy, dynamic resistance and static capacitance 8=18131
 Si, avalanche breakdown 8=18123
 Si, avalanche, microwave 8=5329
 Si diodes, Au doped, for companders 8=9165
 Si, Frenkel effect 8=18129
 Si grown epitaxially on sapphire, charact. 8=18130
 Si, high conduction characteristics 8=2219
 Si, hyper-abrupt variable-capacitance 8=9156
 Si, minority carrier lifetime, mag. field effect 8=13853
 Si, neutron irradiated, L-shaped current characteristic 8=22630
 Si, p-i-n and p-n-i-n, avalanche breakdown voltage evaluation 8=13855
 Si p-i-n, Co-doped, current oscillation 8=2227
 Si p-i-n gold-doped, negative resist. region in characts. 8=9164
 Si, prod. by electron beam mask-forming 8=15279
 Si, variable capacitance, low-temp. epitaxial growth 8=13856
 Si, zener, breakdown, between avalanche and field emission 8=5328
 SiC, electroluminescent, props. 8=9627
 Si-SiO₂-Au, relaxation of conductance 8=9180

- CdTe, film, wedge-shaped, photo-voltages rel. to incident angle of illumination 8=5398
- n-CdTe, Gunn effect 8=5242
- CdTe, Gunn effect and impact ionization, influence of ionized impurity scatt. 8=22583
- CdTe, Gunn effect, rel. to current instabilities 8=5243
- n-CdTe:In, free carrier absorpt. 8=22967
- CdTe, metal vacancies formation energies rel. to Te-Te covalent bonding 8=17608
- p-CdTe, thermostimulated currents and trap levels 8=2260
- CdTe thin films, ion bombardment effect on resistance 8=5244
- $CdTiS_2$, electronic props. and crystal parameters 8=17354
- CoO, elec. meas. rel. to hopping model 8=18060
- CoO, i. r. absorpt., 0.5-700 μm , by small polarons 8=23008
- CoO-Li doped, elec. meas. rel. to hopping and narrow-band conduction 8=18059
- CoSi, scattering mechanism and band structure 8=2098
- Cs-GaAs interface, Schottky barrier height obs. 8=13797
- Cs_3Sb , time depend. of absorpt. and photoemission 8=13937
- Cu oxide, controlled resistors 8=18034
- Cu phthalocyanine films, thin, trap distrib. 8=22586
- CuBr, lattice potential, mean internal, using Thomas-Fermi-Dirac model 8=13833
- Cu_3P monocrystals, props. and prep. 8=21948
- p- Cu_2S , thermoelectric power, elec. cond. and Hall effect 8=22585
- CuX , (X=Cl, Br and I), band structures 8=2190
- Fe-Cu ferrites, mixed conduction mechanisms from resistivity and Seebeck meas. 8=18035
- $\alpha-Fe_2O_3$, elec. meas. rel. to hopping model 8=18060
- Ga(As, P), thermal expansion coeffs. from -62 to 200°C 8=1880
- Ga, r.f. size effect, temp. and freq. dependence 8=9099
- Ga_{1-x}In_x-As alloys, optical energy gap variation 8=18040
- GaP, electroluminescence and elec. props, effect of two zone melting prep. techniques 8=9611

Semiconducting materials—contd

- GaP epitaxial layers with high mobility 8=9101
 GaP, Hall coefficient and conductivity, 4.2-300°K 8=9100
 GaP, hot-electron-phonon interactions 8=5245
 GaP, thermal expansion coeffs. from -62 to 200°C 8=1880
 GaP, uniaxially stressed, optical transmission and absorpt. rel. to energy levels 8=18529
 GaP-GaAs, n-p heterojunctions, photo-effects 8=5311
 GaP: Ni, absorption spectrum 8=22983
 GaP:S, electrical properties 8=13805
 GaP:Zn, electrical properties 8=13806
 GaSb, diffusion and solubility of Li 8=13409
 n-GaSb, electron mobility carrier conc. dependence at 77°K 8=2195
 GaSb, Faraday rotation, spectral emittance and Hall effect 8=22587
 p-GaSb, Hall coeff. and conductivity, pressure dependence at diff. temps. 8=13804
 n-GaSb, Shubnikov-de Haas oscs., beating effects 8=9102
 GaSb, thermal expansion from 2-40°K 8=4937
 GaSb-InSb alloys, thermal and elec. props. at high temps. rel. to comp. 8=4944
 GaSe, band gap rel. to second optical harmonic generation 8=5600
 GaSe, charge carrier mobility from elec. resistivity and Hall constants 8=5247
 GeSe_{0.75}Te_{0.25}, prep. and props. 8=2197
 GeTe liquid, Hall effect meas. 8=16877
 n-HgSe, quantum oscs. of transport coeffs. 8=5261
 HgSe, oscillatory magnetoresistance, inversion asymmetry splitting 8=2100
 HgTe, Hall coeff. and magnetoresistance at 4.2 and 77°K rel. to carrier model 8=2200
 p-HgTe, i.r. reflection in region of plasma minimum 8=5262
 n-HgTe, magnetoplasma reflection at 296 and 85°K 8=13815
 HgTe, metal vacancies formation energies rel. to Te-Te covalent bonding 8=17608
 HgTe-ZnTe, Hall coefficient and conductivity at low temp. 8=13816
 HgTe-ZnTe system, electrical properties 8=5263
 InAs, avalanche breakdown theory 8=22599
 InAs diode laser, epitaxy prod., characts. 8=11106
 InAs, epitaxial, preparation and properties 8=1749
 InAs, infra-red Faraday effect 8=9539
 InAs, Knight shift calc. 8=18463
 InAs, light absorpt. by free carriers, 300°K and 80°K obs. 8=18536
 InAs, light scattering by plasmons and Landau levels of electron gas 8=22990
 InAs n-type, Faraday rotation, interband and free-carrier 8=9540
 InAs, photo-emission rel. to surface props. and interband transitions 8=5417
 InAs, surface inversion layer props. in elec. quantum limit 8=5231
 InAs, thermal expansion from 2-40°K 8=4937
 InAs thin films, obtained by discrete evaporation, structure 8=8324
 InAs thin films, optical props. 8=18535
 InBi, preparation and electrophysical properties 8=5268
 InOF, temp. independent conductor 8=8414
 n-InP, effect of As doping on electrical properties 8=9113
 n-InSb, polar, hot electron mobility 8=22430
 InSb, quantum efficiency and overlap integrals 8=5264
 n-InSe crystals, thermal and i.r. quenching of photo-conductivity 8=18233
 KCl:Ti, induced local 3p states on Cl⁻ ions nearest Ti⁺, calc. 8=8930
 LaCoO₃, p- and n-type, optical absorpt. by small polarons 8=2434
 LaCoO₃, conductivity rel. to optical props., small polaron theory 8=18505
 n-Mg₂Sn, piezoresistance at 80-300°K rel. to valence-band structure 8=2204
 α-MnS, conductivity rel. to optical reflectance and absorption props. 8=18057
 MnTe, p-type, antiferromag., optical meas. 80-375°K 8=5622
 MoS(Se)₂, charge carrier mobility from elec. resistivity and Hall constants 8=5247
 Nb stannide coils, Q-factors, in 20-35 MHz range 8=17982
 NiO, elec. meas. rel. to hopping model 8=18060
 NiO films prep. and thin-film triodes 8=22602
 NiO, Hall effect at high temp. 8=8977
 NiO, Hall mobility at 1007°K 8=13827
 NiO, i.r. absorpt., 0.5-700 μm, by small polarons 8=23008
 NiO, stoichiometry and elec. props. 8=13826
 NiO-Li doped, elec. meas. rel. to hopping and narrow-band conduction 8=18059
 PbS, mobility temp. dependence 8=18062
 PbSe, forbidden band width and temp. dependence 8=5272
 p-PbSe, hole mass and valence band, from free carrier Faraday rot. 8=2445
 Pb_{0.85}Sn_{0.15}Te, thermal and optical energy gaps 8=2446
 Pb_{0.95}Sn_{0.05}Te, thermal and optical energy gaps 8=2446
 p-PbTe, doped, interband interactions of light and heavy holes rel. to Lorenz number 8=9116

Semiconducting materials—contd

- PbTe films, elec. characts. and vacuum evaporation 8=8327
 PbTe films, thin, resistivity, Hall mobility and conductivity 8=22603
 p-PbTe heavily doped thermal conductivity betw. 80-400°K 8=8662
 PbTe liquid, Hall effect meas. 8=16877
 PbTe, p-type, Hall mobility and thermoelectric power rel. to Na doping 8=5274
 PbTe, helicon-phonon coupling at 4.2°K 8=18063
 PbTe, stimulated emission of phonons by electrons, obs. 8=9115
 PbTe:Na, acceptor centre model from Na:hole ratio determ. 8=2205
 PbTe-PbS solid solution, n-type, conductivity temp. and pressure dependence 8=18061
 S, orthorhombic, electron hopping transport and orbital overlap 8=18064
 Sb₂S₃, anomalies in temp. depends. of dielectric properties 8=9217
 Sb₂S₃ and SbSI, anomalous dispersion of permittivity and reson. absorpt. of microwaves 8=9218
 SbSeI, dielec. const. and elec. conductivity meas., -200 to +50°C 8=18193
 SbSI, ferroelectric, fund. absorpt. edge profile 8=9120
 SbSI, photo-induced microwave response obs. 8=5630
 SbSI, photosensitive phase transition 8=2159
 SbSI(Br), dielec. const. and elec. conductivity meas., -200 to +50°C 8=18193
 Se, amorphous, conductivity rel. to optical absorpt. props. 8=18066
 Se, effect of cooling to 100°K on elec. props. 8=1808
 Se films, vitreous, space-charge-limited currents and high elec. field effect 8=13828
 Se, hexagonal, photoconductance meas. during cooling from 300° to 4.2°K 8=18238
 Se, high-purity, hole conductivity rel. to Na and O₂ impurity admixture 8=5276
 Se, magnetoconductivity rel. to mobility mechanism 8=18065
 Se, vitreous, electron and hole drift mobilities, temp. depend. 8=13639
 n-SiC, α-phase, piezoresistance constants 8=18073
 SiC, hole mobility and interband transitions 8=9122
 SiC, p-type and n-type, field-effect mobilities 8=13835
 SiO₂-C structure, anomalous auto-electron emission 8=22712
 SiO₂, effect of dissolved O₂ on C-V characts. 8=5284
 SiO₂ films on Si, electron beam effects and etching rate 8=22609
 SiO₂ films on Si, pinhole locating by electrograph method 8=1698
 SiO₂ films, thermally grown, electronic conduction mechanism 8=18076
 SiO₂ layers, dielec. breakdown 8=18080
 SiO₂-openings, diffusion induced dislocations, arrangement, rel. to transistor simulation 8=8733
 SiO₂-Si system, interface states, influence of heat treatments on oxide charge 8=13834
 α-Sn, lattice potential, mean internal, using Thomas-Fermi-Dirac model 8=13833
 SnO₂, electron scattering polar optical modes 8=22611
 SnTe liquid, Hall effect meas. 8=16877
 SrTiO₃, conductivity rel. to optical props., small polaron theory 8=18505
 SrTiO₃, superconducting semiconductor films and whiskers, transition temps. 8=9056
 SrTiO₃, superconducting transition temp. 8=9055
 TCNQ-complexes, Overhauser effect 8=5549
 Te, amorphous, conductivity rel. to optical absorpt. props. 8=18066
 Te, interband hole transitions 8=9018
 Te-Ge eutectic alloys, Hall effect meas. 8=16877
 Te-Sb eutectic alloys, Hall effect meas. 8=16877
 Ti₂O₃, e.s.r. at 77°K rel. to semiconductor-metal transition 8=14125
 TiO₂ layers, electronic props. from optical meas. 8=23017
 TiSe, thermal conductivity 8=17547
 UO₂, conductivity, electrical 8=18089
 UO_{2-x} and U₃O_{8-x}, carrier mobility investigation 8=18090
 WS₂, single crystal, thermistor characts. 8=18092
 WSe₂, charge carrier mobility from elec. resistivity and Hall constants 8=5247
 Zn-CdS, graded band-gap, luminescent spectra, electric-field dependence 8=9134
 Zn,Cd_{1-x}Sb, thermoelec. conversion efficiency rel. to transport coeffs. 8=2254
 Zn₃In₂S₈, crystal structure 8=8567
 ZnO, acousto-electric oscillations, 1-5 GHz range 8=22613
 ZnO, cathodic reduction of aqueous Fe(CN)₆³⁻ 8=14423
 ZnO, polycryst. containing 3% Bi₂O₃, doped, semiconducting and semi-insulating props. 8=18205
 ZnO powder, cond. effect of O₂ adsorption 8=22612
 ZnO rel. to radicaloluminesc. excit., sorption-recomb. processes 8=9635
 ZnO:(Ni, Co) crystals, Hall effect and conductivity, liquid N₂ to room temp. 8=9132

Semiconducting materials—contd

β -ZnS film, activation energy of current carriers 8=17143
ZnS, hexagonal, elastic stiffness conductivity dependence, corrections 8=17838
ZnS phosphors, carrier redistrib. among traps under i.r. irradi., obs. 8=9135
ZnS phosphors, photoimpedance, a. c. field freq. and excitation intensity dependence 8=14335
ZnS photocond. and Hall effect rel. to recomb. mechanisms 8=9258
ZnS:Cu conductivity rel. to electrolumesc., obs. 8=9133
ZnSb and ZnSb-CdSb mixed crystals, doping experiments 8=13698
ZnSe, electron mobility rel. to prep. by direct fusion 8=2210
n-ZnSe, Gunn effect 8=9136
ZnSe, hexagonal crystals, luminesc. 8=9631
ZnSe interface with electrolyte, chem. and elec. props. 8=13837
ZnSe, lattice potential, mean internal, using Thomas-Fermi-Dirac model 8=13833
ZnTe films, electroabsorpt. rel. to determ. of reduced effective mass 8=18566
ZnTe, i.r. transmission and reflection spectra 8=2460
ZnTe, metal vacancies formation energies rel. to Te-Te covalent bonding 8=17608
ZnTe:Pb, photo-induced paramag. resonance at 77°K 8=9440
ZrO₂-CeO₂ mixtures, high-temp. cond. 8=22614

gallium arsenide

abrupt junctions, formed by solid-to-solid diffusion 8=18110
absorption edge, influence of magnetic field 8=9531
appl. to field-effect transistors 8=9167
band-edge emission, excitation intensity effect 8=14316
defect centres produced by Cu diffusion 8=1954
density-of-state effective mass 8=5256
diodes, electroluminescent, temp. depend. of recombination lifetimes 8=2222
diode, i. r.-sensitive, made by Cr diffusion 8=18126
dislocation free, laser diode showing homogeneous near-field pattern 8=11097
electric field at 80°K using Pockels electro-optic effect 8=2193
electroluminescent diodes, fabrication 8=5323
energy band pinch effect 8=13662
epitaxially grown from Ga soln., elec. props. 8=4829
Fermi level, influence of volume dope 8=8934
field effect at low temperatures 8=13798
film, wedge-shaped, photo-voltages rel. to incident angle of illumination 8=5398
Gunn devices, design for c. w. operation, rel. to temp. 8=5297
Gunn diodes, layer selection for X-band 8=5246
Gunn effect, electron-transfer mechanism, domain propagation 8=9077
Gunn-effect, long samples 8=5252
Gunn effect, negative mobility model for oscillator analysis 8=9098
Gunn-effect oscillations in biconical cavity 8=5300
Gunn effect oscillator, negative resistance type, analysis 8=13845
Gunn oscillators, epitaxial, high peak power 8=5298
Gunn oscillations in epitaxial layers, u. h. f. 8=18036
Gunn oscillators, electrical performance 8=5299
Gunn oscillators, microwave amplification 8=5302
Hall effect at high electric field 8=22417
high electric field domain behaviour 8=9103
high-field dipole domains in, steady-state and transient charact. 8=18121
high-mobility, grown by liquid-phase epitaxy 8=22589
injection laser, output spikes 8=11096
impurity photoionization, quantum defect study 8=2207
laser diode, freq. modulation by u. s. waves 9=11093
laser diode operating at room temp. 8=441
laser, dual type, quenching response 8=443
laser, injection, compensated p region, elec. and optical props. 8=15482
laser, injection, emission modulation and synchronization 8=15481
laser, injection, lasing wavelength rel. to threshold current density and impurity conc. 8=15483
laser, light pulse synchronization 8=15480
laser for optical ranging system 8=14918
laser, optically pumped, av. power output 8=11102
laser radiation pulsations, investigation 8=11098
laser, time characts. 8=11099
lasers 8=11095
lasers, continuous operation in liquid He 8=11101
lasers, cw, linewidths meas. at 77°K 8=11094
lattice potential, mean internal, using Thomas-Fermi-Dirac model 8=13833
lattice Raman scattering theory 8=2397
luminescence spectra at 77°K rel. to doping with Te, S, Se, Sn 8=18605
microhardness and dislocation structure temp. dependence, rel. to doping effects 8=17809
microwave amplification 8=5251
microwave dielec. const., resonance behaviour 8=13799-802
negative conductance in zero ion density limit 8=5250

Semiconducting materials—contd

gallium arsenide—contd

negative magnetoresistance, causes from published dates 8=5258
n-type crack formation at high pressures 8=22369
n-type, current-field strength characts., microwave technique 8=5249
n-type, in mag. field, circularly polarized waves, doping rel. to optical absorpt. 8=22981
n-type, negative differential conductivity when electrons are heated by strong microwave pulses 8=5253
n-type, obs. of multiple high-field domains with point-contact probe 8=22588
n-type radiative recombination 8=9612
n-type, S, Se, Te-doped, i. r. absorpt. spectra 8=18528
ohmic contacts, simple technique 8=13846
optical properties and carriers density, laser induced changes 8=5633
oscillators, microwave circuit characteristics 8=5301
paramagnetic resonance of shallow Cd acceptors, at 77°K 8=18421
piezoelectric, ultrasound generation under Gunn effect 8=22100
p-type, effect of γ -radiation on elect. props. 8=18039
p-type, photoluminescence, effect of heat treatment
p-type, valence band studies by magnetoresistance and Hall effect meas. at 4.2°K 8=13803
p-type, Zn-doped, compensated, photoluminescence at 77, 194, 300°K 8=5662
p-n junction characteristics, effect of hydrostatic pressure 8=5304
p-n junctions, epitaxial, spontaneous and coherent light emission 8=6466
recombination of current carriers 8=2194
recombination processes following impact ionization by high field domains 8=2192
reflectivity, i. r. spectral, rel. to free carriers 8=2418
second order optical susceptibility calc. 8=18496
surface prep. for epitaxial deposition 8=9104
thermal expansion coeffs. from -62 to 200°C 8=1880
thermal expansion from 2-40°K 8=4937
thin multilayer GaAs-metal ohmic contact 8=9145
traveling domains, electric field profile 8=5254
tunnel-diode p-n junctions, alloying temp. rel. to characts. 8=22631
two-photon absorption obs. 8=18516
ultrasonic absorpt., infrared radiation effect 8=13352
AlAs-GaAs alloyed heterojunctions, preparation and electrical properties 8=5308
Cs-GaAs interface, Schottky barrier height obs. 8=13797
GaAs:Cr, photoconductivity 8=2263
GaAs:Cr, semi-insulating, photoconductivity and i. r. quenching 8=18232
GaAs-GaP alloys, electronic mobility comp. dependence 8=18037
GaAs-GaP 50% alloy, impact ionization and charge transport 8=18038
GaAs:Ge, acceptor behaviour 8=13807
GaAs:Sn laser, electron-beam pumped, quantum efficiency 8=11100
Ga_{1-x}In_xAs alloys, electroluminescence rel. to band structure 8=2419
with Li complexes, local mode spectra 8=22982
LSA operation, bulk samples 8=5248
and Ni surface barrier diodes, elec. props. 8=22629
Sn doped, resistivity and Hall effect meas. 8=2191
Zn doped, Zn diffusion coeff. Fermi level dependence 8=1918
Zn polycrystalline films, electrical resistance and Hall effect obs. 8=5255
Zn-doped, photoluminescence, heat treatment effects 8=2481

germanium

acceptor impurities, magneto-oscillatory excitation 8=22991
amorphous, conductivity rel. to optical absorpt. props. 8=18066
amorphous, electronic struct. and i. r. absorpt. bands 8=22987
Auger recombination, indirect band-to-band 8=14221
amorphous, short-range order, rectification, cond., Hall effect etc. 8=22597
bolometer using Hall effect 8=6205
carrier lifetime determ. through self-associated cyclotron resonance 8=13831
complex band structure and real energy-lines 8=9125
compressive uniaxial stress, effect on high field domains 8=18051
conduction electron g-tensor from k-p theory 8=9110
conductivity, electrical, microwave freqs., rel. to impurity deformed, cyclotron resonance due to edge-type dislocations 8=9106
diodes, minority carrier lifetime, mag. field effect 8=13853
diodes, neutron irradiated, L-shaped current characteristic 8=22630
dislocations, optical effects, Hall effect 8=1979
dislocations, overlap phenomena of space-change cylinders 8=17656
dust electrification, effect of crushing period 8=13813

Semiconducting materials—contd**germanium—contd**

- dust electrification effect of crystal lattice defects 8=13812
- γ -ray coaxial detector current pulse generation 8=11430
- electrolyte electroreflectance technique, line shape of spectra 8=2199
- electron-irradiated, annealing of Hall mobility changes 8=2196
- electroreflectance spectra and band structure, at int. pts. in interband transitions 8=13663
- exciton lines, obs. with optical wavelength wobbles 8=5573
- Fano factor, 77°K 8=2198
- field emitters, Fowler-Nordheim plots 8=5412
- films on Al_2O_3 by vacuum deposition, elec. props. 8=4749
- films, charge-carrier mobility 8=9107
- film crystallization by zone melting 8=8320
- films, degenerate epitaxial, production by iodide method, rel. to tunnel diodes 8=8321
- films, polycrystalline, acceptor and scattering centre natures 8=18046
- films, produced by vacuum deposition 8=8309
- films, transition to metallic conduction at high exciton concs. 8=18048
- Hall mobilities of holes at 9.6 GHz between room and liquid He temp. 8=13836
- impurity photoionization, quantum defect study 8=2207
- interband electro-optical props., electroabsorption 8=22595
- interband electro-optical props., electro-reflectance 8=22596
- interstitial Cu impurity, irradiated, obs. 8=2027
- k.p. expansions, approx. symmetry relations 8=22461
- lattice dislocations rel. to structure of kinks and steps 8=8727
- lattice potential, mean internal, using Thomas-Fermi-Dirac model 8=13833
- luminescence emitted by hot carriers 8=5664
- luminescence under pinch conditions 8=18603
- magneto-photocond., 300°-200°K, fields up to 22.3 kG 8=9109
- metallic etching rel. to facet forming planes 8=1728
- microwave-oscillator diodes, admittance meas. 8=2223
- motion of molten metal drops on surfaces under action of electric current 8=5259
- near-intrinsic, avalanche breakdown effects 8=9127
- negative magnetoresistance, causes from published dates 8=5258
- n-type, with adsorbed gas, conductivity hydrostatic pressure dependence 8=18045
- n-type, breakdown on photoinjection of carriers rel. to impact ionization of excitons 8=18050
- n-type, bulk neg. differential cond. and travelling domains 8=13810
- n-type dislocations effects on electrical properties 8=18053
- n-type, electron hole plasma, helical density waves and oscillator effect, theory 8=17903
- n-type, galvanomagnetic props., effect of dislocations 8=22592
- n-type, Hall meas. during n-irradiation over 78-330°K 8=18042
- n-type, hot electron Hall mobility and magnetoresist. for elec. field along <100> direction 8=18052
- n-type, i.r. spectral reflectivity rel. to free carriers 8=2418
- n-type lattice mobility at low temps. 8=8902
- n-type, low-temp. transport processes 8=18043
- n-type, mag. field effects on I-V charact. 8=13808
- n-type, oscillatory phenomena at 77°K 8=9108
- n-type, piezomagnetoresistance for mixed scattering mechanism 8=18047
- n-type, quenching rel. to form of vacancies 8=4962
- n-type refractive index anisotropy in elec. field 8=9533
- n-type, Shubnikov-de Haas oscillations, 20-80°K 8=18044
- n-type, subthreshold electron damage 8=22252
- n-type, surface recombination changes due to edge dislocations 8=22591
- n-type, small field d.c. conduction in presence of large microwave field 8=13811
- optical absorption edge, electron irradi. 8=9534
- optical energy gap, pressure coeff. meas. 8=14220
- oxygen conc., activation meas. by He^3 bombard. 8=18083
- p-type, bombardment-produced defects at low temps. 8=22170
- p-type, e-irradiated, angular dependence of radiation-induced conductivity 8=18041
- p-type, microhardness on e-irradiation and γ -ray irradiation 8=17810
- p-type, Ga doped and As compensated, interimpurity radiative recomb. 8=9613
- p-n-p transistors, structure study, hole injection 8=5339
- photodiodes, shot-noise meas. at high freqs. 8=22706
- photoexcited carriers, observed trapping parameters, rel. to Hall number anomalies 8=13637
- photomagnetic susceptibility, pulse method of meas. 8=9282
- photon-assisted magnetotunnelling in parallel and crossed elec. and mag. fields 8=5260
- photothermal effect, experimental study 8=8650

Semiconducting materials—contd**germanium—contd**

- photovoltages, Dember and lifetime-gradient, in n- and p-type 8=9253
 - piezothermal e.m.f., anisotropy 8=5390
 - pinch effect and breakdown in pure material 8=8956
 - protons, 0.8 to 2.0 MeV, range-energy determ. 8=13468
 - pure, field effect kinetics on surface 8=22598
 - recombination process in space-charge region 8=18049
 - reflection coeff. of I vapour from surface, etching vel. 8=8382
 - resistance meas. under shock-wave loading 8=17719
 - resistance, negative differential, during injection of minority carriers 8=5325
 - resistance thermometer, thermal time consts. at liq. He temp. 8=15119
 - surface recombination, generation process 8=22610
 - surface states on clean surfaces, study of origin 8=13814
 - thermal conductivity, lattice component, effect of impurities 8=1888
 - thermal expansion from 2-40°K 8=4937
 - thin films, Seebeck coefficient, Hall mobility 8=2255
 - tubes, preparation by pulling from melt 8=9111
 - tunnel and backward diodes, curvature coefficient 8=5327
 - ultrasonic attenuation, low temp. 8=8629
 - velocity field charact. of electrons 8=22590
 - with warped energy surfaces, low field transport props., theory 8=18055
 - X-ray stress topography, rel. to film-crystal interface stresses 8=22371
 - X-ray total reflection of films 8=5604
 - Al diffusion 8=13406
 - As doped, electrical breakdown at 4.2°K 8=13809
 - B diffusion 8=13406
 - As doped-resistor, as resistance thermometers for range 2.1 to 5.0°K 8=247
 - Ga-doped p-type, impurity photoconductivity spectra, nature of oscs. 8=13912
 - Ge-electrolyte interfaces, surface recombination obs. 8=18054
 - Ge(Li) detector for γ -spectrometer with cooled pre-amplifier 8=698
 - Hg-doped, dielectric relax. phenomena 8=2230
 - Li doped, coaxial radiation detectors, electron-hole collection time 8=20391
 - Li drift rate determ. 8=22594
 - Zn-doped, Sb-compensated, luminescence rel. to Zn impurity conc. 8=18604
- indium antimonide**
- absorption of charge carriers and Beers law 8=5102
 - acceptor impurities, magneto-oscillatory excitation 8=22991
 - acoustoelectric domains form. and amplifiers d.c. loss, mag. fields effects 8=13355
 - acoustoelectric oscillations in presence of magnetic field, field-dependent period 8=4923
 - alloy films, electrical resistivity 8=9008
 - avalanche breakdown theory 8=22599
 - bolometer using Hall effect 8=6205
 - Corbino magnetoresistivity, admixture and layer distrib. effects 8=5266
 - crystal, selective etching in HCl solns. of FeCl_3 8=8383
 - donor levels, shallow, in mag. field 8=22462
 - electron-TO- and electron-LO-phonon interactions from donor spectrum in magnetic field 8=13817
 - films, slow photoconduction 8=9254
 - free carrier rotation for 10.6μ circulation 8=9538
 - Hall coeff. and conductivity, high pressure dependence 8=13819
 - heat treatment effect rel. to disloc. density 8=1919
 - helicon wave propag. 8=5141
 - holes, effective mass by i.r. reflection states 8=5269
 - hot electron polar scattering 8=13638
 - impact ionization using a fast high current pulse generator 8=6249
 - interband magnetoabsorption polaron induced anomalies, Coulomb effect 8=22818
 - ionization waves in plasma, predictions of theory 8=18056
 - Knight shift calc. 8=18463
 - Landau levels, electron-hole pair effects 8=5113
 - lasers, mag. field depend. of mode spacing and total no. of modes 8=11105
 - laser, Raman tunable type, pumped with CO_2 laser 8=11104
 - lattice potential, mean internal, using Thomas-Fermi-Dirac model 8=13833
 - m.o.s. infrared image detect. and storage 8=13863
 - metallic etching rel. to facet forming planes 8=1728
 - microwave emission, Hall effect 8=5267
 - microwave power coupling to helicon mode 8=13825
 - n-type, absorpt. in 0.2-4 mm. range at 4.2°K 8=18537
 - n-type, acoustoelectrically oscillating, microwave emission at 77°K 8=13823
 - n type at 77°K, acoustoelectric effect in crossed electric and magnetic fields 8=13356
 - n-type, electrical cond. and magnetoresist. below 1°K 8=13820
 - n-type, electron mobility at intermediate and high fields 8=18005

Semiconducting materials—contd**indium antimonide—contd**

- n-type, electron shielding rel. to impurities 8=2202
- n-type, Hall coefficient, Corbino conductivity 8=9114
- n-type, hot carrier double injection process 8=2203
- n-type, influence of impurities on microwave detection props. 8=2224
- n-type, magnetic-field-free electron-hole, and gigahertz radiation 8=8969
- n-type, microwave emission during plasma formation 8=22600
- n, relaxation oscillations and responsivity obs. in far i.r. 8=13824
- n-type, resistance anomaly at very low temps. 8=5265
- n- and p-type, current instability under crossed electric and magnetic fields 8=2201
- p'-n junction in forward bias, charact. 8=18113
- p-type, lifetime of nonequilibrium carriers, influence of illumination on 8=5271
- p-type, Li-saturated, annealing effects on Hall coeff. and resistivity 8=5270
- p-type, 90% compensated, Hall const., cond. coeff. and energy levels, 4.2-300°K 8=13822
- plasma waves, x-ray scattering 8=5148
- quantum oscs. in Hall effect and magnetoresistance 8=13818
- quantum oscillations in photoelec. coeffs. in n-type 8=13913
- recombination through centres, effect of high mag. field 8=22223
- second order optical susceptibility calc. 8=18496
- thermal expansion from 2-40°K 8=4937
- θ pinch effect in e-hole plasma, 250°K 8=13821
- thin films by electron beam re-crystallization, electrical props. 8=8323
- transport phenomena and microwave generation 8=9112
- two-photon absorption obs. 8=18516
- X-ray scattering by transverse polarized phonons 8=8613

silicon

- absorption rel. to bound excitons 8=5132
- acceptor states from Group III impurities (B, Al, Ga and In), spectra 8=5285
- amorphous, conductivity rel. to optical absorpt. props. 8=18066
- amorphous, electronic struct. and i.r. absorpt. bands 8=22987
- amorphous, short-range order, rectification, and cond., Hall effect etc. 8=22597
- avalanche diodes, microwave 8=5329
- avalanche oscillators, uniaxial stress effects 8=5303
- carrier lifetime determ. through self-associated cyclotron resonance 8=13831
- carrier recombination, non-equilib., at high photo-excitation levels 8=18616
- channeling-effect in α -particle detection 8=3467
- complex band structure and real energy-lines 8=9125
- conductivity, electrical, microwave freqs., rel. to impurity conc. and temp. 8=13829
- deep-level impurities, rel. to i.r. absorpt., impurity interacts, and interact. with lattice defects 8=22607
- diffused diodes in Si grown epitaxially on sapphire, charact. 8=18130
- diffusion of Li, Na and K experimental results cf. Weiser theory 8=8683
- diodes, minority carrier lifetime, mag. field effect 8=13853
- diodes, neutron irradiated, L-shaped current characteristic 8=22630
- dislocations, optical effects, Hall effect 8=1979
- electron-beam heated, stress investigation, triangular macrodefect, X-ray and i.r. studies 8=1862
- electron Hall effect 8=9124
- electron-phonon interaction in ionized impurity-pairs 8=9128
- epitaxial wafer, slip and bowing control by etching technique 8=8385
- evaluation by frozen drop method 8=14509
- exciton lines, obs. with optical wavelength wobbles 8=5573
- extrinsic, doped with Group III and V elements, carrier thermalization 8=18010
- films, epitaxial on α -alumina, carrier conc. and mobility 8=9121
- films, heteroepitaxial on sapphire, space-charge limited currents 8=2213
- films on insulators, epitaxial growth 8=8328
- hole-optical-phonon interaction, degenerate p-type, in tunneling obs. 8=18088
- hot carrier drift velocity theory 8=9130
- impact ionization, transition probability 8=13665
- impurity compensation degree, determ. 8=18085
- impurity photoionization, quantum defect study 8=2207
- impurity redistrib. during thermal oxidation 8=18015
- impurities testing by non destructive neutron activation method 8=18086
- infra-red Faraday effect 8=9539
- internal friction and elec. resist. on repeated alternating bending 8=17828
- ion-bombarded, surface structure, temp. dependence 8=5278
- isolation diffusion of P, integrated circuits 8=1929
- lattice potential, mean internal, using Thomas-Fermi-Dirac model 8=13833

Semiconducting materials—contd**silicon—contd**

- localized state energies rel. to neutral divacancy 8=9123
- metal-anodic oxide-Si structures, frequency response 8=18143
- metal impurities determ. by spectrochemical analysis 8=18081
- m.o.s. capacitor, minority carrier lifetime 8=9179
- microhardness and dislocation structure temp. dependence, rel. to doping effects 8=17809
- motion of molten metal drops on surfaces under action of electric current 8=5259
- near-intrinsic, avalanche breakdown effects 8=9127
- n-irradiated, effect of O₂ concentration 8=5279
- n-metal, Schottky barriers rel. to mode of preparation 8=18116
- n-type, Hall meas. during n-irradiation over 78-330°K 8=18042
- n-type, e-irradiated, elec. props. rel. to impurity and irradiation-temp. dependence 8=5282
- n-type, n-irradiated, elec. props. rel. to defect structure and annealing 8=5283
- n-type, Nernst-Ettingshausen effects, longit. and transverse 100-400°K 8=18075
- n-type permittivity and conductivity of microwave freq. 8=5277
- n-type, uniform-field hot-electron effect theory 8=9129
- n-type, warm electron coefficient, meas. with microwave cavity TM₀₂₀ 8=18087
- optical properties and carriers density, laser induced changes 8=5633
- oxidized surface, MOS avalanche and tunnelling effects 8=2206
- oxygen conc., activation meas. by He³ bombard. 8=18083
- paramagnetic centres 8=22762
- pellet bonding, for large pellets, using vibration 8=22608
- photocells, rectifying props., effect of accelerated electron irradiation 8=22699
- photo excited carriers, observed trapping parameters, rel. to Hall number anomalies 8=13637
- photovoltages, Dember and lifetime-gradient, in n- and p-type 8=9253
- piezothermal e.m.f., anisotropy 8=5390
- p-n junctions, anisotropic stress effects 8=13847
- p-n junction characteristics, effect of hydrostatic pressure 8=5304
- p-n junctions, diffused, breakdown voltage 8=5317
- p-n junctions, diffused, reactive properties in region of high injection levels 8=13848
- p, thermally quenched, effect on electrical properties 8=18084
- p-type, B-doped, impurity conduction, effect of uniaxial compression 8=9131
- p-type, hole velocity depend. on elec. field and hole density 8=13832
- p-type, space-charge-limited, transient behaviour 8=5280
- p-type, thermal neutron irradiation effects 8=18068
- proton irradi. damage isothermal annealing, 22-158 MeV, 100-300°C 8=22605
- protons, 0.8 to 2.0 MeV, range-energy determ. 8=13468
- polishing of, methods 8=10452
- rectifier, for generation of rectangular current pulses 8=15178
- radiation detectors, theory and simple laboratory applications 8=11311
- in resistance thermometers, possible use at liq. He temp. 8=248
- on sapphire, chemical-vapour deposition, electron microscopy obs. 8=4826
- s.c.r. circuit for prod. pulsed mag. fields 8=3164
- single crystals growth on cleaved planes, faults investigation 8=17244
- solid state microwave spectrometer, Stark modulated 8=3275
- surface diffusion of Li, electron mirror microscope obs. 8=22159
- surface electronic states, from field effect kinetics study 8=22472
- surface inversion layer props. in elec. quantum limit 8=5231
- surface properties after irradiation with 500 keV nitrogen, boron and helium ions 8=18078
- surface recombination, generation process 8=22610
- surface, shallow donors ground and optically excit. states calc. 8=9126
- thermal expansion from 2-40°K 8=4937
- vacuum deposition on corundum 8=5281
- X-ray stress topography, rel. to film-crystal interface stresses 8=22371
- zener diode, breakdown, between avalanche and field emission 8=5328
- Al impurity redistrib. in oxidation and depletion depth, obs. 8=22606
- As ion implanted, carrier conc. and distrib., Hall effect obs. 8=18072
- Au-Si contact props, potential barrier and work function 8=18077
- B acceptor states, effects of ext. and int. elec. fields 8=2208

Semiconducting materials—contd**silicon**—contd

- B-doped, absorption line broadening 8=2452
- B-doped, deformed in elec. fields, hole relax. times at low temps. 8=18074
- B-doped by ion bombardment, B distrib. profiles 8=18071
- B-doped, temp. depend. of half-widths of internal absorpt. lines 8=14263
- BN as a diffusion source for Si 8=8684
- Co doped, p-i-n structure, current oscillations 8=2227
- Ga ion implanted, carrier conc. and distrib., Hall effect obs. 8=18072
- Li-donor ground state, chemical splitting 8=1950
- Li doped, e irradi. prod. defects and annealing at 20°C, 1 MeV 8=22604
- P-doped, annealing of the Si-E centre 8=2209
- Sb ion implanted, carrier conc. and distrib., Hall effect obs. 8=18072
- n-Si: Au, electrical props. 8=13830
- Si-metal contact characts. 8=18082
- Si: In, electron and hole-capture coeff. at low temps. 8=13915
- Si: P, As, X-ray investigation of impurities distrib. 8=18079
- Si, and Si-SiO₂ interface in MOS dev, influences of SiO₂ struct. and characts. 8=18148
- Si-SiO₂ structure, fixed charge at interface, and built-in voltage in SiO₂ 8=18141
- n-Si surface, Au contacts, props. 8=18070
- Si: Zn, slow rise photoresponse 8=5402

Semiconductors

- acoustoelectric amplification and negative differential cond. rel. to traps 8=1843
- acoustoelectric effect theory 8=17494
- acoustoelectric gain, magnetic field effect 8=13345
- adhesion, electronic theory 8=2046
- alkali metal doping, in small quantities, by electrolysis of fused salt 8=18017
- amorphous, charge transport mechanisms 8=18006
- anisotropic, electron density fluctuations, nonlinear excitation by e.m. radiation 8=13772
- annealed surfaces, influence of quartz impurities 8=9087
- antiferromagnetic crystal, magnetic polaron suggested 8=9068
- antiferromagnet, ferromagnetic domains 8=22866
- band structure Green's function method 8=8913
- breakdown mechanism, review 8=18009
- carrier conc. instability prod. by hot e diffusion 8=13773
- carrier mobility, influence of screened electron-phonon interact. 8=9075
- carrier temp., electric field depend. 8=8900
- characteristics, meas. by fine focussed electron beam 8=22575
- compensated, carrier scattering at liq. He temps. 8=18003
- compensated, electron mobility rel. to ionized impurity scattering 8=9080-1
- complex permittivity variations meas. 8=265
- conduction, intrinsic, onset temp., from p-n junction characts. 8=9147
- coupled cyclotron and spin waves 8=13682
- crystal and electron struct., effect of high press. 8=4699
- current instability in the case of weak surface recombination, theory 8=18011
- current oscills, growth rate calc. 8=13774
- degenerate, band-tail spreading energy meas. from emission of laser diodes 8=13781
- dense electron-hole gas 8=8959
- density distrib. and lifetime of injected plasma 8=9069
- differentiation of lattice defect types 8=9067
- diffusion layers, elec. characts. 8=22418
- direct-band, phonon-assisted magnetoabsorption 8=5222
- domains, elec., in sample with neg. differential resistance 8=17997
- doping, repeated diffusion, concentration distributions formation 8=1899
- double injection regime, effects of diffusion and thermal generation 8=22419
- drift mobility experiments rel. to trapping effects 8=8896
- e.m. wave excitation by electron beam, quasilinear theory 8=5151
- e.m. wave propag., electron temp. not unique function of incident field amp. 8=9084
- electronic band parameters determination from optical and magneto-optical properties 8=9493
- electron exchange eqns., between surface and vol. zones 8=22431
- electron-hole gas density, Green function method 8=8889
- electron-hole pairs yield and Fano factor calc. from van Roosbroeck statistical model 8=2183
- electron-hole plasma decay meas. by double-pulse variable-delay circuit 8=1E177
- electron-hole plasma, i.f. waves excitation 8=13683
- electron and ion emission on laser light interaction 8=18272
- electron irradi. effects, design of β -spectrograph for meas. 8=11466

- colloid-Au contacts, photocapacitive effects 8=22673
- containing Li donors, acoustic paramagnetic resonance 8=9443

Silicon—contd

- crystal growth by Czochralski method 8=13141
- crystal window in double spectrometer, X-ray diffr. profile exam. with monochromatic radiation 8=22004
- crystals, Compton scatt. power 8=23012
- crystals, density by hydrostatic weighing, precision obs. 8=14920
- crystal growth, Czochralski, radial solute segregation 8=4815
- cubic crystals, thermal expansion coeff., temp. depend. 8=8646
- deposition and etching through windows in SiO₂ 8=17245
- diffusion of B, dislocation motion rel. to coefficient 8=1925
- diffusion of B, lattice contractions. contrast reversal in reflection topography 8=1927-8
- diffusion of P, dislocation motion rel. to coefficient 8=1925
- diffusion of P, enhancement by vacancy generation 8=1926
- dislocation motion under e-bombardment during e-microscope investigations 8=17660
- distorted crystals, X-ray topography 8=13198
- doped with B, Al, Ga, P, As or Sb, extrinsic i.r. photoconductivity 8=9257
- e-drift, hot, e-phonon scatt. 8=22438
- effective mass, intrinsic concentration 8=5119
- elastic constants between 25 and 300°C from u.s. wave velocity 8=17830
- electron-beam heated, stress investigation, triangular macrodefect, X-ray and i.r. studies 8=1862
- electron energy loss probability, retardation effects 8=22497
- electron scattering, anomalous, coeffs. determ. 8=13289
- energy given to lattice by primary ions 8=2033
- epitaxial growth, effect of surface perturbations 8=17256
- epitaxial layers, "hillock" formation 8=17619
- epitaxial layers, stacking faults, cause and cure 8=8736
- etching in aq. h. f. solns. 8=17219
- etching conditions, SiO₂ and Si₃N₄ elimination, epitaxial growth 8=13128
- etching in HNO₃-HF-CH₃COOH 8=4791
- etching, in H₂O-amine-complexing agent 8=4792
- etching, vac. thermal 8=17217
- faults, extrinsic, climb 8=22217
- film on Ni substrate, total reflection of X-rays of different wavelengths 8=22038
- films, amorphous, structure 8=13092
- films, epitaxial, prep. by pyrolysis of hydrides 8=17130
- films, etch rates in H₃PO₄, influence of H₂O content 8=17218
- films, evaporated, quantitative determ. by radioisotope analysis following n-activation 8=4756
- films grown on W substrate 8=4758
- films, prep. by rheotaxial method 8=4739
- fluoride chemisorption on surfaces, use of F¹⁹ in HF etches 8=18697
- galactic source 3C 191, Si:C ratios 8=14810
- group III diffusion, hot implantation behaviour, comp. with group V diffusion in Ge 8=22160
- homoepitaxial, vacuum deposition, low temp. 8=1697
- impurity diffusion anomaly 8=13427
- impurity spectrochemical analysis 8=18771
- junctions, large area p-n type, by epitaxial growth technique 8=5316
- p-n junctions, mesoplasma, visible and i. r. radiation 8=2218
- lattice theory of third order elastic consts. 8=13261
- lattice, vibr. freq. spectrum 8=8616
- metal-oxide-Si structures, Au-doped, C-V curves 8=13896
- muonic K series X-rays 8=1209
- n-irradiation damage, investigation by transmission electron microscopy 8=17707
- npn transistor, effect of fields on diffusion, overcoming "push out" effect 8=22145
- n-type, anodic passivity in NaOH rel. to cryst. orientation 8=2533
- nuclear methods of boron determ. 8=5765
- (111) surface, low energy electron diffraction study of PH₃ adsorption 8=4765
- optical three-photon stepwise absorption 8=5635
- oxidation by wet O₂ stream 8=18689
- paramagnetic centres produced along proton range 8=8704
- permittivity calculation 8=5354
- photocells, rectifying props., effect of accelerated electron irradiation 8=22699
- photoelastic constants, bond stretching and bending model 8=8830
- photoelectromagnetic effect, energy band structure dependence 8=13916
- for photographic recorders spot-brightness control, photocell 8=2271
- plastic deform. in brittle fracture region 8=5084
- positron annihilation meas. in Se 8=5150
- proton scatt. by monocryst., directional effects 8=2034
- protons, channelling, anomalous energy losses, E_p = 1.5 MeV 8=17708
- refractive index in far i.r. 8=14219
- site transfer in GaAs 8=17574
- solar cell characts, thickness and temp. depend. rel. to power-weight param., obs. 8=10850

Silicon—contd

- solar cell deployable rigid-frame array, performance obs. 8=10845
- solar cell, p or n, characts. rel. to distributed model 8=9265
- solar cell, integrated high-voltage 8=10852
- solar cells, dendritic and refr. back, prod. by implantation 8=10849
- solar cells for 0.4 and 0.2 AU from sun, use 8=10851
- sputtered films, r.f. and d.c., re-emission coeffs. 8=2032
- in steel, spectrochem. determ., line interferences due to Cr, V and Mo 8=23190
- stopping for p, d, t, α 8=8778
- surface contamination, detection and identification 8=1688
- surface exoemission of mechanically treated n- and p-type samples 8=18255
- surface properties rel. to u.v. illumination 8=8297
- surface states from charges in oxide coating 8=22469
- surfaces, solid, elec. decoration, new method 8=8380
- thermal conductivity, elec. resistivity and Seebeck coeff. from 100 to 1300°K 8=22136
- thermal conductivity, neutron irradiat. effects at 80°K 8=8663
- thermal expansion from 2-40°K 8=4937
- wafers, orientation, by proton channelling 8=8476
- web dendrite, stacking faults, contrast in X-ray topographs 8=1983
- X-ray emission spectrum obs., valence bonds 8=2454
- zone melting, temperature field, theory 8=8427
- Au-diffused, precipitates formation 8=17620
- B doped, p radiation sensitivity, obs. 8=17414
- B (or P) diffused, appl. of dynamical theory of X-ray scattering 8=13412
- in Fe liquid, heat of solution 8=16799
- Ga and Bi impurities photoexcit. lines anomalous broadening rel. to optical phonons, obs. 8=5601
- on Ge(111) surfaces, epitaxial films struct., LEED obs., 870°K 8=17140
- Ni-induced surface structure on (111), LEED study 8=4732
- Si-Au potential barriers prep. by local sputtering 8=9166
- Si:B, "internal" impurity spectrum, conc. depend. 8=13426
- Si:B, Li mobility and drifted n-i-p⁺ counters prep. and characts., obs. 8=20200
- Si I lines, shift by Van der Waals interact. with Ar atoms 8=7423
- Si II λ 4128 and λ 4130Å in model atmospheres and B stars 8=19163
- Si II, stellar, superposition of configuration applied to a series of states 8=19158
- Si III, spectra, transition probabilities 8=7411
- Si III, theoretical multiplet strengths 8=7410
- on Si(311) surfaces, epitaxial films struct., LEED obs., 870°K 8=17140
- Si:Ga, Li mobility and drifted n-i-p⁺ counters prep. and characts., obs. 8=20200
- Si:Li, radiation defects, effect on annealing rate 8=2067
- Si:P, e-irradiated, spin-lattice relax. rel. to defect production 8=18434
- Si:Sb, melt-grown, tetrahedral defects 8=1958
- Si-SiO₂ interface, thermal oxidation, effect of Na impurity 8=14384
- Si-WSi₂-Si, epitaxial struct. 8=17257
- Si:X (X=Sb, Ga, As, In and Xe), implanted atoms location, lattice disorder and radiation sensitivity, obs. 8=17414
- YIG: Si doped, photomag. anneal 8=23022

Silicon compounds

- See also Quartz.
- alkali silicate melts, bubble formation, wet atmosphere effect 8=7996
- carbides, formation by chemical vapour deposition 8=23112
- cristobalite, solution and diffusion of He and Ne 8=8247
- erionite and offretite, differentiation 8=13153
- garnet, Ce activated, fluorescence 8=2474
- hydrides decomp. in r.f. glow discharge rel. to films deposition 8=21872
- metal-SiO₂-CdSe (metal contacts, photocurrent studies 8=2281
- methylethoxy silanes, integrated intensity of i.r. spectra 8=7551
- olivine crystals, registration of As and I ions 8=11325
- quartz and silica, thermal diffusivity from 300° to 1100°K at 1 atm 8=22131
- sesquiteroxide, formula and ht. of formation 8=9662
- silica gel, factors influencing growth of CuCl 8=21944
- silica gel, modification of struct. on purification 8=1663
- silica gel, surface meas., absorption method 8=21742
- silica gels, adsorbed H₂O, proton relax. 8=12932
- silica gels, surface, energy states and dynamics of Sn atoms 8=16912
- silica glass, dielec. loss at low temps., OH⁻ conc. and irradiation effects. 8=18172
- silica, physisorpt. of Ar at low temps., process and mean adsorpt. time 8=17172
- silicate glasses, e.p.r. of Mn²⁺, 293-4°K 8=18408
- silicate glass, validity of Nernst-Einstein eqn. 8=8354
- silicate materials containing Fe, site populations, Mössbauer effect 8=8218
- silicate melts, Newtonian flow, viscosity eqn. and bond rearrangement 8=21628

Silicon compounds—contd

- silicates, microprobe analysis standards prep. from gels 8=14496
- silicates, porous, fragment shapes in hypervel. impact rel. to lunar surface struct. 8=13609
- silicate rocks at high press. and temp., hydrolytic weakening 8=14561
- silicates, structural anal. and their crystal chemistry, review 8=8466
- silicone oil, cellular convection obs. 8=6213
- silicones, #200 series, ultrasonic absorption in range 30-350 MHz and -30° to +30°C, rel. to viscosity 8=8063
- trichlorosilane, evaluation for prep. of electronic grade Si 8=14509
- tridymite, solution and diffusion of He and Ne 8=8247
- α -AgCd alloys, specific heat from 1 to 4°K 8=8637
- AgBr micro-crystals, growth rates and defect formation 8=8698
- α -AgPb alloys, specific heat from 1 to 4°K 8=8637
- α -AlFeSi, 4 possible phases 8=13057
- CH₃SiCl₃, r.f. spectrum, structure and dipole moment 8=4169
- Fe-Si sheet, initial permeab. depend. on demag. freq. 8=5464
- HSiCl₃, r.f. spectrum, structure and dipole moment 8=4169
- PbO-Al₂O₃-B₂O₃-SiO₂ system glasses, elec. props. temp. and comp. dependence 8=18170
- Si²⁹(CH₃)₄, indirect nuclear spin coupling 8=4233
- Si₃F₈, n.m.r. study, coupling consts. and chem. shifts of F¹⁹ and Si²⁹ rel. to SiF₄ 8=4237
- SiC, addition up to 15% in BeO, rel. to rupture and grain growth props. 8=22315
- SiC, B and N doped, luminescence efficiency 8=18615
- β -SiC, cryst. growth from soln. 8=17246
- SiC crystals, deduction of energy spectrum of acceptor states 8=5668
- SiC, delayed fracture and creep 8=22391
- α -SiC on diamond, directed crystallization 8=8428
- SiC diodes, electroluminescent, props. 8=9627
- SiC, fibrous single cryst., i.r. spectrum 8=2455
- SiC films deposition in r.f. glow discharge 8=21872
- SiC, growth single crystal films on Si 8=1748
- SiC, hole mobility and interband transitions 8=9122
- α -SiC, magnetic studies 8=18301
- SiC, polarity of structure 8=21999
- SiC, polycrystalline, creep 8=22393
- SiC polytypes, infrared absorption 8=23013
- SiC powders, reflection and polarization properties 8=14266
- SiC, pyrolytic, texture 8=21994
- SiC, vapour-deposited films, phys. props. 8=17137
- SiC, vapour-liq.-solid and melt growth 8=21963
- β -SiC whiskers, elastic modulus 8=22392
- SiC whisker and field emission 8=9273
- SiC X-ray emission spectrum obs., valence bonds 8=2454
- SiC, X-ray topographic obs. of polytypes 8=13115
- SiC/Al₂O₃ powders, reflection and polarization properties 8=14266
- SiCl₄, use in epitaxial growth of GaAs 8=13146
- SiDBr₃, microwave spectrum and struct. 8=21105
- SiF₄, radiative lifetimes of u.v. emission systems 8=7501
- Si²⁹Cl₃, radical struct. and hyperfine coupling const., e.p.r. obs. 8=12349
- SiCl₄ reaction with water vapour, SiO₂ film deposition 8=21889
- Si-Fe alloys, elec. resist. at 800-1700°C 8=9017
- Si-Fe, dislocation structure changes during creep 8=8734
- Si-Fe, freq. depend. of mag. reversal mechanism 8=5484
- SiF₄, gaseous, spin-lattice relax. 8=21176
- Si₂, i.r. spectrum and molec. props. 8=16301
- Si-Fe, temp. dependence of magnetic properties, influence of plastic deformation 8=14014
- Si-Fe thin tapes, dynamic hysteresis phenomena 8=5483
- Si-Ge alloy thermoelec. props. and generator modules 8=19732
- SiH₄ decomp. in r.f. glow discharge rel. to films deposition 8=21872
- SiH₄, spectrum 8=12355
- SiHBr₃, microwave spectrum and struct. 8=21105
- SIN films deposited on metal-coated substrates, dielectric properties 8=13870
- SiN films deposition in r.f. glow discharge 8=21872
- Si₃N₄, deposited on GaAs, i.r. absorpt. 8=14262
- Si₃N₄, elimination, Si substrate, etching conditions 8=13128
- Si₃N₄ films, amorphous structure dependence on deposition parameters 8=17179
- Si₃N₄ films, etch rates in H₂PO₄, influence of H₂O content, and use of SiO₂ mask 8=17218
- Si₂N₄ film, thermal expansion coefficient 8=4939
- Si₃N₄ films, fabrication and characts. 8=21891
- Si₃N₄ films on Ge to mask Al and B diffusion 8=13406
- Si₃N₄ films, prod. by reactive sputtering 8=17139
- Si₃N₄, reactively sputtered, evidence of excess Si 8=21890
- Si₃N₄, vapour deposition on GaAs, by SiCl₄-NH₃-N₂ system 8=13094
- SiO₂, adsorpt. of aliphatic aldehydes and ketones, i.r. study 8=8346
- SiO₂, adsorpt. of polyethers at soln.-solid interface 8=1707

Silicon compounds—contd

SiO capacitors, rel. to impurities in vapour source 8=18202
 SiO₂, conduction in films by Pool-Frenkel eqn. 8=13705
 SiO₂, diffusion of Au 8=13896
 SiO₂, effect of dissolved O₂ on C-V characts. 8=5284
 SiO₂, effect on elec. cond. of ferrites 8=13715
 SiO₂, electron Hall effect 8=9124
 SiO₂, elimination, Si substrate, etching conditions 8=13128
 SiO₂, epitaxial systems, vapour deposition 8=13148
 SiO₂, film deposition from SiCl₄-water vapour reaction 8=21889
 SiO₂, film growth in microwave discharge 8=4755
 SiO₂ film on Si, thickness (< 900 Å) meas. with reflection tech. 8=13093
 SiO₂ films, borax diffusion 8=4957
 SiO₂ films, Na contamination, and diffusion and drift of tracer Na 8=18069
 SiO₂ films deposited on n-type Si 8=4757
 SiO₂ films, deposition from silane 8=13095
 SiO₂ films, effects on Si and Si-SiO₂ interfaces in MOS devices 8=18148
 SiO₂ films, etch rates in H₃PO₄, influence of H₂O content, and use as mask for etching Si₃N₄ 8=17218
 SiO₂ films on Ge to mask Al and B diffusion 8=13406
 SiO₂, films, MOS capacitors, noncrystalline structure, electronic conduction 8=9234
 SiO₂, films, proton and Na transport 8=9172
 SiO₂ films, pyrolytically grown, voltage-current charac. 8=13873
 SiO₂ films on Si, electron beam effects and etching rate 8=22609
 SiO₂ isolation strcuts. for integrated circuits, fabrication 8=21964
 SiO₂ layers, dielec. breakdown. 8=18080
 SiO₂ layers in MOS structures, radiation induced space charge buildup 8=9181
 SiO₂ films, thermally grown, electronic conduction mechanism 8=18076
 SiO₂, fine patterns, 2 μ wide, obtained by photo-etching 8=18096
 SiO₂, molec. geometry 8=7550
 SiO₂, in MOS struct., built-in voltage and charge distrib. 8=18141
 SiO₂ sputtered films, r.f. and d.c., re-emission coeffs. 8=2032
 SiO₂, sputtering in Ar, r.f. dielectric system with non-grounded electrodes 8=17138
 SiO₂, surface states, study using Al-SiO₂-Si-Al structure 8=2228
 SiO₂ surfaces, fluoride chemisorption, use of F¹⁹ in HF etches 8=18697
 SiO thin film capacitors, heating effects 8=9233
 SiO, thin-film capacitor props. 8=22676
 SiO₂, vacuum deposited insulating layer, instability 8=9175
 SiO₂, vitreous, acoustic shear wave propag. characts. obs. 8=13358
 SiO₂ vitreous films, i.r. absorpt. 8=5637
 SiO₂, vitreous, rel. to internal friction in vibrating granular reeds 8=13606
 SiO₂, vitreous, structure and correl. by X-ray and n diffraction 8=12795
 SiO₂, vitreous, X-ray and neutron diffracted intensities analysis 8=8467
 SiO films, evaporated, forming process variables 8=4754
 SiO, thin-film capacitors, a.c. electrical breakdown 8=2253
 SiO₂-B₂O₃, metastable immiscibility 8=21748
 SiO₂-C structure, anomalous auto-electron emission 8=22712
 Si-O tetrahedral distances in aluminosilicate framework structures 8=21795
 SiO₂-Si₃N₄ films on Si, optical thickness obs. 8=1699
 SiO-Ta₂O₅ dielectric thin film capacitors, prep. and props. 8=9232
 SiO₂:Tb, Eu, fused, fluoresc. and H diffusion 8=17585
 SiO₂-UO₂ vitroc ceramics, rad. induced volume changes and annealing 8=8779
 SiO₂-UO₂ vitroc ceramics, thermal cond. 8=8664

Silver

analysis, γ-activation method 8=14502
 anomalous-skin-effect theory, in i.r., verification 8=14192
 atom, e-binding energy effect on incoherent γ scatt. 8=17703
 atoms, electron-impact ionization cross-sections 8=12428-9
 atomic impurity in KCl, optical absorpt. rel. to E-band models 8=14228
 catalysis of acetate ion oxidation by K₂S₂O₈ 8=23094
 catalyst, exo-emission, chem. stimulation 8=22711
 cementation on Cu in perchloric acid and alkaline cyanide solns., kinetics 8=14427
 contacts, effect of H₂S contamination on contact resistance 8=22512
 crystal containing alumina, self-diffusion 8=1909
 crystal, thermal oscillations frequency, temp. variation 8=17476

Silver—contd

crystals, orientation stability under plane compression 8=17662
 crystals, well-annealed, stress at which dislocations multiply 8=13545
 deceleration of 0.2-40 keV H and D ions in foil 8=2020
 diffusion in AgCl under pressure 8=1910
 diffusion in Al 8=8671
 diffusion in Al 8=22147
 diffusion in Tl, obs. by radiotracer technique 8=22163
 diffusion of Xe from recoil fission of U 8=3981
 dislocation (Bordoni) relaxation 8=22197
 dislocation density and strength, effect of purity 8=8722
 electrical erosion, obs. 8=22342
 electromigration of small amount in liq. Bi 8=12815
 energy loss of fission fragments, range-energy relation 8=2021
 ethylene catalytic oxidation rel. to surface struct., chemisorpt. obs. 8=18706
 film, 0.6 μ thick, filtered electron diffraction obs. 8=8455
 film, optical constants, ellipsometric meas. 8=11201
 film, reflection and transmission coeffs. in 0.4-1 μ range 8=5580
 film, vapour-deposited, resistivity annealing temp. and thickness dependence 8=17925
 films on mica, W substrate nucleation 8=13087
 films, non-linear reflection on laser-radiation 8=18497
 foils, optical absorpt., structure and surface characts. 8=18502
 grain boundary diffusion in Cu 8=17568
 heat capacity, temp. dependence, effect of crystal lattice defects 8=13368
 hydrogen embrittlement 8=22307
 intense rad. prod. by electrons at grazing angles, interpret. via surface waves 8=3181
 laser induced non-linear photoelectric effect in metals 8=22721
 liquid, diffusion of Ru, Fe and Co 8=12836
 liquid, metal solute diffusion, theory 8=12832
 in liquid Pb, thermodynamic props. 8=8043
 liquid, solubility of H 8=21617
 magnetoresistance coeff. at 4.2°K 8=8997
 magnetoresistance, longitudinal from 4.2 to 35°K, electron scattering effects 8=22511
 mode of distrib. rel. to categories of exogenous Au 8=14562
 nucleation on NaCl 8=8188
 optical polarizability and dielectric constant, calc. 8=18498
 photoelectric effect, non-linear, laser induced 8=2258
 photoexcited electrons, discrete energy loss by plasmon excitation 8=2279
 polycrystalline, diffusion of In impurities 8=8670
 polycrystalline, Sb volume and grain-boundary diffusion 8=17563
 polycrystalline target, sputtering coeff. rel. to incident angle of Ne, Ar and Kr ions 8=8766
 secondary electron emission from self-supporting films 8=2284
 shear strength in grossly deformed sample at high temps. 8=8833
 single crystals, D⁺ transmission 8=22242
 solutions in water, extinction light curves 8=4579
 sulphiding by H₂S, effect of surface Fe 8=23096
 surface reflection of zero-energy electrons 8=6301-2
 target for ion emission, bombard by Ar⁺ 8=6626
 thick films, optical constants, least squares method 8=2403
 thin films, Hall effect 8=2133
 trace analysis, spectrochemical 8=18773
 ultrasonic attenuation rel. to Fermi surface deformation 8=1851
 vacancy diffusion rate calc., Debye model 8=22172
 wires, electric explosion, temp. variation during first stage 8=1622
 Ag¹¹⁰, diffusion in Bi, dependence on crystallographic direction 8=13407
 Ag¹¹⁰, diffusion coeff. in Sn 8=22162
 Ag⁺ doped alkali halide, B-centre 8=17681
 Ag(III) face, exam. by LEED rel. to secondary emission 8=17212
 Ag-Al solid soln., Debye temp. and lattice vibrations 8=1867
 in AgMg, silver-rich, diffusion, re-examination 8=17561
 in β-AgMg, stoichiometric, diffusion of Ag 8=17562
 Ar-ion bombardment, LEED study 8=22240
 in BiTe, electrotransport, 150 and 250 A/cm², < 400°C 8=17564
 CO catalytic oxidation rel. to surface struct., chemisorpt. obs. 8=18706
 H catalytic oxidation rel. to surface struct., chemisorpt. obs. 8=18706
 K-ionization by relativistic electron theory 8=4994
 on Mo, moiré fringes, dynamical effects 8=21977
 O⁶ ion beam energy loss 8=13477
 Pb-Ag system, galvanic cell studies using PbO-SiO₂ melts 8=23150

Silver compounds

alloy, effect of H₂S contamination on contact resistance 8=22512

Silver compounds—contd

- alloys, thermopowers interpret. rel. to resistivity and band structure 8=18213
 halides, e.s.r. studies of different $\text{Se}_{2-}^{\cdot-}$ centres 8=13464
 halides, optical absorb. spectra of $\text{T}_{2g} \rightarrow \text{E}_g$ transitions of Ti^{3+} and Fe^{2+} , Jahn-Teller effect 8=14193
 sternbergite, antiferromag. ordering, and Mössbauer spectra 8=14066
 van-der-Waals dipole-dipole coeffs. 8=1625
 Ag alloys, dilute, stacking-fault energy from extended node meas. 8=17669
 Ag-rich solid solutions, solubility limits 8=8240
 Ag(I) complex, monothiosemicarbazidesilver(I)chloride, crystal and mol. structure 8=22013
 Ag-5.64 wt. %Al alloys, grain boundary precipitation 8=17038
 Ag_2AsS_3 , photoconductivity 8=18220
 Ag-Au alloys, charging and mag. susceptibility, electron states variation, electronic sp. ht. 8=13970
 Ag-Au alloys, tracer diffusion coeff. rel. to activity-coeff. and vacancy flow effect 8=4948
 Ag-Au-Sn liq. alloys, thermodynamic props. of Ag and Au, at 723°K 8=21652
 Ag-Au-Zn system, β' thermal stability 8=17037
 Ag-Bi molten alloys with segregation tendencies, densities 8=12812
 AgBr, charge compensation of trapped holes 8=22688
 AgBr, line edge luminescence at 4.2°K 8=23041
 AgBr plates, ion-sensitive, for mass spectrograph 8=16178
 AgBr(I) photographic films, influence of dyes on luminesc. 8=23042
 AgBr:AgI:CdBr₂, line-edge luminescence at 4.2°K 8=23041
 Ag-Cd alloy, elec. erosion, obs. 8=22342
 AgCdO, sintered and internal oxidized, elec. erosion, obs. 8=22342
 AgCl absorpt. edge, polaron states 8=22955
 AgCl crystals, α -particle track recording 8=15644
 AgCl, electron distrib. from structure factors 8=17334
 AgCl, line edge luminescence at 4.2°K 8=23041
 AgCl, as an embedding medium for i.r. spectroscopy 8=18553
 AgCl, mechanical props., high-pressure data 8=19342
 AgCl, negative resist., electroluminescence and current-voltage characts. 8=17918
 AgCl, state of Fe impurity ions 8=1657
 $\text{Ag}[\text{C}_6\text{H}_5\text{N}_3\text{ClO}_4]$, structure by X-ray diffraction 8=17333
 Ag-Cr film, reflection and transmission coeffs. in 0.4-1 μ range 8=5580
 Ag-Cu alloys, age hardenable, precip. 8=21837
 Ag-Cu, liquid, oxygen solubility 8=16800
 Ag-Cu-Zn alloys, low-temp. martensitic transformation 8=13056
 ζ -Ag-Ga alloys, lattice spacings on addition of Cd 8=17335
 AgI, state of Fe impurity ions 8=1657
 Ag-In alloys, liq., Hall coeff., resistivity and electron states 8=12923
 AgI-Ag₂S, phase distrib. 8=21838
 AgIn mol., u.v. absorpt. bands, system A, vibrational analysis 8=16262
 Ag-In-Ge(Zn) contacts for GaAs semiconducting devices 8=5291
 Ag-M(M=Cd, Mg, In) alloys, one-phase, inhomogeneous concs., from Zener relax. 8=8239
 AgMg, silver-rich, Ag diffusion, re-examination 8=17561
 Ag-Mg solid soln., Ag-rich, short range order effects 8=21819
 Ag-Mg solid solns., Ag-rich, long-range order dependence 8=21820
 β -AgMg, stoichiometric, simultaneous diffusion of Ag and Mg 8=17562
 AgMn, dissoc. energy 8=21183
 AgMnO₄, Raman spectra 8=21085
 Ag-Ni alloys, f.c.c. stacking and twin faults 8=4988
 AgNO₃-alkali nitrates, molten ternary mixtures, thermodynamics 8=21648
 $[\text{Ag}_2\text{O}_9]^{2-} \cdot \text{HF}_2^-$ clathrate, n.m.r. and supercond. 8=17957
 Ag-Pb molten alloys with segregation tendencies, densities 8=12812
 Ag-Sn alloys, liq. atomic distrib. and electronic transport 8=12799
 Ag-Sn liq. alloys, atomic distrib. functions 8=12801
 Ag₂Al, elastic constants meas. 77-700°K 8=5040
 Ag₂O₃, formation for catalysis 8=9706
 Ag₂S_{1+x}, melt, elec. conductivity and thermoelec. power dependence on S vapour pressure 8=16876
 α -Ag₂S, mixed conductor: electronic and ionic conduction props. 8=22500
 Ag₂S, nonstoichiometric, mag. props. meas. 8=9290
 Ag₂Se, nonstoichiometric, mag. props. meas. 8=9290
 Ag₂Se-In₂Se₃, constitution diagrams, structure 8=8266
 Ag₂Te-In₂Te₃, constitution diagrams, structure 8=8266
 Ag₃AsS₃, xanthoconite, crystal structure 8=13248
 AgBr, effect of Cd and Cu ions on photography 8=533
 AgBr grain distrib. in photographic plates for mass-spectrometers 8=7360
 AgBr, microcrystals, effect of solvolysis on growth of faces 8=4786

Silver compounds—contd

- AgBr, migration of photoexcited holes, obs. 8=1908
 AgBr, polaron internal states detection using piezo-optical transmission 8=13679
 AgCl dislocation etching 8=1965
 AgCl, elastic constants, 4.2 to 300°K 8=5041
 AgCl, optically pumped vapour, vibr. energy level population 8=1235
 AgCl single crystals, state of iron, Mössbauer study 8=8215
 AgCl single crystal, surface hardening while in contact with aqueous environment 8=4727
 AgCl, teflon and I, melting temp. under high pressure 8=4644
 AgCl, ultrasonic field effect on conductivity 8=2237
 AgCl, Ag diffusion under pressure 8=1910
 AgCl:Ag²⁺, Ag²⁺ detection by e.s.r. 8=14090
 AgCl + CdCl₂, state of impurity ions 8=1657
 AgI, adsorpt. of methanol vapour 8=8337
 AgI, ionic diffusion under high pressure gradient 8=1907
 AgI smoke used in cloud seeding, hygroscopicity and chemical composition 8=1605
 AgI.KNO₃ nuclei, water vapour adsorption obs. 8=8335
 AgPd alloy, localized states from permittivity obs. 8=13656
 AgTe, liq. Hall coeff. rel. to possible semicond. nature 8=12917
 Ag-Zn alloys, deformed, stacking faults and twin-fault probability 8=17668
 Ag, Zn alloys, ϵ -phase, Zn thermodynamic activity dependence on density of states 8=22109
 α -AgZn, Zener relax. 8=5009
 AgZnSn, liq. alloys, activity coeffs. 8=8016
 GaAgS₂, non-enantiomorphous crystal optical activity obs. 8=14191
Sinanoğlu's theory. See Atoms/structure.
Sintering
 metals, diffusion, surface, vol. and grain boundary 8=21832
 steel, stainless, powder, strain effects 8=4693
 thoria gel, crystallite size distribution 8=12960
 wires, by surface diffusion, theory 8=13051
 Al₂O₃, activation enthalpy 8=13052
 Al₂O₃, kinetics, data correlation 8=8258
 Al₂O₃, kinetics, resonant freq. meas. 8=17027
 As-S-Se system partially vitreous, flow mechanism 8=13053
 BaTiO₃, high purity, meas. of impurity content, crystallinity and particle size 8=17024
 Bi₂Te₃ alloys sintered, orientation 8=21922
 C composite materials sintered, effect of heat treatment on electrical resistivity 8=2129
 C composite sintered materials, elec. resistivity, temp. depend. 8=22502
 CaO, water vapour effect on kinetics, 920-1123°C 8=21833
 CdSe, control of photocond. props. 8=18231
 Dy₂O₃, kinetics, data correlation 8=8258
 Dy₂O₃, kinetics, resonant freq. meas. 8=17027
 Er₂O₃, kinetics, data correlation 8=8258
 Er₂O₃, kinetics, resonant freq. meas. 8=17027
 Fe, mag. props. rel. to porosity and high densities prod. 8=22808
 GaSb-GaAs alloy, pressure-sintered, densification and thermoelectric props. 8=4697
 MgF₂, effect of additives on density and grain size 8=17026
 Mg_{0.9}Mn_{0.1}Fe_{0.9}O₄, effect on mag. spectra 8=2342
 Mn basic carbonate and magnesite containing ZnO, calc. 8=4698
 Ni, effective volume self-diffusion 8=1923
 Ni, mag. props. rel. to porosity and high densities prod. 8=22808
 Ni-Fe relay core prod. 8=22808
 PuO₂ rel. to O adsorption, obs. 8=8345
 UO₂ powders, rel. to particle size and shape 8=21834
 Y₂O₃, inhibition of grain growth by addition of ThO₂ 8=13444
 Y₂O₃, kinetics, data correlation 8=8258
 Y₂O₃, kinetics, resonant freq. meas. 8=17027
Skin effect
 anomalous in layer lattices 8=5115
 anomalous theory, computation of r.f. surface impedance 8=19720
 corrections in immittance standards using air-dielec. coaxial lines 8=10964
 discharge, electrode, analysis using semi-bounded plasma model 8=21219
 electromagnets, effect on pulsed field prod. 8=15260
 a. c. current distribution in cylindrical conductor with elliptical section 8=15194
 Ag, anomalous theory, in i.r., verification 8=14192
 K, anomalous, rel. to surface impedance near cyclotron edge for helicons 8=13686
Sky brightness
 See also Airglow; Twilight.
 Balmer alpha in night sky, May-Nov. 1965 obs. 8=14620
 conditions of sky, Cerro Tololo Observatory, predictions for 1968 8=14621
 electrons, Van allen, by e.m. transverse waves travelling along mag. field 8=18965
 horizon, spectral radiance obs. 8=18874
 India, blue luminance distribution 8=9864

Sky brightness—contd

- northern sky, contour maps, radio emission survey at 178 MHz 8=19225
- observations rel. to atmos. transparency 8=18886
- polarization, obs. and object contrast improvement 8=18875
- scattered radiation at small angles, intensity aerosol spectrum 8=18880
- sky temp., apparent, at mm wavelengths 8=2593
- in solar eclipse July 20, 1963, seven colours, from air-borne photometer obs. 8=2629

Sliderules

No entries

Slip

- coagulation, by Brownian motion, correction 8=8148
- metals, b.c.c., rate controlling mechanism rel. to neutron-irradiation damage 8=4987
- parallel bands, edge type, interaction 8=17732
- plate, thin flat, under uniform stress in one direction 8=13513
- solid solutions, rate controlling mechanism rel. to neutron-irradiation damage 8=4987
- Al single crystals, dynamic deformation 8=22310
- Au, quenched, channel formation on plastic deformation 8=17663
- Be single crystals, directions in deformed specimens 8=1969
- Cu crystal, band development on n-irradiation 8=22212
- Cu, cyclic deform., and crack form. and propag., obs. 8=22330
- Cu, fatigued at low strain amplitude, surface lines and interior planes 8=17774
- β' -CuZn alloys, binary and ternary, cross slip 8=8634
- Fe crystals, [100] and [110] axes, -70°C to 250°C 8=13553
- Fe, fatigue damage from intergranular weakness 8=5060
- α -Fe, 3.28%Ni addition, effect on behaviour 8=22346
- Mg-9 wt.% Al alloy, in age hardening mechanism 8=13583
- Mg-Al spinel, plastically deformed, parallel to {111} plane 8=17664
- Mg,Cd, critical resolved shear stress needed rel. to degree of order 8=5079
- NaCl, plastically deformed, lines, electron microscopic study 8=22213
- Nb-Mo alloy single crystals, rel. to plastic deformation, -196°C -250°C 8=17819
- Si, and bowing, control by etching technique 8=8385
- 3% Si-Fe, upper yield stress rel. to etch pitting experiments 8=5065
- Ti, non-basal vector identification 8=17665
- Ti-Al alloys, non-basal vector identification 8=17665
- U, α and β mono- and poly-crysts., creep mechanisms 8=8867
- US single crystals, transmission electron microscopy obs. 8=17834
- Zn, basal, Al impurity effects 8=17836
- Zn, second-order pyramidal slip on {1213} {1212} system 8=22214
- Zr-H alloys, rel. to H conc. 8=13613
- Zr-O alloy crystals, rate-controlling mechanism at $77-473^\circ\text{K}$ 8=13614

Smectic phase. See Liquid crystals.

Smokes. See Aerosols.

Snoek effect. See Crystal imperfections/interstitials; Elastic relaxation.

Snow

- atmospheric aerosol particles removal by crystals 8=23275
- heat transfer through four layer system of air, snow, sea ice and water 8=23226
- in South Pole region, O isotope ratio rel. to air temp. 8=23227

Sodium

- aerosol produced by burning, characts. rel. to reactor safety 8=12950
- alkali metal impurities (K^{84} and Rb^{86}), diffusion 8=8680
- atmosphere, upper 8=18916-7
- in atmosphere, upper, daytime distrib. and origin, 92.4 km 8=2616
- atmosphere, upper, distribution 8=9903
- atmosphere, upper, meteoric origin 8=9902
- atomic absorption and emission enhancement by alcohol, flame photometric obs. 8=20961
- atom, e scatt., long-range interaction, nonadiabatic contrib. 8=12092
- atoms, excitation by low energy electrons, absolute cross sections 8=12087
- atom, ^2F level, polarization by outer electron 8=7413
- atom and ions of isoelectronic sequence, wavefunctions calc., using effective potential 8=20958
- atoms, gas discharge plasma, line excitation rel. to cascade transitions 8=20962
- atoms, Kerr dispersion, theory 8=12068
- atoms, pseudopotentials 8=7409
- atom, resonance fluorescence quenching in inert gases 8=1185
- atoms scatt. from polyat. gases, quenching of glory undulations 8=7633
- atomic spectra in fluoresc. of NaI 8=12069

Sodium—contd

- clusters of atoms prod. by vapour flow through orifice, ionization pots. 8=16231
- Na D lines in comet 1965f near perihelion passage 8=14852
- D-lines in night airglow using rocket obs. 8=18935
- D-lines in solar spectrum, profile anal. assuming pure absorpt. 8=10383
- D-lines in solar spectrum, profiles rel. to coherent and non-coherent scatt. 8=23708
- diffusion in NaCl-NaBr system, self-diffusion coefficient 8=13402
- diffusion in PbTe, coeff. meas. by radio tracer technique 8=17580
- elastic moduli and pressure derivs. at absolute zero 8=17818
- electron-impact ionization, empirical calculations 8=12448
- electron-self-energy, phonon contrib., numerical calc. rel. to temp. 8=17862
- excited atoms, depolarization cross-section in inert-gas collision 8=7436
- helicon waves, nonlocal damping 8=17904
- ions, charge composition, effect of target state 8=1365
- ions, range distrib. in amorphous Al_2O_3 8=13476
- isoelectronic sequence, dipole polarizabilities and shielding factors 8=7415
- lattice dynamics, quasi-harmonic calcs. 8=1838
- liquid, Alfvén wave resonances 8=19803
- liquid, conducting, with aligned mag. field, drag obs. 8=6349
- liquid, density of states and autocorrel. of independent electrons 8=12898
- liquid, effect on creep and stress-rupture props of austenitic steel 8=22359
- liquid, effective ion-ion potential 8=8237
- liquid, elec. resistivity, appl. of structure factor and pseudo pot. relation 8=12920
- liquid, electronic structure and optical absorpt. 8=8111
- liquid in m.h.d. engine 8=289
- liquid, oxygen solubility data 8=16798
- liquid, solubility of Sn 8=21621
- liquid, structure rel. to pair pot., and effect on phys. props. 8=12790
- liquid vein m. h. d. generator, power transfer to armature 8=15206
- liquid, wavenumber-dependence of elastic moduli 8=1499
- molten, electronic band struct., density of states, and resistivity calc. 8=16789
- photoconductivity calc. from Kubo-Greenwood formula 8=5393
- plasma stabilization by random electric field 8=16599
- positron enhancement factor 8=8975
- scattering from Cs, atomic differential spin-exchange scattering 8=12109
- self-diffusion, isotope effect 8=17576
- self-diffusion in Na silicate liquids 8=8036
- solar D-line rel. to solar atmosphere min. temp. calc. 8=10388
- as steel plastic deform. props. at 1000°C model, obs. 8=13556
- structure at 110° and 525°C 8=4530
- trace impurity determ. by atomic absorpt. spectrometry 8=14459
- Zeeman effect, longitudinal inverse and magneto-optical meas. of line profile 8=4057
- Na, K radioactive ion separation, spacers in electrophoresis 8=5742
- Na I stellar lines near HI clouds, search for 8=5880
- Na^+ e affinity calc. by superposition of configuration 8=21281
- Na^+ , cochlear microphonic pot depend. on 8=19616-7
- Na^+ , dipole polarizability from spectra 8=7414
- Na^{22} , cosmic ray prod., meas. for atm. exchange studies 8=18857
- Na^{22} in KCl solns., self-thermal diffusion 8=21640
- Na^{23} n. m. r. spectrum in NaHg , Na_2Hg_2 and Na_4Hg_2 , Knight shift in solid and liquid state 8=22926
- Na^{23} in NaCl powders, n. m. r. 8=5562
- Na^{23} in some ionic compounds, n. m. r. study of quadrupolar couplings 8=18469
- Na^{23} spin-lattice relax. in aqueous alkali halide solns. 8=1593
- Na^{23} in vanadates, quadrupole coupling constants 8=9474
- in Na methoxide-methanol ions coordination number and solvates comp. obs. 8=2497
- Na-K seeded plasma in elec. field, temp. meas. 8=21308
- Na-Li liq. mixtures, critical opalescence 8=1558
- Na-Na collisions, energy transfer in sensitized fluorescence 8=16213
- $\text{Na}-\text{NH}_3$ dilute solns., absence of vol. change on dilution at -45°C 8=1530
- Pb-Sn, Na conc. at grain boundaries 8=8344
- in SiO_2 films, contamination, and diffusion and drift of tracer Na 8=18069

Sodium compounds

- borax diffusion in SiO_2 films 8=4957
- kernite, crystal structure by X-ray diffraction 8=8542
- natrolite, $(\text{Na}_4(\text{Al}, \text{Fe})_2\text{Si}_3\text{O}_{10}, 2\text{H}_2\text{O})$, e.p.r. of Fe^{3+} , at 4.2 and 293°K 8=18432
- salts, K-doped, n irradiated, $\text{Ar}^{39,41}$ diffusion and trapping 8=1920

Sodium compounds—contd

- sodalites, photochromic, e.s.r. 8=14120
zeolite NaX, adsorpt. of Xe, press. and temp. depend. 8=1713
K-Na alloys, density 0 to 300°C 8=21624
 Li_2CO_3 - Na_2CO_3 , molten, electrochem. studies 8=5741
(Li, K) $_2\text{SO}_4$, differential thermal anal. 8=8270
Na mordenite, synthetic, sorption and diffusion coeffs. of C_1 to C_4 paraffin hydrocarbon gases 8=13109
Na rare-earth tungstates, energy transfer of Er^{3+} , Tb^{3+} and Tm^{3+} 8=9610
Na silicate liquids, self-diffusion of Na 8=8036
Na tetraborate, $\text{Na}_2\text{O} \cdot 4\text{B}_2\text{O}_3$, crystal struct. 8=8541
 Na_3AlF_6 (cryolite), melting point 8=21754
 Na_3AlF_6 , and MgF_2 and CaF_2 , i. r. antireflectant suitability 8=2435
 NaAlGeO_4 , high pressure form. and crystal structure 8=1678
 $\text{NaAlSi}_3\text{O}_8$, enthalpy of fusion 8=21753
 NaAlSiO_4 , isomorph of high pressure NaAlGeO_4 , rel. to formation in earth's mantle 8=1678
 NaBD_4 , d.m.r. studies 8=18460
 $\text{Na}_2\text{B}_4\text{O}_7 \cdot 10\text{H}_2\text{O}$, borax, diffusion in SiO_2 films 8=4957
 $\text{Na}_2\text{B}_4\text{O}_7$, glass, Eu activated, luminescence 8=23061
NaBr, alkali halides, F-band peak, Mollwo relation 8=17688
NaBr single crystal, n. m. r. and quadrupole effects 8=14146
NaBr, water vapour adsorption on cleavage surface 8=17166
NaBr-KBr solid solutions, fundamental absorption 8=18549
 NaBrO_3 cryst., anisotropic chem. shift of Br 8=18457
 NaBrO_3 , γ -irrad., e. s. r. of paramag. centres 8=2372
 NaBrO_3 , nuclear quadrupole res. of Br^{81} 8=10991
NaBr:P radioluminesc. rel. to hole storage at centres, obs. 8=9625
 Na_2CO_3 , reactions during prep. of KCl pressed discs 8=14373
 $\text{Na}_2\text{Ca}_2\text{Si}_2\text{O}_9$, X-ray powder data 8=22030
 NaCaYF_6 , Nd^{3+} activated laser 8=446
 $\text{Na}_2\text{CdSi}_2\text{O}_6$ lattice struct., obs. 8=22031
 $\text{NaCl}(\text{Br})\text{O}_3$, rotatory dispersion in visible and u. v. regions 8=5623
NaCl-KCl system, thermodynamic studies 8=17092
 NaClO_3 cryst. in 1-bromonaphthalene, refl. second-harmonic intensity obs. 8=5611
 NaClO_3 , cryst. growth rate, rel. to supersaturation 8=21940
 NaClO_3 , n. m. r. of Na^{23} , thermally and acoustically induced transition probabilities 8=14152
 NaClO_3 , quadrupole relax. of Na^{23} , ang. depend. of transition probabilities 8=14161
 NaClO_3 , reflection spectrum, cooling effects 8=9555
 NaClO_3 , X-ray irradiated crystals, optical absorption 8=18548
 NaClO_4 aq. soln. with HCl, nucl. mag. relax. times 8=21726
 NaClO_4 solns., ion assoc. 8=21716
 NaCs , $^1\Sigma^+$ and $^2\Sigma^+$ potentials from total cross-section meas. 8=21091
 $\text{NaD}_2(\text{SeO}_3)_2$, ferroelec., growth 8=8420
NaF, alkali halides, F-band peak Mollwo relation 8=17688
NaF, assoc. with AlF_3 in saturated vapour 8=9692
NaF, F-aggregate centres 8=17686
NaF, ionic crystal, elastic constants, calc. 8=2062
NaF, thermoluminesc., thermal activation energies 8=18609
NaF, universal etch 8=1730
 $\text{Na}_2[\text{Fe}(\text{II})(\text{CN})_5 \cdot \text{NO}] \cdot 2\text{H}_2\text{O}$, Mössbauer absorpt. of Fe^{57} 8=1650
 $\text{Na}_2[\text{Fe}(\text{CN})_5 \cdot \text{NO}] \cdot 2\text{H}_2\text{O}$, i. r. spectrum in polarized light between 400-700 cm^{-1} 8=14248
 $\text{Na}_2\text{Fe}_2\text{O}_9$, prep., crystal structure and mag. props. 8=8540
 $\text{Na}_4\text{Ge}_2\text{Si}_2\text{O}_{15}(\text{OH})_2$, crystal structure 8=17402
 NaHCO_3 , H and Na n. m. r. 8=14153
 NaHF_2 , i. r. absorpt. study of lattice vibrations 8=5617
 $\text{NaH}_3(\text{SeO}_3)_2$, ferroelec., growth 8=8420
 $\text{Na}_2\text{HfSiO}_6$, phys. and luminesc. props. 8=9624
 Na_2HPO_4 hydrates, entropy and disorder at low temp. 8=17521
 $\text{NaH}_3(\text{SeO}_3)_2$ and $\text{NaD}_3(\text{SeO}_3)_2$, phase transitions, isotope effects in crystal symm. and nature 8=21849
 $\text{NaH}_3(\text{SeO}_3)_2$, second ferroelec. phase transition 8=2245
 $\text{NaH}_3(\text{SeO}_3)_2$, fundamental absorpt. edge near ferroelectric phase transition pt. 8=9548
NaI, absorption, in i. r., induced by monovalent impurities 8=9544
NaI, alkali halides, F-band peak, Mollwo relation 8=17688
NaI, atomic fluoresc. in photodissoc. 8=12069
NaI capture centres luminesc., heat treatment in O effects, obs. 8=23060
NaI, elastic constants temp. dependence 8=13591
NaI, elastic tensor of gradient elec. field induced by uniaxial stress, n. m. r. obs. 8=13014
NaI, i. r. vibrational absorption by U-centres 8=9557
NaI, isothermal annealing effect on dislocation density 8=17650
NaI, X-ray luminesc., effect of Cu impurity 8=23062
NaI: Tl capture centres luminesc., heat treatment in O effects, obs. 8=23060
NaI(Tl) crystal growth, effect of Cl^- ions 8=14327
NaI(Tl), fluorescent response function 8=5665
NaI(Tl), high-energy muon absorpt. energy loss and straggling 8=8776
NaI(Tl) phosphor, recomb. luminesc. 8=18611

Sodium compounds—contd

- NaI-Tl, photoluminesc. spectra, effect of X-irrad. and O-containing impurities 8=5666
NaI-Tl, single cryst., with oxygen-containing impurities, photoluminesc. and gamma ray response 8=18610
NaI(Tl) 64-channel γ -spectrometer probe, 0.05-9.6 MeV 8=20363
NaK, flowing through unbaffled rod bundles, heat transfer to 8=21649
NaK liq. alloys, ordering and excess entropies and energies 8=12843
NaK liq., structure and correl. by X-ray and n diffraction 8=12795
Na-K-NH₃ solns., liq.-liq. phase separation 8=8014
 $\text{NaMg}[\text{Cr}(\text{C}_2\text{O}_4)_2] \cdot 9\text{H}_2\text{O}$, vibronic spectra 8=14247
 $\text{NaMgF}_3 \cdot \text{Ni}^{2+}$ i. r. luminesc. emission 8=18626
 NaMnCl_2 , prep. and crystallographic props. 8=13138
 $\text{Na}_2\text{Mn}_2\text{Si}_2\text{O}_7$, mag. susceptibility between 1.7 and 300°K 8=9292
 NaN_3 , crystal structures of α and β forms on phase transform. 8=17387
Na-NH₃ solns., liq.-liq. phase separation 8=8013
Na-NH₃ solns., reactions with contaminants on surface of glass 8=21868
 NaNO_2 , dipole interaction and electronic polarizabilities 8=22655
 NaNO_2 , ferroelectric phase, n. q. r. 8=9473
 NaNO_2 , inhibition of steel corrosion by NaCl solns., 20°C 8=2517
 NaNO_2 molten, optical determ. of thermal cond. 8=21658
 NaNO_2 , molten, solvent props. 8=4538
 NaNO_2 , absorpt. spectra from 450-5700 cm^{-1} 8=9556
 NaNO_2 cryst. growth and dislocations, obs. 8=21957
 NaNO_2 , elec. resistivity rel. to other props including transforms and thermodynamic charac. 8=18191
 NaNO_2 , fused, complex permittivity 8=8101
 NaNO_2 molten, refr. index meas. by interferometry 8=4583
 NaNO_2 , permittivity, dielec. loss and d. c. conductivity, temp. depend. 8=2239
 NaNO_2 , X-irrad., electron-hole trapping 8=5105
 NaNiF_3 , i. r. spectra and lattice vib. anal. 8=2428
 $\text{Na}_2\text{O}-\text{B}_2\text{O}_3$ glass system, fraction of four-co-ord. B atoms present 8=21915
 $\text{Na}_2\text{O}-\text{BaO}-\text{SiO}_2$ glass system, internal friction 8=22383
 $\text{Na}_2\text{O} \cdot \text{GeO}_2 \cdot \text{B}_2\text{O}_3$ system, glasses and melts, structure 8=21605
 $\text{Na}_2\text{O}-\text{SiO}_2$ solutions, activities 8=21620
NaOH impurity in ice, dielec. dispersion obs. 8=18188
NaOH soln. with additives, rel. to stress-corrosion cracking of mild steel 8=22366
 NaPO_3 , colour centres and thermoluminesc. due to γ -irrad. 8=22234
 $\text{Na}_3\text{P}_2\text{O}_7 \cdot 10\text{H}_2\text{O}$, improved dimensions 8=17400
 $\text{Na}_2\text{S}_2\text{O}_8 \cdot 2\text{D}_2\text{O}$ cryst. dynamics of D_2O 8=8539
 $\text{Na}_2\text{S}_2\text{O}_8 \cdot 2\text{H}_2\text{O}$ cryst. dynamics of H_2O 8=8537
 $\text{Na}_2\text{S}_2\text{O}_8 \cdot 2\text{H}_2\text{O}$ crystal structure rel. to H_2O dynamics 8=8538
 NaSbF_6 , e. s. r. of X-irrad. cryst. 8=5538
 Na_2SiO_3 , improved dimensions 8=17400
 α - $\text{Na}_2\text{Si}_2\text{O}_6$ crystal structure 8=13278
 $\text{Na}_2\text{Si}_3\text{O}_8$, crystal structure 8=1801
 $\text{NaTi}_2\text{Al}_3\text{O}_{12}$, crystal structure 8=1800
 $\text{Na}_2\text{Ti}_2\text{O}_{15}$, crystal structure 8=22029
 Na_2Ti , crystal structure rel. to Ti-Ti bonding 8=17399
 Na_2Ti , structure and bonding model 8=8536
 $\text{Na}_{0.33}\text{V}_2\text{O}_6$, elec. props. 8=22601
 $\text{Na}_2\text{ZnSiO}_4$, crystal structure 8=17401
 Na_2ZrCl_6 , thermal props. 8=8640
 $\text{Na}_7\text{Zr}_6\text{F}_{31}$, crystal structure 8=13276
 $\text{Na}_w\text{Zr}_x\text{Si}_y\text{O}_z$ ($w = 2, 4; x = 1, 2; y = 1, 2, 3; z = 5, 7, 12$), phys. and luminesc. props. 8=9624

 ionic, polarization capacitance, comments 8=22509
 metal to insulator transitions 8=22451
 methane, slow neutron scatt., rotational hindrance effect 8=13038
 micro, geometric and kinematic properties 8=6105
 nonadiabatic transitions 8=13039
 non-conductors band struct. calc. from spectra 8=8915
 nuclear and electron spin polarization by hot electrons 8=1638
 partition function for cryst. 8=17507
 rare-earth chelates, exchange-reson. energy transfer overlap integrals calc. 8=1656
 rigid disks at high density 8=15003
 semiconductors band structure, Green's function method 8=8913
 statistical model, appl. to metals and solid solns. 8=4665
 surface elastic waves, excitation by transient surface heating, piezoelectric and nonpiezoelectric 8=17720
 II-VI compounds, band structure obs. and calcs., review 8=8911
 vibration of loaded elastic continuum 8=23
 X-ray spectra rel. to atomic energy levels and excitons 8=9492
 Ar, shock compression, Thomas-Fermi-Dirac theory 8=16994
 KCl crystals, electric dipole-lattice relaxation times for OH^- dipoles 8=8202
- Solions.** See Acoustic transducers.
- Sols**
 See also Colloids; Sedimentation.
 birefringence due to electric or magnetic fields 8=12878
 ferromagnetic, mag. field prod. rotation 8=16622
 thoria, particle size meas. by scatt. 8=12958
 Au, colloidal radioactive conc. determ. from spectrophotometric data 8=16910
 $ZnS: CdS$, Cu phosphor-silicic acid, adhesion to glass, obs. 8=8157
- Solubility**
 See also Phase equilibrium.
 cristobalite, solution and trapping of He and Ne 8=8247
 cryolite melts, of Al, comp. and temp. dependence 8=21618
 cyclohexane, gases in solution, rel. to entropy 8=4536
 cyclopropane in polyethylene 8=17188
 diffusion in sphere, and diffusivity with error anal., calcs. 8=16813
 gas bubbles dissolving in liquid 8=12763
 iron alloys saturated with oxides, liquid, of oxide rel. to first-order interactions 8=16797
 method for determining structural charact. of metal alloys 8=17001
 oxygen, compressed, of anthracene, benzene and naphthalene rel. to complex stabilization 8=2499
- Solubility—contd**
 phenol-aqueous sodium salicylate- α -methyl naphthalene, solubility and equilb. data 8=4641
 polyvinyltoluene + phosphors, solid solns, solubility of CO_2 8=20386
 steel, dissolution of Nb carbon-nitrides and their precip. and age hardening effect 8=1660
 tridymite, solution and trapping of He and Ne 8=8247
 Ag, liq. of H 8=21617
 Ag-rich, solid solutions, limits 8=8240
 AgCl in water rel. to liquid structure 8=21608
 Al_2O_3 , of MgO ; TiO_2 and $MgTiO_3$, in H_2 atmos., temp. dependence 8=21818
 Ar, in H_2O -methanol system 8=12809
 B, in graphite, 1800-2500°C 8=17006
 CO_2 : molten salts, influence on current efficiency in Al electrolysis 8=12805
 $CaCO_3$ aragonitic oolites in sea water, pressure coeff. obs. 8=8012
 Cd in $CdCl_2$, radiometric method 8=21615
 Cr_2O_3 , in $Pb(Zr-Ti)O_3$, limit 8=13043
 Cu in InAs 8=17011
 Cu-Co liq. alloys, solubility and activity coeff. of O 8=8011
 Fe alloys, of S at 1000°C, Cr, Cu, Ni, V effect 8=17012
 γ -Fe, of Nb from C content analysis at temps. 950-1050°C 8=4535
 Fe in TiO_2 , X-ray examination 8=13042
 in Fe-50%Ni of metallic impurities rel. to mag. props., obs. 8=22825
 in Fe-Ni system, α and γ solid solubilities rel. to phase diagram, e microprobe obs. 8=17034
 GaSb, of Li, and diffusion 8=13409
 H in U and $\langle U, H \rangle$ solid soln. comp., ≤ 150 atm and 860°C 8=8190
 H_2 in α -Zr, Zircaloy-2 and Zircaloy-4, terminal solubility and partitioning 8=8249
 H_2 , in Zircaloy-2 and Zr-2.5wt.%Nb, thermal diffusion obs. 8=8250
 He³ in He⁴, and 0°K limiting solubility, 1.25-0.025°K 8=6230
 In in Fe 8=8160
 KBr-KI solid solns., large gap at room temp. from free energy of formation data 8=16998
 KCl of Pb activator, OH^- ions effects, obs. 8=21824
 KCl of Tl activator, OH^- ions effects, obs. 8=21824
 KX, (X = Cl, Br, I), of H_2O mols, mechanism 8=4953
 $LiNO_3$ molten, water solubility at 230-280° up to 30 torr 8=12806
 $LiNO_3 + NaNO_3$ (or $+ KNO_3$) molten, water solubility at 230-280°, up to 30 torr 8=12806
 M hydrides, M = Pd, V, Nb and Ta, of H_2 solubility isotherm in hydride phase 8=1924
 Mo, of C, limit, and diffusivity 8=17007
 NaCl of Ni activator, OH^- ions effects, obs. 8=21824
 $NaNO_3$, molten, solvent props. 8=4538
 NbC in 20%Cr-25%Ni stainless steel 8=4689
 Nb-Hf, (-W), (-Mo) alloys, interstitial solid solubilities of O, N, C 8=17015
 Nb-Mo-C alloys, solid, phase diagram, constitution 8=8275
 Ni-Cu alloys, solid, of H 8=21826
 O atoms, in b.c.c. Fe, rel. to temp. 8=22150
 O in liquid Ag-Cu alloys 8=16800
 O in Na, data analysis 8=16798
 PbTe-Fe pseudobinary section of Fe in PbTe and PbTe in Fe 8=17097
 Pu in Fe 8=13041
 Sn in liquid Na 8=21621
 in Ta-O-C solid solns. of CO , 1700-2000°C 8=21787
 U cpds, solid-solubility relationships 8=8248
 V, of H, rel. to ductility drop 8=5088
- Solution energy.** See Heat of solution.
- Solutions**

 absorption on solids from non-ideal solns. 8=8331
 activity coeffs. calc. from Brillouin scatt. 8=4576
 activity coeffs., meas. by gas chromatography 8=5760
 alkali halides in aq. soln., influence on struct. of water 8=4527
 alkali metal- NH_3 , phase separation model 8=12808
 alkali nitrates- $AgNO_3$, molten ternary systems, thermodynamics 8=21648
 n-alkanes, binary mixtures, thermodynamic props. 8=16791
 n-alkane mixtures, congruence principle appl. to viscosity 8=8024
 anions, change in chem. potential on transfer from protic to dipolar aprotic solvents 8=14418
 aqueous, dissociation computation from ultrasonic relaxation study 8=18712
 aqueous electrolytic, sound velocity at 1160 Hz rel. to molar conc. 8=16828
 aqueous, frozen, electron hole pairs 8=8950
 aqueous, of macromolecules, freezing 8=21761
 aqueous, non-polar gases, freezing 8=1618
 aqueous, of strong electrolytes, far i. r. absorpt. spectra 8=21679
 bimolecular rate constants for reaction of e, H and OH 8=2510
 binary mixtures elec. cond. rel. to dielec. const. 8=4609

Solutions—contd

bromides, aq. solns., partition coeffs. by thermal diffusion 8=4559
 n-butanol complexes in amine solns., dipole moments 8=12909
 butyl alcohol-water mixtures, hypersonic meas. 8=4572
 competitive solvation of H^+ in water-methanol vapour 8=14443
 concentration meas. using reactance meter 8=5733
 copolymers, effect of interaction between unlike segments 8=4541
 copolymer, molec. dims. 8=12811
 critical mixture, conc. fluctuations, direct visual obs. 8=21616
 d.c. transport coeffs., effect of non-Brownian motion 8=21718
 dielectric properties, criticism of Debye and Onsager theories 8=8102
 di-tertiary-butyl nitroxide solns., spin exchange 8=8121
 dye, laser, wavelength dependent time development of intensity 8=20005
 EDTA chelates of Cd^{2+} and Hg^{2+} , comp. study by ultrasonic vel. meas. 8=23170
 electrolytes in alcohols, dielec. relax. 8=8100
 electrolytes, intermediate conc., statistical theory 8=14417
 electrolytes, n-component, isothermal vector transport 8=8046
 electrolyte, self-thermal diffusion 8=21640
 electrolytes, Zwanzig theory of dielec. friction 8=8099
 electrolytic, two-structure model 8=23142
 eosin, fluorescence spectrum, effect of conc. 8=21701
 ethanol- H_2O , with electrolytes in soln., cond. 8=4604-5
 gases in liq., density difference up to 1 part in 10^8 meas. 8=16803
 graft copolymers, viscosity 8=8027
 guar gum in tap water, aging and degradation from Pitot tube obs. 8=12744
 heat of soln. calorimeter with Peltier cooling for operation at const. temp. 8=9677
 iodine in iodides and bromides, effect on absorption spectra of polyvinyl alcohol films 8=5650
 ion-exchange equilibria in mixed solvents 8=18647
 ion interactions, short-range non-Coulombic rel. to thermodyn. and electrokinetic props. 8=21602
 isobutyric acid- H_2O system near crit. mixing pt., correl. effect in conc. fluctuations 8=12882
 liquid-liquid mixtures, ordering 8=21608
 liquid metal-oxygen, solid electrolytic cell for measuring equilib. press. 8=16951
 liquid mixtures, extension of Widom model 8=12785
 liquid scintillation counting, new efficient solutes with high solubility 8=15637
 macromolecular, props. determ. by distillation 8=8018
 macromolecules in soln., effects of solvent on X-ray scatt. 8=21205-6
 metals, molten, in m.h.d. convertor, thermodynamics of cycles 8=294
 methylene blue, water induced dimerization, absorpt. spectrum obs. 8=8123
 methyl viologen cation, aq. and alcoholic solns., e.s.r. spectra, rel. to water induced dimerization 8=8123
 mixed, intermol. electronic transitions 8=8010
 molten salts containing water, quasi-lattice model of hydration 8=8015
 molten salts, ternary systems, thermodynamics 8=21648
 myoglobin effects of solvent on X-ray scatt. 8=21206
 non-electrolyte, structural effects 8=16785
 n.m.r. solvent effects, molec. interactions 8=12935
 of organic mols., two-photon fluoresc. excitation 8=4592
 photoelectric control for rotary power meas. 8=15549
 photoluminescence band intensity distrib. rel. to excit. freq. 8=21695
 polar, proton shielding, role of reaction field 8=12782
 polyacrylamide in tap water, aging and degradation from Pitot tube obs. 8=12744
 polydisperse, sedimentation equilib. 8=1531
 polyelectrolytes, osmotic coeffs. meas. during phase separation 8=16817
 polyelectrolytes, osmotic press. from e.m.f. meas. 8=16818
 polyelectrolytes in salt solns., excluded vol. effect 8=12810
 polyelectrolytes, 2nd virial coeff. 8=4540
 polyelectrolytes, thermodynamics of potentiometric titration 8=5736
 polyelectrolytes, u.s. vibr. potentials 8=8061
 polyethylene in soln., n.m.r. 8=16891
 polyethylene in tap water, aging and degradation from Pitot tube obs. 8=12744
 polymer, conc., viscosity dependence on molecular weight and concentration 8=8026
 polymer, critical opalescence 8=21669
 polymeric, diffusion for solutes of low molecular weight 8=1540
 polymer, effect on resistance of circular cylinder in turbulent flow 8=16754
 polymer, equilib. distrib. between soln. and small voids 8=16801
 polymers, flow in pipes, drag reduction 8=1511
 polymers, flow through curved pipes 8=21570

Solutions—contd

polymer, intrinsic viscosity rel. to sedimentation 8=12823
 polymer, Newtonian viscosity 8=8025
 polymers, optical activity 8=8065
 polymer, quasi-elastic scattering, effects of hydrodynamic interactions 8=4542
 polymers, second osmotic virial coeff. calc. using lattice model 8=8039
 polymer, 2nd virial coeff., cryometric determ. 8=8017
 polymers, solvent evaporation kinetics at film formation 8=12972
 polymer, theory of expansion of linear chain 8=4264
 polymer, viscosity theory tests 8=8029
 polymer, viscous flow, conc. depend. of activation energy 8=16807
 polymethacrylic acid in alcohol-water mixtures 8=12822
 polymethine dyes, liquid solutions, stimulated light radiation 8=16848
 poly(methyl methacrylates) in soln., n.m.r. 8=16890
 polystyrene in chlorinated biphenyl solns., dynamic mech. props. 8=12818
 polystyrene solns., excluded-volume effect 8=8019
 polystyrene, viscoelastic props., mol. wt. depend. 8=8030
 propanol- H_2O mixtures, cond. with HCl in soln. 8=4607
 propanol- H_2O mixtures, cond. with NaCl in soln. 8=4606
 PVC solns., light scatt. 8=16850
 quaternary systems, equilibria 8=1529
 rare earth chelate for de-excitation meas. of organic molecules 8=16333
 reactions in, under pressure 8=14356
 rhodamine 6G and B, and mixtures, laser, mode locking 8=20009
 rubber, in amines, viscosity obs. 8=21625
 scaled-particle theory 8=4534
 second virial coeff., cryometric determ. 8=8017
 solvent composition and ion pair association constants 8=8009
 solvent effects in u.v. spectra 8=1571
 strong electrolytes, polarization contribs. to thermodynamic props. 8=4599
 tetracyanoquinodimethane anion, aq. and alcoholic solns., e.s.r. spectra, rel. to water induced dimerization 8=8123
 uranyl nitrate, organic soln., complexing, i.r. spectrum study 8=21619
 urea and inorganic salts, v.p. meas. 8=12996
 volume change on mixing simple liqs., corresponding states calc. 8=4537
 $AlCl_3$, p.m.r. determ. of coord. no. in aq. mixtures 8=16888
 B_2O_3 - SiO_2 system, metastable immiscibility 8=21748
 Bi-Sn eutectic alloys, of type 304 stainless steel, dissolution kinetics, convective-diffusion study 8=4558
 CH_3OH - H_2O , sp. ht. using calorimeter with adiabatic shell 8=21647
 $CaCO_3$ in H_2O , equilib. and zeta pot. rel. to surface charge zero point, obs. 8=16903
 Co^{2+} ion hydration, n.m.r. 8=12937
 H_2O , molec. dia. from solubility meas. 8=21606
 I_2 molten salt solns., elec. cond. 8=21719
 KCl, aq. solns., elec. cond. under high press. 8=12922
 K_2O - SiO_2 , activities 8=21620
 $LiClO_4$ in acetonitrile-dioxane, solvent-solute interaction 8=8108
 $LiClO_4$ in H_2O -dioxane, solvent-solute interaction 8=8107
 $LiClO_4$ in methanol-dioxane, solvent-solute interaction 8=8108
 Li_2O - SiO_2 , activities 8=21620
 $MnSO_4$ in water-glycol, elec. cond., viscosity effect 8=12921
 NH_3 , solvent effect on bending vibr. 8=21093
 NaCl aqueous, Cu anodic behaviour 8=2532
 Na-K- NH_3 solns., liq.-liq. phase separation 8=8014
 Na-NH₃ solns., liq.-liq. phase separation 8=8013
 Na_2O - SiO_2 , activities 8=21620
 Ni(II) complexes of glycine peptides in aqueous soln., form. 8=9664
 Pt, liquid, dilute, containing Ag, Au or Pt, thermodynamic properties 8=8043
 SO_2 , oxidation, effect of ullage 8=23111

 carbon, chemisorption of O_2 8=5725
 chemisorbed species in catalytic reaction, dynamic treatment 8=9701
 chemisorption, meas. apparatus 8=5723
 chemisorption, molec.-orbital model 8=18695
 chemisorption, surface mobility parameter 8=14400
 chemisorption and physisorption, conference, Rome, March 1967 8=8333
 cubic lattices, of gas atoms, interaction potentials rel. to 6-12 pairwise model 8=8332
 desorbed molecules, angular distrib. in physisorpt. processes 8=17146
 desorption, activation energy distrib., mathematical exam. 8=21896
 desorption from graphite of Xe captured by nuclear recoil 8=4017

Sorption—contd

- diffusion-controlled, in heterogeneous systems 8=17147-9
 dye molecules 8=17149
 electrosorption of neutral substs. 8=9716
 emulsion polymerization, free radical desorpt. and readsorpt., rel. to kinetics 8=14415
 gases, Bayard-Alpert gauge modification 8=16732
 glass, desorption of O_2 by electron bombardment 8=13945
 inconel, anode, desorption efficiency meas. 8=17167
 kovar, anode, desorption efficiency meas. 8=17167
 laminar, flow instability due to film of adsorption 8=7974
 liquid phase adsorpt. fractionation in fixed beds, anal. 8=17151
 mechanism model 8=4450
 metals, of active gases, bond strength and mean adsorpt. times 8=14399
 metals, desorption of multiple additives, rel. to thermionic converters 8=17154
 metal, electron density near chemisorbed atom or molecule 8=8908
 metal films, adsorbate binding state characterization 8=14398
 metal films of gases, evaluation of sticking probability without gas pressure meas. 8=14397
 metal surfaces, oxygen chemisorption 8=9703
 methane in picture c. r. t., effect of silicate binder residues 8=15325
 neopentane-D exchange, desorption effects 8=23083
 organic cpds. and superconductors, interaction 8=9668
 Penning pumps, influence of pre-evacuation cycle 8=16725
 polyethylene, drawn and undrawn, of organic vapours 8=8349
 pre-exponential factor of desorption, energy variation due to localized vibration mode 8=17153
 semiconductor chemisorption, test for no. of atoms 8=13786
 silica, of Ar, low temp. physisorpt. process and mean adsorpt. time 8=17172
 silica gel, of benzene, change in dielec. behaviour of benzene on gel purification 8=1663
 silica gel, purified, of nitrogen, rel. to modification of gel struct. 8=1663
 steel, stainless, anode, desorption efficiency meas. 8=17167
 steel surfaces, stainless, electron-induced desorption of gas 8=17164
 surface active monolayers on H_2O substrate, reduction in gas desorption 8=12830
 surface reactions exam. by simultaneous X-ray emission and electron diff. 8=8290
 thermal desorpt. of inert gases from W and Au 8=17701
 transition metals with adsorbed CO, entropy changes on desorption 8=17174
 in vacuum gauges, Bayard-Alpert-Redhead, e desorption effects 8=7960
 Ag chemisorpt. props. rel. to surface struct., catalytic oxidation effects, obs. 8=18706
 Al surfaces, (111), (100), (110), atomically clean, chemisorpt. of O_2 8=4728
 Au, thermal desorption of inert gas ions 8=9280
 Ba films, of methane 8=17160
 Ba film, of O_2 in colour picture c. r. t. 8=15324
 CO adsorbed on transition metals, entropy changes on desorption 8=17174
 CO, chemisorbed on Pt-Aerosil surfaces, i. r. spectra 8=9704
 CaO, neutron or γ irradiated, chemi- of O_2 , rel. to surface paramag. centres 8=5724
 H, chemisorption on Re 8=23126
 H_2 , definition in metals 8=9743
 H_2 desorbed from Ti anode, discharge 8=21227
 H_2 desorption from Ni polycrystals 8=17170
 Ir on SiO_2 , chemisorpt. of HCN, C_2N_2 and BrCN, i. r. spectroscopy 8=23127
 Kr, desorption spectrum, rel. to He⁺ bombardment on glass (with trapped Kr) 8=17173
 Mg-Fe mixed hydroxides, cyclohexane desorpt. rel. to pore struct. 8=17023
 Mg-Fe mixed hydroxides, N desorpt. rel. to pore struct. 8=17023
 MgO, neutron or γ irradiated, chemi- of O_2 , rel. to surface paramag. centres 8=5724
 MnO_2 , electrolytic, of N, O, Ar and Ne, rel. to pore struct. and area 8=21904
 Mo, of CO, physical and chemical processes from study of low energy electron interactions 8=18702
 N_2 desorption kinetics, from Fe- N_2 solid solns. 8=1704
 Na mordenite, synthetic, sorption of methane, ethane, propane and butane 8=13109
 Ni, anode, desorption efficiency meas. 8=17167
 Ni polycrystals, desorption of H_2 8=17170
 Ni on SiO_2 , chemisorpt. of HCN, C_2N_2 and BrCN, i. r. spectroscopy 8=23127
 O_2 -Nb system at very low pressure, ad-, ab- and degassing 8=4763
 O_2 from W, field desorption, inert-gas enhancement 8=17176
 O from W surface, electron-stimulated desorption, mechanism 8=17177
 Pt, of CO rel. to binding states 8=18701

Sorption—contd

- Si and SiO_2 surfaces, fluoride chemisorption obs. by F^{19} in HF etches 8=18697
 SrO, neutron or γ irradiated, chemi- of O_2 , rel. to surface paramag. centres 8=5724
 Ta + N_2 system, adsorpt.-absorpt. kinetics 8=18698
 Ti, of N_2 , sticking coeff. obs. 8=17175
 TiO_2 , H_2O desorpt. kinetics, 25-100°C 8=18703
 W cathode, carbon adsorbed, field desorption effect 8=2276
 W crystal, of O_2 , mechanism and kinetics 8=8348
 W, desorption of CO, by electron impact 8=21911
 W, desorption of CO, NO and O by electron impact 8=21912
 W films of N_2 , sticking probability temp. dependence 8=14396
 W film, sorption and interact. of H_2O vapour, rel. to catalytic activity 8=14405
 W single crystals, chemisorption of diatomic molecules, work function studies. 8=18700
 W surface, desorption of rare earth elements 8=17171
 W surface, O_2 sorption, study by mass-spectra 8=4767
 W, of Th, desorption by high energy electrons 8=1712
 W, thermal desorption of inert gas ions 8=9280
 ZnO crystals, effect oxygen chemisorption on electrical conductivity 8=5160
 ZnO_2 , in cellulose membranes 8=21645
 ZnO, of formic acid, i. r. spectra 8=18705
 ZnO rel. to radicaloluminesc. excit., sorption-recomb. processes 8=9635

 - pressure gauges, airstream adsorption errors 8=5838
 - p energy meas. for auroral studies 8=5837
 - p spectrometer, e-insensitive 8=6938
 - quartz sphere with superconducting Nb for satellite instrumentation and expts. 8=17984
 - radiation meas. data handling system 8=10067
 - r.f. sources in ionized medium, behaviour 8=12495
 - reactor, with thermionic converter, parameters 8=1123
 - reactor, thermionic, criticality and n flux density 8=1116
 - reactor, thermionic as power supply 8=1115
 - reactor, thermionic, temp. distrib. 8=1117
 - satellites, artificial, electrostatic probe theory 8=2764
 - solar cells, calc. of optimum grid 8=3160
 - solar cell systems for UK 3 8=19734
 - solar energy, system of acquisition 8=10858
 - spark chamber, digitized 8=6687
 - spark chamber, magnetic core, for satellites 8=6688
 - Surveyor V, Si detector for chemical analysis of lunar surface 8=23463
 - telescope in satellite, thermal deformations in mirror 8=480
 - CdS solar cell deployable rigid-frame array, performance obs. 8=10845
 - CdTe solar cell roll-up array 8=10857
 - H^0 or $H^+ + H^+$ fluxes, 1-10 keV, an energy independent detector 8=7381
 - Si horizon sensors, in rel. to earth reflectivity 8=18834
 - Si solar cell deployable rigid-frame array, performance obs. 8=10845
- Spallation.** See Nuclear spallation.
- Spark chambers**
- data handling system with piezo-electric microphones 8=3484
 - decision-making, for scatt. preselection 8=20225
 - discharge mechanism, image converter obs. 8=11326
 - electronic system, modular 8=6686
 - emulsion for 15 GeV cosmic ray photon det. 8=20594
 - filmless system with on-line computer 8=3486
 - film scanner, cathode ray, computer directed 8=3482
 - magnetic core, suitable for satellites 8=6688
 - with magnetostrictive line recording of track co-ords. and angles 8=11327
 - magnetostrictive, thin-wire, large dimension 8=6684
 - multiplate, and 'curtain-discharge' chambers, simplified systems 8=624
 - multiplate, for meas. of elastic π^+ backward scatt. 8=775
 - multiwire monitor and readout system by magnetostrictive delay line 8=625
 - piezoelectric readout device, matching and backing problems 8=3485
 - space research 8=6687
 - spark gap, triggered 8=623
 - streamer, ionization from particle track brightness meas. 8=15646
 - streamer tracks, ang. depend. of brightness 8=20226
 - vidicon tubes for automatic recording 8=3483
 - wire, cylindrical, for p-p scatt. 8=11329
 - wire, semi-popular review 8=626
 - Al, thin foil chamber, descrip. 8=6685
 - He, for α det. with alcohol vapour lowest pressure for spark 8=11328
- Spark counters.** See Counters/spark.
- Sparks, electric**
- See also Breakdown, electric; Lightning.
 - air, by focused laser beam, development 8=4292
 - air and water vapor mixtures 8=12412
 - between parallel plates, field distortion, calc. 8=21248

Sparks, electric—contd

- discharge in oil, electrode cavity configuration rel. to pressure 8=21249
 discharge shape in dielectric-bounded cavity 8=7681
 discharge, surface, as light source for laser pumping 8=6412
 electrode erosion photography 8=16423
 light source for atomic absorpt. anal., time resolved 8=18783
 machining device for metal sectioning 8=14905
 machining of micro-notch prototype 8=23772
 preionized gas gap, study 8=7671
 quartz films, discharge along surface 8=7682
 spark-gap-switch, de-ionization detection with exploding wire 8=7679
 spectrochemical anal. of steel, sample condition 8=2548
 steel emission analysis, decomp. and inter-element effects 8=14392
 three-electrode gap, switching characs. 8=7680
 triggered, for spark chambers 8=623
 switching using parallel bank of spark gaps, performance 8=273
 underwater, energy balance and sound radiation 8=12863
 BaTiO₃, films, discharge along surface 8=7682
 CaTiO₃, films, discharge along surface 8=7682
 H₂, high-current spark channels, voltage drop, expansion rates etc. 8=12410
 He-alcohol chamber, lowest pressure for α det. 8=11328
 from Nd laser beam, weakly focused 8=3337
 TiO₂ films, discharge along surface 8=7682

Specific heat

- See also Thermodynamic properties.
 adsorbates, isotherm analysis 8=13102
 at critical point, lattice gas model 8=4638
 ferromagnetic metals, rel. to anomaly in elec. resist. near T_c 8=13985
 gases meas., capillary flow calorimeter 8=7921
 Grüneisen parameters of some II-VI compounds 8=17537
 heat-resistant materials, meas. device under cooling conditions 8=251
 inequality rel. to expectation value of variable which varies rapidly with temp. 8=6099-6100
 Ising model, distrib. of roots of partition function in complex temp. plane 8=19443
 liquid-gas supercritical region, C₁ and C₂ extrema calc. from phenomenological theory 8=12978
 magnetic alloys, dilute, low temp. props. 8=18289
 metals, Debye temp. rel. to energies of vacancies form. and diffusion 8=17509
 metal halides and oxides, i.r. absorpt. freq. and charact. Debye temp. 8=14190
 porcelain, rel. to structure 8=1893
 solid solns., anomalies 8=8634
 thin film, specific heat, size effects in fermion model 8=10656
 Cu, low-temp. calorimetric standard 8=15127
 CuK₂(SO₄)₂·6H₂O, heat capacity below 1°K, meas. 8=13372
 D, polycrystalline, Debye temp. calc. from sound velocity meas. at 2 and 16°K. 8=17499
 KCl:OH⁻, below 4°K 8=1874
 K₂Fe(CN)₆, heat capacity below 1°K, meas. 8=13372
 Li plasma, calc. 8=12462
 LiCl, Debye temp. meas. 8=2058
 Mn(HCOO)₂·2H₂O, heat capacity between 1.4 and 20°K 8=13375
 Mn(NH₄)₂(SO₄)₂·6H₂O, heat capacity, near critical point 8=13376
 Pd:Ni alloys, correl. with paramag. susceptibility enhancement 8=18300
 RbCl, Debye temp. meas. 8=2058
 Sr_{0.925}Ba_{0.075}TiO₃, heat capacity, 0.3 to 4°K 8=1877
 TaC, heat content valves, entropy 8=8643
 TiNi, heat capacity 8=4935
 TlBr, Debye temp. obs. 8=2068
 β -UH₃, ht. capacities from 1 to 4-23°K 8=8644
 WC, heat content valves, entropy 8=8643

gases

- ethyl ketone, ethyl propyl ketone, methyl isopropyl ketone, methyl phenyl ether, vapour heat capacity and heat of vapourization 8=1471
 Cr measurement, influence of small volume changes 8=21508
 Xe, heat capacity in critical region, obs. 8=21513

liquids

- condensed substance, rel. to sound velocity 8=1551
 diethyl phthalate 8=1870
 Fermi liqs., nearly ferromag., re-evaluation of spin fluctuation contrib. 8=2995
 metals, heat capacity 8=1549
 1,3,5-tri- α -naphthylbenzene 8=4563
 Au-Si alloy, near eutectic composition 8=1548
 CH₃OH-H₂O solutions, using calorimeter with adiabatic shell 8=21647
 He II, logarithmic singularity 8=15150
 He³, Cr, and Fermi liquid quasiparticle self-energy 8=3117
 He³ meas. 8=3118
 He³-He⁴ mixture, interpolation between isotopes 8=3118

Specific heat—contd**liquids—contd**

- K₂ZrCl₆ 8=8640
 Li₂HfCl₆ 8=8640
 Li₂ZrCl₆ 8=8640
 Na₂ZrCl₆ 8=8640
 P₄S₁₀, heat capacity, 560°K to 720°K 8=4933

solids

- absorbent-adsorbate systems, heat capacity and length changes, simultaneous obs. using new calorimeter 8=6221
 antiferromagnets in strong mag. fields, spin sp. ht., theory 8=18369
 carbon steels, at 2 to 20°K 8=8639
 cryostat meas., 0.05 \rightarrow 2°K 8=22112
 diamond-like, ht. capacities from chain hetero-dynamism 8=17515
 Debye temp., vacancy formation and migration energy dependence 8=1865
 diethyl phthalate, cryst. and glass 8=1870
 electrical conductors from 25 to 900°C by pulse calorimetry 8=4927
 ferromagnet, dilute, critical behaviour 8=9307
 heat capacity meas. in adiabatic vacuum calorimeter, use of charcoal adsorpt. pump 8=17511
 Heisenberg ferromagnet, semi-infinite, surface effects 8=2303
 ice, amorphous and hexagonal 8=21846
 Kapitza conductance, depend. on Debye temp. of solid, exptl. evidence 8=10811
 magnetic alloys, dil., calcs. 8=13367
 magnetic alloys, rel. to Kondo model 8=17510
 metals, at high temp., meas. of temp. depend. 8=1864
 noble transition elements and alloys, electronic, and supercond. and mag. susceptibility 8=13753
 noble transition elements and alloys, and superconductivity and mag. susceptibility 8=13752
 non-cubic solids, heat capacities 8=22111
 organic, calc. of barriers to internal rotation 8=1221
 phenanthrene heat capacity anomaly obs. 8=13378
 from phonon freq. meas. calcs. 8=22113
 polyethylene, ht. capacity 2.5°-30°K 8=1875-6
 polymeric, Grüneisen number 8=1866
 polyurethanes, linear, temp. depend. of heat capacity 8=22110
 Pyrex glass, 0.4°-4°K in 0-90 kG fields 8=17525
 quartz, Debye temp. meas. \sim 1-4°K 8=4934
 rare earths, hyperfine interaction meas. 8=17514
 rare earth metals, 3 to 25°K, rel. to mag. props. 8=17513
 rare-earth, polycryst., Debye temps. and elastic moduli, 4.2 and 300°K 8=2057
 singularity in second order phase transitions using complex temp. plane 8=13365
 solid solns., binary metallic, Debye temp. calc. 8=1867
 superconductors with strong electron-phonon interaction 8=17508
 superconductors, transition point calc. 8=13745
 superconductors, two-dimensional 8=17522
 1,3,5-tri- α -naphthylbenzene, glassy and cryst. 8=4563
 wave statistics, applied to Debye's theory, and Schrodinger eqn., Heisenberg force 8=2982
 Ag, heat capacity, temp. dependence, effect of crystal lattice defects 8=13368
 Ag₂Al, Debye temp. calc. from elastic constant meas., 77-700°K 8=5040
 Ag-Au alloys, electronic, mag. susceptibility, electron states variation 8=13970
 α -AgCd alloys, from 1 to 4°K 8=8637
 α -AgPb alloys, from 1 to 4°K 8=8637
 Al, heat capacity between 2.7 and 20°K 8=22114
 Al, heat capacity and phonon-frequency distrib. 8=1868
 AlF₃, anhydrous cryst., high temp. 8=4929
 Ar, at T=0°K, anharmonic parameters of Debye charact. temp. 8=13594
 Au, heat capacity, temp. dependence, effect of crystal lattice defects 8=13368
 AuCu₃, rel. to atomic characteristic temp. 8=13029
 Au₄V, 1.5-60°K 8=4930
 CdS, elastic const. and Debye temp. calc. at 0°K 8=13542
 Ce ethyl sulphate, Schottky anomaly and spin-phonon coupling 8=8636
 Co, near Curie temp., from magneto-caloric effects 8=9337
 CoCr₂O₄, in 80-273°K range 8=17516
 Cr-Mo alloys, and Hall effect meas., between 125-625°K rel. to comp. 8=4931
 Cs metal, ht. capacity, 2°-4°K 8=13374
 CsCl, and dispersion curves, using shell model 8=8610
 Cu, Debye temp. calcs. from X-ray transmission temp. dependence (77-377°K) 8=14210
 Cu, for low-temp. calorimetry, atomic heat meas. 8=17517
 Cu formate tetrahydrate, anomalies at antiferroelectric transition pt. 8=8638
 Cu, heat capacity, temp. dependence, effect of crystal lattice defects 8=13368
 Cu-Au alloys, α -phase, electronic, mag. susceptibility, electron states variation 8=13970
 Cu-Ni alloys, anomalous, at low temps 8=22118
 Cu₂O, Debye temp. calc. from elastic constants 8=1869

Specific heat—contd

solids—contd

- Eu, ht. capacity 5°-300°K 8=17518
 Fe, electronic sp. ht. calc. by band model 8=4932
 FeNH₄(SO₄)₂·12H₂O, and mag. susceptibility calcs. at very low temps. 8=13370
 Fe-Ru alloys, h.c.p., rel. to electronic states density 8=13369
 Ga, near 1.7°K, no anomaly, rel. to absence of mag. transition 8=1871
 GdCl₃·6H₂O heat capacity singularities below 1°K 8=22115
 Gd₂(SO₄)₃·8H₂O heat capacity singularities below 1°K 8=22115
 KCl, 0.05 → 2°K, cryostat obs. 8=22112
 KCoF₄, heat capacity, 80°-300°K 8=17519
 KD₂PO₄, near Curie point (-70°K) 8=1873
 KF, Debye temp. and lattice energy calc. from elastic constants meas. 8=2056
 K₂MoCl₆ rel. to mag. ordering, 1.5-20°K 8=1872
 K₂ZrCl₆ 8=8640
 LaH₂, 1.3-20°K 8=13373
 Li₂HfCl₆ 8=8640
 Li(NH₂)₂, ht. capacity, 2°-4°K 8=13374
 Li₂ZrCl₆ 8=8640
 Mg-In alloys, rel. to ordered and disordered transformation energy 8=13072
 MgO, from 1.2 to 36°K, and Debye θ as function of temp. 8=22116
 α -Mn, comparison with α -Pu 8=17512
 Mn(NH₄)₂(SO₄)₂·6H₂O, 1°-4°K in mag. fields 8=17520
 ND₂Br, ht. capacity 17°-300°K 8=22117
 NaCl, 0- -25°K, heat capacity new calorimeter 8=6221
 Na₂HPO₄ hydrates, molar ht. capacity 8=17521
 Na₂ZrCl₆ 8=8640
 NbB₂, 0.6-2.8°K 8=17522
 NbC, stoichiometric, 500 to 2400°K 8=13366
 Nb-Mo alloys, Debye temp., Young's modulus, atomic bond strength 8=1626
 NbS₂, 1.7-6.4°K 8=17522
 Nb₂Sn, temp. range 1.42°K in mag. fields up to 52.5 kG 8=17523
 Nb-Ta, Nb-Ti, Nb-V, Nb-W alloys, Debye temp., Young's modulus, atomic bond strength 8=1626
 Ne crystals, caloric Debye charact. temp. and thermal Grüneisen parameter 8=1803
 Ne, at T=0°K, anharmonic parameters of Debye charact. temp. 8=13594
 Ni, anomalous, at low temps. 8=22118
 Ni, Debye temp., 0 to 300°K 8=13377
 Ni, electronic sp. ht. calc. by band model 8=4932
 Ni, at high temp. meas. of temp. depend. 8=1864
 Ni₃Mn alloy, 0.3 to 1.5°K 8=1635
 NiSiF₆·6H₂O, heat capacity below 0 35°K 8=8641
 P₂S₅, heat capacity, 273°K to 560°K 8=4933
 Pb, heat capacity and phonon-frequency distrib. 8=1868
 Pd-Co alloys, ferromagnetic 8=8642
 Pd-Fe alloys, ferromagnetic 8=8642
 Pd-Ni alloys, paramagnon mass enhancement theory 8=17524
 Pt, meas from 1.4-100°K 8=22119
 α -Pu, comparison with α -Mn 8=17512
 RbCl:Cn, and thermal cond., rel. to rot. degrees of freedom of mols. 8=22120
 Th cpds., refractory, charact. temp. meas. 8=13379
 Ti, near phase transition point, 1000 to 1300°K 8=17526
 TiO₂ (rutile), vac. reduced, below 4.5°K, rel. to impurity band model 8=13380
 Ti-Rh superconducting alloys 8=9058
 UO₂-ZrO₂-CaO, nuclear fuel, out-of-pile tests 8=17527
 US, ht. capacity 1.5°-350°K 8=22848
 W, in 1600-2900°K range 8=17528
 W-Re alloy, VR-20, in 1600-2900°K range 8=17528
 YH₂, charact. temp. from resistivity meas. 1000-1200°K 8=17942
 Zn, pure 8=22121
 Zn-Mn alloys 8=22121
 ZrC, stoichiometric, 500 to 2400°K 8=13366
 ZrH_{1.89-1.99}, charact. temp. from resistivity meas. 1000-1200°K 8=17942
 ZrO, and enthalpy in temp. range 100-2500°K 8=1878

Spectra

- See also Absorption/light; Astronomical spectra; Atmospheric spectra; Colour; Mass spectra; Raman spectra; Spectrochemical analysis; Spectroscopy; Stark effect; X-ray spectra; Zeeman effect.
 absorptance and radiative transfer by regular band 8=12125
 absorption band shape, complex molecules 8=1215
 complex mols, shape of continuous absorpt. bands 8=1214
 crystals, impurity, isotopic composition effect on electronic-vibration lines 8=22937
 deconvolution for exponential, Gaussian and Cauchy slit functions 8=6521
 diatomic polar mols. in liq. non-polar solvents, orientation 8=21673
 Einstein coeffs. for emission and absorpt. of mol., rel. to characts. in condensed media 8=22932
 emission, alkali metal, influence of electrical field 8=1895

Spectra—contd

- emission line distribution in d.c. arcs 8=7684
 energy spectrum representation and interpretation 8=94
 flames, absorption line profiles, Zeeman scanning 8=12044
 frequency-contrast characts, calc. by Hopkins method 8=20045
 gas layer, optically thick, X- and Y-functions in theory of multiple scatt. in spectral line 8=16187
 glass miniature mass spectrometer, charact. 8=16176
 high pressure modification of cryst. electronic spectra 8=8914
 inert gases, diffuse continua-emitting discharges 8=4273
 i. r. absorpt. bands, intensity meas. by Ramsay's direct integration method 8=21680
 infrared for Al-Fe substitution in hexaferrites 8=16999
 ions with incomplete shells in crystals, rel. to structure parameters 8=13033
 laser-heated plasma radiation 8=16200
 laser spark 8=3293
 light, profile from intensity correlation obs. 8=20028
 liquids, coupling of oscillators 8=16854
 liquids, far infrared, survey 8=12886
 liquids, frequency broadening by short pulse 8=4574
 liquids, freq. broadening in self-focused light 8=8083
 liquid molecules near the Rayleigh line, distribution 8=21678
 liquids, polar microwave to far infrared spectra, relaxation theories 8=8081
 luminescence rel. to exciton annihilation and bound complexes 8=9582
 β -methyl naphthalene in polycrystalline, dissolved and melted state in 750-3500 cm⁻¹ 8=16866
 mixed cryst., absorpt., deep-trap impurities effects 8=17865
 molecular, approximate open shell theory 8=4119
 molecular band, assuming gaussian line profile, calc. 8=7488
 molecular generator, line quality meas. 8=7485
 molecular systems and generalized response function 8=4141
 molecules, axially symmetric, nomenclature of rot. and vib. resonances 8=21045
 molecules, diatomic, electron-vibrational transition probability 8=1216
 molecules, discrete perturbation, quasi-classical soln. 8=12147
 molecules exhibiting accidental resonances, numerical analysis 8=12116
 molecules, Franck-Condon integrals, cancellation effects 8=21056
 molecules f-valves by hook method, theory and use 8=6525
 molecules, microwave and i. r., rel. to torsional energy levels and semiempirical potentials 8=12139
 molecules, PR separations prod. by prolate and oblate top mols. 8=12120
 molecules, rotational absorpt. lines, collision broadening 8=1224
 molecule vibrational relax. in gases and liquid 8=1218
 muonic mols., S-states, bound, variational calc. 8=12392
 naphthalene in polycrystalline, dissolved and melted state in 750-3500 cm⁻¹ 8=16866
 nonisothermal gases 8=12122
 odd-odd nuclei 8=20665
 optical cell, null press., for liquids at elevated temp. and press. 8=21676
 oxygen-acetylene flame temp. meas. by molecular spectroscopy 8=3109
 phenanthrene in polycrystalline, dissolved and melted state in 750-3500 cm⁻¹ 8=16866
 plasma, laser-produced, vacuum u. v. emission spectra 8=7777
 plasma, statistical mathematics for estimating parameters 8=7728
 polar liqs., Hertzian spectra of binary mixtures 8=8082
 polyatomic mols. secondary light emission rel. to e. eqn. of motion 8=1212
 quartz-kaolin-microdine reactions during firing, i. r. studies 8=18690
 quasars, absorpt. lines 8=23621
 radiationless transition probabilities, weak solvent-solute interactions 8=16256
 reflectance, lunar and laboratory, and inferences about Moon's surface 8=14820
 rotation lines in gaseous mixtures, modification theory by density effect 8=16244
 volatile solns., under press., up to 300°C, optical cell 8=8084
 Al plasma, energy spectra of ions 8=2122
 ALP, infrared and Raman active modes 8=18500
 Ar II laser, polarization in perturbed spontaneous emission spectrum 8=11042
 CO₂-N₂ plasma, i. r. emission 8=12510
 Cu and Zn complexes, tetraphenylporphine and tetraphenylchlorine, absorpt. 8=9117
 H-foreign gas Van der Waals complexes bound states 8=6523

Spectra—contd

- Hg vapour + C_6H_4 impurity, absorption of $Hg\lambda$ 2537 Å line 8=16287
 K lamp, line shape dependence on current 8=15523
 atoms
 See also Atoms/excitation; Atoms/structure.
 air, high-temp., continuum and atomic line rad. 8=16198
 alkali-metal, fine-structure transitions in adiabatic collisions 8=4106
 alkali metals 2P fine structure transitions in adiabatic collisions, calc. 8=1162
 arcs, free-burning, oscill. strengths, systematic errors 8=7683
 cascade transitions with stimulated emission, freq.-correl. effects 8=12043
 correlation effects in complex spectra 8=7411
 density matrix kinetic equation 8=21000
 doublet-term inversion, non-central electrostatic corrections 8=4054
 effective potential calc. 8=12038
 e.m. field effect, decay theory, projector-operator approach 8=11262
 emission and Raman scattering lines 8=7376
 energy levels, perturbation by e.m. wave 8=7375
 excited state lifetimes by e impact, using single-photon counting 8=7429
 fine structure constant, exact reduced mass correction 8=4114
 fluorescence efficiencies in hot gas 8=4059
 f-valves by hook method, theory and use 8=6525
 gases, continuous 8=4060
 Hertzian resonances, optical methods, review and bibliography 8=20929
 highly ionized, rel. to space research observations 8=16192
 Hanle effect obs. in Rb^{87} 8=7422
 high degrees of ionization produced by vacuum u.v. source 8=7399
 hyperfine line structure, expt. apparatus for nuclear radius meas. 8=7078
 hyperfine structure, e quadrupole moment induced by nuclear quadrupole moment, effect 8=7402
 hyperfine structure, rel. to min. size of p and e in nonrelativistic theory 8=826
 Lamb shift, rel. to self-interaction corrections in q. e. d. 8=20174
 line intensities revised tables below 2450 Å 8=1152
 line profile meas., magneto-optical 8=4057
 L_1 - L_{II} level separation, effect of finite nuclear size 8=20927
 Lyman α from radiation belts due to interaction with charged particles 8=18963
 magnetic hyperfine anomaly, nonrelativistic derivation 8=12042
 many-electron, fine-structure splitting, use of Hartree-Fock functions 8=20923
 metal vapours, absorption, in modified miniaturized King furnace 8=7393
 multipole radiation, exploding-wire technique 8=20939
 oxygen, S^0 metastable state 8=1304
 pionic $2p$ - $1s$ transitions Ge counter obs. 8=1179
 plane isothermal gas-layer, radiative transfer in spectral lines 8=16188
 plasma, CV, OVII, collisional rate coeffs. deduced 8=12470
 plasma, line shifts due to e impact, semiempirical formulas 8=12511
 plasmas, Stark-broadening and line shapes calc. 8=1402
 pressure-broadened, quantum oscillations in line shape 8=20932
 pressure shift of excited states, when embedded in gas medium 8=4052
 quark-atoms in spectrum of sun 8=6718
 reabsorption line, Fermi calc. 8=7366
 resonance fluoresc., forward-scatt. curves 8=20946
 spectral line broadening, effect of collisions 8=1153
 spontaneous emission under classical and quantum fields and collisions 8=20937
 spontaneous emission from a system of 2 level atoms interacting with relaxation mechanism 8=20971
 stellar atmospheres, line-blanketing 8=14761
 trapped in inert gas matrices, molecular features 8=8227
 reabsorption method for concentration of line with complex structure 8=4051
 spontaneous emission, line shape for imperfect mixing of degenerate levels 8=4049
 stimulated rad. during interact. of cascade transitions 8=417
 term splitting in interaction of identical atoms in different states 8=4055
 X-radiation, characteristic, polarization following ionization of inner electron 8=12041
 X-ray emission, bonds effects 8=16191
 X-ray satellites and excitation states belonging to same inner vacancy 8=16216
 X-ray satellites, new screening doublets 8=16193
 X-ray, screening doublet formation, extended study 8=20922
 Al II, theoretical multiplet strengths 8=7410
 Al II, transition probabilities 8=7411
 Al II, III, beam-foil excitation 8=12079
 Al III, vacuum u.v. obs. 8=16202
 Al IV, V, VI from 125-315 Å, relative intensities, spectra response of detectors 8=15494

Spectra—contd

- atoms—contd
 Al^{III} and Al^{III} produced by 17-18 kV spark 8=7399
 Ar, abs. coeffs. in thermal plasmas 8=16207
 Ar, arc, rel. to temp. meas. 8=4297
 Ar, explosively generated shock waves 8=1480
 Ar, isotopic displacements of i.r. laser lines 8=7397
 Ar laser lines, high gain, identification 8=7395
 Ar, L_1 shell, Coster-Kronig and Auger spectrum 8=7396
 Ar, self-broadening and oscillator strengths 8=7416
 Ar, transition probabilities in intermediate coupling 8=12055
 Ar I in arc plasma, Stark broadening 8=12057
 Ar I, mean lives of some 4p levels 8=4069
 Ar I and II, interferometric meas. in region 5000-7000 Å 8=4070
 Ar II capillary arc discharge, mag. field effect on inversion population 8=7692
 Ar II lines, Stark broadening parameters, obs. 8=20949
 Ar II, stationary arc discharge, population inversion in 4s and 4p states 8=7693
 Ar⁺ laser, study rel. to transition wave functions and probabilities 8=3307
 Ar, Kr and Xe, superradiant transitions 8=7398
 Au III, transition strengths between $5d^66s$ and $5d^86p$ configurations 8=4071
 Ba II isotope shifts and mag. h. f. s., 4.934 Å 8=16204
 Be to F, Rydberg orbitals, Slater-Condon parameters 8=12059
 Be hyperfine structure, e quadrupole moment induced by nuclear quadrupole moment, effect 8=7402
 Bi I, $^2D_{3/2}$ and $^2P_{1/2}$ levels hyperfine structure, $6p^3$ ground configuration 8=4072
 Br, new Rydberg series of absorpt. in 600-1500 Å region 8=1165
 C, absorption coeffs. compilation 8=12060
 C using resonance lamp 8=15538
 C^v and C^{VI} produced by 6 kV spark 8=7399
 Ca, pionic, rel. to π mass 8=6839
 Ca II, spatial extent in twilight, airborne obs. 8=9868
 Ca IX, transition probabilities 8=7411
 Ca²⁺, dipole polarizability evaluation 8=7414
 Cd $5^2P_{0,1,2}$ levels lifetimes and transitions, obs. 8=1183
 Cd, Stark effect obs. in $5s5^2P_1$ state 8=20966
 Cl, K-series, K_α line calc. from M/L e capture ratio of Ar³⁷ 8=20748
 Cl, new Rydberg series of absorpt. in 600-1500 Å region 8=1165
 Cm³⁺, low-lying levels 8=4074
 Cs in Cs-Ar low-pressure discharges 8=7401
 Cs freq. standard, comp. with H 8=10483
 Cs, interpretation rel. to plasma diagnosis and molec. effects 8=12527
 Cs, Stark effect obs. in $7^2P_{3/2}$ state 8=20966
 Cu hyperfine structure, e quadrupole moment induced by nuclear quadrupole moment, effect 8=7402
 Cu, λ 3247.5 Å-resonance line profile from hollow-cathode source, by interferometry 8=3365
 Cu⁶³ in $(3d^{10}4p^2P_{3/2})$, h. f. s. constants, rel. to polarization corrections 8=12061
 D, using broadening of D_β line, expt. 8=16194
 Es, sensitive spark lines 8=12063
 F, new Rydberg series of absorpt. in 600-1500 Å region 8=1165
 Fe²⁺ in sphalerite, i.r. absorpt. 8=18570
 Fe³⁺ in $Ca_2Fe_2Si_2O_{12}$, $3d^5$ configs. splitting by cryst. field 8=1654
 Fe II, III, beam-foil excitation 8=12079
 Fe^{XVI} produced by 6 kV spark 8=7399
 Fe^{XVIII} produced by 17-18 kV spark 8=7399
 Ga V in vacuum u.v. 8=12082
 Gd I, Zeeman, rel. to g-values of levels 8=4077
 Gd II, Zeeman, rel. to g values of levels 8=4076
 Ge VI in vacuum u.v. 8=12082
 H, auroral arc, Balmer α emission rel. to incident H flux obs. 8=2636
 H, Balmer- α line excitations by electron impact, cross section and polarization meas. 8=20979
 H discrete spectrum and radiadiapason obs. 8=7377
 H freq. standard, comp. with Cs 8=10483
 H, Lamb shift calc. from precise theory of Zeeman effect 8=1158
 H, line broadening, electron concentration meas. 8=4062
 H, lines, broadening by Stark effect 8=1159
 H-line Stark broadening functions 8=12051
 H, Lyman- α line, spectral broadening in a plasma 8=21350
 H, Lyman- α prod. by electron collisions on H_2 8=12050
 H, N_2 -H collisions rel. to aurora 8=12212
 H, resonance scatt. of light and level crossings 8=4064
 H stimulated emission in beam laser, line shape and width obs. 8=421
 H, 2500-1100 Å, intensity distrib. 8=4065
 He, balance eqns for 2^3S , and 2^3P levels in hollow-cathode discharge 8=20981
 He, continuous absorpt. coeff. 8=7387
 He coupling width anomaly, linear extrapolation of Lorentz width to zero 8=20955
 He, excitation of 4F states 8=12054

Spectra—contd

atoms—contd

- He, excited by fast protons and H atoms 8=7433
 He, ground and metastable states, dipole props. 8=20980
 He, large-angle electron-impact 8=16224
 He II, 4686 Å line complex excited in atomic-beam light source, analysis 8=12052
 He II, interference of fine-structure levels 8=4066
 He II, Lamb shift 8=1161
 He³, optical orientation of 2³S₁ state 8=16219
 He, recombination afterglow, differential level decay 8=21237
 He, superradiance at transitions terminating at metastable levels 8=20943
 Hf, isotopic shifts of 20 spectral lines, rel. to deformation of Hf¹⁷⁴ 8=20953
 Hg, 7³S₁—6³P₁—6¹S₀ cascade correlation, and 6³P₁ coherence time 8=4078
 Hg, Stark effect obs. in 6s6p³P₁ state 8=20966
 Hg, temperature dependence of 1849 Å absorption in saturated vapour 8=1166
 Hg¹⁹⁸ double reson., linewidth narrowing and Zeeman sublevel transition and shifts obs. 8=21001
 Hg¹⁹⁸ 4358 Å line shape, intensity correl. obs. 8=20075
 Hg¹⁹⁹, hyperfine structure of the 2967 Å (6³P₀—6³D₁) and of 6³D₁ level 8=16205
 Hg¹⁹⁹ and Hg²⁰¹, 7³S₁ level, hyperfine structure 8=1184
 Hg¹⁹⁹ and Hg²⁰¹, 6¹P₁ level hyperfine structures 8=7404
 Hg²⁰¹, hyperfine levels, population transfers 8=7467
 Hg, metastable state, coherent excitation by e, rel. to resonance absorpt. 8=4094
 Hg, in pulsed discharge, afterglow, rel. to delayed emission 8=21238
 Hg, resonance line, press. broadening by He 8=7403
 I, new Rydberg series of absorpt. in 600–1500 Å region 8=1165
 I(5²P_{1/2}), time resolved emission obs. 8=4079
 In line intensities, in Hg–In fluoresc. spectrum 8=4080
 K, 580 Å to 1000 Å, atomic absorption cross section, experimental values 8=12065
 K, in 4²P_{1/2} state, collisional mixing with inert gases obs. 8=12064
 K-series dipole elec. transitions 8=7367
 K vapour, stimulated emission from 4P_{3/2 1/2}—4S_{1/2} 8=20984
 Kα, X-ray shift in various isotopes 8=20671
 K⁺, dipole polarizability evaluation 8=7414
 Kr, abs. coeffs. in thermal plasmas 8=16207
 Kr, autoionization influence 8=20954
 Kr, collision broadening and shift due to Ne, Ar He 8=20956
 Kr, excitation functions of 33 lines by electron-atom collisions 8=4096
 Kr gas self-broadening and resonance oscillator strength 8=20955
 Kr, resonance lines, oscillator strength meas. 8=7449
 Kr, self-broadening and oscillator strengths 8=7416
 Kr–Ar couple, and form of "satellite" bands 8=7425
 La III, new spectra lines in 2000 to 12000 Å region 8=12066
 Li, continuous absorpt. coeff. 8=7387
 Li, in inert-gas matrices 8=4082
 Li hyperfine structure, e quadrupole moment induced by nuclear quadrupole moment, effect 8=7402
 Li sequence, eigenvalues of 1s²2p²P states 8=20957
 Li, 2p²P levels, hyperfine coupling constants 8=7408
 Li I, first-level lifetimes 8=7407
 Lu III, hyperfine structure, nuclear dipole moment 8=4083
 Mg isoelectronic sequence, transition probabilities 8=7411
 Mg²⁺, dipole polarizability evaluation 8=7414
 Mg I, theoretical multiplet strengths 8=7410
 Mg III and Mg IV, vacuum ultraviolet spectroscopy 8=1169
 Mn IV, vacuum spectroscopy and energy levels 8=12067
 N, absorption coeffs. compilation 8=12060
 N, radiative transfer, for local thermodynamic equil. 8=7926
 N II, Stark effect in multiplet lines 8=4084
 N II–V, lifetimes meas. by decay of optical radiation 8=7412
 NII, NIII and NIV emitted by ion beam passing through C target 8=20960
 Na absorption and emission enhancement by alcohol, flame photometric obs. 8=20961
 Na, Doppler profiles in atomic fluoresc. of Na I 8=12069
 Na⁺, dipole polarizability evaluation 8=7414
 Na gas discharge plasma, line excitation rel. to cascade transitions 8=20962
 Nd³⁺ ions in rare-earth trichlorides, high-resolution, low-temp. absorption spectra 8=12070
 Nd, isotope shift 8=21024
 Ne, abs. coeffs. in thermal plasmas 8=16207
 Ne coupling width anomaly, linear extrapolation of Lorentz width to zero 8=20955
 Ne, double resonance laser spectroscopy of excited states 8=11066
 Ne, Landé factors meas. by saturation from laser 8=1186
 Ne, microwave emission in excited states, when laser pumped 8=12071
 Ne-self-broadening and oscillator strengths 8=7416
 Ne, transition between levels, electron induced 8=20947

Spectra—contd

atoms—contd

- O, absorption coeffs. compilation 8=12060
 O₂ in Ar cascade arc, absorpt. oscill. strengths of O I lines in vac. u.v. 8=7417
 O, ¹D₂—³P_{1/2} forbidden transition origin 8=1182
 O I(¹D₂) and O I(³S₁) metastable states, vac. u.v. 8=12072
 OI, 5577 and 6300 Å, auroral, ratio of intensity to H₃ 8=23340
 [OI] λ 5577 and λ 6300, auroral luminosity spatial var. obs. 8=14649
 O II, equilibrium population of states in plasma 8=7418
 O IV lines in vacuum u.v. 8=20964
 O VIII in solar corona, L_α and L_β lines intensity ratio calc. 8=10434
 P IV, transition probabilities 8=7411
 Pr hyperfine structure, e quadrupole moment induced by nuclear quadrupole moment, effect 8=7402
 Pr, L_{α1,2} meas. 8=7420
 Pu²³⁸⁻²⁴², arc, rel. isotopic shift 8=20965
 Rb photon emission following β-decay in solid 8=8226
 Rb, Stark effect obs. in 6p²P_{3/2} state 8=20966
 Rb⁸⁵, 5²P_{3/2} state, level crossing expt. 8=1174
 Rb⁸⁷ Hanle effect obs., calc. of lifetime of first excited states 8=7422
 Si I lines, width and shift by Van der Waals interact. with Ar atoms 8=7423
 Si III, theoretical multiplet strengths 8=7410
 Si III, transition probabilities 8=7411
 SnI forbidden lines, obs. 8=1175
 Sr, absorption, u.v. extension of arc spectra 8=20967
 Sri, 5s² ¹S₀—4dnp, nf spectrum, analysis of autoionization resonance structure 8=20968
 Tb I, neutral, levels with extreme J 8=12073
 Th, 1–2.5 μ emission 8=12074
 Ti, pionic, rel. to π mass 8=6839
 TiI resonance lines, absolute oscillator strengths 8=1176
 TI, oscillator strengths for np → ms_{1/2} and np → md transitions 8=4086
 TI, superradiance at transitions terminating at metastable levels 8=20943
 Tm hyperfine structure, e quadrupole moment induced by nuclear quadrupole moment, effect 8=7402
 W, transition probabilities, 9 lines, 4700–5300 Å 8=20969
 Xe, abs. coeffs. in thermal plasmas 8=16207
 Xe, autoionization influence 8=20954
 Xe 1469, 6 Å line perturbation by Ar, He, H₂ and H₂ compressed gases 8=16201
 Xe¹²⁹, hyperfine structure of i.r. laser lines 8=16210
 Xe–A couples (A = He, Ne, Ar, H₂), and form of "satellite" bands 8=7425
 Yb, anticrossing signals from 6s¹P₁ level 8=16211
- inorganic molecules**
 See also Molecules.
 air, high-temp., continuum and atomic line rad. 8=16198
 gases, absorption function of overlapping spectral lines 8=498
 germanium fluoro- and hydroxyfluoro-compounds and thermal polymerization products, i.r. vibr. freqs. of Ge–O–Ge bond 8=4170
 tin fluoro- and hydroxyfluoro-compounds and thermal polymerization products, i.r. vibr. freqs. of Sn–O–Sn bond 8=4170
 van der Waal molecules, trapped in inert gas matrices 8=8227
 AlO, absorption, dissociation energy 8=12169
 CCl₄ vibr. transitions rel. to intermol. interactions 8=16274
 CO₂, trapped in inert gas matrices 8=8227
 D, Lamb shift calc. from Zeeman spectrum precise theory 8=1158
 FCN, microwave, excited vibrational states 8=12182
 H, N₂–H collisions rel. to Aurora 8=12212
 Hg₂, trapped in inert gas matrices 8=8227
 HgBr₂, in vacuum u.v. 8=12204
 KI, containing H₂O mols. 8=4953
 N₂⁺ intensity distrib. among bands, obs. in atmosphere 8=18933
 N₂⁺ λ 3914, auroral luminosity spatial var. obs. 8=14649
 N₂–p collisions rel. to Aurora 8=12212
 N₂O solid, pure and in a matrix, absorption spectrum between 63 and 14°K 8=18552
 Ne²⁰, 633 n.m., He³–Ne²⁰ discharge, effect of press. and mixture on profile 8=16295
 O + CO, emission in shock-heated system 8=1342
 Zn, optically pumped, collision broadening obs. 8=6523
- inorganic molecules, diatomic**
 alkali-metal halides, inner-electron excitation 8=7529
 Condon loci, primary and subsidiary, geometry 8=1231
 Raman spectra pressure broadening obs. 8=6523
 transition probability from Hulbert–Hirschfelder potential 8=4117
 AgIn, u.v. absorpt. bands, system A, vibrational analysis 8=16262
 AlO, new ²Σ⁺–²Σ⁺ band, Franck-Condon factors 8=16263
 AsH and AsD, A, ³Π₁–³Σ⁺ band systems 8=21062
 AuGa, in Ar atm. at 2100°K 8=16265
 BO₂⁺ ion in alkali halides, vibr. bands obs. 8=22946
 BeF, discharge, emission in vacuum u.v. 8=21064

Spectra—contd

inorganic molecules, diatomic—contd

- BiCl, rotational analysis in 4220-4000 Å region 8=7504
 BiO, magnetic interactions in Hund's case 8=12172
 BiO, rotational structure absorption bands 8=12171
 Br₂, continuum and line absorption, 6328 Å, half-width meas. 8=12173
 C₂, absorption and emission spectroscopy, in low-press. oxyacetylene flames 8=21189
 C₂, dissociation energy determ. 8=12336
 C₂, electronically excited in hydrocarbon flames 8=7509
 CN, assuming gaussian line profile, calc. 8=7488
 CN bands, red system, electronic transition strength 8=12180
 CO, adsorbed on Pd, i.r. 8=4764
 CO, chemisorbed on Pt-Aerosil surfaces 8=9704
 CO, fundamental band at high temp., spectral absorpt. coeff. 8=21067
 CO, 3ν band, strengths, widths and shapes 8=16269
 CaF, A-X and B-X level systems 8=21069
 CdI, 3586 to 3495 Å C-system band, representation by vibr. quantum eqn. 8=21070
 CuBr, rel. to rot. structure of C band system 8=1239
 H vibr.-rotational spectrum for e ground state, generalized VKB calc. 8=1246
 H₂, Balmer emission following p collisions 8=12190
 H₂, predissoc., weak absorpt. lines 8=12189
 H₂, press. induced i.r. bands, anal. of profiles 8=12188
 H₂, Rayleigh and Raman scattering cross section calcs. 8=7517
 H₂, para, rotational h.f. s. and vibrational coupling coeffs. 8=16284
 HCl, pressure effect 8=21077
 HCl, rot. line strengths, by Fourier transform. 8=1253
 HF, rotational spectrum, frequencies and linewidths 8=12198
 Hg₂ excimers, kinetics of band emissions 8=12203
 Hg, 4850 Å and 3350 Å bands, role of Hg⁶³P, atoms 8=21033
 I₂, 5350 Å band, resolving power test 8=16289
 K₂ vapour, nonlinear absorpt. of ruby laser light, and resonance fluoresc. 8=7527
 LaF, gaseous, electronic states 8=7549
 MgH, (A²Π-X²Σ⁺), oscill. strengths meas. 8=7530
 MgO, (B²Σ⁺-X²Σ⁺), oscill. strengths meas. 8=7530
 MgO, colour centre production, effect of atomic displacements 8=2011
 N₂ absorpt., 12.28 eV quadrupole transition obs. 8=12208
 N₂, often p collision at 0.15-1.0 MeV and secondary e collisions 8=12213
 N₂, on excitation by fast protons and H atoms 8=7433
 N₂, excited by electron beam, rot. temp. obs. 8=16292
 N₂, large-angle electron-impact 8=16224
 N₂, model dipole spectrum consistent with oscillator strength sum rule 8=7533
 N₂, new Rydberg series 8=4160
 N₂ second positive system excited by impact with a metastable Ar atom 8=12209
 N₂⁺, 3914 and 4709 Å, auroral, ratio of intensity to H_β 8=23340
 NH⁺, emission band systems 8=16291
 NO, on excitation by fast protons and H atoms 8=7433
 NO, integrated intensity of fundamental vib. band 8=7535
 NO in solid Ne, Ar and Kr rel. to excited states, 2300-1100 Å 8=14243
 NS, Franck-Condon factors for B²Π-X²Π transition 8=7540
 NS, vibr. bands, γ- and β-systems 8=16293
 O₂ (b²Σ⁺) emission 8=4098
 O₂, electronic structure 8=16297
 O₂, excited emission 8=1262
 O₂ microwave emission, stratosphere 8=23256
 OD, transition B²Σ⁺-A²Σ⁺, high resolution obs. 8=21095
 OH, absorption and emission spectroscopy, in low-press. oxyacetylene flames 8=21189
 OH, chemiluminescence by flame photometry, predissociation 8=12223
 OH cosmic 18 cm lines, anomalous polarization theory 8=7543
 OH, emission band systems 8=12222
 OH galactic, radio emission, brightness and temporal variation 8=10253
 OH in NI cloud, excitation temp. of 18-cm line 8=10299
 OH, oscillator strengths in 2Σ⁺-Π band system 8=7544
 OH-stretching, vibration in solid alcohols, band-width 8=8228
 OH, transition B²Σ⁺-A²Σ⁺, high resolution obs. 8=21095
 OH, transition moment and vib.-rot. interact. 8=7545
 OH, vib.-rot. from oxyacetylene flame in air or N₂ rel. to flame temp. 8=18692
 P₂⁺, rotational analysis of the (2, 3) band of a new transition 2Π → 2Π 8=16299
 PD⁺, emission, vibrational and rotational structure 8=4167
 PO, β-system subsystems anal. 8=12225
 PbBr emission 8=7546
 PbF, emission 8=21099
 RhC, C²Σ⁺-X²Σ⁺ band, Franck-Condon factors and r centroids 8=7548
 SbH and SbD radicals, absorpt. 8=12354
 ScF, gaseous, electronic states 8=7549

Spectra—contd

inorganic molecules, diatomic—contd

- SrF emission bands and C²π-X³Σ vibr. consts. obs. 8=1266
 TaO, gaseous, electronic bands rot. anal. 8=1267
 YF, gaseous, electronic states 8=7549
 ZnCl, emission, visible region 8=4171
 inorganic molecules, diatomic, radiofrequency

 Cs¹³³F¹⁹, h.f. s., molec. beam meas. 8=16278-9
 H⁺, Zeeman sublevels, g-factor ratios 8=12195
 HBr, far i.r. microwave, rot. lines 8=7523
 HCl, DCl, far i.r. microwave, rot. lines 8=7523
 NO, rotational lines at 150 GHz, a high-Q Fabry-Perot resonator 8=7536
 OH radical, low-field Zeeman effect 8=4246
 inorganic molecules, polyatomic
 ammonia, pure rotation band absorpt. rel. to refractive index of ammonia 8=4162
 borazine and deuteroborazine, i.r. 8=4145
 contact transform., choice of S-operator 8=7494
 Franck-Condon factors calc. 8=21269
 lanthanide complexes, mixed, energy transfer 8=2433
 pyrophosphates, divalent metal, far i.r. 8=21097
 thiophosphoryl halides, vibration 8=7547
 3α decay, as cause of scintillation in He, He-Ar, He-Ne bombard. with α 8=12202
 trans N₂F₂, vib.-rot. bands and molec. geometry 8=12218
 AlCl₃ ion, h.f. i.r. active f₂ vibr., correction 8=4142
 AlF₃, i.r. 8=12997
 As(SiH₃)₃, i.r., rel. to struct. 8=4144
 BF₃, radiative lifetimes of u.v. emission systems 8=7501
 BrDBr⁺ and BrHBr⁺, i.r. 8=12174
 C₃ radical, absorpt., diazopropyne photolysis obs. 8=16368
 CCl, free radical, electronic and vib. 8=1315
 [(C₆H₅)₃As]⁺[MoOBr₄]⁻, i.r. Mo-O stretching freq. 8=9552
 CO-N₂O mixture, study of overlapping absorpt. bands 8=7507
 CO₂, band emissivities, evaluation 8=16272
 CO₂, excited by N₂, emission obs. 8=21068
 CO₂, i. r. emission from low vib.-rot. levels in discharge 8=12177
 CO₂, relative intensities, 160°-280°K calc. 8=7506
 CO₂, 10.4 μ band, strength and half-width 8=12178
 CO₂, 2Π_g → 2Π_u transition 8=16277
 CO₂, 2Π_g → 2Π_u vibrational transition probabilities 8=21066
 C₃O₂ flames in reactions with O atoms and active N 8=14360
 CS₂, ν₃ bands 8=12265
 Cl₂ radical, i.r. 8=7620
 ClOO, i.r., in matrix 8=12344
 CuF₆⁴⁻, absorpt. spectrum and struct. 8=16280
 D₂O, press. broadening obs. using CN maser 8=21073
 D₂O in solid N₂, i.r. absorpt. 8=22977
 D₂O in soln., absolute i. r. intensities rel. to meas. in gas phase 8=1561
 DOCl, i.r. spectra of ν, bands, rel. to rot. consts. and geometry 8=21083
 GeD₃, i.r. 8=12187
 GeH₃NCO, i.r. 8=21074
 H₂C₂, rel. to virtual-orbital approx. to excited states 8=1213
 HCF, rel. to virtual-orbital approx. to excited states 8=1213
 HCN and DCN, l-type resonance doublets 8=7522
 H₂CO, rel. to virtual-orbital approx. to excited states 8=1213
 HCl dimers in solid solns., far i.r. 8=18532
 HNO, rel. to virtual-orbital approx. to excited states 8=1213
 H₂O, band emissivities, evaluation 8=16272
 H₂O, 2.7 μ bands radiant emission, compared with general band model 8=7520
 H₂O in soln., absolute i. r. intensities rel. to meas. in gas phase 8=1561
 H₂O vapour, pure rot. spectrum 8=4149
 H₃O⁺ group in acid soln., i.r. spectroscopic investigation 8=4150
 HOBr, i. r., in matrix 8=12175
 HOCl, i. r., in matrix 8=12175
 HOCl, i.r. spectra of ν, bands, rel. to rot. consts. and geometry 8=21083
 HeH⁺ 1σ and 2π states, approx. wave functions calc. 8=4153
 ICN, i. r. 8=12184
 KrF₂, i. r. 8=7528
 MnO₄⁻, MO calc. of u.v. spectrum 8=12207
 NF₃, i. r. 8=1260
 NF₃, mm wave, rel. to centrifugal distortion consts. 8=1258
 NH₃, centrifugal distortion and electron spin coupling effects 8=21089
 NH₃, rel. to virtual-orbital approx. to excited states 8=1213
 N¹⁴H₃, resolution of central line, at J = 3, K = 3, ΔF = 0 8=4163
 N₂O₃, i. r. 8=7538
 N₂¹⁵O¹⁸, i. r. vibr. rot. bands 8=21086

 azides, metallic, in soln. 8=1259
 Brillouin light spectrum determination, systematic errors 8=16833
 critical binary mixtures, spectral width temp. and angular dependence 8=21778
 hydrated electron, temp. effect 8=5705
 hydrated electrons in $H + F^-$ reaction 8=18679
 infrared absorpt., cell for low temp. use 8=8069
 infrared absorption band intensity rel. to additional bandwidth parameters 8=4588
 line anal. using Gaussian and Lorentzian convolution tech. 8=15529
 mm-wave Fourier transform technique 8=21674
 nitrates, metallic, in soln. 8=1259
 nitrates, molten mixtures, u.v. absorption 8=8085
 perchlorates, metallic, in soln. 8=1259
 polar diatomic mol. dissolved in nonpolar solvents, i.r. band shapes 8=12885
 ultra radiofrequency rel. to correlation function for molecular rotation 8=16855
 CO_2 , Brillouin scatt. in critical temp. region, obs. 8=16708
 CO_2 , near i.r., temp. effects 8=21685
 CO_3^{2-} ions, electron absorpt. 8=12793
 CS_2 Brillouin, stimulated, quasi-steady state 8=21687
 CS_2 , liquid and crystalline, sub-millimeter region 8=7568
 CS_2 , ν_3 bands 8=12265
 CS_2^{2-} ions, electron absorpt. 8=12793
 CSe_2^{2-} ions, electron absorpt. 8=12793
 $Cr(ONO)_3(H_2O)_3 \cdot 1.5 KNO_3$, formation and struct. in crystalline state and in soln. 8=9518
 $CsNiCl_4$, molten, near m.p. 8=9519
 Cs_2NiCl_6 , molten, near m.p. 8=9519
 D_2 dissolved in liquefied inert gases 8=12887
 D_2 in liq. Ar, induced rotation-translation spectra 8=1564
 H in solution in liq. Ar, translational absorpt. in far i.r. 8=12889
 H_2 in liq. Ar, induced rotation-translation spectra 8=1564
 HD in liq. Ar, induced rotation-translation spectra 8=1564
 $HSiCl_3$, 8 to 40 Gc rot. spectrum 8=4169
 $Ir(III)$ ions in fused $LiCl-KCl$ 8=1567
 KNO_3 containing KNO_2 impurity, analysis by i.r. spectra of solns. 8=23177
 $Kr-Ar$ binary mixture, at 135°K 8=7425
 MoS_4^{2-} in aq. soln. electron absorption 8=12792
 $NbCl_5$ in soln., far i.r. 8=14249
 NF_3 , solution H in, simultaneous transitions 8=21675
 NO_2^- ions in soln., shift of $n \rightarrow \pi^*$ bands 8=12890
 NO_3^- ions in soln., shift of $n \rightarrow \pi^*$ bands 8=12890
 Ni centres in molten $LiCl-KCl$ 8=8087
 Ni centres in molten $MgCl_2-KCl$ 8=8086
 $Ni(CO)_4$ in CCl_4 , corrections for CO stretching vibs. 8=1570
 $Pd(II)$ ions in fused $LiCl-KCl$ 8=1567
 $Pt(II)$ ions in fused $LiCl-KCl$ 8=1567
 $Rh(III)$ ions in fused $LiCl-KCl$ 8=1567
 SF_6 , solution H in, simultaneous transitions 8=21675
 SF_6-CO_2 critical binary mixtures, spectral with temp. and angular dependence 8=21778
 SO_2 , microwave absorpt. 8=16302
 SO_2 , and solid, vibrational 8=8088
 SO_2 soln., vibr. bandwidth, reorientation theory 8=16867
 Tl^+ ions in aqueous soln., absorpt. characts. 8=21704

Spectra—contd

 alkali-halide crystals, i.r. absorpt., local vibs. of mol. impurity ions 8=14197
 alkali halides, i.r. absorpt. of U-centres, sidebands 8=4991-2
 alkali halides with injected molecular ions 8=5583
 alkali halides, two-photon theory using two-band model 9=22935
 alkali metal halides, comparison with absorpt. formula 8=8947
 azides, metallic 8=1259
 beryl, i.r. spectra of foreign mols. 8=2400
 carbides, carbon κ and metal emission bands rel. to bonding 8=2406
 $d^{2,7}$ ions in tetragonal cryst. fields 8=21798
 diamond, zero-phonon 415 $m\mu$ line temp. dependence 8=5589
 first transition ion impurities in solids 8=14171
 fluorite type crystals, rare-earth ion doped, molar absorpt. coeff. 8=23011
 fresnoite, $Ba_2TiSi_2O_8$, i.r. absorpt., rel. to isomorphous $Ba_2TiGe_2O_8$ 8=18506
 glass, emission characts. due to laser beam illum. 8=14246
 glass, irradi. effect suppressed by H high pressure synthesis 8=4996
 ice, crystalline, optical absorpt. 8=18533
 ice, γ -irradiated, solvated e obs. at 77°K 8=22989
 ice, low frequency optical spectra, interpretation using crystal lattice model 8=13326
 mixed crystals, persistence and amalgamation types of intrinsic spectra 8=22452
 nitrate ions in alkali halides, lattice vibrations and i.r. absorption spectra 8=17471
 nitrates, metallic 8=1259
 oxides in graphite electrodes thermochemical reactions, rel. to spectral line intensity 8=14385
 paramagnetic crystals, absorpt. and emission by impurity centres 8=5574
 perchlorates, metallic 8=1259
 powders, compressed and single crystal, i.r. reflection comparison 8=14169
 quartz, anomalous dispersion due to Si-K absorption 8=18560
 α -quartz, combination scatt., freq. depend. 8=18561
 rare-earth salts, ion-pair 8=9497
 rare-earth sesquisulphide single crystals. 8=9119
 rel. to band struct. semi-empirical calc. in non-cond. solids 8=8915
 ruby, absorption meas. 8=1995
 ruby, optically excited, absorpt. and emission props. 8=14196
 ruby, pink, nonlinear absorption of coherent resonance radiation 8=18499
 semiconductors, i.r. absorption 8=9493
 sphalerite: Fe^{2+} , i.r. absorpt. of Fe^{2+} 8=18570
 steel, analysis of decomposition process and inter-element effect 8=14392
 tetrathiomolybdates, i.r. 8=2438
 tetrathiotungstates, i.r. 8=2438
 transition metal anions, i.r. and Raman 8=9542
 transition metal complexes with tetrazoline-5-thiones 8=14188
 Tuttons salt, line anal. using convolution tech. 8=15529
 uranyl salts, D_2O isotopic shifts 8=5641
 Al, X -ray K-satellites and K-absorption 8=2398
 $Al_2O_3 \cdot V^{3+}$, absorption lines, Zeeman effect up to 79 kOe at 4.2°K and intensities 1.3-20.3°K 8=9500
 $AlSb$, Te and Se donors, photoexcitation 8=22953
 $Ba, 0.3-4.0$ eV range, and band structure 8=5598
 $BaF_2 \cdot Gd^{3+}$, Stark splitting and centre of gravity of $^6P_{7/2}$ and $^6P_{5/2}$ 8=23015
 $BaTiO_3$ with Fe and Co impurities, transmission props rel. to elec. props 8=18187
 $Ba_2TiSi_2O_8$, fresnoite, i.r. absorpt., rel. to isomorphous $Ba_2TiGe_2O_8$ 8=18506
 Bi in Si , photoexcit. lines, anomalous broadening rel. to optical phonons 8=5601
 BiI_3 refl., doublet structure rel. to spin-orbit interaction, 1-5 eV 8=9509
 Br_2 , solid film at 80°K, u.v. absorpt. rel. to intermol. interactions 8=18510
 $[C_6H_5)_4As][MoOBr_4]^-$, i.r. $Mo-O$ stretching freq. 8=9552
 CN^- in alkali halides, environmental perturbation 8=2405
 CO_2 , near i.r., temp. effects 8=21685
 CS_2 , crystalline and liq. in sub-millimeter region 8=7568
 $CaDPO_4$ and dihydrate i.r. 8=5594
 $CaF_2:Nd^{3+}$, effect of rare earth on Nd^{3+} optical centre 8=5593
 $CaF_2:Ti^{3+}$, optical, Jahn-Teller splitting 8=14126
 $CaF_2:Yb^{3+}$, rel. to polarization effects in cubic cryst. field 8=21800
 $Ca_3Fe_2Si_2O_{12}$, F^{3-} 3d e configs. splitting by cryst. field 8=1654
 $CaHPO_4$ and dihydrate, i.r. 8=5594
 CaS , SrS phosphors absorpt. excit. and i.r. flash stimulation 8=9511
 $Ca(SO_3F)_2$, i.r. 8=9562
 $Ca_xSb_2O_7$ ($x = 1, 2, 3; y = 4, 5, 6$), reflection 8=14363

 KMF₃ (M = Mg, Mn, Co, Ni, Zn, Mg/Ni), i.r. transmission rel. to multiphonon processes 8=2427
 KMGf₃, i.r. transmission, rel. to lattice vib. anal. 8=2428
 KNiF₃, i.r. transmission, rel. to lattice vib. anal. 8=2428
 K₂NiFe(CN)₆, cubic, i.r. and e.s.r., rel. to X-ray analysis 8=13265
 Kr–Ar binary mixture at 77°K and 1600 bar 8=7425
 KSO₃F, i.r. 8=9562
 KZnF₃, i.r. transmission, rel. to lattice vib. anal. 8=2428
 LaCl₃:Gd³⁺ 8=16975
 LiF, 6955Å zero-phonon line, pseudo Stark and uniaxial stress splitting 8=18542
 MgAl₂O₄, optical transitions rel. to temp., Ni²⁺ and Cr³⁺ dopants 8=23000
 MgCl₂:Ag, γ -irradiated, absorption bands 8=9419
 MgO, absorption and emission, fluorescence 8=9620
 MgO:Co²⁺, near i.r. absorpt. 8=23050
 MgO with Mn impurity, h.f.s. 8=14238
 MgO:Ni²⁺, near i.r. absorpt. 8=23050
 MnF₂, i.r., due to lattice vibrations 8=14241
 MnF₂, uniaxially stressed, exciton magnon sidebands 8=14240
 MnO₂ films, i.r. 8=4750
 MnS 8=2484
 α -MnS, reflectance and absorpt. rel. to elec. conductivity 8=18057
 MnS/ZnS mixed crystals. 8=2484
 MnSb₂O₄, reflection 8=14363
 (NH₄)₂Cr₂O₇, i.r., low-temp. 8=14250
 (ND₄)₂Cr₂O₇, low temp. i.r. 8=23006
 (NH₄)₂SO₄ and (ND₄)₂SO₄, low-temp. i.r. 8=23005
 NO absorpt. rel. to mol. excited states, 2300–1100Å 8=14243
 NO₂⁻ in solid solns., i.r. 8=2439
 N₂O, i.r. absorpt. bands rel. to isotopic mols. and crystal lattice vibrations 8=14251
 N₂O pure and in a matrix, between 63 and 14°K 8=18552
 NaCl, emission characts. due to laser beam illum. 8=14246
 NaCl:Eu luminesc., excit. and absorpt. rel. to luminesc. centres, obs. 8=9623
 NaCl:Ni absorpt., OH⁻ ions effects rel. to activator solubility, obs. 8=21824
 NaCl:OH, i.r. absorpt., rel. to temp. dependence of intensity of OH⁻ vibrations 8=18538
 NaClO₃ crystals, u.v. and i.r., X-ray induced 8=18548
 Na₂[Fe(CN)₅NO]·2H₂O, i.r., rel. to assignment of bands 8=14248
 NaMg[Cr(C₂O₄)₃]·9H₂O, polarized absorpt. 8=14247
 NaNiF₃, i.r. transmission, rel. to lattice vib. anal. 8=2428
 NaNO₃, absorpt. spectra from 450–5700cm⁻¹ 8=9556
 NbCl₅, far i.r. 8=14249
 Nd glass, measurement cross-section stimulated emission 8=449
 Ni²⁺ in MgO, absorption, line shift rel. to temp. 8=2442
 NiBr₂, absorption, high temp. and pressure 8=1580
 NiO, absorpt., fine structures 8=2441

Spectra—contd

inorganic solids—contd

- NiO, semiconducting, near and far i.r. absorpt. by small polarons 8=23008
 α -O, absorpt, bands at 4.2°K, effect of 170 kOe mag. field 8=5626
 α -O, absorpt. line splitting in strong mag. field 8=14252
 O_2 , α , β , γ forms, 34000-42000 cm^{-1} 8=5625
 OCS cryst., i.r. intensity of librational mode 8=14201
 P sulphides, dispersed in AgCl 8=18553
 PbBr₂:Mn luminesc. excit. and emission and absorpt. 8=9622
 PbCl₂:Mn luminesc. excit. and emission and absorpt. 8=9622
 PbTe-PbS solid solns., i.r. transmission, rel. to forbidden band optical width 8=18554
 Rb₂CO₃, i.r. 8=18556
 RbHCO₃.2H₂O, i.r. 8=18556
 RbHCO₃, RbDCO₃, i.r. 8=18556
 RbMnF₃ 8=2449
 RbMnF₃, i.r. reflectance rel. to lattice vibrations 8=2426
 RbNiF₃, magnon sidebands in visible and i.r. absorpt. region 8=23010
 Ru, in solid Ar matrix, optical absorpt. and X-band e. s. r. 8=18558
 SbI₃ refl., doublet structure rel. to spin-orbit interaction, 1-5 eV 8=9509
 SbSI, microwave response, photo-induced, obs. 8=5630
 Sc₂O₃:Er³⁺, absorpt. and emission 8=14260
 Se, i.r. rel. to reflectivity and transmission 8=8615
 Si, exciton lines, obs. with optical wavelength wobbles 8=5573
 Si:B, "internal" impurity spectrum, conc. depend. 8=13426
 Si, B-doped, internal absorpt. lines half-widths, temp. depend. 8=14263
 Si, B(Al, Ga and In)-doped, rel. to acceptor states 8=5285
 SiC crystals, deduction of energy spectrum of acceptor states 8=5668
 SiC, fibrous single cryst., i.r. 8=2455
 SiC polytypes, infrared absorption 8=23013
 Si₃N₄, deposited on GaAs, i.r. absorpt. 8=14262
 SO₂, and liqs., vibrational 8=8088
 SnO₂, thin films, u.v. absorption edge 8=2458
 SrF₂, F-centres obs. 8=2014
 SrF₂:Gd³⁺, Stark splitting and centre of gravity of ⁶P_{7/2} and ⁶P_{5/2} 8=23015
 Sr,Sb₂O₇ (x = 1, 2; y = 4, 5), reflection 8=14363
 TlBr:Mn luminesc. excit. and emission and absorpt. 8=9622
 TlCl:Mn luminesc. excit. and emission and absorpt. 8=9622
 TlI crystal, CsI stabilized, transmission in 30-65 μ region 8=5640
 V, L-emission, fine structure 8=14270
 V₂O₅, diffuse reflection spectra 8=18564
 Yb, M_{IV} and M_V absorpt. lines and edges 8=5602
 YGa garnet, Er³⁺ optical obs. intensities and quantum counter action 8=22979
 Zn.K β _{2,3} band fine structure 8=23027
 ZnO, impure, with adsorbed O₂, i.r. absorpt. studies 8=4769
 ZnO single crystal, transmission spectrum, rel. to exciton absorpt. and exciton-phonon complexes 8=14272
 ZnO, splitting of exciton lines by uniaxial stress 8=14273
 ZnO:Cu²⁺, absorption band obs. 8=14211
 ZnO:Ni(Co), lattice-vibration effects 8=9563
 ZnS phosphors, luminescence and electroluminescence, time constants 8=5677
 ZnS-phosphor, vibrational structure in stimulation spectrum 8=2459
 ZnS, Fe²⁺ i.r. luminescence, 5 and 77°K 8=2491
 ZnS;S²⁻, photoluminescence, dark conductivity 8=5000
 ZnS, Se_{1-x}, infrared reflection, transmission and Raman, LO and TO phonons 8=4909
 Zn(SO₄F)₂, i.r. 8=9562
 Zn tellurite glass, i.r., optical transmission range 8=5644
 ZnTe, i.r. transmission and reflection 8=2460
 ZrO₂, monoclinic, diffuse reflectance characts. as function of purity 8=18568

 acetamide, vibration and potential energy constants 8=4174
 acetonitrile, in soln., vibration bandwidth 8=21681

Spectra—contd

organic molecules and substances—contd

- acetophenone in chloroform, co-band width and intensity at 1682 cm^{-1} 8=4588
 acetylene, excitation by proton collisions 8=1288
 alcohols, bandwidth of OH stretching vibration 8=8228
 n-alkanes, far u.v. 8=12249
 alkyl benzenes crystals, absorpt. rel. to mol. config. 8=5645
 alkyl iodides, γ -irrad. at -196°C 8=14275
 allene, two rotational lines 8=21112
 amides, theory 8=12250
 aminopurines, electronic spectra calc. 8=7594
 anthracene crystals, absorpt. and fluorescence spectra symmetry 8=18631
 anthracene derivatives, displacement due to dispersion interaction 8=4176
 anthracene in diethylaniline, luminescence 8=7560
 anthracene, γ -irrad., colour centres 8=17689
 anthracene, reflection, near exciton excitation low temp anomaly 8=23030
 anthracene, triplet-triplet absorption under Shpol'ski's condition 8=21147
 anthracene vapour, fluoresc. fine struct. and vibr. analysis, 23 000-28 000 cm^{-1} 8=1274
 9-anthranaldehyde in alcohol and hexane solutions, singlet-triplet conversion 8=21693
 9,10-anthraquinone, sensitized emission in visible region 8=4177
 aromatics absorpt. rel. to conjugated π -bonds, obs. 8=4178
 aromatic compounds, triplet-triplet absorption under Shpol'ski's condition 8=21147
 aromatic hydrocarbons, luminescence 8=7553
 aromatic mols., triplet-triplet absorpt. at 77°K 8=7561
 aromatic, 77°K, triplet-triplet absorpt. 8=7554
 aromatics, transient absorpt. 5000-8800 Å 8=4179
 azaindole, electronic, oscillator strengths meas. 8=7580
 azatetrabenzoporphins, polarization and absorpt. rel. to porphyrin ring e struct. 8=21116
 azoalkanes, electron states 8=12255
 azobenzene, continuous bands 8=4182
 1,2-benzanthracene, triplet-triplet absorption under Shpol'ski's condition 8=21147
 benzodioxins, u.v., P-method calc. 8=7575
 benzene crystals, absorpt. rel. to mol. config. 8=5645
 benzene in compressed O₂, 3300 Å transition 8=12259
 benzene and derivatives, structure of ν (CH) vibration bands, 300 and 80°K 8=12260
 benzene, large-angle electron-impact 8=16224
 benzene, liquid and crystalline state, sub-millimeter region 8=7568
 benzene luminesc., N and Ar excit. in solid solns., obs. 8=13036
 benzene in solid solns., matrix effects rel. to intramol. vibrs. and lattice vibrs. coupling, 77°K 8=13037
 benzene, u.v. absorpt. 8=7567
 benzil cryst., optical rotatory dispersion, circular dichroism and absorpt. 8=2463
 benzophenone and derivatives, triplet-triplet absorpt. 8=12263
 benzophenone, flash photolysis absorpt. 8=4184
 benzophenones, polarized absorpt. 8=9566
 p-benzoquinone anion dimers in soln. 8=21186
 benzyl radical fluoresc. in methylcyclohexane, cyclopentane and methylcyclopentane, 4°K 8=12342
 benzyl radicals fluoresc. in solid solns., vibr. analysis 8=13032
 p-biphenylaldehyde in alcohol and hexane solutions, singlet-triplet conversion 8=21693
 biphenyl derivs of group IV b, u.v. spectra anal. by heteroatom model 8=8090
 bromomethyldiazirine, electronic absorpt. spectra 8=12268
 carbonyl group coupling in cyclic anhydrides and imides rel. to solvent effect on valence vibrations 8=16857
 chloranil, absorption in near u.v. 8=21126
 chlorins, optically active 8=16317
 chloro-aluminium phthalocyanine and diethylthiatricarbo-cyanine iodide pumped by ruby laser, comparison expt. and interpretation 8=452
 chloroethylene, ion-molecule reactions in, study by ion cyclotron reson. spectroscopy 8=16453
 chloroform, gas and liq., ν_h bands 8=12265
 chloromethyldiazirine, electronic absorpt. spectra 8=12268
 α -chloronaphthalene two-photon absorpt. 8=16865
 chlorophyllide a and b fluoresc. polarization and absorpt., 390-440 μ 8=21700
 3-chloropyridine, near u.v. absorption 8=21130
 cinnoline vapour, rel. to electronic spectrum 8=16318
 coronene, excited singlet state, nsec absorpt. 8=9728
 coronene in CCl₄, phosphoresc. rel. to mol. deform. by lattice interactions, 77°K 8=1577
 coronene, π transitions, free-electron and MOLCAO calcs. 8=4139
 critical binary mixtures, spectral width temp. and angular dependence 8=21778
 cyclohexane-aniline critical binary mixtures, spectral width temp. and angular dependence 8=21778
 cyclohexane benzene, near u.v. absorption 8=16861
 de-excitation in rare-earth chelate solns. 8=16333
 deuterobenzenes, vibr. band structure 8=21683

Spectra—contd**organic molecules and substances—contd**

- diacetylene- h_2 , - d_2 , absorption, in vacuum u.v. to 1000 Å 8=12245
- diatomic, Franck-Condon factors rel. to mol. constant var. 8=4173
- dibenzosuberone, absorpt. phosphoresc. and polarization spectra 8=8096
- 4,4'-dibromobenzophenone, absorpt., phosphoresc. and polarization spectra 8=8096
- 1,4-dibromonaphthalene, triplet states 8=2467
- 2,4(5)-dichloroaniline, near u.v. in vapour phase 8=21132
- 2,5(6)-dichloro-p-benzoquinone, absorption in near u.v. 8=21126
- dichloromethane, $^n\text{CH}_2$ valence vibrations in vapour and condensed phases 8=16328
- diethylthiatricarbocyanine iodide and chloro-aluminium phthalocyanine pumped by ruby laser, comparison expt. and interpretation 8=452
- dihalogenomethanes in CCl_4 , methylene group valence vibr. bands rel. to weak intermol. interaction 8=1292
- diiodomethane, $^n\text{CH}_2$ valence vibrations in vapour and condensed phases 8=16328
- 2,6-di-isopropyl phenol, OH vib. absorpt. line, elec. field induced shift 8=1572
- α -diketones, emission and absorpt., rel. to excited state geometry 8=1297
- p-dimethoxybenzene, near u.v. absorption and emission 8=21133
- dimethylacetylene, vib., theory necessary for anal. 8=1294
- dimethylaniline, α,β -unsaturated ketone derivatives in toluene, electronic absorption 8=21702
- 1,2-dimethylcyclopropane, cis- and trans-, vibration, calc. and interpretation 8=7587
- 2,3-dimethyl-naphthalene in n-hexane rigid matrix at 77°K, absorpt. and emission 8=14286
- 1,2- and 2,3-dimethylnaphthalene, triplet-triplet absorption under Shpol'ski's condition 8=21147
- 1,4-dioxane, solvent shift obs. rel. to structure 8=16862
- dioxazines, electronic spectra, MO calc. 8=4205
- diphenyls, 4-monosubstituted, absorpt. rel. to ionization pot. and conjugated π -bonds, obs. 8=4212
- DPPH, high press., low temp. effects 8=18579
- 1,4-distyrylbenzenes, 4-monosubstituted, absorpt. rel. to ionization pot. and conjugated π -bonds, obs. 8=4212
- dye laser flashlamp excitation obs. 8=451
- ethane, excitation by proton collisions 8=1288
- ethane-1,1,1- d_3 , Raman spectrum and rot. consts. obs. 8=16321
- ethane, solid films, far u.v. 8=14283
- ethanal, luminescence vibrational analysis 8=7577
- ethylamine and its deuterated analogs, dissociative mechanism by mass spectra 8=16326
- ethylamine molecule, microwave 8=7578
- ethyl chloride, absorption of microwaves 8=7579
- ethyl ether Brillouin, stimulated quasi-steady state 8=21687
- ethylene, excitation by proton collisions 8=1288
- ethylene, large-angle electron-impact 8=16224
- fluorobenzaldehydes, emission obs. 8=21122
- formate ion in various states, rel. to isoelectronic AB, mols. 8=1269
- α -germyl ketones, electronic spectra 8=21159
- glycerine, liquid, Brillouin scatt., 23-90°C 8=21689
- halogenophenanthrenes, n.m.r. obs. 8=9461
- haloquinone complexes in polymer matrices, at high press. 8=14274
- N-heterocyclic complexes, ionization potential determ. 8=12455
- heterocyclic cpds., u.v. 8=21142
- heterocyclics, transient absorpt. 5000-8800 Å 8=4179
- heterocyclic, at 77°K, triplet-triplet absorpt. 8=7554
- heterocyclic mols., triplet-triplet absorpt. at 77°K 8=7561
- n-hexane Brillouin, stimulated, quasi-steady state 8=21687
- hexatrienes, substituted, HMO calc. of electronic spectra 8=12273
- hydrochinolines, spectral parameters of K and B bands 8=21677
- 8-hydroxy-1-methyl quinolinium hydroxide anhydro-soln. in chloroform 8=1566
- indole, electronic, oscillator strengths meas. 8=7580
- iodine and substituted pyridines charge transfer complexes, rel. to structure and stability 8=4216
- ketones, alcoholized, vapour phase, $\nu_{\text{C=O}}$ frequency 8=7582
- liquids, intensity in wing of Rayleigh line rel. to vibrating molecule model 8=16851
- liquids, mm-wave Fourier transform technique 8=21674
- liquids, overtones of combination scattering 8=1559
- macromolecules, scattering in soln. 8=12381
- metal-phthalocyanines, luminesc. singlet-singlet transitions 8=18591
- methane, excitation by proton collisions 8=1288
- methane, solid films, far u.v. 8=14283
- p-methoxyphenol, near u.v. absorpt. obs. 8=21156
- 2-methyl-1,4-naphthoquinone vapour, in near u.v. 8=7585
- methylene blue, absorpt., depend. on solvent, dye conc. and solutes conc., rel. to water induced dimerization 8=8123

Spectra—contd**organic molecules and substances—contd**

- monochlorobenzene, u.v. absorpt. 8=7567
- naphthalene crystal, attenuated total refl. 8=9569
- naphthols, dichroic spectra in PVA sheets, rel. to vibronic transitions 8=14285
- naphthols, triplet state, rel. to electronic structure 8=21152
- naphthalene solid solns., phosphoresc. and delayed fluoresc. rel. to triplet state, obs. 8=23068
- α - β -naphthylaldehyde in alcohol and hexane solutions, singlet-triplet conversion 8=21693
- nucleotides 8=16334
- 1,4-naphthoquinone, visible emission in vapour phase 8=7589
- α - β -naphthylaldehyde in alcohol and hexane solutions, singlet-triplet conversion 8=21693
- oxalyl chloride 8=2468
- pentachlorotoluene, crystals and solns., and vibr. assignments, i.r. obs. 8=9575
- pentaerythrite, mono, di and trihalogen derivatives, vibr. spectra 8=7576
- perfluoro-aza-propene, $\text{CF}_3\text{N}=\text{CH}_2$, u.v. absorpt. band of NCF_2 radical 8=7626
- perylene, π transitions, free-electron and MOLCAO calcs. 8=4139
- phenanthrene, cryst. 8=5648
- phenanthrene, n.m.r. obs. 8=9460
- p-phenetidine vapour, near u.v. abs. 8=21157
- phenol and N,N-dimethylacetamide, solvent effects on H-bonding 8=1571
- phenol, 2750 Å band system, extended vib. assignments, and band contour anal. 8=16337
- phenylacetylene, singlet and triplet electronic states 8=4210
- phthalocyanine lanthanides, acid adducts, absorption 8=4589
- pinacyanol dye in alcohol, long wavelength bands 8=8091
- polyacene solid solns., energy transfer bibliography 8=14162
- polynuclear hydrocarbons, e.s.r. 8=12307
- polystyrene, vac. u.v. absorpt. 8=14290
- polyvinyl alcohol films dyed in solutions of iodine in iodides and bromides, absorption in 220-1000 nm range 8=5650
- propane, solid films, far u.v. 8=14283
- pseudocyanine dye in alcohol, long wavelength bands 8=8091
- purine, electronic spectra calc. 8=7594
- 2-pyrazolines, trisubstituted, structural analogues 8=12293
- pyrene, π transitions, free-electron and MOLCAO calcs. 8=4139
- pyridazine, singlet-triplet transitions 8=9573
- pyridocyanines, stereoisomerism 8=7596
- 2-pyrrolidone, vibration spectra, 3500-250 cm^{-1} 8=7595
- rhodamine B dye lasers, emission 8=21694
- α -silyl ketones, electronic spectra 8=21159
- solids, non-cond., rel. to band struct. semi-empirical calc. 8=8915
- solid solns. of mols. and radicals, and vibr. analysis 8=13032
- spiropentane, vibration calc. and interpretation 8=7588
- trans-stilbenes, 4-monosubstituted, absorpt. rel. to ionization pot. and conjugated π -bonds, obs. 8=4212
- stilbene, triplet-triplet energy transfer and "phantom triplet" 8=21160
- terphenyls, 4-monosubstituted, absorpt. rel. to ionization pot. and conjugated π -bonds, obs. 8=4212
- 2,3,5,6-tetrachlorotoluene crystals and solns., and vibr. assignments, i.r. obs. 8=9575
- tetrachloro-p-xylene crystals and solns., and vibr. assignments, i.r. obs. 8=9575
- tetramethylpyrazine emission rel. to triplet state struct., 4.2°K 8=22907
- thienylphenyl-ketones and -thioketones, electronic, steric effects obs. 8=4218
- p-tolunitrile, emission bands 8=21163
- α,α,α -trichlorotoluene, vac. u.v. absorpt. 8=4219
- 3,4,5-trimethoxyphenylglyoxal semidiones, e.s.r. measurements 8=12305
- triphenylene in CCl_4 , phosphoresc. rel. to mol. deform. by lattice interactions, 77°K 8=1577
- triphenylphosphine, modified Mataga SCF calc. 8=4209
- TMPD-chloranil crystals, u.v. and visible meas. 8=8595
- u.v. absorption spectra cooling device for recording 8=22930
- u.v., orbital energy level diagrams, limitations on use 8=1268
- Wurster's blue perchlorate, cryst. reflect. 8=14288
- Wurster's cation dimers in soln. 8=21186
- xanthane $\pi\pi^*$ and $n\pi^*$ levels location, absorpt. and luminesc. obs. 8=1302
- xyl radicals fluoresc. in cryst. xylenes, vibr. analysis obs. 8=12356
- Al phthalocyanines, absorpt. spectra in soln. 8=21688
- CCl_4 , liquid and crystalline state, sub-millimeter region 8=7568
- CCl_4 soln. of SO_2 , absolute i.r. intensities meas. and calcs. 8=1560
- CCl_4 , 71°C, spectrum of scatt. microwave radiation 8=21686
- CCl_4 vibr. intensities rel. to intermol. interactions 8=16274

- CCl₂F₂, solution H in, simultaneous transitions 8=21675
 CD₄ nuclear hyperfine interactions 8=12119
 CD₄, vibration, anharmonic calc. method 8=12133
 CF₂, absorpt. at 2500 Å, and rot. structure 8=4188
 CF₄, radiative lifetimes of u.v. emission systems 8=7501
 CF₄, solution H in, simultaneous transitions 8=21675
 [(CF₃)₂CF]₂SO₂, i.r. vibration 8=16273
 CH, absorption and emission spectroscopy, in low-press. oxyacetylene flames 8=21189
 CH, electronically excited in hydrocarbon flames 8=7509
 CH radical, electronic absorpt. bands 8=7618
 CH₂, centrifugal distortion and electron spin coupling effects 8=21089
 CH₄, nuclear hyperfine interactions 8=12119
 CH₄, vibration, anharmonic calc. method 8=12133
 CHD₃, ground state molec. consts. 8=12275
 CH₃Br, vibration-rotation band near 6000 cm⁻¹ 8=16859
 CH₃Cl₂ soln. of SO₂, absolute i. r. intensities meas. and calcs. 8=1560
 CH₃Cl, Fermi and Coriolis resonances in the ν₄ band 8=16319
 CH₃CN soln. of SO₂, absolute i. r. intensities meas. and calcs. 8=1560
 (CH₃NH₂)₂CuCl₂ 8=14104
 C₃H₂ radical, absorpt., diazopropyne photolysis obs. 8=16368
 C₆H₅OD anharmonicity variation effect on frequency perturbations ν(OH) and ν(OD) 8=16316
 C₆H₅OH anharmonicity variation effect on frequency perturbations ν(OH) and ν(OD) 8=16316
 CN, Franck-Condon factors rel. to mol. constant var. 8=4173
 CT₄, vibration, anharmonic calc. method 8=12133
 C₂T₂, i.r. absorption spectrum 8=12244
 Cr oxalate, ²E-⁴A₂ emission, rel. to Cr³⁺ conc. 8=18578
 Eu, β-diketon complexes, for laser use 8=22978
 Eu chelates, u. v. irrad., optical emission losses, study of causes 8=18571
 Li dihydroanthracene salts, electronic rel. to ion-pair structure 8=7558
 Mg-azatetrabenzoporphins, polarization and absorpt. rel. to porphin ring e struct. 8=21116
 Mn²⁺ in hexa- and tetracoordinated cpds. 8=9551
 X₃P. BH₃ type additive compounds, frequency and absorption of vibrations 8=16305

organic molecules and substances, infrared

- acenaphthene, single crystal absorpt. 8=23028
 acetates, rare earth, Pb and Cu, rel. to thermal decomp. 8=23095
 acetonitrile N-oxide, and symmetry force consts. 8=16309
 acetophenone in CHCl₃, shape intensities of i.r. absorpt. bands 8=8080
 acetyl bromide and CD₃COBr 8=7555
 acetylene, heated emission 4000-4160 cm⁻¹ 8=16308
 acetylene, rotational constants 8=16307
 acrylyl fluoride, rel. to rot. isomerism 8=16311
 Allyl halides 8=21111
 amines, primary aliphatic, absorption spectra 8=16313
 α-aminoacid hydrochlorides 8=7556
 anthracene, single crystal absorpt. 8=23028
 azides, anomalous band splittings 8=21118
 azines, absorpt. of ν_{C-N} band 8=1276
 benzene-dioxan crystallized mixture at 80°K 8=18572
 benzene, vibr. excitation spectrum 8=9567
 benzenes, paradisubstituted, far i. r. absorption 8=7566
 benzophenone, single crystal absorpt. 8=23028
 benzimidazolone derivatives 8=4186
 biphenyl, single crystal absorpt. 8=23028
 bromoacetone, rel. to rotational isomerism 8=1271
 p-bromoanisole, 400-4600 cm⁻¹ obs. 8=21682
 2-bromocyclobutanone 8=12266
 bromomalonaldehyde 8=21144
 bromomalonaldehyde anion 8=21144
 2-bromo-2,4,4-tridentercyclobutanone 8=12266
 caffeine salts 8=14277
 carboxylic acids, H-bonded 8=7571
 all-trans β-carotene, crystals, absorpt. 8=2465
 all-trans β-carotene, cryst. and free mol. electronic absorpt. 8=2465
 chlor-diphenyl-sulphone-urethanes, 9 cpds., absorpt., rel. to struct. 8=9571
 chlorobenzenes in CS₂ soln., i. r. intensity meas. of C-H out-of-plane vib. bands 8=21684
 chloroform, molec. complex with benzene 8=2464
 chloroform, in nonpolar solvents, intensity meas. of 1216 cm⁻¹ band 8=21680
 chloroform-triethylamine system 8=18649
 chloroform, using high resolution grating spectrometer 8=20078
 chloromethyl thiocyanate 8=4201
 p-chloro-phenol, OH stretching band struct. 8=4211
 chlorosilyl dialkylamines 8=1300
 complexes formed by H-bonding 8=12242
 p-cresol, OH stretching band struct. 8=4211
 cyclic mols, anal. of type A bands rel. to asymmetry parameters 8=1277

Spectra—contd

organic molecules and substances, infrared—contd

- cyclopentadiene 8=12267
 cyclopentene, ring puckering 8=16304
 cyclopentene, vibration, phases I and II 8=7590
 cyclopropane, gas and partially deuterated, rel. to force consts. 8=1298
 depsides, lichen, and u.v. 8=4191
 depsidones, lichen, and u.v. 8=4191
 deuteriochlorobenzenes, o-, m- and p- 8=7574
 deuterotoluenes, o-, m- and p- 8=7574
 dibenzenechromium iodide, band assignments and force consts. 8=14276
 dibromoacetonitrile 8=12281
 2,6 difluoropyridine, vapour and liq. 8=16341
 2,5-dihydrofuran 8=12271
 2,3-dihydrofuran, ring puckering 8=16304
 2,5-dihydrofuran, ring puckering 8=16304
 2,3-dihydrothiophene, ring puckering 8=16304
 2,5-dihydrothiophene, ring puckering 8=16304
 diimines, absorpt. of ν_{C=N} band 8=1276
 2,5-dimethyl-1,3,4-oxadiazole 8=12285
 2,3-dimethylnaphthalene, rel. to mol. and crystal structure study 8=18574
 0,0-dimethyl phosphorochloridothioate 8=21146
 p-dithiane, absorpt. 15° and 300°K 8=18575
 p-dithiane in CS₂, absorpt. 15° and 300°K 8=18575
 ditluenechromium iodide, band assignments and force consts. 8=14276
 dixanthogens, anomalous band splittings 8=21118
 durene, single crystal absorpt. 8=23028
 ethane, high resolution 8=490
 ethyl caproate, in nonpolar solvents, intensity meas. of 1737 cm⁻¹ band 8=21680
 ethyl nitrite, gas, soln. and solid, rel. to isomerism 8=16329
 ethylene-trifluoropropylene copolymer, rel. to microstruct. 8=17298
 ethylenediamines 8=1283
 ethylgermane 8=1280
 ethylsilane 8=1280
 fluoroacetone, rel. to rotational isomerism 8=1271
 p-fluoro-phenol, OH stretching band struct. 8=4211
 formic acid adsorbed on ZnO 8=18705
 formic acid, cryst. 8=14279
 frequency shifts, correl. with gas chromatographic retentions 8=9759
 furan, cryst., absorpt. at liq. N₂ temp. 8=14280
 glycine silver nitrate and monoglycine nitrate, absorption obs. 8=5646
 haloacetonitriles, far i. r. 8=16323
 halogenated ethanes 8=12269
 halogens cyanoacetylenes 8=1270
 hexachloroethane, far i. r. fundamentals, discussion of freqs. 8=16320
 indolene in CCl₄, shape intensities of i. r. absorpt. bands 8=8080
 isothiazole, microwave obs. and struct. 8=21162
 isothiocyanates, anomalous band splittings 8=21118
 ketones, intermolecular forces 8=1287
 ligand-metal-halide complexes, far i. r. 8=1296
 malonaldehyde anion 8=21144
 metal carbonyls 8=4189
 methane, high resolution 8=490
 methylethoxy silanes, integrated intensity 8=7551
 methyl iodide, fundamental bands 8=8079
 methyl lithium monomer in solid Ar 8=12282
 methyl mercaptan, from 15 to 45 cm⁻¹ 8=21145
 methyl methoxysilanes on base, structure study 8=4738
 methyl nitrite, gas, soln. and solid, rel. to isomerism 8=16329
 methylphosphine 8=1289
 methylsilyl dialkylamines 8=1300
 methylene bromide, solid 8=14284
 methylene chloride, solid 8=14284
 methylene iodide, solid 8=14284
 monobromoacetonitrile 8=12281
 monodeuteriomethane, 2ν₄ band resonance 8=7583
 monohalogen diacetylenes 8=1270
 naphthalene at liquid He temp., interpretation of fundamental vibrations 8=18577
 naphthalene, single crystal absorpt. 8=23028
 organic uranyl nitrate solution, complexing study 8=21619
 1,2,4-oxadiazole and methyl derivatives 8=4204
 1,3,4-oxadiazole 8=12285
 1,2,5-oxadiazole, vapour and liq. absorpt., rel. to vib. assignment 8=16335
 oxalate free ion, D_{2d} symmetry and freq. assignment 8=21154
 oxamide, 4000-400 cm⁻¹ obs. 8=23032
 d-oxamide, 4000-400 cm⁻¹ obs. 8=23032
 paraffins, long-chain 8=13341
 o-phenylenediamine 8=1295
 pentadeuteropyridine, structure of vibration bands 8=7597
 phenanthrene, single crystal absorpt. 8=23028
 phenol-d₄, vib. and torsional i. r. freqs. 8=16336
 phenol-formaldehyde, polymer, during thermal treatment 8=4269

Spectra—contd

organic molecules and substances, infrared—contd

- phenol H complexes with benzene and ethers 8=4213
 phenol, OH stretching band struct. 8=4211
 phenol, polymeric forms, H-bond stretching freq. 8=21141
 phosphoramidates and phosphoramidothioates and struct. 8=7591
 γ -picoline-halogen complexes 8=7592
 1,4 trans-polybutadiene, structure 8=4773
 polydioxolane, rel. to chain vibs. and molec. struct. 8=18584
 polyethylene, cryst. 8=13341
 polyethylene, electron irradi. and not irradi., 150-310°K, 700-2100 cm^{-1} 8=21165
 polyethyleneterephthalate, for determ. of crystalline fraction content 8=17190
 poly- α -methylstyrene in soln. 8=21692
 poly-L-proline, in aq. soln. 8=12891
 poly(vinyl chloride), tacticity study 8=21217
 polyvinylphthalimide absorpt. and luminesc. rel. to triplet-triplet energy transfer, 15000-40000 cm^{-1} 8=12389
 polymers on base, structure study 8=4738
 polymethylmethacrylate, rotational isomerism in ester group, absorption study 8=4220
 polypentene-1, polymorphs 8=17463
 propane, high resolution 8=490
 pyridine complexes, far i. r. 8=1296
 pyridine, structure of vibration bands 8=7597
 pyrimidine, liq. N temp. meas. 8=9572
 pyridine complexes formed with metallic halogenes 8=16860
 3-pyridinesulphonic acid and salts 8=16339
 pyrrole, cryst., absorpt. at liq. N, temp. 8=14280
 rotational rel. to vel. of light 8=11122
 1,2,5-selenadiazole 8=16342
 shape intensities of i. r. absorpt. bands, liquid phase 8=8080
 1,3,4,5-tetrachlorobenzene, in nonpolar solvents, intensity meas. of 878 cm^{-1} band 8=21680
 tetrakis-[dimethylamides] of group IV 8=1290
 s-tetrazine, type-A bands anal. rel. to asymmetry parameters 8=1277
 theobromine salts 8=12300
 thiazoles, monosubstituted, vibs. and coupling 8=4217
 thiophene, cryst., absorpt. at liq. N, temp. 8=14280
 toluene glow discharge prod. polymer films, obs. 8=21894
 triethylphosphine and related cpds 8=21137
 trifluoroacetone, in proton donor solvents 8=16867
 2,2,2-trifluoroethanol as H bonding acid, freq. shifts rel. to bonds 8=16863
 2,4,6-trifluoropyrimidine, liq. and vapour 8=16340
 trimethylaluminium 8=16327
 trimethylsulphonium cpds., and freq. assignments 8=16864
 trimethylsulphoxonium cpds., and freq. assignments 8=16864
 trimethylene oxide, ring puckering 8=16304
 triphenylaluminium, rel. to vibs 8=12287
 triphenyl phosphine complexes, far i. r. 8=1296
 BF_3 :dimethyl sulphide complex, liq. 8=1569
 Ca dicarboxylates (malonate to sebacate), rel. to thermal decomp. 8=23095
 CCl_4 , molec. complex with benzene 8=2464
 CD_3 , mono, di- and tri-substituted compounds, far i. r. torsional vibration spectra 8=4196
 $\text{CD}_3\text{CD}_2\text{Cl}$, far i. r. torsional vibr. 8=4193
 $\text{CF}_3(\text{OF})_2$ 8=12279
 CF_3 , mono, di- and tri-substituted compounds, far i. r. torsional vibration spectra 8=4196
 $\text{CF}_3\text{P}(\text{O})\text{F}_2$ 8=21177
 CH_3 , mono, di- and tri-substituted compounds, far i. r. torsional vibration spectra 8=4196
 CH_3 , in photolysis of methane 8=18737
 CH_3 radical in solid Ar 8=7624
 $(\text{CH}_3)_2\text{POCl}$ 8=12286

 Si in steel, line interferences due to Cr, V and Mo 8=23190
 Sm in ThO_2 , direct determ. 8=18787
 Ta thin films, impurities determ. 8=18786
 Ta in B, U, Zr, spectrophotometry 8=9749
 U, estimation in carnotite ores by spark technique 8=14461
 U, urinary, method for radiation analysis 8=23181
 Zn, high-purity, comparison of fine optical spectrographic methods 8=23191

Spectrometers

- See also Mass spectrometers; Monochromators; Particle spectrometers; Spectrophotometers; X-ray spectrometers.
 astronomical multi-slit spectrograph 8=23498
 bremsstrahlung, use of single-crystal refl. 8=6794
 cam mechanisms for interference modulation 8=3361
 echelle spectrometer-spectrograph for astronomical use 8=14740
 Fabry-Perot photoelec., obs. deconvolution, least-squares method 8=6524
 Fabry-Pérot photoelec. type, spectrum calibration using Michelson interferometer 8=20077
 Fabry-Perot, scanning using Moiré fringes system 8=6531
 field-sensitive, for quasi-coherent scatt. studies 8=11195
 grating type, for rapid scanning over wide spectral range, design and capabilities 8=20079
 high resolution grating, for near i. r., construction 8=20078
 high resolution grating spectrometer, for four-pass operation in near i. r. 8=6529
 interferometer spectrometer, scanning, use as optical chopper 8=6528
 i. r. high resolution, using Zeeman-tuned laser 8=490
 liquid-scintillation types, developments 8=6644
 for magneto-absorpt. in pulsed fields at 4.2°K 8=11157
 neutrons, very slow, high resolution for cold source of high flux reactor 8=6964
 new methods of instrumental spectroscopy, colloquium 8=20071
 nuclear quadrupole resonance, f. e. t. appl. 8=15436
 optical system for time and space resolution 8=20076
 resolving power test, 5350 Å band of I_2 8=16289
 spectrographs image illuminance distrib. with concave diff. grating, calc. 8=487
 spectroradiometer-luminometer, for luminescence spectral distributions: descr., applic. 8=492
 slit function effects, atomic lines 8=20082
 time-of-flight, appl. to neutron cross-section meas. 8=7196
 u. v. reflection spectrum using photoelec. method 8=15532
accessories
 bandpass filter for atomic absorpt. 8=489
 Barnes ES-100 Educational, absorpt. of four filters 8=491
 cassette, for simultaneous recording of several lines 8=20084
 cooling vessel for molecular u. v. absorpt. recording 8=22930
 data reduction, computer programme 8=15534
 for diffraction gratings blazed to high orders, predispersion order sorter 8=6534
 Fabry-Perot recording interferometer 8=15545
 Fourier transform spectrograph using Lippmann effect 8=3363
 infrared absorption cell for liquids at low temps. 8=8069
 Kodak I-Z plates, modified hypersensitization procedure 8=494
 laser source for scanning-function calibration 8=15539
 multichannel spectral recording instrument 8=20083
 near i. r., for diffuse reflectance 8=496
 n.m.r., spin echo attachment, single coil 8=10988
 optical cell, null press., for liquids at elevated temp. and press. 8=21676
 Raman, oblique illumination 8=3360
 real-time electro-optical analyzers, with coherent detection 8=6532

Spectrometers—contd**accessories—contd**

- for reflectance, bidirectional, dual beam device with top illum. and $\pm 45^\circ$ sample tilting 8=6533
- shock-tube flash spectrography, explosive shutter 8=15047
- sliding shutter, e. m. induction drive 8=15535
- solar, large Echelle grating 8=10385
- white surface reference standards, U.S.S.R. specimens 8=466

CsBr and CsI i.r. windows, polishing 8=495

Spectrometers, radiofrequency

- See also Nuclear magnetic resonance and relaxation measurement; Paramagnetic resonance and relaxation measurement.
- automatic swept-freq. spin-echo, for n. m. r. in ferromag. mats. 8=9454
- coaxial bridge with helical line sample holder, for nuclear quadrupole res. 8=10991
- e. s. r., for short-lived free radicals prod. by u. v. flash photolysis 8=12339
- fluctuations spectrum analyser, statistical props. 8=10981
- with high modulation freq. for mag. resonance parameters 8=10980
- hybrid tees for n. m. r. 8=3280
- i. r.-microwave double reson., using CO₂ laser 8=6402
- mm spectroscopes, klystron-oscillator power supply 8=15425
- microwave, construction of helices, design criteria 8=3276
- microwave, continuous wave, for u. p. r. 8=19905
- microwave, solid state, Stark modulated 8=3275
- modified Robinson type, for n. q. r. of N¹⁴ nuclei 8=3283
- n. m. r. frequency sweep using voltage controlled oscillator 8=19908
- n. m. r., heating system 8=19912
- n. m. r. 100 MHz, phase-lock circuit 8=15430
- n. m. r. p stabilised 8=388
- n. m. r. sensitivity and magnet technology, advances 8=15431
- n. m. r., spin-stabilization for double proton rdsonance 8=3281
- n. m. r., variable freq., construction from commercial grid dip meter 8=10987
- n. q. r., improved super-regenerative instrument 8=15437
- resonator, high Q, for NO absorption meas. at 150 GHz 8=7536
- for spin-lattice relax. times, meas. 8=19913
- system for meas. frequencies up to 345 GHz 8=6401

Spectrophotometers

- a. c. for low intensity signals, dark noise discrimination 8=20081
- actual Littrow and Wadsworth systems, deviation, scanning equation and spectral widths of slits 8=15531
- energy-compensated spectrofluorometer, adjustment 8=15533
- laboratory performance assessment 8=11153
- modulated optical null type, for flash excitation reactions 8=3359
- 12-channel Doppler-profile, plasma scattered laser light 8=3357
- ultraviolet, sodium salicylate appl 8=15494
- vibrating-reed, conversion to modulation system 8=15536

Spectrophotometry

- atomic line, spectral distrib. from Perot-Fabry meas. 8=15530
- chromic (III) cpds., stability study 8=23079
- Chudze-Lovas (1967) supernova, spectrophotometry 8=5900
- diffusion pump fluid film thickness meas. 8=16728
- γ Cen, visual binary system 8=10200
- ocean, for atm. absorpt. coeffs. 8=9872
- polyethylenimine, analysis via Cu chelate 8=16393
- polyphenyl diffusion pump fluid film thickness, continuous meas. 8=7949
- protein mol. wt. determ. 8=18642
- radiation intensity, measurements in vacuum u. v. region by aromatic phosphors 8=11159
- solar corona, 5303 and 6374 Å lines, charts of equal luminosity 8=19323
- solar, high resolution, appl. of rapid spectral scanning 8=10386
- spectral irradiances determ. 8=462
- CO, low concentrations in air, determ. 8=14589
- KNO₃ and other nitrates, molten mixtures, u. v. absorption 8=8085
- N in iron and steel, determ. 8=23178
- Os determ. from thiocyanate 8=9752
- Ta, spectrochemical determ. in metals 8=9749

Spectroscopy

- See also Spectra; Spectrometers; Spectrophotometry.
- in acoustics, optics and radiophysics using a modulation method 8=6404
- advanced optical techniques, book 8=15489
- atmosphere, upper, Saskatchewan University research, review 8=9925
- atomic absorpt., atomization of solid samples, use of solid fuel 8=11150
- atomic absorpt. for thermodynamic meas 8=16962
- atoms, highly ionized, rel. to space research observations 8=16192

Spectroscopy—contd

- carbonyl cpds., u. v. study of reversible hydration, limitations 8=9682
- carrier distillation, electrodes, apparatus for rapid prep. 8=14903
- computer processing of spectrograms for absolute intensities 8=493
- derivative, to filter unwanted contents in source spectrum 8=20073
- electron-excited Auger electrons for material analysis 8=22729
- exploding wires, time-resolved 8=15537
- Fabry-Perot photoelec. obs. deconvolution, least-squares method 8=6524
- Fourier, spectral recovery from interferogram 8=15528
- Fourier transform, masks in optically formed spatial filters, storage capacity 8=6514
- Fourier transform, sources of systematic error 8=1253
- Fourier transform, for unequal number of input and output points 8=6522
- gamma-resonance Mossbauer use, in chemistry and solid state 8=692
- high-resolution, Fabry-Perot developments 8=6520
- hook method for f-valves, theory and use 8=6525
- i. r., adsorbed species on solids, cell 8=6530
- i. r., AgCl as an embedding medium 8=18553
- i. r. band envelopes, math. functions to fit 8=6526
- i. r., review and current applications 8=11149
- interferometric, using modified line shape 8=11152
- internal reflection, for meas. conformation of adsorbed polymers 8=8350
- internal reflection, rel. to bulk optical props. 8=22934
- laser photolysis in nsec range 8=9728
- lasers, giant pulse, Fabry-Perot interferograms quasi-linear dispersion 8=6416
- line anal. using Gaussian and Lorentzian convolution tech. 8=15529
- low temp., sapphire window mountings 8=3362
- molecular 8=16246
- molecular beam triple reson. for h. f. s. 8=16279
- molecular, liq. cryst. matrices 8=8008
- molecular spectroscopy, conference, Copenhagen Denmark (1965) 8=16239
- molecules, optical, Canadian N. R. C. apparatus and meas., review 8=7484
- molecular structure and spectroscopy, conference Ohio USA (1966) 8=16238
- molecular wt. determ., by i. r. 8=9755
- new methods of instrumental spectroscopy, colloquium 8=20071
- nuclear improvement of peak to background ratio 8=3453
- nuclear quadrupole moments of even-Z isotopes optical meas. 8=7068
- optical illumination, coherent, phase-modulated, spectrum broadening 8=20072
- photographic images, faint, electronic enhancement 8=6583
- plasma, high-temp. exptl. device 8=16539
- plasma, high-temp. preliminary expts. 8=16540
- plasma jet, seeded, photography of isotherms 8=7781
- plasma jet temp. meas. techniques 8=12572
- plasma, vacuum u. v. and soft X-rays 8=12512
- polarized internal reflexion for molecular orientation of fibres 8=16394
- scattering media, physical principles and methods 8=11151
- spectra reconstruction from coherence meas., phase problem 8=20074
- stellar spectra, automatic data reduction 8=23540
- theoretical, symposium (Yerevan, 1966) 8=11148
- Toronto University research programmes review 8=6523
- Zeeman, solid state, crystallographic alignment 8=22936
- Hg¹⁹⁸ 4358 Å line shape, intensity correl. obs. 8=20075
- He plasma in theta pinch discharge, electron densities and temp. meas. 8=21349

Light sources

- arc, low-temp., for emission anal. of solns. 8=23185
- flames, evaluation for atomic absorpt. 8=23183
- graphite electrodes, purification by electron beam heating 8=23187
- h. f. plasma, for emission of solns. and powders 8=20086
- hollow-cathode, high intensity, λ 3247.5 Å -copper resonance line profile by interferometry 8=3365
- hollow-cathode lamp for atomic absorpt. 8=497
- hollow cathode lamp for atomic fluoresc. flame 8=18781
- ionic beam source, electronically excited by thin foil, characts. 8=6535
- laser, continuously tunable, applications 8=15485
- lasers for spectrometer scanning-function calibration 8=15539
- microwave induced Ar plasmas for metal excitation 8=18785
- modulator for hollow cathode lamps 8=15536
- Nernst glower, control circuitry 8=3364
- ruby laser, tunable, repetitively pulsed, with solid etalon mode control 8=19993
- spark, time-resolved, for atomic absorpt. anal. 8=18783
- vacuum u. v., low voltage, high capacitance and very low inductance spark source 8=7399
- volume, intensity definition 8=11158

Spectroscopy—contd**light sources**—contd

- C arc, electrode particle trajectory photography 8=16428
- C resonance lamp 8=15538
- He-Ne laser for Raman excitation of powders 8=14175
- K r.f. resonance lamp for Zeeman scanning in kgauss fields 8=6536
- Ne laser, i.r. Zeeman-tuned, for absorpt. line fine-structure anal. 8=11160
- Xe laser, i.r. Zeeman-tuned, for absorpt. line fine-structure anal. 8=11160

Spectroscopy, radiofrequency

- See also Nuclear magnetic resonance and relaxation; Paramagnetic resonance and relaxation; Spectrometers, radiofrequency.
- magnetic resonance, many photon transitions, obs. 8=22904
- magnetosphere, He ion effect 8=9921
- microwave resonance absorpt., modulation effect 8=15426
- mm-wave Fourier transform, for liquids 8=21674
- using modulation method 8=6404
- semiconductors, organic, review 8=14088
- separator beam at the AGS 8=3491

Speech

- See also Hearing.
- American English /s/ transitions as cues to adjacent stop consonants identity 8=201
- articulation score meas. in reverberating conditions using a correlation method 8=15077
- automatic recognition, time-invariant measure of contour similarity 8=19597
- discrimination, consonant-vowel-consonant words, statistical theory 8=19599
- distortion in reverberating hall 8=19592
- filter, linear, giving max. intelligibility over noisy channel for peak power limited transmitter 8=15080
- identification of talkers from monosyllables in context 8=6188
- information transfer by short tonal signals and tone pitch duration threshold 8=3095
- intelligibility, effect of compressor action 8=207
- intelligibility gain, binaural, and release from masking, prediction 8=205
- laryngoscopic technique using fiber optics 8=14892
- listening, selective, application of signal detection theory 8=216
- periodic and jittered pulse patterns, perception of temporal gaps 8=15082
- recognition of spoken digits in real time, sequential system 8=3084
- release of masking through interaural time delay 8=3088
- rhyming minimal contrasts, diagnostic articulation test 8=3080
- sound perception, dimensions 8=200
- syllable duration in oral and whispered reading, masking noise effect 8=15078
- synthesis, machine aided format determination 8=204
- vocal freq., perceptual study 8=19596
- voiceprints, automatic system recognition 8=19598
- vowels, Polish, formant freq. regions 8=6187
- vowel quality as function of spectrum envelope and fundamental freq. 8=15079
- vowel recognition, formant transitions effect 8=202
- waveform instantaneous amplitude, asymmetries in the cumulative probability distributions 8=203

Spherical aberration. See Aberrations, optical.**Spicules.** See Sun, prominences.**Spin.** See Elementary particles; Hyperons/spin and parity; Mesons' spin and parity; Nucleus/spin and parity; Rotating bodies.**Spin echo.** See Nuclear magnetic resonance and relaxation.**Spin-lattice relaxation.** See Crystals/lattice mechanics; Magnetic resonance and relaxation.**Spin waves.** See Ferromagnetism/spin-wave theory.**Spinors.** See Quantum theory, wave equations.**Spions (pions with spin).** See Pions.**Spirality.** See Elementary particles; Field theory, quantum.**Sporadic-E.** See Ionosphere/E-region.**Sprays**

- combustion of liq. fuel, comparison with single drops 8=19657
- evaporation in air, continuum model 8=8184
- liquid, droplet size distribution 8=4635

Spurions. See Elementary particles.**Sputtering**

- alkali halides, and colour centres, induced by slow electron bombardment, formation theory 8=13472
- e.m. field, crossed, effect 8=7651
- films, resistive temp. and pressure var. 8=8303
- focused collision sequence generation, inverse-square potential calcs. 8=17696
- glow-discharge tube cathodes, variation with current 8=2019
- magnetron anodes, cathode heating by ion bombardment 8=15334
- metal carbides, with Cd⁺ ions up to 500 eV energy, coeffs. 8=8762
- metals, comparison of laser beam and pulsed discharge effects 8=17698

Sputtering—contd

- metallic target, electron emission by Auger de-excitation of atoms 8=5422
- plasma, thermonuclear, search for impurity atoms using neutrons 8=16600
- spark discharge in oil, cavity configuration rel. to pressure 8=21249
- transition metal nitrides and borides, by Cd⁺ ions, coeff. determ. 8=17705
- travelling-wave tubes, pumping, auxiliary electrode 8=15287
- triode, new discharge arrangement, high current in 10⁻⁴ torr range 8=7653
- Ag, polycrystalline target, coeff. rel. to incident angle of Ne, Ar and Kr ions 8=8766
- Al, distribution of sputtered atoms by electron microprobe 8=21876
- Al₂O₃, by Cs ions, surface oxide film 8=8760
- Ar films, due to negative O ions in O discharge 8=21877
- Cu polycrystalline target, coeff. rel. to incident angle of Ne, Ar and Kr ions 8=8766
- K, differential sputtering ratio (energy spectrum) meas. for incident Ar and Xe ions 8=2029
- LaB₆, by Cd⁺ ions, coeff. determ. 8=17705
- MnO₂ films, prep. and props. 8=4750
- Mo, polycrystalline target, coeff. rel. to incident angle of Ne, Ar and Kr ions 8=8766
- Ni polycrystalline target, coeff. rel. to incident angle of Ne, Ar and Kr ions 8=8766
- Ni-Cr alloys, in Ar, comparison of film and target composition 8=22254
- Ni-Cr films, use of H₂ for thickness control 8=8777
- NiFe₂O₄ ferrite films, single cryst., prep. 8=18362
- Si and SiO₂ films, r.f. and d.c., rel. to re-emission coeffs. 8=2032
- Si₃N₄ films prod. 8=17139
- Si₃N₄ films reactively sputtered, evidence of excess Si 8=21890
- SiO₂, in Ar, r.f. dielectric system with non-grounded electrodes 8=17138
- Ta₂O₅ film capacitors preparation 8=13097
- Ti by positive ions of N₂, O₂ and Ar 3-9 keV 8=8780
- W films, and condensed on NaCl, structure rel. to temp. 8=4759

Stacking faults. See Crystal imperfections.**Standards**

- See also Constants; Units.
- air-dielectric coaxial-lines for immittance, skin-effect corrections 8=10964
- calorimetric, pure Cu for low temp. 8=15127
- e.m.f. rel. to a.c. Josephson effect 8=17989
- frequency multiplier, phase-locked 8=2877
- masses, precision for torsion balances 8=19349
- ohm 8=19708
- optical radiation scale development 8=11117
- primary, mutual inductance 8=283
- resistance, absolute determination by Campbell's method 8=282
- quartz metre gauges, interferometric meas. 8=10475
- reference data, concept for properties of substances 8=10473
- thermal n flux density, optimal geometry 8=20869
- time, mean atomic scales accuracy 8=10484
- 2.5 MHz frequency, design 8=19351
- voltage, electrostatic method for absolute meas. 8=10824
- wavelength, Al III vacuum u.v. 8=16202
- wavelength, use of spontaneous emission from He-Ne laser 8=15467
- white surfaces for colorimetry and spectrophotometry 8=466
- X130 standard attenuator, for super high freq. transmission systems 8=15415
- Cs, errors in reproducing frequency 8=15160
- H and Cs freq. standards, intercomp. of average freq. and freq. stability 8=10483
- Mn⁵⁴ γ -spectrometric source calibration 8=20750
- Ra-Be(α , n) neutron source, comparison of meas. 8=11618
- Zn⁶⁵ γ -spectrometric source calibration 8=20750

Stark effect

- electronic spectrum of asymmetric rotor 8=21035
- gas-phase electron reson. of free radicals 8=12345
- molecular crystals 8=22940
- n.m.r. and n.q.r., rel. to effective field acting on electrons 8=14133
- in plasma, with h.f. stochastic fields, linewidths rel. to main characts. 8=7778
- plasmas spectral line shapes calc. 8=1402
- quadratic, computation of 39 const. for 8 elements 8=20935
- quadratic shift in plasma temperature meas. 8=7787
- R-centre, inclusion of Jahn-Teller, spin-orbit and internal stress interaction 8=1992
- Rochelle salt:Cu²⁺ ferroelec. e.p.r. Stark effect obs. 8=14101
- rotational transitions identification and dipole moment detm. 8=21037
- ruby, linear, in U absorpt. band 8=9501
- waveguide for 258 GHz modulator 8=6365
- Al in anode zone of vacuum pulse discharge, line broadening and displacement 8=16203
- ArII lines, broadening parameters, obs. 8=20949

Stark effect—contd

- BaF₂:Gd³⁺, Stark splitting and centre of gravity of ⁶P_{3/2} and ⁶P_{1/2} 8=23015
 CaF₂:Gd³⁺, thermoluminescence, splittings of ⁶P_{7/2} and ⁶P_{5/2} levels 8=14310
 Cd obs. in 5s5p ³P₁ state 8=20966
 Cs obs. in 7p ²P_{3/2} state 8=20966
 D, using broadening of D₂ line, expt. 8=16194
 H, contribution of polarizabilities 8=12048
 H lines, broadening 8=1159
 H-line broadening functions 8=12051
 H_α, γ, _δ, broadening of line profiles in plasma column 8=4063
 He II, broadening of 3203Å line 8=7383
 He-Ne laser, frequency shifts produced by 8=11058
 Hg obs. in 6s6p ³P₁ state 8=20966
 LiF, 6955Å zero-phonon line, pseudo Stark splitting 8=18542
 LiF, R-centre 8=1993
 N II, multiplet lines 8=4084
 Rb obs. in 6p ²P_{3/2} state 8=20966
 Si, B acceptor lines, effects of ext. and int. elec. fields 8=2208
 SrF₂:Gd³⁺, Stark splitting and centre of gravity of ⁶P_{7/2} and ⁶P_{5/2} 8=23015

 dwarf in near group galaxy 8=19218
 dwarfs, red, convective, Kr 60 A and B, vibr. stability calc. 8=19123
 dwarf, white, pulsation after mass loss during development 8=19177
 early-type, effective temp. and bolometric corrections 8=19151
 eclipses in visual binary systems 8=10198
 eclipsing binary solutions, approximating functions 8=23556
 eclipsing systems, interpret. as inverse problem of the photometry classic and half-classic models 8=19188
 energy losses due to neutrino processes in hot plasma 8=10137
 epochs of minimum, determ. 8=23559
 ε Eridani and GMB 1830 convective model atmospheres compared 8=10125
 550 and B, Milky Way field in Scorpius, K line and λ4430 absorption band 8=19201
 53 Cam, light and magnetic variations rel. to wavelengths 8=19155
 44i Bootis B, VW Cephei and W Ursae Majoris radial-velocity curves 8=19187
 dynamics in a discrete phase space 8=19107
 field stars system, dynamics of test star 8=10211
 flare star, Butlers, comment rel. to ape of stellar aggregate 8=14770
 formation, interstellar matter heating and ionization by subcosmic rays 8=10245
 4C radio sources optical indentifications 8=10305
 47 Tucanae cluster diameter and ellipticity obs. 8=10208
 fundamental processes imitation and study in laboratory experiments 8=15924
 G- and -K star atmospheres, departures from LTE 8=5864
 gaseous mass, inhomogeneous, convective instability, model 8=2794
 globular clusters, blue end of horiz. branch 8=10212
 globular clusters, differential rot. 8=5908
 globular cluster in centre of Galaxy 8=5929
 GMB 1830 and ε Eridani convective model atmospheres compared 8=10125
 gravitation collapse, evolution of ejected matter rel. to nucleosynthesis 8=14726
 Hyades cluster, distance modulus 8=10202
 Hyades cluster distance modulus parallax 8=10194
 Hyades cluster, distance modulus and stellar models 8=10203
 HD 107904, radial vel. and photometric meas. 8=14774
 HD 140283 subdwarf, model-atmosphere abundance analysis 8=19125
 HD 19445 subdwarf, model-atmosphere abundance analysis 8=19125
 HD217050, spectral study 8=2784
 HD 30353, H- poor, visual magnitude and effective temp. 8=5881
 He, atmospheres 8=5891
 He shell-burning, pulsational instability 8=5873
 Hertzler, i. r. spectral classification 8=5892
 He, vibrational stability, non-constant opacity effects of 8=2788
 in intergalactic arms, formation 8=10260
 interstellar polarization, wavelength depend. 8=10173
 Jeans' instability criterion, effect of grains 8=2793
 λ Bootis, temp. and gravity 8=5885
 Leo II system obs. 8=14784
 LTE models for atmosphere 8=14750
 M giants, early, classification by photometry of 7050 Å TiO bands 8=14768
 M31 five new variables 8=23548
 Magellanic Clouds, obs. rel. to massive stars evolution 8=10274
 magnetic, α²CvN and modified solar model 8=19117
 magnetic, equilibrium, magnetostatic models 8=19116
 magnitude, directly from in-focus images, method 8=5852
 main sequence, mass-radius, mass-luminosity, empirical relations 8=14771
 main-sequence upper-part, effective-temp. and bolometric correction scales 8=14772
 massive, non radial oscillations 8=10190
 massive, particle-tracks, relativistic eqns. of motion 8=10110
 metallic-line, temp. and gravity from struct. models and spectra 8=19136
 Mira variables, analysis of motions 8=10189
 μ Orionis, spectroscopic binary, obs. 8=14789
 NGC 7006 remote globular cluster, anomalous colour magnitude diagram 8=5906

Stars—contd

neutron, shock wave propagation 8=1390
 new C star at South Galactic Pole 8=14755
 new variables, around globular clusters NGC6304, 6638 and 7099 (M30) obs. 8=19182
 non-rotating, spherically symmetric, optical appearance when gravitationally collapsing 8=19153
 ν pairs prod., hot 8=19130
 OB in I Puppis and Norma, radial vels. rel. to galactic struct., obs. 8=23594
 OB stars, distrib. in Southern Milky Way 8=10111
 one-zone pulsation model with proper boundary conditions 8=14751
 orbits, non-linear coupling of two harmonic oscillations 8=14738
 observations, direct elimination of sky background 8=23542
 oscillations, adiabatic, freq. distrib. and non-radial oscils. reson. excit. rel. to struct. 8=10183
 oscillations, radial, toroidal mag. field effects in polytrope $n=3$ 8=10129
 oscillating spheres, exact solns. in gen. relativity 8=19429
 parallaxes and proper motions of 6 nearby stars 8=10113
 parallaxes, 21 stars, from plates taken with McCormick 26-in. refractor 8=23501
 periodic magnetic variables, orientation of magnetic axes, statistical investigation 8=5902
 with phase transition, eqns. of state for equilibrium 8=5661
 Pleiades region, proper motions for 125 M stars 8=23500
 polytropes, uniformly rotating, perturbation theory 8=10116
 population I, velocity distribution and orbits in spiral galaxies 8=5932
 protostar, collapsing, dynamical calc. for different initial condns. 8=14752
 pulsating, periodic shock wave effects on atmospheric density distribution 8=5869
 R lunis Majoris system, Tu Monocerotis 8=14782
 RR Lyrae, eclipsing system, photometric elements, absolute dimensions and masses 8=19189
 RR Lyrae stars, pulsation 8=14778
 RR Lyrae variable, projected on Andromeda nebula 8=10229
 RRLyr variable type, adiabatic pulsations of models, rel. to mixing path lengths 8=19173
 radial pulsation, coupled with convection 8=14775
 radial velocities of fourteen stars between 8 and 12 mpg 8=10164
 radio, in declination range + 18° to + 20°, freq. 750 and 1410 MHz, pencil beam survey 8=23605
 radiostars, existence? 8=2799
 random motion in phase space 8=19109
 red giants, gravitational collapse of non-degenerate He shell, energy release calc. 8=10128
 red giants, limiting temp. and dynamic instability 8=19178
 red giant, Tc synthesis mechanism 8=2779
 red giant, Tc⁹⁹, disintegration probability 8=2780
 relaxation time in an infinite uniform stellar medium 8=19112
 rotating, exchange of stabilities, onset of convective Lagrangian displacements 8=5856
 rotating, line intensities calc. rel. to gravity darkening and other effects 8=19121
 rotating, pseudo-radial pulsations and stability 8=19120
 rotation stability differential, in radiative zones 8=5854
 rotational velocities and braking systems, rel. to planetary systems formation 8=5853
 rotational vels. obs. with spectracon, stars in Praesepe and Hyades clusters 8=19105
 s-process nucleosynthesis in thermal relaxation cycles 8=10144
 Scorpio-Centaurus assoc. distance moduli and distances from photo-electric H. index obs. 8=10207
 Scorpius X-ray source, model 8=10310
 Sco X-1 X-ray source, brightness variations 8=10289
 self-gravitating stellar system with uniform rotation, kinetic theory 8=23502
 self-gravitating system, one-dimensional sheet model, thermalization effects 8=5858
 73 Draconis, magnetic, spectrum, and radial velocity var. 8=10179
 solar type, non-gray model atmosphere 8=2775
 solar-type, rotation dependence on age 8=5855
 stellar clusters, dist. of vel. 8=14800
 stellar systems, statistical mechanics of violent relaxation 8=10273
 Stock 13, cluster of early-type stars 8=23515
 supergiants, F- and G-type, temps. from H α profiles, obs. 8=10181
 supernova, remnants, coherent plasma radio-emission 8=14813
 symbiotic, hot components, temp. from nebulae continuity obs. 8=5896
 thermodynamic waves and thermomagnetic instability in ionized objects 8=10109
 3C273, photographic obs. 8=10175
 276 stars in NGC6067 region, magnitudes and colours 8=19142
 UBVRi meas. applied to calculation of wideband sensor magnitudes 8=14762

Stars—contd

variability, short period, Coma cluster δ -Scuti type 8=23552
 variable α Lupi, H outflow and vel. amplitude, spectroscopic obs. 8=10182
 variable β Cen vel. vars. and spectrum, rel. to nature, obs. 8=10182
 variable Carinae brightness vars. 1963–67, UBVRi obs. 8=23544
 variable in direction SCOX-1, photometry 8=5897
 variable HD 170682, Be characts. development rel. to magnitude vars., obs. 8=23547
 variables, long-period, UBVR photoelec. obs. 8=19175
 variables in NGC 2403 galaxy 8=23593
 variables, new, in nearby galactic clusters and assoc. 8=2787
 variable SZ Lyr, period and light and colour curves vars., obs. 8=19170
 variables, short-period, photoelectric obs. 8=5898
 vibrating neutron stars, time variation of characts. 8=14773
 W Centauri and 47 Tucanae clusters, limits to neutral H content 8=23555
 white dwarfs energy content and cooling rate 8=10134
 wind, recombination shell between H I and H II 8=23576
 Wolf-Rayet stars, masses, presence of severe anomalies 8=14748
 X-ray Sco XR-1 and assoc. optical source, binary model 8=10177
 ζ tan (HD 37202), pulsation of the envelope 8=19169
 Be, temp. from nebulae continuity obs. 8=5896
 Be, three new stars HD87543, HD 91269 and HD109857 8=19139
 β CrB, abundances of elements, and atmos. turbulence and excitation 8=19159
 H mixing by He-shell flashes, calc. 8=10145
 He white dwarf, evolutionary sequence 8=10147
 O₂ and C burning, and pre-supernova models, evolution 8=5874
composition
 See also Elements/origin.
 A- and B-types binaries, He abundance 8=10130
 Am, five, oxygen and nitrogen abundances 8=23514
 Ap, overabundances of Si, Cr, Mn, Sr and Eu, binary theory 8=5867
 binaries, A- and B-type, He abundance 8=10130
 binary peculiar A star HR4072, chem. comp. 8=10199
 carbon, H C N:O equilibrated abundances calc. 8=10141
 chemical, influence on position of main sequence in Hertzsprung-Russell diagrams 8=14772
 density gradient inversion in convection zone 8=2778
 early-type, effective temp. and bolometric corrections 8=19151
 F and G main-sequence, Li/Be ratio 8=19152
 5 nonvariable C stars, H deficient, abundance analyses 8=10118
 G dwarfs, [Fe/H] ratio and u.v. excess 8=10155
 γ ser, metal abundance ratio determ. 8=5868
 Groombridge 1830 He content 8=23505
 heavy elements, synthesis by neutron capture 8=10140
 heavy elements synthesis, n radiational capture 8=10143
 HD 122563, abundances of iron-peak elements, from u.v. spectra 8=5862
 HD 30353, H-poor, abundances of light elements 8=5882
 HR 1105, Zr isotope ratios 8=14759
 HR 4533, surface gravity, temp. and [Fe/H] abundance 8=23533
 HR 4657, surface gravity, temp. and [Fe/H] abundance 8=23533
 K-type, curve-of-growth analyses 8=2782
 main-sequence, minimum mass calc. 8=19119
 neutron capture data at stellar temps. 8=5872
 OB supergiants in Orion, mass loss 8=5866
 Of, occurrence in H II regions and clusters rel. to O type 8=23512
 planetary nebulae, central stars 8=14790
 Pleiads, Li abundances 8=5863
 RU Cam, spectral obs. 8=19172
 red giants, Tc disintegration probability 8=2780
 s-process abundances obs. 8=10144
 subdwarfs, He content 8=5865
 supergiants, HD 96248 and HD 14443, N-deficiency 8=5889
 surface layers, abundance anomalies produced by nuclear reactions 8=5870-1
 τ Bootis, metal abundances 8=5860
 Tc synthesis, at different steps of stellar evolution 8=2779
 thermonuclear reaction of heavy ions 8=10151
 Ursa Major clusters, Li abundances 8=5863
 yellow supergiants, fine analysis of two, preliminary results 8=5878
 ζ Lyr A, from visible spectra by method of model atmospheres 8=23514
 H mixing by He-shell flashes, calc. 8=10145
 He, surface abundance in B stars 8=10136
evolution
 binaries, contact, W Ursae Majoris type, review 8=14783
 binaries, models approximating possible remnants after mass loss 8=19126
 binary systems, appl. of Iben's theory 8=19127

Stars—contd

— evolution — contd

- conference, Brussels, 1964 8=23510
- early and main sequence 8=10148
- formation 8=23511
- of galactic clusters 8=14787
- in galaxies, from gas with Population I composition 8=19132
- instability of gravity waves 8=21450
- low mass 8=10149
- mass loss effects 8=10146
- models with isothermal cores, secular stability 8=19129
- ν radiation from β processes rel. to matter density 8=10138
- Nova Delphini 1967 8=19148
- pre-main sequence, models, criticism 8=23513
- stellar rates of the C¹³(a, n)O¹⁶ and Be⁹(a, n)C¹² reactions 8=19131
- supermassive, stabilized by large-scaled motions 8=10139
- supernova and remnants 8=23545
- white dwarfs, ions crystallization and effect on rate of cooling 8=10152
- white dwarfs, radiation loss mechanisms, critical temp. for nuclear reactions 8=10150
- by He consumption in core, rel. to horiz. branch in globular cluster 8=10212
- He flash and thermal pulses of 1.3 solar mass star. calc. 8=19133
- Si burning, nucleosynthesis, model 8=16136

magnetism

- See also Sun/magnetism.
- α^2 CVn, cross-over effect 8=2781
- 53 Cam, light and magnetic variations rel. to wavelength 8=19155
- force-free mag. fields 8=23509
- HD 32633, variations obs. by UVB photometric and Zeeman spectroscopy 8=19154
- HD98088 cross-over effect 8=2781
- magnetic field, review of literature 8=5963
- radio sources field strengths, l.f. spectra obs. 8=23613
- turbulent motion as origin 8=10127
- variable magnetic stars, Babcock theory 8=2789
- variations due to precession 8=19114
- variation not in entire volume, possible obs. effect. 8=19115

radiation

- See also Cosmic radiations, radiofrequency; Sun radiation.
- β Centauri et al., brightness obs. 8=19164
- β Lyrae polarization, variability interpretation 8=5877
- bolometric corrections scale standardization 8=19149
- Cassiopeia A, polarised intensity distrib. at 1.55 cm 8=10284
- centrals of planetary nebulae, 35, effective temp. calc. 8=23560
- Cepheids, period-luminosity-color relations 8=23554
- continuous energy distribution, 1350–10 000 Å, effect of rot. 8=23520
- Cygnus A, polarised intensity distrib. at 1.55 cm 8=10284
- Cygnus, sky survey of cosmic X-rays 8=10230
- Cygnus XR-1, X-ray flux, twofold increase at high energy 8=19162
- diffusion, source excitation power from spectral line profile 8=5895
- dwarfs, solar type, u.v. excess and DM, residuals 8=14760
- early type, far u.v. 8=10170
- faint Pleiades, confirmation of membership 8=19186
- flares, rel. to solar 8=2857
- free electron scattering in stellar atmosphere 8=15028
- galactic, abundance of anti-protons 8=14730
- globular cluster M13, luminosity function 8=10213
- gravitational, by binaries, obs. 8=14959
- gravitationally collapsing, non-rotating, spherically symmetric star 8=19153
- interstellar polarization meas. 8=23541
- light polarization vars., meas. programme proposal 8=23532
- neutron, model for mag. and rot. energy release 8=23543
- NLM Cygnus i.r. polarization rel. to nature 8=23529
- optical research, 20 year review 8=19066
- planetary nebulae, Ly- α density 8=5912
- polarization by interstellar matter, theory 8=5920
- polarization, intrinsic, rapidly rot. early types 8=23518
- polarization obs. in galactic plane and direction of galactic poles, 308 stars mostly within 200 parsecs 8=23521
- radio sources, non-thermal, thermal X-rays 8=5941
- radio-sources, two-dimensional brightness distrib. from lunar occultation obs. 8=5943
- SCO XR-1 photometric monitoring 8=10153
- 73 Draconis, magnetic, spectrum, and radial velocity var. 8=10179
- synchrotron, resultant thermal instability in surrounding medium 8=5944
- T Tauri type, i.r. excesses 8=23525
- 3C273, harmonic analysis of light variation 8=23537
- 3C273, interplanetary scintillation 8=14807
- transfer in relativistic medium 8=15029
- U Her, photoelectric obs. 8=19171
- variable P Cyg, tight curve eclipsing W UMa props. obs. 8=23551

Stars—contd

radiation—contd

- X-ray source in vicinity of the constellation Crux 8=10291
 - X-ray emission and stellar accretion 8=10310
 - H II regions, higher-order high-quantum H recombination lines 8=23569
 - H II, stimulated emission of r.f. lines, enhancement by small departures from thermal equilib. 8=23567
- spectra
- A star 73 Draconis, spectrum variations 8=5879
 - A stars, peculiar, u.v. spectra 8=14766
 - Algol rel. to component bodies nature, 6700–11000 Å 8=10205
 - α^2 CVn, profiles of H lines, anal. 8=19146
 - analysis, special device for reading diagram coordinates 8=14763
 - Ap, A- and B-type normal, continuous energy distrib. 8=10168
 - Ap stars, Balmer discontinuities rel. to temp. grads. and model atmos. 8=19161
 - OO Aquilae, light variation and orbital elements 8=23524
 - Arcturus, Mn I and VI hyperfine-broadened profiles rel. to obs. 8=23527
 - Arcturus, K2 giant, curve-of-growth anal. 8=19160
 - atmosphere, line-blanketed, statistical procedure 8=19150
 - Zeta Aurigae, photoelectric observations and chromosphere K-line during 1963–64 eclipse 8=14764–5
 - binary β Per K(Ca II) linewidth rel. to eclipse phases, obs. 8=10197
 - binary 47 Audromedae, study of 8=2792
 - and binarity of HD 3950, obs. 8=10209
 - BL telescopii rel. to evolution and secondary body nature 8=10204
 - blanketing in high-gravity stars 8=14769
 - blue identified as 4C radio sources 8=5940
 - BVR system, 44 standard stars obs. 8=23539
 - RU Cam, quantitative analysis 8=19172
 - Z Cam, during light plaus. 8=10158
 - β Canis Majoris, period-colour-luminosity relation 8=5888
 - Cas A, 5.8–25 Mc/s 8=10304
 - Cen XR-2, X-ray emission 8=5883
 - γ Cen, spectrophotometric obs. 8=10200
 - RR Centauri, improved orbital soln. of photoelectric obs. 8=23553
 - central stars of planetary nebulae, u.v. spectrum and temp. 8=10216
 - Cepheids, classification, numerical methods application 8=2785
 - VV Cephei in the photographic infrared 8=5876
 - Cepheids, reddening line on U-B/B-V diagram 8=23535
 - cepheids S Mus and β Dor, H α profiles rel. to temp. obs. 8=10181
 - μ Cephei, wavelength dependence of polarization 8=23516
 - class B5 to M2 absolute energy distrib. obs. 8=10160
 - classification and photometry, high proper motion 8=23536
 - classifications, theory, model atmospheres 8=2777
 - clusters NGC6242, NGC6268, Tr24, 3 colour photometry 8=19181
 - Crux regions, photometric standard sequences 250 stars 8=19205
 - Cyg A, 5.8–25 Mc/s 8=10304
 - CH Cygni, emission lines in u.v. 3140–3500 Å 8=23517
 - 41 Cyg, F-stars, rel. to atmos. parameters, comparison with the sun 8=19137
 - P Cyg, ionization temp. in atmos., Balmer decrement, and chem. comp. 8=19147
 - Cygnus sky survey of source spectra 8=10230
 - DB, peculiar, colours and space motions 8=10174
 - β Doradus cepheid, H α line profiles rel. to atmos. 8=10133
 - χ Draconis effective temp., abundance of metals and microturbulent vel. obs. 8=2791
 - dwarfs, G and K, energy distribution at red wavelengths 8=5894
 - dwarf, late K and early M charac. for stars in the Hyades 8=19157
 - early-type, far u.v. spectroscopy and photometry using Aerobee-150 rocket 8=10170
 - element abundance, microturbulence vel. in atmos. etc. 8=19159
 - F and G main-sequence, Li/Be ratio 8=19152
 - 4C sources in declination 40°–44°, 38, 178, 610–5 and 1417 Mc/s 8=10297
 - G dwarfs, u.v. excess and [Fe/H] ratio 8=10155
 - G and K dwarfs, scanner obs. 8=14758
 - G stars, CO, CH, C₂ and CN band intensities 8=10171
 - Of group, variations obs. 8=19140
 - HD 32633, light variations obs. by UVB photometric and Zeeman spectroscopy 8=19154
 - HD 37202, speed from He I λ 4026 line 8=19169
 - HD 11844–5, classification 8=14756
 - HD 151804 and 152408, 4430 Å absorpt. vars., obs. 8=23530
 - HD217050 star, study from 8 high dispersion spectra 8=2784
 - ν Her, F-stars, rel. to atmos. parameters, comparison with the sun 8=19137
 - Hetzler, i.r. classification 8=5892

Stars—contd

spectra—contd

- hot molecules, trapped at 4°K 8=4116
hydrogen emission lines of three new Be stars 8=19139
interferometer 8=19134-5
interstellar absorpt. at 4430 Å, var. with galactic longitude 8=23534
interstellar absorption band at 6180 Å, profile 8=10235
K, CO, CH, C₂ and CN band intensities 8=10171
K flares, astronomical or match flame origin? 8=14753
K giants, variable chromospheric activity, obs. 8=14754
late-type, emission component of Ca_{II} K-line 8=19156
late-type, negative ions 8=10154
line formation in inhomogeneous atmospheres, soln. of 3D Eddington approx. 8=23519
line formation in stellar atmosphere 8=14761
SZ Lyncis, photoelect. obs. 8=23526
γ Lyr, profiles of H lines, anal. 8=19146
RR Lyrae stars, three-colour photometry 8=5875
Magellanic cloud, small, colour-magnitude array for core region 8=10163
magnetic variables, two-cell photoelectric polarimeter, obs. 8=19168
metallic-line, multicolour UBVRI observations 8=10166
metallic-line stars, continuum energy distrib. anal. 8=19138
metallic-line, and temp. and gravity, obs. 8=19136
Milky Way field in Circinus (SA195), V magnitudes and B-V and U-B colours 8=19202
Milne-Eddington curve, modifications allowing for depth 8=5886
V372 monocerotis S star, peculiar spectrum, obs. 8=5884
Morgan-Keenan system, slit spectrograms of 185 bright stars 8=10156
nebula NGC 6960, FeX 6374 Å line, obs. 8=10225
NGC 2451, three-colour photometric results 8=5905
NGC 362 cluster, colour-magnitude diagram 8=10206
276 stars in NGC 6067 neighbourhood, colours and magnitude 8=19142
nova Delphini 1967, obs. 8=5899
Nova Delphini 1967 8=19148
Nova Herculis 1960 8=19174
Nova Herculis 1960, 3530-6560 Å 8=10187
O and B, early-type line profiles rapid time vars., obs. 8=23531
opacity, source of in u.v. continuum 8=2775
α Orionis cluster, classification 8=14786
paradoxes ascribed to erroneous oscillator strengths 8=10159
Pasch discontinuity, theoretical importance 8=23538
photoelectric polarization measurements on faint objects, detection principle 8=19143
Pleiades, absolute energy distribution in 14 bright stars 8=10172
polarization of starlight, possible variations 8=19144
Praesepe cluster, colours and magnitudes, effect of rotation 8=23523
proper-motion, colours and space motions 8=10174
Puppis, three regions, 78 stars, magnitudes and colours 8=19204
VV Pup, U Gem and UX UMa, peculiarities, explanation 8=5907
quasars, emission-line variability 8=23627
quasars redshift-absolute magnitude correl. rel. to Universe models 8=10317
quasars, 2974 Å emission line identification 8=19234
quasistellar, intensity distribution in 1000 Å ≤ λ ≤ 7200 Å and colour index 8=2806
radial-velocity curves, 44i Bootis B, VW Cephei and W Ursae Majoris 8=19187
radiation rel. to thermodynamic structure, plasma radio recombination lines and anomalous Balmer line intensities 8=5915
red-shift due to interstellar photon collisions 8=5922
red star in Vela, large colour index 8=19141
resonance lines, weak, effect of axial rotation on equivalent widths 8=10176
Sco X-1, additional photometry of nearby stars 8=10162
Sirius B, high dispersion spectrum 8=14767
spectral types of fourteen stars between 8 and 12 mpg 8=10164
spectrograms, automatic data reduction 8=23540
Stock 13, cluster of early-type stars, five-colour photometry 8=23515
subdwarfs, He content 8=5865
subdwarfs, metal-deficient, quasi-H₂ absorpt. calc., 0.2-0.45 μ 8=23528
supergiants, F- and G-type, Hα profiles rel. to temp., obs. 8=10181
supergiants, HD 96248 and HD 14443, N-deficiency 8=5889
63 Tau, continuum energy distrib. anal. 8=19138
u.v., subtractive dispersion spectrographs for 8=10319
universe, Friedman and steady-state models from Q.S.S. data 8=2768
χ Ursae Majoris, spectra compared with 37 Coma Berenices 8=2782
15 UMa, continuum energy distrib. anal. 8=19138
variable α Lupi, H outflow and vel. amplitude obs. 8=10182

Stars—contd

spectra—contd

- variable β Cen, linewidth and vel. vars. rel. to nature, obs. 8=10182
variable HD 170682, Be characts. development rel. to magnitude vars., obs. 8=23547
white dwarfs, colours and space motions 8=10174
yellow supergiants, fine analysis of two, preliminary results 8=5878
X-ray intensities and spectra from several sources 8=5893
AlO, new ²Σ⁺-X²Σ⁺ band, Franck-Condon factors 8=16263
Am, five, near i.r. 8=23514
B, He λ4771 strength, in IC2391, 2602, Southern galactic cluster 8=2783
Be stars, classification 8=10161
Be, southern, photometric data 8=19165
carbon star identification, Scutum region 8=14757
C stars, temp. determ. and Franck-Condon factors for CN mols. 8=4173
Ca II lines, Scorpio XR-1, distance estimation 8=23503
Ca II and Na I interstellar lines near HI clouds, search for 8=5880
Ca II, photometric index of K-line strength, independent of atmos. extinction and interstellar reddening effects 8=23522
H_α contours in NGC 700 filaments, obs. 8=10232
H_β index in open clusters rel. to distance moduli and distances, photo-elec. obs. 8=10207
H_γ and He I lines 8=10157
H II reddening anomaly, review of explanations 8=14797
He, as a function of hydrogen abundance 8=5891
He I 4026 Å line for stellar rotation velocity 8=19121
Si II λ4128 and λ4130 Å in model atmospheres and B stars 8=19163
Si II, superposition of configuration applied to a series of states 8=19158
- structure
angular vel. distrib., massive stars 8=19122
atmosphere, line-blanketed statistical procedure 8=19150
atmosphere models, discrete optical depths 8=10119
atmosphere models, soln. of transfer eqns. subject to constraint of radiative equil. 8=10135
atmospheres, plane parallel, specific intensity behaviour at infinity 8=2774
atmospheres, radiative equilibrium line-blanketing 8=14761
atmospheric Rayleigh scatt. problems, calc. 8=5921
atmosphere theory 8=2773
BV267 single-line eclipsing binary 8=19184
binaries, contact, W Ursae Majoris stars with unequal components at zero age 8=23558
binaries, contact, W Ursae Majoris type, review 8=14783
binary systems, close, effect of jet in envelope of one 8=5907
carbon, H:C:N:O equilibrated abundances calc. 8=10141
cephheids rel. to freq. of reson. exit. non-radial oscils. 8=10183
cephheid variables, models, nonlinear calc. 8=14776
cephheids, radii determ. by Wesselink's method 8=10117
δ Ceti, period since 1900 8=19127
cool stars, outer atmosphere 8=10120
curves of growth, transfer eqn. modification by electron scattering 8=14749
V477 Cyg binary system, from photoelec. obs. 8=19185
cylinders, compressible, polytropic, oscils. 8=5859
density gradient inversion in convection zone 8=2778
differential rotation models, instability 8=10377
dwarfs, cold, chromospheres 8=19113
dwarfs, red, convective, Kr60A and B, calc. 8=19123
early-type, model atmospheres, departures from LTE in H and He 8=10132
finite amplitude convection theory 8=10122
u Her system, from photoelec. obs. 8=19171
HD 140283 subdwarf, model-atmosphere abundance analysis 8=19125
HD 19445 subdwarf, model-atmosphere abundance analysis 8=19125
interface location, coord. stretching method 8=19367
line-blanketing, high gravity effect 8=14769
liquid sphere, influenced only by gravity, frequency spectrum 8=4504
mag. field with differential rotations in spherical fluid shell of infinite elect. conduct. 8=23508
mag. fields, toroidal in radiative zones, stability 8=23507
magnetogasdynamical model of corona 8=23506
mass loss gross effects on evolution 8=10146
mass-radius-temperature relationship 8=19118
metallic-line, photosphere struct. and turbulence, models 8=19136
neutron, soft repulsive core among baryons, mass and radius 8=19166
one-zone pulsation model with proper boundary conditions 8=14751
photosphere in B to K spectral stars, deviation of H and H⁺ from LTE 8=10131
polytropes in magnetostatic equil. 8=19124
pre-main sequence, models, criticism 8=23513
pulsations, adiabatic, and convective instability of gaseous masses 8=10121

Stars—contd

structure—contd

- radial pulsation, coupled with convection 8=14775
- quasars, consequences of gravitational collapse theory 8=10087
- red giants H burning shell, calc. 8=10128
- rotating main-sequence model construction 8=10112
- rotating, radial pulsation eigenfrequencies 8=23504
- rotating, slow and relativistic, equations for equilibrium calc. 8=10123
- γ Ser, microturbulent vel., var. with depth 8=5868
- shock wave propag. in degenerate gases 8=19544

Statistical mechanics—contd

Boltzmann equation, nonlinear and nonlinear, for gas between two parallel plates 8=19470
 Boltzmann gas, nonequilibrium, logarithmic density behaviour 8=2980
 Boltzmann-Gibbs probability, redefinition 8=14992
 Boltzmann's theory of irreversibility and velocity inversion 8=95
 Bose-Einstein condensation criterion and canonical commut. relns. represent. 8=6108
 Bose gas, 3-body correl. function with hard-sphere interaction 8=2993
 canonical partition function, classical limit 8=10621
 chemical potential, appl. to problems 8=105
 classical, "canonical" representations of the inhomogeneous Lorentz group 8=2893
 classical, canonical statistics, temp. depend. near phase transition 8=97
 classical, inequalities and variational methods 8=14993
 classical, linear closure approx. 8=19445
 classical, mean entropy of states 8=10628
 classical, relativistic, Hamiltonian formulation without interactions 8=19442
 coherent states, She and Heffner theorem 8=2974
 cooperative phenomena in triangular lattice 8=89
 crystals, partition function 8=17507
 dense hard-sphere gas, propag. of density disturbances 8=10660
 diffusion coeff. of Lorentz gas 8=136
 disordered lattices, 3D, spectral gaps 8=10609
 distribution functions, integral equations for 8=10619
 entropy, indefinability for Hamiltonian system 8=2971
 equilibrium, cluster development by quantum field theory 8=10626
 excitons, Frenkel, by Bose operators 8=5122
 Fermi hard-sphere gas at zero-temp., eqn. of state, distrib. function 8=10658
 Fermi system with direct interaction, retarded temp. Green's functions, perturbation theory 8=15021
 Feynman rules 8=120
 fluctuation theory of irreversible processes 8=10624
 fluid, classical with Lennard-Jones pot., correlation function 8=12576
 fluid surface layer distant from boundary surface 8=99
 fluorescent source, polarization, quantum theory 8=23036
 galaxies, elliptical, collisionless relax. 8=10273
 gas, critical density fluctuations free energy calc., rel. to sound absorption 8=16703
 gas mixtures macroscopic theory from Boltzmann equation 8=118
 gas thermodynamic props. at transition 8=19459
 gases, dilute, nonadditive molec. interactions 8=4466
 Green's functions and double-time distrib. 8=15000
 Gyarmati principle and canonical equations 8=10633
 Hamiltonian, covariant, with interactions, classical, canonical formalism 8=19441
 Hamiltonian time-reversal-noninvariant term detect. from energy-level spacings 8=10625
 hard disks in isothermal-isobaric ensemble, Monte Carlo calc. 8=19467
 hard sphere fluid, phase transition 8=12578
 hard-sphere gas, collisional relax. eigenvalues 8=3000
 hard sphere gas, sequence of relaxation constants 8=133
 hard-sphere solid, pair distrib. functions 8=6091
 harmonic, stationary nonequil. Gibbsian ensemble 8=4901
 Heisenberg ferromagnet, spin pair correlations 8=9316
 infinite system state descriptions 8=14999
 interacting particles, partition function with singularities 8=98
 irreversible evolution of dynamic systems 8=2972
 Ising chain, computation of Green functions 8=10610
 Ising-Lenz model solns. and appls., review 8=10612
 Ising model, chain dynamics 8=10611
 Ising model, distrib. of roots of partition function in complex temp. plane 8=19443
 Ising model, Kawaski modification, generalized to two master eqns. 8=10669
 Ising model, Onsager's results using Green's function 8=2964
 Ising model near T_c , second order phase transitions 8=14986
 Ising model, time-independ., kinetic eqns. developed 8=14985
 Ising problem for lattice with substitutional and interstitial impurities 8=1951
 Ising spin correl. function, calc. 8=14987
 kinetic equations and Lorentz transformation 8=15002
 kinetic equations, transformation properties 8=14996
 kinetic equations, unified formulation 8=15001
 kinetic gas theory, relativistic Onsager relations 8=21500
 kinetic phase transitions 8=21743
 laser light props., quantized e.m. field model 8=19941
 lattice gas, honeycomb, exact finite method 8=10661
 lattice gas models, low temp. phase separation 8=19439
 lattice model of planar 'spins' for Bose fluid 8=126
 lattice points, mutually visible, some theorems 8=90
 linear molecules, correl. functions 8=4252
 linear molecules, potential energy functions 8=4251
 linear response theory, quasi-static processes 8=114

Statistical mechanics—contd

linearized collision operator, matrix elements 8=21499
 Liouville equation, solution in infinite limit 8=106
 local potential, variational method, appl. to plasma stability 8=16590
 macroions of rigid-sphere potentials, potential of average force 8=21203
 macroscopic measurement, theory 8=14911

Stress effects—contd

- powder, loose sintering rel. to strain effects 8=4693
- pulse loading, unloading boundary 8=19385
- quartzite, elastic precursor decay for cylindrical and spherical flow 8=13605
- rotating annuli, induced thermal membrane stresses rel. to increase in natural freqs. 8=19503
- shallow trusses and arches, nonlinear creep buckling 8=22278
- shell, truncated conical, thin, buckling under uniform static press. 8=19382
- steel, austenitic, stress corrosion cracking 8=8844
- steel, high strength, dynamic strain ageing 8=17782
- steel, mild, dynamic strain-ageing, effect of N content 8=13554
- steel, on γ -ray absorpt. and scatt. 8=13483
- steel, 0.04% C, residual strains due to single pulse compression stress wave 8=17787
- steels, structural, brittle fracture susceptibility, effect of strain ageing of martensite 8=13573
- strain hardening influence on loading and unloading biwaves in elastic-visco-plastic body 8=17718
- surface ionization and thermionic emission, depend. 8=13946
- thermoelasticity and elastic constants of stressed materials 8=2036
- Zircaloy-2 tubing, biaxial 8=13615
- Ag crystals, well-annealed, stress at which dislocations multiply 8=13545
- Ag, rel. to dislocation (Bordoni) relaxation 8=22197
- α -AgZn, mechanical relax. due to changes in short range order from stress 8=5009
- Al alloys, stress corrosion cracks at cutting planes 8=8818
- Al, annealed, commercially pure, strain ageing 8=5042
- Al, slow loading, rate of strengthening 8=22311
- Al-Cu-Mg alloy corrosion pot. 8=8819
- Al-2%Mg alloy, dislocation network knitting on stress-induced climb 8=17644
- Al_2O_3 (sapphire), crack-branching, vel. meas. 8=8815
- Au crystals, well-annealed, stress at which dislocations multiply 8=13545
- BaTiO₃ ceramics, depolarization at high strain rates 8=2243
- BeO, on cracks 8=13540
- CaF_2 , e. p. r. of Ho^{2+} 8=14128
- CdS, splitting of exciton lines 8=14273
- CdSe, splitting of exciton lines 8=14273
- Cu, cavitation damage, by magnetostrictive vibratory method 8=22339
- Cu crystals, well-annealed, stress at which dislocations multiply 8=13545
- Cu, cyclic, defect concentrations at room temp., resist. studies 8=17604
- Cu, explosively deformed, rel. to dislocation density and distrib. 8=17651
- Cu, on γ -ray absorpt. and scatt. 8=13483
- Cu single crystals in stressed condition, dislocation arrangement, electron microscope obs. 8=22201
- Cu_2O exciton spectrum of uniaxial press., obs. 8=9521
- Fe-Mn-N alloys, rel. to creep resistance 8=5064
- Fe, polycrystalline, lower yield stress, temp. depend. 8=13562
- Fe-Si(3%) sheet, oriented, dynamic magnetostriction and mech. strain 8=22812
- n-Ge, compressive uniaxial stress, effect on high field domains 8=18051
- Ge, As and Sb impurities, stress-induced splitting of spectral lines 8=13424
- KBr crystals, and temp. depend. of dislocation mobilities 8=8729
- KBr, V-bonds, effect of stress, obs. 8=2000
- KNO₃, dynamic compression by explosive impact loading 8=22377
- LiF, strain amplitude independent dislocation damping, recovery 8=13582
- Mg₂Cd, critical resolved shear stress for slip, degree of order dependence 8=5079
- MnF₂, magnon sidebands, selection rules for coupling to excitons 8=14240
- MnO, axially cooled or stressed, anisotropy from torque meas. 8=14072
- Mo and alloys, rupture characteristics 8=2061
- Mo crystals, dislocation velocity-stress relations 8=17657
- NaI, elastic tensor of gradient elec. field induced by uniaxial stress, n. m. r. obs. 8=13014
- Nb foil, dislocation density and flow stress, effects of grain size 8=4980
- NiO, axially cooled or stressed, anisotropy from torque meas. 8=14072
- Pb, creep, stress sensitivity at low stresses, article discussion 8=17825
- Pb zirconate-titanate ceramics, depolarization at high strain rates 8=2243
- p-Si, B-doped, uniaxial compression, effect on impurity conduction 8=9131
- Si, avalanche oscillators 8=5303
- Si p-n junctions, noise and V-I characteristics 8=13847
- SiC, polycrystalline, rel. to creep 8=22393

Stress effects—contd

- SrTiO₃ supercond. transition temp., ≤ 1.5 kbar 8=2175
 ThO₂, e.p.r. of Yb³⁺ 8=14128
 Ti alloy in non-electrolyte, corrosion cracking susceptibility 8=8863
 Ti hydrides, disaligning by plastic straining 8=4782
 Zn, deformation at high strain rates in hardening process 8=17837
 Zn single crystals, wave-induced cleavage 8=21927
 Zn-Al, γ -ray spectrum distrib. compression effects 8=4999
 ZnO, splitting of exciton lines 8=14273

 Al flow stress, effect of specimen diameter 8=8820
 Al single crystals, high strain rates 8=22310
 Al, zone-refined, curves for shear deformation along slip direction 8=17761
 Al-Mg alloys, Portevin-le Chatelier effect, rel. to comp. and testing temp. 8=22309
 Au nuclei on MoS₂ substrate, strain nucleus size and misalignment dependence 8=8823
 Be rel. to mechanical eqn. of state obs. 8=8825
 Cu crystals with dispersed Co/SiO₂ phase on plastic deformation 8=4974
 Fe, armco, strain ageing, effect of preliminary deformation 8=17786
 Fe crystals, under tensile deformation, -70°C to 250°C 8=13553
 Fe, neutron irradi., plastic deformation 8=22348
 Fe-Al alloys, yield effect from elevated temp. constant strain-rate tests 8=13555
 Fe-Ni-Ti alloy of Invar type, Young modulus anomalies 8=17790
 Mg-Li alloy, plane-strain compression, anisotropy 8=17814
 Mg, plane-strain compression, anisotropy 8=17814
 Mg-Th alloy, plane-strain compression, anisotropy 8=17814
 Mo crystals, deformation at slow rates of strain 8=13587
 Mo crystals, dislocation velocity-stress relations 8=17657
 Ni-Cu alloys, Portevin-Le Chatelier effect, hydrogen level dependence 8=22331
 Zn-Al, alloy, superplastic, effect of stress, temp. and heat-treatment 8=5090
 Zn, basal slip, Al impurity effects 8=17836
 ZrO₂, Y₂O₃- and MgO- stabilized, rel. to stress relief mechanism 8=17839

Stresses, internal

- alkaline metals, strain critical systems 8=13524
 alloys, shear stress increase due to coherent precipitates 8=5017
 anisotropic half-space, Boussinesq problems 8=10540

Stresses, internal—contd

- body, elastic, with hexagonal lattice technical micro-structure 8=10544
 ceramics, laminated, residual stresses at interfaces, rel. to mech. props. 8=17723
 composites, reinforced, fibre-matrix interaction forces calc. 8=22268
 crystalline materials, obs. by means of X-ray diffraction 8=5014
 crystal, static and dynamic uniaxial stress apparatus 8=5018
 dislocations, flexible rel. to internal and external stresses 8=1961
 distribution in composites with planar interfaces 8=5016
 distribution in elastic thin strip material 8=5011
 f. c. c. metals, elastically anisotropic, shear stresses of tilt boundaries of $\{111\}$, $1/2 \{110\}$ dislocations 8=22195
 field, periodic, thermally activated dislocation motion 8=8711
 graphite, deformation mechanism, localized cracking, interlayer slip 8=5053
 lattice strain and Raman-active vibrations rel. to elasticity and piezoelectricity 8=5013
 meas. with i.r. radiometer 8=8794
 metals, elastically anisotropic f. c. c., shear, and energies of $1/2 \{110\}$, $\{111\}$ edge dislocations, new data 8=17640
 metals, hexagonal, due to dislocation pile-ups on anisotropic treatment 8=1963
 metals, plastically deformed, residual stresses and latent elastic strain energy 8=22269
 metals, residual and lattice expansion by X-ray goniometric methods 8=4862
 metals, strain fields under omnidirectional uniform compression 8=17756
 molecular crystal strain tensors, temp. dependence 8=13508
 pressure in solid-filled pistons, u.s. meas. of expansion 8=10580
 rod, inhomogeneous curved, loading capacity 8=10553
 in rubber vulcanizates on diffusion of liqs. 8=1932
 short specimen, from long cylinder, residual stresses, theory and expt. 8=14949-50
 solid, mobility of dislocations 8=8715
 strain accumulation, second-order, at ultrasonic freq. 8=13527
 stress-assisted diffusion to dislocations and strain ageing 8=4969
 thermal, distrib. in sandwich plate with rigid core 8=2040
 thermoelastic, on edge of semi-infinite strip of aetotropic material, with 2 infinitely long sides insulated 8=19405
 toroidal shell, perturbation theory 8=10543
 in twin-induced fracture 8=5028
 Al, plastic relaxation rel. to stacking fault energy 8=13529
 Au, plastic relaxation rel. to stacking fault energy 8=13529
 Cr electrodeposits rel. to epitaxy, obs. 8=22325
 Cu, cyclic strain dispersal rel. to fatigue life improvement obs. 8=5031
 Cu, films, creep, elastic lattice strains 8=13548
 Cu, plastic relaxation rel. to stacking fault energy 8=13529
 Cu-Ni-Co alloys, critical shearing stress temp. dependence 8=1971
 Cu, polycrystalline, flow stress, meas. 8=9004
 Fe-Ni films, electro-deposited, rel. to deposition conditions 8=17653
 GaSb, effect of ion bombardment, annealing and polishing on (111) surface stress 8=8849
 Ge, effect of ion bombardment, annealing and polishing on (111) surface stress 8=8849
 Ge, lattice energy rel. to elastic deform., electron distrib., elastic const. 8=13576
 InSb, effect of ion bombardment, annealing and polishing on (111) surface stress 8=8849
 KCl and KF, dichroism, mag. circular, of R₂ band 8=14235
 LiF crystals obs. by means of X-ray diffraction, MoK α 8=5014
 Mg, cold-worked, strain and particle size determ. by variance method 8=1761
 MgO crystallite, from thermal decomposition of Mg cpds., X-ray analysis 8=22379
 Ni:Al₂O₃, sintered, flow stresses and dislocation movement resistance 8=2048
 Ni layers, electrolytically deposited, rel. to deposition inhibitor effect 8=1805
 Ni, plastic relaxation rel. to stacking fault energy 8=13529
 Pt-Ir alloys electrodeposits, obs. 8=23153
 ZrO₂, Y₂O₃- and MgO- stabilized, stress relief mechanism 8=17839
 Zr-2.5wt.% Nb, cold rolled, relax rel. to aging and recovery, obs. 8=8872
- Striations.** See Discharges, electric.
- Stripping reactions.** See Nuclear reactions.
- Stroboscopes**
 light chopper, feedback-stabilized with continuously variable frequency 8=6509

Strong interactions. See Field theory, quantum/interactions, strong.

Strontium

- films, thin, optical absorpt. between 0.5 and 5.5 eV 8=23014
 g_{1-} values of lowest 3P_1 states 8=7424
 ion-exchange selectivity in some synthetic zeolites 8=23061
 lifetime of $5s5p^3P_1$ state 8=7437
 Rydberg states obs. from electron collision 8=20941
 thermal diffusion of ions in NaCl cryst., Soret effect obs. 8=1921
 vapour, absorption spectrum, u. v. extension of arc spectra 8=20967
 Sr^{90} , activity, in rain water, Sydney 8=14632
 Sr^{90} in alpine glacier, meas. in fern and ice samples 8=18831
 Sr^{90} , global budget, implications of changes 8=14634
 SrI , $5s^2\ ^1S_0$ -4dnp, nf spectrum, analysis of autoionization resonance structure 8=20968

Strontium compounds

- $Sr_xBa_{1-x}Nb_2O_6$ ($x = 0.25, 0.50, 0.75$), refractive indices, temp. and wavelength depend. 8=14268
 $Sr_{1-x}Ba_xNb_2O_6$, cryst. growth and props. 8=21966
 $Sr_{0.925}Ba_{0.075}TiO_3$, heat capacity, 0.3 to 4°K 8=1877
 $(Sr, Ba)_2Zn_2Fe_{1-x}O_{22}(Y)$ ferrite, spin ordering using neutron diffraction meas. 8=22858
 $Sr(IO_{3/2})_x \cdot xH_2O$ ($x=3, 4; x=1, 6; x=4, 7$), structure 8=8558
 $SrCa_{1-x}F_2$, far i. r. reflectivity spectra 8=9507
 $SrCl_2$ cryst., e. s. r. of reaction intermediate with F_2 8=14124
 $SrCl_2$, electron centres form. by Co^{60} - γ -irrad. 8=22235
 $SrCl_2$, pure and $Y^{3+}(Na^+)$ doped, ionic conduction and diffusion mechanisms 8=8983
 $SrCO_3$, aragonite/disordered rhombohedral polymorphic transition 8=21840
 SrF_2 , colorability enhancement by plastic deformation 8=22228
 SrO , colorability enhancement after plastic deformation 8=22229
 SrF emission spectrum and $C^{2+}\pi-X^2\Sigma$ vibr. consts. obs. 8=1266
 SrF_2 additively coloured, phonon-assisted colour centre fluorescence 8=14306
 SrF_2 , lattice theory, elastic consts., dielectric const. 8=13178
 SrF_2 , paramagnetic rare-earth activated, magnetooptic rotation 8=5590
 $SrF_2:Eu^{2+}$, e. p. r. spectrum at 77-964°K 8=9424
 SrF_2 , F-centres, e. s. r. and optical data 8=2014
 SrF_2 , Gd^{3+} impurity centres, temp. effects 8=8703
 $SrF_2:Gd^{3+}$, Stark splitting and centre of gravity of $^6P_{7/2}$ and $^6P_{5/2}$ 8=23015
 $SrF_2:H,D$, polarization 8=8206
 $SrF_2:Sc^{2+}$, paramagnetic reson. in 2E state, effect of linear Jahn-Teller coupling 8=18402
 $SrF_2:Sm^{2+}$, fluoresc. 8=14332
 $SrF_2:Tm^{2+}$, magneto-optical rot. 8=18512
 $SrF_2:V^{2+}$, e. p. r. study 8=9446
 SrF_2 , X-ray coloured, absorbs. by colour centres, temp. dependence 8=17683
 $SrF_2:Yb^{3+}$, spin-lattice relax. 8=18444
 $SrGe$, crystal structure 8=8557
 $SrK_2(PO_3)_4$, cryst. struct., and features of P_4O_{12} rings 8=13293
 $(Sr, Mg)_3(PO_4)_2:Eu^{2+}:Mn^{2+}$ phosphors, luminesc. obs. 8=9629
 $(Sr_{0.88}Mg_{0.11})_3(PO_4)_2:Eu$ yellow luminesc. and mechanism 8=9629
 $SrMoO_4:Er^{3+}$, e. p. r. spectra at 4.2 and 10°K 8=18412
 $Sr(N_3)_2$, crystal structure refinement 8=17387
 $Sr_2NaNb_3O_{15}$, electro-optic and nonlinear optic characts. 8=22959
 SrO , defect structure studies 8=22171
 SrO , neutron or γ irradiated, O_2 chemisorption rel. to surface states 8=5724
 SrO , photoluminescence, photoelectric emission and enhanced thermionic emission 8=23063
 $SrO:Mn^{2+}$ impurity ion hyperfine coupling constant temp. dependence 8=8196
 $\alpha-Sr_2P_2O_7$, cryst. struct. atomic 8=13292
 $Sr_2P_2O_7:Eu^{2+}$ activated, luminesc. 8=9628
 $Sr_{10}(PO_4)_6(OH)_2$, i. r. frequencies 8=12234
 SrS , sublimation and dissociation energy 8=16957
 $Sr_2Sb_2O_7$ ($x = 1, 2; y = 4, 5$), prep. and props. 8=14363
 $SrSn$, crystal structure 8=8557
 $Sr(TaFe)_{1/2}O_3$, study using Mössbauer effect of Fe^{57} 8=16984
 $SrTiO_3$, optical-phonon freq., electric field dependence 8=5370
 $SrTiO_3$, phonon lifetime, at low temps. 8=4908
 $SrTiO_3$, photochromic crystals, thick hologram storage 8=20118
 $SrTiO_3$, reduced, u. s. propagation at low temps. 8=17505
 $SrTiO_3$, second-order renormalization and phase stability 8=9219
 $SrTiO_3$, semiconducting, superconducting transition temp. 8=9055
 $SrTiO_3$ supercond. transition temp., stress effects at ≤ 1.5 kbar 8=2175

Strontium compounds—contd

- $SrTiO_3$, superconducting semiconductor films and whiskers, transition temps. 8=9056
 $SrTiO_3:Eu^{3+}, Tb^{3+}, Pr^{3+}$, vibronic structure in luminescence spectra 8=14333
 $SrTiO_3$, of Fe^{3+} axial spectrum, paramag. reson. study at mm wavelengths 8=14106
 $SrTiO_3-1.15 Sr(TaFe)_{1/2}O_3$, solid soln., study using Mössbauer effect of Fe^{57} solid soln. 8=16984
 $SrTiO_3:Ti^{3+}$ electronic ground state structure 8=9445
 $SrVSi_2O_7$, haradaite, crystal structure $SrVSi_2O_7$, and $Si-O$ bond lengths 8=17416
 $SrWO_4$, low work function collector for thermionic converter 8=18266
 $SrY_2O_4:Ce$, phosphoresc. 8=18600
 $SrZrO_3$, phase transitions, at 700-1170°C, X-ray investigations 8=8281

Structure factors. See Crystal structure, atomic; X-ray crystallography.

Structure of matter. See Crystal structure; Liquids/structure; Solids/structure.

Sublimation

- See also Heat of sublimation; Vaporization.
 asymptotic solution 8=21783
 energy pulse interaction with solid, heat and mass transfer 8=12968
 rarefied multicomponent gas flow over subliming wall, boundary conditions 8=4663
 thin plate in gas flow, conc. and templ. eqns. 8=21784
 Ar, solidified, vapour pressure, binding energy and mean vibration freq. 8=16960
 CeC_2 , mass spectra-Knudsen cell determ. 8=21785
 Cu-phthalocyanines cryst. growth from vap. phase 8=21946
 Kr, solidified, vapour pressure, binding energy and mean vibration freq. 8=16960
 Mg, kinetics in chambers with cryogenic surfaces, obs. 8=16959
 Mg-Al alloy, kinetics in chambers with cryogenic surfaces, obs. 8=16959
 SrS 8=16957
 TiF_3 , pressures from mass spectra 8=1623
 Xe, solidified, vapour pressure, binding energy and mean vibration freq. 8=16960
 ZnTe 8=16956

Sudden commencement. See Magnetic storms.

Suhl effect. See Hall effect; Semiconductors.

Sulphur

- critical surface tension 8=21869
 cyclooctasulphur, entropy changes in formation 8=21207
 Fraunhofer spectrum, forbidden lines 8=19295
 molten, sound velocity and compressibility 8=12866
 molten, ultrasonic velocity 8=12867
 muonic K series X-rays 8=1209
 orthorhombic, electron hopping transport and orbital overlap 8=18064
 orthorhombic, hole and electron traps 8=8904
 orthorhombic, transient space-charge perturbed currents 8=18171
 polymeric, relax. mechanisms 8=4267
 self-diffusion in ZnS 8=1931
 solubility in iron alloys at 1000°C, effect of Cr, Cu, Ni and V 8=17012
 thermodynamic props. of vap., meas. 200-400°C 8=21512
 thiophosphoryl halides, vibration spectra 8=7547
 vapour pressure above Ag_2S_{11} , melt, rel. to elec. conductivity and thermoelec. power 8=16876
 S II, inelastic e scatt. collision contribution to linewidths 8=20991
 S_2^- in alkali halides, thermal quenching of luminescence 8=2485
 S_6 , vibrations and thermodynamic props. 8=12227
 S_8 molecule, mean square amplitudes of vibration 8=12228
 SF_6 , clathrate hydrate, F^{19} mag. reson. absorpt. 8=7607
 SH^+ , fine structure of $^3\Sigma^-$ and $^3\Pi$ states 8=7541
 SI forbidden lines in sunspot spectrum obs. 8=14880
 SO_2 , liq. and solid, vibrational spectra 8=8088
 SO_2 , thermal conductivity rel. to temp. 8=7925

Sulphur compounds

- alum, methylammonium chromium, crystal structure 8=22017
 hydrides, proton reson. 8=12327
 structure determ. by ESCA (electron spectroscopy for chem. anal.) 8=21100
 sulphide phosphors, freq. depend of shape of light pulse 8=5676
 sulphosalts, crystal chemistry 8=17204
 H_2SO_4 aerosols, light scatt. studies 8=12951
 H_2S_2 gaseous, struct. study by electron diff. 8=21103
 (Mn, Me)(S, Se)-type synthetic cpds. and selenide-sulphide inclusions 8=4692
 S_2Cl_2 , i. r. and Raman spectra 8=12231
 SF_6Cl molecule, amplitudes of vibration, shrinkage effect and Coriolis constants 8=12230
 SF_6-CO_2 , critical binary fluids, spectral width temp. and angular dependence 8=21778
 SF_6 , creep discharge over solid dielectrics 8=16420
 SF_6 , degradation in electrical equipment 8=14383
 SF_6 , discharge voltage, comparison with air 8=16421

Sulphur compounds—contd

- SF_6 , effect on combination coeff. of ions in γ -irrad.
 HCl gas 8=23164
 SF_6 , i.r. spectrum, high resolution 8=490
 SF_6 , solution H in, spectral simultaneous transitions 8=21675
 SF_6 , X-ray absorpt. 8=12229
 SH , dipole moment, from gas-phase electron reson. 8=12345
 $\text{SH}^+(\Sigma^+)$, Hartree-Fock wavefunctions and molec. props. 8=4165
 $\text{S}_4\text{N}_4\text{H}_4$, crystal structure by neutron diff. meas. 8=4884
 SO_3^- anion, in Antarctic atmosphere 8=23264
 $\text{S}_2\text{O}_6^{2-}$ anion, in Antarctic atmosphere 8=23264
 SO_2 asymmetric mol., microwave absorpt. 8=16302
 SO_3 , Coriolis coupling consts. from Q-heads 8=21102
 $\text{SO}(\Delta)$, dipole moment, from gas-phase electron reson. 8=12345
 SO gaseous free radical, e.s.r. study 8=12340
 SO_2 gaseous, struct. by electron diff. 8=21104
 SO , gas-phase electron reson., double quantum transitions 8=12308
 $\text{S}^{33}\text{O}^{16}$, gas-phase electron reson. spectrum 8=12353
 SO_2 hydrate, solid, l.f. vib. spectra of H_2O mols. 8=1840
 S_2O_8 , improved dimensions 8=17400
 SO_2 in CCl_4 , CH_2Cl_2 , CH_3CN , absolute i. r. intensities meas. and calcs. 8=1560
 SO_2 , reaction kinetics with O atoms 8=5715
 SO_2 soln., mol. reorientation theory of vibr. spectra 8=16867
 SO_2 solns., oxidation, effect of ullage 8=23111
 SO_2 , with ketones, nitriles, esters or alcohols, u.v. absorpt. spectra 8=18688
 SOF_4 , molec. struct. 8=21101
 SO_2OH groups in polymer foils, i.r. continuum absorpt. extinction 8=17028
 SPFBr_2 , i. r. spectra 8=16300
 SPFCl_2 , i. r. spectra 8=16300
 SSe^- , e.s.r. in alkali iodide crystals. 8=14123

Sun

- See also Sunspots.
 active M-regions props. rel. to quasistationary plasma emission 8=19311
 activity centres, creation, influence of solar movement towards apex 8=23735
 activity coinciding with changes in Mars 8=5971
 activity correl. with red aurora, 1946-1951 8=9930
 activity cycle, relation with solar tidal force induced by planets 8=23731
 activity, evolution and structure obs. 8=19286
 activity, July-Sep. (1965) 8=19053
 activity, Oct-Dec (1965) 8=19054
 activity, Jan-March (1966) 8=19055
 activity, minimum, rel. to cosmic ray radial density gradient and rigidity 8=5970
 activity rel. aurora frequency, obs. 8=9933
 activity, review chart 8=10417
 air heaters, rating parameters 8=228
 arch-filament systems in young bipolar spot groups 8=19310
 rel. to astronomical seeing verification by isophote of vertical satellite 8=14746
 centre-to-limb brightening in far i. r., obs. compared with theoretical predictions 8=23753
 chromosphere, Bilderberg continuum atmos. model 8=23730
 chromosphere, Ca II H and K core profiles near solar max. 8=10382
 chromosphere-corona transition zone, transport processes rel. to heavy ion abundances 8=19320
 chromosphere, heating, above a sunspot 8=5975
 chromosphere, lower, Ca II and Mg II lines 8=2859
 chromosphere model rel. to emission cores and profiles of H and K lines of Mg II and Ca II 8=23707
 chromosphere, relative abundances of O, Mg, Cr, Mn, Fe and Ni 8=23742
 chromosphere, solar r.f. radiation scatt. on turbulence rel. to temp. inversion at 6 mm 8=10404
 chromosphere, 300-sec. type oscillation, explanation 8=23743
 chromosphere, u.v. emission spectrum 8=10428
 convection region, lower thermal boundary layer 8=10380
 correlation of solar activity with geomagnetic drift 8=2750
 cosmic ray cycle effect in IGY 8=3754
 cosmic rays, intergalactic, modulation theory 8=2771
 cosmic ray nuclei generation rel. to intensity vars. (1964-65) 8=11680
 cosmic ray modulation effect 8=10086
 differential rotation models, instability 8=10377
 disk flattening, atmospheric, obs. 8=2597
 east limb passage of active region, July 7-10, 1959 8=10416
 elements diffusion in, rel. to observed abundances 8=19285
 granulation, colour, due to atm. dispersion 8=23725
 granulation, improvement of images distorted by atmospheric turbulence 8=23728
 granulation, statistical analysis of photometry obs. 8=19307
 horizontal wind field in atmos., comments on Plaskett's spectroscopic anal. 8=10378
 hydromagnetic waves, propagation through solar convective zone 8=10376

Sun—contd

- intensity profile near solar limits in far i. r. and m. m. regions 8=23700
 intensity for range $0.02 < \tau_0 < 10$, improved photospheric temp. model 8=23729
 limb darkening in range $4500 \text{ \AA} < \lambda < 2500 \text{ \AA}$, failure and modification of Bilderberg continuum atmos. 8=23752
 limb darkening obs. between 1800 and 2900 \AA , rel. to opacity of photosphere 8=23751
 luni-solar daily variation of geomagnetic field at Tananarive 8=10040
 model, for magnetic stars 8=19117
 modulation of cosmic rays, neutron monitor and direct space obs., 1958-65 8=11677
 modulation of galactic cosmic rays 8=10419
 modulation of galactic electrons and protons obs. 8=11679
 motion of emitter and receiver in Sun field, freq. shift 8=14970
 oblate, and relativity 8=10599
 oblateness and perihelion precession of Mercury 8=2838
 oblateness, core rot. rel. to planetary perihelion advances 8=23694
 oblateness, defence of Roxburgh's theory 8=23695
 oblateness obs. rel. to mag. stress 8=23693
 oblateness, quadrupole moment rel. to precession of Moon's orbit 8=23691
 observatory, Hawaii 8=10374
 outer atmosphere, struct. 8=10120
 perturbative effect on motion near collinear Earth-Moon libration points 8=19070
 photosphere, Bilderberg continuum atmos. model 8=23730
 photosphere, $\text{C}^{12}/\text{C}^{13}$ ratio 8=23726
 photosphere-chromosphere transition zone temp. distrib. from MgII and CaII reson. lines 8=19319
 photosphere, CO molecules, vibration and kinetic temp. 8=10412
 photosphere, curves of growth and rough analysis 8=14879
 photosphere, simplified model of temp. distrib., deriv. of emergent continuous spectrum 8=23745
 photosphere and sunspots, vel. and mag. fields, high resolution meas. 8=23724
 photosphere, x, T, P, ρ , K model 8=19306
 photospheric model, test by centre-to-limb anal. of O lines 8=23704
 photospheric temp. model, $0.02 < \tau_0 < 10$ range, for continuum intensity 8=23729
 plage, Ca, of post-limb event of March 2 1966 8=10427
 plage, X-ray emission model 8=10394
 reflection, very distant, Radcliffe Observatory, S.A. 8=19291
 research, Rome 8=10373
 rotation, differential and meridional currents using hydrodynamic equations of motion calc. 8=10372
 rotation, differential, and oblateness 8=2837
 solar-terrestrial physics, The Inter-Union Symposium Belgrade, 1966 8=10325
 solar wind, Alfvén waves 8=23719
 solar wind and interplanetary magnetic field 8=2849
 solar windows, effects of line blanketing rel. to high flux prediction to violet of 4500 \AA 8=23701
 stratified atmos., acoustic and gravity wave emission by turbulence 8=23270
 Sun-Mars mass ratio from Mariner IV and NASA deep space stations 8=23671
 supergranulation, mag. field accumulation 8=19292
 temperature min. rel. to u. v. spectrum interpret. in Bilderberg model 8=23703
 tidal forces, and moon, long period vars. 8=19241
 torque, solar wind induced, calc. 8=14873
 velocity rel. to cosmic microwave background anisotropy 8=23609
 $\text{C}^{12}/\text{C}^{13}$, atmospheric abundance ratio from spectral meas. 8=10429
 CO mols. dissociation in photosphere-chromosphere transition zone 8=12337
 CO mols. energy transfer to photosphere particles rel. to spectrum 8=12377
 Fe abundance 8=23682
 $\text{H}\alpha$ double-limb controversy, resolution 8=23746
 He abundance in 8=10381
 He in chromosphere, low temp. emission theory 8=10430
 Pb abundance, spectrometry 8=23696
- corona**
- above active regions, extreme u. v. rel. to r.f. 8=10431
 asymmetry, explanation of cosmic-ray variations 8=3755
 barrier and cosmic ray modulation effect 8=10088
 coronagraph, 535 mm objective lens 8=536
 coronagraph 5303 and 6374 \AA lines 8=19323
 chromosphere-corona transition zone, transport processes rel. to heavy ion abundances 8=19320
 condensations and noise storm centres, 408 and 169 MHz 8=19325
 dielectronic recombination, influence of radiation fields 8=23750
 dome formation around prominence, obs. 8=2864
 at eclipse of 20 May 1966 8=10437
 electron accel., source of type IV flare 8=14884
 electron streams in outer region rel. to type III and V radio bursts 8=10399
 electron temp. in outer region "Venus-2" obs. 8=10396

Sun—contd**corona—contd**

- emission data, Jul.-Sep. 1966 8=2836
- heat transfer, possible role of oscillatory convection 8=19308
- historical survey and book review 8=14886
- inner, temp. for each rotation during last sunspot cycle 8=14885
- ionization formula, effect of doubly excited levels 8=2863
- line profiles, temp. variation effects 8=23698
- line spectra at eclipse of 1952, anal. 8=10436
- optical research, 20 year review 8=19066
- outer, and interplanetary plasma, radio scatt. rel. to plasma irregularities 8=19284
- polar plumes, rel. to polar surface features 8=23747
- Razin effect, determ. of mag. field at one solar radius 8=23749
- relative abundances, from u.v. spectrum 8=5976-7
- rel. to solar wind origin, expansion, microscopic model 8=14876
- spectra, continuous and Fraunhofer obs. 8=19322
- spectrum during total eclipse of Nov. 1966 8=2862
- spectrum, u.v., rel. to spectroscopy of highly ionized atoms 8=16192
- spectrum, visible emission lines, excitation and electron density 8=10439
- spicule diffusion, obs. and model 8=10433
- structure and brightness distrib., 12 Nov. 1966 eclipse obs. 8=19321
- temperature, from intensity gradients meas. during total eclipse of May 30th, 1965 8=10435
- temperature rel. to dielectronic recomb. 8=10438
- transition region with chromosphere, spicules origin 8=2860
- u.v. emission spectrum 8=10428
- upper, rarefied plasma, turbulent structure and brightness temperature of radio emission 8=10432
- waves, solitary, calc. of structure 8=1391
- X-ray flare, 9.5-200 Å 8=14866
- O/Fe relative abundances 8=23748
- O VIII L_{α} and L_{β} lines intensity ratio as temperature function, calc. 8=10434

eclipses

- annular, 20 May 1966, optical instruments and obs. 8=19288
- annular, 20 May 1966, photoelectric obs. 8=19290
- annular, 20 May 1966, satellite obs. 8=19289
- convention of Italian Astronomical Society, Catania Italy (1966) 8=19111
- corona, spectrum, Nov. 1966 8=2862
- corona struct. and brightness distrib., 12 Nov. (1966) 8=19321
- ionospheric cosmic noise absorption, effect on, May 20, 1966 8=9979
- ionospheric E region recombination coefficient and coronal contribution to ionization, eclipse obs. 8=19014
- ionospheric effects, May 30, 1965, obs. 8=9959
- and ionosphere topside obs. 8=2717
- noise storm occultation 8=2843
- 1965 May 30, day airglow, λ 3914 Å and λ 6300 Å 8=2628
- 1966, May 20, corona obs. 8=10437
- 1966, May 20, limb-darkening, instrumentation and results 8=2861
- May 20, 1966, radiation at 19 Gc/s 8=10402
- November 12th, 1966, airborne spectrographic obs. 8=5962
- ozone-eclipse effect 8=23692
- partial, 20 May 1966, r.f. activity obs. 8=19301
- photoelectric meas. rel. to iron abundance 8=5965
- radiotelescope 20 May 1966 obs. 8=19287
- total, May 20, 1966, F-region obs. from 6 African stations 8=2710
- total, 12 Nov. 1966, effect on v.l.f. long path transmission 8=23374
- total, July 20, 1963, sky brightness in 7 colours from airborne photometer obs. 8=2629
- total, Nov. 1966, measurements performed with 4.28 cm radio polarimeter 8=14868

flares

- association rate with surges 8=10421
- association with type II bursts 8=19316
- bipolar flux tube model 8=5972
- in CMP region, rel. to mag. fields, 20 Sept. 1963 8=23736
- coronal X-ray and chromospheric optical, 9.5-200 Å 8=14866
- corpuscular effects, obs. through sudden increases in longwave field intensity 8=19314
- cosmic ray variation with solar activity 8=20634
- "disparitions brusques", phenomenological model, obs. 8=10422
- effect on altitudes of main isobaric surfaces in N. hemisphere 8=18923
- emission data, Jul.-Sep. 1966 8=2836
- energetic X-rays obs. by satellite, correlation with solar radio and energetic particle emission 8=14883
- energy, rel. to stability of force-free mag. fields 8=23737
- energy transport and cosmic rays 8=2857
- hydromagnetic resonance in hypothesis of temporary choking of energy flux to corona 8=19317

Sun—contd**flares—contd**

- importance 2, H α line study 8=2856
- ionospheric effects 8=18967
- loop-prominence event, model based on condensation theory 8=5973
- photometric meas. and classification 8=19315
- plasma blob ejections and radio bursts 8=10397
- plasma flow generated by, 3D structure 8=23740
- plasma interaction with magnetosphere, lab. analog 8=2622
- and polar cap absorption separation into 2 types 8=10407
- post-limb event of March 2 1966 8=10427
- proton, longitude distrib. over one century 8=10426
- radio burst flux density associated with proton events, 1966, obs. 8=10403
- radio bursts, type III and type V rel. to electron streams in outer corona 8=10399
- radio events, flare-associated, homology 8=10398
- spectral characteristics from ionosphere electron density data 8=10425
- structure, effect of filamentary interplanetary field obs. 8=10424
- tropospheric responses to chromospheric flares, search 8=23257
- type IV source, electron accel. in corona 8=14884
- X-radiations rel. to ionospheric sudden freq. deviations 8=9985
- X-ray and sudden cosmic noise absorpt. 8=2653
- X rays, 80 keV to 1 MeV, OGO 3 obs. and nonthermal bremsstrahlung hypothesis 8=23739
- X-ray, July 7, 1966, Explorer 33 GM tube obs. 8=14882
- 1957, 13 Sept., effects on aurora 8=9934
- Na D₂ line, brightening obs. 8=2858

magnetism

- Babcock theory and variability of magnetic stars 8=2789
- in CMP region, rel. to flares, 20 Sept. 1963 8=23736
- field at one solar radius, from Razin effect in solar corona 8=23749
- field, computations based on model 8=14864
- field, interaction with solar wind, calc. 8=14878
- field, origin and interplanetary effects 8=10375
- fields, small-scale, and "invisible sunspots" 8=2854
- galactic ray modulation possibility rel. to H⁺/He balloon obs. 1961-65 8=2770
- longitudinal field config. on both sides of dark chromospheric filaments 8=19318
- magnetic cycle, models 8=19309
- magnetic field, review of literature 8=5963
- oscillations of magnetic fields with simultaneous record of radial velocities at λ 5250 Å 6103 Å 8=10379
- spiral field, model charged particle motion calc. 8=23689
- stress rel. to obliteness obs. 8=23693
- sunspots, and Fe I 6302, 5 Å line contours, rel. to Zeeman splitting anomalies, obs. 8=10418
- sunspots, rel. to development 8=10415
- sunspots, magnetic field structure 8=2851
- sunspots, small and young, fields meas. 8=2853
- supergranules, growth of mag. fields around boundaries 8=19292

prominences

- dark chromospheric filaments, longit. mag. field config. on both sides 8=19318
- dome formation in corona, obs. 8=2864
- emission data, Jul.-Sep. 1966 8=2836
- flare-loop, model based on condensation theory 8=5973
- homogeneity, using monochromatic light photographs 8=2855
- magnetic field, He I 5876 Å line meas. 8=23738
- quiescent, mag. field intensities, obs. 8=10423
- H α filament, against chromosphere at limb, obs. 8=23741

radiation

- See also Sunlight.
- activity, cyclic var. of cosmic rays 8=20632
- activity minima correl. with cosmic ray intensity sudden change 8=20638
- albedo, earth, July 1963-June 1964 8=23285
- cosmic, ionospheric absorption, review 8=18997
- earth satellite orbit perturbation 8=23462
- e.m. flux incident on atmosphere, numerical calc. 8=2840
- energetic X-rays obs. by satellite, correlation with solar radio and energetic particle emission 8=14883
- ionospheric and geomag. effects, sudden, review 8=18996
- light from edge of solar disc, fluctuations rel. to atmos. turbulence 8=14623
- in magnetosphere rel. to geomag. micropulsations 8=10046
- optical research, 20 year review 8=19066
- optical, role in upper atmospheric processes, review 8=18910
- photons, 2.22 MeV from n, p capture, limit to flux obs. 8=23720
- planet refl. of thermal flux calc., geometrical model 8=14829
- relative spectral intensities, estimation of altitude of upper boundary of clouds 8=14833
- soft X-ray spectrum, proportional counter spectrometer 8=23709
- total eclipse Nov. 1966, measurements performed with 4.28 cm radio polarimeter 8=14868
- ultraviolet, book 8=20012

Sun—cont'd

radiation—cont'd

- X from flare, 80 keV to 1 MeV, OGO 3 obs. and nonthermal bremsstrahlung hypothesis 8=23739
 X, from flares, rel. to ionospheric sudden freq. deviations 8=9985
 X-radiation, soft and vacuum u.v. review, USSR 8=14867
 X-ray absorption rel. to 140-160 km atmosphere density changes, obs. 8=9900
 X-rays below 20 Å, Explorer 30 obs. 8=2841
 X-ray burst, hard, 1963 obs. 8=10393
 X-ray bursts, hard 8=10392
 X-ray emission from coronal region 8=14887
 X-ray meas. with space probes 8=2842
 X, rel. to field strength of 164 kHz received signal 8=5807
 He emission in chromosphere, low temp. theory 8=10430

radiation, corpuscular

- acceleration by geomag. neutral sheet 8=2618
 active M-regions quasi-stationary emission 8=19311
 cosmic, diffusion coeff. rel. to sun distance 8=23722
 cosmic, low energy cut-off dependence on latitude in geomag. field 8=897
 cosmic ray variation on earth, effect 8=911
 cosmic rays, effect on electron density and radio absorpt. in ionosphere 8=2655
 rel. to cosmic rays, primary, ionizing capacity increases, heavy nuclei accel. obs. 8=11663
 cosmic ray injection into magnetosphere 8=23721
 cosmic ray variations, diurnal and semidiurnal, seasonal changes 8=916
 cosmic rays, wind, protons and electrons propag. obs., review 8=23717
 diurnal anisotropy, variability of yearly means, obs. 8=2749
 earth's bow shock, plasma and mag. field correlation obs. 8=23328
 effect on moon, unipolar generator and shock wave 8=23642
 electrons > 40 keV and protons > 500 keV 8=2850
 electrons and protons, high energy, absence in vicinity of Venus from Mariner 2 obs. 8=23676
 energetic X-rays obs. by satellite, correlation with solar radio and energetic particle emission 8=14883
 energy of cosmic-ray particles in solar wind, rel. to distrib. in solar system 8=14872
 and geomag. activity, rel. to, review 8=19303
 high energy particles in new cycle, neutron monitor obs. 8=23723
 increase of January 28, 1967, neutron multiplicity obs. 8=915
 intensity variation with time, interplanetary diffusion model correction 8=2847
 ion wind, Vela 2 and 3 obs. 8=10410
 ionosphere, D-region, effect on formation 8=14682
 ionosphere topside, effect on, from ionogram obs. 8=2709
 ionospheric v.l.f. phase perturbations produced by protons, February 5, (1965) 8=18990
 luminescence of moon, obs. 8=19244
 magnetosphere, effect on, calc. by Euler potential method 8=2722
 neutrinos, capture by Cl^{37} atoms 8=23718
 neutrinos, interact. with electrons 8=14871
 neutrino flux, Brans-Dicke gravitation theory 8=14731
 ν flux rel. to Be^7 K-capture 8=10405
 ν , inverse β decay and elastic scatt. meas. 8=2848
 plasma changes across bow shock of earth, Vela 3 obs. 8=9908
 plasma flow generated by flares, 3D structure 8=23740
 plasma outward flow, spherically symmetric, influence of polytropic heat source 8=19304
 primary cosmic ray heavy nuclei cyclic modulation, Texas, March 1962, balloon obs. 8=3744
 production of Forbush decreases, Sept.-Oct. 1962 8=20633
 proton cosmic rays, low energy, cutoff diurnal vars. and pitch angle distributions 8=20631
 protons and electrons, diffusion and interplanetary mag. field power spectrum 8=23686
 proton precip. over polar caps, obs. of nonuniformity Feb. 1965, lat. 68° to 82°S 8=905
 secondary neutron flux after November 15, 1960 event, Atlas ballistic flight obs. 8=2623
 solar wind distortion of geomag. field rel. to models, $3\frac{1}{2}$ -13 earth radii 8=2751
 solar wind flowing round comets, m. h. d. effects 8=19262
 solar wind, intergalactic cosmic rays modulation theory 8=2771
 solar wind-magnetosphere interact., scaling for model plasma gun-terrella expts. 8=14643
 in solar wind, motion 8=19261
 rel. to solar wind origin, corona expansion, model 8=14876
 solar wind outside magnetosphere, ion spectrum rel. to geomag. vars. Venus 3 obs. 8=14875
 solar wind, Venus 3 and Pioneer 6 obs. comparison 8=14877
 spare flux obs. rel. to predictions on basis of balloon ionization chamber obs. 8=11666
 stream of fast particles, spectra of plasma and e. m. waves induced by stream instability 8=19305
 streams, magnetic morphology rel. to geomag. storms 8=10053

Sun—cont'd

radiation, corpuscular—cont'd

- p streams and var. in ionospheric absorpt. 8=2687
 27 day cosmic ray cycle, quasi spiral variation with solar activity 8=912
 wind and troposphere temp. field 8=18850
 wind, double shock wave structure 8=10411
 wind effect on planetary rotation 8=10337
 wind, effect of rotation 8=10408
 wind excitation of magnetosphere 8=9923
 wind, February-July 1966, obs. 8=10409
 wind flow, effect of Moon, Explorer 35 obs. 8=14828
 wind, $^3\text{He}^2+$, $^4\text{He}^+$, and O^8 species ions, meas. using Vela satellite 8=23715
 wind, interaction with solar mag. field 8=14878
 wind, interplanetary shock waves, Vela 3 obs. 8=23687
 wind, Parker's theory 8=19304
 wind, props. and magnetosphere interaction rel. to interstellar plasma theories 8=23578
 wind rel. to ionospheric blackout, polar cap and auroral zones, 1957-65 8=23363
 wind rel. to magnetosphere electron response during April 17-18, 1965 storm 8=23321
 wind, solar, props., from 11-year cosmic ray cycle 8=14874
 wind, thermal anisotropies, Vela 3 and IMP3 obs. 8=10406
 wind, two fluid model (electrons and protons) 8=23716
 B^8 solar neutrino flux dependence on heavy element composition 8=5968
 B^8 solar neutrino flux dependence on rate of the reaction $\text{He}^3(\text{He}^3, 2\text{p})\text{He}^4$ 8=5969

radiation, radiofrequency

- activity during eclipse, 20 May 1966, obs. 8=19301
 brightness temp. meas. near 1 cm wavelength 8=23714
 bursts, flux density associated with proton events, 1966, obs. 8=10403
 bursts, meter, longitude distrib. over one century 8=10426
 bursts showing freq. splitting, below 60 MHz 8=10401
 burst, spectrum in region 46 to 540 MHz 8=2844
 bursts, type II, Doppler shift suggested for splitting 8=10395
 bursts, type II rel. IV 8=10397
 burst, type II rel. to flare 8=19316
 bursts, type III 8=14870
 bursts, type III, interpret. where streams of fast particles are 8=19305
 bursts, type III, obs. by automatic interplanetary station 'Venus-2' 8=10396
 bursts, type III, starting freqs., daily variation 8=19299
 bursts, type III and type V rel. to electron streams in outer corona 8=10399
 cm, from spot groups sources, mag. field effect 8=10400
 comet 1965f "sun-grazing" effect, Oct 21 obs. 8=2846
 corona noise storms and condensations, 408 and 169 MHz 8=19325
 correlation with cosmic ray diurnal var. type IV burst 8=19298
 effective centre co-ords, determ. with interferometer 8=6383
 emission data, Jul-Sep. 1966 8=2836
 energetic X-rays obs. by satellite, correlation with solar radio and energetic particle emission 8=14883
 flare-associated events, homology 8=10398
 microwave obs., rel. to sudden cosmic noise absorpt. 8=23710
 in millimetric wave range 8=19297
 mm and submm diapasone of waves, meas., app., conditions and results 8=19302
 noise storm occultation during eclipse 8=2843
 radio behaviour, indices, book 8=19005
 review of recent activity 8=10417
 scattering on chromosphere turbulence rel. to temp. inversion at 6 mm 8=10404
 solar cycle var. of 1 GHz emission 8=5967
 solar eclipse 20 May 1966 obs. 8=19287
 solar radio spectrograph, 30-300 MHz 8=14869
 spectrographs and radiometer for 239 MHz 8=19300
 spectrum change of active region rel. to covering by solar limb 8=19296
 spectrum, S-component, millimetre wavelengths 8=23711
 10 cm rel. to F2 electron concentration 8=23423
 theory of bursts 8=2845
 thermal gyromag. emission from active regions 8=23713
 type I bursts, wavelength dependence of bandwidth and duration 8=23712
 5.65 mm, absorpt. by terrestrial atm. 8=5789
 19 Gc/s during eclipse of May 20, 1966 8=10402

spectra

- See also Sun/corona; Sun/flares; Sun/prominences.
 brightness temp. meas. near freqs. of 20 GHz 8=23714
 centre-limb anal. of C_2 , CH, CN, CO and MgH lines, rel. to photospheric inhomogeneities 8=23697
 chromosphere and corona, line profiles, temp. var. effects 8=23698
 chromosphere, H line intensity decrease 8=5974
 continuous, deriv. from simplified temp. distrib. model of photosphere 8=23745
 corona, above active regions, extreme u.v. rel. to r.f. 8=10431

Sun—contd

spectra—contd

- corona, continuous and Fraunhofer obs. 8=19322
 corona, u. v., rel. to spectroscopy of highly ionized atoms 8=16192
 corona, visible emission lines, excitation and electron density 8=10439
 coronal line spectra at eclipse of 1952, anal. 8=10436
 disk near 6708 Å obs. 8=5964
 eclipse, November 12th, 1966, airborne spectrographic obs. of Ca II, H- and K-lines 8=5962
 Evershed effect as wave phenomenon 8=10413
 far u. v., flux and limb darkening, obs. compared with Utrecht and Bilderberg modes 8=23703
 flares, chromospheric optical and coronal X-ray, 9.5-200 Å 8=14866
 high resolution spectrophotometry, used rapid scanning 8=10386
 i. r. Fraunhofer lines, source functions in cores rel. to atmos. models 8=23705
 infrared, forbidden NI lines 8=10384
 intensity profile near solar limits in far i. r. and m. m. regions 8=23700
 limb darkening in range 4500 Å < λ < 2500 Å, failure and modification of Bilderberg continuum atmos. 8=23752
 limb darkening obs. between 1800 and 2900 Å, rel. to opacity of photosphere 8=23751
 at limb, relative intensities of CI lines in EUV spectrum 8=19324
 line profiles, generalized theory for solar case 8=10387
 magnetograph for Zeeman effect meas. 8=14865
 ozone region, eclipse effect 8=23692
 photoelectric meas. rel. to iron abundance, during eclipse 8=5965
 photosphere, Ca II forbidden line identification 8=19293
 photosphere, search for quark-atom spectra 8=23727
 quark-atom lines, identifiability 8=6718
 spectrometer, large Echelle grating 8=10385
 spots, line contours and intensities, effect of image spreading 8=23699
 u. v. emission of chromosphere and corona 8=10428
 u. v. spectrum, continuous, and Balmer jump 8=23702
 X-ray, absolute intensities near min. activity 8=10391
 X-ray images at solar minimum 8=10394
 5577 and 6300 Å regions using a prism grating spectrometer 8=5966
 C^{12}/C^{13} ratio in solar photosphere 8=23726
 $CH(A^2\Delta-X^2\Pi)$ lines near 4300 Å, profiles 8=10389
 CI lines, rel. to f-value of $A^2\Delta-X^2\Pi$ transition of Ch 8=10389
 CO lines, in region of 2.3 μ , interpret. rel. to no. of mols. 8=19294
 Ca, ionized, mean and core profiles of H and K lines 8=23706
 Ca II lines in lower chromosphere 8=2859
 Ca II, profiles of H and K lines, emission cores and optically thick chromosphere 8=23707
 Ca II reson. lines rel. to photosphere-chromosphere transition zone temp. distrib. 8=19319
 Ca II resonance line, emission peaks 8=23744
 Ca II H and K lines, profiles of the cores in 1957 and early 1965, near solar minimum 8=10382
 H Ly- α and - β line intensities rel. to emitting layers e temp. and density 8=10390
 Mg II lines in lower chromosphere 8=2859
 Mg II, profiles of H and K lines, emission cores and optically thick chromosphere 8=23707
 Mg II reson. lines rel. to photosphere-chromosphere transition zone temp. distrib. 8=19319
 Mg II resonance line, emission peaks 8=23744
 Na D-lines, atmosphere min. temp. calc. 8=10388
 Na D-lines, profile anal. assuming pure absorpt. 8=10383
 Na D-lines, profiles rel. to coherent and non-coherent scatt. 8=23708
 Na D₂ line, brightening obs. 8=2858
 O lines, rel. to temp. distrib., vel. field, profile damping and O abundance in photosphere 8=23704
 S, neutral, forbidden lines in Fraunhofer spectrum 8=19295

Sunlight

- oscillator-detector 8=15172
- oxide, tunnelling theory 8=2153
- paramagnetic salt, solenoid for adiabatic demagnetization 8=5217
- parametric amplifier, for meas. of small d.c. voltages 8=3135
- point contacts, mechanism for control of characts. 8=5218
- point tunnelling, new method 8=5211
- quantization and thermodynamic fluctuations 8=17987
- quantum generation and phonon detection 8=17954
- quantum interference device for small voltage meas. 8=15165
- relaxation absorption of e.m. waves 8=9022
- resonator, cylindrical iris, for 3 cm waves 8=6362
- resonators, 30 MHz, for oscillators 8=13767
- rings, weakly connected, thermodynamical anal. of magnetization 8=13768
- roller bearings for flux pump with only frictional losses 8=15196
- shields, for travelling wave maser, mag. field shaping 8=13769
- solenoids, critical state exam. 8=15262
- solenoidal magnet, mag. field sweep 8=10869
- strips, magnetic flux motion 8=2152
- superconductor-glass vacuum seals 8=21551
- superconductor-metal-superconductor junctions, current 8=13765
- thermal props. rel. to strong electron-phonon interaction 8=17508
- thermodynamic effects 8=9040
- for thermometry with 10^{-3} K resolution 8=15117
- thin thread, resistance at near critical currents 8=22540
- torus for low-temp. torque meas. 8=14924
- transition metal, isotope effect rel. to dirtiness 8=5215
- tunnel junctions, current fluctuations 8=17988
- type II alloys, thin plates, Meissner effect 8=9034
- type II, critical surface current 8=13740
- type II, flux jumps 8=13741
- wire, in composite conductor, internal thermal resistance effect on min. prop. current 8=17993
- wires and magnets, transition to normal state 8=5189
- [Ag₂O₃]·HF₂ clathrate, n.m.r. 8=17957
- Ag-Sn superimposed films, proximity effect examination 8=9044
- Al, critical field as function of press. and temp. above 0.3°K 8=13746
- Al, 10^{-9} Ω joints to, by ultrasonic soldering 8=17995
- Al thin-film cylinder, temp. depend. of mag. field periodicity 8=22539
- Al, transition temp. calcs. 8=5201
- Al, transition temp. change due to 3d transitional impurities 8=9041
- Al-Al₂O₃-Al tunnel junctions, temp. dependence of energy gap 8=17958
- Al-Al₂O₃-Pb-M, (M = Ni, Fe and Pt), gapless props. induced by proximity effect 8=9042
- AlSb, metallic 8=9043
- B rich lattices 8=22870
- Be alloys, magnetization meas. 8=17959
- Bi, amorphous, strong-coupling superconductivity and phonon structure 8=5202
- Bi, 2-4°K on surface, tunnel effect investigation 8=2155
- C-W-Re alloy 8=22566
- Cd-Bi solder junctns, thermal transport near 0.1°K 8=5203
- Cr-Pb-PbO-Pb-Cr, gapless props. induced by proximity effect 8=9042
- Cu-Al-Mn alloys, transition and surface relief effects 8=19686

Superconducting materials and devices—contd

- CuRh₂S₄ with spinel structure, transition temperature obs. at 4.35°K 8=13749
- CuRh₂Se₄ with spinel structure, transition temperature obs. at 3.50°K 8=13749
- Fe magnet 8=15263
- Fe-Ni alloys, transition and surface relief effects 8=19686
- Fe-Sn superimposed films, proximity effect examination 8=9044
- Ga, boundary scattering rel. to critical temp. shifting 8=1374
- Ga crystal, energy gap and anisotropy meas. by tunneling effect, 0.36-1.1°K 8=22546
- Ga, pure, transition width 8=13748
- Hg, surface nucleation and bulk superheating fields, 1.2°K-T_c 8=17968
- Hg-Sn system, transition temp. comp. dependence 8=17960
- In, critical fields, 0.1-4°K, pressure effect up to 30 k atm 8=5212
- In, films, Nernst effect 8=2174
- In films, transition temp. thickness dependence 8=9045
- In films with superconductive and ferromag. overlays, tunnelling 8=22549
- In-40at.% Pb, resist. and Hall angle, flux pinning model and obs. 8=2162
- In in porous glass, flux jumping during magnetization 8=2163
- In, length differences between normal and supercond. states 8=22124
- In 1.5 at.% Bi, type II, ideal flux flow resistance 8=22547
- In single spheres, hysteresis near T_c , and size effects 8=17961
- In spheres, superheating and supercooling in normal to supercond. transition 8=13750
- In, spin-lattice relax., energy-gap broadening 8=18464
- In, ultrasonic attenuation 8=13354
- In-Bi alloy foils, superconducting type-I, in mag. field, mixed state evidence 8=17962
- In-In tunnel junctions, I-V characts. and 3-cm radiation emission 8=17981
- InPb type II, magnetostriction and magnetization 8=22548
- In-Tl alloy, Ginzburg-Landau parameter changes under pressure 8=22550
- In-Tl alloys, anomalous nucleation fields 8=13751
- In-Tl alloys, Ginzburg-Landau parameters rel. to temp. 8=9046
- Ir alloys, and mag. susceptibility and sp. ht., exptl. study 8=13752
- La films, electron-tunneling meas. 8=9047
- La-Ce alloy film, gapless, deviations from theory 8=5205
- La-Ce(Gd) alloys, Kondo effect in T_c and H_{c2} 8=5206
- La-Lu films, electron-tunneling meas. 8=9047
- LaX₃, (X = Sn, Pb, Ti, In), with Cu₂Au structure 8=22551
- Mo, energy gap anisotropy, u.s. investigation 8=9048
- Mo single crystals, pure with small residual resistance 2×10^{-5} Ω 8=5207
- Mo₂B, d-shell effect on transition temp. 8=2164
- Nb (and Nb alloys) wires, a.c. induced voltages 8=13757
- Nb crystal, anisotropic energy gap meas. by tunneling 8=17964
- Nb, energy gap anisotropy by single crystal tunneling technique 8=5209
- Nb, energy-gap, anisotropic, meas. by tunnelling 8=22552
- Nb films, for cryotron ground planes 8=2171
- Nb, flux diffusion 8=9053
- Nb, flux penetration and a.c. losses 8=5210
- Nb, heat effects rel. to mag. processes 8=2167
- Nb, helicon resonances near H_{c2} 8=9049
- Nb, internal friction and Young's modulus variation 8=2063
- Nb, irreversible magnetisation obs. 8=2160
- Nb, magnetocaloric effect, rel. to upper critical field 8=9052
- Nb, mixed state, u.s. attenuation rel. to transverse mag field 8=17502
- Nb, n-irradiation effects on magnetization behaviour and transition temp. 8=2169
- Nb, nuclear relax. near H_{c2} 8=2170
- Nb, resist. and Hall angle, flux pinning model, and surface layer effects, obs. 8=2162
- Nb, surface investigation 8=2157
- Nb, thermal conductivity rel. to energy gap and mag. hysteresis 8=2166
- Nb, transition temp. under high pressure 8=9060
- Nb, upper two critical fields ratio, temp. dependence 8=17963
- Nb, u.s. wave attenuation, temp. and mag. field depend. 8=17503
- Nb₃(Al, Ge, Sn) solid solns., transition temp. dependence on atomic ordering 8=17967
- NbB₂, specific heat 9.6-2.8°K 8=17522
- NbC-NbN-based alloys, pseudoquaternary, rel. to T_c > 15°K studies 8=17965
- Nb-Cu composite, strong proximity effects 8=22553
- NbN-based alloys, pseudobinary and -ternary, rel. to T_c > 15°K studies 8=17965
- NbN, critical fields and currents 8=2165
- NbN, critical temp., lattice parameter, N content 8=17966
- NbN with Zr and Ti, preparation and behaviour 8=2158

Superconducting materials and devices—contd

Nb-Nb oxide-Nb diode for microwave mixing 8=15386
 NbS₂, specific heat 1.7-6.4 K 8=17522
 Nb₃Sn-based ribbon, stabilized, prep. by diffusion process 8=13756
 Nb₃Sn Fermi level motion rel. to normal-state props. temp. depend 8=5118
 Nb-50 at. %Ta, sheets and cold-rolled and annealed foils, transport current distrib. obs. 8=9051
 (Nb-Ta)N_x, critical temp., lattice parameter, N content 8=17966
 NbTi, copper-coated, large coils, performances 8=17994
 (Nb-Ti)N_x, critical temp., lattice parameter, N content 8=17966
 Nb-Ti wires, flux jumping 8=9050
 Nb-Ti-Zr alloy, magnetic props. 8=13754
 Nb-Ti-Zr alloy solenoid at mag. field strength more than 75kG 8=309
 Nb-Ti-Zr wire, transitions during destruction of superconductivity 8=22567
 Nb-Zr alloy closed solenoid, flux jumping-patterns 8=2168
 Nb-25%Zr, copper-coated, large coils, performances 8=17994
 (Nb-Zr)N_x, critical temp., lattice parameter, N content 8=17966
 Nb-25 at. %Zr, sheets, transport current distrib. obs. 8=9051
 Nb 25%Zr wire, a.c. quenching 8=13755
 Nb-25%Zr wires carrying a.c. in mag. field 8=5208
 Nb-Zr/Ti cable, critical current 8=13770
 Ni-Sn alloy under pressure, transition temp. and stability interval 8=2156
 Pb, defects rel. to structure of intermediate stage 8=22556
 Pb, energy gap and electron-phonon coupling strength press. depend. 8=22557
 Pb, far i.r. absorpt. rel. to crit. energy gaps 8=18555
 Pb film, frequency conversion in 3 cm band 8=22558
 Pb films, thermal forces on vortices 8=13761
 Pb films, thin, far i.r. absorption 8=13759
 Pb, flux line motion in current-carrying, direct detection 8=13758
 Pb Josephson tunnel junctions, V-A characts. fine structure 8=9063
 Sn Josephson tunnel junctions, V-A characts. fine structure 8=9063
 Pb, in high-Q microwave cavities, application in construction 8=15388
 Pb, microwave absorpt. in surface-sheath regime, depairing effect of mag. field 8=13760
 Pb, phonon spectrum change by lattice distortion, tunnel effect method 8=22559
 Pb, point tunnelling 8=5211
 Pb shell, attainment of zero mag. field 8=17990
 Pb, surface nucleation field H_{c3} 8=17971
 Pb, surface nucleation and bulk superheating fields, 1 K-T 8=17968
 Pb, thermally induced H II vaporization threshold 8=4660
 Pb tunnelling characts., size effects in 700-3200 Å films 8=2172
 Pb, tunnelling meas. of energy gap, high pressures 8=22554
 Pb, type I, asymmetric critical currents 8=17969
 Pb-insulator-Al tunnel junctions, electron tunnelling 8=2180
 Pb-Ag superimposed films, proximity effect examination 8=9044
 Pb-Bi, type II critical current density rel. to surface 8=2173
 Pb-Fe superimposed films, proximity effect examination 8=9044
 Pb-In alloy, type II tube, magnetic induction meas. on wall 8=5221
 Pb_{0.99}In_{0.17}, transitions during destruction of superconductivity 8=22567
 Pb-Pb tunnel junctions, I-V characts. and 3-cm radiation emission 8=17981
 Pb-Tl alloys, electron-phonon coupling and phonon spectra, electron tunnelling studies 8=22555
 Pb-Tl type II foils, sheath irreversible magnetization obs. 8=17970
 Pb-Tl(In) alloys, order-disorder transform. from superconducting transition temp. meas. 8=1680
 Pb-30 at. %In, sheets and cold-rolled foils, transport current distrib. obs. 8=9051
 Re, isotope effect 8=17973
 Re, transition temp., h.p. dependence 8=17972
 Re-Os alloys, transition temp., h.p. dependence 8=17972
 Re-W-C alloy 8=22566
 Sn, critical fields, 0.1-4 K, pressure effect up to 30k atm 8=5212
 Sn, doped, us. attenuation studies 8=22572
 Sn film, nonlinear effect at about 10 GHz 8=22562
 Sn films and bulk Nb, microwave-photon assisted tunnelling 8=17975
 Sn films, Ge coating effect on transition temp. 8=5214
 Sn films in mag. field, thermal cond. 8=22137
 Sn, films, Nernst effect 8=2174
 Sn, in high-Q microwave cavities, application in construction 8=15388

Superconducting materials and devices—contd

Sn point contact electrode for microwave generation and detection 8=22570
 Sn, pure and Cd-doped, energy-gap effect on thermal conductivity 8=4942
 Sn, pure, superheating in cylindrical samples 8=22564
 Sn, quantum phase fluctuations at onset of long-range phase coherence 8=22561
 Sn, resistance jump at superconducting to intermediate transition rel. to London model 8=17974
 Sn, surface impedance, mag. field dependence, anomalies 8=9054
 Sn, transition temp. and resistance temp. depend., undergrad. expt. 8=254
 Sn, u.s. absorpt. by electrons near transition pt. 8=4924
 Sn, u.s. absorpt. at various amplitudes 8=5213
 Sn whiskers, intrinsic thermodynamic fluctuations from depressions of supercurrent and T_c 8=22560
 Sn-In, solder junctions, thermal transport near 0.1 K 8=5203
 Sn-In type II foils, sheath irreversible magnetization obs. 8=17970
 Sn-Pb Josephson junctions, radiation threshold absorption, mag. field depend. 8=22569
 Sn-Pb, solder junctions, thermal transport near 0.1 K 8=5203
 Sn-Pb tunnel junctions, I-V characts. and 3-cm radiation emission 8=17981
 Sn-SnO₂-Sn tunnel junction, d.c. Josephson current mag. field depend. and self-screening 8=22568
 SrTiO₃, anomalous behaviour of transition temp. rel. to electron density 8=9057
 SrTiO₃, superconducting semiconductor films and whiskers, transition temps. 8=9056
 SrTiO₃, transition temp., stress effects at ≤1.5 kbar 8=2175
 Ta, transition temp. under high pressure 8=9060
 TCNQ derivatives of cyanine dyes 8=17977
 Te films, Ge coating effect on transition temp. 8=5214
 Ti alloys, Fe and Nb additions, props., phase transformations 8=22563
 Ti-Rh alloys, specific heat and transition temp. meas. 8=9058
 Ti-22 at. %Nb alloy, critical transport currents on ω phase precip. 8=4718
 α-U, superconducting transition temp., positive isotope effect 8=22565
 V, local field mapping by n. m. r. 8=2179
 V, transition temp. under high pressure 8=9060
 V₃Al superconductivity, Si contamination effects 8=17976
 V₃Au, atomic ordering props. 8=18475
 V₃Ga Fermi level motion rel. to normal-state susceptibility temp. depend. 8=5118
 V₃In superconductivity, Si contamination effects 8=17976
 VN-based alloys, pseudobinary, rel. to T_c > 15 K studies 8=17965
 V₃Si Fermi level motion rel. to normal-state susceptibility temp. depend. 8=5118
 V₃Si type, properties by expt. 8=2178
 V-V₃Si, transition temp. and homogeneity regions 8=9061
 V₃X type compounds, strong-coupling 8=2177
 W₂B, d-shell effect on transition temp. 8=2164
 W-Re-C alloy 8=22566
 Zn^{64, 66, 68}, transition temp. isotopic mass dependence 8=9062
 Zr + 4%Nb, transitions during destruction of superconductivity 8=22567

 voltage meas. 8=9031
 type II, critical surface current 8=13740
 type II, degradation effects in high-field, pulse
 meas. 8=17953

type II, enhancement of Meissner effect by heat
 pulse 8=5198
 type II, flux flow state, apparent negative thermal
 conductivity 8=2148
 type II, flux jumps 8=13741
 type-II, flux transport noise 8=17949
 type II, lattice defects of flux lines 8=13734
 type II, linear I-V characts. under conditions of flux
 flow 8=22537
 type II, mixed state structure and vortex motion with
 transport current 8=2150
 type II model of self-trapped laser filaments 8=9030
 type-II, modified London model 8=17948
 type II, pinning forces and hysteresis 8=22538
 type-II, quantum theory of vortices 8=5200
 type II sheets, flux motion prod. voltages obs. 8=2149
 type II, thermal losses under a.c. conditions 8=5197
 type II, thermodynamics 8=13735
 type-II, thermodynamics of volume and press
 effects 8=17947
 type II, thermodynamic fluctuations of order parameter
 near upper critical field 8=9032
 type II, ultrasonic attenuation, anisotropy 8=22091
 type II, upper critical field and thermodynamic props.,
 two-band model 8=13736
 type II, vortex structure motion in high mag. field 8=9033
 type II wire, nonideal, a.c. quench phenomenon 8=13755
 wire in liq. He, minimum propag. current 8=22541
 A₂B type, intermetallic compounds, band structure 8=5216
 BCS model, critique of Bogoliubov-Haag
 treatment 8=22527
 BCS solutions at critical point 8=22525
 BCS theory, off-diagonal long-range order 8=2145
 BCS theory of superconductivity, Freidrichs-Berezin
 transformation reformulation 8=5190
 Cd-Bi eutectic solder, transition temp. 8=2161
 Fe dissolved in Zn, revision of props. rel. to magnetic
 moments 8=9344
 Ga, pure, transition width 8=13748
 In, type I, intermediate state statics and dynamics 8=5204
 In, ultrasonic waves, quasi-longitudinal,
 attenuation 8=22103
 La-Ce alloys, transition temp., paramagnetic impurity
 effect 8=9303
 La-Gd alloys, transition temp., paramagnetic impurity
 effect 8=9303
 Sn, type I, intermediate state statics and dynamics 8=5204
 Sr_{0.925}Ba_{0.075}TiO₃, heat capacity transition at
 0.5°K 8=1877
 SrTiO₃, semiconducting, transition temp. 8=9055
 Ti₃AuH, A-15 structure 8=9059

Supercooling

criteria for solid-liquid interface stability, thermal
 diffusion effect 8=1617
 ice crystals, in supercooled water, ultrasound
 effects 8=22102
 metallic crystals, rel. to growth vel., theory of
 expt. method 8=8419
 metals, rel. to dynamic nucleation 8=21760
 multiphase diffusion couples, lattice transform. at interface
 on supercooling 8=17552
 nitrate melts, binary mixtures of Ca(NO₃)₂ and
 MnO₃ (M = Na, Cs, Rb, K), relax. processes 8=1586
 organic supercooled melts, scintillation 8=8089
 sucrose soln., aq. and water, rel. to ice growth
 velocities 8=17236
 water and aq. sucrose solns., rel. to ice growth
 velocities 8=17236
 water, to -50°C, u.s. velocity rel. to precrystallization
 theory 8=13353
 Bi, growth of large crystals from melt 8=17227
 Cu: Cu-12.5 wt.%Al multiphase diffusion couples, lattice
 transform. on supercooling 8=17552
 (K, Na)(Ba, Cl) solid soln., constitutional supercooling,
 convection cells 8=8417
 αP₄, solid/liq. interface temps. 8=21755

Superexchange. See Antiferromagnetism.**Superfluidity**

 motion, obs. 8=10796

Superfluidity — contd

- He flow through orifices, critical vel. and vortices form. obs. 8=6234
 He liquid 8=10806
 He, liquid, collective coordinates theory 8=10799
 He liquid, λ point suppression by elec. field 8=15151
 He, penetration into Zeolite microparcs., obs. 8=10805
 He, wave function exam. 8=261
 He II circulation in a porous medium 8=19698
 He II filling narrow gap, heat exchange with solid body 8=6233
 He II, liquid, counterflow past a flat plate, anisotropy 8=19701
 He II, local gauge invariance and broken symmetry 8=3126
 He II near critical point, density obs. 8=19702
 He II in plane-parallel capillary, wave processes 8=3123
 He II quantized circulation around a fine wire obs. 1.2°-1.9°K 8=19703
 He II rotating annulus, quantized vortex lines threshold obs. 8=10810
 He II rotating in annular channel, radial distrib. of vortex lines 8=10809
 He II, single cortex and rotating vortex lattic, quant. theory 8=3125
 He II, specific heat, logarithmic singularity 8=15150
 He II, subcritical flow, pressure obs. 8=19695
 He³ in superfluid He⁴, dilute mixtures 8=15152
 He⁴ glass superleak construction 8=15149
 He⁴, normal-mode anal. 8=15153
 He⁴, scatt. of laser light 8=8078
 He⁴, soln. of He³, model of fermion soln. in boson gas 8=6232
 He⁴, turbulently flowing, λ -point shift 8=19694

Superlattice structure. See alloys; Crystal structure, atomic; Solid solutions.

Supernovae. See Novae.

Superparamagnetism. See Ferromagnetism.

Supersonic flow

See also Shock waves.

- air stream, ignition of slot-injected H₂ 8=15112
 Chaplygin's equation near the vacuum line, solutions approximating 8=7905
 circular cylinders, flow field in far wake 8=16674
 of entropy layers, linearized perturb., and vorticity induced by shock waves 8=16652
 gas macroparameters near leading edge of plate in hypersonic flow, asymptotic values 8=16672
 gas, real, over solid of revolution, perturbations damping 8=21480
 gases, internal heat generation 8=1458
 high stagnation enthalpies in shock tunnels, use of N₂O 8=16676
 hypersonic viscous shock layer of blunt body, effects of surface mass transfer 8=3035
 leading shock from jet injection into 2-dimens. supersonic stream 8=16678
 magnetoaerodynamic, blunt body, theory 8=355
 nozzles, electrical potential development 8=1456
 plate vibration, parametric, self-excited, in supersonic flow 8=10685
 radiation coupled shock layer including upstream absorpt. effects 8=19545
 sharp cones in rarified hypersonic flow, surface pressure distrib. 8=16681
 shock wave Mach wave refl. coeff. 8=3037
 shock wave motion along converging or diverging ducts 8=15056
 tangential slot injection of gas into external stream, associated flow field 8=16675
 transverse-curvature parameter in hypersonic flow regime, required form 8=16682
 Ar ionized by h.f. induction, electronic and ionic properties 8=21266
 Ar, partially ionized, source-flow expansion into vacuum 8=16658
 NO₂, chemiluminescent radiation from far wake of hypersonic flow 8=21478

Supersonics. See Ultrasonics.

Surface diffusion. See Diffusion in liquids; Diffusion in solids; Surface phenomena.

Surface energy

- adhesion, role in metalworking 8=5034
 crystal, ang. depend., and thermodynamic classification of surface 8=8377
 cubic crystals, as function of orientation, calc. 8=21865
 deformable, theory, simple force multipoles 8=2918
 equilibrium form of finite crystals 8=21866
 gases, and equilib. forms of anisotropic phases 8=4464
 Inconel 600, twin and grain boundaries free energy ratios, from e-micros. exam. 8=17287
 lipid membranes, interface free energy 8=8038
 molecular forces at solid surface 8=21637
 NaCl, potential meas. by CF⁺ emission on electron bombardment 8=5425
 Ni, twin and grain boundaries free energy ratios, from e-micros. exam. 8=17287
 Po, allotropes, critical surface tension 8=21869
 S, allotropes, critical surface tension 8=21869

Surface energy—contd

- Se, allotropes, critical surface tension 8=21869
 Sn atoms on silica gels and zeolite, states and dynamics 8=16912
 TD-nickel, twin and grain boundaries free energy ratios, from e-micros. exam. 8=17287
 Te, allotropes, critical surface tension 8=21869
 U, potential of H₂ 8=21909
 W, (112) and (100) oriented crystal surfaces, potentials of CO 8=21910

Surface ionization. See Ionization, surface.

Surface measurement

See also Area measurement.

- aluminized surface, testing in Fizeau interferometer using coated reference flat 8=11171
 aspherical, optical systems 8=15511
 charcoal, n. m. r. and adsorpt. methods 8=8293
 diamond, strains and damage due to abrasion 8=8826
 elasticity constants of contacting solid bodies 8=56
 electron diffraction, pseudo-superstructures and low energy multiple scattering 8=1752
 electroplated, interferometric exam. 8=9722
 epoxy polymers, micropenetrator for surface characterisation 8=8876
 interferometric flatness testing, Lloyd's mirror appls. 8=6547
 metals, influence of optical films 8=11168
 microstructure of crystals, by reflection of atom and ion beams 8=13201
 polymers, scanning electron microscope, prep. technique for examination 8=17180
 pores, without shape assumptions 8=17020
 porous materials, pore volume eqn. 8=13049
 silica gel, adsorption method 8=21742
 Teflon 6, area meas. 8=13047
 temperature by i. r. television 8=15118
 two-beam Linnik interference microscope study 8=13078
 AgCl single crystal, surface hardening while in contact with aqueous environment 8=4727
 Mg-Fe mixed hydroxides and dehydration prods., absorpt. obs. 8=17023
 MnO₂, electrolytic, area and pore struct., sorption obs. 8=21904

Surface phenomena

See also Adsorption; Capillarity; Catalysis; Electron emission; Films; Ionization, surface; Liquid waves/surface. Sorption.

- adhesion, electronic theory 8=2046
 amine oxide micelles, potentials 8=8158
 analysis by simultaneous X-ray emission and electron diffr. 8=8290
 brass, dezincification before anodic dissoln, in NaOH 8=18732
 contamination meas. by evolution of H in reactions with Na-NH₃ solns. at -78°C 8=21868
 dielectrics, pulsed breakdown in non-uniform field 8=9189
 dielectrics, pulsed breakdown in uniform field 8=9188
 diffuse, retro-reflection 8=468
 discharge with ring-type electrodes 8=12397
 dislocation loops in thick plate rel. to sinusoidal surface temp. cycling 8=17630
 elastic waves, excitation by transient surface heating, piezoelectric and nonpiezoelectric 8=17720
 electrical contacts, corrosion degradation obs. 8=8987
 electrical contacts, tarnishing studies 8=8988
 emulsions, stabilized, barrier to coalescence model 8=12957
 films, epitaxial, role of surfaces in nucleation 8=1735
 films, thin metal, optical absorb. and photoelectric emission, vectorial selective effects 8=22950
 fracture-surface energies, double cantilever method, critical analysis 8=22291
 gas flow through microporous media, transport mechanisms 8=4450
 gas-solid collisions, study by 'lock-in' detect. of modulated molec. beams 8=1323
 in glass, bubble surfaces, contamination-nucleated crystal growth 8=21937
 Heisenberg ferromagnet, semi-infinite, surface effect on sp. ht. and spin deviation 8=2303
 ice, conference 8=21867
 insulator, electric breakdown in vacuum 8=7673
 insulator/semiconductor interfacial magnetoplasma wave instability 8=2116
 laser beam scattering, comparison with gas particles 8=3286
 liquid, films, cavitation destruction in sound field, at elevated static press., photographic obs. 8=12775
 liquid/liquid interfaces, molecular interactions and mobility by NMR spectroscopy 8=12778
 liquid, thermal excitation of capillary waves by scattering of coherent light 8=16853
 liquids, thermal ripplon scatt. of light 8=16838
 liquids, surface layer thermodynamics 8=8047
 metal foil roughness rel. to scattered radiation at plasma frequency 8=8958
 metal-gas, e emission, Thomas-Fermi-Dirac model of quantum mechanical contrib. 8=5414
 metals, oxygen chemisorption and film growth 8=9703

Surface phenomena—contd

- metal surface impedance changes on acoustic wave generation by r.f. e.m. radiation 8=180
 metallic, u.v. emission on K⁺ bombardment analysed by spectral microscopy 8=14299
 multiphase couples, interface comps., motion and lattice transformations 8=17552
 phase equilibrium between adsorbed and free Ar in ultra-high vacuum obs. 8=21530
 polymeric and refractory heat shield materials, ablation obs. 8=1860
 polymers wettability rel. to melts heterogeneous nucleation, substrate effects 8=8298
 quartz, natural and cultured, distinction between rhombohedral faces 8=4731
 radiative props., effect of scatter 8=1686
 roughness rel. to anomalous resistral structure, model 8=5572
 sapphire, critical surface tension 8=13080
 semiconductor properties, meas. methods 8=18147
 semiconductor voltage rectification effect 8=13786
 semiconductors, e. m. wave propag. and amplification in strong mag. fields, theory 8=9090
 semiconductors, 1/f noise theory 8=13787
 shock wave production using laser beam on solid target 8=19534
 soda-lime glass with adsorped water spreading of org. liqs. 8=1520
 solid-liquid interface, supercooling criterion, thermal diffusion effect 8=1617
 steel, 18Cr-8Ni, oxide film identification by electron microscopy 8=8319
 structure and reactions, meas. by low and high energy electron diffraction apparatus 8=4834
 superconducting sheath, inhomogeneous distrib. of transport current 8=22543
 superconductivity, high temp. 8=17946
 semiconductor devices, by light spot scanning method 8=18099
 superconductor surface reactance properties using superconducting oscillators 8=13767
 superconductor, type II, critical current 8=13740
 superconductors, surface resistance, h.f., mag. field dependence 8=9035
 thermionic conversion Specialists Conference San Diego USA October 1967 8=6273
 Ag foils, contamination and roughness rel. to optical absorpt. 8=18502
 Ag, reflection of zero-energy electrons 8=6301-2
 Ag, sulphiding by H₂S, effect of surface Fe 8=23096
 AgCl single crystal, surface hardening, effect of aqueous environment 8=4727
 Al alloy, bubble formation during fatigue, rel. to humidity 8=4729
 Al, effect on electron emission of abrasion in air, O₂, N₂ and H₂O vap. 8=9270
 Al, (111), (100) and (110), atomically clean, prep. and props. 8=4728
 Al and Al₂O₃, dispersion of surface plasma oscillns. 8=12547
 Ar impact on Al, Ag, Au and Pt, accommodation coeffs., 500-12 000 eV 8=12685
 Au foils, contamination and roughness rel. to optical absorpt. 8=18502
 Bi, condensed, 2-4°K, superconducting props. 8=2155
 C contacts in microphones, deterioration leading to resistance increase 8=19558
 CaF₂:GdF₃, surface-layer dielec. relax. 8=18163
 CdS layered system on Ge, elastic wave behaviour 8=8850
 CdS, surface and volume conductance, kinetics comparison 8=18032
 CdSe powder, investigation by e.p.r. method 8=8294
 CdTe-HgTe, mass transfer by evaporation-diffusion 8=8673
 Cu: Cu-12.5 wt.%Al multiphase couple, interface comps., motion and lattice transformations 8=17552
 Fe-Cr alloys of 25-95%Cr comp., oxidation at 1000-1300°C, scaling kinetics 8=18677
 GaAs Fermi level, influence of volume dope 8=8934
 Ge, contamination, detection and identification 8=1688
 Ge-electrolyte interfaces, recombination obs. 8=18054
 n-Ge, recombination changes due to edge dislocations 8=22591
 Ge, recombination, generation process 8=22610
 H impact on Al, Ag, Au and Pt, accommodation coeffs., 500-12 000 eV 8=12685
 H₂O, destruction on various surfaces 8=18704
 He impact on Al, Ag, Au and Pt, accommodation coeffs., 500-12 000 eV 8=12685
 Hg-Mo system, diffusion 8=21903
 Hg-W system, diffusion 8=21903
 K, impedance near cyclotron edge for helicons 8=13686
 K, size effect, r.f., line shapes for surface reactance and resist. derivatives 8=13719
 MgF₂ films, thin, charging with electrons of average energy 8=22505
 MgO, gas emission 8=2272
 Mn-Zn eutectics, shock-decanted, interface examination 8=8170

Surface phenomena—contd

- Mo, accommodation coeffs. of inert gases 8=4734
 Mo, rel. to O₂ interaction, from surface exam. by LEED and work function studies 8=17165
 MOS transistors, surface states, i.f. noise 8=9176
 MoS₂, detection of monatomic steps and vacancies 8=4730
 N impact on Al, Ag, Au and Pt, accommodation coeffs., 500-12 000 eV 8=12685
 NaCl(100) surface, low energy electron diffraction study 8=17116
 Nb, superconductivity investigation 8=2157
 Ni, adsorption of H₂, electron probe surface mass spectrometer obs. 8=21908
 NiS film on Ni in S solns., growth kinetics and mechanisms, obs. 8=2525
 Pb, superconducting, microwave absorpt. in surface-sheath regime, depairing effect of mag. field 8=13760
 PbBrO₃, interface temp. of crystallizing melt 8=21960
 PbO, yellow, photoconductivity, effect 8=22697
 Si, changes due to u.v. illumination 8=8297
 Si, contamination, detection and identification 8=1688
 Si, recombination, generation process 8=22610
 TiO₂ electric discharge channels 8=1330
 V₂O₅(101) surface structure transitions, e-induced in LEED expt. 8=4733
 W, accommodation coeffs. of inert gases 8=4734
 W, field evaporation end form in field ion microscope 8=4735
 W, interactions of I₂ vapour 8=18699
 W, tip radius in ion microscope 8=343
 W, translation accommodation coeffs. of Ar, O₂, N₂ 8=17113
 W, trapping energy calc. for inert gas ions 8=13081
 W, (110), atomic perfection rel. to field emission 8=2275
 ZnS(Cu), temps., exptl. determ. by photoluminescent emissions 8=13082

Surface tension

- See also Capillarity.
 adhesion, wetted spheres 8=8150
 benzene-water, interfacial, effect of temp. and press. 8=12827
 binary liq. mixtures, organic cpds., theory 8=12826
 and cellular convection in semi-infinite liquid layer 8=1503
 copolymers 8=17841
 cylinder withdrawal, gravity corrected theory for speed range extension 8=12762
 n-decane-water, interfacial, effect of temp. and press. 8=12827
 interfacial forces at plane surface of solids 8=21637
 interfacial, of polar mixtures 8=16811
 interfacial, of ternary random mixtures, lattice models 8=21639
 liquid drops subject to electrical forces 8=16782
 liquid mixtures 8=21636
 near phase transition, quasichem. approx. 8=21635
 noble metals, correl. with dispersion energies 8=21792
 organic liquid spreading on soda-lime glass rel. to adsorped water effects 8=1520
 organic liquids, pure, new correlation 8=12824
 phosphates, molten, rigid sphere model 8=7999
 physical-cluster theory of condensation 8=4654
 polyetherdioxols, meas. and theory, and parachor 8=4552
 poly(methylmethacrylate), interface, tacticity determ. 8=4551
 polysiloxane-polyether block copolymers, equilb. 8=8155
 polysiloxane-polyether block copolymer solns., dynamic 8=8156
 related to latent heat of fusion 8=16936
 sapphire, wet by liq. metals 8=13080
 solid-liquid, rel. to nature of liq. state 8=12825
 Teflon 6, in hydrocarbons, contact angle data 8=13361
 tin, solid-liquid interface meas. 8=16925
 tube, horizontal, effect on flow during emptying 8=16626
 variation, inducing fluid motion 8=21422
 water, rel. to "shadow-sausage effect" of illuminated, partially submerged rod 8=6495
 Bl₃, under its own vapour and contact angle on W 8=12998
 H₂O and D₂O, domain theory 8=4550
 H₂O liq.-vapour interface potential, molec. theory 8=12196
 He II liquid, calc. using Gross-Pitaevski model 8=3128
 Xe, liq. and energy, in temp. range 189°-280°K 8=1539

Surface tension measurement

- vertical plate method 8=8031
 viscous liquids, pendent drop method 8=21638
 Fe alloy liquid drop preparation 8=8257

Surface texture

- apophyllite, a-face structures 8=17220
 atomic, slow electron diffraction, a review 8=22012
 boundary layer turbulence promoters, improved heat transfer rel. to power reactor systems 8=21510
 brass, contour measurement using laser probe 8=19339
 carbon blacks, graphitized, Xe adsorpt. obs. 8=17162
 cellulose fibres, effect of ionic etching on structure 8=13083
 clay, contour measurement using laser probe 8=19339
 crystals grown from molten salts, growth spirals obs. 8=4838
 electroplated, interferometric exam. 8=9722

Surface texture—contd

- electropolishing for field-ion microscope specimens, automatic supervisor 8=17273
 electropolishing, prod. of flat discs required 8=5996
 electropolishing of thin foils for electron microscopy, specimen temperatures 8=4836
 field-ion images from asymmetric specimens, rel. to streak contrast 8=8452
 interferometric flatness testing, Lloyd's mirror appls. 8=6547
 low energy electron diffraction, sensitivity rel. to surface perfection 8=4726
 metal emitters, effect of micropatches on average thermionic consts. 8=18260
 metal polycrystals, ionic corrosion 8=13522
 micro-roughness of tyres, rel. to adhesion to wet road, and viscous hydroplaning 8=17752
 oriented crystals prep., lapping machine attachment 8=21918
 plaster, contour measurement using laser probe 8=19339
 polyethylene single crysts. 8=17215
 quartz, polished, X-ray diffr. microscopy 8=17599
 roughness determ. for wax-polished painted surface 8=2470
 roughness of electric noncond. rel. to directional distrib. of emitted thermal rad. 8=22138
 steel 8=8295
 steps, resolution and contrast, meas. with electron microscope 8=13079
 strain free polishing of accurate flats 8=5989
 structure of surfaces, conference, Nov, 1966, Durham, North Carolina 8=17115
 substrate roughness effect on work function of evaporated films 8=9267
 topography characterization with scanning electron microscope 8=17114
 two-beam Linnik interference microscope study 8=13078
 AgI, finely divided 8=8337
 Al alloys, preconditioning for electroplating, electron microscopy 8=8291
 Al, cold rolled 8=21938
 Al, electropolished, form. of tops and pits during heating in air and vacuum 8=17117
 Al film, rel. to hemispherical reflectance 8=2399
 Al, microrough compared with polished, for increase of thermal rad. 8=22139
 AlZn-Mg cast alloys, influence on stress corrosion cracking 8=22312
 Au film, rel. to hemispherical reflectance 8=2399
 C, vitreous and pyrolytic graphite, comp. of oxidation pitting 8=8292
 CsBr and CsI i.r. windows, polishing 8=495
 Cu-Al-Mn alloys, surface relief effects rel. to supercond. transition 8=19686
 Fe 8=8295
 Fe-Cr alloy, Cr₂O₃ protective scales, mechanism of breakthrough 8=23099
 Fe-Ni alloys, surface relief effects rel. to supercond. transition 8=19686
 Fe-Si alloys, chemical polishing 8=1687
 GaSb, effect of ion bombardment, annealing and polishing on (111) surface stress 8=8849
 Ge, effect of ion bombardment, annealing and polishing on (111) surface stress 8=8849
 Ge, thermally etched 8=17217
 InSb, effect of ion bombardment, annealing and polishing on (111) surface stress 8=8849
 LiF, structure, props. after annealing 8=8378
 Mo crystals, electron microscope exam. 8=21992
 MoZr crystals, electron microscope exam. 8=21992
 NaCl(100) surface, study with LEED 8=17116
 Nb, exam. by field electron microscopy 8=13930
 Ni film, rel. to hemispherical reflectance 8=2399
 NiBr₂ crysts. surface-spikes, growth and impurities conc. 8=4807
 PbSe_{0.9}Te_{0.1}, comp. variations shown by chemical polishing 8=1689
 Pt film, rel. to hemispherical reflectance 8=2399
 Si epitaxial growth, effect of perturbations 8=17256
 Si, ion-bombarded, temp. dependence 8=5278
 SiO₂ films on Si, pinhole locating by electrophograph method 8=1698
 Si, polishing methods 8=10452
 Si, solid, elec. decoration, new method 8=8380
 Si, thermally etched 8=17217
 Ti, microrough compared with polished, for increase of thermal rad. 8=22139
 V₂O₅, LED study 8=21870

Surveys. See Reviews.**Suspensions**

 birefringence, transient elec., particle size determ. 8=16899
 clay, forced-flow electrophoretic filtration, elec. field effects 8=16898
 dioctylphthalate aerosol, particle conc., by turbidity meas. 8=8153

Suspensions—contd

- and drilling muds, in tubes, laminar and transitional flow 8=8151
 extremum principles for slow viscous flow, application to 8=1449
 flow in porous media 8=12738
 flows, particle migrations in 8=8146
 gas with micron-size solid particles, heat conduction 8=21735
 lamella thickening, theoretical analysis 8=21728
 latex spheres in water, monodispersed, light transmission meas. 8=4632
 milk, light absorpt. var. with beam dia. 8=6537
 ordered aggregates of rigid spheres, disks and rods in plane Couette flow 8=12944
 polystyrene latex particles, aqueous, atomization 8=8154
 radiant heat transfer with wall, zonal calc. 8=8143
 sheared, wall migration of fluid drops 8=7995
 stearic acid aerosol, particle conc., by turbidity meas. 8=8153
 triphenylphosphate aerosol, particle conc., by turbidity meas. 8=8153
 ultracentrifugation, simultaneous automatic sequence and photo control system 8=4631
 viscosity, concentrated solid spheres 8=8149
 Fe(OH)₃, flow meas. by Br⁹² 8=21727
 LaB₆ powder in N₂, m. h. d. generator working fluid 8=15199
 SnO₂ in glycerine/castor oil, Mössbauer line widening, temp. and viscosity dependence 8=1603
Suzuki atmospheres. See Crystals imperfections/dislocations.
Switching time, ferroelectric. See Ferroelectric materials; Ferroelectric phenomena.
Switching time, ferromagnetic. See Ferromagnetism; Magnetic properties of substances/ferromagnetic.
Symbols. See Nomenclature and symbols.
Symposia. See Conferences.
Synchrocyclotrons. See Particle accelerators/orbital, cyclotrons.
Synchrotron radiation. See Electrons/radiation
Synchrotrons. See Particle accelerators/orbital.
Szillard-Chalmers reactions. See Radiochemistry.

Tables, mathematical

- conversion relations for isotropic ceramic elasticity formulations 8=8783
 Green's functions for b.c.c. lattices 8=4859
 Laguerre polynomials, roots and weight factors 8=19370
 Love waves, theoretical dispersion tables for wedge propag. 8=9775
 radioactive and other exponential decay 8=7124
 Hermite polynomials, roots and weight factors 8=19370

Tables, physical. See Collections of physical data.**Tachometers.** See Angular velocity measurement.**Tandel.** See Dielectric devices.**Tantalum**

- anodic oxidation in LiCl-KCl 8=5738
 anodization, gas-phase 8=14420
 diffusion of C, investigation over wide temp. range 8=17586
 diffusion, summary of ORNL work 8=17593
 electron emission, laser induced, using pulsed Ar laser 8=18271
 film deposited by sputtering in crossed e.m. field 8=7651
 films, impurities, spectrochem. anal. 8=18786
 films, ultra-thin, vacuum-deposited, structure from e-diffr. and microscopy 8=17292
 hardness and deformation effect of Nb and Mo additions 8=8862
 hydride phase, solubility of H₂, isotherm 8=1924
 in metals, spectrochemical determ. 8=9749
 oxidation, controlled, in radio-frequency-excited glow discharge 8=8310
 recrystallized, impurity effects on strain hardening 8=22380
 secondary electron emission, H⁺ bombardment 8=5423
 superconductivity under high pressure 8=9060
 thermal conductivity, temp. dependence of temp. coefficient 8=13387
 work function changes on Cs, O₂ and H₂ adsorpt. on Ta ribbon 8=9276
 Ta¹⁷⁶, decay periods, using a time-amplitude converter 8=16042
 Ta¹⁸¹(5/2⁺ → 7/2⁺), circular polarization of γ-radiation 8=991
 Ta + N₂ system, adsorpt.-absorpt. kinetics 8=18698

Tantalum compounds

- alloys, anti-oxidation metallurgy 8=23779
 cavitation damage resistance 8=5035
 R₂O₃-M₂O₅, (R = rare earth, M = Nb, Ta or Pa), crystal structure 8=1802
 TaC, in Fe alloy, fracture obs. 8=22347
 TaC_x, thermal expansion, effect of stoichiometry 8=1881
 TaC, heat content valves, entropy specific heat 8=8643
 TaC, Verneuil growth by arc melting 8=4799
 TaC_{0.99}, elastic constant determ. 8=8861

Tantalum compounds—contd

- TaCl₅F, crystal structure 8=17418
 TaCr₂ precipitation from Ta-Cr solid soln. 8=8282
 TaN, lattice dimensions, thermal and electrical conductivity, Hall coefficient, thermal e.m.f. and microhardness obs. 8=13702
 Ta₂O₅ films e beam evaporation and dielec. props. 8=22652
 TaO, gaseous, electronic bands rot. anal. 8=1267
 Ta-O, lattice particle X-ray and electron scattering on new phase form. 8=1773
 TaO₂, molec. geometry 8=7550
 Ta-O system, new phases, e-diffr. study 8=17101
 TaO_{2-x} in thin films, e-diffr. exam. 8=17417
 Ta₂O₅, thin film prep. by anodizing and sputtering 8=13097
 Ta₂O₅, thin insulating film, effective mass meas. 8=8944
 Ta-O-C solids solns., CO solubility and equilib. press., 1700-2000°C 8=21787
 Ta₂O₅-SiO₂ dielectric thin film capacitors, prep. and props. 8=9232

Targets. See Nuclear bombardment targets.

Teaching

- crystal geometry, introductory course 8=1767
 electricity and magnetism project laboratory 8=15159
 electromagnetic theory, junior college course 8=19757
 holography, introduction 8=11213
 lens theory, systematic approach 8=15502
 meson decays, lectures 8=20413
 meson-meson interactions, lectures 8=20422
 modified open-ended laboratory in mechanics at general-physics level 8=10469
 nuclear physics, misconceptions 8=7027
 π -N interactions, lectures 8=20427
 programmes in education, American Institute of Physics 8=10468
 quark substructure for mesonic and baryonic states, lecture 8=20408
 solid state physics in USSR higher educational institutions 8=16965
 spinodal decomp., Institute of Metals lecture 1967 8=21835

demonstrations

- alpha particle range, simple stand for determination 8=883
 amplitude modulated, vibrations, mechanical demonstration apparatus 8=10679
 beats and Lissajous figures, demonstration using turntable oscillators 8=10680
 crystal models 8=10470
 crystallography, of Ewald construction 8=13204
 diffusion experiment, simple, quantitative 8=12709
 dynamics, apparatus 8=10525
 eigenvalues, degenerate, introduction 8=3404
 electric and magnetic field probes, audible signal demons. 8=10822
 electrolytic solutions, thermodynamics using molten salt 8=2529
 e/m measurement, modification of experiment 8=10471
 F-centre diffusion, lecture demonstration 8=13452
 films on acoustics and wave motion 8=19548
 gas laser, coherent properties 8=418
 geometrical optics sign convention 8=467
 holograms, instant, prep. and characteristics 8=11208
 liquid-vapour phase diagram, student expt. 8=21768
 mechanical vibration and resonance, combination of 8=142
 mechanics, using electrical readout 8=10472
 microwave system, expt. and demonstration 8=6366
 monochromator, Czerny-Turner, construction 8=11154
 neutron mass, from capture-gamma ray energy 8=6944
 n. m. r., acetone-chloroform system 8=2498
 object-image relns. of mirrors, and 3-dimens. Lissajous figures 8=476
 optical rotation of microwaves, by macroscopic models 8=375
 radiation, e. m., experimental introduction 8=10936
 statistical mechanical behavior, hard sphere simulation 8=14981
 thermodynamics 8=2983
 Van de Graaff type accelerator, undergraduate construction and operation 8=11339
 vibrations of circular membrane, resonant response 8=10691
 wave machine, dispersion, reflection and eigenfrequencies 8=10937
 wave motion, using air-suspended discs connected by light springs 8=10678
 wave theory by phasors 8=3013
 C-H bond strengths, student expt. 8=21109
 Cs¹³⁷-Ba^{137m} isotope generator 8=1207
 Hg, vapour, diffusion through rare gas 8=12711
 N₂ phase change 8=1607

Technetium

- disintegration probability in red giants 8=2780
 synthesis mechanism in different stages of stellar evolution 8=2779

Technetium compounds

- TcAl₃, structure refinement 8=8555

Tektites. See Meteorites.

Telescopes

- objective, cemented, 5th order spherical aberration 8=3351

Telescopes—contd

- resolving power, effect of eye sensitivity curve 8=481
 in satellite, thermal deformations in mirror 8=480
 X-ray mirror 8=15591

astronomical

See also Radioastronomy

- dome slit, microthermal vars. rel. to image quality, obs. 8=14741
 drive, clock-controlled 8=2772
 10 MHz, large array-type 8=19327
 optical, faint objective-prism spectra and diffr. patterns meas. 8=23498
 Queen Elizabeth II, optics design and testing 8=10101
 radiotelescope of the Naucay station, the pointing device 8=5980
 review of future requirements 8=5851

Tellurium

- atomic structure using Mössbauer effect 8=4887
 band structure calc. using LCAO approximation 8=8906
 band structure, relativistic KKR-calcs. 8=22468
 critical surface tension 8=21869
 crystal, multiple diffraction of X-rays 8=8559
 crystal, u. s. wave absorpt. meas. and dislocation loop length calcs. 8=8619
 cyclotron resonance, effective masses and diamagnetic resonances 8=22490
 dislocations, theory and plastic behaviour 8=4984
 films, vac.-evaporated, forbidden reflexes in e-diffr. 8=17141
 interband hole transitions 8=9018
 isoelectronic trap in CdS, optical fluorescence and absorpt. 8=23048
 isomorphous, non-centrosymmetric structure with Bijvoet differences 8=13273
 liquid, elec. cond., high pressure meas. 8=1588
 magnetoabsorption meas. 8=23016
 molten, ultrasonic velocity 8=12867
 non-linear optical props. 8=18563
 ore from Boliden, dating by isotope anal. of inert gases 8=14455
 p-band absorption at 4°K 8=8945
 phase detection in V₂VL₂ alloys, by etching 8=17102
 piezoresistance coefficient 8=5376
 semiconductors band structure Green's function method 8=8913
 single crystals, far u.v. reflectivity 8=15551
 subgrain boundaries, low-angle 8=8737
 thermal vibration spectra, experimental 8=8607
 in Bi, distribution coeff. and donor valency 8=22517
 ZnS luminescence, effect 8=14336

Tellurium compounds

- hydrides, proton reson. 8=12327
 telluriumbismuthite, Xe extraction, Te¹³⁰ decay rate 8=1017
 p-HgTe, i.r. reflection in region of plasma minimum 8=5262
 HgTe-ZnTe system, electrical properties 8=5263
 La telluride phases, crystal chemistry 8=17202
 Nd telluride phases, crystal chemistry 8=17202
 PbTe-Sb₂Te₃ alloy system, thermoelectric props. and phase relations 8=4716
 Pr telluride phases, crystal chemistry 8=17202
 SnTe-Bi₂Te₃ alloy system, thermoelectric props. and phase relations 8=4716
 Te(halide)₂, Mössbauer line, isomeric chemical shift 8=8222
 TeF₆, structure determ. by electron diffr. 8=12236
 Te(NO₃)₄, atomic structure using Mössbauer effect 8=4887
 TeO₂, atomic structure using Mössbauer effect 8=4887
 TeO₄K₂, γ -irrad., e. s. r. spectra 8=9444
 TeO₄Na₂, γ -irrad., e. s. r. spectra 8=9444
 Te-Se alloy, laser second harmonic generation 8=6442
 Te_{1-x}Se_x alloys, liq., elec. cond. and thermoelec. power 8=12918

Temperature control. See Cryostats; Thermostats.

Temperature

- See also High-temperature production and effects;
 Low-temperature production.
 auroral electrons, possible estimation from r.f. capacity probe obs. 8=2666
 automatic regulator for meas. in interval 10 to 150°K 8=15122
 control, pendulum apparatus, electronic system 8=10480
 furnace, simple thyristor controller 8=15125
 liquid, unsteady distrib. in viscous flow 8=7977
 negative, concept 8=10642
 plasma, multi-ion, rel. to elect. conductivity, calc. 8=4345
 potential in meteorology, formulae for different types 8=9823
 principles, review 8=10764
 radiant self-stabilization, by change in optical constants of VO₂ 8=23019
 relativistic thermodynamics, definition 8=10785
 surface, nonsteady state, exponential point meas. method 8=10781
 thermostatic water bath with $\pm 70\mu^\circ\text{C}$ stability 8=15124
 uniform field, stability props. 8=19661
 Ag wires, electric explosion, temp. variation during first stage 8=1622

Temperature—contd

- Ar discharge neutral gas, medium press. 8=16408
 Cu wires, electric explosion, temp. variation during first stage 8=16222
 He boiling, thermodynamic scale 8=19689
 Pt resistance thermostat for $\pm 25\mu^\circ\text{C}$ 8=15123

Temperature distribution

- bar with surface temp. oscillations 8=15115
 behind detached shock, non-adiabatic, in power series of radiative coupling coeff. 8=15053
 bundle of rods, during heat exchange, forming channel through which water flows 8=12849
 channel wall of m. h. d. generator with water-cooled electrodes 8=19726
 circular pipe, turbulent heat transfer and temp. distrib. 8=232
 in conductor with temp.-depend. conductance 8=3151
 in cylindrical bodies with longit. fins, rel. to heat conduction and boundary problems 8=19648
 electron-microscope specimens, calc. 8=1861
 flame in cylindrical chamber, recirculation effect 8=15114
 furnace wall, temp. dependent conductivity 8=19659
 heat equation, general solution 8=3102
 heat equation, one-dimensional, new solutions for spheres, cylinders and slabs 8=3105
 heat insulation coatings, with phase transitions, numerical solns. 8=237
 heated tube, steady state behaviour 8=10782
 hollow cylinder, low Fourier numbers 8=15116
 infrared heating, penetration curve determ. 8=19660
 jet, liquid, Landau thermal 8=16777
 laminar flow at high shear stresses 8=4508
 liquid, centrifuged 8=21654
 near Apollo wake, Reynolds number depend. 8=23459
 non Newtonian fluid with nonlinear heat conduction law 8=4424
 satellite gravity gradient rods 8=23461
 solid circular cylinder, axisymmetric field calc. 8=19658
 solid, one dimensional, transformation for calc. 8=13386
 solids and gas along height of a fluidized bed 8=4628
 surface, by i. r. television 8=15118
 in thin plate with convection losses, heated by moving discrete source 8=3111
 3-layer colloidal body 8=4633
 transient, in spherical region subjected to variable surface heat flux 8=19662
 unsteady, infinite regions of arbitrary geometry 8=6199
 unsteady, viscous flow 8=7977

Temperature measurement

- See also Pyrometers; Thermocouples; Thermometers.
 elec. meas. on double-rotating mechanism 8=13505
 electroacoustic, for low temps. 8=19663
 chromel-alumel thermocouples for small difference meas. 8=15121
 chromic potassium (methylamine) alums, temp. scales from nuclear orientation 8=8205
 differential thermal analysis, at high press. 8=9684
 fixed points, 232° – 661°C , gas thermometry 8=244
 gas-phases, by spectral line reversal, effect of continuous absorber 8=16695
 of gas, rapidly varying in an unsteady flow 8=16694
 iron and steel, laser irradi. temp. 8=8769
 moving body appears cool? 8=219
 neutron diffusion expts. samples, regulation 8=6218
 nylon thread, by i. r. pyrometer 8=17187
 oxide cathode, surface temp. meas. during pulsed emission 8=9275
 photographic pyrometry 8=10784
 in plasma, from quadratic Stark effect shift, and spectral line broadening 8=7787
 plasma, NaK seeded, in elec. field 8=21308
 pyrometer, optical, calibration from Pt/Pt₉₀Rh₁₀ thermocouple 8=19670
 reactor fuel, acoustical thermometer 8=4018
 rotating system, a contactless method 8=10780
 sea, i. r. radiometry problems 8=18845
 semicond. devs., i. r. meas. 8=22618
 solid bodies, errors 8=10783
 steel, phase equilib., mag. method 8=17062
 by superconducting device, with 10^{-3}K resolution 8=15117
 surface, by i. r. television 8=15118
 thermistors resist. rel. to temp. and immersion depth, obs. 8=3110
 thermocouple, nozzle, for high-temp. gases 8=7927
 thermocouples, resistance detectors, thermistors, comparison 8=10788
 virtual air, use of ultrasonic resonance thermometer 8=246
 C resistance, low-temp., calibration 8=19682

spectral methods

- double-beam modulated pyrometer 8=20039
 on oxygen-acetylene flames 8=3109
 oxyacetylene flame, in air or N₂, from vib.-rot. spectrum of OH 8=18692
 plasma, discharges for CO, lasers 8=15459
 plasma, rel. to line intensity and broadening 8=16538
 sea surface, using airborne i. r. thermometer 8=2570
 spectroradiometer with automatic digital recording 8=6202
 N₂ excited by electron beam, obs. 8=16292

Tensile strength. See Mechanical strength/tensile.**Tensors**

- decomposition of classical groups 8=2880
 elastic, anisotropic, decomposition for given crystal symmetries 8=17714
 electromagnetism, Green's function, singularities 8=19758
 energy-ang. momentum, polarized media 8=10636
 energy-impulse, geometry of electromagnetic field 8=3172
 energy-momentum, polarized media 8=10635
 energy tensor for null, source-free e.m. field 8=315
 group theory, symmetrized tensor products, Clebsch-Gordan series 8=2890
 ideal gas mixtures, diffusion, calc. 8=16718
 impulse-energy of e.m. field 8=3170
 Maxwell, for energy in e.m. field 8=3171
 irreducible of O₃, decomposition into its rotation subgroup D² 8=19355
 product of one-particle representations of an infinite-dimensional Lie algebra 8=6724
 quasi-spin, use of creation and destruction operators 8=918
 stretching and spin of surface and linear material elements 8=40
 symmetric, covariant decomposition for Cauchy problem 8=6071

Terbium

- antiferromagnetic, critical mag.-scattering of neutrons 8=22882
 exchange interactions and spin-wave spectrum 8=22846
 ferromagnetic to paramag. phase transition, neutron diffraction study 8=18352
 ferromagnetic spin waves, dispersion reln. from inelastic n. scatt. 8=18351
 magnetoelastic effects and mag. props. 8=22799
 microwave absorption phenomena at 9.44 and 35.3 Gc/s, 10–290°K 8=14269
 neutron diffraction study under high pressure, helical periodicity 8=14040
 in phosphors, fluorescence and radiative transition probabilities 8=4683
 spin-wave spectrum, temp.-dependent crystal field effects 8=22845
 uniaxial mag. anisotropy 8=18333
 Tb¹, spectrum, levels with extreme J 8=12073
 Tb³⁺ activated phosphors, correlation of fluorescence with crystal and other properties 8=9581
 Tb³⁺ in CaWO₄, spin-lattice relaxation time obs. 8=22914
 Tb³⁺, energy transfer in Na rare-earth tungstates 8=9610
 Tb³⁺, energy transfer with Nd³⁺ in inorganic solids 8=9594
 Tb³⁺ in SrTiO₃, vibronic structure in luminescence spectra 8=14333
 Tb³⁺ in tungstates and molybdates, u. v. excitation of fluoresc. 8=2473
 TbCrO₃, mag. structure at 77, 4.2 and 3.95°K, by n-diff. studies 8=5508
 TbCu_{1-x}Zn_x alloys, antiferro-ferromag. transition, on increasing Zn conc. 8=14073

Terbium compounds

- chelate phosphors, radiative quantum efficiencies, enhancement 8=18617
 salts, hydrated, fluoresc. lifetimes and multi-phonon deactivation, 4.2°, 77° and 300°K 8=14315
 TbC₂, antiferromag. structure 8=18386
 TbFeO₃, orthoferrite, transition to antiferromagnetism at liq. He temps. 8=9375

- Tb-Y alloys, crystal struct., 77–300°K 8=22040

Terrestrial electricity. See Earth/electricity**Terrestrial heat.** See Earth/heat.**Terrestrial magnetism.** See Earth/magnetic field; Magnetic storms.**Tetraneutrons.** See Neutrons.**Thallium**

- atomic beam, surface ionization on Pt and W 8=12110
 atoms, oscillator strengths for np, \rightarrow ms_{1/2} and np, \rightarrow md transitions 8=4086
 atoms, superradiance at transitions terminating at metastable levels 8=20943
 cyclotron resonance 8=8972
 depolarization in noble gas-atom collision 8=7473
 diffusion of Au and Ag in, obs. by radiotracer technique 8=22163
 films, Ge coating effect on transition temp. 8=5214
 magnetoresistance field dependence up to 150 kG at low temps. 8=5433
 n. m. r., anisotropy 8=9467
 pure, elec. resistance α to 5°K, dimension effect and temp. depend. 8=5185
 sensitizer for BaO. Al₂O₃:Mn emissions 8=14303
 vapour absorpt. spectra using modified King furnace 8=7393
 TI' clustering in KI from absorpt and emission spectra at 77°K 8=23056
 TI' ion, hydrated, luminesc. intensity and spectral characts. 8=21704
 TI' in K₂B₂O₄ glass, γ -irrad., induced absorption bands 8=5639

Thallium—contd

- Ti(III)-Ti(I) isotope exchange in complexes 8=18653-4
- Thallium compounds**
- halides, dielectric consts., temp. and press. depend. 8=13874
- halides, gaseous ions, recomb. rates 8=4317
- tetraiodothallates, pure quadrupole reson. of I 8=18477
- HgX₂-TlX, (X = I, Br, Cl) system, cpds. formed 8=17085
- TlBr, anisotropy of diamag. susceptibility 8=9295
- TlBr, elastic consts. and thermal expansion 8=17833
- TlBr, temp. and pr. dependence, obs. 8=2068
- TlBr:Mn luminesc. excit. and emission and absorpt. spectra 8=9622
- TlCl, cyclotron resonance obs. 8=8971
- TlCl, ionic conduction and thermal disorder 8=9200
- TlCl molten, self diffusion of Tl⁺ 8=21643
- TlCl, transient magnetoresistance of holes 8=9020
- TlCl, two photon absorption, angular dependence 8=9561
- TlCl:Mn luminesc. excit. and emission and absorpt. spectra 8=9622
- TlF, anisotropy of diamag. susceptibility 8=9295
- TlMnF₃:Co, antiferromag. zero anisotropy Co conc. dependence 8=9401
- Tl₂O₃, optical meas. rel. to semiconducting props. 8=23017
- Tl₂SA₂, paramag. reson. spectrum of Mn²⁺, hyperfine structure with g-factor ~ 4.3 8=5533
- TlSe single crystal growth in u.s. field 8=21967
- TlSe, thermal conductivity 8=17547
- Tl₂SeAs₂Se₃, paramag. reson. spectrum of Mn²⁺, hyperfine structure with g-factor ~ 4.3 8=5533
- Tl₂Te, rhombohedral, crystal structure by e-diffr. 8=17424
- Tl₂TeAs₂Te₃, paramag. reson. spectrum of Mn²⁺, hyperfine structure with g-factor ~ 4.3 8=5533
- TII crystal, CsI stabilized, transmission in 30-65 μ region 8=5640
- TII, effect on temp. of Hg arc 8=485
- TII, polymorphism, compressibility and thermal expansion 8=1683
- Thermal conductivity.** See Conductivity, thermal.
- Thermal decomposition.** See Chemical reactions.
- Thermal diffusion.** See Diffusion in gases/thermal; Diffusion in liquids/thermal.

- surface distortion of semi-infinite solid due to uniform circular heat source 8=22122
- transition metal cpds., shrinkage with concurrent reduction 8=4936
- unsteady regime meas. method 8=8645
- Al₂O₃ for testing relative dilatometers 8=13381
- As-Se glasses 8=13382
- Ba(NO₃)₂·H₂O, single crystal, coeff. meas. 80-3000°K 8=5051
- CaCO₃, (calcite), and precision lattice parameters 8=22015
- Co hexagonal single crystal, Young's modulus dependence 8=22324
- Cu cubic crystals, coeff., temp. depend. 8=8646
- Cu-Ni alloys, rel. to ferromag. Curie point of Ni 8=17532
- Fe-(9.75-11.66%)Al alloys, nature of K-state 8=9005
- Fe-Ni bimetal strip components, ageing effects 8=22345

Thermal expansion—contd

- GaAs, coeffs. from -62 to 200°C 8=1880
- Ga(As, P), coeffs. from -62 to 200°C 8=1880
- GaAs(Sb), from 2-40°K 8=4937
- GaP, coeffs. from -62 to 200°C 8=1880
- Ge cubic crystals, coeff., temp. depend. 8=8646
- Ge, from 2-40°K 8=4937
- He⁴, liquid, 1.25-4.2°K, 0.5-28 atm 8=10802
- In, 20 to 2°K, length differences between normal and supercond. states 8=22124
- InAs(Sb), from 2-40°K 8=4937
- KNbO₃-AgNbO₃ system, and elec. and X-ray studies 8=21823
- LiTaO₃, a₁₁ and c₁₁ axes, room temp. to 850°C 8=13383
- α-Mn, and structure study 8=8532
- Mo lattice, temp. dependence 28°-522°C 8=22125
- Ne crystals, volume coeff. and isothermal compressibility 8=1803
- O₂ solid, β and γ phase coeffs. and transform. characts. 8=4938
- Re, X-ray diffraction determination 8=13384
- Si cubic crystals, coeff., temp. depend. 8=8646
- Si, from 2-40°K 8=4937
- Si₃N₄ film, pyrolytically deposited, meas. 8=4939
- TaC_x, stoichiometric effect 7=1881
- α-Ti, anisotropic by X-ray method 8=17535
- TlBr, and elastic consts., from acoustic wave vel. 8=17833
- TlBr, 78°-673°K meas. 8=2068
- TII, polymorphism, compressibility and thermal expansion 8=1683
- TiO₂, single cryst., 100°-700°K 8=17536
- VO₂ tetragonal phase, from lattice meas. at 78-415°C 8=13385
- ZrO₂-CeO₂ mixtures, high temp. 8=22614
- Thermal measurement**
- See also Calorimeters; Calorimetry; Conductivity, thermal/measurement; Temperature measurement; Vapour pressure measurement. Entries describing measurement methods for specific thermal quantities and effects may also be found listed under the various headings for the subjects concerned.
- conductivity and capacity, appl. of solns. of eqns. for non-steady state monotonic heating 8=10773
- fluxes and surface temp., nonsteady state, exponential point method 8=10781
- fluxmeter in shear flow for local heat transfer rates, theory 8=19639
- hot film sensor for turbulent fluid 8=16822
- U₁, α self irradiation effects obs. 8=17105
- Thermal radiation.** See Radiation/heat.
- Thermal spikes.** See Crystal imperfections; Physical effects of radiations.
- Thermal transformations.** See Boiling; Condensation; Freezing; Heat of transformation; Melting; Phase transformations; Sublimation; Vaporization.
- Thermionic emission.** See Electron emission/thermionic; Ion emission/thermionic; Ionization, surface.
- Thermionic generators.** See Electricity/direct conversion; Electron tubes.
- Thermionic tubes.** See Electron tubes.
- Thermistors.** See Semiconducting devices.
- Thermochemistry.** See Heat of reaction, etc.
- Thermocouples**
- advances and applications 8=10787
- appl. to electrolyte boundary recording 8=5734
- chromel-alumel, for small difference meas. 8=15121
- comparison with resistance and thermistor temp meas. 8=10788
- extreme u.v. absolute detectors, comparison with Ar ionization chamber 8=11162
- gas-filled thermopiles, responsivity 8=15120
- intrinsic, transient response theory and meas. 8=10786
- junction form, and environmental effects 8=10789
- in magnetic field, theory 8=284
- nozzle, for high temp. gases 8=7927
- reactor fuel temp. meas., selection of materials 8=4029
- sapphire rod thermosensor 8=19668
- thermopile, semiconductor, stationary temp. field calc. 8=22685
- Cu-constantan thin film, thermopower 8=22686
- Cu, evaluation for cryogenic meas. 8=19685
- PbTe compatibility with metals study 8=18686
- Pt/Pt₉₀Rh₁₀, optical pyrometer calibration 8=19670
- SnTe compatibility with metals study 8=18686
- Thermodynamic properties**
- See also Critical constants, thermal; Entropy; Heat of reaction; Latent heat.
- acetamide, ideal gas calc. using rotator and harmonic approx. 8=4174
- alkali halides with CsCl structure, and low temp. thermal expansion coeffs. 8=8648
- n-alkanes, binary mixtures 8=16791
- aniline solution in benzene, CCl₄ and chlorobenzene, vap. press. and excess free energies 8=8056
- antiferromagnets in strong mag. fields, theory 8=18369
- atomic absorpt. spectroscopy measuring technique 8=16962
- austenite, alloyed, C activity at 1000° C 8=17008

Thermodynamic properties—contd

butatriene 8=16314
 correlation function near critical point 8=16914
 crystal, Helmholtz free energy, anharmonic contributions 8=8601
 crystals, high press. effects, theory 8=8914
 crystal lattices, ideal and with point defect, harmonic approx. calc. 8=13362
 dielectrics, elastic, thermodynamic pots. at finite deforms. 8=10541
 diethyl phthalate, cryst., glass, liq. 8=1870
 diphenylboron halides, thermodynamic properties 8=1863
 elastic material, no. of parameters 8=50
 enthalpy, charge in rotary kilns, depend on flow rate 8=22108
 enthalpy meas. at low temp. using conduction calorimeter 8=15126
 enthalpy and thermal pot. rel. to Hamilton-Jacobi eqn. for charged relativistic fluid 8=16634
 excess functions, temp. depend. 8=10667
 ferromagnet, dilute, depend. on magnetic atom conc. 8=9307
 fluid mixtures, excess functions 8=4423
 fluid at supercritical temps. 8=12575
 fluids, enthalpies at elevated press. and low temps. 8=21600
 fluids, rel. to refractive index and dielectric constant 8=16615
 force on a dislocation 8=17641
 gas mixtures, strongly ionized, and composition 8=12422
 gases, multi-atomic, temp. dependence formulae derived 8=12674
 haloacetonitriles 8=16323
 heat transfer between an incompressible fluid and a porous medium 8=16821
 Heisenberg ferromagnet, semi-infinite, surface effects 8=2303
 Helmholtz free energy, lower bound calc. using density matrices 8=10647
 high-enthalpy gas flow, stagnation point heat transfer of a solid 8=22140
 holomorphy and phase transitions, scaling law for mag. systems 8=22740
 hydrogen ion solvation by H₂O mols. in gas phase 8=18661
 ice, amorphous → hexagonal, enthalpy changes 8=21846
 ice, square, residual entropy at low temp. 8=4945
 Inconel 600, twin and grain boundaries free energy ratios, from e-micros. exam. 8=17287
 inorganic substances, vacancy formation enthalpy calcs. 8=22176
 Ising model near T_c, second order phase transitions 8=14986
 liquid alloys, activity coeffs. 8=8016
 liquid alloys, effect of electronic and structural parameters 8=12845
 liquid binary alloys, expt. and theory of mixing 8=12844
 liquid binary alloys, model for anal. of enthalpies and entropies of mixing 8=12846
 liquid, convective heat transfer during stabilized turbulent flow in tube at supercritical press. 8=1550
 liquid crystals, review of data 8=1527
 liquids, density meas. as function of temp. with temp. sensitive magnetic float densimetry 8=4544
 liquids, free volume calc., and new parameter $\delta = (3C_v - 1)/2$ 8=4561
 liquid, rotation-induced heat transfer in zero-gravity field 8=4562
 liquids, surface layer, estimate of thickness 8=8047
 magnetization vector diffusion rel. to ang. momentum conservation principle 8=13953
 materials high temp. and determ. of thermal props. at 3500°C 8=4925
 measurement by atomic absorpt. spectroscopy 8=16962
 methylmethacrylate copolymers with methacrylic acid, ht. capacities, 25-190°C 8=1579
 molten salts, ternary mixtures 8=21648
 non-ideal gas, relativistic, from electron gas kinetic eqn. 8=132
 non-vaporizable liquid, initial cooling of tempered metal 8=8044
 organic crystals, from structure 8=13360
 organic crystals, rel. to derivation of oscillation spectrum and charact. temp. 8=17470
 1,2,5-oxadiazole, from i. r. and Raman spectra 8=16335
 oxygen in urania-yttria and urania-lanthana solid solutions 8=13044
 paramagnetic specimen with particles of spin ½, cyclic processes 8=17506
 pentane, enthalpy calc. from Redlich-Kwong eqn. 8=16689
 perfect f. c. c. cryst. lattice, characts. in harmonic approx. 8=4854
 phenylboron dihalides, thermodynamic properties 8=1863
 polar crystals, eqn. of state, linear model 8=13013
 polymers, homo- and graft co-, in soln., intrinsic viscosity and free energy 8=1536
 polyvinylidenechloride, ht. capacity, entropy and free energy studies, 60-300°K 8=1547
 polyvinylchloride, ht. capacity and sp. ht. values from studies at 60-300°K 8=1547

Thermodynamic properties—contd

salt, molten concentration cells, association constants 8=2529
 semiconductors with stoichiometric vacancies 8=17197
 of solid solns., from exam. of diffuse background scattering of X-rays 8=13359
 solids, at contact, temp. field in neighbourhood 8=13364
 solids, diathermance at high radiator temp., obs. 8=1896
 solids, emissivity, integral, 100 to 1100°C, modified calorimetric method 8=13400
 solids, heat resistant, thermal diffusivity, theory 8=13405
 solvation of ions 8=12807
 steam, dissociating 8=7917
 steam, near critical point 8=7920
 superconducting rings, weakly connected, anal. of magnetization 8=13768
 superconductors, fluctuations and quantization 8=17987
 superconductors, in multiple pair-breaking regimes 8=22526
 superconductors, type II, fluctuations of order parameter near upper critical field 8=9032
 superconductors, type II, rel. to volume and press. effects 8=17947
 Teflon 6, immersion heats in hydrocarbons 8=13361
 1,1,2,2-tetrabromofluoroethane, medium effects 8=21181
 thermal props., similarity calc. 8=21646
 thermophysical properties, phenomenological relation 8=16698
 transition metal cpds. rel. to cryst. field calc. 8=4669
 tricyclohexylboron, thermodynamic properties 8=1863
 triphenylboron, thermodynamic properties 8=1863
 US, 1.5°-350°C 8=22848
 vinylchloride, ht. capacity, entropy and free energy studies, 60-300°K 8=1547
 water and aqueous solutions, discontinuities 8=8045
 water at high pressure from ultrasonic propag. meas. 8=21623
 water channel formed by bundle of rods or tubes, heat transfer to 8=12849
 water, Debye temp. calc. from model 8=1544
 Al₂Cl₆, calcs. for ideal gaseous state 8=4143
 AlF₃, anhydrous cryst., enthalpy 273°-1173°K 8=4929
 Al-Fe alloys, Al activity at 1315°C 8=21651
 AlH₃ 8=4928
 Al₂Me₆, calcs. for ideal gaseous state 8=4143
 Al₂Me₂Cl₄, calcs. for ideal gaseous state 8=4143
 Al₂O₃, sintering, activation enthalpy 8=13052
 Ag-Au-Sn liq. alloys, enthalpy interaction coeffs. of Ag and Au, at 723°K 8=21652
 Ag-Bi molten alloys, (segregation system) densities 8=12812
 Ag-Mg solid solns., Ag-rich, long-range order dependence 8=21820
 Ag-Mg solid soln., Ag-rich, short-range order dependence 8=21819
 Ag-Pb molten alloys, (segregation system), densities 8=12812
 AgZnSn, liq. alloys, activity coeffs. 8=8016
 Ar, liquid, calc. 8=8041
 Ar, liquid, C, and C_v calc. using geometric theory 8=8042
 Ar, test gas in ballistic compressor 8=1470
 Au-Cd phase transformations, thermodyn. investigation 8=8263
 Au-Si alloy, enthalpy, specific heat, near eutectic composition 8=1548
 BH₃ 8=7624
 Be₃N₂ vaporization, enthalpy and enthalpy of activation, vapour pressure and evap. coeff. 8=1624
 CH₃ radical 8=7624
 CH₂Cl₂ to 750°K and 200 atm. 8=16819
 CaCl₂-NaCl-H₂O systems, enthalpy 8=12848
 CaF₂ soln. enthalpy 8=21650
 CaO, rel. to water vapour effect on sintering kinetics, 920-1123°C 8=21833
 Cd(ClO₄)₂-HClO₄-H₂O system, saturated solution 8=12847
 Cd-Sb, molten, free energies of mixing 8=12842
 Co, of f. c. c.-h. c. p. martensitic transformations 8=17049
 CoO-Al₂O₃-SiO₂, free energy of reaction of formation of mullite 8=9669
 Cr measurement, influence of small volume changes 8=21508
 Cu, solid, thermal diffusivity meas. 8=1898
 Cu₃Au solid solutions, determ. from short-range order parameters 8=16996
 Cu-Co liq. alloys with dissolved oxygen 8=8011
 Fe, h. c. p., sp. ht., vapour press., lattice stability 8=13371
 Fe-C and Fe-N systems, martensite transformations 8=17075
 Fe-C-Cr solns., liq., activity of C 8=21653
 Fe-Ru alloys, h. c. p., sp. ht., vapour press., lattice stability 8=13371
 GaAs vaporization at 900-1200°K enthalpies from vapour pressure meas. 8=4664
 H₂, thermodyn. activity in α -Zr, Zircaloy-2 and Zircaloy-4 8=8249
 H₂, solid, ortho, near 0°K 8=8233
 H₂O rel. to liquid structure and H bonds, n scatt. meas. 8=1525
 H₂O¹⁸ and D₂O¹⁸, relax. parameters calc. 8=12780
 He, b. c. c. crystals, and phonon freq. calcs. 8=1836

Thermodynamic properties - contd

- He, enthalpy calc. from Redlich-Kwong eqn. 8=16689
 He liquid, quantized circulation, evidence from torque on cylinder 8=10808
 He, test gas in ballistic compressor 8=1470
 He II, lowest state of free energy obtained during rotation 8=10812
 He³-He⁴ solutions, at λ -transition, n.m.r. studies 8=10794
 He⁴ liquid 1.25-4.2°K, 0.5-28 atm 8=10802
 Hg, liq., press. depend. of phonon dispersion 8=16879
 In-Bi, molten, free energies of mixing 8=12842
 In-Sb, molten, free energies of mixing 8=12842
 K-graphite system lamellar cpds. 8=4712
 K, natural convective boiling 8=12013
 KAlSi₃O₈, enthalpy of fusion 8=21753
 KBr, of inert-gas diffusion and release behaviour 8=22156
 KBr self-diffusion, activation entropy and enthalpy from elec. cond. 8=8679
 KCl, of inert-gas diffusion and release behaviour 8=22156
 KI, of inert-gas diffusion and release behaviour 8=22156
 KCOF₃, 80°-300°K 8=17519
 K₂ZrCl₆, from 25°C to above m.p. 8=8640
 Li plasma, composition, enthalpy, specific heats, apparent molecular weights and velocity of sound 8=12462
 Li₂HfCl₆, from 25°C to above m.p. 8=8640
 Li₂ZrCl₆, from 25°C to above m.p. 8=8640
 N₂, enthalpy calc. from Redlich-Kwong eqn. 8=16689
 N₂-hydrocarbon mixtures, enthalpy calc. from Redlich-Kwong eqn. 8=16689
 NH₃, enthalpy calc. from Redlich-Kwong eqn. 8=16689
 NO, 200°-2000°K and at 1000 bar 8=7918
 NSCl, molar thermodyn. functions, i.r. spectra obs. 8=4161
 Na, natural convective boiling 8=12013
 NaAlSiO₃, enthalpy of fusion 8=21753
 NaK liq. alloys, excess entropies and Gibbs energies and ordering 8=12843
 Na₂ZrCl₆, from 25°C to above m.p. 8=8640
 Nb, conductivity, temp. coefficient dependence on temp. 8=13387
 NbC, stoichiometric, 500 to 2400°K 8=13366
 NbCl₅, calc. from spectra 8=14249
 Ni, solid, thermal diffusivity meas. 8=1898
 Ni, twin and grain boundaries free energy ratios, from e-micros. exam. 8=17287
 NiO, stoichiometry 8=13826
 NiSiF₆·6H₂O, thermodynamic temp. below 0.35°K 8=8641
 Pb, liquid, containing Ag, Au or Pt 8=8043
 Pb, solid, thermal diffusivity meas. 8=1898
 Pb-Ag system, galvanic cell studies using PbO-SiO₂ melts 8=23150
 Pb-Bi, molten, free energies of mixing 8=12842
 P₄S₁₀, 273°K to 720°K 8=4933
 Rh-Hg system phases 8=8280
 S₈ 8=12227
 S vapour, meas. 200-400°C 8=21512
 Se vapour 8=4659
 SiF₄, calc. from i.r. spectrum 8=16301
 Sn-Bi, molten, free energies of mixing 8=12842
 TD-nickel, twin and grain boundaries free energy ratios, from e-micros. exam. 8=17287
 Ta, conductivity, temp. coefficient dependence on temp. 8=13387
 TaC, heat content values, entropy, specific heat 8=8643
 α -Ti/H₂(D₂) system, thermodynamic props. 8=21858
 UH_{3-x} solid soln. rel. to comp. and temp. 8=8190
 <U, H> solid soln. rel. to comp. and temp. 8=8190
 UN, and equil. N pressures over UN_(s) + U_(l) system 8=18646
 UO₂, solid, thermal diffusivity meas. 8=1898
 WC, heat content values, entropy, specific heat 8=8643
 Zn in ϵ -phase Ag-Zn alloys, activity dependence on density of states of conduction electrons 8=22109
 Zn sulphides, standard free energy of formation 8=9712
 ZrC, stoichiometric, 500 to 2400°K 8=13366
 α -Zr-H and α -Zr-D solid solns. 8=8252

Thermodynamics

- See also Atmosphere/thermodynamics; Entropy;
 Equations of state; Statistical mechanics.
 analogy for transport processes 8=6098
 averages, <A, A'>, bounds 8=2978
 Boltzmann's H theorem, standardization of terms 8=10665
 Bose gas mean critical point 8=19459
 Carathéodory system, flow in absolute temp. treatment 8=93
 cascade production of low temp. 8=10792
 Clausius-Clapeyron eqn., derivation 8=10668
 critical point, liq.-vapour systems 8=16916
 Curie theorem, short proof 8=19468

 diffusion coeffs., solid-fluid mixture 8=19480
 dilution, heat of, derivation 8=110
 electron diamagnetism, case of inhomogeneous mag. moment 8=17896
 electron gas, state with broken geometrical symmetry, existence 8=19465
 entropy increase, principle 8=108
 entropy and temp. in equil. stat. mech. 8=107

Thermodynamics-contd

- evolution criterion of Glansdorff and Prigogine, statistical derivation 8=6097
 expansion, adiabatic, of mixture of two phases 8=10662
 fluctuations in continuous medium, space time dependent 8=6103
 fluid, classical with Lennard-Jones pot., correlation function 8=12576
 γ , comment on determination 8=10664
 gas flow into vacuum with exponential boundary temp. 8=4458
 gas mixture in field of bulk forces, equil. 8=6111
 gas-solid system, polytropic changes 8=4472
 gases and mixtures, props. calc., correl. of corresponding states law 8=16697
 Gibbs-Duhem relation, useful consequence 8=15008
 Green's functions, zero-freq. behaviour 8=113
 Gyarmati principle and canonical equations 8=10633
 hard-driven system, exact methods, application to dynamic relaxation phenomena 8=19469
 heat, temperature and internal energy, review 8=10764
 Heisenberg ferromagnet 8=13984
 of intermolecular interactions 8=3002
 irreversible, for anal. of liquid/vapour phase charge 8=21766
 irreversible, of hydromagnetic energy conversion 8=345
 Ising-Lenz model solns. and appls., review 8=10612
 Joule-Thomson porous plug expt. analysis rel. to classical relativity 8=6061
 kinetic gas theory, relativistic Onsager relations 8=21500
 least-squares curve fitting tech., problem and appls. 8=19451
 linear response to arbitrary thermal perturbation 8=2969
 metal surfaces, passivity theory 8=9702
 of nonlinear mats. with internal state variables 8=112
 Onsager relation, generalization for high order symmetries and their invariance 8=96
 phase transformations, density fluctuation at critical points, Yang and Lee theory 8=10620
 plasma, dense, electron-ion reflection 8=7736
 potential temperatures, formulae for different types 8=9823
 quantum distribution functions, temp. dependence 8=10618
 reciprocal relations, higher order 8=109
 relativistic, ambiguity of pressure concept 8=6102
 relativistic, form of second law 8=6062
 relativistic, reversible and irreversible processes in a fluid 8=10632
 relativistic, temperature definition 8=10785
 relativistic, thermodynamics conservation of energy 8=3001
 relativistic, transformation formulas for temp. and heat 8=19444
 scaling laws generalization to dynamical props. near critical point 8=2346
 second-order transitions, solid-state 8=1668
 stars, while dwarfs energy content and cooling rate 8=10134
 statistical mechanics and thermodynamics, conference Copenhagen Denmark (1966) 8=15007
 superconductors, type II 8=13735
 temperature and special relativity, $T=T_m/\beta$ 8=14964-5
 thermoelectric systems, single stage 8=10844
 teaching suggestions 8=2983
 Ar solution in water-methanol system 8=12809
 GaP-Cl₂-H₂ system, vapour transport in open tube, thermodynamics 8=12699
 He boiling point, temp. scale 8=19689
- applications
 adsorption isotherms, analysis 8=13102
 betatron acceleration of trapped radiation by geomag. storm, adiabatic 8=2645
 cosmology, instabilities in expanding universe 8=10080
 critical point, fundamental problems 8=12962
 crystal surface classification, and ang. depend. of free surface energy 8=8377
 earth's upper mantle, low velocity zone, density and temp. distributions 8=14553
 electrolyte solns., isothermal vector transport 8=8046
 ferromagnetic, ideal, using diagram technique 8=5442
 flow, slow viscous, extremum principles for and application to suspensions 8=1449
 fluid with deforming microstructure, governing eqns. 8=12577
 gas mixtures, diffusion with internal degrees of freedom 8=21528
 gases, equilibrium, approach through black-body radiation interaction 8=12673
 heterogeneous flow systems, 2nd law 8=12595
 homogeneous nucleation theory 8=23278
 m.h.d. convertor, molten metal mixing cycle 8=294
 melting and crystallization of mixtures 8=4643
 particle motion in dipole field, mag. moment adiabatic invariant 8=2649
 phase transformations, deceleration near crit. point 8=8162
 photoluminescence, limit yield 8=12126
 plasma, relativistic, momentum distribution after adiabatic compression 8=7731

Thermodynamics—contd**applications—contd**

- shock adiabats, discontinuous 8=165
- spinodal decomposition in multicomponent system, thermodynamic conditions 8=4700
- systems analysis using thermodynamic and nonlinear circuit eqns. 8=26
- CH₄-O₂ mixtures, combustion products, equilibrium calc. 8=14393
- H₂O₂ decomposition 8=1466
- He II, rotating, superfluid velocity rel. to temp. 8=6231
- Zn corrosion in CO₂ solns., rel. to predominance diagrams 8=2523

Thermoelasticity

- acceleration waves in elastic material of finite thermal, and infinite elect. conductivity 8=15042
- appl. to i.r. radiometric stress meas. 8=8794
- asymmetric, variational (Reissner), potential energy, complementary work theorems 8=64
- coupled thermoelasticity, continuity at wave fronts 8=10577
- critical states of instability and spectrum of isentropic bending-torsion vibrations 8=14957
- elastic half-space, stresses 8=14958
- generalized dynamical theory using heat transport equation 8=10578
- Helmholtz and Green theorems 8=2932
- linear, hyperstresses 8=10579
- medium with 2 spherical cavities, axisymmetric anal. 8=19407
- micro-materials, equations derived 8=2931
- stress analysis of composite cylinder, book 8=19408
- stress analysis, energy-derived difference eqns. 8=19406
- stress distrib. in sandwich plate with rigid core 8=2040
- stressed materials, and elastic constants comparison 8=2036
- stresses on edge of semi-infinite strip of anisotropic material, with 2 infinitely long sides insulated 8=19405
- stresses in plate with transversely isotropic material 8=2930
- triacetylcellulose, plastified, thermomech. curves of elongation at const. strength 8=22407
- waves, non-coupled, particular soln. of nonhomogeneous fundamental set of eqns. 8=10576

Thermoelectric conversion. See Electricity/direct conversion.

Thermoelectricity

See also Thermocouples.

- alkali metals, solid and liquid, thermopower pressure depend. 8=9010
- aqueous bromide solns. 8=4557
- carriers, hot, effect analyzed as Bernoulli effect 8=13629
- circular foil radiometer, peculiarities in stationary regime 8=19626
- dielectric solids, ionic thermocurrents rel. to meas. relax. effects. 8=5346
- eddy currents in anisotropic plates 8=5386
- electrolyte thermocells, flowing, gravity effect 8=14416
- graphite, props. of well oriented crystals 8=5384
- heat pump optimization 8=18217
- heat transfer from a pile to liquid flows past hot and cold junctions 8=4567
- ice, effect on atmospheric electricity 8=14625
- liquid alloys, absolute power rel. to temp. and comp. 8=12913
- liquid metals, polyvalent, absolute thermoelec. power 8=16881
- low-temp. behaviour, research in USSR 8=19681
- metals, thermoelectric power, higher approximations 8=13901
- molten salts, possibility for use in thermoelectric generation 8=22677
- Nernst-Ettingshausen effect rel. to magnetoresistance 8=9082
- power generation, review 8=19733
- p-quaterphenyl polycrystals, thermally stimulated currents 8=13906
- rare-earth sesquisulphide crystals. 8=9119
- semiconductor, degenerate, absolute power rel. to impurity and chem. pot. 8=18207
- semicond., photothermoelec. and thermally stimulated effects, rel. to photoelectronic anal. technique 8=22678
- semiconductor, power in strong elec. field 8=18209
- semiconductors in mag. field, phonon-drag Seebeck effect, quantum theory 8=9236
- semiconductors, organic, power meas. in metal chamber 8=9092
- semiconductors, thermoelectric power in strong transverse field 8=9236
- single stage systems, thermodynamics 8=10844
- superconductors, thermoelectric effect 8=22679
- thermionic conversion specialist conference 8=19731
- thermoelements, for semicond. device cooling, new appl. 8=22684
- thermogalvanomagnetic phenomena, quantum theory 8=18208
- thermopile, semiconductor, stationary temp. field calc. 8=22685
- trace characterization in metals by thermopower meas. 8=18757

Thermoelectricity—contd

- wüstite, Seebeck coeff. rel. to p to n transition, grain size and Mg doping dependence 8=5387
- Ag alloys, thermopowers interpret. rel. to resistivity and band structure 8=18213
- Al, power, high press. effects, and elec. resist. 8=13902
- Al, pure, thermopower meas. rel. to electronic diffusion and phonon drag contributions 8=5382
- Ag₂S_{1+x} melt, thermoelec. power dependence on S vapour pressure above melt 8=16876
- α-Ag₂S mixed conductor, thermoelectric power meas. rel. to electronic props. 8=22500
- Au films, thin, and ohmic props., -100 to +100°C in ultrahigh vacuum 8=22513
- Au, power, high press. effects, and elec. resist. 8=13902
- Au-Hg alloys, liq., abs. power rel. to temp. and comp. 8=12913
- Au-V alloys, thermoelectric power, near Kondo temp. 8=8992
- B, polycryst., thermopower and resist. temp. and press. effects 8=18210
- Bi, e. m. f. increase due to phonon dragging 8=22435
- Bi, magneto-Seebeck effect 80°K, effect of surface recombination 8=18211
- Bi, thin films, power and elec. resist. 8=5383
- Bi, 300-540°K 8=13710
- Bi, Sn and Te doped, solid and liq. phase boundary, Peltier coeff. 8=9238
- Bi₂Se₃-Bi₂Te₃, props. of cryst. and pressed powder 8=18212
- Bi₂Te₃ alloys sintered, Seebeck coeff. 8=21922
- Bi₂Te₃-Bi₂Se₃ alloys, n type, properties 8=9237
- Bi₂Te₃-PbTe alloys, thermoelect. power, low temp. 8=22680
- CdCr₂Se₄, ferromagnetic, Seebeck effect 8=2189
- Cd-In alloys, liq., abs. power rel. to temp. and comp. 8=12913
- CoO:Li, Seebeck-effect, thermogravimetric effect, high temps. 8=1956
- CdS, conductivity, thermally stimulated, influence of electric field 8=9239
- CdS, photothermoelec. effects 8=22681
- CdS-SiO₂ film devices, "frozen" cond. and thermo-stimulated currents 8=5388
- CdSb, conversion efficiency 8=2254
- CdSb, eddy currents in single crystals. 8=5386
- CdSb, investigation 8=13698
- Cd_{3-x}Zn_xAs₂, 80°-400°K, meas. 8=5385
- Cd_{1-x}Zn_xS, mixed single crystals, rel. to comp. and defect nature 8=18227
- CoO, paramagnetic, Seebeck coeff. and anomalous Hall effect 8=17914
- Cr alloys, antiferromagnetic, power 8=18374
- Cr-Fe alloys, Cr rich, Seebeck coeff. and antiferromag. ordering rel. to energy changes 8=8931
- Cr selenides, power, and elec. and thermal cond., lattice parameters 8=13703
- Cu alloy, dilute, phonon-drag power 8=18214
- Cu alloys, thermopowers interpret. rel. to resistivity and band structure 8=18213
- Cu, 99.999% pure, Seebeck coeff., 78-400°K 8=22134
- Cu, thin films, thermopower size-effect for determination of electronic structure 8=13903
- p-Cu₂S, power, elec. cond. and Hall effect 8=22585
- FeCr₂Se₄, thermoelectric power, rel. to d-orbital interaction clarification 8=5391
- Fe-Cu ferrites mixed conduction mechanisms from resistivity and Seebeck meas. 8=18035
- α-Fe₂O₃, paramagnetic, Seebeck coeff. and anomalous Hall effect 8=17914
- Ga liquid, structural sensitivity 8=16878
- GaSb-GaAs alloy, pressure-sintered, densification and thermoelectric props. 8=4697
- GaSb-InSb alloys, Seebeck coeff. at high temps. rel. to comp. and impurity doping 8=4944
- Ge, piezothermal, e. m. f. anisotropy 8=5390
- Ge, thin films, Seebeck coefficient 8=2255
- Hg alloys with In, Tl and Na, liq., abs. powers 8=12913
- In liquid, structural sensitivity 8=16878
- Li₂SO₄, power of high-temp. modification 8=18169
- Mn ferrites, Seebeck voltage and elec. cond., influence of Mn²⁺ clustering 8=13720
- Na_{0.33}V₂O₆, single cryst. 8=22601
- NaCl single crystals. 8=2256
- Ni, high press. effects, and elec. resist. 8=13902
- NiCr₂Se₄, thermoelectric power, rel. to d-orbital interaction clarification 8=5391
- Ni-Cu solid solns., and resist. rel. to temp. and Cu % 8=5389
- Ni₃Ge alloy, thermoelectric power in range 77°K < T < 1300°K 8=18215
- NiO, neutron irradiation effect on Seebeck coeff. 8=18058
- NiO, paramagnetic, Seebeck coeff. and anomalous Hall effect 8=17914
- Ni-Si alloys, thermal e. m. f. and reflection coeff. 8=18551
- PbSe, rel. to forbidden band width 8=5272
- p-PbTe, Hall mobility and thermoelectric power rel. to Na doping 8=5274
- PbTe-PbS solid solution, n-type, power temp. and pressure dependence 8=18061

Thermoelectricity—contd

- PbTe-Sb₂Te₃ alloy system, props., and phase relations 8=4716
- Pd alloys, thermoelec. power meas. 2-120°K 8=18216
- PdNi alloys, power anomalies 8=13904
- Pt alloys, thermoelec. power meas. 2-120°K 8=18216
- Pt, high press. effects, and elec. resist. 8=13902
- Sb, Seebeck coefficient and Fermi surface 8=22467
- Se, trigonal, thermally stimulated currents after u.v. irradiation 8=22683
- Si, piezothermal e.m.f., anisotropy 8=5390
- Si, Seebeck coeff. from 100 to 1300°K 8=22136
- Si-Ge alloy props. and generator modules prep. 8=19732
- SnTe, properties, effect of small Sn substitutions by Nd 8=13905
- SnTe-Bi₂Te₃ alloy system, props., and phase relations 8=4716
- Te_{1-x}Se_x alloys, liq., 0<X<0.5, power rel. to electron states 8=12918
- ThC₂, nonstoichiometric, power 8=2140
- ThN_x, (x = 1, 3; y = 1, 4), thermoelectric power rel. to electronic props. 8=2139
- UO₂, thermal cond. and Seebeck coeff. obs. 8=8665
- VCr₂Se₄, thermoelectric power, rel. to d-orbital interaction, clarification 8=5391
- Zn-Bi alloys, solid and liq. thermo-e.m.f. 8=9240
- Zn_{1-x}Cd_xSb, conversion efficiency 8=2254
- Zn_{1-x}Cd_xSb, power rel. to conc. of acceptors and temp. 8=2131
- ZrO₂ between O₂ electrodes, thermoelec. power 8=9241
- ZnSb and ZnSb-CdSb mixed crystals, investigation 8=13698

Thermoluminescence

- alkali halides, inactivated, and radioluminesc., obs. 8=9592
- alumina, γ -irrad. pure, and magnesia-doped 8=5652
- aluminophosphate glasses, radiocolouration and luminescence kinetics 8=1996
- apparatus, controlled heater 8=18585
- boric acid glass, solvated electrons rel. to aromatics photo-oxidation 8=23160
- glasses, aluminosilicate, gamma-irradiated, spectrum 8=18614
- inorganic cpds. during phase transitions 8=23040
- moon, obs. and theory 8=23650
- phenanthrene-d₁₀ in solidified solvents 8=23070
- quartz, influence of X-ray irradiation 8=13871
- radio, electronic instrument for research 8=9585
- rubber, study of transition temps. by radio-thermoluminesc. 8=13077
- Al silicates, irradiated 8=23044
- CaF₂ rel. to calcination and X-ray dosage, obs. 8=14305
- CaF₂:Gd³⁺, Stark splittings of ⁶P_{7/2} and ⁶P_{5/2} levels 8=14310
- CaO, unirradiated 8=14308
- Ca(OH)₂, unirradiated 8=14308
- CdI₂, curves, use of computer anal. 8=5659
- LiF dosimeter for radiobiological work 8=14890
- LiF, fading after γ doses 10-10³ rad. 8=14321
- LiF, fading characteristics and appl. dosimetry 8=14295
- LiF, response to n γ reactor fluxes 8=20899
- LiF, thermal activation energies 8=18609
- NaCl, thermal activation energies 8=18609
- NaCl:Ag, Sr phosphors rel. to F centre destruction 8=17687
- NaF, thermal activation energies 8=18609
- NaI, capture centres, heat treatment in O effects, obs. 8=23060
- NaI(Tl), after X-ray excitation at low temp., recomb. luminesc. 8=18611
- NaI: Tl capture centres heat treatment in O effects, obs. 8=23060
- NaPO₃, γ irradiation effect 8=22234
- ZnS+Cu, Cl, luminance and complex dielectric constant, comparison 8=13875
- SiC crystals, deduction of energy spectrum of acceptor states 8=5668
- ZnTe, melt-grown, flash-like 8=5680

Thermomagnetic effects. See Magnetothermal effects.**Thermometers**

 ice growth in supercooled aqueous solns., electrical effects (lab.) 8=21762
 lightning, Monte San Salvatore obs. 8=23293
 non-disruptive electric currents, theory 8=2585
 radio noise effects, book 8=19005
 NO₃⁻ ions in precipitation, electrification role 8=23290

Thyratrons. See Gas-discharge tubes.**Tides.** See Atmosphere/movements; Ionosphere; Oceanography.**Time interval measurement**

- chromatographs, electronic method 8=14451
 differences in range milli- to picosecs, appl. to electronics of oscilloscope 8=3138
 meteoroid masses frequency distrib. rel. to freq. distrib. of radar echo duration 8=5960
 microcatalytic reactors, electronic method 8=14451
 microwave beam pulsing system of nuclear energy level lifetimes 8=7058
 pendulum apparatus, electronic temperature control system 8=10480
 pendulum period, electronic system, \pm 600 ns. 8=10481
 pendulum period, using phototransistor output triggering oscilloscope 8=10479
 phase locked pulsed oscillator method 8=14922
 photomultiplier pulse processing 8=6665
 pulse interval meas. 8=6666
 signals reception at l.f., receiver 8=8
 two readings, optimal correspondence choice rel. to meas. device 8=2875

Time measurement

- atomic clock, annual variation 8=19350
 atomic freq. standard, appl. to radiotelescope interferometry 8=10440
 atomic scales, accuracy of standards 8=10484
 bridge oscillator freq. stabilization 8=3145
 Conference on definition, realization and use of time and frequency London 1967 8=10
 Ephemeris time corrections rel. to revised lunar theory 8=10485
 Ephemeris and Universal time difference by lunar photography 8=10486
 frequencies up to 345 GHz 8=6401
 frequency, design of 2.5 MHz standard 8=19351

Time measurement—contd

- frequency multiplier, phase-locked 8=2877
 frequency of 118.6 μ m water-vapour laser transition 8=10482
 frequency standard servo-system 8=9
 meridian passages, photoelectric micrometer 8=10104
 photomultiplier, resolution improved with fast discriminator 8=6330
 satellite, minimum distance from observer, digital device 8=19069
 scintill. photomultiplier system 8=3459
 synchrotron, radial betatron oscill. freq. 8=20235
 transmission time for e. m. waves along coaxial cables 8=6395
 tuning-fork escapement regulator, optimization of design parameters 8=14921

Tin

- atmosphere, H Ly- α and - β emitting layers e temp. and density from line intensities 8=10390
 atoms, electron-impact ionization cross-sections 8=12428
 atom, photoelectric cross-section for K-Mv subshells for X-rays 412-1332 keV 8=7438
 atoms, on silica gels and zeolite, states and dynamics 8=16912
 $\beta \rightarrow \alpha$ transformation 8=21856
 brittle rupture during contact melting with multi-component eutectics 8=8832
 collective motions of atoms in liq. state, compared with polycryst. solid 8=12796
 crystals growth by Webb-dendrite method 8=4824
 cyclotron resonance at 9.5 Gc/s obs. in (010), (110) and (001) planes, in inclined mag. field 8=22489
 e-diffraction reflection anomalies in low-pressure condensation explained 8=13154
 diffusion coeff. of Ag¹¹⁰ 8=22162
 doped, superconductivity, us. attenuation studies 8=22572
 effect of small amounts on self-diffusion of Fe in γ -phase 8=1930
 electrodeposited, whisker growth 8=17251
 electrodes in alkaline solns., passivation by oxidation studies 8=18733
 electronic struct. in cpds. rel. to Mössbauer spectra 8=12233
 evaporation from Fe-Sn alloys at 1600°C under vacuum 8=12993
 films, Ge coating effect on transition temp. 8=5214
 films, obliquely deposited, struct., effect of atom mobility 8=8296
 films, in u. v., reflecting power, optical consts. and dielectric consts. deduced 8=5638
 freezing pt, as fixed pt. 8=244
 grey, phonon spectrum from inelastic scattering of cold neutrons 8=4905
 impurity addition to steel, effect on temper brittleness 8=17797
 isotope neutron scattering amplitudes from powder patterns of SnO₂ 8=1809
 K-ionization by relativistic electron theory 8=4994
 Knight shift oscillatory field dependence 8=5566
 liquid, metal solute diffusion, theory 8=12832
 mass ejection by laser pulse 8=8759
 melting point, particle size dependence 8=16925
 nuclei in Mn ferrite, mag. field at nuclei, Mössbauer effect studies 8=9382
 in organo-Sn cpds., bonds with Co, Mn, Mo and Re, Mössbauer obs. 8=4668
 polycrystalline films, influence of annealing on block structure charact. 8=4741
 pure and Cd-doped, thermal conductivity, effect of superconducting energy-gap 8=4942
 recrystallization, autoradiography 8=13142
 resistance temp. depend. and supercond. transition temp., undergrad. meas. 8=254
 self-diffusion, radioactive tracer absorpt. obs. 8=22161
 solubility in liquid Na 8=21621
 superconducting, critical fields, 0.1-4°K, pressure effect up to 30 k atm 8=5212
 superconducting film and bulk Nb, microwave-photon assisted tunnelling 8=17975
 superconducting film, nonlinear effect at about 10 GHz 8=22562
 superconducting point contact electrode for microwave generation and detection 8=22570
 superconducting, quantum phase fluctuations at onset of long-range phase coherence 8=22561
 superconducting resistance jump at superconducting to intermediate transition rel. to London model 8=17973
 superconducting, superheating in cylindrical samples 8=22564
 superconducting, surface impedance, mag. field dependence, anomalies 8=9054
 superconducting, u. s. absorpt. 8=5213
 superconducting whisker, intrinsic thermodynamic fluctuations from depressions of supercurrent and T. 8=22560
 superconductive, irreversible magnetisation obs. 8=2160
 type I superconductors intermediate state statics and dynamics 8=5204

Tin—contd

- u. s. absorption, longitudinal, by electrons, near supercond. transition 8=4924
- whiskers and filamentary growths on film due to d.c. 8=13145
- white tin films, optical data analysis over 0.1 to 27.5 eV energy region 8=2456
- Fe-Sn systems, α - γ equilib. 8=4709
- in GaAs, resistivity, Hall effect and lattice parameter meas. 8=2191
- β -Sn, crystal dynamics at 110°K 8=4907
- Sn crystals grown from Pb-Sn solder, in electrotransport processes 8=8433
- β -Sn, group-theoretical vibrational analysis 8=4906
- Sn^{113,129} diffusion in Ni, obs. 8=17579
- Sn¹¹⁹ nuclei, impurity in semiconducting cpds., isomeric shift 8=9086
- Sn¹¹⁹ in USn₃, n.m.r. rel. to interband mixing effects 8=18474
- Sn-Pb Josephson junctions, radiation threshold absorption, mag. field depend. 8=22569
- Sn-Pb superconducting tunnel junctions, I-V characts. and 3-cm characts. emission 8=17981
- Sn-Pb and Sn-In solder joints, thermal transport near 0.1°K 8=5203

Tin compounds

- alloys, dilute, microsegregation nodes and cellular solidification substructures 8=16919
- electronic struct. rel. to Mössbauer spectra 8=12233
- fluorinated organotin cpds., n.m.r. spectra 8=12318
- fluoro- and hydroxyfluoro-compounds and thermal polymerization products, i.r. vibr. freqs. of Sn-O-Sn bond 8=4170
- oxide films, electron emission from high resist. regions 8=22713
- triphenyltin pentacarbonyl manganese, structure 8=8594
- H₂SnO₃ conversion to SnO₂, kinetics, Mössbauer obs. 8=14386
- KF-SnF₂-H₂O system 8=4781
- with O, S, Se and Te, chem. shifts of the K_α X-ray line 8=9558
- Sn(halide)₂, Mössbauer line, isomeric chemical shift 8=8222
- Sn-molten BiCl₃ solutions, study of reaction 8=17000
- Sn¹¹⁹(CH₃)₄, indirect nuclear spin coupling 8=4233
- Sn-Bi alloys, dendrite morphology 8=4825
- Sn-Bi molten alloys, free energy of mixing and elec. resistivity 8=12842
- SnCl₄, polymerized with methyl methacrylate, methacrylonitrile and acrylonitrile 8=2527
- SnI mols. spectrum forbidden lines, obs. 8=1175
- Sn-In supercond. foils, type II, sheath irreversible magnetization obs. 8=17970
- SnO₂, electrical conductivity 8=5167
- SnO₂, electron scattering polar optical modes 8=22611
- SnO₂ in glycerine/castor oil, Mössbauer line widening, temp. and viscosity dependence 8=1603
- SnO₂- γ layers, secondary electron emission 8=18284
- SnO₂, neutron powder patterns rel. to scattering amplitudes of seven Sn isotopes 8=1809
- SnO₂, thin films, u.v. absorption edge spectrum 8=2458
- SnO-SiO₂ glasses, crystallization and decomposition 8=21965
- Sn-Pb, X-ray fluorescence analysis 8=9750
- Sn-Sb alloy, X-ray fluorescence analysis 8=9750
- Sn-Sb, moving boundaries, solute profile 8=8468
- Sn-SnO₂-Sn supercond. tunnel junction, d.c. Josephson current mag. field depend. and self-screening 8=22568
- SnTe compatibility with metals study 8=18686
- SnTe, electronic band structure, optical props. 8=8943
- SnTe films, thin, prep., resist. meas., Hall effect and cryst. props. 8=13096
- SnTe, i.r. reflectivity rel. to free carrier dispersion theory 8=2457
- SnTe, lattice dynamics 8=13337
- SnTe, melting curve by thermal analysis between 5-40 kilobars 8=1614
- SnTe, optical props. 8=18562
- SnTe, thermoelectric props., effect of small Sn substitutions by Nd 8=13905
- SnTe-Bi₂Te₃ alloy system, thermoelectric props. and phase relations 8=4716

Titanium

- absorption coeff. for Ag K α radiation, meas. 8=2436
- anode of ion source, discharge in desorbed H₂ 8=21227
- atom, pionic, 4f-3d transition rel. to π mass 8=6839
- band structure, density of states and Fermi surface by cellular method 8=8942
- deformation mechanisms, low-temp. 8=8864-5
- diffusion of C, investigation over wide temp. range 8=17586
- diffusion of metallic impurities 8=17596
- diffusion of Ti-44 and V-48 8=17587
- film deposited by sputtering in crossed e.m. field 8=7651
- getter pump, evacuation of t. w. t. 8=16731
- with microrough or dispersed surface, increase of thermal rad. compared with polished surface 8=22139
- resistivity in thickness range 75-350 Å 8=9019

Titanium—contd

- slip vector, non-basal, identification 8=17665
 - solid solns. in Cu, mag. moments 8=22760
 - specific heat near phase transition point, 1000 to 1300°K 8=17526
 - sputtering by positive ions of N₂, O₂ and Ar 3-9 keV 8=8780
 - textural, biaxial strengthening 8=5086
 - thermionic emission in Cs vapour meas. by plasma-anode tech. 8=18264
 - X-ray emission bands fine struct. rel. to e band struct. obs. 8=18527
 - B-Ti, diffusion mechanism 8=17594
 - CaF₂:Ti²⁺, impurity ion e. p. r. spectrum 8=9422
 - CdS:Ti²⁺, e. p. r. 8=22900
 - H₂ definition, spectral-isotopic method 8=9743
 - N₂ sorption, sticking coeff. obs. 8=17175
 - α -Ti, anisotropic thermal expansion by X-ray method 8=17535
 - β -Ti, diffusion behaviour from thermo and electrotransport meas. 8=17589
 - β -Ti, impurity diffusion summary 8=17588
 - Ti I spectral resonance lines, absolute oscillator strength 8=1176
 - Ti(III) hexahydrated ions, electronic struct. 8=16995
 - Ti²⁺ e. s. r. in CsAl(SO₄)₂·12H₂O single crystals 8=18418
 - Ti³⁺ in CaF₂, optical and e.s.r. spectra 8=14126
 - Ti³⁺ in SrTiO₃, electronic ground state structure 8=9445
 - α -Ti/H₂(D₂) system, thermodynamic props. 8=21858
- Titanium compounds**
- alloy, irradiated, tensile and shear props. at cryotemps. 8=17763
 - alloy in non-electrolyte, stress corrosion cracking susceptibility 8=8863
 - alloys, Fe and Nb additions, superconducting props., phase transformations 8=22563
 - alloy, VT15, solution-treated and aged, structural features 8=17293
 - anatase formation at high temps. 8=1684
 - anatase, permittivity rel. to that of rutile 8=18173
 - carbides, formation by chemical vapour deposition 8=23112
 - hydrides, disaligning by plastic straining 8=4782
 - K- and L-spectra 8=14281
 - quadrivalent Ti compounds with OH and O₂H radicals, e. s. r. and chemiluminescence 8=2522
 - rutile, adsorpt. at solid-liq. interface from binary soln. 8=1710
 - rutile, electronic mobility at high pressures 8=2087
 - rutile, partially reduced, e.p.r. studies at 77°K 8=18436
 - rutile, polaron theory of carrier props. 8=17894
 - titanates, Mg activated, luminescence model 8=2488
 - titanomagnetites in basalts, electron probe 8=14703
 - titanomagnetite structure rel. to magnetic props. on oxidation 8=14054
 - triscyclooctatetraen-dititanium crystal structure 8=13304
 - Ti complex, diethoxytitanium dichloride, crystal and mol. structure 8=17421
 - Ti complex, di(tetraethylammonium) tetrachloroxotitanate (IV) crystal structure 8=17422
 - Ti-Al alloys, dilute, hydride formation in thin foils 8=17016
 - Ti-Al alloys, slip vector, non-basal, identification 8=17665
 - Ti-Al-Co alloys, microstructure, rel. to Ti-rich corner 8=4851
 - Ti-6Al-4V alloy, stress-corrosion cracking in methanol 8=22394
 - Ti₃AuH₃, A-15 structure, superconductivity 8=9059
 - Ti-Be oxide, energy absorber of superhigh-freq. vibs. 8=10458
 - TiC, B-doped, TiB precip. rel. to defect structure 8=4967
 - TiC, fibrous, preparation by high-temp., vapour-phase process 8=14908
 - TiCl₃ + H₂O₂ reaction, e.s.r. 8=2521
 - TiCl₃ α , X-ray diffraction microstructure meas. 8=22041
 - TiCl₄, in binary solvent mixtures, n.m.r. 8=8138
 - TiCl₄-heptane solns., γ -radiolysis obs. 8=18747
 - TiCl₄, polymerized with methyl methacrylate, methacrylonitrile and acrylonitrile 8=2527
 - TiCl₄, Raman spectrum, difference bands 8=7570
 - TiF, dissociation energy 8=1623
 - TiF₂, ht. of formation 8=1623
 - TiF₃, sublimation pressures 8=1623
 - Ti-3 wt.%Fe alloy, quenched from β -phase, study of martensites 8=21859
 - TiFe₂, atomic arrangement in homogeneity range of Laves phase 8=1813
 - TiFe₂-Co₂ alloys, hyperfine fields and electronic structure 8=14156
 - Ti-Fe-Si system, R(M, X)₂ and RMX₂ cpds., crystal structure 8=17435
 - TiGaLiO₄, structure of ordered phase on annealing at 600°C 8=17423
 - Ti(HPO₄)₂·H₂O synthetic ion exchanger, crystal structure and exchange behaviour 8=13295
 - Ti-Mg oxide, energy absorber of superhigh-freq. vibs. 8=10458
 - ϵ -TiN, high-temp. stability 8=21857
 - Ti-22 at. %Nb alloy, ω phase precip. rel. to superconducting critical transport currents 8=4718

Titanium compounds—contd

- TiNi, heat capacity 8=4935
 TiNi mechanical props., hydrostatic extrusion effects obs. 8=5059
 Ti-O system, $\beta \rightarrow \alpha$ bainitic transformation 8=17103
 TiO 7050 Å band, photometric classification of early M giant stars 8=14768
 TiO₂, adsorption of CO, i.r. spectroscopy 8=8347
 TiO₂, adsorption of poly(dimethyl siloxane) from CCl₄ and xylene solns. 8=8336
 TiO₂, dielec. discs, in resonator, h.f. props. 8=19829
 TiO₂, effect of H₂O and NH₄Cl traces on ϵ^1 and ϵ^{11} 8=18174
 TiO₂, enamel, opacification kinetics, X-ray diffr meas. 8=17221
 TiO₂, enthalpy of anatase-rutile transformation 8=13074
 TiO₂ films, with large ionic space charge, conduction process 8=2233
 TiO₂ films, spark discharge along surface 8=7682
 TiO₂ growth by chem. transport with TeCl₄ 8=8429
 TiO₂, H₂O desorption kinetics, 25-100°C 8=18703
 TiO₂, molec. geometry 8=7550
 TiO₂, phase transforms. under shock-wave compression, from X-ray studies 8=1685
 TiO_{2-x}, (reduced rutile), dielec. relaxation processes at 1.2 to 50°K 8=5355
 TiO₂ (rutile), vac. reduced, sp. ht. below 4.5°K, rel. to impurity band model 8=13380
 TiO₂, solubility in Al₂O₃ in H₂ atmos., temp. dependence 8=21818
 TiO₂, solubility of iron, X-ray examination 8=13042
 TiO₂, thermal expansion, 100°-700°K 8=17536
 TiO₂:V⁴⁺, multiple electron-spin echoes 8=22657
 Ti₂O₃, dielec.-metal phase transition rel. to mag. ordering 8=18389
 Ti₂O₃, e.s.r. at 77°K rel. to semiconductor-metal transition 8=14125
 Ti₂O₃, growth of single crystals from melt 8=4817
 Ti₂O, ordered, structure determ. by e-microscopy 8=17420
 Ti₂O₃, effective mass, magnetic susceptibility rel. to temp. 8=5120
 Ti-Rh alloys, specific heat and superconducting transition temp. 8=9058
 ZrO₂-TiO₂ system, change of mineral composition by heat treatment 8=4721

Torquemeters. See Mechanical measurement.

Torsion

- See also Elastic constants; Stress analysis.
 balance, precision standard masses 8=19349
 ferromagnets, var. in magnetic field effect 8=2312
 hollow notched round bar, stress-intensity factor 8=5024
 intermetallic compounds, press. effects on ductility 8=13535
 low-temp. calibration, torque meas. 8=14924
 magnetic resonance meas. method 8=14075
 magnetostriction in ferromagnetic materials, circular magnetization calc. 8=13998
 oscillating in rigid disc on surface of elastic half-space 8=10689
 pendulum for automatic elastic moduli meas. 8=5006
 polymethylmethacrylate tube torsional oscillations rel. to ht. generation 8=4946
 viscoelastic conical rod 8=14956
 Gd internal friction obs., magnetic damping effect 8=14020

Total cross-sections. See under individual particles, no sub-heading.

Townsend coefficient. See Ionization/gases.

Tracers

- See also Radioactive tracers; Radiochemistry.
 anions and cations, adsorpt. on metal surface 8=4760
 radioactive, for study of chem. reactions in stationary droplets 8=14355

Transducers. See Acoustic transducers.

Transformations. See Phase transformations.

Transformations, mathematical

- canonical in gravitation theory rel. to quantization in general relativity 8=10597
 canonical and involutory, variational problems, transport theory 8=7308
 channel symmetry and nonlinear transfer 8=6482
 conformal, numerical calc. 8=19352
 contact 8=10493
 coordinate, Coriolis and other fictitious accelerations, derivation 8=10531
 Euler angles, helicity formalism for 4 identical particles 8=15912
 Fourier, appl. to optical images 8=11136
 Fourier appl. to Perot-Fabry spectrophotometry 8=15530
 Fourier and Laplace soln. of Cauchy-Poisson surface waves 8=16774
 Fourier, modified algorithm for unequal number of input and output points 8=6522
 infinitesimal, law of Yang-Mills field associated to the conformal group 8=15679
 invariant, rel. to noninvariant solns. of eqns for mono-energetic nonrelativistic particle beams 8=15270
 Laplace transforms, analytic continuation by asympt. series 8=2905
 Lorentz, 4-dimensional, note 8=14928

Transformations, mathematical—contd

- Lorentz, and motion of charges in electromagnetic field 8=15269
 Lorentz, vector, derivation 8=14960
 Noether equations and conservation laws 8=6032
 non-linear into equivalent linear systems 8=19359
 O₃ → O₁ for unitary representations of SL_{2,C} as a series of Γ functions 8=20264
 in quantum theory point, rel. to isometric transformations in Hilbert space 8=559
 Schrödinger equation, two-parameter Hamiltonians 8=11250
 SL_{2,C} decomposition into sums over unitary representations of SU₁ and U₁ A T₂ 8=10502
 spinors, generalized in complex n-space 8=6014
 Stieltjes, asymptotic behaviour 8=6015

Transistors. See Semiconducting devices/transistors.

Transition metals

- atoms, wave functions, limited-basis-set SCF in ground state 8=12075
 b.c.c., density of states, isochromat spectroscopic invest. 8=17876
 b.c.c., diffusion, theoretical critique 8=17590
 compressibility, 5 metals, subjected to high press., effect of electron structure 8=17724
 conductivity dependence on atomic wt. 8=17924
 electron binding energies 8=8976
 electron emission in Cs and F vapours, quantum chem. model 8=18261
 ion, recent Japanese work 8=16992
 liquid, density of states of narrow nondegenerate (s) band 8=12901
 Lorenz number, ideal, and itinerant electron correlation 8=8905
 magnetic susceptibility spin-orbit coupling dependence 8=2332
 noble elements and alloys, superconductivity, mag. susceptibility and sp. ht. 8=13752
 noble elements and alloys, supercond., mag. susceptibility and sp. ht. 8=13753
 phase diagrams and bond theory 8=13003
 solid solns., mag. susceptibility 8=9283
 in spinel ferrites, spin wave linewidth variations 8=5495
 superconductors, isotope effect rel. to dirtiness 8=5215
 d-transition, formulae of Slater-Koster interpolation procedure 8=8885
 valency structure for 5th and 6th periods 8=16967
 with CO adsorbed, entropy changes on desorption 8=17174
 Co(II)-Ni(II)-Mn(II)-V(V)-Mo(VI) chloride system, extraction separation, radioisotope study 8=23077
 in Cu, dilute alloys, effect on thermal cond. 8=22133
 in Fe-rich alloys, magnetization values 8=22811
 Pt-group, electron emission in Cs vapour at T_g=414°K 8=18265

Transition metal compounds

- alloys, electronic structure 8=22444
 A15-type phase, binary, atomic ordering 8=17419
 borides, Cd⁺ sputtering coeff. determ. 817705
 broad band versus d-level semiconductors 8=17886
 carbides, carbon κ and metal emission bands rel. to bonding 8=2406
 carbides, sputtering with Cd⁺ ions, 100-500 eV energies, coeffs. 8=8762
 chalcogenides of formula MM₃X₄, M(M¹) = trans. metal, X = S, Se, Te, structure 8=13294
 complexes, octahedral, electric quadrupole transitions 8=16976
 complexes with tetrazoline-4-thiones, i.r. spectra 8=14188
 complexes, theory of ligand substitution 8=14387
 crystal fields, thermodynamic and optical calcs. discrepancy correction 8=4669
 fluorides, MO calc. of 10 Dq 8=4667
 h.c.p. alloys of later 4d and 5d series, electronic structure from mag. susceptibilities 8=18296
 molybdates, structure and props. 8=13296
 monophosphides, mag. susceptibility and n.m.r. 8=22847
 nitrides, Cd⁺ sputtering coeff. determ. 8=17705
 oxalato complexes, C¹⁴ radioisotopic exchange 8=21796
 oxide glasses elec. cond. 8=22522
 oxides, shrinkage with concurrent reduction, obs. 8=4936
 thionibates, MNb₃S₄, with berthierite structure 8=8560
 [Me(CNS)₆]⁻³, struct., by isotopic exchange 8=23087

Transmission

- Co, magnetized of polarized n 8=2031
 Cu, of X-rays, temp. dependence, (Borrmann effect) from 77-377°K 8=14210
 Ge, of X-rays, multiple Borrmann effect 8=14222
 Ni, magnetized of polarized n 8=2031

acoustic waves

- See also Acoustic wave propagation.
 absorption resonance line, width and shift dependence on temp. 8=13342
 along $\langle 110 \rangle$ axis of cryst, third-order elastic consts. rel. to thermal attenuation 8=4916
 apertures, discrepancies 8=6162
 apertures, negligible thickness 8=6163
 aperture in rigid screen, i.f. 8=10745
 channel, divergent, surface/bottom reflected 8=18844

Transmission—contd

acoustic waves—contd

- circular apertures in thin panel 8=19561
 duct with nonlinear wall impedance, attenuation 8=15066
 finite amplitude, dynamics of propagation in free space 8=10736
 loss expt., room absorption meas. by steady-state and decay rate methods 8=191
 loss meas. using vibr. transducers 8=10754
 l.f. attenuation coeffs. in ocean, analytic description 8=5786
 Luneberg fluid lens, acoustic field 8=19562
 magnetite, acoustic loss peak, electronic mech. 8=1852
 metals, helicoid instability of sound oscs. 8=5139
 molecular, in perpendicular stationary and varying fields 8=21493
 panels, double, loss calc. allowing for absorption by cavity walls 8=10740
 physical acoustics, principles and methods; application to quantum and solid state physics, book IV A 8=17486
 in plasma, partly ionized, $\lambda \gg m.f.p.$ neutral particles 8=7795
 semiconductors, helicoid instability of sound oscs. 8=5139
 sound field in metal-dielec.-supercond. structure, rel. to electron tunneling 8=5219
 split beam sound-field, WKB-type approx. 8=19567
 transmittivity density distribution function for two layer system with random parameter 8=19564
 underwater, nonlinear 8=6164
 underwater sound-pulse distortion by converging lens 8=4570
 underwater, theory, book 8=10751
 water, acoustical effects on free convective transfer from horizontal wire 8=21663
- acoustic waves, ultrasonic**
 ferromagnet, attenuation near transition temp., phonon interact. with spin system 8=18323
 in non-conducting solids, low-temp. attenuation of 3 GHz waves 8=17490
 quartz, attenuation of 3 GHz waves, from 4 to 40°K 8=17490
 shallow water propag. loss at sonar freqs. 8=1554
 standing waves in anisotropic media, diffraction of e.m. waves 8=10952
 Al, attenuation and rotation of u.s. shearwaves in mag. field 8=17497
 Bi, amplitude of giant quantum oscs. 8=1848
 In₂Bi, pre-melting, 10 MHz pulse-echo obs. 8=21751
 N₂, liquid, rel. to meas. of volume viscosity 8=1538
 ZnO, attenuation of 3 GHz waves, from 4 to 40°K 8=17490
- electromagnetic waves.** See Electromagnetic wave propagation.
- light**
 See also Absorption/light; Filters, optical.
 absorbing film containing pinholes, meas. with laser system 8=9483
 in atmosphere, intensity fluctuations rel. to varying turbulence 8=14618
 coefficient at lowest exciton level calc. from polariton model 8=22480
 duct, curved with circularly refl. walls 8=6508
 far i.r. LWP filters, low temp transmittance 8=20066
 glasses, aluminate for i.r. use 8=22954
 gyrotropic layer, Faraday effect 8=3376
 Irtran 2, 4 and 6, total hemispherical emittance at low temps. 8=18467
 liquids, display of picosec. pulses via two-photon fluoresc. 8=8071
 narrow beam, in turbid media with highly directive scatt. 8=11161
 noble metal films, and reflectance, anomalous skin and size effects 8=9498
 optical materials, 0.17–3.0 μ 8=11140
 optical superheterodyne receiver, for communications expts. 8=6423
 optical wave packet kinetics in lens-like medium 8=3366
 optically thick layers 8=6538
 plastic scintillating fibres, light-conducting characts. 8=9586
 polymethine dyes, spectra 8=430
 Rosseland radiative mean opacity, calc. 8=11163
 scattering media, spectral line profiles near resonance 8=509
 spherical wave with Gaussian amplitude distrib. 8=20087
 suspensions of latex spheres in water, monodispersed, efficiency factor K meas. 8=4632
 through windows set near Brewster angle, rel. to laser tubes 8=6426
 ultraviolet, book 8=20012
 water vapour, attenuation of m.m. wavelength rad. 8=9865
 Ag film, 0.4–1 μ range 8=5580
 Ag-Cr film, 0.4–1 μ range 8=5580
 Au films, and reflectance, anomalous skin and size effects 8=9498
 BaTiO₃ with Fe and Co impurities, transmission props 8=18187
 Bi film, band structure determ. 8=13859
 CS₂, self-focusing and induced combination scatt. 8=4581
 CdS, interference max. on curve rel. to refractive index 8=2409

Transmission—contd

light—contd

- Cr film, 0.4–1 μ range 8=5580
 Cr₂O₃, reactively evaporated characts. and refractive index 8=9517
 Cu films, and reflectance, anomalous skin and size effects 8=9498
 Cu film on Si, in spectral region from 1.5–7 μ 8=14212
 Cu films, thin, and absorpt. in spectral region between 0.6 and 4 μ 8=22972
 Cu₃TaSe₄, and other optical props. 8=8408
 H₂NH₂PO₃ films in polarized light, 400–4000 cm⁻¹ rel. to internal vibrations 8=14224
 KI, pure and doped, spectra at low temps. 8=18540
 KMF₃ (M = Mg, Mn, Co, Ni, Zn, Mg/Ni), i.r. spectra rel. to multiphonon processes 8=2427
 Mg films, plasma reson. of p-polarized u.v. 8=12516
 MnTe, antiferromag. semiconductor, and reflection, 80–375°K 8=5622
 PbTe-PbS solid solns., i.r. spectra rel. to forbidden band optical width 8=18554
 Sb film, band structure determ. 8=13859
 Se, i.r. spectra 8=8615
 TlI, CsI stabilized, in 30–65 μ region 8=5640
 Zn tellurite glass range, i.r. spectra 8=5644
- Transmission lines, r.f.** See Electromagnetic wave propagation/ guided waves.
- Transparency**
 See also Optical constants; Transmission/light.
 in dielectrics, damage due to laser light 8=8755
 effect of multiquantum resonance 8=499
 Irtran 2, 4 and 6, total hemispherical emittance at low temps. 8=18467
 Rosseland radiative mean opacity, calc. 8=11163
 Hf oxides, u.v., temp. depend. and effect of Cl⁻ and NO₃⁻ 8=5605
 Th oxides, u.v., temp. depend. and effect of Cl⁻ and NO₃⁻ 8=5605

 Boltzmann eqns. solns. with anisotropic scatt. 8=20541
 Boltzmann eqn., soln. by extrapolation 8=3003
 Boltzmann eqn. soln. for neutron scatt. in spherical geometry media 8=20542
 Boltzmann's eqn., solving by Jacobi polynomial method 8=11983
 Boltzmann systems, spectrum and evoln. for soft potentials 8=1462
 Boltzmann's theory of irreversibility and velocity inversion 8=95
 Brownian motion in quantum fluid 8=92
 bubbles, gas, meas. of interphase mass transfer at high Reynolds number 8=12764
 classical fluids, h.f. linear response to Brownian oscillators 8=4446
 contaminants in atmospheric turbulent boundary with unstable stratification 8=14608
 cross-section determ. from meas. on arc discharges 8=4294
 cryogenic liqs, saturated, correl. for viscosities, thermal cond. and self-diffusivities 8=15132
 diffusion of radiation from a cavity, moments method description 8=19622
 in dispersions, interrelationships with heat transfer 8=16904
 distributed parameter nonadiabatic heat and mass transfer, thermal dynamics 8=12976
 drop velocity in mixture of gases 8=1482
 electroluminescence, mathematical description by a system of equations 8=5651
 electrolyte solns., isothermal vector, in n-component systems 8=8046

Transport processes--contd

- e in solids, theory for strong field 8=2078
 energy pulse interaction with solid 8=12968
 energy transport, turbulent spectra, Kraichman-Spiege approx. 8=21442
 ethanol, evaporation into O_2 and CO_2 , effect of moving interface 8=16711
 ethylether, evaporation into He and CO_2 , effect of moving interface 8=16711
 evaporation from unsaturated surface using Dalton-type eqn. and energy balance 8=21777
 Fermi-gases, interacting 8=10655
 finite cylindrical medium, matrix factorization soln. 8=15024
 fluid of high thermal diffusivity, convective instability in heated layers 8=16639
 fluid, incompressible, transport equations 8=7879
 fluids, mass transfer in rectangular cavities 8=12600
 fluid, single component, new eqn. 8=1438
 fluid, turbulent energy transfer in universal equilibrium range 8=16643
 fluid, turbulent radial wall jet, mass transfer from axial source 8=1451
 fluid, turbulent separated flow in rectangular cavity 8=12610
 free fermions, generalized Boltzmann eqn. 8=15674
 gas, axial, in d.c. discharges in mixture gases 8=1333
 gases in critical region 8=4490
 gases, cross sections and angular distribution 8=1483
 gases, electron transport, effect of inelastic collisions 8=7939
 gas, interphase mass transfer coeffs. for insoluble monolayer on water 8=12830
 gas-liquid interaction, intensification, survey 8=19637
 gas-liquid mass transfer, effect of moving interface, theory 8=16710
 gas, partly ionized in mag. field, transport property eqns. 8=10927
 gases, polyatomic, effect of varying elec. and mag. fields 8=1465
 gas, turbulent boundary, streamwise wall curvature effect 8=12656
 generalized albedo method 8=15023
 generalized eqn., using quantum-mech. Green's function 8=19472-3
 heat and mass transfer in moving media, soln. of parabolic boundary layer eqns. 8=19634
 heat and mass transfer, turbulent boundary layer problems, solutions 8=6208
 heat radiation in absorbing and anisotropically scattering medium 8=10675
 inert gases through rubber membrane 8=1487
 inverse problem, theory 8=11613
 ion slip in slightly ionized gas mixture 8=16436
 Laplace eqn., soln with transport through cylindrical constrictions 8=10670
 laser, Fokker-Planck eqn. for atoms and light mode 8=19942
 laser noise, Fokker-Planck solution 8=11023
 laser noise, quantum Fokker-Planck soln. 8=19937
 linearized collision operator, matrix elements 8=21499
 liquid, conducting and in turbulent flow, effect of mag. field on heat transfer 8=10930
 liquid, convective heat transfer during stabilized turbulent flow in tube at supercritical press. 8=1550
 liquid phase adsorpt. fractionation in fixed beds, anal. 8=17151
 liquids, vel. autocorrelation function, calc. in itinerant oscillator model 8=12777
 local potential of fluctuations, in hydrodynamics, variational properties 8=1440
 longitudinal waves, phase velocity and damping in viscous fluid 8=1534
 macroscopic evolution systems, quantum mechanics 8=2967
 mass, by evaporation-diffusion between solids 8=8673
 mass and heat transfer, physical props. effects calc. 8=10770
 mass transfer between falling liq. film, and vertical surface, diffusion-controlled electrolytic tech. 8=21598
 mass transfer between single drop and a continuous phase 8=21594
 mass transfer between spherical particle and ambient medium under high temp. mixed convection 8=1473
 mass transfer effect on hypersonic viscous shock layer of blunt body 8=3035
 mass transfer, electroconductive media 8=15105
 mass transfer in laminar free convection with moving interface 8=240
 mass transfer in solid-liquid system 8=4630
 mass transfer to ,ear of sphere in Stokes flow 8=21563
 mass transport, vacancy mechanism 8=4947
 master equations, exact and asymptotic 8=19471
 master-eqn. model near critical point 8=10669
 master eqn. of Pauli and equilibrium between matter and radiation 8=2990
 master eqns. with and without time convolution 8=19477
 medium, response to a pulse disturbance, instabilities, convective, absolute 8=19476
 membranes, liquid, and elect. props. 8=4560

Transport processes--contd

- memory effects and autocorrel. function of dynamic variable 8=2007
 Milne's problem for 2 adjacent spaces, solution 8=1119
 mols. vel. distrib. function near solid wall in non-uniformly heated gas 8=21494
 monatomic ionized mixtures 8=4304
 in multicompartment assembly, reconsidered generalized B-G-K collision model 8=19479
 neutrons, in infinite slab, initial-value problem 8=20875
 neutrons, perturbation eqn. for critical slab 8=16143
 neutrons in reactor, ergodic theory of semigroups 8=3992
 neutrons, time-depend. Boltzmann eqn., cylindrical geometry soln. 8=20545
 nonlinear response, formal theory 8=2989
 ocean, heat flow and free air gravity anomalies 8=18838
 one-speed transport eqn., closure relns. for eigenfunctions 8=847
 plasma, appl. Fokker-Planck eqn. 8=4328
 plasma, Cerenkov heating in radially non-uniform cylinder 8=16485
 plasmas, electron transport, effect of inelastic collisions 8=7939
 plasma, with inelastic processes 8=1379
 plasma, rarefied, in toroidal trap 8=4342
 plasma, seeded, drift velocities and thermal flux vectors in elect. and mag. fields 8=16488
 plasma, various expressions for kinetic equation 8=21314
 polar-gas mixtures 8=4492
 polyatomic gases, molec. theory 8=16684
 in primordial fireball 8=14729
 quantum theory, collisional transfer contribs. 8=19475
 radiation fluctuation, kinetic theory of obs. 8=3010
 radiation heat transfer in nonisothermal nongray gases 8=21506
 radiation transport in scatt. media, eqn. deduction 8=3012
 radiative trans. eqn. with anisotropic scatt. 8=138
 rarified gas, heat transfer, appl. of conventional eqn. for conductivity and boundary temp. jumps 8=12682
 reformulation using autocorrel. functions 8=3006
 resonance phenomena in kinetics of molecular gases 8=21493
 scattering, anisotropic in energy depend. transport 8=19478
 Schwinger's variational principle for calc. transport coefficients 8=17916
 semiconductors in double injection regime, effects of diffusion and thermal generation 8=22419
 solutions, effect of non-Brownian motion 8=21718
 from spheres, prediction of macroscopic thermal and material transport 8=4434
 spherically symmetrical molecules, viscosity and intermolecular potential 8=7630
 in thermionic conversion, appl. Monte Carlo method 8=15246
 thermodynamic analogy 8=6098
 thermoionic convertor, general equations 8=3158
 time-correlation-function for coeffs. 8=6112
 time-correlation-function expressions 8=6113
 transport eqn. in 3-dimens., truncation of spherical harmonic expansion 8=11990
 turbulent, in free turbulent flows, effects of intermittency 8=16766
 viscoelastic fluids, turbulent heat transfer characts. 8=4426
 viscous momentum transfer effect 8=21736
 Al, thin film, electro-transport, direct obs. 8=17927
 Bi, liq., electromigration of small amounts of Ag, Cd, In and Sb 8=12815
 D, electron transport coeff. 8=21521
 GaP- Cl_2 - H_2 system, vapour transport in open tube, thermodynamics 8=12699
 Ge, n-type, low-temp. semiconductor obs. 8=18043
 Ge surfaces, motion of metal drops on, under action of electric current 8=5259
 H, electron transport coeff. 8=21521
 H_2O turbulent flow in square duct, heat transfer and wall temp. distribution obs. 8=1545
 Hg turbulent flow in square duct, heat transfer and wall temp. distribution obs. 8=1545
 n-HgSe, quantum oscillations of coeffs. 8=5261
 In-Sb liq. alloys, cell for electrotransport meas. 8=12816
 N_2 gas, thermomagnetic torque, temp. dependence 8=16712
 Pb-Sn liq. alloys, cell for electrotransport meas. 8=12816
 Si surfaces, motion of metal drops on, under action of electric current 8=5259
 SiO_2 films, role of proton and Na transport 8=9172
Trapped free radicals. See Free radicals.
Traps. See Crystal electron states; Crystal imperfections; Semiconductors.
Travelling wave tubes. See Electron tubes.
Triboelectric emission. See Electron emission.
Triboelectricity
 crystals rubbing with metals, nature of changes acquired 8=18158
 metals sliding on glass in a 3×10^{-7} torr vacuum 8=13872
 solid surfaces, mechanisms of charging 8=18156
 static charge, dissipation and generation on dielectrics in vacuum 8=18159

Triboluminescence. See Luminescence.

Trions (He^3, H^3). See Alpha-particles and helium nuclei; Tritons.

Triple point. See Critical constants, thermal.

Tritium

atomic, quartz contained discharge 8=4276
bremsstrahlung irradi., nuclear photoeffect 8=11432
hot-atom reactions, energy dependence 8=14447
isotopic exchange with toluene 8=5695
loss from iron meteorites by solar wind hydrogen 8=10370
radioactivity meas. with evacuated scintill. probe 8=3853
as tracer for groundwater flow obs. 8=2568
tritiated, scintill. probe for monitoring 8=3737
tritiated water analysis, water vapour counter 8=9748
 H_2 - T_2 mixtures, equilibria and reaction rates 8=14448
T-D gas mixture, propagation of thermonuclear detonation wave 8=21482

Tritium compounds. See Hydrogen compounds.

Tritons

See also Nuclear reactions due to tritons.

binding energy calc. using N-N non-local separable pot. 8=11647
binding energy calc. using pair potential 8=881
binding energy rel. to n-d scatt. length 8=11648
d-T reaction, n yield 8=874
Fadeev calc. of binding energy, T matrix perturbation theory 8=20584
ground state props. with Hamada potential 8=885
 $\bar{\mu} + \text{He}^3 \rightarrow \text{H}^3 + \nu$, asymm. in recoil of H^3 8=15740
 $\frac{3}{2}\text{n}$ particle instability 8=20733
photodisintegration, Cabibbo-Radicati sum rule appls. 8=695
photodisintegration cross-section calc., normalization anomaly 8=11655
photodisintegration cross section obs. 8=11652
photodisintegration, two- and three-body cross section calc. 8=15870
 $\pi^+ + t \rightarrow \gamma + \text{He}^3$ by PCAC generalization of Kroll-Ruderman theorem 8=7217
p photo-absorpt. sum rule 8=3577
d+t prod. of n with t in Zr or Ta, yield decrease diffusion mechanism theory 8=6921
radial wave-function partial differential eqns. 8=880
radius, mean square, expectation value, variational method 8=20146
trinucleon μ capture rate and S' state 8=20583
wave function, S and D state component calc. 8=6995
D(d, p)T, 8 energies, 2.1-14.1 MeV, p polarization obs. 8=11642
D(t, n)He⁴, as polarized n generator 8=15844
H³ charge form factors and charge distrib. calc. 8=886
H³(γ , n)d, H³(γ , p)2n, H³(γ , 2n)p, cross sections and ang. distribs. 8=11432
H³(n, d)2n, 15.1 MeV, n-n scatt. length deduced 8=20543
H³(n, p), 14.1, 18, 21.5 MeV search for trineutron 8=11649
H³-H³ scatt., using 2-body pot. calc. compared to expt. 8=11656
He³-H³ scatt. rel. to levels of Li⁷ and Be⁷ 8=7001
T(d, n)He⁴, as polarized n generator 8=15844
T(d, n)He⁴ rel. to polarized d beam prod. 8=11602
T(p, n), He³, obs. 8=882

Troposphere. See Atmosphere.

Tungsten

adsorbed Ce, Ba, e emission, Thomas-Fermi-Dirac theory 8=5414
adsorption of CO, on surface partly covered with O 8=4762
adsorption of Hg on field emitter tips, nucleation obs. 8=1702
adsorption of N₂, N₂ phase transforms caused by e-impact 8=21913
adsorption of N₂, rel. to work function 8=1711
adsorption of O₂, equilb. surface conc., sticking probability and work function charges 8=4767
adsorption of U, study by field emission work function of U film 8=22715
annealing of n-irrad. damage, migration of single vacancies 8=17601
anodic oxidation in LiCl-KCl 8=5738
atom, transition probabilities, 9 lines, 4700-5300Å 8=20969
attack by atomic O at high temp. 8=14370
catalyst for decomposition of diethyl and di-n-propyl ethers 8=14404
cathode, carbon adsorbed high temp. field emission, effect of oxygen and air 8=2276
cesiated, evaluation of thermionic emitter surfaces, rel. to conversion 8=18269
channelling of MeV projectiles 8=11954
chemisorption of diatomic molecules on single crystals, work function studies. 8=18700
coating by plasma jet 8=19337
conductivity, thermal, meas. and analysis, 100-400°K 8=4943
crystal faces, work function of Xe 8=18252
crystal, with Mo film, adsorption and electron emission 8=9269
crystal, single, mechanical strength from elec. field required to break whiskers 8=2069
crystal, sorption of O₂ on (111) face, mechanism and kinetics 8=8348

Tungsten—contd

cyclotron resonance meas. 8=13688
desorption, of CO by electron impact 8=21911
desorption of CO, NO and O by electron impact 8=21912
desorption, electron-stimulated, of O from surface, mechanism 8=17177
desorption of rare earth elements from surface 8=17171
desorption of Th by high energy electrons 8=1712
diffusion of C, investigation over wide temp. range 8=17586
dislocation pinning, internal friction rel. to temp. 8=1980
doped, annealed, evidence for voids 8=17613
doped, model from annealed glass-doped Fe 8=17025
elec. resist. and hardness, effects of neutron irradi. and subsequent annealing 8=2141
electron emission, laser induced, using pulsed Ar laser 8=18271
electron field emission, anomalous total-energy distribution and electronic structure 8=5411
electron field emission from (110) surface rel. to atomic perfection 8=2275
emission processes in Cs-additive systems, correl. 8=15214
emissivity, spectral in visible and i.r. range 8=1897
emitter in thermionic converter, effect of evaporation on to Ni collector 8=15245
emitter thermionic converter, performance with CsF additive 8=15244
Fermi surface 8=17887
field-emitted electron distrib. and work function 8=5413
film, adsorpt. of N₂, sticking probability temp. dependence 8=14396
film, interact. with and adsorpt. of H₂O vapour, rel. to catalytic activity 8=14405
films, sputtered and condensed on cleaved NaCl, structure rel. to temp. 8=4759
heavy ion penetration along low index channels, effect of atomic thermal motion 8=2024
ion emission due to laser irradi., masses, energies and numbers 8=13948
micromosaic block size and misorientation in zone-melted crystals, impurity depend. 8=8470
microstructure, thermochemically deposited sheet deformation studies 8=8471
n irradi., changes in mech. props. rel. to changes in microstruct. 8=21998
with non-metallic traces, effects on yield strength ductile-brittle transition, hardness and microstruct. 8=17835
nucleation of mica substrate for Ag film evaporation 8=13087
(112) and (100) oriented crystal surfaces, surface potentials of CO 8=21910
(100) surface, electron emission under proton bombardment 8=18249
permeation rates of O₂ and H₂, pressure, thickness and temp. dependence 8=4958
phonon drag effects below 2.6°K 8=5106
polycrystalline, U coated, photoelectric work function 8=5408
polycrystals, adsorpt. of CO 8=17169
proton scatt. and channeling 8=4997
recrystallized, impurity effects on strain hardening 8=22380
reluctance field dependence, 1.8-35°K rel. to K_{öler} law deviations 8=22750
ribbons exposed to water, low-energy electron bombardment 8=21907
specific heat in 1600-2900°K range 8=17528
specimen preparation for field-ion microscope 8=15354
stacking faults, electron micr. obs. 8=1984
substrate for growth of Si films 8=4758
surface, accommodation coeffs. of inert gases 8=4734
surface Ba ionization coeff. meas. 1800-2600°K 8=18288
surface interactions with I₂ vapour 8=18699
surface, translation accommodation of Ar, O₂ and N₂ mols. 8=17113
surface, trapping energy calc. for inert gas ions 8=13081
thermal desorption of inert gas ions 8=9280
thermal desorption of inert gases 8=17701
thermionic electron emission saturated, in Cs vapour 8=18268
thermionic emitter cesiated surface evaluation 8=22717
two-band conduction model for resistivity, contradictions 8=2107
vacancies and interstitials, calcs. 8=22179
vapour deposited emitter in thermionic converter with Mo collector 8=15230
vapour deposited from WCl₆, work function rel. to preferred orientation and surface treatment 8=18248
wire, recrystallized, prep. for transmission e-microscopy 8=17267
wires, secondary recrystallization, from electron optical meas. based on emission 8=1765
wire, Young's and shear moduli meas. 8=5003
work function differences between (110), (211), (100) and (111) planes 8=18244
work function distrib. when chem. vapour deposited, rel. to patch effect 8=18250
work function, effect of Cs additives 8=18251
work function of (100) surface 8=13928

Tungsten—contd

- work function of surface, influence of CsF adsorption 8=18270
- X-rays, L_{α} , film targets direct and fluoresc. components 8=14179
- X-ray production on p-bombardment 8=4995
- Fe-W systems, α - γ equilib. 8=4709
- from H reduction of WF_6 , effect of F impurities on high temp. grain stability 8=17294
- N_2 adsorption on film, sticking probabilities obs. 8=4761
- β -W, V_5Si type tetragonal modifications 8=4888
- W^{185} , in tungstate soln. aggregation study 8=21607
- W^{185} radioisotope distribution and stratospheric transport processes 8=23300

Tungsten compounds

- alloys, anti-oxidation metallurgy 8=23779
- tetrathiotungstates, i.r. spectra 8=2438
- tungstate soln. aggregation study, by W^{185} 8=21607
- tungstates, ($ZnWO_4$ -type), Cr^{3+} third crystal-field constant meas. 8=16974
- W oxide bronzes, struct. evolution with temp., phase stability 8=17048
- W_2B , superconductivity transition temp. and d-shell 8=2164
- WC, heat content valves, entropy, specific heat 8=8643
- WC pistons, cemented, crushing strength 8=8870
- WC, strain and crystallite size, compressed at high pressure 8=13612
- W_2C , rhombic modifications rel. to annealing temp. 8=8561
- $W(CO)_6$, structure determ. by electron-diffr. 8=12236
- W-x at.% Co alloys, x=1.05, 0.87, 0.54, mag. props., 27.300°K 8=14007
- WF_6 , liq., molec. motion, F^{19} relax. 8=12930
- WF_6 , structure determ. by electron-diffr. 8=12236
- W- La_2O_3 system alloys, thermoemission obs. 8=22716
- W-Mo-UC phase diagrams and ternary peritectics, obs. 8=9710
- W-O system, free-energies of formation changes 8=14388
- W-O system, intermediate phases on reduction by gases, O_2 conc. cell method 8=18683
- WO_3 , Pt-activated, films, as gas detector 8=13098
- WO_3^{2-} anion, pH depend. of adsorpt. of Fe_2O_3 powder 8=8342
- WO_4^{2-} ion in HCl, polarography 8=18736
- W-Re alloys, deposition by H reduction of WF_6 and ReF_6 , struct. and props. 8=17100
- W-Re alloy, VR 20, sp. ht. in 1600-2900°K range 8=17528
- W-Re alloys, work function of (100) surface 8=13928
- W-Re-C, superconductivity 8=22566
- WS_2 , single crystal, thermistor characts. 8=18092

 - UAl₃ coatings on U, phase struct. and protection against U oxidation 8=21892
 - UAu, dissociation energy 8=16366
 - U-C alloys, around UC comp., high-temp creep and hot extrusion 8=22396
 - U-C system phase diagrams 8=21860
 - UC, high-temp. oxidation obs. 8=23115
 - UC₂, n. diffr. exam. rel. to mag. props., cryst. struct. and phase change 8=1810
 - UC rod, temp. coeff. of resonance integral 8=12019
 - UC, self-diffusion parameters, appl. to activated processes 8=22164
 - UC-Fe-Cr system, phase equilib. and compatibility relns. 8=21861
 - UC-Fe-Ni system, phase equilib. and compatibility relns. 8=21861
 - UC-ZrC, W clad, vacuum emission stability, effect of temp. to 2473°K 8=18267
 - U-Cr alloys, martensite nucleation and growth in β - α transform., temp. dependence 8=4717
 - UF₃, atomic structure from n diffraction 8=13297
 - U₂F₆, body-centred, cryst. structure 8=13298
 - UF₆, determ. of Mo by atomic absorpt. spectroscopy 8=18776
 - UF₆, gaseous, thermal diffusion factor and mol. interaction pot. 8=7944
 - UF₆, liq., molec. motion, F¹⁹ relax. 8=12930
 - UF₆, structure determ. by electron-diffr. 8=12236
 - UF₆M (M=Li, Na, Cs, K, NH₄, Rb, Ag, Tl), paramag. reson. absorpt. 8=14127
 - UFeO₄, magnetic meas. and neutron diffraction exam. 8=18353
 - < U, H > solid soln. thermodynamic props. and comp. \leq 150 atm and 860°C 8=8190
 - β -UH₃, ht. capacities from 1.4-23°K 8=8644
 - UH₃, thermodynamic props. and comp. \leq 150 atm and 860°C 8=8190
 - U₃, paramag. and antiferromag. states, P²⁷ quadrupole spectrum 8=9469
 - U₄, phase transition rel. to α irradi. obs. 8=17105
 - U-M alloys, (M=Fe, Al and Si), irradiated, phase comp. changes rel. to resistivity meas. 8=8283
 - U-1.5wt% Mo struct. transforms. rel. to cooling rate from γ phase, obs. 8=8285
 - UN, diffusion of N 8=14504
 - U₂N₃, calc. of heat of formation 8=9660
 - UN-ThN pseudobinary system, lattice parameters 8=22044
 - UN_(s) + U₍₁₎ system, equilib. pressure of N and thermo-dynamic props. 8=18646
 - U-Nb-Zr alloy, anal. by X-ray absorpt. edge technique 8=18792
 - U-Ni-C system, phase equilib. and compatibility relns. 8=21861
 - U-O system, non-stoichiometric oxides 8=21788
 - U-O system phase diagrams 8=21860
 - UO₂, antiferromagnetic phase transition, magnetic point groups and selection rules 8=9402
 - UO₂ burnup, mass spectrometric determ. 8=7344
 - UO₂, calc. of temp. depend. shear modulus 8=13610
 - UO₂ columnar grain microstructure 8=21997
 - UO₂, conductivity, electrical 8=18089
 - UO₂, Debye-Waller factors, anharmonic temp. contrbs. 8=13299
 - UO₂ dissoln. in acid media 8=18691
 - UO₂:Dy₂O₃, dispersions, behaviour in steep temp. grad. 8=4694
 - UO₂, enthalpy of fusion determ. 8=21750
 - UO₂:Eu₂O₃, dispersions, behaviour in steep temp. grad. 8=4694

Uranium compounds—contd

- UO_2 -fueled Mo emitters, irradi. studies rel. to in-core converters 8=15226
 UO_2 , irradi., microstruct. 8=8469
 UO_{2+x} lattice defects rel. to chem. props. and O self-diffusion 8=23113
 UO_2 , magnetic excitations 8=22888
 UO_2 , molec. geometry 8=7550
 UO_2 , porosity effect on thermal conductivity 8=13397
 UO_2 powder compacted fuel, effective thermal cond. and structural change 8=13398
 UO_2 powders, sintering behaviour rel. to particle size and shape 8=21834
 UO_2 , reactor fuel, material buckling and reaction rates 8=20904
 UO_2 as second core in FR2 reactor, efficiency 8=4013
 UO_2 , with small amounts of yttria or lanthana, equilibrium oxygen pressure over solid solns. 8=13044
 $\text{UO}_2\text{:Sm}_2\text{O}_3$, dispersions, behaviour in steep temp. grad. 8=4694
 UO_2 , spin lattice interaction, first-order phase transition theory 8=22886
 UO_2 , spin-lattice interaction, ground-state and spin-wave excitations 8=18437
 UO_2 , surface self-diffusion meas. 8=13413
 UO_2 swaged compacts, equiaxed grain growth under temp. grad. 8=8255
 UO_2 , thermal cond., depend. on temp. and temp. gradient 8=8665
 UO_2 , thermal diffusivity meas. 8=1898
 UO_2 thermionic emitter-filling, radiation tests 8=15241
 UO_2 , U ions diffusion, lattice and grain boundary, 1900–2150°C 8=13414
 UO_{2+x} and U_3O_{8-x} , carrier mobility investigation 8=18090
 UO_2 , W clad, vacuum emission stability, effect of temp. to 2473°K 8=18267
U–O–C system phase diagram 8=21860
 $\text{UO}_2(\text{CO}_2)_2$, dil. soln., low temp. luminesc. spectrum 8=18618

Vacuum polarization. See Quantum electrodynamics.

Vacuum pumps

- automatic e.m. valve with variable delay 8=7955
 baffle, for reducing stray currents in sputter-ion pump vacuum chambers 8=21539
 charcoal adsorpt. pump in adiabatic vacuum calorimeter, for 4.2 to 300°K 8=17511
 conference 8=21531
 cryogenically cooled plane, efficiency meas., expt. apparatus and techs. 8=7950
 cryogenically cooled plane, factors affecting efficiency 8=16729
 cryopump, design and performance 8=15134
 cryopumps, return probability of molecules 8=7954
 cryopump for ultrahigh vacuum 8=7951
 cryosorption, performance for two types of molecular sieve 8=12714
 diffusion, fluid film thickness meas. 8=16728
 diffusion pumps using polyphenyl ether, unrefrigerated, for 10^{-9} torr 8=7953
 diffusion pumps, polyphenyl fluid film thickness, spectrophotometer for continuous meas. 8=7949
 getter-ion, electrostatic, design 8=1496
 getter-ion, electrostatic, performance 8=1495
 getter-type, walls constructed from getter material 8=21536
 ion-sorption, cold-cathode, operation and performance 8=7956
 oil diffusion, back-streaming fluid analysis 8=9746
 oils, secondary electron emission 8=13942
 omegatron efficiency, comparison of oil-free and oil diffusion pumps 8=21538
 Penning system, influence of pre-evacuation cycle 8=16725
 speed meas., from mol. gas flow in cylindrical tube 8=1453
 speed measurements, high vacuum 8=7957

Vacuum pumps—contd

- sputter-ion, in field-ion microscope, gas contamination 8=6338
- test header arrangement, correction using impact pressure transducer 8=16730
- 2-pump system, theoretical analysis of factors affecting pressure 8=21537
- ultrahigh, isolation from oil, e microscopic obs. of molecular sieves, use of optical baffle 8=21535
- vapour pump, improvement using dual-expansion nozzle at elevated temp. 8=21533
- N-1S-2 oil-vapour pump, use of polyphenyl ester 8=7952
- Ti getter, evacuation of t.w.t. 8=16731
- Zr-Al getter cartridge for u. h. v. systems 8=16726

Vacuum technique

- activated U getter for rare gas lasers 8=15452
- bell-jar system, rapid cycling 8=7970
- channel multiplier, life tests in ultra-high vacuum 8=15336
- chemisorption and physisorption, Conference, Rome, March 1967 8=8333
- cleaving device, in ultra-high vac. 8=21926
- conference 8=21531

Valves, thermionic. See Electron tubes**Vanadium**

- addition to 'Malcolloy', a Co-Al alloy, effect on mag. props. 8=22793
- anomalous properties rel. to H₂ content 8=5186
- Compton effect and thermal agitation 8=13300
- diffusion, summary of ORNL work 8=17593
- diffusion of V-48 and Ti-44 in Ti 8=17587
- ductility rel. to terminal solubility of H 8=5088
- hydride phase, solubility of H₂, isotherm 8=1924
- ions, VI hyperfine-broadened line profiles rel. to Arcturus spectrum 8=23527
- L-emission spectra, fine structure 8=14270
- N interstitials, calcs. 8=22179
- solid solns. in Cu, mag. moments 8=22760
- superconducting local field mapping, n. m. r. studies 8=2179

Vanadium—contd

- superconductivity under high pressure 8=9060
- H₂ definition, spectral-isotopic method 8=9743
- V:Fe⁵⁷, Mössbauer effect, recoil-free fraction and Doppler shift meas., localized modes 8=13338
- V²⁺ in MgF₂, phonon-terminated stimulated emission and i. r. fluorescence 8=2489
- V²⁺ and Ni²⁺ superexchange interaction in MgO 8=9355
- V²⁺ in SrF₂, e. p. r. study 8=9446
- V³⁺ ions in Al₂O₃ (corundum), longit. relax. times by spin echo method 8=5541
- V⁴⁸, self-diffusion 8=17592
- V⁵¹, 10-80 MeV He⁴ ions, recoil range 8=13489
- V⁵¹ in vanadates, quadrupole coupling constants 8=9474
- V(III) hexahydrated ions, electronic struct. 8=16995
- X-ray emission bands fine struct. rel. to e band struct., obs. 8=18527

Vanadium compounds

- vanadates, V⁵¹ and Na²³ quadrupole coupling constants 8=9474
- vanadites, cryst. growth and elec. transport props. 8=4819
- vanadium (III) tris(salicylaldehydes) and tris(salicylaldehyde) complexes, n. m. r. obs., synthesis and stereochemistry 8=16343
- V complex, di(tetraethylammonium) tetrachloroxovanadate (IV) crystal structure 8=17422
- V₃Al superconductivity, Si contamination effects 8=17976
- VAlu₃, magnetic props., atomic environment effect 8=9294
- V₃Au superconductor, atomic ordering 8=18475
- VBr₄, structure determ. by gas-phase e-diffr. 8=16303
- [V(CN)₆]³⁻—¹⁴CN⁻, isotope exchange kinetics 8=23088
- [V(CNS)₆]³⁻—¹⁴CNS⁻, isotopic exchange rel. to structure study 8=23087
- [V(C₂O₄)₃]³⁻—¹⁴C₂O₄²⁻, radiosotopic exchange 8=21796
- V(CO)₆, e. s. r. spectrum at liq. He temps. 8=18438
- VC₁₄, structure determ. by gas-phase e-diffr. 8=16303
- VCr₂Se₄, structural, electrical and thermal parameters rel. to d-orbital interactions 8=5391
- VFe, atomic spin values by polarized n-diffr. 8=18354
- V-Fe-Si alloy, D phase structure determ. 8=17403
- V-Ga alloys, anodic oxidation rel. to phase anal. 8=8286
- V₃Ga Fermi level motion rel. to normal-state susceptibility temp. depend. 8=5118
- V-H alloys: V anomalous properties rel. to H₂ content 8=5186
- V₃In superconductivity, Si contamination effects 8=17976
- V₂MoO₈, crystal structure 8=17425
- VN, atomic state, by absolute meas. of X-ray scattering factors 8=13030
- VN, electronic state from X-ray diffr. intensity meas. 8=22414
- V(O) bisaromatic complexes, e. s. r. spectra 8=12311
- VO phthalocyanine, luminesc. singlet-singlet transitions 8=18591
- VO²⁺ in NH₄Cl, e. s. r. studies 8=5542
- VO, VO₂, V₂O₃ dielec. -metal phase transition rel. to VO₂, change in optical constants, for radiant self-stabilization of temp. 8=23019
- VO₂, domain structure and twinning in low temp. monoclinic phase 8=4889
- VO₂ high-speed solid-state thermal switches 8=22616
- VO₂, phase transformation 8=4719
- VO₂ tetragonal phase, thermal expansion from lattice meas. at 78-415°C 8=13385
- VO₂, V⁵¹ n. m. r. spectra, rel. to crystalline field theory of V⁴⁺ ions in VO₂ 8=9411
- VO₃ anion, pH depend. of adsorpt. on Fe₂O₃ powder 8=8342
- V₂O₅:Cr, e. s. r. spectra 8=9421
- V₂O₅, diffuse reflection spectra 8=18564
- V₂O₅, LEED study of surface 8=21870
- V₂O₅:Mn crystals, e. s. r., 77°K 8=14114
- V₂O₅ single crystals, optical props. 8=23020
- V₂O₅ (010) surface structure transitions, e-induced in LEED expt. 8=4733
- V₃Si, cubic → tetragonal martensitic transform., low temp. 8=8273
- V₃Si Fermi level motion rel. to normal-state susceptibility temp. depend. 8=5118
- V₃Si, superconducting props. 8=2178
- V₃Si, superconductivity, band structure 8=5216
- V₃Si type crystals, tetragonal modifications 8=4888
- V₃Si type in cubic phase, elastic const., temp. depend. explanation 8=13611
- V-V₃Si, supercond. transition temp. and homogeneity regions 8=9061
- V₃X type, strong-coupling superconductivity 8=2177

Van Allen radiation. See Atmosphere/radiation belts.**Van de Graaff generators.** See High voltage production; Particle accelerators/linear.**van der Waals forces.** See Atoms; Kinetic theory; Molecules/intermolecular mechanics; solids.**Vaporization**

- cylindrical shell containing flowing fluid 8=152
- cylindrical shell, orthotropic finite, dynamic response to arbitrary press. field 8=19508
- cylindrical shells, thin orthogonally stiffened, boundary conditions effect on flexural vibs. 8=149
- cylinder, thin-walled, circumferential wave reflection at slit 8=6133
- cylindrical shell, long mobility obs. 8=6121
- cylindrical, wind-induced lateral vibs., statistical soln. 8=3022
- dielectric cylinders, between reflecting planes vibrations 8=10699
- double-beam system, elastically connected, damped response to cyclic moving load 8=151
- double-plate system, elastically connected, resonance conditions with cyclic load 8=143
- elastic plates, thin, rib-stiffened carrying concentrated masses 8=19496
- fibres, electrostatically driven in vibroscope, polarizing voltage effect on frequency 8=6124
- finitely deformable structures, natural vibs. 8=15031
- flat plate, response to acoustic excitation in a gas 8=20884
- flexible liq. filled cylinder, rel. to press. distrib. and bubble formation 8=16781
- floating plate, loaded 8=6126
- with harmonic excitation, use of mass as perturbation parameter 8=19505
- homogeneous sphere, radial oscs. 8=146
- horizontal fine wire, effect of vibration on heat transfer 8=19649
- hysteretic structures, multidegree-of-freedom, random vib. 8=3017
- liquid sphere, influenced only by gravity, frequency spectrum 8=4504
- mechanical impedance, driving point, new method of meas. 8=19502
- mechanical oscillators, thermally excited 8=10697
- membrane, circular, resonant response demonstration 8=10691
- membrane, general solns. 8=10695
- nonlinear damped oscillations, elliptic functions 8=6122
- oscillators, adjustable i.f., compact 8=19495
- panels, multimode response to sonic booms, normal and travelling 8=6123
- paraboloidal bar, longitudinal vib. 8=19512
- plate, damping of transverse normal modes 8=19492
- plates, elastic, large deflexion analysis 8=10687
- plate, finite, forced vibr. in plane of supersonic flow 8=10686
- plates, flexurally, radiation statement, by damping 8=3019
- plate in narrow channel, flow-induced vibs. 8=19497
- plate, in supersonic flow, parametric self-excited vibration 8=10685
- plates of complicated shape, fundamental freq. calc. by complex variable theory 8=154
- plates on elastic foundations 8=10549
- plates, upper and lower bounds for freq. 8=15036
- quartz plates, flexural and shear, anharmonic thickness-twist overtones 8=15045
- reactor structural damage due to vibr. of high pressure gas 8=20885
- rectangular AT-cut quartz plates, with partial electrodes 8=19501
- rings and discs, uniform, radial and torsional vibs. 8=10693
- rings, discs, and rods, arbitrary profile, resonant freqs., modes and stress distributions 8=10694
- rod, heated nonuniformly, but symmetrically, stress distribution 8=10688
- rod, tapered, longitudinal vibrations, Poisson's ratio not necessary 8=19484
- rod with variable cross section, forced, combination of reduction and successive approx. methods 8=19506
- rotating annuli, increase in natural freqs. by induced thermal membrane stresses 8=19503
- rotor, nonlinear flexural-torsional 8=3021
- sandwich, and homogeneous spherical shells, axisymmetric obs. inc. effect of thickness-shear deform. 8=19488
- shell, circular, thick walled, radial oscillations, analysis 8=144
- shell of revolution, symmetrical vibrations 8=10690
- shells, fluid filled spherical and spheroidal 8=6125
- shells of revolution free vibs., ring finite element analysis extension 8=10696
- simple beam with tuned viscoelastic dampers, response and damping 8=3018
- spherical caps., approx. solns. for freqs. of axisymmetric vibs. 8=19489
- spherical caps, torsional vibs. 8=19490
- in spinning membrane, soln. for nonlinear, flexural, asymmetric waves 8=19498
- stringed instruments, analysis of bridge behaviour 8=15070
- "summed and differential harmonic" oscillation in non linear vibratory systems, multiple-degrees of freedom 8=3024
- thick membranes, effects of flexural stiffness, shear deform. and rot. inertia 8=19500
- two-dimensional regions with irreg. boundaries, construction of eigenfunctions 8=19510
- 2-layered plates, flexural and extensional vib., theory 8=148
- two-mass vibrator-hammer, contribution to theory 8=10524
- wall, nonuniform, sound radiation 8=3049
- wave machine, dispersion, reflection and eigenfrequencies 8=10937

Vibration, molecular. See Molecules/vibration**Vibrations**

- acoustic in high pressure gases in a reactor, meas. with piezoelectric transducer 8=20885

Vibrations—contd

- air in tube, forced and finite amplitude 8=16705
 amplitude modulated, mechanical demonstration apparatus 8=10679
 bar, uniform straight, and effects on lateral freqs. 8=150
 centrosymmetric cubic cryst. model, normal-mode rel. to elastic const. 8=5002
 of circular cylindrical shell closed at one end by elastic plate, natural freqs. and mode shapes 8=15034
 circular plate, weights or bar on outer boundary 8=15039
 control by architectural acoustics, conference 8=3076
 cylinder, solid isotropic conducting, magneto-elastic 8=13499
 in cylindrical shell, long, mobility obs. 8=6121
 cylindrical shells, sandwich, nonaxially symmetric 8=19507
 damping structure, viscoelastic material armoured with rigid sheath 8=19494
 elastic bodies, axially symmetric, stationary dynamic problems within range of very short waves 8=10537
 elliptic plates, free, large amplitude 8=6045
 of flexible liq. filled cylinder, rel. to press. distrib. and bubble formation 8=16781
 flexural, perfectly conducting solid circular in presence of uniform mag. field 8=15032
 with harmonic excitation, use of mass as perturbation parameter 8=19505
 linear, complementary variational principles 8=10692
 linear systems, response to stochastic impulses, non-stationary 8=6128
 loaded elastic continuum 8=23
 longitudinal, of paraboloidal bar 8=19512
 mechanical, use of vibrators in adjustable l.f. oscillators 8=19495
 metals on solidification, rel. to nucleation 8=4796
 metals, supercooled, rel. to dynamic nucleation 8=21760
 motion of body over tangentially vibr. surface allowing for friction 8=19493
 natural, of simple elastic structures, effect of initial finite deformation 8=15031
 organ pipes, self excited 8=10749
 of orthotropic stiffened plates and grillages, analysis 8=49
 parametrically excited random vib. system, almost sure stability conds. 8=19499
 particle restrained by two springs 8=10681
 plate, flexural waves, oblique incidence on slender obstacle 8=19521
 plate, infinite, driven by point source, near sound field 8=10725
 in plate in narrow channel, flow-induced 8=19497
 plate in plane supersonic flow, nonstationary parametric and self excited 8=15033
 plates, thin elastic, under random loading, and sound radiation 8=10729
 pressure field, random continuous, representation by discrete set of point excitations 8=19509
 random, of multidegree-of-freedom hysteretic structures 8=3017
 rigid disk on isotropic elastic plate calc. 8=3015
 sandwich, spherical caps with clamped edges, nat. freqs. inc. effect of thickness-shear deform 8=19488
 shells with variable curvatures, harmonics 8=19387
 solid friction, high frequency behaviour 8=3023
 of spherical caps, approx. solns. for freqs. of axisymmetric vibs. 8=19489
 springs connecting air-suspended discs, wave motion demonstration 8=10678
 superhigh-freq., (Ti-Mg) and (Ti-Be) oxide energy absorbers 8=10458
 thickness-shear in AT-cut quartz plates with partial electrodes 8=19501
 torsional in rigid disc on surface of elastic half-space 8=10689
 torsional, of spherical caps and circular plates 8=19490
 transverse of a moving thin rod 8=19485
 two-dimensional regions with irreg. boundaries, construction of eigenfunctions 8=19510
 2-layered plates, flexural and extensional, theory 8=148
 universe models, normal modes and stability 8=14732
 vibrators and librators perturbed by collisions 8=100
 wave machine, dispersion, reflection and eigen-frequencies 8=10937
 α -Fe, (b. c. c.), torsional, impurity-induced internal friction peak (Snoek's peak), anisotropy 8=13572
 MnHg, atomic thermal vibrations amplitudes at 298°K 8=8236
 Si-Fe, (b. c. c.), torsional, impurity-induced internal friction peak (Snoek's peak), anisotropy 8=13572
 Zn crystals, rel. to growth 8=8430

excitation

- eye, by humming, strobe vision effect 8=20128
 fibres, electrostatically driven in vibroscope, polarizing voltage effect on frequency 8=6124
 friction-induced, critical velocity theory 8=10682
 thermal, of mechanical oscillators 8=10697
 Al plates of constant cross section, high order Lamb waves 8=19491

measurement

See also Seismology.

Vibrations—contd**measurement—contd**

- mechanical, combination and mechanical resonance 8=142
 oscillators, minimum detectable disturbance, meas. by optical resonator 8=10683
 strings, stiff, normal frequencies, device 8=6171
Vibronic states. See Molecules/electronic structure; Molecules/vibration
Vidicons. See Electron tubes.
Virial coefficients. See Equations of state.
Virtuons (virtual phonons). See Crystals/lattice mechanics.
Viscoelasticity
 See also Plasticity.
 advances in applied mechanics, book IX 8=16747
 beams, stress waves propag. and reflection 8=14954
 biwaves, loading and unloading in elastic-visco-plastic body, strain hardening effect on propag. 8=17718
 circular plates, effect of random temperature distributions 8=10572
 contact problem in linear theory 8=10575
 crack propagation 8=2045
 dislocation losses in strain field 8=16617
 displacement in infinite slab due to transient twisting forces on surface of cylindrical cavity 8=19404
 dynamic shear, in model materials, thermistor analog study 8=62
 Earth model, elastic and viscoelastic behaviour 8=14948
 elastic-viscoplastic semi-infinite body, loading and unloading biwaves, numerical analysis 8=10565
 elastic-viscoplastic semi-infinite body, propag. of loading and unloading biwaves 8=10564
 elastic-visco-plastic semi-space, plane biwaves 8=10569
 elastic-visco-plastic waves, longitudinal, in finite bar, resonance 8=10568
 elastomer, tensile test and linear props, obs. 8=22400
 flow of fluids through porous media 8=21573
 fluid Couette flow, linear instability 8=7869
 fluid, decay of isotropic turbulence, non-Newtonian effects 8=12645
 fluid flow through porous media 8=1446
 of fluid, plane Poiseuille flow, effect on hydrodynamic stability 8=16632
 fluids, restrictions on velocity probes 8=12603
 fluids, turbulent heat-transfer characts. 8=4426
 linear fluids, Maxwell type, flow near osc. or accelerating plate 8=21559
 liquid film motion under gravity 8=12736
 liquids, Brillouin scattering obs. 8=16839
 liquids, linear, steady, two-dimens. flow 8=12725
 liquids, turbulent heat flow 8=1510
 macromolecular networks 8=21209
 materials, calc. of acceleration waves 8=10570
 nonlinear, generalized creep function and inversion 8=61
 nonlinear, generalized superposition principle 8=60
 nonlinear, stress/deformation relation 8=2929
 polybutylmethacrylate shear pliability freq. depend., obs. 8=22404
 polyisobutene shear pliability freq. depend., obs. 8=22404
 polymer melts 8=16748-9
 polymeric bodies, meas. method based on Volterra operator 8=13616
 polymers, crosslinked, theory 8=8873
 polymers, and rheology, temp. dependence 8=2071
 polymers, and structure 8=8869
 polystyrene 8=8878
 polystyrene in chlorinated biphenyl solns., 40 MHz 8=12818
 polystyrene solns., mol. wt. depend. 8=8030
 relaxation, Isakovitch-Chaban theory 8=16771
 shear waves in finite strain at surface of a half-space 8=15035
 spherical wave, propag. and reflection in viscoelast. medium, closed form soln. 8=10567
 static and dynamic props. using a torsional pendulum 8=8880
 stress waves, plane, produced by moving load in elastic plastic medium 8=10566
 textile fibres 8=17846
 theories, experimental evaluation 8=1535
 torsion of conical rod 8=14956
 turbulence, fine-grained, isotropic, visco-elastic character 8=4441
 waves in viscoelastic media 8=10709
 S, polymeric, relax. mechanisms 8=4267
 Se films, evaporated, properties, obs. 8=21888

Viscometers

- double cone, for non-Newtonian liquids, theory 8=12821
 for glass-forming oxides melts, high temp. and press. 8=8022
 pressurized capillary for liquids 8=21633
 radioactive, sinking ball principle 8=21631
 rotating Cartesian-diver 8=4548
 single rotating cylinder for plastic laminar flow 8=21632

Viscoplasticity. See Plasticity**Viscosity**

- aerosol separation, viscous momentum transfer effect 8=21736
 butyl phthalate, compared with dielec. and spin-lattice nuclear relax. 8=9459

Viscosity—contd

- critical mixtures, nonlinear effects in shear viscosity 8=8163
- dislocation losses in strain field 8=16617
- equilibrium layers, turbulent, eddy viscosity 8=16640
- in Fermi liqs., nearly ferromag. 8=2994
- fluid, effect on gravity waves, internal, at critical level 8=7887
- fluid, single-component, new eqn. 8=1438
- fluid, turbulent, associated with transfer of mean square vorticity across energy spectrum 8=12635
- glasses, in range 10^{12} to 10^{14} poises, viscosity-temp. data, fibre elongation approx. 8=17725
- laminar flow around semi-infinite obstacle 8=7864
- at liquid-gas critical point 8=21745
- MHD, due to rotating sphere 8=15370
- MHD turbulent flow friction coeff. in ducts 8=6356
- negative, production in presence of buoyancy and shear 8=21441
- oceanic and atm. motions, large-scale 8=23237
- polymer solutions, concentration var., compression of chains 8=4545
- polymer solns., time-depend. charges 8=8023
- polymers, homo- and graft co-, in soln., intrinsic viscosity and free energy 8=1536
- Reynolds number determ., magnetic 8=6352
- spherically symmetrical molecules 8=7630
- suspension of solid spheres, concentrated 8=8149
- viscous shear motion, finite propag. speed 8=239
- water, surface boiling in vertical tube, local fluid friction 8=12989

gases

- acetone, 30-200°C, for intermolecular potential information 8=21523
- boundary layer, compressible, kinematic eddy analysis 8=21489
- chloroform, 30-200°C, for intermolecular potential information 8=21523
- in critical region 8=4490
- diamagnetic mixtures, Senftleben-Beenakker mag. field dependence 8=21524
- diatomic, low-temp. in stationary mag. field 8=7919
- in diffuser, resultant force on sphere due to press. and shear forces 8=16717
- dilute, diamagnetic gas in external mag. field 8=12703
- ethyl alcohol, 30-200°C, for intermolecular potential information 8=21523
- flow behind detonation, friction effects on transition to steady flow 8=15058
- helium, effect of organic vapour molecules, for determ. of molec. dims. 8=1485
- hydrogen, effect of organic vapour molecules, for determ. of molec. dims. 8=1485
- induced drag of elliptically loaded lifting line in exponentially sheared flow in vertical dirn. 8=16677
- inert, binary mixtures, Sutherland-Wassiljeiva coeffs. 8=7940
- ionized, anisotropy effect on plane parallel flow in coplanar mag. field 8=16494
- ionosphere, model for e.m. wave propag. effects 8=19903
- methyl alcohol, 30-200°C, for intermolecular potential information 8=21523
- mixtures, calc. from potential parameters 8=21522
- molecular, in perpendicular stationary and varying fields 8=21493
- multicomponent mixts., Chapman-Cowling third order bracket integrals 8=16713
- multicomponent mixtures, additional matrix elements for third approx. 8=12700
- plasma, in strong mag. field influencing particle collisions 8=16482
- polyatomic, mag. fields effects, 290°K 8=1484
- Rayleigh instability theory 8=4546
- stagnation point laminar boundary layers and shock layer eqns., soln. in presence of chem. reactions 8=16671
- Ar plasmas, partially ionized 8=7734
- Cs vapour, in temp. range 1000°K to 2400°K, meas. by transpiration method 8=16714
- Cs vapour, from 800 to 2000°K, meas. by transpiration tech. 8=12702
- H₂, partly ionized, calc. 8=12701
- He, low-temp., high press. 8=4493
- He-N₂ mixtures, low-temp., high press. 8=4493
- N₂, low-temp., high press. 8=4493
- NH₃-methylamine mixtures 8=4492

liquids

- See also Lubrication; Superfluidity.
- acoustic wave propagation, non-Newtonian viscous liquid 8=16830
- alcohol-water mixtures and structure of water 8=4549
- n-alkane mixtures, congruence principle 8=8024
- aniline in CS₂ and CCl₄ solution, effect on nuclear relax. time 8=8126
- cellulose derivatives solns., Newtonian 8=8025
- cyrogenic liqs, correl. with thermal cond. and self-diffusivity 8=15132
- dynamic shear impedance for low visc., meas. at u.s. freqs. 8=4547
- elastic solid permeated with non-Newtonian fluid 8=19381

Viscosity—contd**liquids—contd**

- elastico-viscous fluid, drag on oscill. sphere 8=21557
- flow in circular pipe with absorbing walls 8=21630
- flow in rectangular open channel 8=7975
- flow in a tube at const. temp. 8=12734
- flow, numerical method of soln. 8=21626
- glass-forming oxides, molten, high-temp., high-pressure viscometer obs. 8=8022
- jet of infinite σ in magnetic field, oscills. 8=1518
- high, theory rel. features of n.m.r. 8=4619
- hydrocarbons, thermal props. from similarity theory 8=21646
- hydroxyethyl cellulose aqueous soln, drag coeff. on falling spheres 8=12724
- intrinsic, determ. from meas. of one value of relative viscosity 8=16809
- methane-propane mixtures, at low temp. and high press. 8=12819
- Navier-Stokes soln. for surface waves 8=7983
- nitrate melts, binary mixtures of Ca(NO₃)₂ and MnO₃ (M = Na, Cs, Rb, K), supercooled, rel. to relax. processes 8=1586
- non-Newtonian, theory of double cone viscometer 8=12821
- phosphates, molten, rigid sphere model 8=7999
- plastic laminar flow, automatic viscometer 8=21632
- polyelectrolytes in salt solns., excluded vol. effect 8=12810
- polyethylene oxide aqueous soln, drag coeff. on falling spheres 8=12724
- polymer solutions, theory tests 8=8029
- polymer solns., drag-reducing effects in turbulent flow past cylinders 8=16754
- polymer solns., flow, conc. depend. of activation energy 8=16807
- polymer solns., influence of intermolecular hydrodynamic interaction, and streaming birefringence 8=4505
- polymer solns., intrinsic, determ. from meas. at a single point 8=16808
- polymer solns., Newtonian 8=8025
- polymer solns., polynomial expansion of log relative viscosity 8=16805
- polymer solns., rel. to sedimentation coeff. 8=12823
- polymers, and non-Newtonian flow 8=16759
- polymethacrylic acid in alcohol-water solution 8=12822
- polymethacrylic acid solns., intrinsic 8=12817
- polystyrene and poly(methyl methacrylate) graft copolymer solns. 8=8027
- polystyrene conc. solns. dependence on molecular weight and concentration 8=8026
- polystyrene in chlorinated biphenyl solns., 40 MHz 8=12818
- polystyrene solns., mol. wt. depend. 8=8030
- poly(vinyl acetate) conc. solns. dependence on molecular weight and concentration 8=8026
- polyvinyl alcohol in aq. salt solns. 8=21634
- propanol-H₂O mixtures, with NaCl in soln. 8=4606
- pyridine in CS₂ and CCl₄ solution, effect on nuclear relax. time 8=8126
- radioactive viscometer, calibration and accuracy on silicone oil sample 8=21631
- Rayleigh instability theory 8=4546
- rubber soln., effect of amines 8=21625
- shock wave propagation 8=168
- silicate melts, Newtonian flow and bond rearrangement 8=21628
- sphere rolling in closed-end fluid-filled tube, incompressible fluid drag force 8=21629
- surface wave impedance calc. 8=16775
- ultrasonic transducer meas. 8=8028
- viscometer-gelation timer 8=16810
- volume, rel. to u.s. compression waves absorpt. and vel., theory 8=16804
- water, pressure to up 230 Kg/cm² and temp. 12.5-108°C 8=8021
- water, 25°-150°C 8=21633
- wave propag., symmetric modes, in cylindrical rigid and elastic conduits 8=16773
- Ar, shear viscosity coeffs., elec. meas., 0-200 Kg/cm² and 86-146°K 8=12820
- B₂O₃, molten high-temp. high-pressure viscometer obs. 8=8022
- D₂O at pressures 1-1200 kg/cm², 4-100°C 8=26806
- H-bonded, shear compliance and free volume 8=1537
- He³, pressure dependence, spin-fluctuation theory 8=19693
- He³ spin rel. to Rice theory of nearly ferromagnetic Fermi liquids 8=10800
- He³ in He³-He⁴ mixture, attenuation of sound propag. 8=10801
- MnSO₄ in water-glycol, effect on elec. cond. 8=12921
- N₂, volume visc. from u.s. attenuation meas. 8=1538
- Na-K alloys, K:49, 51 and 74% at 300°C 8=21627
- S, polymeric, relax. mechanism 8=4267

Visibility. See Atmospheric optics.**Vision**

- See also Colour vision; Eye; Stereoscopia.

- eddies, shear flow, deductions from space-time correlation obs. 8=12605
- in flow fields due to curved shock waves, rel. to perturb. of entropy layers 8=16652
- fluid, charged, relativistic in e. m. and gravitational fields, Helmholtz eqn. 8=16633
- fluid, curved flow, rate of change of vorticity components 8=12619
- fluid, cylinder-wake, large structure 8=12627

Vortices—contd

- fluid, eddy rel. to mean states, Eulerian vector 8=12630
- fluid, large, in homogeneous turbulence statistical props. 8=16636
- fluid, rot. stratified, second circulation generation 8=12637
- fluid, surface-distribution integral eqn. used to solve flow through orifice 8=16625
- fluid, turbulent boundary layer, and correlation obs. 8=12615
- fluid, turbulent displacement variance, conservation and moment of moment eqns. 8=12629
- fluid, wakes of cylinders, transition to turbulence of separated boundary layer, obs. 8=12620
- forced and periodic breakdown of confined vortex rotating in opposite direction 8=21469
- free-stream effects on parameter of flow in region of separated zones 8=12644
- gas, generation of free, factors affecting 8=7904
- gas, suppression of shedding behind oscill. cylinder, expt. 8=12666
- inviscid flow past delta wing, field near centre of rolled-up sheet 8=1459
- in jets, evolution 8=21437
- linear polymers in the turbulence vortices 8=12946
- liquid, boundary layer transition, hydrogen bubble obs. 8=12740
- liquid, shedding in wake of cylinder 8=12752
- liquid, translating cavity, equilibrium and stability 8=7982
- magneto fluid, generated by a shock 8=19815
- magnetogasdynamic shock wave, region behind 8=6358
- relativistic theory 8=7878
- shock-front interaction, rel. to sound generation 8=188
- superconductor, analogy of self-trapped filaments of laser light in liquids 8=4577
- Taylor flow, perturbation instability 8=12643
- Taylor, obs. in eccentric cylinders 8=21577
- wakes behind two-dimens. air bubbles 8=12767
- water, Karman, in wake of rot. cylinder, obs. 8=12751
- in He, superfluid, flowing through orifices, form. and critical vel. obs. 8=6234
- He II rotating annulus, quantized vortex lines threshold obs. 8=10810
- He II, rotating, interaction of quantized vortex and lines 8=10804
- He II, rotating, wave propagation 8=262
- He II, superfluid in rotating annular channel 8=10809
- He II, vorticity in flow through orifices 8=19699

- linear accelerators in 2-6 MeV range 8=6699
- linear unfolding methods and optimization 8=14180
- metals, plasmon satellite in soft spectra, theoretical interpretation 8=13680
- Mössbauer scatt., internal conversion of e, efficient geometry 8=691
- oxides of metals, chem. bonding investigation 8=9499
- polarization following ionization of inner electron 8=12041
- satellites and excitation states, belonging to same inner vacancy, relative prod. probabilities 8=16216
- satellites, new screening doublets 8=16193
- solar, absolute intensities near min. activity 8=10391
- solar, design of proportional counter spectrometer for meas. 8=23709
- solids, rel. to atomic energy levels and excitons 8=9492
- vitreous ice, diffraction, comparison with water 8=8355
- Al crystals, p beam interaction 250-1560 keV, orientation effect 8=4995
- B in its cpds. 8=18503
- B, Raman scatt. of Cu Kα rad. 8=2396
- Be, Raman scatt. of Cu Kα rad. 8=2396
- C, Raman scatt. of Cu Kα rad. 8=2396
- Ca, muonic K series 8=1209
- Cf²⁵² primary fission products rel. to odd-even effect 8=1113
- Cu crystals, p beam interaction 250-1560 keV, orientation effect 8=4995
- Li, Raman scatt. of Cu Kα rad. 8=2396
- Mg, muonic K series 8=1209
- Mo, Kα rad., prep. of Ross difference filters 8=2437
- Ne, Kα satellites (non-diag. lines) intensity 8=1170
- P, red, rel. to energy structure investigations 8=9559
- Pd alloyed with Rh and Ag, soft X-ray isochromats rel. to Pd density of states 8=17884
- Pb stearate, optimization for X-ray diffraction 8=14254
- S, muonic K series 8=1209
- Si, muonic K series 8=1209
- Sn cpds with O, S, Se and Te, chem shifts of the K_{α1} line 8=9558
- Ti cpds., K- and L-spectra 8=14281
- W crystals, p beam interaction 250-1560 keV, orientation effect 8=4995
- Yb⁷⁰ L spectrum 8=23023
- absorption
 - hydrocarbons, gaseous 8=12277

X-ray spectra—contd**absorption—contd**

- K-series dipole elec. transitions 8=7367
 mass absorpt. coeffs., obs. 8=14178
 rare earth elements, M_{IV} and M_{V} , rel. to effects in emission spectra 8=2447
 solids, Kronig-Hayasi, Kostarev et al. theories differences 8=2392
 Al and K-absorption, fine structures 8=2398
 Al, $L_{II, III}$ region, structure 8=22956
 Al_2O_3 , anodized and crystalline, $L_{II, III}$ region, structure 8=22956
 As, chemical effects in K abs. 8=22957
 Cd, K edge, variations rel. to beam direction 8=2408
 Cl in alkali-chlorides, K-absorption secondary structure 8=2410
 Cu, compared with isochromat at 8 kV 8=2414
 Cu, isochromats at Cu $K\alpha$ wavelength 8=2416
 Cu, polarised K-absorption, (100), (110) and (111) comparison 8=2413
 CuCl rel. to distrib. of states, Cu L absorpt. obs. 8=9522
 Cu_2O , isochromat structure 8=2415
 Cu_2O rel. to distrib. of states, Cu L absorpt. obs. 8=9522
 CuO , isochromat structure 8=2415
 CuO rel. to distrib. of states, Cu L absorpt. obs. 8=9522
 Ga in GaAs and GaP, K-absorption 8=2420
 Ge, interference passing near K-edge 8=14218
 Ge, K-absorption, fine structure 8=2423
 KCl, K- $L_{II, III}$, $M_{II, III}$, and quasi-stationary states 8=2432
 MnSe, K absorption spectra rel. to chemical bonding 8=14242
 SF₆, mechanism 8=12229
 Yb⁰, M_V , M_{IV} and M_{III} abs. edges 8=23024

emission

- atoms, bonds effects 8=16191
 fluorescent X-rays from γ -irradiated target, absolute yield meas. 8=23039
 rare earth elements, soft M_α and M_β , self absorpt. effects 8=2447
 screening doublet formation, extended study 8=20922
 solar radiation from coronal region 8=14887
 surface, and simultaneous refl. electron diffr. meas. 8=8290
 Al, solid, liquid and vapour states 8=9502
 Al, $K\alpha$ doublet obs. in metal and oxide 8=5582
 Al, X-ray K-satellites 8=2398
 Al-Cu alloys 8=9502
 Al-Fe alloys, disordered and ordered, at 40-90 eV 8=5624
 Al-Mn alloys 8=9502
 Co, K and L bands fine struct. rel. to e band struct. obs. 8=18527
 Cu K_α fluoresc. and direct components, films and solid targets 8=14179
 CuCl, Cu_2O and CuO , rel. to distrib. of states, Cu L emission obs. 8=9522
 Lu, L spectrum 8=9549
 Mg₂Ni, at 40-90 eV 8=5624
 Ni, soft-X-ray analysis rel. to density of states determ. 8=8940
 Ni-Zn alloys, at 40-90 eV 8=5624
 O^{1s, 1s}, muonic, nuclear radii determ. 8=943
 P cpds., fluoresc. line shift 8=2443
 Pu, 8 to 75 Å 8=14255
 Si, and cpds., photon-counting spectrograph, obs. compared to photographic and theory 8=2454
 W L_α fluoresc. and direct components, film targets 8=14179

X-ray spectrometers

- See also Gamma-ray spectrometers; X-ray crystallography/apparatus.
 automatic analysis of samples 8=543
 energy disperser using Si lithium drifted detector 8=23195
 monochromator system for obtaining an extremely parallel beam by successive asymmetric diffrs. 8=13209
 multi-grating for soft X-rays 8=15590
 2-beam, characteristics 8=542
 vacuum, with X-ray analyser, construction e use 8=15588

X-ray spectroscopy

- See also X-ray crystallography; X-ray diffraction.
 automatic high-speed continuous analysis of wet and dry processes 8=2550
 instruments and appls., 15-150 Å 8=22945
 microanalysis by X-ray fluoresc. meas. 8=14487
 plasma, radiation meas. 8=12512

X-ray tubes

- focus, intensity distrib. and dimensions meas. 8=15584
 FXR discharge, electron temp. in column and accelerating voltage 8=3393
 microfocus unit, with telefocus electron beams one-step reducing technique 8=15583
 power supply, high voltage waveform, radiographic effects 8=11243
 safety system for personnel, remote operation 8=15585
 soft X-ray, power enhancement 8=15590

X-rays

- See also Gamma-rays.
 Centaurus XR-2, variability obs. 8=23598

X-rays—contd

- Crab nebula, synchrotron production 8=5918
 8-80 keV from Large Magellanic Cloud and Crab Nebula, search with sounding rocket 8=5916
 emission from Be, C and Mo under laser irr., accompanying ion emission 8=13947
 focusing by quartz crystals 8=14261
 γ -spectrometer meas., Ge(Li) detector, cooled pre-amplifier 8=698
 homogeneous beam, h.v.l. determinations, geometrical considerations 8=11242
 KX- γ directional correlations 8=20739
 thermal from non-thermal radio sources 8=5941
 ScoXR-1 and assoc. optical source, binary model 8=10177
 sharp images, photographic, apparatus 8=6582
 solar, rel. to field strength of 164 kHz received signal 8=5807
 in solids, prod. depth distrib., calc. from e absorpt. obs. 8=17693
 visual response of human eye 8=6585
 in Al target, charact. radiation depth distrib., Mg tracer obs. 8=15587
 in Cu microanalyser target, K_α depth distrib. obs. 8=15586

effects

- See also Nuclear reactions due to photons.
 alkali halide crystals, conductivity, elec., kinetics of radiational change 8=22501
 alkali halides, energy spectra of emitted photoelectrons 8=18274
 alkali silicate glasses, form. of trapped hole centres 8=1998
 aluminophosphate glasses, on radiocolouration and luminescence kinetics 8=1996
 bremsstrahlung spectra on thick anodes, absolute meas. rel. to atomic number 8=699
 on electron micrography rel. to crystal orientation 8=17266
 film response, quantitative calibration, 5 keV-1.3 MeV 8=15565
 film, spectral sensitivity 8=535
 metaphosphate glass, Ag activated 8=4990
 quartz, on permittivity, luminescence and thermoluminescence 8=13871
 rel. to photoelectric absorption producing ruby monocrystals, luminescence 8=14301
 scintillators, obs. of luminescence 8=9588
 Ba(ClO₃)₂·H₂O, X-irradiated, e.p.r. spectral changes in u.v. irradiation 8=18410
 BaF₂, X-ray coloured, absorpt. by colour centres, temp. dependence 8=17683
 CaCO₃ cryst., radical formation 8=5105
 CaF₂ thermoluminesc. and thermostimulated emission, obs. 8=14305
 CaF₂(Eu) fluorescent response function 8=5665
 CaF₂, F-centre prod. 8=1999
 CaF₂, X-ray coloured, absorpt. by colour centres, temp. dependence 8=17683
 CsI(Na) fluorescent response function 8=5665
 CsI(Tl) fluorescent response function 8=5665
 CuSO₄, crystal growth with and without irr. 8=21947
 Ge, multiple Bormann effect in transmission 8=14222
 KBr, vol. expansion, irr.-induced, by relax. at Frenkel defects 8=13486
 KBr, Ca doped, growth of optical absorption bands 8=2429
 KCl, α -centre production and thermal annealing 8=17685
 KCl, vol. expansion, irr.-induced, by relax. at Frenkel defects 8=13486
 KClO₃, new absorpt. bands in near and far i. r. regions 8=22993
 KI and KI(In) self-luminesc., decay 8=14318
 LiF, change in lattice constant 8=2030
 Mg cpds., energy spectra of emitted photoelectrons 8=18274
 NaCl, F-centre first-stage formation 8=2012
 NaCl:Mn²⁺, e. p. r. resolution obtained by X-radiation 8=14117
 NaI(Tl), fluorescent response function 8=5665
 NaI-Tl, on photoluminesc. spectra 8=5666
 NaNO₃ cryst., radical formation 8=5105
 NaSbF₆, e. s. r. of irr. cryst. 8=5538
 Se, polycrystalline, hexagonal, local (conduction) levels, X-ray-induced 8=18236
 SrF₂, X-ray coloured, absorpt. by colour centres, temp. dependence 8=17683

protection. See Radiation protection.**Xenon**

- additive in Cs arc diode, effect on performance 8=15225
 adsorption on zeolites LiX and NaX, press. and temp. depend. 8=1713
 afterglow, msec microwave pulses nonlinear interactions 8=21340
 atom, influence of autoionization on spectra 8=20954
 atoms, electron scatt., 40 keV 8=7447
 captured in graphite by nuclear recoil, escape behaviour 8=4017
 on carbon blacks, graphitized, adsorption, obs. 8=17162
 condensation coeff. at 4.2°K 8=12981
 extraction from telluriumbismuthite, Te¹³⁰ decay rate 8=1017

Xenon—contd

- f. c. c. crystal, adsorpt. of inert gases, potential energy profiles 8=17159
 free-carrier drift-velocity studied in liquid and solid state 8=8119
 heat capacity in critical region, obs. 8=21513
 high-pressure arc, device for stabilizing radiant output 8=12416
 i.r. Zeeman-tuned laser, for fine-structure anal. of absorpt. spectra 8=11160
 ions, range distrib. in amorphous Al_2O_3 8=13476
 ion, relative charge transfer efficiencies of $^{20}\text{P}_{3/2}$, $^{21}\text{P}_{1/2}$ determ. 8=12454
 ionization efficiency obs. 8=21283
 ionized, c. w. laser oscillation at 9697 Å 8=6451
 isotope mixtures, thermal diffusion props. 8=1492
 liquid, sound velocity and law of corresponding states 8=1552
 liquid, surface tension and energy, 189°–286°K 8=1539
 microwave excited, new c. w. ion laser oscillation 8=6452
 radioactive, prod. by in-pile melting of irradi. $\text{UO}_2(\text{NO}_3)_2 \cdot 6\text{H}_2\text{O}$ 8=3982
 recoil fission prod. of U, diffusion in Ag 8=3981
 shock wave front, luminance temp. obs. 8=21483
 solid, band structure, deform. potential and exciton states 8=2108
 solid, free carrier mobility 8=17863
 solid at 0°K, parameters from interact. potential of gas 8=1468
 solid, zero-point energy, effect of long-range 3-body forces 8=22083
 solidified, vapour pressure, binding energy and mean vibration freq. 8=16960
 spectral line, 1469.6 Å, perturbation by Ar, He, N_2 and H_2 compressed gases 8=16201
 superradiant transitions 8=7398
 thermal conductivity, hot-wire cell meas., 30°–100°C, 120–150 torr 8=16700
 thermal plasma, continuous emission spectrum 8=16207
 work function on W crystal faces 8=18252
 Ar-Xe, He-Xe, H_2 -Xe, Ne-Xe couples, translation spectra 8=7425
 In-doped solid film, absorption spectra 8=9541
 in Si, implanted atoms location and lattice disorder, obs. 8=17414
 TiO_2 surface discharge, channel development 8=1330
 XeI, Hartree-Fock wavefunctions 8=1177
 XeII, Hartree-Fock wavefunctions 8=1177
 XeIII($5p^4$, 3P) HF calc. of ground state wave functions 8=1178
 Xe III, ground state Slater integrals 8=4087
 Xe^{129} , hyperfine structure of i. r. laser lines 8=16210
 Xe^{133} , diffusion in multicomponent gaseous mixtures 8=1491
 Xe^{133} diffusion in zirconium carbide, activation energy, rel. to struct. 8=8686
 Xe-133, radioactive, in leak test method, for semicond. devices 8=2211
 $^{133}\text{Xe}^+$ ions, penetration distrib. in Au, effect of target temp. 8=2023
 Xe^+ , low-energy irradi. of Ge crystals 8=8772
 Xe + D_2 collisions, compound state resonances 8=4255
 Xe + H_2 collisions, compound state resonances 8=4255

Xenon compounds

- XeF_2 , r.m.s. amplitudes of vibr., calc. 8=21106
 XeF_4 , r.m.s. amplitudes of vibr., calc. 8=21106
 XeF_6 , molec. beam, mag.-field deflection 8=16377
 XeF_6 , molec. struct. 8=21107
 XeF_6 , pseudo-Jahn-Teller effect evidence 8=7552
 XeF_6 , symmetry, electron diff. obs. 8=17383

Xerography. See Photography.**Y-particles.** See Hyperons resonances.**Yield.** See Elastic limit; Plastic deformation; Plastic flow.**Young's modulus.** See Elastic constants.**Ytterbium**

- anticrossing signals from $6s^2P_1$ level 8=16211
 M_V and M_V absorpt. lines and edges 8=5602
 Yb^{3+} , energy transfer with Nd^{3+} in LaF_3 8=14328
 Yb^{3+} , e.p.r. in ThO_2 , stress effects 8=14128
 Yb^{3+} in BaF_2 , SrF_2 , CaF_2 , spin-lattice relaxation 8=18444
 Yb^{3+} in CaF_2 , anisotropy of spin-lattice relax. for Kramers doublets 8=9414
 Yb^{3+} in CaF_2 , new laser line oscillations from ions at noncubic sites 8=3335
 Yb^{70} , L spectrum 8=23023
 Yb^{70} , M X-ray absorption 8=23024
 in YFe garnet, magnetostriction 8=2344

Ytterbium compounds

- $\text{YbCl}_3 \cdot 6\text{H}_2\text{O}$, hyperfine splitting of lowest 2^+ state of Yb 8=9301
 Yb-Sb phases, magnetic and electrical properties 8=22754
 Yb_2Sb_2 , crystal structure 8=17430

Yttrium

- band structure, density of states and Fermi surface by cellular method 8=8942

Yttrium—contd

- crystals, mag. susceptibility temp. dependence, 80–300°K 8=18303
 deformation planes after dehydrogenation and hydride habit planes 8=8728
 de Haas-van Alphen effect 8=5434
 ferrite magnetostriction constants from ferromagnetic resonance 8=14045
 magnetic susceptibility anomaly 8=18302
 magnetic susceptibility, anisotropy rel. to electron charge density 8=13965
 recrystallization and work hardening characts. 8=5089
 sulphate hydrates, crystallographic data 8=17385
 vacuum distillation, for low gas content 8=4652
 H_2 definition, spectral-isotopic method 8=9743

 YGa garnet, Er³⁺ optical obs. intensities and quantum counter action 8=22979
 YGa garnet, reflectivity 8=5642
 YGa garnet:Ru³⁺, e.s.r. 8=18440
 YGaFe garnet, spheres and powders, determ. of Curie points 8=18367
 YH₃, elec. resistivity meas. 1000-1200°K 8=17942
 YH₃, stability of pressed pellets, expansion obs. 8=8871
 YMnO₃, ferroelec., domain struct. made visible by etching 8=2247
 Y₂Ni, alloys, mag. props. 8=18363
 Y₂Ni, cryst. structure 8=13247
 YNi₃ and YNi₅, X-ray diffraction data 8=17426
 Y(OH)₃ polycrystals, light scattering, diffuse, effect of anisotropy 8=23004
 Y₂O₃, addition of ThO₂, inhibition of grain growth during sintering 8=13444
 Y₂O₃ adsorption of ethanol, methanol, ethylene, acetaldehyde and H₂O, i.r. obs. 8=4768
 Y₂O₃, sintering, kinetics, data correlation 8=8258
 Y₂O₃-stabilized ZrO₂, stress relief mechanism 8=17839
 Y₂O₃-Al₂O₃ system, formation of compounds 8=4720
 Y₂O₃-Al₂O₃ system, liquidus curve meas. 8=16921
 Y₂O₃, sintering kinetics, resonant freq. meas. 8=17027
 Y₂O₃-ZrO₂, cubic phase stabilization at low temps. 8=8287
 YS, gaseous, dissociation energies 8=7616
 (Y, Sc)₂Si₂O₇, (thortveitite), e. s. r. 8=9447
 YTaO₄, M²⁺-phase of fergusonite, lattice structure 8=8562
 Y-Tb alloys, susceptibility 8=2299
 YVO₄:Bi, energy transfer and fluoresc. 8=2490
 YVO₄, crystal structure refinement 8=17427
 YVO₄: (Dy or Sm) activated, const. quantum yield 8=5670
 YVO₄:Eu, Bi, energy transfer and fluoresc. 8=2490
 YVO₄:Gd³⁺, e. p. r. spectrum 8=9428
 Y₂W₃, prep., lattice constants and elec. resistivities 8=5709

Yukawa potential. See Field theory, quantum meson field; Nuclear forces; Scattering.

Zeeman effect

- flames, absorption line profiles, Zeeman scanning 8=12044
 fluoroacetylene, molec. g value 8=12246
 ketene, microwave, rotational transitions 8=7581
 rel. to lasers, gaseous, parametric reson., non-linear theory 8=6435
 naphthalenes, substituted, r. m. s. splitting parameter 8=9435
 population transfer and alignment by spontaneous emission 8=20985
 positronium annihilation 8=15739
 rel. to Fe I 6302.5 Å line contours in sunspots, obs. 8=10418
 solid state spectroscopy, crystallographic alignment 8=22936
 in sun spectrum, magnetograph for meas. 8=14865
 Al₂O₃:V³⁺, absorption lines up to 79 kOe at 4.2°K 8=9500
 Br⁷⁹ in p-bromocetanilide, n. q. r. obs. 8=4228
 Ca₂WO₄:Yb³⁺ 8=14205
 Cu₂O n = 1 line in pulsed fields, 4.2°K 8=11157
 D, precise theory for calc. of Lamb shift 8=1158
 Gd I, rel. to g-values of levels 8=4077
 Gd II, rel. to g values for 67 levels 8=4076
 H, precise theory for n=2, calc. of Lamb shift 8=1158
 H₂⁺, sublevels by photodissociation 8=12195
 H₂O vapour laser, 118.65 μ m transition 8=3311
 He atom, aligned, magnetic field saturation, depolarization of scatt. resonance fluorescence 8=20982
 He³, splitting 8=16219
 He-Ne laser, resonances 8=15469
 Hg¹⁹⁸ double reson., Zeeman sublevel transitions shifts, obs. 8=21001
 KBr:Pb, A absorption band 8=9504
 KBr:Ti, A absorption band 8=9504
 KCl:Pb, A absorption band 8=9504
 KI:Ti, A absorption band 8=9504
 Na-D, longitudinal inverse, magneto-optical meas. of profile 8=4057
 α -O, at 4.2°K in 170 kOe mag. field 8=5626
 Tb I spectrum meas. 8=12073

Zener diodes. See Semiconducting devices/diodes.

Zener effect. See Metals; Semiconducting materials; Semiconductors.

Zeta-potential. See Electrokinetic effects.

Zinc

- basal slip, Al impurity effects 8=17836
 concentration gradient near p-n junction in III-IV cpds. 8=8678
 containing Fe, magnetic moment, revision of superconducting props. 8=9344
 crystal interband absorpt., 82° and 295°K 8=18545
 crystal, twinning kinetics in deformation at 8-10°K 8=17211

Zinc--contd

- crystallite nucleation rates rel. to prior adsorpt. on W emitter 8=1746
 crystals, basal dislocation mobility meas. 8=8735
 crystals, effect of mech. vibrs. on growth 8=8430
 crystals in rod form, prep. by recrystn. 8=8431
 damage caused by electric spark discharge machining 8=1959
 deformation at high strain rates in hardening process 8=17837
 de Haas-van Alphen effect, freq. meas. 8=5435
 diffused in GaAs, precipitates formation 8=17617
 diffusion in GaAs, coeff. Fermi level dependence 8=1918
 diffusion in GaAs, under excess As pressure 8=22153
 dislocation density, substructure, effect of Cd addition 8=17295
 dislocations and slip planes in single crystals 8=8725
 dislocations, revealed by etch-pit technique 8=13439
 elasto-plastic behaviour study of pure monocrystalline sheets 8=8848
 estimation in Cu, Pb and Al alloys, atomic absorpt. spectrometry 8=23184
 etch pits at dislocations 8=4985
 in ethylenediamine medium, polarography 8=18761
 Fermi surface and band structure, calc. 8=2111
 Fermi surface study by cyclotron resonance 8=13725
 films, evaporated, oxidation 8=1691
 g factor determ. by de Haas-van Alphen meas. 8=2110
 high-purity, spectrochem. anal., comparison of fine methods 8=23191
 labelled atoms, in crystn. interphase equilib. studies 8=21933
 liquid, cavitation intensity rel. bubble vibration 8=4521
 magnetic properties 8=22755
 molten, ultrasonic velocity 8=12867
 polycrystalline, γ -irrad. and non-irrad. X-ray scattering 8=22253
 pure single crystals, second-order pyramidal slip on {1213} {1212} system 8=22214
 self-diffusion isotope effect 8=4959
 single crystals, stress-wave cleavage 8=21927
 specific heat 8=22121
 spectrum of optically pumped, collision broadening obs. 8=6523
 stacking fault energy calcs. using pseudopotentials 8=17673
 surface corrosion pitting at dislocation sites 8=13440
 texture study by magnetores. and Hall effect 8=8454
 thermal anal. for thermometric fixed point 8=4645
 thermodynamic activity in ϵ -phase Ag-Zn alloys, electronic density of states, dependence 8=22109
 whisker growth from vapour on Zn substrate, and orientation 8=1747
 for Al electroplating, alkaline pretreatment soln. 8=14431
 in CO₂ solns., corrosion rel. to predominance diagrams 8=2523
 in GaAs, photoluminescence, effect of As pressure 8=23053
 K $\beta_{2,5}$ band fine structure 8=23027
 Zn²⁺, pseudopotentials 8=7409
 Zn^{64,66,68} superconducting transitions 8=9062
 Zn⁶⁸ deposition in bone, obs. 8=23766
 Zn-CdS graded band-gap semiconductor, luminescent spectra electric-field dependence 8=9134
 ZnO, impure, with adsorbed O₂, i.r. absorpt. studies 8=4796

Zinc compounds

- alloys atmospheric corrosion prevention, acrylic and polyurethane layers 8=14389
 cellulose, ZnO₂ diffusion and absorpt in cellulose membranes 8=21645
 ferrite form. from Fe(III) oxide at 400°C 8=23117
 gases, electrical resistivity and gas purification 8=4488
 photoconductivity changes, during luminescence excited by alternating field 8=22701
 phthalocyanine, luminesc. singlet-singlet transitions 8=18591
 rare-earth-zinc intermetallic compounds, paramagnetic susceptibilities 8=2298
 sphalerite: Fe²⁺, i.r. absorpt. spectra of Fe²⁺ 8=18570
 wurtzite, symmetrized combinations of plane waves 8=13666
 Cd-Zn solder alloys, high-strength, props. 8=5056
 Zn complexes, tetraphenylporphine and tetraphenylchlorine, as photoconductors 8=9117
 Zn ferrite, intermed. phases in formation 8=17087
 Zn sulphides, standard free energy of formation 8=9712
 Zn tellurite, glass formation, refractive index, optical transmission range 8=5644
 Zn-Ag alloy, Hall effect 8=17941
 Zn-Al alloy, Hall effect 8=17941
 Zn-Al, γ -ray spectrum distrib., compression effects 8=4999
 Zn-Al, superplastic, deformation behaviour 8=5090
 Zn-Bi alloys, solid and liq., thermo-e.m.f. 8=9240
 ZnCl₂, emission spectrum, visible region 8=4171
 ZnCl₂, polymerized with methyl methacrylate, methacrylonitrile and acrylonitrile 8=2527
 Zn-Cu alloy, Hall effect 8=17941
 Zn, Cd, β -Sb, elec. cond., Hall effect and thermoelec. power 8=2131

Zinc compounds—contd

- Zn₂Cd_{1-x}Sb_x, with hole conductivity, thermoelec. efficiency 8=2254
- Zn[Co(CO)₄]₂, cryst. and molec. struct. 8=17431
- ZnCr₂Se₄, magnetic interactions, spiral ground states 8=2296
- ZnF₂:Ni²⁺, i. r. luminesc. emission 8=18626
- ZnFe₂O₄, thermal conductivity rel. to non-stoichiometric vacancies 8=8660
- ZnFe₂O₄, thermal conductivity dependence on anion vacancies (produced by chem. reduction) 8=17543
- Zn₂GeO₄, high pressure transformations 8=13075
- ZnIn₂S₄ monocrystals, photocond. and voltage-controlled negative differential resist. 8=13917
- Zn₃In₂S₆, crystal structure 8=8567
- Zn₃In₂S₆, crystal structure 8=13301
- (Zn, Cu)₂K₂(SO₄)₂·6H₂O, dynamic polarization of protons, non-exponential behaviour 8=18476
- Zn₂Mn₃O₄, cation distrib. determ. 8=17364
- Zn-Mn alloys, low temp. electrical resistivity, influence of magnetic ordering 8=2136
- Zn-Mn alloys, specific heat 8=22121
- Zn(NH₄)₂(SO₄)₂·6H₂O, Co²⁺ e. p. r., forbidden hyperfine spectra 8=9420
- Zn(NO₃)₂·xH₂O, molten, i. r. and Raman spectra 8=16868
- Zn(NO₃)₂·xH₂O (x=4, 2), crystal structures 8=8565
- ZnO, acousto-electric oscillations, 1-5 GHz range 8=22613
- ZnO, attenuation of 3GHz sound waves from 4 to 40°K 8=17490
- ZnO crystal, change in surface conductivity as detector for atomic H beam 8=7475
- ZnO crystal ultrasonic vibrations, diff. of light 8=18514
- ZnO crystals, effect oxygen chemisorption on electrical conductivity 8=5160
- ZnO electrodes, cathodic reduction of aqueous ferri-cyanide ion 8=14423
- ZnO, electroreflectance rel. to gas adsorption 8=9564
- ZnO, formic acid adsorption, i. r. spectra 8=18705
- ZnO, luminescence mechanism 8=5672
- n-ZnO, neutron irradi., resistivity vs time and temp. 8=2109
- Zn-0.03 at. %Cd, Al, Cu or Ag, substructure rel. to impurity distrib. coeff. 8=17296
- ZnO, piezoelectric, microwave rectification 8=9227
- ZnO, polycryst. containing 3% Bi₂O₃, doped, semiconducting and semi-insulating props. 8=18205
- ZnO powder, elec. cond. 8=22612
- ZnO, radiation damage 8=22255
- ZnO, radical-recombination luminescence spectra 8=5673
- ZnO radicaloluminesc. and elec. cond. rel. to excit. mechanism, obs. 8=9635
- ZnO single crystal, transmission spectrum, rel. to exciton absorpt. and exciton-phonon complexes 8=14272
- ZnO single crystal, γ-irradiated, defect structure 8=22168
- ZnO, single crystals, vapour phase growth 8=21970
- ZnO, splitting of exciton lines by uniaxial stress 8=14273
- ZnO:Cu²⁺, absorption spectra 8=14211
- ZnO:(Ni, Co) crystals, Hall effect and conductivity, liquid N₂ to room temp. 8=9132
- ZnO:Ni(Co), lattice-vibration effects 8=9563
- ZnO-NiO ferrite, heating during ferromag. resonance 8=14082
- ZnO:Ni²⁺, i. r. luminesc. emission 8=18626
- ZnO:Zn, H, He, N, Ar and Kr ions energy losses and deterioration depth, obs. 8=18624
- ZnO:Zn phosphor heavy ion irradi. damage deterioration, obs. 8=18623
- ZnO-ZnSe systems, electroluminescence 8=9644
- β-Zn₃(PO₄)₂, cryst. struct. 8=8566
- ZnSO₄ soln. in H₂O-glycol, u. s. relax. 8=8062
- Zn(SO₃F)₂, i. r. spectra and mag. props. 8=9562
- ZnSb and ZnSb-CdSb mixed crystals, growth, elec. and thermal properties, investigation 8=13698
- ZnSe, absorption and reflect spectra in i. r., low temps. 8=23026
- ZnSe crystals, hexagonal, luminesc. 8=9631
- ZnSe crystals, recombination centre parameters 8=18627
- ZnSe, electron mobility rel. to prep. by direct fusion 8=2210
- n-ZnSe, Gunn effect 8=9136
- ZnSe:Ni²⁺, i. r. luminesc. emission 8=18626
- ZnSe, thin films, preparation by flash evaporation 8=13100
- Zn₂Se_{1-x}, LO and TO optical phonons 8=4909
- ZnSe₂Te_{1-x}, thin films, preparation by flash evaporation 8=13100
- ZnSiF₆·6H₂O and analogous cpds., X-ray exam. 8=17432
- Zn₂SiO₄, high pressure transformations 8=13075
- ZnTe, absorption and reflection spectra in i. r., low temps. 8=23026
- ZnTe, electrooptical effect, meas. at 10.6 μ 8=18515
- ZnTe films, electroabsorpt. rel. to determ. of reduced effective mass 8=18566
- ZnTe, i. r. transmission and reflection spectra 8=2460
- ZnTe, melt-grown, edge emission, annealing effects 8=5681
- ZnTe, melt-grown, flash-like thermoluminescence 8=5680

Zinc compounds—contd

- ZnTe, metal vacancies formation energies rel. to Te-Te covalent bonding 8=17608
- ZnTe, phase equilibria 8=16956
- ZnTe, photo-excited paramag. reson. of Cr³⁺ 8=5525
- ZnTe, photoluminescence spectra with anomalous temp. dependence 8=2492
- ZnTe, submillimetre-wave generation by optical difference-frequency mixing of ruby laser lines 8=18569
- ZnTe, thin films, preparation by flash evaporation 8=13100
- ZnTe, vapour press., torsion meas. 8=16963
- ZnTe:Pb, photo-induced paramag. resonance at 77°K 8=9440
- ZnWO₄ crystals, Mn²⁺ impurity, e. p. r. spectra rel. to conc. and temp. 8=5535
- ZnWO₄, e. p. r. spectrum of Cu²⁺ 8=5527
- ZnWO₄:Cr³⁺ (Li⁺), electric broadening of lines 8=18442
- ZnWO₄:Cr³⁺ spin-lattice relax. rel. to maser material 8=10994
- ZnWO₄:Cr³⁺, theory 8=14085
- Zn₂Y single crystals, tuning curve meas. and theoretical agreement 8=5485
- Zn₂Y, (Ba₂Zn₂Fe₁₂O₂₂), single crystals, Bloch wall structure determs. 8=5496
- Zn(II) perchlorates, water solns., u. s. velocity 8=12865
- ZrM₂-H₂ systems, (M = Cr, V, Mo), phase equilibria betw. 0° and 900°C 8=4723
- zinc sulphide
- cathodoluminescence spectra and bands lifetimes obs. 8=9646
- cubic, epitaxial growth by evaporation in ultra-high vac. 8=21893
- electrical conductivity and luminescence changes, alternating voltage effect 8=9259
- electroluminesc., brightness wave 8=9634
- electroluminescence, influence of illumination 8=9630
- electronic band structure rel. to optical props. 8=8928
- electroluminescent lamp, calibrated for use as standard light source 8=20067
- electrolumiphors, radiation-controlled enhancement 8=14344
- films, cathodoluminescence energy losses, rel. to photoluminesc. yield 8=9645
- growth, single crystals, from melt, 1850°C, 50 atm. Ar press. 8=21969
- Hall effect, e and hole mobility obs. 8=8898
- hexagonal → cubic, Cu-induced transformation 8=17107
- hexagonal, electroluminescent intensity distrib. rel. to dislocations 8=18621
- hexagonal, elastic stiffness conductivity dependence, corrections 8=17838
- luminescence reabsorption rel. to equilib. emission kinetics 8=9641
- luminescence, u. v., cryst. prep. conditions for optimum obs. 8=18629
- luminors, effect of Te on emission 8=14336
- minority carriers, photovoltage and photocond. meas. 8=22700
- phase transformations on crushing rel. to luminescent props. 8=17106
- phosphors, carrier redistrib. among traps under i. r. irradi., obs. 8=9135
- phosphors, cryoluminescence 8=14347
- phosphors, glow curves, meas., anal. and origin 8=5675
- phosphors, mech. excited, behaviour of light emissions 8=9633
- phosphors, optical spectra, luminescence and electroluminescence 8=5677
- phosphors, stimulation with i. v. wavelengths 8=5671
- phosphor, vibrational structure in stimulation spectrum 8=2459
- photoconductivity and Hall effect rel. to recomb. mechanisms 8=9258
- photoconductivity, optical quenching spectrum temp. dependence 8=9249
- photoelectret state and Gudden-Pohl effect, correl. 8=5679
- photovoltages, negative differential 8=22702
- polytype families 8=8564
- polytypes of family 24L-72R, unit cell and Zhdanov symbols 8=17194
- polytypes, structure and double refr. 8=8563
- radical-recombination luminescence spectra 8=5673
- self-diffusion of S 8=1931
- semiconductors band structure Green's function method 8=8913
- solution, convective motion due to electrolytic heating, obs. 8=1509
- ultrasonic vibrations, diff. of light 8=18415
- u. v. luminesc. under electron excitation 8=18619
- u. v. two-photon excitation 8=9632
- X-band travelling-wave light-intensity modulator 8=23025
- X-ray microanalysis, atomic number effect. correction, obs. 8=14479
- Cr³⁺ photo-induced e. s. r., decay obs. 77°-325°K 8=18441
- MnS/ZnS mixed crystals, phosphoresc. 8=2484
- S²⁻ photoluminescence, spectra, dark conductivity 8=5000
- β-ZnS film, growth and elect. props. 8=17143

Zinc compounds—contd**zinc sulphide—contd**

- ZnS:Ag, for energy loss of heavy ions obs. in KeV range 8=8758
 ZnS:Ag, red fluorescence, rapidly quenched 8=9648
 ZnS-Ag single crystal, luminescence, influence of i.r. radiation 8=5674
 ZnS:Ag, deterioration depth under prolonged heavy ions bombard. obs. 8=4998
 ZnS:CdS luminors, nonmonotonic var. 8=14337
 ZnS:CdS:Cu phosphor-silicic acid sol. adhesion to glass, obs. 8=8157
 ZnS:Cl colour centres excit. peaks from emission obs. 8=9642
 ZnS:Cu, Al phosphors, electroluminescence rel. to luminescent centre interactions 8=18622
 ZnS-CuAl and ZnS-CuMn freq. depend. of shape of light pulse 8=5675
 ZnS:Cu, brightness wave variations of electro-luminesc. 8=18620
 ZnS/Cu, Cl, luminance and complex dielectric constant, comparison during thermoluminescence 8=13875
 ZnS:Cu colour centres excit. peaks from emission obs. 8=9642
 ZnS-Cu electroluminescent phosphor, filling of traps during electric field excitation 8=14314
 ZnS:Cu electroluminescence brightness non-additivity obs. 8=9636
 ZnS:Cu electroluminesc. cells brightness build-up and ageing, obs. 8=9637
 ZnS:Cu elec. cond. rel. to electroluminesc., obs. 8=9133
 ZnS:Cu²⁺, filled trap distrib. rel. to duration of u.v. irradiation 8=18628
 ZnS:Cu, irradi., electroluminesc. quenching and stimulation rel. to elec. props. 8=9640
 ZnS:Cu phosphor condenser, characts depend on props. of crystal barrier layer 8=9657
 ZnS:Cu photo- and electroluminesc., effects of grinding, obs. 8=9647
 ZnS(Cu), surface temps., exptl determ. by photoluminescent emissions 8=13082
 ZnS:Fe²⁺ i.r. luminescence spectra, 5 and 77°K 8=2491
 ZnS:Ho³⁺ luminesc. and blue centres rel. to lattice-activator energy transfer, obs. 8=9643
 ZnS(Mn, Cu), high-efficiency d.c. electro-luminescence 8=18625
 ZnS:Mn films electroluminesc., pulse excitation characts, obs. 8=9639
 ZnS:Mn films electroluminesc., polarization effects obs. 8=9638
 ZnS:Mn, Cl, electroluminescence i.r. enhancement 8=5678
 ZnS:Mn²⁺, luminescence decay time 8=14326
 ZnS:Ni²⁺, i.r. luminesc. emission 8=18626
 Zn(S, Se)-Ag luminors, interaction of heated luminescence centres 8=14338
 ZnS:Sm³⁺ luminesc. and blue centres rel. to lattice-activator energy transfer, obs. 8=9643
 ZnS/ThO₂ multilayer mirrors, reflectance 8=2461
 ZnS:Tm growth and luminesc. rel. to Zn vacancies, obs. 8=8434

Zirconium

- age hardening and recovery in cold rolled, obs. 8=8872
 band structure, density of states and Fermi surface by cellular method 8=8942
 creep rel. to vacancy diffusion 8=4964
 diffusion of metallic impurities 8=17596
 diffusion in ZrH_{1.7}, ZrH_{0.8}, 800–1000°C 8=17595
 ore deposits in Republic of South Africa 8=9792
 oxidation, low-pressure. 8=14391
 star HR 1105, isotope ratios 8=14759
 H₂ definition, spectral-isotopic method 8=9743
 Ta content, spectrochemical determ. 8=9749
 Zr(IV), polarographic behaviour 8=18735
 α -Zr, deformed, form of polygonized sub-structure 8=22219
 α -Zr, polycrystalline, steady-state creep 8=4986
 α -Zr, H₂ terminal solubility in this, Zircaloy-2 and Zircaloy-4 8=8249
 α -Zr, with and without dissolved O, population anal. of occupied energy bands 8=17878
 β -Zr, diffusion behaviour from thermo and electro-transport meas. 8=17589
 β -Zr, diffusion mechanism 8=17594
 β -Zr, diffusion, summary of ORNL work 8=17593
 Zr⁹⁰, 10–80 MeV He⁴ ions, recoil range 8=13489
 ZrO₂-HfO₂ system, phase equilibria 8=21863

Zirconium compounds

- alloys, creep rel. to vacancy diffusion 8=4964
 carbide, powder, diffusion of Xe¹³³, activation energy, rel. to struct. 8=8686
 electrographic determ. of Zr in alloys 8=18762
 Zircalloy-2, cold rolled, age hardening and recovery, obs. 8=8872
 Zircalloy-2 corrosion in LiOH solns., hydriding rate, 300°C 8=5719
 Zircaloys-2 and -4, H₂ terminal solubility in these and in α -Zr 8=8249
 Zircaloy-2, grain boundary effects in deformation 8=13447

Zirconium compounds—contd

- Zircaloy-2, H₂ terminal solubility, thermal diffusion obs. 8=8250
 Zircaloy-2 tubing, ductility, effect of hydride 8=13615
 zircon, natural, luminescence origin 8=9649
 Zr hydride, effect on Zircaloy-2 tubing ductility 8=13615
 Zr rich alloys, effect of rolling temp. on texture developed 8=22399
 Zr-2.5wt%Nb, H₂ terminal solubility, thermal diffusion obs. 8=8250
 Zr-2.5wt.%Nb, cold rolled, age hardening and recovery rel. to stress relax., obs. 8=8872
 Zr-Al getter cartridge for u.h.v. systems 8=16726
 ZrC powder, in vacuum and Cs vapors, thermal emission props. 8=10843
 ZrC, stoichiometric, enthalpy and specific heat in range 500 to 2400°K 8=13366
 ZrC,H₂, formation in Zr-H-C system, and structure analysis 8=17433
 ZrCr₂Se₃, mag. structure by n-diff. 8=22865
 α -Zr-D solid solns., thermodynamic props. 8=8252
 ZrFe₂, atomic arrangement in homogeneity range of Laves phase 8=1813
 Zr-H alloys, deformation, thermally-activated mechanisms 8=13613
 α -Zr-H equilib. press. of dissolved H 8=8251
 ZrH_{1.69-1.96}, elec. resistivity meas. 1000–1200°K 8=17942
 (Zr,H)_{0.955}N, defect structure by chem. and lattice studies 8=17434
 Zr(HXO₄)₂·H₂O, (X = P, As), synthetic ion exchanger, crystal structure and exchange behaviour 8=13295
 Zr-Nb alloy, oxidation 8=14390
 (Zr_{0.6}Nb_{0.4})Fe₂, Laves cpds., anomaly in magnetization 8=2295
 ZrN₂H₄, formation in Zr-H-N system, and structure analysis 8=17433
 Zr + 4%Nb, transitions during destruction of superconductivity 8=22567
 Zr-Ni-Al system, R(M, X₂ and RMX₂ cpds., crystal structure 8=17435

Ge semiconducting films, prep. 8=8320

InSb, rel. to selective etching in HCl solns. of

FeCl₃ 8=8383

Kr, purification by directional freezing 8=4810

Zone melting and refining—contd

Mo, removal of C and W rel. to residual resistivity 8=17935

Si, temperature field, theory 8=8427

Zone plates. See Diffraction/light.**Zoology**

pig-skin surface contamination by U 8=5987

planarian normal eye, electron microscopy 8=11240

planarian regenerating eye, electron microscopy 8=11241

IEE BOOK

Frequency generation & control for radio systems

IEE CONFERENCE PUBLICATION 31

Atomic clocks and crystal-controlled frequency generators are two of the devices used for the precise frequency control needed for such tasks as the packing of more stations into the radio spectrum and the measurement of time to the required accuracy for navigation and radar aids for aircraft and satellites. At a conference organised by the IEE, the IERE and the IEEE and held in London in May 1967, 32 papers were presented on the following aspects of frequency generation and control:

- Oscillators: atomic and transferred-electron sources
- Oscillators: crystal controlled
- Oscillators: measurement and correction
- Control and derivation of frequency: synthesisers
- Control and derivation of frequency: phase and frequency-locking and tracking systems
- Applications.

The papers have been reproduced by photolithography from the authors' manuscripts in IEE Conference Publication 31.

191 pp. A4 size, soft covers. 1967. price £3
(members £2 if ordered through sponsoring society)

Orders, with remittances, should be sent to:

Publications Department, IEE, Savoy Place, London WC2

Great activity in silicon-iron

Intense research activity into silicon-iron is brought to light in this new IEE publication which reviews the whole ambit of magnetic materials and their applications throughout the world.

The book contains 53 papers, presented at a conference held in London in September 1967 and sponsored by the IEE, IPPS and IEEE, which are grouped as follows:

- Orientation and domain structure
- Measurements on silicon-iron
- Permanent magnets
- Magnetostriction in silicon-iron
- Transformer noise
- Losses in silicon-iron
- Nickel-iron and aluminium-iron
- Garnets and ferrites
- Microwave properties of ferrites
- Thin films.

IEE Conference Publication 33: Magnetic materials and their applications.

266 pp. photolitho. A4. soft covers. 1967.

Price £3 15s. (members £2 10s. if ordered through sponsoring society)

Orders, with remittances, should be sent to:

Publications Department, IEE, Savoy Place, London WC2

Magnetic materials and their applications

IEE NEW BOOK

Acoustic noise and its control

IEE CONFERENCE PUBLICATION 26

Excessive noise can cause damage to mechanical structures, but its worst features are its effects on people. These range from annoyance, through interference with speech and communication, to permanent impairment of hearing. An international conference on acoustic noise and its control was organised jointly by the IEE, the IERE, the IEEE, the Institute of Physics & the Physical Society and the British Acoustical Society, and held in London in January 1967. 24 papers were presented by experts from the UK, the USA, Germany and France. The papers were grouped under four headings:

Subjective effects
Measurement analysis
Machines
Noise in buildings.

The papers have been reproduced by photolithography from the authors' manuscripts and bound as IEE Conference Publication 26.

101 pp. A4 size. soft covers. 1967. price £2 5s.
(members 30s. if ordered through sponsoring society)

Orders, with remittances, should be sent to:

Publications Department
IEE, Savoy Place, London WC2

IEE BOOK

Integrated circuits

IEE CONFERENCE PUBLICATION 30

'Expensive curiosity' is no longer an accurate description of integrated circuits. Seven years ago, although they had the great advantage of being small and highly reliable, integrated circuits were expensive and limited in capacity. Since then there have been substantial reductions in cost and a great extension of capacity, so that integrated circuits are now an essential part of modern equipments and are causing radical changes in the thinking of design engineers. The latest developments in integrated circuits were reviewed in detail at a conference held in Eastbourne on the 2nd-4th May 1967. The conference, sponsored by the IEE Electronics Division, the IERE and the IEEE, was attended by representatives from 18 countries. The 33 papers presented have been reproduced by photolithography from the authors' manuscripts and bound as IEE Conference Publication 30. The papers are grouped under these headings:

High-speed circuits
Film circuits
Economics: design and characterisation
Large-scale integration
Applications
Design and analysis circuits.

298 pp. A4 size. soft covers. 1967. price £3 15s.
(members £2 10s. if ordered through sponsoring society)

Orders, with remittances, should be sent to:

Publications Department, IEE, Savoy Place, London WC2

IEE Conference Publications

Timely & Authoritative Development & Progress Reviews

The IEE Publications Department, Savoy
Place, London WC2 will be glad to
send you further particulars on any of
our publications.

The papers presented at conferences sponsored by the IEE are regularly reproduced and bound into book form as IEE Conference Publications.

Each conference is organised by one or more of the IEE Divisions, POWER, ELECTRONICS or CONTROL & AUTOMATION, or by the SCIENCE & EDUCATION JOINT BOARD. The conferences thus survey the whole ambit of electrotechnology and control.

IEE Conference Publications are internationally recognised as up-to-date, authoritative reviews of development and progress in the various branches of electrotechnology and control with which they deal.

1966, 140 pp., 15 papers, £3 10s.

25 Automatic operation & control of broadcasting equipment

1966, 163 pp., 30 papers, £3

26 Acoustic noise and its control

1967, 101 pp., 24 papers, £2 5s.

27 Microwave & optical generation & amplification

1966, 531 pp., 112 papers, £7 10s.

28 Air-traffic control

1967, 146 pp., 35 papers, £2 5s.

29 Advances in computer control

1967, 346 pp., 29 papers, £4 10s.

30 Integrated circuits

1967, 298 pp., 33 papers, £3 15s.

31 Frequency generation & control for radio systems

1967, 191 pp., 32 papers, £3

32 Computer technology

1967, 284 pp., 29 papers, £3 15s.

33 Magnetic materials & their applications

1967, 266 pp., 53 papers, £3 15s.

34 The economics of the reliability of supply

1967, 303 pp., 27 papers, £4 5s.

35 Metering & apparatus for modern electricity supply tariffs

1967, 380 pp., 72 papers, £5

36 M.f., l.f., and v.l.f. radio propagation

1967, 354 pp., 43 papers, £5

37 Servocomponents

1967, 264 pp., 27 papers, £4

38 Electrical methods of machining & forming

1967, 261 pp., 22 papers, £3 6s.

39 Interference problems associated with the operation of microwave communication systems

1968, 196 pp., 26 papers, £3 10s.

IEE PERIODICALS

Copies and information can be obtained from the

Publications Department

IEE, Savoy Place, London WC2

Proceedings IEE, published monthly, contains papers of industrial and technological interest from engineers and scientists the world over. Each issue comprises three self-contained groups of papers on Electronics; Power; and Control and Electrical Science, and these can be ordered as separate publications—*Electronics Record*, *Power Record*, and *Control & Science Record*.

Subscriptions to *Proceedings IEE*:

£18 p.a. IEE Associates and Associate Members under 28 and IEE Students: £2 10s. Other IEE members: £5

Separate copies of individual papers are available when they have been published in the *Proceedings*. Price 2s. each.

Electronics Record is published every two months, the papers being taken from the two previous issues of *Proceedings IEE*.

£9 9s. p.a. IEE Associates and Associate Members under 28 and IEE Students: 25s. Other IEE members: £2 10s.

Power Record, quarterly, takes its material from the three preceding issues of *Proceedings IEE*.

£6 p.a. IEE Associates and Associate Members under 28 and IEE Students: 15s. Other IEE members: 30s.

Control & Science Record, quarterly, includes papers on control and automation and electrical science taken from the three previous issues of *Proceedings IEE*.

£6 p.a. IEE Associates and Associate Members under 28 and IEE Students: 15s. Other IEE members: 30s.

Electronics Letters, published fortnightly, is an international journal offering speedy dissemination of research and development results in electronics, control and allied subjects, in the form of communications up to about 1200 words in length. Publication is within two to six weeks of receipt, giving the engineer an immediate picture of the latest developments in the field.

£10 p.a. IEE members: £3

Electronics & Power, published monthly, is a wide-ranging magazine covering the complete field of interest of electrical, electronic, and control technology by means of articles specially written for the busy engineer by experts in every sphere.

Electronics & Power alone: £5 p.a.

Electronics & Power with all issues of *IEE News*: £5 10s. p.a.

IEE members: free

IEE News is a twice-monthly tabloid newspaper for the professional electrical, electronics and control systems engineer. All IEE members receive *IEE News* free. Nonmember subscribers to *Electronics & Power* can also receive *IEE News* for an additional subscription as quoted above. There is no separate subscription to *IEE News*.

Students' Quarterly Journal is received free of further subscription by all IEE Students, Associates and Associate Members under the age of 30. It caters particularly for the younger member, and specialises in concise, topical articles on the latest advances in electrical, electronic and control engineering.

12s. 6d. p.a. Senior members: 8s. 6d. p.a.

SCIENCE ABSTRACTS PUBLICATIONS

Physics Abstracts is the recognised and long-established retrieval service for physicists. Published monthly, it provides 50 000 abstracts annually, drawn from 1000 British, American, Russian and other periodicals. Alphabetical author and subject indexes are given twice yearly.

£50 p.a.

IEE members: £10 p.a.

Electrical & Electronics Abstracts is the comprehensive literature-retrieval service for engineers. It is published monthly and provides 30 000 abstracts annually. Alphabetical author and subject indexes are issued twice yearly.

£40 p.a.

IEE members: £7 10s. p.a.

Control Abstracts is the monthly tool of information retrieval for all aspects of control and automation. It covers cybernetics, the electrical, electronic, mechanical, pneumatic and hydraulic aspects of automatic control, computers and all applications.

£25 p.a.

Cumulative Indexes

Physics Abstracts—subject index for the five years 1955–59 inclusive, bound in one volume, stiff covers and buckram cloth, 800 pp.

£20

Physics Abstracts—author index for the five years 1960–64 inclusive, bound in four parts, stiff covers and buckram cloth, 2300 pp.

£17 set

Members: £10 set

Physics Abstracts—subject index for the five years 1960–64 inclusive, bound in two parts, stiff covers and buckram cloth.

£40 set

Electrical Engineering Abstracts—subject index for the five years 1955–59 inclusive, bound in one volume, stiff covers and buckram cloth, 320 pp.

£15

Members: £9

Electrical Engineering Abstracts—author index for the five years 1960–64 inclusive, bound in two volumes, stiff covers and buckram cloth, 970 pp.

£12 10s. set

Members: £7 10s. set

Electrical Engineering Abstracts—subject index for the five years 1960–64 inclusive, bound in one volume, stiff covers and buckram cloth, 950 pp.

£20

Members: £12

Current Papers in Electrotechnology (CPE) is a monthly 'current-awareness' publication, listing in each issue more than 1300 titles and references of important papers and articles describing new developments in electrical and electronic engineering so that the technologist can see the world's literature at a glance only a few weeks after its appearance.

30s. p.a.

Current Papers in Physics (CPP) is the twice-monthly alerting publication for physicists. More than 1800 titles and references in each issue

£3 p.a.

Current Papers on Control (CPC) displays each month all the important titles and references in the world's literature on control and automation.

20s. p.a.
